BRAZIL*, an empire of S. America, second only in extent to the giant empires of China and Russia, stretches along about two thirds of the E. coast of that continent, while its superficial area occupies nearly half its whole extent. It lies between 49° 17' N. and 33° S. lat.; its most easterly point is Cape St. Augustus, to 34° 55' W. long., but the longitude of its W. frontier cannot be determined with accuracy, since its boundary-line on that side is in countries hitherto unexplored by Europeans: it probably verges upon 75°. The length, from N. to S., is between 2,600 and 2,700 m., and its breadth, from E. to W., between 2,300 and 2,400 m. Its extent of coast along the Atlantic Ocean exceeds 4,000 m.; its area has been estimated at 2,300,000 to 2,700,000 sq. m. It is bounded E. and S. by the Atlantic Ocean; N. by French, Dutch, and British Guiana, and the republic of Colombia, from which it is separated by a chain of mountains, under the various names of Serra de Tuluhy, Serra Pecaraimo, &c., and the Rio Oyapoco; E. by the Atlantic Ocean; and W. by the states constituting the federal republic of La Plata, with

* It is commonly supposed that the wood yielding the red dye *Coccoloba tinctoria*, derived its name from Brazil, and that its being principally imported from, and produced in, Brazil. This, however, is not the fact. It has been shown that woods yielding a red dye were cultivated in Brazil previous to the discovery of America; and that the early voyagers gave the name Brazil to the part of that continent to which it is still applied, from their having ascertained that it abounded in such woods. (*Bancroft's Philosophy of Colours*, ii. 216—221.)

Bolivia, Peru, and Ecuador or Quito. The country which was formerly included under the name of Brazil is proved by ancient maps to have extended only from the sea-coast to Rio San Pedro. The Portuguese, however, have never ceased adding fresh acquisitions to the country which they already possessed, and their possession has from time to time been confirmed to them by treaties with Spain.

Nearly two thirds of Brazil consists of high land and mountains. Estimates have been given of the comparative quantity of the country under tillage and that still in a wild state, as well as of that occupied by rivers, swamps, &c. &c.; but from the very limited knowledge which Europeans possess of by far the larger portion of Brazil, it is plain such estimates can be good for nothing, unless it be to throw ridicule and discredit on all statistical computations. It is, however, abundantly certain that the extent of cultivated land bears but a very small proportion indeed to that of the whole country; perhaps not more than 14 or 2 per cent.!

The following statement of the area and population of the different provinces is borrowed from the *Hemmar Almanac* for 1839.

Provinces.	Area in sq. m. (Eng.)	Pop. 1833.	Ch. Towns.
1 Para	530,000	145,073	Paxa.
2 Rio Negro	421,000	48,257	Barcellos.
3 Maranhão	640,073	182,985	San Luis.
4 Piauí	60,517	46,296	Jeitras.
5 Ceará	70,135	272,713	Aracati.
6 Rio Grande do Norte	51,227	68,735	Natal.
7 Paraíba	167,768	216,552	Paraíba.
8 Pernambuco	29,955	602,205	Pernambuco.
9 Alagoas	10,322	226,356	Porto Calvo.
10 Sergipe	18,017	267,523	Sergipe.
11 Bahia	51,675	559,650	Salvador.
12 Espírito Santo	37,905	75,996	Vitoria.
13 Rio Janeiro	189,516	280,550	Rio Janeiro.
14 San Paulo	191,012	510,672	San Paulo.
15 Minas Geraes	255,573	928,553	Minas.
16 Goyas	315,760	150,000	Villa Boa.
17 Matto Grosso	426,456	82,000	Villa Bella.
18 Fernando	1,000	600	
Total	2,735,942	5,130,418	

Perhaps no country is more favoured by nature, as regards the requisites for carrying on an extensive commerce, than Brazil. All its principal cities are on the coast: its harbours are among the finest in the world, and are connected with the interior by numerous large rivers, most of which are navigable for a considerable way inland.

The principal rivers are,—1. the Amazon, generally considered the largest river in the world, supposed to be formed by the junction of the modern Marañon (Tungurahua) with the Ucayali, or ancient Marañon. It enters Brazil at San Francisco do Abacatinga, and flows from W. to E., along the immense northern province of Para, discharging itself into the Atlantic in about 50° W. long. Its principal tributaries are,—the Madeira, which takes its rise in Potosi, and flows a distance of 700 leagues; the Xingu, in the province of Matto Grosso, itself possessing several smaller tributary streams; the Rio Negro, which rises in New Granada, and loses itself in the N. of Brazil, after a course of 700 leagues; the Tapajós, which rises in Matto Grosso. In addition to these, are upwards of 60 others of less or more importance. 2. The Rio Pardo, which traverses a portion of the province of San Paulo, rises in the district of San João del Rey, and empties itself into the Parana. 3. The Rio Doce, traversing the province of Espírito Santo, and serving as a sort of means of uniting the interior of Minas Geraes with the coast. 4. The Para or Tocantins, formed by the junction of the Araguay and the Tocantins, properly so called: the former is the principal branch. N. of this junction, being the smaller section of its course, it is known by the name of the Para, and S. by that of the Araguay: it rises in the prov. of Goyaz, which it traverses, together with part of Para, and empties itself into the Atlantic Ocean. At the mouth of the Para, the phenomenon of the *boré*, to which the Indians have given the name of *pororoca*, manifests itself in a very striking manner. Three days previously to the new or full moon, when the tides are highest, an immense wave, upwards of 15 ft. in perpendicular height, rushes from shore to shore with a tremendous noise, and is succeeded immediately by a second and a third, and sometimes by a fourth. The tide, instead of occupying six hours to flow, attains its greatest height in a few minutes. The roaring of the *pororoca* is heard at a distance of nearly two leagues. (*Dennis, Brazil*, p. 233. Paris, 1837.) 5. The Rio San Francisco, one of the

largest of the Brazilian rivers, rises in the vicinity of the Parana, in the prov. of Minas Geraes. It is the only river of importance between Bahia and Pernambuco.

Its course is interrupted by the cascade of Paulo Afonso. 6. The Rio Grande do Sul, in the province of San Pedro. 7. The Parana, or La Plata, which separates Brazil from Paraguay and the states of La Plata, and forms also the boundary-line between the province of San Paulo, Matto Grosso, and Goyaz. The Rio Pardo, the Itahy, and the Aguapehy, empty themselves into it.

In addition to the above, we may succinctly enumerate,—1. the Parahyba, in the prov. of Maranhão; 2. the Oyapoco, dividing French Guiana from that portion belonging to Brazil; 3. the Paraguayan, emptying itself into the Bay of Bahia; 4. Rio Itapicuru, known also by the name of Jacobina and Rio do Peixe, in the province of Maranhão; 5. the Rio Grande do Norte; 6. the Jiquinhonha, so celebrated for its diamonds: it empties itself into the ocean, after having watered the province of Minas Geraes; 7. The Jaguaribe, &c. &c. Many of the rivers of Brazil, especially the Marañon, like the Nile, overflow their banks, and subject the country, until the middle of January, to extensive inundations, attended with an injurious effect upon the health. The navigation of many of the Brazilian rivers, at a distance from the coast, is interrupted by dangerous falls and rapids, and the mouths of many of the smaller rivers, are subject to winds and currents, which render them extremely unsafe.

Lakes.—The lakes of Brazil are few and inconsiderable in extent: the principal are those of Los Patos and Mirim, the former of which is merely a widening of the Rio Grande de San Pedro. There are also those of Jupia-nan, Jigibua, Mangueira, Parapitanga, Jaguarassu, &c.

The form of Brazil may be said almost to resemble that of a heart, of which the greatest diameter, from E. to W., in a straight line from Cape Roque to Peru, approaches an extent of 35 degrees. The E. side of Brazil is traversed, from N. to S., at more or less distance from the coast, by a mountainous range, of which the average height is about 3,000 ft.: it is known by the name of Serra do Mar, and its greatest height is 4,000 ft. This range serves to divide the coast-land from the high land, consisting of Campos, the average height of which is about 2,500 ft. It gradually becomes lower in the direction of Paraguay, until it be lost in the low and mostly marshy plains inhabited by the Indian tribe of Guaycurus. Many geographers have fallen into the error of supposing that the prov. of Matto Grosso contains the highest mountains, and that they form a junction with the Cordilleras of Peru and Chili. But Eschwege, who resided in the country for 10 years, during which period he visited the greater part of it, confutes the supposition, in his *Brasilien de neuer Welt* (vol. i. p. 165. Braunsch. 1830). He observes that broad and extensive plains lie between, and that the sources of the Madeira, which flows in a northerly direction towards the Amazon, and of the Paraguay, taking a southerly course towards the La Plata, are both within a few miles of each other, and that the elevation of their sources is inconsiderable. The highest range of the Brazilian mountains is that which traverses the centre of the country, and its greatest altitude is about 6,000 ft. The mountains of Brazil may be subdivided into three different ranges: 1. the coast range, or Serra do Mar, above mentioned. This is by far the most picturesque of the Brazilian chains, and in some parts approaches within 16 or 18 m. of the sea, while in others it sweeps inwards to a distance of from 120 to 140 m. The soil near the coast displays evidences of the richest cultivation, and teems with abundance of the choicest productions. At a distance, and in the vicinity of the mountains, are found ancient forests (quanto virgim), whose giant trees and countless plants and shrubs, and whose luxuriant growth so thickly interwoven as almost to defy the attempts of man to force a passage, sufficiently attest the excellence of the soil on which they grow. On crossing the Serra do Mar, we meet with a barren table-land, called Campos Geraes, with few traces of cultivation. In the valleys, gold and diamonds are frequently discovered. The Serra do Mar chain commences in the Campos de Vacaria, sinks abruptly in the direction of the Rio Doce, and loses itself completely at Bahia. The celebrated Monte Pascoal, which was seen by the early navigators, forms a part of the Serra do Mar. It is known by various names in the districts through which it runs. On the E. side it is styled Serra dos Aymeres, while in the neighbourhood of Rio it is styled Serra dos Orgãos. It is worthy of remark, that the plants growing in the Campos are altogether distinct from those on the other side the Serra do Mar; and the zoologist may discover quite a new race of animals, as well as birds, in this region.

2. The central chain, called in some parts Serra do Mattoqueira, and in others Serra do Espinilino, is more extensive than the former, and comprises the highest points in Brazil; viz. the Ilaculim, near Villena; the Serra do Carassá, near Caltas Altas; and the Itambé, near Villa do Principe. This range traverses

* Both the area and pop. of this prov. are much underrated: the table, in fact, is but little to be depended upon.

† Eschwege enumerates upwards of 40 tributaries to this single river. (*Brasilien de neuer Welt*, u. 136, 137.)

‡ The Brazilians give this name to all tracts of country, whether plain or hilly, that are destitute of wood. They designate such tracts as are diversified by occasional wood by the name of *campos serrados*.

the prov. of Minas Geraes, running, in its northerly course, through Bahia and Pernambuco, and in its southerly course through San Paulo and Rio Grande. It is not only remarkable as comprising the highest points in Brazil, but is highly interesting in a geognostical, botanical, and zoological point of view. In different parts, it bears the various local names of Serra do Lopo, Serra Sallado, Serra de San Geraldo, Serra dos Esmeraldas, &c. &c.

3. The Serra dos Vertentes, or the Water-separating Mountain, so called because it divides the E. tributaries of the rivers Amazon and La Plata from the river San Francisco. This chain is sometimes called the Brazilian Pyrenees. Its loftiest and most remarkable points are those of Serra do Canastra and Marçella, where, on one side, the Rio San Francisco, and on the other, the most important tributaries of the Rio Grande, take their rise; and the Pyrenees, in the province of Goyaz, where the tributaries of the Parana are found.

Soil.—The soil of Brazil is of various descriptions. In the neighbourhood of Rio Janeiro, it consists in a great measure of plains, which bear every trace of former inundations: those which, during high tides, are covered by the sea have degenerated into swamps, upon which we find the *Rhizophora* of Linnaeus; those that lie higher consist of quicksand, and seem almost incapable of cultivation. The marshy plains at a distance from the sea might perhaps, by dint of draining, be made available for the purposes of growing rice and the sugar-cane. The soil upon the heights which surround these plains consists of a mixture of clay and coarse quartz sand; it retains but little moisture, and in times of drought becomes extremely hard. A few miles from the town, traces of considerable improvement are observed. A pretty deep layer of rich quartz sand rests upon a bottom of granite or decayed felspar. The soil is much injured, however, by the universal growth of the *Manduca**. In the mountainous districts in the interior of the provs., which are still covered with their native woods, the excellence of the soil is simply proved by the size and abundance of the trees. Neglected for centuries, a layer of the richest mould has been formed of their fallen leaves and decayed trunks, which resting again upon a rich and deep bed of clay, is of a red or yellow colour, as it contains more or less oxide of iron. Between Rio Janeiro and Villarica, the soil is every where of hard and excellent white clay; the mountains are of granite, in which the amphibole predominates.

Climate, &c.—The great extent of Brazil will, of course, account for a considerable variation of climate. Along the coast, the ordinary temperature is from 19° to 20° Reaumur, with some modifications, according to the localities. Thus, while the thermometer seldom rises above 20° at Bahia, it sometimes stands as high as 27° and 27° at Rio Janeiro. Winter is severe in the S. provinces, and it even freezes at Rio Grande de San Pedro and San Catharina. The climate, in the vicinity of San Paulo, is usually accounted the most agreeable, and the temperature permits the growth of European fruits. The west wind, in the interior of Brazil, is unwholesome, as it passes over vast marshy tracts. The sea coast, from Para to Olinda, appears to possess a similar climate to Guiana. Notwithstanding the position of Brazil between the equator and the tropics, the air, owing to the height of the greater portion of the country, is in general temperate, rather than hot. Pernambuco and a few of the other provs. suffer occasionally from drought, to which, however, the coast lands are seldom subject.

The seasons may be properly reduced to two, the rainy and the dry, although some divide them into four; viz. the spring, commencing in Sept.; the summer, in Dec.; the autumn, in March; and the winter, in June. The rainy season usually sets in about Oct. or Nov., and is preceded in some parts by fogs, thick groups of clouds, and sudden gusts of wind, as well as by occasional showers, and the temperature is also extremely variable. This season generally lasts till March. The period of its commencement and termination varies according to latitude and natural position.

Prince Maximilian observes (*Reise nach Brasilien*, ii. 194.), that in the region of Campos Geraes, Feb., March, April, and May, are usually the rainy months; June, July, Aug., and Sept., are called the cold season; and that during Oct., Nov., Dec., and Jan., the greatest heat prevails.

Mr. Von Langsdorff, formerly Russian consul at Rio, makes the following remark upon the seasons in Brazil, in a letter to a friend, given in Eschwege's *Journal* (ii. 166.):—"Winter, in this country, resembles summer in the N. of Europe; summer appears one continuous spring; while spring and autumn are unconsciously lost

in winter and summer." It may therefore be more truly said of Brazil than, perhaps, of any other country—

Stern winter smiles on this auspicious clime;
The fields are flooded in eternal prime;
From the bleak pole no wintry inclement blow,
Mould the round hant, or flake the frigid snow,
But from the breezy deep the groves inhale
The fragrant murmurs of the *castra* gale!

Products.—The most celebrated, though not the most important, of the natural productions of Brazil, are diamonds. The provs. known to possess them are Minas Geraes, Minas Novas, Goyaz, and Matto Grosso; but it is supposed that several of the other provinces are furnished with these highly prized gems. The diamonds found in Minas Geraes are generally the largest, but they are not of the purest water. The most celebrated diamond mines in Brazil are those of Serrado Frio†, which are also known by the name of the Arayal Diamantino, or diamond district, properly so called. This district is surrounded by almost inaccessible rocks, and was formerly guarded with so much vigilance that not even the governor of the province had the liberty of entering it without the special permission of the director of the mines.

The mines are wrought by accumulating the cascalhao, a kind of ferruginous earth (in which the diamonds are found mixed with flints), and washing it. The former operation is generally performed during the hot season, at a time when the beds of the rivers and torrents are dry, and the diamond-sand can be easily extracted. When the wet season arrives, the operation of washing commences. It is performed in the open air, and frequently under sheds, where the action of the sun is least likely to injure the health of the negroes. At the bottom of the shed glides a small stream, which occupies one of its sides. Sents, raked, and without backs, are arranged along the shed, in such a manner that the subaltern officers (*fetores*) are enabled to watch the negroes at work. One fotor superintendent is negroes. Each negro works in a compartment of the shed, separated or walled off, as it were, from the others. The cascalhao to be examined is placed in troughs close to the stream, and the negroes are introduced entirely naked, excepting in time of extreme cold, when they are allowed a kind of waistcoat, but without either pockets or lining. They are furnished with an alavanca, a kind of hand-spike, by means of which they separate the earth from the flint, and then, taking the largest stones in their hands, they proceed to search for the diamonds. Notwithstanding the precaution of making the negroes work naked, robbery of diamonds and of frequent occurrence. When a negro discovers a diamond, having first shown it to the fotor, he deposits it in a large wooden vessel suspended in the middle of the shed. If any negro is fortunate enough to discover a diamond weighing 17 carats, he is purchased by the government, and receives his liberty. The discovery of a stone of less weight also confers liberty upon the finder, but with some restrictions. Various premiums are distributed, according to the value of the stone, even to a pinch of tobacco. (*Diário, Brasil*, p. 345.) Notwithstanding every imaginable precaution, negroes find means to steal diamonds, which they dispose of to smugglers (*contrabandistas*) at a very low price. The latter dispose of them chiefly at Tijuco and Villo do Principe. They obtain a higher price at the latter, because their risks are greater in transporting them thither. The negroes frequently contrive to impose upon the contrabandistas, as they have the means, by some simple process, of giving crystals the appearance of rough diamonds, so as effectually to deceive them. Formerly there were as many as 30,000 negroes employed in the mines, but, according to Freyreiss, the number employed at the time of his visit to Brazil (about 1823) did not exceed 20,000.

The diamonds differ greatly in size. There are some so small that 16 or 20 would scarcely make a carat. It is rarely that, in the course of a year, more than two or three are found weighing from 17 to 20 carats; and two years may pass without discovering one of the weight of 30 carats. The administration of the diamond mines is regulated by a law of the 2d Aug., 1771, entitled, "Regimento para a Real Extração dos Diamantes do Arayal, do Tijuco, do Serro do Frio," consisting of 54 articles. Down to the date of this law, the right of working the diamond mines was farmed out; but from that period, the government have taken it into their own hands, and they are all under the superintendence of a board, *Junta Real para a Administração dos Diamantes*.

Eschwege (*Brasilien die neue Welt*, i. 120.) gives the following table of the weight of the diamonds extracted from the first discovery. As little is known respecting the weight of those discovered during the first ten years

* Although the soil of Brazil is generally well adapted for the cultivation of this plant, its tendency is, nevertheless, to exhaust it completely in the course of a few years. A plantation never yields more than three crops, after which it is abandoned.

† These mines were not actually discovered until the government of Dom. Loreno d'Almeida, although the diamonds were known to have

been in the possession of the negroes, who met with them accidentally while employed in gold-washing, and other persons ignorant of their value, long before that period. They were first brought from Brazil to London in 1729, by Bernardo da Silva Lebo. He showed them to the Dutch resident consul, who recognised them as diamonds, and informed him of his important discovery.

(from 1730 to 1740), he commences with the latter year:—

	Carats.	Average per year.
From 1740 to 1772 - - -	1,666,769	52,080
— 1772 - 1806 - - -	910,811½	26,826
In the years 1811, 14, 15, and 16 -	74,147	18,537
During the 11 years of which there are no statistical accounts to which he could gain access (i.e. from 1806 to 1822, deducting the above), and during which the produce remarkably decreased, it cannot, at an average, be estimated at more than - -	232,000	12,000

Barbiero estimates the total value of these, at the rate of 8,000 reis the carat, to be 23,869,531,000 reis, = 59,673,835 cruzadoes, = 39,782,556 Prussian dollars, or 3,475,537; so that, supposing this estimate to be tolerably correct, it follows that the total value of the diamond-washings, during a period of above 80 years, was hardly equal to 18 months' export of sugar or coffee. The crown receives one fifth of the total value.

After Mexico and Peru, Brazil has furnished Europe with the greatest quantity of the precious metals. Gold is supposed to exist in great abundance throughout the district which extends from the neighbourhood of San Paulo and Villarica as far as the confines of the river Ytènes. The greater portion, however, of the supposed mines remain at present untouched. The most celebrated mine is that of Congo Soco, situated in a beautiful valley, at the distance of about 40 leagues from Villarica. The first person who worked this mine was a Portuguese, named Bethencourt, who commenced, about 1740, to labour with his own hand. In a short time he amassed a splendid fortune. In consequence, however, of the want of care and activity on the part of his descendants, to whom he bequeathed his mines, they ceased to be productive, and were therefore disposed of, about 25 years since, to a capitão mor, named José Alvez, for the sum of 9,000 cruzadoes. The latter disposed of them, in 1825, after a good deal of bargaining, to a company of Englishmen, known as the "Anglo-Brazilian Mining Company," for 70,000l. sterling, his first demand being 90,000l. = 1,000,000 cruzadoes. (*Dennis, Brazil*, p. 334.) The operations of this company extend also to Inficionado, Catas Altas, and Antonio Pereira. In the first six months of the year 1829, the mines of Congo Soco are stated to have yielded 2,037 lbs. 4 oz. 15 gr.; and there seemed to be little doubt, that in this district, the working of the mines would be attended with great advantage, although, in other parts, the company had not been so successful. Malte-Brun estimates the value of the ingots exported from Rio Janeiro to England, from 1st Jan. to 1st July, 1829, by the company, at 4,166,000 francs.

About Villarica the gold is found in the form of powder and fine dust, in crystals, and sometimes, though rarely, in whole lumps, as Spix and Martins (*Eng. Travels*, ii. 182.) mention an instance of a massy piece weighing 16 lbs. having been found. They state that it is related to have been discovered in heaps, under the roots of plants pulled out of the ground, whither it had been accidentally washed by the rains.

The following account of the administration of the gold mines: the manner of procuring the gold; the dress and mode of working of the mines, &c., has been compiled from Spix and Martins, as it was thought advisable to preserve some account of the practices in use prior to the establishment of the Anglo-Brazilian Mining Company.

It is washed out of streams and rivers, from the clayey surface of the soil, or out of iron-stone fíoz, or quartz veins. The dress of the gold-washers (lascadores) is a leather jacket; they use a round bowl, cut out of the wood of the fig-tree, from a foot and half to two feet in diameter, and a foot deep (gamella), and have also a leather bag fixed before them. They generally select those places where the river is not rapid, where it makes a bend and has deep holes. They commence by removing the large stones and upper layers of sand, with the fíoz, or the gamella, and then take up a bowlful from the deeper and older gravel of the river. They continue to shake, wash, and strike off the stones and sand at the top, till the heavy gold dust appears pure at the bottom of the vessel, on which a little water is thrown with the hand, and the gold at length put into the leathern bag. A man may earn in this way several florins per day.

The gold formations differ much in various parts of the country. The produce of the gold mines was most considerable in the first half of the last century. Towards its close, from 70 to 80 arrobas were annually smelted in Villarica; while, previously to the arrival of the English company, the quantity had dwindled down to 40.

The royal fifth, which is separated from the gold immediately on its arrival at the smelting-house, amounted, in 1783, from the productions of Minas, to 118 arrobas; and

down to the year 1814, the total amount was 6,933 arrobas, = 85,000,000 cruzadoes. The gold, however, had decreased so much, that in 1815 the royal fifth did not amount to more than 20 arrobas. The total value, therefore, down to the year 1814, would be 34,665 arrobas. Stein (ii. 780.) computes the amount of what had been smuggled from time to time at 10,000 arrobas. All the gold in the district of Villarica is brought into the palace of the governor, where it is smelted. For this purpose 18 persons are employed, under the superintendence of an escrivaõ contador, who receives a salary of 3,000 cruzadoes. When the bars are smelted, and their weight and fineness are determined, they are returned to their owners, but cannot pass instead of coin without the Brazilian and Portuguese arms, the number of the list, the mark of the smelting-house, the date of the year, and the degree of fineness, being stamped upon them. A printed ticket is also given with each bar, which, in addition to all the above particulars, states the value in reis, the weight which the proprietor gave in gold dust, and how much was deducted for the king. It is only natural to suppose, that a soil abounding in mines of gold and diamonds, must have excited the cupidity of adventurers. Several years ago, bands of contraband miners, usually of desperate character, and forced to shun society, roved about the country, in search of gold and diamonds. They frequently discovered diamond mines, and river-courses abounding with gold, which they worked until they had exhausted them, unless previously dispossessed by the emissaries of government. The crowing of a cock is said to have been the means of putting one mine into the possession of the latter, in the district now called, from that circumstance, *Caita Gallo*.

The eagerness of all classes to engage in mining pursuits, formed, for a lengthened period, a powerful obstacle to the improvement of the country. But happily this rage is now greatly abated; and the energies of the population being directed to the safer and infinitely more productive occupations connected with the culture of the soil, mining has become an object of very inferior importance; and the value of the gold and diamonds that are now produced is quite inconsiderable, compared with that of various other articles. (*See post.*)

Iron abounds in the mountain-chain of Morro, near Villarica, and in the district lying between Inficionado and Conceição for a distance of 150 m. In the prov. of Minas Geraes, near the village of Ypanema, in the mountain of Arasaoyra, is a mine of magnetic iron-stone, known to contain from 80 to 99 per cent. pure iron. (*Stein*, ii. 780.) The first discovery of iron in Brazil took place near Villa Sorocaya, in the province of San Paulo. It was not properly worked till 1810, when the Conde de Linhares brought over a company of Swedish workmen. In the prov. of San Paulo are also the rich and extensive mines of Garasaoyra, Bomhu, and Sorocaya, just mentioned.

The working of the iron mines was, for unknown, but certainly had reasons, long prohibited by government; but that prohibition no longer exists, having been repealed soon after the arrival of the count in Brazil. Malte-Brun omitted to mention the latter fact, and the reader might infer from his account, that the prohibition had not been removed. As evincing the importance attached by the Brazilians to the opening of the mines, a gigantic pyramid has been erected upon the summit of the Garasaoyra, in commemoration of the event. In the smelting and other operations, the Swedish method is practised.

Among the other mineral productions of Brazil, may be mentioned platina, found in the prov. of Minas Geraes; and copper, found near St. Domingo, in the same prov. Precious stones abound in Brazil, especially those of which there are a great many varieties, found principally in the district of Capão. In some parts of Minas Novas, white and blue topazes are found, though the usual colour be yellow.

Vegetable Products.—Among these are sugar, coffee, cotton, cocon, rice, tobacco, maize, wheat, maudico, beans, cassava-root, bananas, ipeacuanha, ginger, yams, oranges, figs, &c. &c. Of these, the most important are sugar and coffee, which are now, in fact, the staple products of the empire, and the culture of which has increased with almost unexampled rapidity. Sugar is principally raised in the prov. of Bahia, the soil of which is admirably suited for its growth; but it is also extensively produced in some of the other provinces. The value of the sugar exported from the different ports of the empire is believed to be at present (1839) little short of 2,000,000l. The coffee of Brazil was formerly not liked in Europe, owing to defects in its treatment. The merit of having introduced a better system is due to a Dr. Lecceane, a planter from St. Domingo, who, having established himself in the vicinity of Rio, instructed the cultivators in the most approved methods of treating the plant. The effects of this liberal conduct have been most striking. Coffee is still principally produced in the vicinity of Rio; and so rapidly has its cultivation been

extended, that while its produce in 1818 only amounted to 74,215 bags, it amounted in 1836 to 704,385 bags. Estimating the average crop at 700,000 bags, worth at the port of shipment, \$1.10s. a bag, the total value of the coffee exported would be 2,450,000*l*. And notwithstanding its extraordinary extension, such are the boundless capacities of the country that the culture of both sugar and coffee may be said still to be in its infancy, and to admit of an indefinite increase.

Cotton ranks, next to coffee and sugar, as one of the principal products of Brazil. It is mostly grown in the prov. of Pernambuco, and, in respect of quality, is inferior only to sea-island cotton. Its cultivation has not, however, been increasing for several years past. The exports may amount, at an average, to about 170,000 bags of 160 lbs. each, worth about 5*l*. per bag, making in all the sum of 850,000*l*. It is grown chiefly in the prov. of Bahia, in the low lands round the bay; but partly also in the prov. of Maranhão. Tobacco is principally grown in the islands in the bay of Rio Janeiro, in that of Angra dos Reis, &c., on the lowest coast-land; it is, however, inferior in quality to that of the U. States, and the cultivation has rather decreased. Rice is largely cultivated in some places, and is exported; but the principal dependence of the population is on the mandioca, regarded by the Indians as a bequest from their prophet Suné, and which, on that account, has sometimes been supposed not to be indigenous. The culture of the tea-plant has been tried in Brazil, and the soil and climate have been found suitable to its growth; but its culture has not made, and could not rationally be expected to make, any progress, inasmuch as it can only be successfully carried on where labour is abundant and cheap; whereas it is here both scarce and dear.

The forests of Brazil, which are of vast extent and luxuriant, furnish almost every variety of useful and ornamental wood; their products being adapted alike to ship-building, carpenters' work, cabinet work, dyeing, &c. The cocoa tree is plentiful in the sandy soils along the coast. It is thicker and taller than in the E. Indies: rocoa is in general use among all ranks, and forms one of the chief articles of the internal trade. The cashew-tree, or castor-tree, is an indigenous production, and is much cultivated for the sake of the oil extracted from its seed. In general use for lamps and other purposes. The jacaranda, or rose-wood, is peculiarly valuable for cabinet work. One of the most valuable woods the *Cesalpinia Braziletto*, or Brazil-wood (called *biripitanga* by the natives), producing a beautiful red dye, has been already referred to. It is found in the greatest abundance, and of the best quality, in the prov. of Pernambuco; but being a government monopoly, it has been cut down in so improvident a manner, that it is now seldom seen in several large tracts of the coast. There are also cedars, logwood, mahogany, &c. The forests of Brazil yield large quantities of caoutchouc, now become an article of much importance, with nuts, &c.

Animals.—The Brazilian forests are full of rapacious animals; among which are the tiger-cat, the hyena, the saratu, an animal about the size of a fox, but far more ferocious, the jaguar, or tiger of S. America, the sloth, and the porcupine. The planters are much annoyed by ounces; wild hogs are common, and the singular animal called the anta, or tapir: the latter resembles the hog in shape, but is much larger; it is, in fact, the largest of the native quadrupeds, is timid and harmless, feeds like a horse, is amphibious, and capable of remaining for a long time at the bottom of lakes without coming up to respire. When killed, its flesh is generally eaten, and is said to differ but little from that of the ox.

The useful animals, as the horse, ox, and sheep, are all descended from the stocks brought from Europe by the early settlers. Their increase, especially that of cattle and horses, has been astonishingly great. Vast herds of wild cattle are met with in all the open parts of the country, particularly in the *lanos*, or plains of the S. provinces. Some idea of the numbers of these cattle may be formed from the fact stated by Mr. Luccock, that a single individual, Jose Antonio dos Anjos, slaughtered, in a single season, 54,000 head of cattle! Hides, tallow, jerked beef, horns, and bones, have long formed, and still continue to form, leading articles of export from Brazil. Above 300,000 hides have frequently been exported from Rio only in one season; and their total export from all the ports of the empire may be estimated at from 650,000 to 800,000 a year! It is only in particular situations that any use is made of the beef, which mostly becomes the prey of vultures, wild dogs, and other ravenous animals. Sheep being less able to defend themselves from attack, and being probably, too, not so well suited to the country, have not increased so rapidly as cattle and horses. Horses are of middling size, strong, active, and fleet. From 40,000 to 50,000 are said to be annually sent to the North. (*Modern Traveller*, xxix. 302.)

The emu, or American ostrich, is found in the Brazilian plains; and the forests swarm with innumerable varieties of birds, monkeys, &c. In the marshy countries

the boa attains to an enormous size, and they are also infested with the coral-snake, and other venomous reptiles.

Manufactures.—These, unless we call the preparation of sugar a manufacture, can hardly be said to exist in Brazil, and are restricted to the production of the coarsest species of cotton cloth, the tanning of leather, and a few of those that are simplest and most necessary; but a great number of trades are necessarily carried on. "The European stranger in Rio," says Dr. Von Spix, "is astonished at the number of gold and silversmiths and jewellers, who, like the other tradesmen, live together in one street, which calls to mind the magnificent *ruas de Ouro* and *de Prata* of Lisbon. The workmanship of these artisans is, indeed, inferior to that of the European, but it is not destitute of taste and solidity. Many trades which are very necessary in Europe are, at present, almost superfluous in the interior of this country, on account of the circumstances of the inhab. In the capital, however, and the other towns on the coast, joiners, whitesmiths, and other artisans are numerous; but tanners, soapboilers, and workers in steel, are scarce. There is a great demand for mechanics, to build sugar and other mills, to construct machines for working the gold mines, &c.; and very high wages are paid them. Hitherto no glass, china, cloth, or hat manufactures, have been established in the capital; and their erection would not be advisable in a country which can obtain the productions of European industry on the lowest terms, in exchange for the produce of its rich soil." (*Travels*, i. 198.)

Commerce.—The trade of Brazil is very extensive: her existing commercial system is one of great freedom and liberality, and is well calculated to accelerate the development of her resources. The duties on imports and exports are both moderate, and are imposed for the sake of revenue, and not for prohibition: her imports comprise most sorts of manufactured goods suitable for her population and climate, particularly cottons, linens, woollens, and hardware, from England; flour, coarse cottons, beef, pork, &c., from the U. States; wine, silks, salt, brandy, olive oil, &c., from France and Portugal; limes, lace, pitch, &c., from Hamburgh, &c. Cottons, which are by far the principal article of import, are mostly all brought from England; and the importance of the Brazilian market may be learned from the fact that, in 1837, when the trade of this country was unusually depressed, the declared value of the various descriptions of cotton goods shipped for Brazil amounted to 1,014,485*l*. During the same year, our exports of all sorts to Brazil amounted to 1,824,082*l*; but in ordinary years they now generally amount to about 2,500,000*l*. The total amount of the exports from the U. States to Brazil, during 1837, was 1,432,220*l*. of which 1,301,217*l*. were domestic, and 131,003*l*. foreign produce. Perhaps we may estimate the total value of the imports of ordinary merchandise at 4,000,000*l*. or 4,500,000*l*. a year.

But the largest and most valuable of all the articles imported into Brazil does not appear in the list of imports. According to a convention entered into by this country with the Brazilian government, the importation of slaves into Brazil should have entirely ceased in 1830. Far, however, from this being the case, the belief is, and it appears to be perfectly well founded, that their importation is carried on to as great an extent at present (1839) as at any former period. There is, in fact, no reason to think that it has sustained any material interruption from the convention alluded to, and the measures we have taken in relation to the trade. It is difficult, on such a subject, to get at any thing like accurate information; but Mr. Fowell Buxton, who has carefully inquired into the facts, is of opinion that the importation of slaves into Brazil, since 1830, cannot be estimated at less than 78,000 annually! (*African Slave Trade*, 1839, p. 12.) And, immense as this amount may appear, there seems to be pretty strong grounds for thinking that it is but little, if any thing, above the mark. It is affirmed, by those who have had good means of coming at the truth, that recently upwards of 50,000 slaves have been imported in a single season into Rio only!

Whatever may be the ultimate effect of this prodigious importation of Africans, there appears little hope of its speedy reduction. The boundless extent of fertile and unoccupied land in Brazil admirably suited for the growth of sugar, coffee, cotton, and other colonial staples; the growing demand for them, and the thinness of the existing population, which prevents the planters from extending their concerns to rapidly as their interest requires, constitute irresistible temptations to the importation of slaves; while the limited extent of the voyage, and the facilities which the all but interminable coasts and numerous bays of Brazil afford for their secure landing, enable them to be introduced with an ease and expedition unknown anywhere else. The making the trade piracy, and the capital punishment of those engaged in it, might, perhaps, do something to check it; but we

doubt whether any thing short of this will be found to be effectual.

The articles of export from Brazil have been already enumerated in our account of the productions of the country. The principal are coffee, sugar, and cotton; and then follow hides, and other animal products, gold and diamonds, cabinet and dye-woods, drugs, gums, nuts, &c. The export trade of Brazil is principally carried on with Hamburgh and the other Hanse towns, and the U. States. This would not, however, be the case, were it not that Brazil sugar and coffee are virtually excluded from our markets. Were the duties on these articles reduced, so

as to admit of their being brought into home consumption, our trade with Brazil would be very much increased. At present we obtain payment for the principal part of our exports to Brazil, at second hand, by drafts on Hamburgh and New York.

For some account of the money, weights, and measures of Brazil, see PORTUGAL.

We subjoin a statement, derived from the best authority, of the average amount of the exports of Brazil, specifying the amounts shipped from each province, and their values at the port of shipment:—

Middle Provinces.					£	£	£
RIO. — Coffee	-	-	-	bags, 550,000	at 3 10 0 per bag	-	155,000
Hides	-	-	-	No. 300,000	— 0 13 0 per skin	-	1,500,000
Sugar	-	-	-	cases, 22,000	— 11 16 0 per case	-	250,000
Cotton, drugs, dyes, gold, and diamonds	-	-	-	-	-	-	500,000
Northern Provinces.							2,880,000
BAHIA. — Coffee	-	-	-	bags, 10,000	at 3 10 0 per bag	35,000	
Cotton	-	-	-	— 47,000	— 4 0 10 —	190,000	
Sugar	-	-	-	cases, 58,000	— 10 0 0 per case	580,000	
Tobacco	-	-	-	packages, 15,000	— 3 4 0 per pck.	50,000	
Drugs, hides, leather, rice, rum, &c.	-	-	-	-	-	20,000	
CEARA. — Cotton	-	-	-	bags, 14,000	— 4 13 0 per bag	65,000	875,000
Hides	-	-	-	-	-	5,000	
MACAYO. — Cotton	-	-	-	bags, 10,000	— 4 10 0 per bag	45,000	70,000
Sugar	-	-	-	cases, 3,000	— 10 0 0 per case	30,000	
MAHANIAM. — Cotton	-	-	-	bags, 75,000	— 4 10 8 per bag	340,000	75,000
Rice	-	-	-	-	-	60,000	
PARA. — Cocoa	-	-	-	bags, 60,000	— 0 16 8 per bag	50,000	400,000
India rubber	-	-	-	tons, 300	— 66 13 4 per ton	20,000	
Isinglass, rice, drugs, and cotton	-	-	-	-	-	180,000	
PERNAMBUCO. — Cotton	-	-	-	bags, 60,000	— 5 0 0 per bag	300,000	250,000
Hides and dye-woods	-	-	-	-	-	100,000	
Sugar	-	-	-	cases, 20,000	— 10 0 0 per case	200,000	
PARAIBA. — Cotton	-	-	-	bags, 20,000	— 5 0 0 per bag	100,000	600,000
Sugar	-	-	-	cases, 5,000	— 10 0 0 per case	50,000	
Southern Provinces.							150,000
RIO GRANDE DO SUL. — Hides and tallow, (chiefly coastwise to other ports, but) foreign export, about	-	-	-	-	-	100,000	2,420,000
SANTOS. — Sugar, rice, and coffee, (much direct to Rio, but) foreign export	-	-	-	-	-	100,000	
							200,000
							5,500,000

Population.—The population of Brazil, in 1830, is stated by Cannabich, upon the authority of documents existing in Brazil, to amount to 5,735,502. Malte-Brun estimates it, for the same year, at 5,340,000. Balbi computes the total at 5,800,000, subdivided as follows:—

Portuguese, or Filhos do Reino, Creoles, &c.	900,000
Mestizcos (free) and mulattoes	600,000
(slaves)	250,000
Free negroes	180,000
Negro slaves	2,925,500
Converted Indians	300,000
Independent Indians, European settlers, &c.	150,000

But we are satisfied that the highest of these estimates is very decidedly under the mark, and that the pop. of Brazil may at present (1839) be safely estimated at from 6,500,000 to 7,000,000. Exclusive of the immense importations of negroes from Africa, amounting, as previously seen, to about 80,000 a year for several years past, the white immigrants have, in some late years, amounted to from 8,000 to 9,000. But, supposing the entire immigration of whites and blacks to have averaged 80,000 a year since 1829, that would make, in the interval, an addition to the pop. of about 800,000; for, owing to the indulgent way in which slaves are treated in Brazil, the presumption seems to be that their natural increase, during the period in question, will have, at least, equalled the deaths. Even if we were not aware of this extraordinary immigration, the rapid increase of commerce and wealth would leave no doubt of there being a nearly corresponding increase of population.

In Brazil, unlike the Spanish and English colonies, there is hardly any political division of castes, and very few of those galling and degrading distinctions which have been made by all other nations in the management of their colonies. This was not intended by the mother country, but has arisen from the circumstances connected with the colonisation of this vast territory, which rendered intermarriage with the natives inevitable. It is true that, according to the old code, people of colour are not eligible

to some of the chief offices of government, nor can they become members of the priesthood; but, from the mildness of the laws, the mixed classes have gained ground considerably, and the regulations against them are evaded, or rather have become obsolete. Marriages between white men and women of colour are by no means rare; and the circumstance is scarcely observed upon, unless the woman be decidedly of a dark colour, for even a considerable tinge will pass for white. The laws as to slaves are peculiarly humane. (*Modern Traveller*, xxix. 91., and the authorities there referred to.)

It will be seen, from the previous table, that the number of the aborigines is very inconsiderable, and the diseases introduced by Europeans are said to produce a fearful mortality amongst them. At the time when the Jesuits, Anchieta and Nogueira, exerted themselves to introduce European civilisation, an epidemical small-pox suddenly carried off two thirds of the pop. (*Southey's Brazil*, i. 294.)

The Brazileiros, or native Brazilians—those born of Portuguese parents in Brazil—amount to about 600,000. They appear to inherit all the idleness and inactivity of their European ancestors. Weech remarks, "that the very narrow compass in which the necessities of the poorer classes are confined is almost incredible. A hut, constructed of thin poles of wood, plastered together, as it were with earth, and covered with straw, is ample security against the sun and rain; a straw mat serves them as a bed, seat, and table; a dish and pot complete the house and cooking apparatus; a couple of cotton shirts, a pair of linen trowsers, a calico jacket, a pair of wooden shoes, and a coarse straw hat, complete a wardrobe that furnishes them handsomely for a year; and a kitchen-garden, a few fruit-trees, and a mandioc field, furnish them with a plentiful subsistence. Give them but a viola (a small guitar strung with metal strings), and some tobacco to make their much-loved paper cigars, and their 6-year wishes are gratified. Smoking the latter, and drumming on the former, they can beguile entire half-days in a

state of enviable forgetfulness, vegetating like the plants. A few fowls, sent to the city from time to time, furnish the necessary supplies; and thus are thousands of families, whose annual income does not exceed 20 mil-rees" (54 florins.—4l. 10s.).

The wealthy inhabitants of the country differ only from those of the city in their greater ignorance. Wealth alone possesses value in their eyes; knowledge and character appear to them almost superfluous. The stranger, therefore, who cannot boast of wealth is, in their estimation, a very insignificant person.

Dénis gives the following quotation from an unpublished voyage in Brazil, by M. de Tollenare, in which he distinguishes between the vanity of the Parisian and the Brazilian:—"The vanity of a Frenchman," says he, "peeps out in his conversation, by his pretensions to wit; if he be rich, he wishes every body to believe that he owes his wealth to his talents, although it is more frequently due to chance. His luxury will be the expression, more or less happy, of good taste. He refuses upon the conveniences of life; follows the most absurd fluctuations of fashion; pretends to an admiration of the fine arts, while he admits within the circle of his friends only those who manage flattery with address."

"The Brazilian, infected with the sin of vanity, is self-satisfied, and does not care to conceal it; whatever may be the source of his wealth, he never considers the means by which he obtained it as any reproach to him; he never strives to disguise them; let him be but rich, and he is insensible to shame; when he is poor, he is perpetually exhibiting *maladresse*." His luxury is rude and solid; his admiration rests upon substantial ornaments and massive jewels. Both men and women bestow much attention on their toilet, when they appear in public; 'Madame' repairs to mass, attended by a numerous retinue of slaves, richly attired; and on her return, she perhaps squats upon a mat, to eat, with her fingers, dry fish and mandioc!"

The planters of Brazil are very similar to those of other countries. The possession of an *engenho* (sugar-plantation and manufactory) establishes, among the cultivators, a sort of nobility. A *senhor d'engenho* is always spoken of with respect to attain this rank is the object of every one. When the *senhor* is in the company of his inferiors, or even of his equals, he is reserved, holds his head high, and speaks in that loud and commanding tone, that betokens the man accustomed to be obeyed. (St. Hilaire.)

The mulattoes (commonly called *Pardos*, signifying of a brown colour, for the term *mulatto* is regarded as a reproach in Brazil) are the offspring of Europeans and negroes. They show considerable ingenuity and perseverance in the mechanical arts, and are even said to display a taste for painting.

There can be no doubt of the effectual influence of the mulatto in the political affairs of the country; a physical organisation essentially energetic, and which fits him to bear up against the heat of the climate; his activity and his intelligence, point him out as a person likely to make a conspicuous figure in a revolution, if not to organise a movement.

The Creoles are those born in Brazil of African parents; the *Mamelucos* are the offspring of whites and Indians; the *Curioccos*, of negroes and Indians; and the *Cubros* of mulattoes and negroes. The African negroes form, as has been seen, a very large proportion of the population. Their condition, though not equal to that of the slaves in Buenos Ayres and the adjacent countries, is upon a far better footing than in many other colonies. It varies, however, in the different provinces, and the course of restraint is milder in those situated in the interior. In the provinces formerly inhabited by the less warlike races among the Indians, who formed early alliances with European, the introduction of negroes has been less necessary. Such, for example, is the case with Rio Grande do Sul, Uruguay, San Paulo, and the countries traversed by the Amazon. The negro population is most numerous in the provinces devoted to the raising of sugar and coffee, as Bahia and Rio Janeiro; and in these probably they have the greatest facilities for obtaining their liberty. The negroes brought to Brazil belong generally to Angola, Anguz, Benguela, Cabinda, Mosambique, and Congo. Since the recent attempts to repress the trade, Koronandou, or negroes from the Gold Coast, who are thought to possess a greater degree of intelligence, are not so frequently met with. There are three modes by which the negroes of Brazil obtain their liberty; it may be granted them by their master while living, or he may bequeath it to them by his will, or they may obtain it by ransom.

There is a practice said to be common in Brazil, which tends in some measure to alleviate the horrors of slavery. If a stranger passing in the street, or being in a dwelling, hear the cries of a negro undergoing the *bastinado*, his voice may immediately arrest any further chastisement. Every one, however licensed, is bound to cease instantly, under pain of committing a grave injury against the party

who implors his clemency, and whose words possess all the force of an official command. "Basta, basta, *Senhor!*" Enough, enough, Sir! are the words employed upon this occasion. The free Negroes, of whom the larger number are found in Rio and San Salvador, do not prove such useful members of society in the cities as in the country, where they not unfrequently become wealthy farmers.

The Brazilians divide the Indian races into "Indios *mamelucos*" civilised or converted Indians speaking the Portuguese language, and *Tapuios* or *Gentios*, or wild hordes.

The general opinion has been that the whole American race, from the polar regions to the Straits of Magellan, offered no distinctive traits, and that it was almost impossible to subdivide it. There appear, however, to have been two dominant races in Brazil, which, though analogous as regards certain customs and traditions, seem nevertheless to be pretty distinct.

The *Tapuios*, or natives of Brazil, are robust and well made; the colour of their skin, somewhat resembling copper, is found to be of various shades among the different tribes: they have prominent cheek-bones, their hair is black and sleek, and hangs over the shoulders, and instances are related by Roulox Baro of its growing so luxuriantly as to form a sort of garment. They are in the habit, like other American races, of painting themselves red and other colours: they pierce the under lip, for the purpose of introducing a light wooden ring or some other ornament, which they prize beyond precious stones, and never remove. It has not been clearly ascertained whether all the tribes of the *Tapuios* were anthropophagi in the full extent of the word; that is to say, that they sacrificed their enemies to their vengeance. There is no doubt, however, that the greater part of them were cannibals. It has been said that it was the custom of the *Tapuias*, when very old, to give themselves as a burnt-offering to their children, who devoured them after having put them to death!

The other dominant race consisted of the collective tribes known under the common name of *Tupis*. The *Tupinambas*, as the *Tupinambas*. Before the conquest of Brazil, they formed establishments of towns, containing from 5,000 to 6,000 inhab., of which, however, at the present day, no vestiges remain. Like all the other natives, the *Tupinambas* painted their skins a bluish-black and red, and though the devices were arbitrary, they bestowed much care upon them, and a whole day was not unfrequently occupied in delineating those singular combinations in which they delighted. Among the *Tupinambas*, the chief was at the same time elective and hereditary; that is to say, that the preference was generally given to the son as his father's successor, though the custom does not appear to have been immutable. It is related that Montaigne, on meeting an Indian chief at Havre, inquired, through an interpreter, what was his right among his tribe; upon which the latter replied, "It is that of marching foremost to the battle;" and this might be said to express succinctly the extent of power assigned to him by his people. The *Tupinambas* inhabit chiefly the coast from the river Camama to that of San Francisco. The *Corvados* were formerly very numerous, but are now reduced to a number comparatively insignificant. They dwell chiefly on the banks of the Rio Xopotó, in the prov. of Minas Geraes. They have one trait that distinguishes them from most other Indian tribes, i.e. they bury their dead. The *Corvados*, it appears, have lost much of their primitive ferocity, but also much of their former courage and intelligence. They have a curious festive dance, which they perform round a large vessel of liquor. The chief holds a maraca or castanet in his right hand, and dances round the vessel: his motions are accompanied by a low monotonous singing; all the rest stand round the vessel, and the vessel, starting at him, sometimes break out into immoderate cries. After the chief has partaken of the liquor, he hands it round to the others, and they generally continue drinking until they become intoxicated.

The *Cafusos*, a mixture of Indians and negroes, are a very singular race. What gives them a peculiarly striking appearance, is the excessively long hair of the head, which, especially at the end, is half curled, and rises almost perpendicularly from the forehead to the height of a foot or a foot and a half; thus forming a prodigious and very ugly kind of peruke. This strange head of hair, which seems more artificial than natural, is merely a consequence of their mixed descent. (*Spiz and Marius*, l. 324.)

The *Puris*, at the commencement of the present century, are supposed to have amounted to about 4,000, and were at that time very troublesome enemies to the Brazilians. Not less than 144 *fazendas* have been from time to time destroyed by them. The Rio Doce, the S. banks of the Parahyba, San Fidélis, and the country watered by the Rio Pomba, in Minas, are the chief points exposed to their incursions. This race is more implacable than any of the Indian races of Brazil.

The Botocudos, descended from the Aymores, occupy at present the territory lying between the Rio Doce and the Rio Pardo. In the savageness of their nature they can scarcely be exceeded by the Puris. The name given to them by the Portuguese is derived from *patoku* or *botoku* (literally the bung of a cask), and is in consequence of the circular ornament which they wear in their ears and lips.

There are many other tribes, such as the *Coités*, *Tonozases*, *Carijós*, *Maconis*, *Chiquitos*, &c. &c.

The Indians of Brazil are generally of a short or middle stature, and mostly of a robust broad make. It is seldom that some of a taller and more slender shape are seen among them. They generally go naked; some, however, have a slight covering round the hips, and even where this is not the common practice, the women of particular races frequently use a sort of covering in the presence of Europeans. They almost universally paint their skins, and are fond of ornamenting their heads with feathers. The colour of their skin is a darker or lighter copper, differing according to the age, &c. of the individual. Their skin is very fine, soft, and shining. They live in irregular monogamy or polygamy. While the man is solely occupied with the chase, war, and making his arms, all the cares of the domestic concerns fall on the women. They subsist chiefly on the products of the chase, fishing, roots of various kinds, fruits found in the woods, and honey.

The general language is the Guarani or Brazilian, called also *Tupi*, and may be considered as one of three chief dialects of a primitive idiom. The three languages known as the Guarani form a family, which differs not only from all the languages of S. America, but also from all those of the New World.

Literature, &c. — It was not till 1808 that a printing press was introduced into Brazil, at Rio, by John VI., on his arrival from Portugal. A newspaper was immediately established, and it is a curious fact, that only 30 years ago there should not have been a single journal in a country where more than 30 periodical publications are now regularly issued.

The first work of importance published in Brazil did not, however, appear until 1817. It was the *Corografia Brasileira, ou descrição historico geographica do Reino do Brazil*, by Manoel Ayres de Caxal, printed at Rio, in 2 vols. 4to. The work of Henderson, "A History of the Brazils," 4to. Lond. 1821, is almost wholly translated from the above. The few works written by Brazilians prior to the commencement of printing in Brazil were printed at Lisbon.

Minas Geraes has produced a poet in the person of Gonzaga, whose poems are extremely popular amongst the people. His poems, chiefly lyrical, under the title of "Marília de Dirceu," por F. A. G., were published at Bahia, in three parts, and have gone through numerous editions. The first part had reached a fourth edition in 1812. When Brazil shall one day have a literature of its own, Gonzaga "will have the glory of having attempted the first Anacreontic tones of the lyre on the banks of the pastoral Rio Grande and of the romantic Jequitinhonha."

Notwithstanding Pedro I. has founded two universities, literature appears to make no progress in Brazil. The journals would seem to engross all the literary talent of the country, though none of them can be said to be conducted with ability, or to have attained an extensive circulation. The *Mercantile Gazette*, at the head of the periodical press, numbers about 2,000 subscribers. An imitation of the "Penny Magazine" has been attempted at Rio, but the projectors having fixed the annual subscription at 50 francs per annum, its success has not been very great. The three journals which have the largest number of subscribers are the "Aurora" (about 800), the "Official Courier" (about 700), and the above-mentioned "Commercial Gazette of Rio de Janeiro" (about 2,000). A "Journal of the Parliamentary Debates" was attempted, but did not pay the cost of printing. In the year 1836, 35 journals were published in Brazil, of which 5 were of a literary and scientific tendency; 4 of the latter being printed in Rio itself. None of the journals devote much space to criticism, and they are all of a very inferior description.

A Portuguese translation of the French work, "The Art of being Happy" (of which 5 editions were speedily exhausted in the original), met with very little success, although the impression was only 500. Not so, however, with the celebrated Portuguese work, "The Art of Stealing," which is to be found in nearly every house in Brazil!

It is very rarely that any work is a source of profit to its publisher, with the exception of a journal; it is the custom here for the writer to pay for the insertion of his articles in the journals, instead of receiving any remuneration for them.

It is a difficult matter to find compositors in Brazil, and when found, they will only hire themselves for the lightest possible works. They are generally young mulattoes. Printers usually employ their slaves.

There are some good French booksellers at Rio, who keep, for the most part, epitomes and manuals. A Portuguese translation of "Faublas" appeared in 1836, and was bought up with avidity.

We are indebted to the journal "Das Ausland," 1838, Nos. 62, 63, for the greater portion of the above information.

Education. — The greatest want of Brazil at the present moment seems to be that of good elementary instruction. Hitherto most schools established in the country have been under the control of ecclesiastics, alike bigoted and uneducated. The increase of such schools would be an evil rather than a good. Luckily, however, the influence of the clergy is every day becoming less powerful; and several respectable academies have been opened in most of the large towns by parties not under their guidance. But, speaking generally, there are as yet no means in Brazil by which even the children of the middle classes can acquire any thing like a really good and useful education. Till some efficient measures be taken to supply this defect, but little improvement need be looked for either in the morals or literature of the people.

Income and Expenditure. — At an average of the years 1832-33, 1833-34, and 1834-35, the income and expenditure of Brazil were as follows: —

	Income.	Expenditure.
1832-33	13,332,395 dollars	12,692,875 dollars
1833-34	12,978,029	12,016,691
1834-35	14,419,551	12,968,250
The budget for the year ending the 30th of June, 1839, was fixed as follows: —		
Ministry of the interior	-	1,527,072 dollars
Do. justice	-	809,945
Do. foreign affairs	-	163,440
Do. marine	-	2,131,080
Do. war	-	3,113,224
Do. finance	-	5,877,985
Total	-	13,622,696

The revenue for the same year was estimated by the minister at 13,663,289 dollars. It principally arose out of the customs' duty of 15 (now 20) per cent. on imports, and 2 per cent. on goods exported, including transshipments, &c.; from tithes and duties on the sale of lands and houses; the mining duties, and the revenue of the diamond district; 15 per cent. on the export of hides from the Rio Grande; and a variety of other items. In 1835-36, the customs' duty of 15 per cent. on imports produced, exclusive of the provinces of Rio Grande and Para, 6,231,480 dollars. The total debt of Brazil may be estimated at 15,000,000.

Government and Administration of Justice. — Prior to 1808, Brazil was merely a Portuguese colony, but on the arrival of John VI., it was raised to a kingdom. In Aug., 1822, Brazil was forcibly separated from the mother country, and erected into an empire, and Don Pedro declared emperor. In 1824, the present constitution was drawn up, and on the 20th March, in the same year, was accepted by the emperor, who, conjointly with the two chambers, took the oath of allegiance to it. The spirit of the constitution is monarchical, and its principal heads are as follows: —

"The empire of Brazil is free and independent. Its government is monarchical, hereditary, constitutional, and representative. The reigning dynasty is that of Don Pedro. The Roman Catholic is the established religion; all other religions are tolerated, but their places of worship can receive no ecclesiastical marks of distinction. The political powers recognised by the Brazilian constitution are four in number: — the legislative or two chambers, the moderating or the emperor, the executive, and the judiciary. The emperor and the general assembly represent the Brazilian nation; all their power flows from the nation. In the general assembly resides the legislative power, subject to the sanction of the emperor. The general assembly is composed of two chambers, the chamber of deputies and the senate. The senators are elected for life, and chosen by the provinces. The chamber of deputies is elective and temporary. To the chamber of deputies alone belongs the right, — 1st, of imposing taxes, and regulating all matters of finance; 2dly, entire power as to the state of the army and navy; 3dly, of choosing a new dynasty in case of the failure of issue of the regnant. The proceedings of each chamber are public, excepting where the exigency of the state demands their being secret. No senator or deputy can be arrested during the continuance of his mandamus. It is not lawful to be at the same time member of both chambers. The power of judging the individual offences of members of the royal family, ministers, councillors of state, senators, and deputies, belongs solely and absolutely to the senate. The executive power resides with the emperor, which he exercises by means of responsible ministers. The emperor calls together the general assembly, declares war, and concludes peace; but whenever the safety of the state allows, he has recourse to the

advice of the general assembly. The ministers are responsible, and are impeachable on the ground of treason; embezzlement of the public money, or property; of corruption, or extortion, or abuse of power, or violation of the freedom, safety, and property, of the citizen. Any elector is eligible for a deputy, provided he derive from his property, trade, or employment, a specified net revenue.

The number of senators is 54, and of deputies 548. Each senator and deputy receives a certain amount of salary. Parliaments are quinquennial, and each meeting lasts 4 months. The executive power is delegated to 6 ministers, under whose control are placed all matters connected with the interior, foreign affairs, justice, marine, war, and finance.

Brazil is divided into 18 provinces, for the purposes of district government, and their affairs are administered by as many presidents, who are styled "presidentes de provincias."

The affairs of the emperor's palace employ 255 persons. The diplomatic body is composed of two envoys-extraordinary, one resident at the court of France, the other at that of England; there is also a resident in Austria, and a chargé d'affaires in Portugal, Spain, Belgium, the Ha-seutic republics, Prussia, Rome, Naples, Florence &c. In America there are three; viz., in the U. States, at Buenos Ayres, and at Monte Video. The secretaries and attachés amount to 18.

The Brazilian aristocracy, in 1837, was composed as follows:—16 marquises, 6 counts, 19 viscounts, 20 barons, and 13 ladies, preserving the titles of their deceased husbands. The nobility is not hereditary.

Brazil was recognized as an independent empire by Portugal, 7th Sept., 1822, and subsequently by the other cabinets of Europe.

Don Pedro II., the present emperor, was born 2d Dec., 1827, and therefore is not of age to govern in Brazil until 1842. A provisional council of regency was formed on the abdication of Don Pedro, consisting of 3 members, nominated by the senate. This council was soon succeeded by another, but the power was shortly afterwards vested in an individual, in which manner it is still exercised. The present regent is Don Duogo Antonio Felpe. His authority came in the course of 1839, and the tendency they devolves upon the heir-apparent to the crown, Donna Januaria, sister of the emperor, born 1st March, 1821.

As regards legislation, every thing remains to be done in Brazil. Where a statute-book is wanting, the administration of justice must be fluctuating and uncertain. The criminal code is a curious memorial of the turbulent times of 1830, when it was compiled, state offences being treated in it with the greatest indulgence. In consequence, government found it imperatively necessary, on the increase of crime in the provinces, and the progress of disaffection in the disturbed districts of Para, Rio Grande do Sul, and San Pedro, to have recourse to far stronger punishments than were warranted by the letter of the law.

As the prosecution of criminals is left to the parties who have been injured, it not infrequently happens that crime goes altogether unpunished, parties being unwilling to undergo the expense and trouble of prosecution. The consequence of this system of administration of the law is, that private revenge very often supplies the place of public justice. Mathison (p. 138) mentions an authenticated instance of an individual who had committed no less than four assassinations in one year, from motives of private revenge, and in every instance he escaped without being called to any account.

Religion.—The established religion of Brazil is the Roman Catholic; but all other religions are tolerated. One of the chief sects at Rio is that known under the name of Sebastianistas, in honour of the patron saint of Rio. Their chief point of belief is the re-appearance of the king Don Sebastian of Portugal, killed in the disastrous battle of Alcazarquivir, in 1578, who they suppose did not perish, but are firmly persuaded that he is still alive! This, in fact, was long the popular belief in Portugal.

Ecclesiastical affairs are under the direction of an archbishop, at Bahia, (originally a bishopric, being the first founded in Brazil, in 1522, and raised to the archiepiscopal rank in 1667;) 6 bishops; viz., at Rio, Pernambuco, Maranhao, Para, Mariana, and San Paulo; and 2 "prelacies," with episcopal powers; viz., Goyaz and Cuyaba. The church of Brazil has been for some time engaged in a dispute with Rome as to the appointment of the bishops, the pope claiming the sovereign right of nomination, which the church rejects.

Monasteries and nunneries are extremely numerous in many parts of Brazil. The saints' days are represented by many to be celebrated in a manner as splendid as at Rome herself. A recent writer (Dénia, p. 132.) observes, that neither the carnival at Venice, nor the declining masquerades of Paris, can convey an exact idea of the tumult and the extreme absurdities which prevail during the days of the "carnavao," or carnival, not only at Rio, but throughout the cities of Brazil. Luckily, however, measures

have been taken for lessening the number of these nurseries of vice and idleness. The revenues of many of them revert to the crown after a certain period, and no new member can now be admitted.

Army and Navy.—The land forces amount to from 60,000 to 65,000 men; of whom 15,000 are regular troops. The latter have received considerable additions of late years, for before the last insurrection they did not exceed 8,000.

The remainder of the military force consists of regular and local militia: the former may be despatched on foreign service, while the latter does not leave the place of their abode.

The local militia, in which every man from 16 to 60, who is not already enrolled in the regular militia or the troops of the line, may be called upon to serve, constitutes an important defence, and is chiefly employed in maintaining internal order. One great use may be said to be that of keeping up a certain military order among the people. Its chief officers are the "capitao mora," or colonels.

The navy numbers 1 ship of the line, 5 frigates, 6 corvettes, 13 sloomers, 4 steamers, &c.; but they are all in a very inefficient state.

Discovery and Historical Sketch.—It is generally believed that the first discovery of Brazil was made on the 26th of January, 1500, by the Spaniards, under Vincente Yanez Pinçon, a native of Palos, and one of the companions of Columbus. He is said to have touched at Cape St. Augustin, and to have subsequently coasted along the shore as far as the river Amazon, and thence to the mouth of the Orinoco. His discovery does not appear to have been attended by any important results, for he made no settlement, but merely claimed the country for Spain.

In the same year, Pedro Alvarez Cabral was appointed admiral of a large fleet sent out by Emanuel, king of Portugal, to follow up the successful voyage of Vasco de Gama in the east. Adverse winds drove the expedition so far W. that, on the 25th of April, Cabral fell in with the coast of Brazil, which he supposed at first to be an island; and on Good Friday the fleet cast anchor in a commodious harbour, to which he gave the name of Porto Seguro. Having taken possession of the country for the crown of Portugal, by erecting a cross, and giving it the name of Terra de Santa Cruz, Cabral proceeded on his voyage, taking care, however, in the first place, to send information of his discovery to his sovereign. Soon after this intelligence reached Portugal, Emanuel despatched a small squadron to explore the country, under the command of the famous Amerigo Vesputi, who had been invited from Seville for that purpose, in 1492, and who made a second voyage in a subsequent year. In 1504, he again returned to Europe, bringing with him a cargo of Brazil-wood, &c.

It was not until 1498 that a third voyage of discovery was undertaken to Brazil, as the advantages which had accrued on the former voyages did not appear to have answered the expectations of the projectors. Amerigo Vesputi was then despatched by the king of Spain, to whose service he had returned, to take possession of the country. But this produced a remonstrance from Portugal; and a dispute having arisen amongst some of the leaders of the expedition, it returned to Spain, without effecting any thing of importance. In 1515, another expedition was fitted out from Spain, the command of which was assigned to Juan Diaz de Solis, with the ostensible purpose of finding a passage to the great Pacific Ocean. To this navigator is supposed to belong the honour of having discovered the harbour of Rio Janeiro, on the 1st of Jan., 1516, though the priority, in this respect, has been disputed by the Portuguese admiral, Martin Alfonso de Souza. On the return of the expedition to Spain, the Portuguese government claimed the cargoes, and again remonstrated on this interference on the part of Spain.

On the reign of Joan III., the coast was divided into 40 captaincies, many of which extended 50 leagues. It is needless to follow step by step the rising fortunes of the Brazilian territory. Various towns sprang up along the shore, which were subject to the vicissitudes that then usually awaited newly founded colonies. They were successively taken and plundered by the French, Dutch, English, &c., who, if not expelled, usually contented themselves with a short possession, and abandoned them, after frequently committing the most barbarous atrocities. Notwithstanding these calamities, the colony continued to increase in prosperity and importance under the superintendence of the Portuguese government. But it experienced a severe check on the annexation of Portugal to the crown of Spain in 1580, during the reign of Philip II. As the mines that had been discovered, down to that period, yielded less wealth than those of the Spanish possessions in S. America, Brazil did not receive much favour from that monarch. The Dutch took advantage of this indifference on the part of Spain; and it was not indeed until they had made considerable inroads, that an expedition was fitted out, in 1640, to expel them from the territory.

About this period, the house of Braganza was restored to the throne of Portugal. After a long and desperate struggle, the Dutch were compelled to evacuate Brazil in 1654. Henceforward it continued in the possession of Portugal, but the latter country being in a very abject impoverished state, instead of rendering assistance to its colony, was compelled to rest its principal hopes of being able to maintain an independent existence on the wealth and resources of Brazil, which it subjected to all the galling and vexatious restraints of the old colonial system.

In 1808 a new era began in Brazil. The French having invaded Portugal in the course of the previous year, the prince regent, John VI., and his court, accompanied by a large body of emigrants, set sail for Brazil, where they arrived on the 25th of Jan., 1808. Brazil immediately ceased to be treated as a colony. In the course of the same year, her ports were thrown open to all friendly and neutral nations; and by a decree, dated the 15th of Nov., 1814, all nations were allowed to trade freely with them.

The revolution in Portugal in 1820 was very speedily followed by a revolutionary movement of the same description in Pernambuco; and to restore tranquillity, and anticipate the further progress of revolution, the government, in 1821, proclaimed the adoption of the Portuguese constitution. Soon after this, the king having left Brazil for Portugal, a struggle commenced between the Portuguese, who wished to recover their former ascendancy over Brazil, and the Brazilians, who were resolved to preserve their newly acquired liberties, which ended in the complete separation of all connection, other than that subsisting between independent states, between the two countries. The government of Brazil having been entrusted to the crown prince, Don Pedro, he refused to admit the troops sent out by Portugal to support her authority, or to obey the instructions of the king, his father. In the following year, 1822, Brazil was declared to be a free and independent state, and Don Pedro assumed the title of emperor. After several stormy debates, the project of a constitution (*see ante*), submitted by the emperor, was accepted; but the disputes between the emperor and the chamber of deputies having continued, the former abdicated the throne in favour of his son, a minor, in 1831, and singular as it may seem, the rights of the latter have hitherto been preserved; and some attempts at insurrection by the republican party have been suppressed without much difficulty, and internal tranquillity has been successfully maintained.

Considering the lengthened period during which Brazil has been colonised; its vast extent and fertility; the variety of its productions, and its favourable situation for commerce, its progress in the accumulation of population and wealth has been extremely slow. This apparent anomaly may, however, be easily explained. The slow progress of Brazil, like that of the contiguous *ci-devant* Spanish colonies, is entirely owing to the vicious principles on which it was governed by the mother country; to the rigid exclusion of foreigners from the country; the oppressive restrictions laid on the trade and industry of the colonists; and more than all the rest, to the ignorance of the Portuguese, and their inferiority, in respect of science and art, to most other nations of Europe. Portugal could bequeath nothing to her colonies but pride, superstition, and intolerance. But since the downfall of the old colonial system, consequent on the emigration of the court to Brazil, the foundations of a new and better order of things have been laid. *Novus sæculorum nascitur ordo*. The settlement of thousands of foreigners in Brazil, and the unfettered intercourse she now carries on with all the most civilised countries of the world, have already had the best effects. And though it will require a lengthened period to counteract the joint influence of ignorance, slavery, and a debasing superstition, Brazil is rapidly rising, not merely in the scale of wealth and population, but also in that of civilisation.

BRAZZA, an island of the Adriatic Sea, near the coast of Dalmatia, dependent on the circle of Spalatro. It is about 24 m. long, by from 5 to 7 broad, and contains 20 villages, with 18,000 inhabitants. It is very mountainous and rocky: in the most elevated parts there are large tracts quite stony, and hardly fit to bear the wildest plants. Great labour and expense are necessary to bring the ground to a fit state for tillage; yet the inhabitants go on progressively increasing their cultivated land, and consequently their vintage, and diminishing their woods and cattle. Its wine is accounted the best in Dalmatia; the other vegetable productions are oil, figs, almonds, and saffron. The corn crop is extremely scanty, scarcely affording subsistence to the inhabitants for three months in the year; hence they are obliged to import to a large extent from the mainland. The stony nature of the soil, and the scarcity of fresh water, subject the island to frequent droughts. Brazza was famous in ancient times for its kids, which still continue in their former perfection. The pastures here give to the flesh not only of kids, but of lambs, a particular delicacy of

taste; the milk too of this island is far superior to that of the neighbouring countries, so that its cheese is in great repute in Dalmatia, and wherever it is known. Bees and silk are cultivated with some success; and the berries of the lentisk furnish the peasants with oil during a scarcity of olives. This island belonged formerly to the republic of Venice, and was ceded to Austria at the peace of Campo Formio.

BRECHIN, a royal burgh of Scotland, co. Forfar, on a sloping bank on the left side of the S. Esk, 7½ m. W. from its junction with the sea at Montrose. Pop. of the town, 5,000; of the town and par., 6,508. The main street, which runs nearly N. and S., is about a mile in length. Some portions of the town are very steep, particularly about the Cross. It was formerly walled, and was also a bishop's see: the bishopric was founded by David I. about the middle of the 12th century; and the portion of the cathedral which now forms the parish church still remains. It was originally a stately Gothic structure, but its architectural beauty and symmetry have been defaced by the bad taste displayed in modern repairs. It is surmounted by a square steeple 120 ft. high. In addition to the parish church, which is collegiate, there are in the town no fewer than four Presbyterian dissenting chapels, and one Episcopal chapel; there is also a new place of worship, recently built, in connection with the established church. The town contains various schools in Brechin, all of them conducted on the best principles. In the churchyard, near the cathedral, is one of those round towers, of which there is only another in Scotland, at Abernethy, and which, it is supposed, were built by the Picts, but for what purpose is unknown. It is 108 ft. high, is surmounted by a conical roof of grey slate, and has no staircase, either without or within. In another part of the town is an ancient hospital, called the *Maison Dieu*, now used as a stable; but certain funds which belonged to it afford weekly allowances to poor inhab. being the widows or children of burgesses. The Red Friars seem to have had a monastery here, but all traces of it have disappeared. (*Keith's Scot. Bishops*, edit. 1824, p. 297.) But, interesting and venerable as Brechin is for its antiquities and its historical and ecclesiastical name, it is no less important now, though in a very different department, — that of manufactures. Its staple manufacture is linen, partly bleached, (hence the number of bleaching grounds in the immediate vicinity,) and Osnaburghs, sackcloth, coffee and cotton bagging, &c. "The particular branches of manufacture," to quote from the *New Statistical Account* (No. 1. § *Brechin*), "are heckling, spinning, weaving, and bleaching. There may be employed in heckling about 30 men and women; in spinning, 200; in weaving, from 1,000 to 1,500; in bleaching, from 40 to 50. Besides the above branches of manufacture, two distilleries for spirits, three nurseries, and three lime-works, have been for some time in full operation in the immediate neighbourhood of the town." Brechin unites with Montrose, Forfar, Bervie, and Arbroath in sending a mem. to the H. of C. Registered electors, in 1828-39, 235. Of the eminent men which this place has produced, the late Dr. John Gillies, author of a valuable History of Greece, a translation of the Politics of Aristotle, and royal historiographer for Scotland, deserves special mention.

Brechin Castle, which has been for many centuries the residence of the Maules of Panmure, stands on a precipice overlooking the Esk, and is separated from the town by a deep ravine. Its castle was formerly a fortress. In 1603, it withstood a siege of 20 days by the English under Edward I.; and surrendered only when Sir Thomas Maule, its brave commander, was killed.

BRECON, or **BRECKNOCK**, an inland co. of S. Wales, having N. the cos. of Cardigan and Radnor; W. Cardigan and Caernarthen; S. Glamorgan and Monmouth; and E. the latter and Hereford. It is about 35 m. in length, by about 30 m. in breadth, and contains 482,560 acres. It is pervaded by two principal mountain chains, which, with their offshoots, occupy a large portion of the surface. The highest summits are the beacons of Brecknock, Capellante, and Crndle mountain; respectively 2,862, 2,334, and 2,545 ft. above the level of the sea. There are, however, a number of beautiful and fertile valleys. The Wye skirts the co. for a considerable distance on the N.W., and it is traversed by the Usk, Taaf, and other lesser streams. Climate rather severe and humid. Though a good deal improved, agriculture is still in a very backward state; and no proper rotation of crops is observed. Oats and barley are the principal objects of attention, but a good deal of wheat is also raised. Turnips are more extensively cultivated than formerly, and the stock of cattle and sheep is also improved. Farms mostly small, and generally occupied by tenants at will. Average rent of land in 1810, 5s. 2d. an acre. Manufactures unimportant, consisting principally of woollen cloth, the produce of domestic industry. There are iron-works on the S. confines of the co., adjacent to those of Merthyr Tydvil, Hirwaun, and Rumney, which employed in 1831 470 men. Principal towns

Brecon, Crickhowell, and Bulth. The Welsh language, though still spoken in different parts of the co., is falling rapidly into disuse. Brecon is divided into 6 hund. and 66 par. In 1831 it had 9,373 inhab. houses; 9,848 families, and 47,763 inhab. It returns 2 mem. to the II. of C. 1 for the co. and 1 for the borg. of Brecon. Registered electors for co., 1837-38, 2,295. Expenditure for the relief of the poor in 1837-38, 12,946*l*.

BRECON, a bo. and town of S. Wales, cap. of the above co., at the confluence of the Honddu and Tarew with the Usk; 144 m. W. by N. London. Pop., 1821, 4,102; 1831, 5,026: houses at the latter date, 1,150. It is an ancient, irregularly-built town, on a very beautiful and picturesque site: there are three principal streets, which diverge from the high street, and contain many well-built houses: the meanest buildings are towards the approaches, on either side; which, however, on the line of the chief thoroughfare, have been much widened and improved within a recent period: it is paved, and lighted with gas. There are four churches—St. John's, originally attached to the priory; St. Mary's, a chapel of ease (both Gothic, and nearly rebuilt in Henry VIII.'s reign); St. David's, built soon after the Conquest, and one of the oldest in the county; and Christ Church, a collegiate church, established by Henry VIII.: it is extra-parochial, and has a grammar-school attached to it. There is an endowed free school for 50 boys, and three or four small charities (the principal of which amounts to 36*l*. a year, for apprenticing poor children), and a borough and county hall, rebuilt in 1770, a good spacious building, in the high street, with the market place under it. There is a promenade along the Usk, under the old town walls, which commands a noble range of mountain scenery; and a more retired one through the priory woods. The Brecknock and Abergavenny Canal (35 m. long) commences at this town, and joins the Monmouthshire Canal (18 m. long), which last joins the Usk near Newport. There are, on it, wharfs for coal and lime at Brecon; and a tram-road (35 m. in length) at the head, for conveying these and other articles inland. Regular passage and trading boats ply on the canal. Weekly markets are held on Friday for cattle; Saturday and Wednesday for general provisions, and 5 annual fairs, for stock and agricultural produce (each preceded by a leather fair), 1st Wednesday in March, 4th May, 5th July, 9th September, and 16th November: those of May and November are also statute fairs, for hiring servants. There are no manufactures; and its trade chiefly consists in the supply of articles of general consumption to the neighbourhood, which comprises the greater part of the co. The limits of the parish comprise the par. of St. David's, St. John's, St. Mary's; the Castle, and Christ Church precincts, and the ward of Trecastle, which is 10 m. off, only connected with it for election purposes. Its present municipal limits are restricted to about one third of the former, and comprise only the town and some small portions immediately contiguous. It has 4 aldermen and 12 councillors. Previously to the Municipal Reform Act, courts of petty and quarter sessions for the borough were held, but the business was of trifling extent: there was also a court of record, for the recovery of debts, held weekly, on Mondays and Thursdays, and much resorted to. This and the petty sessions are still held. The assizes and quarter sessions for the co. are held in Brecon. Brecon has returned 1 mem. to the II. of C. since the reign of Mary. Previously to the Reform Act the privilege vested in 11 burgesses. There are 356 qualifying tenements of 10*l*. and upwards: registered electors in 1834, 339. Brecon is the chief polling town of the co. The castle of Brecon was built in 1094, from which period the town also dates its origin; many Norman families then settled in the co., whose descendants still remain. It was surrounded by strong walls: these and the castle were destroyed in the last civil war, by the inhabitants, to prevent a siege, or being saddled with the maintenance of a garrison.

BREDA, a fortified town of the kingdom of Holland, prov. Brabant, cap. arrond. and cant. on the Mook, 24 m. W. S. W. Bois-le-Duc, and 30 m. N. N. E. Antwerp. Pop. 13,000. It is one of the strongest places in the kingdom, being regularly fortified, and defended by a citadel rebuilt by William III. king of England; its position, in the middle of a marsh that may be laid under water, contributes materially to its strength. It is well built, with broad and well-paved streets; has 4 squares, a fine quay, several canals, an arsenal, town-hall, 2 Protestant and 4 Catholic churches, an orphan hospital, &c. The principal Protestant church has a spire 362 ft. in height. The ramparts are planted with trees, and afford fine promenades. It is the seat of tribunals of primary jurisdiction and of commerce; and has some manufactures of woollen goods, linen, hats, &c., with breweries and tanneries.

Breda was taken from the Spaniards by Prince Maurice, in 1600, by means of a stratagem suggested by the master of a boat who sometimes supplied the garrison with fuel. With singular address, he contrived to introduce 70

chosen soldiers into the town, under a cargo of turf; who, having attacked the garrison in the night, and secured the gates, their comrades came to their assistance, and gained possession of the town. It was retaken by the Spaniards, under the Marquis of Spinola, in 1625; but was finally ceded to Holland by the treaty of Westphalia, in 1648. (*Dict. Géographique, &c.; Watson's Philip II.*, iii. 158.)

BRÉDE (I.A.), a village of France, dépt. Gironde, (cap. near Bordeaux), Pop. 1,131.

The village would be unorthodox notice in a work of this sort, were it not that in its environs is the *Château de la Brède*, where the illustrious author of the *Esprit des Loix* was born, and where he composed the greater part of his immortal works. It is a large gloomy-looking building, in the middle of extensive plains and meadows, and is surrounded by a deep ditch filled with water, over which is a drawbridge. In the chamber used by Montesquieu, the furniture has been carefully preserved as in his time: it consists of a plain bed, a few easy chairs of a Gothic shape, and some family pictures; the room is well lighted, and from the window there is a fine view over the surrounding country. Montesquieu was much attached to this retreat. "Je puis dire," says he, "que la Brède est un des lieux aussi agréables qu'il y ait en France: au château près, la nature s'y trouve en robe de chambre, et pour ainsi dire au lever du lit." (*Lugo, art. Gironde; Inglish's Switzerland*, 8*re* p. 322.)

BREMEN, one of the three free German Hanseatic cities, on the Weser, by which it is intersected, 60 m. S. W. Hamburg, and about 57 m. direct distance from Bremerhaven, at the mouth of the Weser, lat. 53° 4' 45" N., long. 8° 48' 3" E. Pop. 42,000. The larger portion of the city, called the *Altstadt*, or old town lies on the right, and the *Neustadt*, or new town, on the left bank of the river. The streets in the latter are comparatively straight and broad, but those in the former are mostly narrow and crooked, and the houses being high they have a gloomy appearance. An island in the river is included within the city; the communication between its two great divisions being kept up by a bridge, which crosses this island. The ramparts by which the town was formerly surrounded, have been levelled, planted, and converted into fine gardens and promenades. It has 9 churches, of which the cathedral, built in 1160, is the principal: the church of St. Ansgarius has a spire 325 ft. in height. The new town-hall, formerly the archiepiscopal palace, is a building of the same elaborate character as the town halls in Bruges, and other cities of the Netherlands. There is also an old town-hall, built in 1165, beneath which are the famous wine cellars, containing vats filled with hock, said to be considerably more than 100 years old. It has, also, an exchange, with currency and toll-rooms; a museum, built in 1801, containing a public library, lecture and reading-rooms, &c.; a theatre; a building called the *Schütting*, or place of meeting of the elder merchants (*Conventiculum Seniorum*); a weighing-house; a *padagogium* (for scientific instruction), gymnasium, high school, school of commerce and navigation, school of design, &c.; 2 orphan asylums, and numerous other charitable institutions. One of the most interesting objects in the town is the observatory, from which Dr. Olbers discovered the new planets Pallas and Vesta, in 1802 and 1807. Both sides the river are lined with hand-ome and convenient quays.

The manufactures of Bremen are pretty considerable. The principal are those for the preparation of snuff and cigars, which employ a great many hands. There are also about 100 distilleries; numerous factories for weaving, and establishments for bleaching linen; 2 factories for the spinning of cotton; 9 sugar refineries; with tanneries, sail and canvass factories; soap and candle do.; cordage do.; oil works, &c. A considerable trade is also carried on in the building and fitting out of vessels.

The situation of Bremen renders her the principal emporium of Hanover, Brunswick, Hesse, and other countries traversed by the Weser. In consequence, she has an extensive and increasing trade. Vessels of large size stop at Bremerhaven, on the E. side of the river, where a new and excellent harbour has been formed on a piece of ground ceded, in 1827, by Hanover to Bremen. Vessels drawing from 13 to 14 ft. water ascend the river as far as Vegesack, 13 m. below Bremen; and vessels not drawing more than 7 ft. water come up to the city. The great articles of import are tobacco, coffee, sugar, and other colonial products; whale-oil, cotton, and cotton yarn, vegetable oil, cheese, butter, wine, tea, rice, iron, spices, dye-woods, &c.

Of the articles of export linens occupy by far the most prominent place, and next to them are snuff and cigars, with hams and bacon, oak bark, rags, bones, chicory, oil-cake, refined sugar, quills, soap, lead, vitriol, &c. We subjoin a list of the principal articles imported into, and exported from, Bremen, in 1838, specifying the

quantity or (where that is not given) the value of each article.

Principal articles of import in 1838:—

Tobacco	23,518,000 lbs.	Pepper	95,000 lbs.
Coffee	14,488,000	Tar	6,524 tons.
Sugar	14,900,000	Butter	1,000,000 lbs.
Train oil	45,000 tons.	Cheese (1836)	795,417
Cotton	6,807 bales.	Tallow	153,000
Cotton yarn and twist	98	Rape oil	200,000
Wine	11,017 hhds.	Lined ditto	500,000
Tea	200,000 lbs.	Hemp ditto	14,500
Rice	2,500,000	Iron, bar and plate	6,000,000
Hides	1,150,000	do. &c.	do. &c.
Indigo	23,000		

The total value of all the articles imported by sea into Bremen in 1838 was 15,000,000 rix-dollars, or (at 3s. 2d. per rix-dollar) 2,617,500*l*.

Principal articles of export in 1838:—

Linen, fine fabrics (value)	3,445,000 rix-doll.
bagging	45,312
tickling	164 bales.
Lead	31,437 centners.
Iron and steel ware	67,407
Corn and legumes	6,621 lasts.
Tobacco, snuff, &c.	5,546,719 lbs.
Cigars (value)	100,426 rix-doll.
Wheat flour	289,011 lbs.
Butter	331,511
Cheese	286,827
Bones	3,141,742
Leather	1,514,732
Oak-bark	1,767,512
Hops	1,826,556
Cotton goods	211,787
Chicory, green and dry	35,125
Starch	640,729
White lead	109,296
Sugar, refined and coarse	286,573
Oil cake	4,921,711
Rape oil	129,608
Hutto seed	211 lasts.
Quills	1,518,800 no.
Tobacco-pipes (value)	20,418 rix-doll.
Soap (brown)	2,229 tons.
Hutto in bars	551,297 lbs.
Hams	701,531
Syrup	687,053
Bacon	977,220
Juniper berries	328,000
Wool	157,461
Wax	67,171
Wood	38,085

Total value of exports by sea in 1838, 11,500,000 rix-dollars, or 1,820,833*l*. But, exclusive of her trade by sea, Bremen has a very extensive internal trade, on which, indeed, her external trade is almost wholly bottomed.*

The shipping of Bremen has increased rapidly since 1820. About that period, most colonial and foreign goods were imported in English and American ships, as consignments on foreign account; but since then, the shipping of the town has been so much augmented that a comparatively small portion of its trade is conducted in foreign bottoms. Since then, also, the Bremen merchants have formed establishments in New York, Rio de Janeiro, Havannah, and other emporiums, both in N. and S. America; so that they have become better acquainted with the state of foreign demand and credit, and are able to conduct their business with greater advantage and security. In 1827, Bremen had only 74 merchant-ships, whereas, in January 1830, she had 151; viz. 23 ships of 200 lasts and upwards, 26 of from 150 to 200 lasts, 54 from 100 to 160 ditto, 42 from 50 to 100 ditto, and 6 under 50 lasts. She had then, also, 46 river-ships, of from 12 to 43 lasts. Bremen is the principal continental port for the despatch of emigrants for America, as many as 10,000 having embarked in the course of a single year. In 1837 there entered the port of Bremen 639 ships (including repeated voyages), of the burden of 105,003 tons, from foreign countries. Of these 20 ships, of 3,019 tons' burden, were British; and 24 ships of 7,688 tons' burden, American. Of the Bremen ships no fewer than 98 of 28,875 tons' burden, were from the United States; and 27 ships, of 6,840 tons' burden, from Cuba.

Bremen is possessed of a tract of territory lying round the city, on both sides the Weser, containing in all about 74 sq. m. with a pop., exclusive of that of the city, of 16,000; making the total pop. of the state, 68,000. The land, which is low and marshy, intersected by canals, and very fertile, is mostly appropriated to pasture. The inhab. of the city and country are all Protestants, with the exception of about 1,500 R. Catholics and a few Jews. The executive government is vested in a senate, consisting of 4 burgomasters, 2 syndics, and 24 councillors; but the principal legislative authority is in the hands of the assembly of burgeses (*Wethers*), composed of all resident citizens that pay a certain amount of taxes, without regard to their religion. The senate choose senators for life, from a list of candidates proposed by the burgeses. In 1837, the ordinary and extraordinary revenue of the republic amounted to 573,843 rix-dollars, and the ordi-

* The Bremen rix-dollar = 3s. 2d. sterling; the pound = 6,990 English grains; so that 100 lbs. Bremen = 109.8 lbs. Avordupois.

nary and extraordinary expenditure to 597,006 rix-dollars, leaving a deficit of 23,163 rix-dollars. There is an export duty of 1 per cent. *ad valorem*, on all goods shipped from, and an import duty of 2 per cent. on all goods imported into, Bremen. The port and shipping charges are very moderate. Bremen contributes 485 men to the army of the Germanic confederation.

Bremen is said to have been founded in 788. She was long one of the leading towns of the Hanseatic league. In 1640, she was summoned to the diet, and allowed a seat and vote on the Rhenish bench, in the college of imperial cities. In 1648, at the treaty of Westphalia, the archbishopric to which Bremen had given name was secularized in favour of Sweden, who held it till 1712, when it was taken possession of by Denmark, by whom it was ceded to Hanover in 1731. Bremen acquired from the electors of Hanover a full recognition of its independence and other prerogatives, which had sometimes been disputed by the Swedes. In 1806, it was taken by the French; and from 1810 to 1813, it was the cap. of the department of the Mouths of the Weser. In 1815, it was restored by the congress of Vienna to its old franchises. (*Von Reden's Statistics of the Kingdom of Hanover*, ii. 116. &c.; *Conversations Lexicon*; *Board of Trade Papers*, viii. 254. and *priv. information*.)

BIENTFORD, a town of England, co. Middlesex, bund. Ossulton and Elthorne, at the junction of the Brent with the Thames, 8 m. W. by S. London. Pop., 1821, 8,641; 1831, 9,868; houses at the latter date, 1731. It consists of one long indifferently-built street, on the great W. road from the metropolis; a modern stone bridge connects it with the S. bank of the Thames, and another (built in 1824, on the site of one very ancient) spans the Brent, which divides the town into Old and New Brentford; the former in the parish of Ealing, the latter a distinct parish. The church at Old Brentford is dependent on that of Ealing; that of New Brentford is a chapel of ease to Hanwell; both are modern structures. There are 4 dissenting chapels, 3 endowed free schools, and 2 national schools. A weekly market is held on Tuesdays, and annual fairs 17th May and 12th September. There are flour-mills, distillery, and an iron-foundry, in the town; the malting business is also carried on to some extent. These employ many of the inhabitants, the market gardens of Ealing employ others; and the traffic arising from its thoroughfare is considerable, and occupies another portion. The Grand Junction Canal joins the Brent a little below Hanwell, and its communication is continued by it to the Thames, on which there are several wharfs, between the town and Kew Gardens. Ann. val. of real prop. in 1828, of Old Brentford and Ealing, 27,463*l*; of New Brentford, 7,418*l*. It is the central town of a poor law union, of 10 parishes: the average rates of the former are 3*l* 12*s*. of the latter 1*l* 5*s* 4*d*. the former has five, the latter two guardians. Brentford is usually considered the co. town, but it has no public hall, nor separate jurisdiction. There is a court of requests for debts under 40*s*. held during the summer half year in the town; during the other at Uxbridge; its jurisdiction extends over the hundreds of Elthorne and Spellthorne. It is the chief polling town, where the co. members are nominated.

BRESCIA, (an. *Brizia*) a city of Austrian Italy, cap. prov. same name, on the Garza, and near the left bank of the Mella, at the foot of the Alps, on the margin of the great plain of Lombardy, 51 m. E. Milan, and 31 m. N.N.E. Cremona; lat. 45° 32' 18" N., long. 10° 13' 34" E. Pop. 35,000. It is surrounded by walls and ramparts, and has a castle on a hill on an eminence within the walls: the streets are broad and straight, and its numerous squares, public buildings, palaces and fountains, give it an air of grandeur and magnificence. It is the seat of a bishopric; and has a fine modern cathedral of white marble, begun in 1604, and finished only in 1829; an elegant modern episcopal palace, and many churches and convents, some of which are said to be ornamented with pictures by the masters of the Venetian school. The Palace of Justice (*Palazzo Publico*), built on the site of an ancient temple, is curious, as exhibiting that incongruous mixture of Gothic and Grecian architecture to be found in so many of the edifices of northern Italy: it has also a fine museum of antiquities, a large theatre, a *monte-de-pieta*, a public library, lyceum, gymnasium, an atheneum, or academy of science and belles-lettres, with numerous hospitals and eleemosynary establishments, and no fewer than 72 public fountains. It is distinguished by its industry and trade. Near it are large iron works, and the arms and cutlery of Brescia have been long reckoned the best in Italy: it has also fabrics of silk, wax, paper, &c. with numerous oil-mills, tanneries, &c. A fair commences annually on the 6th of August; and a large building is constructed outside for the accommodation of those frequenting the fair. Brescia has produced many eminent men, among whom may be specified Tartaglia, Mazzuchelli, Agoni, &c.

This city is very ancient. It is supposed to have been

the cap. of the *Cenoman*, and it subsequently became a Roman colony and *municipium*. It was sacked by Attila. Being declared by Otto I. a free city, it was governed for nearly 300 years by its own consuls; but being distracted by the contests of the Guelphs and Ghibellines, it placed itself, in 1426, under the Venetian government. It was taken by the French during the League of Cambray, and having revolted, was retaken by them by storm in 1512, when it was given up to military execution. On this occasion, the Chevalier Bayard, the knight *sans peur et sans reproche*, was severely wounded. It has also been repeatedly laid waste by the plague and smallpox; and was in part destroyed, in 1769, by the explosion of a powder magazine. During the ascendancy of Napoleon, it was the cap. of the dep. of Meila.

The chief interest of the town is derived from its antiquities. During excavations, begun in 1820 and continued till 1826, there was discovered a beautiful temple of white marble, adorned with columns of the Corinthian order; and under the pavement was found a bronze statue of Victory, between 5 and 6 ft. high, represented as a very fine specimen of art. (*Rampoldi*; *Corder's Italy*, ii. 60., &c.)

BRESLAU, the second city of the Prussian dominions, cap. prov. Silesia, and of a regency and circ. of same name, at the confluence of the small river Ohlau with the Oder; lat. 51° 57' 30" N., long. 17° 27' 18" E. Pop. (1837) 88,868, of whom about 60,000 were Protestants, 24,000 Catholics, and the remainder Jews, &c. It comprises the old and new towns, with various suburbs, some of them built on islands of the Oder, and united to the body of the town by numerous bridges. Streets in the old town mostly narrow; but those in the newer parts are broad, and the houses good; while the number and magnificence of the squares and public buildings give it an air of splendour. Among the latter may be specified the cathedral, founded in 1148; the church of St. Elizabeth, with a spire 364 ft. (*Murray*) in height; and several other churches; the *acade'mic* convent of the Augustines; the palace, the government-house, built by Frederick the Great; the archiepiscopal palace, town-house, mint, Catholic gymnasium, theatre, Exchange Buildings, university, barracks, &c. A colossal statue in cast-iron of Marshal Blücher, by Rauch, was erected opposite to the Exchange Buildings in 1827, to commemorate the decisive and important victory gained by the Marshal and the Prussian landwehr under his command over the French under Macdonald, on the Katsbach, in 1813. The university was founded in 1702, and had in 1834, 920, and in 1837, 721, students,—a decline, we may remark, not peculiar to this, but which extends to all the other Prussian universities. Breslau is the seat of government for the prov., has a court of appeal for the latter and for the regency, a supreme council of mines, and other administrative establishments. Besides the university, it has a school of industry, of deaf and dumb, of surgery, one Catholic, and three Protestant, gymnasia, a seminary for the instruction of schoolmasters, a school of architecture, a school of arts, and an immense number of inferior schools, a society for the promotion of public utility, &c. The library of the university contains above 130,000 volumes, and there are several smaller collections all open to the public. There are a great number of richly endowed hospitals and other charitable institutions, among which may be specified one for faithful servants. It has numerous breweries and distilleries (of the latter nearly 100), with manufactures of linen, cotton, wool and silk, alum, soap, plate, jewellery, &c.; and is the centre of a very extensive commerce, being in some measure the *entrepôt* of the prov. Exclusive of its own products, the greater part of the linens, cottons, cloth, &c. manufactured in Silesia, are disposed of at its fairs. Metals from the mines, and timber from the forests in the upper part of the province, are also brought here in large quantities, with flax and hemp, madder, and oxen from the Ukraine and Moldavia. Exclusive of its other fairs, two great fairs for the sale of wool are held annually in June and October. The first of these is the greatest fair of its kind in Germany, the quantity sold being usually about 6,000,000 lbs. During its continuance, the town, owing to the number of persons in the Oriental costume, has a good deal of the appearance of an eastern city. The Bank of Berlin has a branch here. The conveyance of goods to and from Hamburg by water occupies from 30 to 34 days.

The fortifications with which Breslau was formerly surrounded were demolished by the French. The ramparts have since been levelled, planted, and laid out in public walks; the bastions have been converted into terraces; and the ditch into an ornamental sheet of water, to the great embellishment of the city.

Breslau is the most bustling animated town in the Prussian dominions. The inhabitants are evidently wealthy, and the increasing number of new buildings, ornamented villas, and pleasure grounds in the vicinity, attest its growing prosperity. It is said to be a desirable place to live in. It is salubrious; provisions abundant

and cheap; education excellent, and to be had for almost nothing; the people intelligent, frank, and sociable; the literary institutions numerous and easily accessible; and the country round beautiful. The *conditioria* (see *BEALIN*) are very splendid. Dram-drinking is very prevalent, spirits constituting the principal beverage of the lower classes.

BRESSAY, one of the Shetland islands, which see.

BRESSUIRE, a town of France, dep. Deux Sèvres, cap. arrond., on a hill, at the foot of which is the Dolo; 19 m. N.W. Parthenay. Pop. 1,894. It is the seat of a tribunal of primary jurisdiction, and of an agricultural society. It was formerly a fortified town, defended by a castle, destroyed in 1759, when the town was burnt to the ground, with the exception of the church and of a single house. (*Hugo*, art. *Deux Sèvres*.)

BREST, a strongly fortified marit. town of France, dep. Finistère, cap. arrond. of the same name, occupying the foot and declivity of a steep hill, on the N. side of a spacious bay, near the extremity of the penins. of Brittany; 30 m. N.W. Quimper, 132 m. W. N.W. Rennes, and 311 m. W. S.W. Paris; lat. 48° 23' 14" N., long. 4° 28' 45" W.; pop. 29,773. Inclusive of its suburb Recouvrance, from which it is separated by the river Penfeld, it is about 3 m. in circuit, and of a triangular shape. Brest proper (situated on the E. as Recouvrance is on the W. side of the river) is naturally divided into the upper and lower town; in the first, which is the most ancient portion, though containing a considerable number of good modern edifices, the streets are irregular, crooked, and narrow, and the houses so unevenly placed, that the gardens of some are on a level with the 5th stories of adjacent ones. In some places the declivity is so rapid, that the road to the lower town is formed by flights of steps. In the lower town many of the streets near the port are well laid out, clean, and healthy; elsewhere they are quite the reverse. Recouvrance, although improved latterly, offers but an unfavourable contrast to Brest. The ramparts which surround the town are planted with trees, and form a pleasant promenade, with fine views toward the harbour. The inner harbour, formed by the mouth of the Penfeld, is lined by good quays adorned with large and handsome stone buildings. It is landlocked, capable of accommodating 50 frigates and other vessels, and is protected by formidable batteries, and by an ancient castle on a rock at its entrance. A large portion of Brest is occupied by marine establishments. It has a noble arsenal established by Louis XIV., excellent docks for building and repairing ships, large rope walks, and various magazines for the stores necessary to the fitting out of a navy, with marine barracks and an hospital. In the upper part of the town is the *Bagne*, a building for the reception of convicts sentenced to the galleys; and the largest edifice of its kind in France. It is 277 yards in length; its centre and extremities are occupied by the various officers having charge of the convicts; the intermediate spaces are separated into 4 divisions, each capable of lodging 500 men. It combines security with salubrity. But despite the severe discipline enforced in this prison, it is said to be *plutôt une école de dépravation qu'un lieu de punition et d'expiation*. (See the interesting account given by Hugo of this prison, ii. 30.) Among other public buildings are the parish church of St. Louis, with a handsome altar, the town hall, and the theatre. There are several public fountains, one of which is ornamented with a fine statue. Brest is the seat of a tribunal of original jurisdiction, and the residence of a sub-prefect, a maritime prefect, and other functionaries. It contains 2 public libraries, a cabinet of natural history, botanic garden, and observatory, schools of naval artillery, navigation, medicine, surgery, and pharmacy, societies of agriculture and emulation, a tribunal of commerce, and an exchange.

The outer harbour or road of Brest, is, without any question, one of the finest in the world. It is of great extent, being capable of accommodating the largest navies, and has deep water throughout. The channel, *Le Grand*, by which it communicates with the ocean, is only 1805 yds. across, defended on either side by very strong batteries; and it is further strengthened by having a rock in its centre, which obliges ships to pass close under the guns of the batteries. Several small rivers discharge themselves into the outer harbour, by one of which, the Châteaulin, there is an inland communication with Nantes. Brest has some tanneries and manufactures of glazed hats; and a fleet of fishing boats for pilchards, cod, and mackerel. Its commerce is comparatively trifling, and mostly confined to supplying provisions to the marine: there is, however, some trade in grain, fish, salt, &c.; and a fair for cattle, leather cloths, &c., is held monthly.

This town is affirmed by some authorities to be the *Brigantes Portus* of the Romans; but of this there is considerable doubt. It was of little consequence till it was fortified by a duke of Brittany in the 11th century. It was assigned to the English, in 1372, by John IV. duke of Brittany, and was held by them till

1397. In 1490 it was taken by the French; and was soon after permanently united to the monarchy by the marriage of Charles VIII. with Anne of Brittany. Cardinal Richelieu, being sensible of its great natural advantages for a naval station, began, in 1631, the construction of the fortifications and magazines, which were completed by Vauban, in 1680. In 1694, an English and Dutch force that had attacked Brest, was defeated with great loss. The space included within the fortification was considerably enlarged in 1772. (*Hugo, art. Finistère; Guide du Voyageur, &c.* 207, 208.)

BRETEUIL, a town of France, dép. Eure, cap. cant., on the Itin, 16 m. S.W. Evreux. Pop. 1,980. The country round abounds in iron mines, the working of which, and the smelting, &c., of the ore, afford abundant employment for the inhabitants.

BRETEUIL, a town of France, dép. Oise, cap. cant., at the source of the Annoy, 16 m. N.E. of Beauvais. Pop. 2,414. It is ill-built, ill-paved, and dirty. There are manufactures of woollen stuffs, paper, and shoes, for the use of the troops and hospitals of Paris. It is very ancient, and was once fortified and had a castle; but few vestiges of the latter or of the fortifications now exist. Its ancient abbey still remains. There are some fine nurseries in the environs. (*Hugo, art. Oise; Dict. Géographique.*)

BRETIGNY, a hamlet of France, dép. Eure et Loir, 6 m. S.E. Chartres. It is remarkable for a treaty of peace, concluded between France and England in 1360, which restored John, king of France, to his freedom, lost at the battle of Poitiers, in 1356, when he was made prisoner by the English.

BRETTEN, or **BRETHEIM**, a town of the grand duchy of Baden, cap. bailiwick, 12 m. E. Carlsruhe. It is remarkable as being the birth-place of the learned and amiable reformer Melancthon. The house where he was born, in 1497, is still to be seen in the market-place, with a statue and an inscription erected to his memory in 1705. This town suffered much during the wars of 1532 and 1689.

BRANCON, a strongly fortified town of France, dép. Hautes Alpes, cap. arrond., on the Durance, 50 m. E.S.E. Grenoble. Pop. 3,456. This is the highest town in France, being nearly 4,300 ft. above the level of the sea. From its commanding a practicable defile, leading from Piedmont into France, it has always been looked upon as one of the keys of the kingdom on the frontiers of Italy. In consequence no expense has been spared on its fortifications, which are now deemed all but impregnable. They consist principally of strong forts built on the contiguous heights, and which command all the approaches to the town. * The two principal forts, *Trois-Têtes* and *Randouillet*, communicate with each other and with the town by a bridge of a single arch 130 ft. (40 metres) in span, thrown over a deep ravine. With the exception of a single street, the town is ill-built, gloomy, and dirty. It has a tribunal of primary jurisdiction, and a departmental college; with fabrics of cotton goods, hosiery, steel and cutlery, pencils, &c. (*Hugo, art. Hautes Alpes.*)

BRIANSK, a town of Russia, in Europe, gov. Orel, cap. distr., on the Desna, 55 m. W. Orel; lat. 53° 16' N., long. 34° 24' E. Pop. 5,000. It has numerous churches, a foundry of cannons, tanneries, &c.; and there is in the vicinity a manufactory of arms. The neighbouring forests supply fine timber.

BRIARE, a town of France, dép. Loiret, cap. cant., on the Loire, at the point where it is joined by the canal of Briare, 23 m. S. Montargis. Pop. 2,977. The canal, to which the town is indebted for its importance, is the oldest work of the kind in France, having been begun in the reign of Henry IV., though it was not finished till 1740. It establishes, by means of its junction with the canal of Loing at Montargis, a communication between the Loire and the Seine; and consequently conveys the various products of the prov. watered by the former to Paris. (*Hugo, art. Loiret.*)

BRICQURBEC, a town of France, dép. La Manche, cap. cant., 8 m. W.S.W. Valognes. Pop. 4,414. It has in its environs a copper mine.

BRIDGENDORTH, a bor. and town of England, co. Salop, hund. Stottenden, on the Severn, 115 m. N.W. London. Pop. of old bor. in 1821, 4,345; in 1831, 5,298; but the part, i.e., the limits of which were extended by the Boundary Act, had, in 1831, a pop. of 6,171. It is divided by the river into the upper and lower towns; the former is built up the acclivities and on the summit of a rock, rising abruptly from the W. bank of the stream to the height of 180 ft. Ranges of detached houses, many of which are handsome modern structures, are built each over the other, so that the roofs of one range are lower than the foundations of the next above it, from the base to the summit of the precipice; with these are intermixed other dwellings, excavated in the rock itself; rude caverns, gardens, and trees. Crowning the summit, at the S. end, is the square ruined tower of the ancient castle, leaning con-

* According to the *Dict. Géographique*, the town is quite open, not being surrounded with either walls or ditches; whereas, according to *Hugo*, it has a "triple enceinte de murs."

siderably from the perpendicular; and the church of St. Mary Mag., a handsome structure, with a lofty tower and cupola, built in 1792. At the N. end is the ancient church, St. Leonard, built in 1448. Half way between the two churches is a flat square reservoir, raised on lofty brick columns, and looking at a distance like a handsome portico: to this tank, water is forced by machinery from the river, to supply the upper town. There are several good streets leading from the high street to the churches; and parallel over these are others of a like character. A carriage road winds round the rock, and several flights of almost perpendicular pebbled steps, secured in iron framing, lead up through the rock into the interior of the town. The whole has a singularly picturesque effect, and from the palisaded wall round the castle hill, extensive and diversified views are commanded over a fertile and romantic district. A handsome stone bridge of six arches connects the lower with the upper town. Its streets have an intermixture of ancient and modern houses. St. Leonard's church is endowed with 600*l.* private benefaction, and 1,100*l.* public grant. St. Mary's, formerly the castle chapel, and exempted by king John from all ecclesiastical jurisdiction, is endowed with 200*l.* private, and 1,500*l.* public grant: both are curacies in private patronage. The Baptists and Independents have each a chapel. There is a free grammar-school, founded in 1603, which educates 10 scholars, and has three exhib. to Christ Church, Oxford; a blue-coat school, in a building over one of the ancient gateways, where 30 boys are clothed, educated, and apprenticed; and a national school, supported by subscription, for 200 boys and 150 girls. The hospital of St. Leonard supports 10 aged widows; and endowed almshouses, with 158*l.* a year, maintain 12 burghesses' widows. The town-hall, in the middle of the principal street, is a spacious old building of timber frame-work and plaster, raised on brick pillars and arches: the corporation meetings and courts are held in it, and the market in the covered area underneath. There is a gaol, built by the corporation in 1823. A neat theatre, built about the same period; and a public library, with a good collection in general literature. The weekly market is held on Saturday; and there are 7 annual fairs. There is a carpet manufactory, and another for tobacco pipes, in the town. Its iron trade has declined, but nails are still made to some extent, and vessels are also built for the navigation of the Severn. The greater part of its labouring pop. are employed upon the river. It has a spacious line of quay N. of the bridge, and offers every facility for the transit of goods, so that large quantities of corn, malt, beans, &c., are sent thither from various parts of the country, and it has become a thriving inland port: its retail trade is also very considerable.

Previously to the Municipal Reform Act the government was nominally vested in 2 bailiffs, 24 aldermen, and the whole of the burghesses, whose number (including the former) was 634; but in reality it was a self-electing body of 14. Petty sessions for the bor. are held every alternate Monday, and general sessions once a year; but no felonies are tried. A court of record is held on the same days as the petty sessions, which takes cognisance of actions to any amount; but not more than three a year are entered. The revenue of the corporation, derived from lands and tenements, averages about 656*l.* a year. The tolls of markets and fairs, formerly levied by them, were given up in 1826. They hold the Severn water-works in trust for the benefit of the town, and levy a rate on the inhab. to support them: they are also trustees of an estate, producing 100*l.* a year, for the benefit of the two church ministers.

Bridgworth has returned 2 mem. to the H. of C. from the 23d of Edward I. Previously to the Reform Act the elective franchise was vested in the corporation and freemen, of whom there were 634. Parl. constituency, in 1837-38, 745.

Bruges was the ancient name of the borough, from a Saxon bridge over the Severn, which was destroyed to prevent the incursions of the Danes. A new bridge was subsequently erected, $\frac{1}{4}$ m. N. of the old site; and hence the present name originated. The Earl of Shrewsbury built the walls, in which were six gates, in the reign of Will. II.; the castle was built in that of Hen. II. and it has since undergone many sieges. Dr. Percy, bishop of Dromore, was born here in 1729.

BRIDGEFORT, a town and sea-port of the U. States, Connecticut, on Long Island Sound, at the mouth of the Pequannock, 174 m. S.W. Newhaven. Pop. 2,800. It has a bank and some trade.

BRIDGETOWN, the cap. of Barbados, which see.

BRIDGETOWN, a town and sea-port of the U. States, N. Jersey, on the Cohanza, 30 m. above its entrance into the Delaware, and 56 m. S. Philadelphia. It has a court-house, jail, bank, academies, &c.; and had, on the 30th September, 1837, 12,455 tons shipping.

BRIDGEWATER, a bor., par., and sea-port of England, co. Somerset, hund. N. Petterton, on the Parrot, about 7 m. in a direct line, and 12 m. by water, 3

from its embouchure in Bridgewater Bay, in the Bristol Channel, 28 m. S.S.W. Bristol; lat 51° 7' N., long. 9° 59' W. Pop. (of new bor.), in 1831, 7,299; houses, 1,441. The town is situated in a fertile well-wooded plain of considerable extent, having E. the Mendips, and W. the Quantock hills; it is built on both sides the stream, but chiefly on the W., the 2 parts being connected by a handsome iron bridge of 1 arch. That on the W. bank has a remarkably neat appearance, the houses (mostly of brick) being well and uniformly built, and the streets spacious, clean, and well paved; the other (East-over) is inferior in these respects, but has also of late years been much improved: the whole is lighted by gas, and well supplied with water from many fine springs. The church is an ancient Gothic structure, with an embattled tower and lofty spire; there are chapels for Baptists, Friends, Independents, Wesleyans, and Unitarians; a free grammar-school (founded by Elizabeth in 1561), and 2 other endowed schools (founded, one in 1723, the other 1781), each of which educates about 30 children; almshouses, with an endowment of about 18*l*. a year; and an infirmary, established 1813, and supported by subscription. The judge's mansion is a handsome modern edifice, in which the courts of justice are held; the market-house is also a good recent building, with a dome and Ionic portico. There is a spacious quay, accessible to vessels of 200 tons; but the entrance to the harbour is difficult, and should not be attempted without a pilot. The tide in the river frequently rises to a great height, rushing forward with a perpendicular front and with extraordinary velocity. (*Norie's Direct. for the Bristol Channel*.) There are 3 weekly markets: Tuesday, for vegetables; Thursday, corn and cattle; Saturday, general provisions. Fairs are annually held on the first Monday in Lent, July 24, Oct. 2 (the principal one), and Dec. 27; they are for linen and woollen goods, cattle, and general merchandise. The imports from foreign parts consist chiefly of wines, hemp, tallow, and timber: customs duties in 1835, 6,734*l*. 9*s*. 6*d*.; in 1836, 8,389*l*. 3*s*. 9*d*. The imports, coastwise, consist of groceries, general merchandise, and coals; the exports, of agricultural produce. The Taunton and Bridgewater Canal connects the 2 places. Considerable quantities of Welsh coal are conveyed by it inland, and the agricultural produce of the fertile district round Taunton, brought for shipment to Bristol and other ports. On the 1st of Jan. 1836, there belonged to the port 51 vessels, of the burden of 3,511 tons. A great quantity of bricks are made in the vicinity, both common and of a peculiar kind, and large size, resembling Bath-stone. The town is on the line of the Bristol and Exeter Railway; it is divided into 2 wards (the N. and S.), and governed by a mayor, 6 aldermen, and 18 councillors. Courts of pleas and of petty sessions are held every Monday, and of general sessions quarterly, for the bor. The general quarter sessions for the co., in summer, and the co. assizes, once in 2 years, are also held in the town; at such times its goal is usually crowded, otherwise it has few prisoners. It has sent 2 mem. to the H. of C. since the 23d Edw. I.; the right of election, previously to the Reform Act, being in the inhabitants paying scot and lot, and having resided in the town for a certain period; the number was about 400: number of registered electors, in 1838, 567. In 1836, the number of houses rated at 10*l*. and above was 730; the rated property of the bor. was 5,602*l*., at one third of the ann. value. The revenues of the corporation are derived from market and fair dues, tithes, and rents, and average about 936*l*. a year. The living is a vicarage, united with the rectory of Chilton Trinity, and in the gift of the crown. Bridgewater is a polling place for the E. division of Somerset, and the central town of a union under the Poor Law Amendment Act. The poor-rates levied in the bor. in 1836 amounted to 2,672*l*. 8*s*.

The town derives its name from Walter de Douay, to whom it was granted by William I., and is spelt "Burg" and "Brugge" Walter, in the old records. In the great civil war it sided with the king, and being well fortified and provisioned, was the depository of much valuable property, sent thither for security; all of which, together with 1,000 prisoners, fell into the hands of Fairfax, after an obstinate resistance. The ill-fated Duke of Monmouth was proclaimed king at Bridgewater, previously to his defeat and capture at the battle of Sedgemoor. The famous Admiral Blake, one of the greatest of the naval heroes of England, was a native of this town, having been born here in 1599.

BRIDLINGTON, a market to. of England, E. riding co. York, 176 m. N. London, 37 m. E.N.E. York, 24 m. N. by E. Hull, and 5 m. W. Flamborough Head. Pop., in 1831, including Bridlington Quay, 4,792. The town, which is about a mile from the sea-coast, consists of one long street, with some smaller streets narrow and irregularly built. A priory, erected in the early part of the reign of Henry I., at the E. end of the town, is, though much decayed, a venerable and magnificent specimen of the old English church architecture. It was endowed with very large estates: its last prior being convicted of high

treason, was executed in 1537. A part of it, used as the parish church, accommodates about 1,900 persons. The other places of worship are those of the Wesleyan and Primitive Methodists, Baptists, Independents, Presbyterians, and Quakers. The schools are, a free grammar-school, founded in 1537; two large national schools, an infants' school, and a school of industry, founded in 1781, to instruct poor children in carding, knitting, and wool spinning. A detached building, which formed part of the priory, is used for a town-hall and prison. Besides a brisk retail trade, an extensive corn trade is carried on. The business is transacted in the Exchange, a neat commodious building. Hats are also manufactured here, and in the neighbourhood are several wind and water mills, and a steam-mill for grinding bones. The malt trade, which was formerly very extensive, is much fallen off. Markets are held on Saturdays, and a cattle market every fortnight; fairs on the Monday before Whit Sunday, and Oct. 21. Bridlington is a station for receiving votes at elections for the E. riding. The banks are, a branch of the York Union, and a private banking house. Bridlington Quay is a neat village, about a mile from Bridlington. Its principal street, which is very broad, leads directly to the harbour, where there is excellent anchorage: it is defended by two batteries. Here are hot and cold baths, and a chalybeate spring, whose medical properties are highly esteemed. An ebbing and flowing spring, discovered in 1811, supplies the inhabitants with abundance of excellent water. The port is a member of that of Hull, and has a neat custom-house on the quay. It is much frequented in summer by visitors for sea-bathing. (*Allen's Hist. of Yorkshire*; *Thompson's Bridlington*, &c.)

BRIDPORT, a bor. and sea-port of England, co. Dorset, hund. Bridport, 127 m. W.S.W. London, in a fertile vale encircled by hills, between the Brit and Asher, which are crossed by several bridges, and unite a short distance below the town. It consists chiefly of three main streets, well lighted and paved, with many handsome modern houses on either side. The church is a cruciform structure of the later Gothic, with an embattled and pinnacled tower in the centre. The Friends, Independents, Wesleyans, and Unitarians, have each a chapel. The town-hall (where the council meet, and the borough sessions are held) is a handsome modern edifice in the centre of the place; there is also an endowed free school, founded 1708, and an almshouse, founded 1696. Pop., in 1821, 3,742; in 1831, 4,242; houses at the latter period, 678; this, however, refers to the old bor., which was only co-extensive with the parish, an area of about 90 acres. Its present boundaries include portions of six other parishes, and an area of 280 acres, so that no exact statement can be made of the population, but in the Appendix to the Municipal Report (1835) it is estimated at 6,133. Its pier harbour (about 1 m. S. of the town, between Lyme and Portland) is safe and commodious, though rather shallow. An act, passed in 1722 (for restoring its piers, and forming a sluice) was carried into effect in 1742, the corporation being trustee. In 1822 another act passed, by which other persons were joined with them in the trust, and the harbour was then materially improved and enlarged, at an expense of nearly 20,000*l*. and is now suitable for vessels of 200 tons; since which the increase of its trade has been progressive. In 1832 it was made independent of Lyme, within whose jurisdiction it had previously been, and established as a bonding port: between 20 and 30 vessels, averaging about 100 tons, belong to it; and several fine coasting smacks are built here. The manufactures are—twine, lines, and fishing-nets, for the home and colonial fisheries, and sail-cloth and shoe-thread: these employ several hundred persons. The exports consist chiefly of those manufactures, and of butter and cheese, the produce of the neighbourhood. The imports comprise hemp, flax, and deals, from the Baltic; tallow, skins, coal, alum, slate, wines, spirits, and groceries, coastwise. There are 2 weekly markets (Wednesday and Saturday), and 3 fairs (April 6., Holy Thursday, and Oct. 10.), chiefly for horses, cattle, and cheese. The bor. is divided into 2 wards, and governed by a mayor, 6 aldermen, and 18 councillors: the revenue of the corporation (derived from market dues and rents) averages about 250*l*. a year. It has sent 2 mem. to the H. of C. since 23 Edw. I. Previously to the Reform Act the right of election was vested in the householders paying scot and lot, the number of voters being nearly 300. In 1837-38 it had 505 registered electors. Bridport was a borough during the Saxon period: at the Domesday survey it had 100 houses, a mint, and an ecclesiastical establishment. Its staple manufacture is of remote origin; Camden notices a special law of Henry VIII.'s reign, by which the navy was to be exclusively supplied with cordage made at Bridport; and Gibson, in a note on the passage, speaks of the failure of an attempt in his day to form a harbour (*Gibb. Ed. Brit. 170.*) It confers the title of viscount on the Hood family; the living is a rectory in private patronage.

BRIE-COMTE-ROBERT, a town of France, dép. Seine et Marne, cap. cant., near the Yères, 10 m. N.N.W. Melun. Pop. 2,726. It was built by Robert of France, count of Dreux, to whom his brother Louis VII. gave the lordship of Brié. Its old feudal castle has been demolished. The parish church, founded in the 13th century, is remarkable for the height of its tower. The Hôtel Dieu is nearly of the same age as the church. (*Hugo*, art. *Seine et Marne*.)

BRIEG, a fortified town of the Prussian states, prov. Silesia, cap. circ., on the Oder, about half way between Breslau and Oppeln. Pop. 11,500. It is situated on an elevated bank of the river, over which it has a wooden bridge, and is well built and thriving. Principal public buildings, a gymnasium, formerly a university, to which is attached a good library, a lunatic asylum, with several churches and hospitals. It has extensive manufactures of linens, woollens, cottons, hats, &c., and carries on a considerable trade.

BRIEL or **BRIELLE**, a fortified sea-port town of the Netherlands, prov. S. Holland, cap. arrond., on the N. shore of the Island of Voorn, near the mouth of the Maeso, 13 m. W. Rotterdam; lat. $51^{\circ} 54' 11''$ N., long. $4^{\circ} 56' 51''$ E. Pop. 4,200. It is a handsome well-built town; is strongly fortified; has a good harbour, a tribunal of primary jurisdiction, and sends a deputy to the states of the province.

The Briel is remarkable in Dutch history for being the place where the first foundation of the republic may be said to have been laid. The exiles from the Netherlands, who had taken refuge in England from the persecutions of the Duke of Alva, were ordered by Queen Elizabeth, in consequence of the urgent representations of Alva, to leave this kingdom. Being thus driven to despair, they assembled a small fleet at Dover, under the command of William de Luynes, Count de La Marck, and resolved, if possible, to get possession of some place of strength in their native country. Their original intention was to make an attempt on Encheusen; but the wind being unfavourable, they cast anchor before Briel, of which they took possession on the 1st of April, 1572. Thus was struck the first blow in that apparently most unequal and long-continued struggle between Holland and Spain, that ended in the independence of the former; a struggle which, whether we consider the sacrifices and perseverance of the weaker party, or the beneficial consequences of their success, is, perhaps, the most extraordinary and important of which history has preserved any account. (For an account of the capture of Briel, see *Watson's Philip II.*, i. p. 427, 8vo. ed.)

Briel was the birth-place of the heroic Admiral Van Tromp, who fell in an engagement with the English, under Blake, off the Texel, on the 8th of Aug., 1633.

BRIENNE-LE-CHATEAU, a town of France, dép. Aube, cap. cant., on the great road from Paris to Châumont, 15 m. N.W. Bar-sur-Aube. Pop. 2,002. The town has a fine castle, erected a short while previously to the Revolution, by the minister Lomenie de Brienne. It stands on an artificial plateau, and commands an extensive view. But the place derives almost its entire celebrity from its connection with the imperishable name of Napoleon. The great captain received the first rudiments of his warlike education in a military academy that formerly existed in this town, but which was suppressed in 1790; and here, in 1814, in an engagement with the Russians and Prussians, he was in imminent danger. (*Hugo*, art. *Aube*, &c.)

BRIEUC (ST.), a sea-port town of France, dép. Côtes-du-Nord, of which it is the capital, on the Gouet, near its embouchure in the Bay of St. Briec, 34 m. W.S.W. St. Malo; lat. $48^{\circ} 31' 2''$ N., long. $2^{\circ} 43' 55''$ E. Pop. 11,892. Its port, at the mouth of the river at the village of Liguou, has a handsome quay, and a commodious harbour, accessible to vessels of 350 tons. The town is pretty well built. The cathedral, a Gothic edifice, was begun in 1220, and finished in 1234; there are, also, a hôtel de ville, an hospital on a large scale, a workhouse, a theatre, &c. The bridge over the river is a handsome stone structure of three arches. There are some good squares and fine promenades. St. Briec is the seat of a bishopric, and of tribunals of primary jurisdiction and commerce; and it has a departmental college, a diocesan seminary with 160 pupils, a school of arts, and a public library with 24,000 volumes. There are in the town fabrics of linen, serge, flannel, paper, &c., with tanneries and breweries. The inhabitants used to employ a considerable number of ships in the whale and cod fisheries, particularly the latter. In 1828, for example, they had engaged in the cod-fishery 47 ships, of the burden of 8,090 tons, manned by 2,610 seamen, who brought home 4,669,300 klog. of cod, &c., worth 1,845,405 fr. But it would seem, from the statements of Hugo, that in the interval between 1828 and 1833, this important business had very rapidly declined, and we have not learned whether it has since recovered. The coast fishery is still carried on to a considerable extent. Horse-

BRIGHTON.

racers were established here in 1807, and are kept up with great spirit. (*Hugo*, art. *Côtes-du-Nord*.)

BRIGHTON, formerly **BRIGHTHELM-STONE**, a marit. town of England, co. Sussex, rape Lewes, hund. *Wells-bourne*, vulg. *Whalesbone*, 47 m. S. London. This modern *Raise* is situated on the coast of the British Channel, between Beachy Head and Selsey Bill. Pop. in 1821, 24,429; in 1831, 41,994: houses, in 1831, 8,625. It is of an irregular shape, and is built along the shore, on the sides of a gentle valley, the centre of which, the *Steine*, forms a long slip of land, lying N. and S. The only buildings in this valley, which divides the town into the E. and W. portions, are the palace, and St. Peter's Church, recently built. The whole of the town K. of the Steine, has been built within the last 60 or 70 years. Along the cliffs, which in this part rise high above the sea, has been formed the finest marine promenade in the world. A wall of immense thickness (at the foundation 30 ft. wide), and from 60 to 70 ft. high, formed of concrete, protects a fine pavement, and a road upwards of 100 feet in width. From the extreme entrance of the town at the E., this splendid marine drive and promenade is occupied to the Steine by large mansions, and lodging-houses of the first description. Along this line is situated Kemp Town, and its square, a splendid range, forming 3 sides of a quadrangle, and having a row of houses, of similar architectural character, diverging from either extremity: the spacious area in front is laid out in walks, &c., and has an arched passage communicating with the beach, the crescent, and various spacious streets, opening from the line of cliff to the northward. West of the Steine is the old town, consisting principally of old and irregular buildings. Many of these have, however, been pulled down, and on the sites of some of them, a new market was constructed in 1829, and a town hall in 1831; but the hall, though large, and making a good appearance externally, is in bad taste and ill contrived within. In every direction around the old town (excepting of course the sea side), new streets and squares have been erected; particularly along the line of cliff, called the King's Road, to Hove, where, facing the sea, but adjoining Brighton, a fine range, called Brunswick Terrace and Square, has been built. The cliffs, in this part of the town, rise only a few feet above the highest part of the beach: in their front is a fine promenade, and, below this, a level space of green sward reaching down to within a very short distance of the sea. On the Lewes road are, Hanover Crescent, Richmond Terrace, and the Grand Parade on the London road, York and St. George's Places, and many structures in the cottage style. The royal palace, called the Pavilion, was begun by George IV. when Prince of Wales, in 1784, and finally completed in 1827; it is in the oriental style, and copied from the Kremlin at Moscow; its stone front extends 200 ft.; it has a circular building in the centre, surmounted by a pillared dome. The Chapel Royal is on the W., and behind is a circular range of stables in the Arabian style, lighted by a glass dome: it is excluded from the view of the sea by the buildings of Castle Square; and little can be said in favour of the taste displayed in its erection. The old church is a spacious structure, partly in the ornamented and partly in the later Gothic style, with a square tower; it crowns a hill 150 ft. above the sea, and serves as a landmark for vessels. St. Peter's church, serving as a chapel of ease to the last, an elegant Gothic structure, built in 1827, at the public expense, has upwards

BRIGHTON.

of 1,100 free sittings. Besides these, and the Royal Chapel, there are 7 others connected with the established worship, 3 occupied by Independents, 2 by Particular Baptists; a Catholic chapel, a new and elegant building in Upper St. James' Street, containing a fine specimen of sculpture from the chisel of Mr. Carew; and chapels for the Scotch Seceders, Friends, and Wesleyan and Whitfield Methodists: there is also a Jewish synagogue. There are numerous free schools, supported by subscription or endowments; of which the principal are, the Blue Coat Schools, one for clothing and educating boys, and one for girls; a government school for the children of fishermen; the Union School, supported by the various dissenting sects; with orphan, national, and infant schools. The County Hospital, a large and well supported establishment, is contiguous to the town. There are baths of all kinds, constructed with the utmost regard to comfort and convenience, as well as numerous bathing machines, and a spa, about half a mile W. of the town, where there is a chalybeate spring, in considerable repute: the building is in the cottage style.

The German Spa is delightfully situated in a valley facing the sea, at the foot of the Row Hill. It was established in 1826, for the preparation of artificial mineral waters, in imitation of the natural springs at Carlsbad, Ems, Marienbad, Pyrmont, &c.

Six almshouses for decayed widows were erected in 1795, on the Lewes road, opposite the Royal Gardens, by two sisters, of the name of Percy.

Every class of visitors finds suitable accommodations here, in furnished lodgings, inns, and hotels; of all which there is every variety, from those of the most superb and expensive character, to the plainest and most economical. The theatre is small and ill-contrived; but the public assembly rooms, at the Old Ship Hotel, are fitted up in the most splendid style. The Royal Gardens, N. of the town, are devoted to various amusements, and comprise a good cricket-ground. On the Downs is a well kept course, where annual races are held the first week of August. There are many fine promenades; amongst them, a very favourite one is the suspension chain pier, constructed in 1821, at an expense of 30,000*l.*: the pier head is 60 ft. by 20, and has seats and awnings, as well as tiers of galleries and flights of steps, to facilitate landing and embarkation at different states of the tide; the pier itself is 1,200 ft. in length by 14 ft. in width; and an esplanade of the same length, 40 ft. wide, connects it with the Steine. The principal market-day is Thursday, but there is a daily supply. Fairs held, one on Holy Thursday, and one on the 4th September. The chief trade of the place is fishing, in which nearly 150 boats are employed. The mackerel season begins in April, the herring season in October; besides which, turbot, soles, skate, &c., are caught in considerable quantities, and supply the London markets, as well as those of the place. A portion of the inhabitants are also employed in making nets and tackle for the fishery, of materials supplied from Bridport. Coasting vessels occasionally discharge coals and light goods on the beach; several steamers ply between this place and Dieppe, which is 21 leagues S.E., and a much nearer and pleasanter route to Paris (*via Rouen*) than that by Calais. A railway to the metropolis and Shoreham is commenced. At present many daily coaches ply between Brighton and London. The Reform Act conferred on Brighton the privilege of

BRINDISI.

445

returning 2 members to the H. of C.: parl. constit., in 1838, 2,091. The parochial affairs are managed by directors and guardians, and the affairs of the town, lighting, &c., by commissioners; but the principal conservator of the peace is the High Constable. Magistrates of the county hold sittings at the Town Hall every day, and petty sessions every Monday and Thursday.

Brighton is by some considered to be the spot where Cæsar landed; a notion for which there is no good foundation, and which probably originated in the numerous Roman remains, coins, &c., found in the vicinity. For some centuries it was a mere fishing village, and was frequently attacked and plundered by the French; to prevent which, Hen. VIII. erected some fortifications, which were strengthened and extended by Eliz. In 1665, and again in 1669, irruptions of the sea destroyed a large part of the town, and inundated an extensive tract adjoining; again, in the years 1703-5-6, the fortifications were undermined, and the place threatened with total destruction. In the reign of Geo. II. Brighton first came into some repute as a sea-bathing place, through the writings of Dr. Russell, an eminent physician of that day. In 1760 the chalybeate spring was observed, which tended to increase its growing popularity. No doubt, however, it is principally indebted for its rapid rise, and for the high rank it has long continued to hold among watering and fashionable places, to the zealous and continued patronage of Geo. IV. when Prince of Wales, and when regent and sovereign. It has nearly quadrupled its population in the course of the present century; and the advantages it enjoys in its situation, and in its being the nearest port on the S. coast to London, may, perhaps, insure its prosperity, even though it should cease to be an object of royal favour.

BRIGNOLLES, a town of France, dép. Var, cap. arrond. on the Carami, 22 m. N.N.E. Toulon. Pop. 5,652. It is neat and well built, and is finely situated in a fertile basin, surrounded with high wooded hills. Its principal ornament is its magnificent public fountain, in the square Carami. It has a tribunal of primary jurisdiction, a primary normal school, a secondary ecclesiastical school, a public library, a society of agriculture, &c., with flatures of silk, fabrics of wine, candles, and tanneries. A considerable trade is carried on in olive-oil, wine, liqueurs, brandy, and excellent prunes, known by the name of *brignoles*. (*Hugo, art. Var; Diet. Géog.*)

BRILLON, a town of the Prussian States, prov. Westphalia, reg. Arnsberg, cap. circ. 24 m. S.E. Soest. Pop. 3,301. It has two churches, a college, an hospital, and fabrics of linen and brass. In the environs are mines of silver, lead, and calamine.

BRINDISI (an. *Brundisium*), a sea-port and city of Naples, prov. Terra d'Otranto, cap. distr., at the bottom of a bay between capes Cavallo and Gollo; lat. 40° 37' 50" N., long. 17° 58' 32" E. Pop. 8,500. (*Rampoldi*.) In antiquity this was one of the most important cities of Italy, and was the port whence the intercourse between Italy and Greece, and the East, was usually carried on. It owed this distinction as much to the excellence of its harbour as to its situation; but in modern times it is sadly changed for the worst. It is still of great extent within the walls; but the inhabited houses do not occupy above half the inclosure. The streets are crooked and rough, and the houses poor and in disrepair. With the exception of the citadel, a large heavy-looking cathedral, and a few remains of antiquity, there is nothing in it that deserves attention. This melancholy change has been produced by the nearly total loss of the inner harbour. This, which encompassed the city on two of its sides, and is deep and capacious, was united to the outer harbour, or bay, by a narrow entrance, like that leading to Portsmouth harbour or the Havannah. Unfortunately, however, this entrance having been nearly shut up, the inner harbour was in consequence rendered inaccessible all but the smallest vessels, and in summer became fetid and unhealthy. Julius Cæsar, who attempted to block up Pompey's fleet that had rendezvoused in the inner harbour, by running mounds into its outlets, may be said to have commenced the ruin of Brindisi, which was com-

pleted in the 15th century by a prince of Taranto, who sunk vessels filled with earth and stones in the passage left open by Cæsar! The destruction that was thus brought on the town and its offsets roused at length the attention of the Neapolitan gov., by whom a vigorous effort was made in 1776 to obviate the cause of the mischief, by cutting a new channel between the two harbours. But owing, as it would seem, to some defect in the plan, the project has only partially succeeded; the new channel soon filled up, and the entrance to the inner harbour became nearly as much encumbered as before. The canal is now, however, kept open by dredging and otherwise to the depth of 10 or 12 palmi, so that vessels of this draught of water may enter the inner port. The outer harbour, or bay, is deep and capacious, and has good anchoring ground. It is partially protected by an island, on which a fort is built; but it is exposed to the easterly gales, which throw in a heavy sea. (*Sardinian's Two Sicilies*, i. 384, 4to. ed.; *Croce's Naples*, p. 148; *Riviera, Considerazioni su i mezzi da Restituire il Regno delle due Sicilie*, i. 242., &c.)

BRINON-L'ARCHEVEQUE, a town of France, dép. Yonne, cap. cant., near the canal of Burgundy, 10 m. E. Joigny. Pop. 2,400. It has fabrics of coarse cloth, and tanneries; and carries on a considerable trade in corn and linen, and in the forwarding of timber by the canal for Paris.

BRIOUDE, a town of France, dép. Haute Loire, cap. arrond. In a vast plain near the Allier, 30 m. N.W. Fuy. Pop. 1,647. It is old, ill-built, and dirty. Its most remarkable edifices are the college, situated on a hill, and commanding a fine view, and the church of St. Julian, a venerable Gothic fabric, founded in the 9th century. Besides the college, it is the seat of a court of primary jurisdiction, and has a small public library, and a society of agriculture. Brioude was the birth-place of the Marquis de Lafayette, who acted so conspicuous a part in the American and French revolutions. At Old Brioude, about 3 m. S.E. of Brioude, is a bridge over the Allier, built in 1454, consisting of a single arch 182 ft. in span. (*Hugo, art. Haute Loire; Dict. Géographique*.)

BRISACH (NEW), a fortified town of France, dép. Haut Rhin, cap. cant., near the left bank of the Rhine, opposite to Old Brisach, 9 m. S.E. Colmar. It was built in 1690 by Louis XIV., and fortified by Vauban. It is a regular octagon, and is regarded as one of the finest works constructed by that celebrated engineer. The streets all terminate in a *place* in the centre, and the houses are all of the same height. It is of no importance except as a fortification. Hugo says he passed through it in 1838, and that two of its gates were then shut up; that most of its houses were deserted, and that the grass grew in the streets. (*Hugo, art. Haut Rhin*.)

BRISIGHELLA, a town of the Papal States, leg. Ravenna, on the Lamone, 27 m. S.W. Ravenna. Pop. 3,000. It has an extensive trade in silk.

BRISTOL, a city, co., and sea-port of England, at the confluence of the Avon and Frome, 8 m. N.W. of the embouchure of the former, in the Bristol Channel, and 108 m. W. London. Lat. 51° 27' 6" N., long. 2° 35' 28" W. Pop. of city and suburbs, (inclusive of Clifton and the parish of Bedminster, on the S. side of the Avon, co. Somerset,) in 1821, 95,758; in 1831, 117,016; but certain portions of the suburbs are excluded from the limits of the existing parl. bor. as fixed by the boundary act, the pop. of which, in 1832, was 104,338. This city extends over 6 or 7 distinct hills and their intermediate valleys, amidst a picturesque and fertile district. In the older portion, forming the nucleus of the modern city, the houses were mostly of wood and plaster, with projecting upper stories over narrow streets; but these are now greatly diminished; in other parts the streets and squares are spacious, and the greater number of the houses well built modern structures. Those of Kingsdown, St. Michael's, and Clifton hills, on the N. and W., rise with their terraces and gardens each above the other, like an amphitheatre. Redcliffe, on the S., has narrow streets and densely crowded houses, resembling those of the older part of the city: Bedminster is mostly occupied by small modern tenements for the working classes and tan-yards. The whole city is well paved and sewered, and is lighted with coal gas, supplied by 2 public companies. There is an adequate supply of water

conducted by pipes to several public conduits and public pumps. There are 25 churches of the established worship, among which are some fine specimens of the ancient Gothic; others are handsome modern structures. Of the former may be noticed the cathedral in College Green, of the age of Stephen, and anciently part of the abbey of St. Augustine; St. Mary's, Redcliffe, crowning the summit of that hill; and St. Stephen's, with its once richly decorated tower. The dissenters of various denominations have 36 places of worship, and form a very numerous and important part of the community. There are 12 endowed charity schools: the free grammar-school, founded in 1532, which has several exhibitions, and two fellowships, each of 30*l.* a year, in St. John's, Oxford; Elizabeth's Hospital, founded in 1586, whose endowments produce above 4,000*l.* a year, now managed by the charity trustees appointed by the Lord Chancellor; the Redcliffe free grammar-school, founded in the 13th of Eliz.; Colston's, in 1708, for the maintenance, clothing, and education of 100 boys; and 8 others. In the whole, above 200 boys and 40 girls are wholly maintained, educated, and apprenticed; 90 boys and 88 girls clothed and educated; and 148 educated only. Besides these, there are (1839) 35 other schools, supported either wholly or partially by benefactions and public subscriptions, in which upwards of 3,000 children are educated, and upwards of 10,000 receive instruction in the Sunday schools of the various sects. Of the endowed charitable institutions, the principal are, the Trin. Almshouse, with a chapel annexed; its endowments produce 700*l.* a year; it maintains 10 old men, and 36 women: Foster's ditto, with a chapel, has 530*l.* a year, and maintains 14 old people; and the Temple Hospital, founded in 1613, has 609*l.* 18*s.* a year, and maintains 24 old people: the Merchants' almshouses, founded in 4th Eliz. for 31 old sailors and their widows: Colston's, in 1696, has 300*l.* a year, and maintains 24 old men and women: Ridley's, in 1716, has 155*l.* a year, and maintains 10 decayed single persons: Blanchard's, in 1722, has 95*l.* a year, and maintains 5 aged people: there are several others of minor importance. Endowed charities, to the amount of about 23,000*l.* a year, are distributed as follows. — 6,000*l.* lent in various sums for various terms without interest, to tradesmen; 9,000*l.* distributed among the poor; 1,000*l.* to the endowed hospitals, and 7,000*l.* among the endowed schools. The other charitable institutions are the Bristol Infirmary, established in 1735; it is capable of accommodating 200 patients, and has, at an annual average, 1,600 *in* and 5,000 *out* patients: it is supported partly by its own funded property, and partly by subscriptions and donations: the General Hospital, a smaller establishment than the former, and partly on a self-supporting principle: the Dispensary, which gives medical relief to about 3,000 poor annually at their own dwellings; it has 2 stations. There are also an asylum for the blind, another for orphan girls, a female penitentiary, and between 40 and 50 other charitable societies, which distribute, in various ways, from 12,000*l.* to 15,000*l.* annually. The principal public buildings are, — the Guildhall, an old structure of the reign of Richard II., with a modern front: the Council House, built in 1827: the Gaoi, a large, well-arranged structure, built in 1820: the Bridewell, rebuilt after the riots in 1831: the Exchange, an extensive building of the Corinthian order, erected by the corporation in 1743, but never being adopted by the merchants

as a place of meeting, the interior is occupied as a corn-market, and its back forms part of the spacious quadrangle in which the principal market is held. The Commercial Rooms, built in 1811, and used as an exchange, have a handsome dome, an Ionic portico, a large hall, reading-room, and various apartments for the despatch of business. The Bristol Institution, a handsome edifice, opened in 1823, has a reading-room, library, theatre, and museum: in the latter are good collections both in natural history and the fine arts; courses of lectures are given, philosophical papers read, and it has occasional exhibitions of paintings. The Mechanics' Institute, built in 1832, has a lecture and a reading-room. The Bristol Library was established in 1772, and has an extensive collection (about 30,000 vols.) in general literature. There are also law and medical libraries; a medical school, established in 1834, in which complete courses of lectures are given: the certificates of its professors are recognised at Apothecaries' Hall; a proprietary school, called the Bristol College, established in 1830, for classical and scientific education; and an academy for the education of young men for the Baptist ministry, to which an extensive library and museum are attached. There is a handsome edifice of the Corinthian order in Princes Street, now the office of the Bristol General Steam Navigation Co., but concerts, balls, &c., are sometimes given in its large room: the Victoria public rooms are now (1839), also, in progress. At Clifton are baths and pump-rooms; and connected with the hot wells, is a handsome edifice of the Tuscan order.

The great rise of tides in the Bristol Channel, and in the river, enables the largest class of ships to come up to the town: but to obviate the risks and damage to which they were formerly exposed by grounding at ebb tide, a floating harbour, equivalent to a dock, was constructed in 1804, by changing the channel of the river. It extends about 3 m. from the dam above Bristol Bridge to the entrance lock at Rownam, occupying the old bed of the Avon and of that branch of the Frome that lies between the quays of St. Augustine and St. Stephen. The present extent of quay frontage is 6,000 ft., but the limits admit of any further extension that an increased trade might require. The act authorising the formation of the harbour (43 Geo. 3. c. 140.) enacts that there should be 21 ft. water in a sufficient number of berths; but the mud being suffered to accumulate so as considerably to reduce this depth, occasioned much complaint. This defect has now, however, been in a great degree obviated. A new channel was formed for the river, and the harbour finished in 1809, at an expense of about 700,000*l*. There are 2 basins for the temporary accommodation of vessels entering or leaving; one at Rownam, for large ships, the other below the iron bridge at Bedminster, for coasters. There are also a floating and a dry dock, founded by the Merchant Venturers in 1769: to the former of these timber ships are compelled to resort, if they do not discharge at some private wharf: further down the river are several private docks, where ship-building, to some extent, is carried on. Vessels frequently load and discharge cargoes in Kingroad, at the mouth of the river, by means of lighters: the Great Western steam-ship is obliged to do this, the entrance to the floating harbour not being wide enough to admit her; but the harbour dues are payable, whether ships enter it or not. The tide in the Avon sets with great rapidity, especially between the high precipitous rocks of

Clifton and Leigh, which seem rent asunder to admit its passage; in Kingroad, its rise at springs is between 48 and 49 ft.; at neaps above 23 ft.; at the gates of the floating harbour its rise is from 4 to 5 feet less than at the tide gauge in Kingroad. The bridges which connect the opposite sides of the floating harbour and rivers are,—Bristol Bridge, of 3 stone arches, built in 1768; it connects the central part of the city with Redcliffe: 2 iron bridges each with a single span of 100 ft.; one on the Bath and Wells, the other on the Exeter line of road: a swivel iron bridge (to admit the passage of ships), connecting St. Augustine and Clifton with the rest of the city: a small stone bridge, spanning the Frome at the point where it ceases to be navigable; and a suspension bridge now in progress, which will connect Clifton with the co. of Somerset: this, when finished, will be the most picturesque and striking work of its kind in the kingdom, and probably in the world; the roadway will be 850 ft. in length, 220 ft. above high-water mark, with precipitous rocks on both sides. The Avon, above Bristol Bridge, is navigable for barges to Bath, whence the water communication is continued by the Avon and Kennet canal. The Bristol and Gloucester railway, intended to connect the 2 cities, now extends to Coalpit Heath (9 m. of line); it has 3 termini at Bristol, and several thousand tons of coal, monthly, are conveyed thither by it. The Great Western railway (118 m. of line), and that of the Bristol and Exeter (76 m.), will shortly effect a rapid means of communication with the metropolis and intermediate towns *&c.* of the city, and with those of Somerset and Devon on the S.W. The Exchange market, and that of St. James, are open daily for general provisions; the chief supply being on Wednesdays and Saturdays: the corn and leather markets are held Tuesdays and Thursdays; the hay-market, Tuesdays and Fridays; the fell-mongers', Wednesdays and Saturdays; the cattle-market, Thursdays, in a walled area of 4 acres, outside the city, at Temple Meads, at the junction of the Great Western and Exeter railways: this market fluctuates considerably, but the average weekly supply is estimated at 500 head of cattle, 3,000 sheep, 400 pigs, 80 horses. A great market is held there on the Thursday preceding Christmas, when the show is usually very fine. Two annual fairs, commencing 1st March, and 1st Sept., and continuing each about 8 days, and formerly resorted to by clothiers, hosiers, cutlers, &c., from all parts of England, having greatly fallen off, were abolished in 1837; but fairs for cattle, horses, leather, &c., are still held on the above days.

Bristol was, for a lengthened period, second only to London as a commercial emporium; but though its comparative importance has, in this respect, greatly declined, it continues to be the seat of some important manufactures and of an extensive and increasing trade. The principal manufactures are those of soap, glass bottles, crown and flint glass, chain cables, anchors, steam-engines and other machinery, refined sugar, tobacco, earthenware, floor-cloths, brass wire, pins, sheet lead, zinc, saltpetre, tin, copper and brass wares, pipes, hats, drugs, colours, dyes, starch, bricks, British spirits, malt liquors; there are also extensive soda works and recently a large cotton-mill. Many of the iron foundries are on a large scale, and are increasing both in their number and the extent of their exports. In 1838 there were made at the various soap manufactories 8,029,076 lbs. hard soap, and 253,467 lbs. soft do.; in 1838 there were consumed, in 39 public breweries, 227,315 bushels malt; and by 703 licensed victuallers, and 767 keepers of beer shops, together, 358,915 bushels. The establishments for glass, sugar, brass, floor-cloths, and earthenware, are also on an extensive scale. The post-office revenue in 1837 was 38,711*l*. There is a savings' bank, established in 1812, and six other banking establishments. The deposits in the former, on the 26th of Nov. 1838, amounted to 296,381*l*. *vol*

which, in 1836, were contributed by 7,483 depositors, and the Bank for Friendly and Charitable Societies. Bristol early became a great manufacturing and commercial city, and continues to enjoy, a large share of the trade of the West Indies; and among her foreign imports the most important are those of sugar, molasses, rum, coffee, and cocoa; the next most important are those of tobacco, timber, wine, brandy, tallow, fruits, wool, hemp, dye, and other manufactures, hides, &c. The exports consist principally of the produce of the various manufactures of the city, with salt, coal, and culm, in part the produce of the neighbourhood; and cotton, linen, and woollen goods. In 1837 the declared value of exports amounted to £20,067, 1s. 6d., and 386 ships, of 76,367 tons burden, entered inwards from foreign parts, and 304 ships, of 49,228 tons, cleared outwards: the customs duties during the same year were 1,158,109*l.* 12*s.* 6*d.* Bristol carries on an extensive and growing trade with Ireland, from which she imports corn, butter, bacon, potatoes, cattle, horses, sheep, pigs, salmon, &c.; she sends in return tea, raw and refined sugar, cheese, wrought iron, tin, slate, copper, glass, woollen, and leather. In 1837 there arrived from Ireland 632 vessels, of 95,694 tons, and cleared for it 240 vessels, of 74,378 tons. The imports, coastwise, consist mostly of iron, tin, coal, salt, agricultural produce, and foreign produce, brought from other ports under bond. The exports are chiefly foreign and colonial produce (especially groceries, spirits, and wines), and the various manufactures of the city. There belonged to the port, in 1836, 271 sailing vessels, of 39,850 tons, and 17 steamers, of 1,610 tons. A communication by steam for the conveyance of goods and passengers to Ireland was established in 1836, and has led to a great increase of the trade with that part of the empire. Bristol has also had the honour of being the first port in the empire to establish a regular communication by steam with the United States. The first voyage by the Great Western steam-ship was performed in 1838.

The parli. and municip. limits of Bristol coincide, and had, as already stated, a pop., in 1831, of 104,338; and at present, 1839, probably of 115,000. It is divided into 12 wards, and governed by a mayor, 16 alds., and 48 councillors. Previously to the Municipal Reform Act, the government was vested in a mayor, 12 alds., and 30 common councillors, the recorder being senior alderman; they were a self-elected body, and filled up their vacancies from the freemen, of whom there were 3,109 registered. The governing charter was granted in the 6th of Anne; the earliest in the 9th of Hen. II. A court of sessions, or goal delivery, (except for capital cases, now tried at Gloucester,) is held quarterly by the recorder. The tolsey, or sheriff's courts, for all kinds of actions in cases under 40*l.* A court of conscience, established by act 1 Wm. 3., for debts under 40*l.*, has from 150 to 200 causes weekly. There is also a court of requests for debts not above 15*l.*, established by act 48 Geo. 3., consisting of the common council and other commissioners, with an assessor, which has on an average from 20 to 25 cases weekly; and a court of assize for *res prius* cases, held the week after the Somerset assizes, by the senior judge on the western circuit. The number of prisoners tried at the criminal courts in 1837 was 215, of whom 88 were acquitted and 1 executed. A police force, upwards of 200 strong, on the plan of the metropolitan police, has been established under the Municipal Reform Act.

The county jurisdiction, by water, extends over the Avon, from 4 m. above the city and sea-ward, to the steep and fast Holmes, and to the high-water-mark on the English side of the Severn, from Aunt's Passage to Clevedon. The charters of Hen. VI. and Edw. IV. granted the corporation an admiralty jurisdiction; but this has been lost through desuetude. They are conservators of the port and harbour; and by an act of 47 Geo. III., have the power of licensing pilots, who have the exclusive privilege of piloting all vessels passing up or down to the E. of Lundy Island, except Irish and coasting traders: the ports of Bristol, Newport, Cardiff, Swansea, Ilfracombe, and Bridgewater are comprised within this jurisdiction. There are 84 licensed or branch pilots, one of whom cruises from Ilfracombe, the rest from Pill, near the mouth of the Avon. A board of commissioners, elected by the rate-payers, has the exclusive power of paving, lighting, and cleansing the town; they levy an annual assessment on the inhab. for these purposes, varying from 11,000*l.* to 12,000*l.* The corporation revenues are derived from town and market dues and rents of houses and lands in the city and neighbourhood; the annual average was estimated, in 1836, at 18,722*l.*; their debt, at that time, amounted to 100,000*l.*; but it has been since paid off by the sale of lands, &c. The Merchant Venturers are another incorporated body, whose governing charter dates in 1st of Hen. 3., they hold, under the former, a beneficial lease of the wharves and other harbour dues, but have long used to be a trading company. The Dock Company are also incorporated, by an act of 48 Geo. III.; their affairs are managed by 12 directors, 4 of whom are appointed by the corporation, and 8 by the Merchant Venturers.

Merchant Venturers, from their ward 9 are proprietors of at least 10 shares, and chosen by the shareholders. The Chamber of Commerce was instituted in 1838, "for the protection and promotion of the commercial and manufacturing interests of Bristol." It is supported by annual subscriptions, and governed by directors, elected annually, who publish reports of their proceedings: they are not an incorporated body, but have exerted a great and beneficial influence in the commercial arrangements and reforms of the town and port, since their establishment. The management of the poor, within the old limits of the city, was vested in a corporate body by an act 7 & 8 W. 3. c. 32, and subsequent acts have been passed regulating their number and powers. The guardians consist of the mayor and 12 members elected annually by the town council out of their own body, the senior churchwardens of the different parishes, the senior overseer of the cable precincts, and 48 other inhabitants. The amount of poor-rates levied in the united parishes for the year ending Lady-day, 1836, was 27,095*l.* 18*s.* the average of 20 years, ending with 1832, was 32,850*l.* Clifton forms the centre of a union, under the Poor Law Amendment Act; in the parishes of that union, which are also within the present limits of Bristol, the average amount of poor-rates for three years, ending 1835, was in all 10,788*l.*; they are represented by 15 guardians. *Redminster* is the centre of another union; its own average rates for the same period were 4,734*l.*: it is represented by 6 guardians. The rack rental of Bristol, according to a survey in 1838, amounts to 373,361*l.*; the number of rated properties being 19,920; of these, 10,420, valued at 219,404*l.*, are within the ancient limits.

Bristol has sent two m. to the H. of C. since 1243: previously to the Reform Act, the right of election was in the freeholders and freemen only. No. of registered electors in 1837-38, 9,856. Bristol was made the seat of a bishopric in 1541. It is now, in conformity to the act 6 & 7 W. 4. c. 77., united with Gloucester, in a see comprising the city of Bristol, the deaneries of Clavdon and Malmesbury, in Wilts, and the previous diocese of Gloucester: Bristol being constituted a deanery, which, alternately with that of Gloucester, is to elect the future bishop.

The Bristol hot well, under the Clifton rock, is a place of much resort for invalids, its waters being considered efficacious in consumptive cases. The temp. of this saline spring, when fresh from the pump, is 71° Fahr., and it then evolves free carbonic acid: in each pint of the water (according to Dr. Carriek) there are 3*grs.* carb. of lime, 1*½* sulph. of soda, 1*½* do. of lime, 1 annate of soda, 1 do. of magnesia; total, 6*grs.* It issues from the cliff, between the high and low water-mark, the hot-well house is finely situated beside the Avon; a carriage road winds from it, behind the rocks, to Clifton Down; a short footpath at the back also leads to that village, which is the fashionable part of Bristol: the view, by either line, is singularly interesting. The activities are occupied by handsome edifices in squares, terraces, crescents, &c., forming fine promenades, the most magnificent of these ranges is York Crescent. Near the water is a good hotel, whence the Irish steam-jackets start regularly; and on the cliff a splendid one, where concerts and assemblies are held during the season. Another spring higher up the cliff, but probably from the same source, has within a recent period had baths and a pump-room attached to it. The geological features of the place may be thus briefly described:—If the entire area be divided N. and S. into three unequal portions, that on the E. will fall within the limits of a civil formation, which extends N. and S. of the city, but chiefly to the N., about 30 m.: its beds are thin, as compared with those of other coal-fields. The central or largest portion is chiefly occupied by the new red sand, in which surian remains occur; the western part is chiefly mountain lime. Some of the summits in the N. and W. parts of the city are 250 ft. above the bed of the Avon. In the rocks of Clifton, and the opposite ones of St. Vincent, quartz crystals of great purity occur, known as Bristol diamonds. There are remains of three Roman encampments at Clifton, Rowham, and Abbots-Leigh.

The decline in the comparative importance of Bristol, as a trading emporium, has been chiefly manifested by contrasting its progress with that of Liverpool. The average customs duties of Bristol for the seven years ending with 1757 amounted to 135,189*l.*; those of Liverpool, for the same period, to 51,136*l.* In 1784, the customs of Bristol were 334,908*l.*, a great increase; but those of Liverpool had advanced, in the same year, to 648,684*l.* One of the chief causes that have been commonly assigned for this relative slowness of progress, is the excess of local taxation; the town and harbour dues having been much heavier than those of any other of the larger ports. The munic. report of 1835 gives the proportion of local taxation charged on 23 principal articles, imported in 1831, in Bristol and three other ports; as—Bristol, 1*l.*; London, 3*0s.* 4*d.*; Liverpool, 11*s.* 5*d.*; Hull, 7*s.* 3*d.*; Gloucester, 3*s.* 6*d.* Since 1831, however, the rates have been

considerably reduced, and the mayor's dues wholly abolished.

But notwithstanding this greater weight of local taxation must have operated seriously to the injury of Bristol, too much stress has been laid upon it in accounting for the slower progress of the trade of the port. The real cause of the rapid rise of Liverpool, Glasgow, and other sea-port towns, is to be found, not in the lowness of their port charges, or in any peculiar advantages they individually enjoy, but in their having become the ports of the great manufacturing districts. The extraordinary growth of Liverpool is a consequence of the still more extraordinary growth of the cotton manufacture. Her rise has been dependent upon, and consequent to, the rise of Manchester, Bolton, Blackburn, &c.

According to Camden (*Gibson's ed. of the Brit. 174.*), Bristol first rose into notice towards the close of the Saxon dynasty. The most common mode of spelling the name, till the 13th century, was Bristowe; but in the oldest, and in all the subsequent charters, it is spelt Bristol. Its castle was built by the Earl of Gloucester, brother to the Empress Matilda. During the wars of the Roses the town was comparatively undisturbed and flourishing; but in the civil war of the 17th century it suffered most severely: at the commencement of hostilities it was garrisoned by the parliamentary forces; subsequently, it was stormed by the king's forces, and surrendered to Prince Rupert: the following year (during which it suffered under the united evils of pestilence and war) it was again stormed, and retaken by Cromwell, who subsequently demolished its castle. The earliest notice, with reference to the trade of Bristol, occurs in the *Anglia Sacra* (ii. 228.); it is there noticed as having a mart for slaves of both sexes, brought from all parts of the kingdom; and also, as having much intercourse with Ireland. In 1247 a great improvement in its port was effected, by digging a new channel for the river, and forming a double line of quay between Bristol and Redcliffe: a bridge, on the site of the present, was built at the same period. Thence to the 16th century, its manufactures supplied a large portion of the kingdom with woollen goods, soap, and glass: in the reign of Edw. III. it was made a staple of wool; and it then traded extensively with Ireland, France, and Russia. In the *Itinerary of Botoner* are details of its trade and shipping in the 15th century, which prove its extended commerce and great enterprise at that period. In 1578 Frobisher returned from an unsuccessful attempt to find a N.W. passage: at the close of the century Hen. VII. granted charters to John Cabot and his two sons, which resulted shortly after in the discovery of Newfoundland, and a large part of the American continent: in 1603 Newfoundland was first colonised by Bristol. In October, 1831, a most disgraceful riot occurred here; which, owing to a want of decision on the part of the civil and military authorities, was allowed to attain a most alarming height. The mansion-house, episcopal palace, and several private houses were burnt down, and a large amount of property destroyed.

Among the distinguished individuals that Bristol has produced are—William of Worcester, the topographer; Wm. Cannyng, the most eminent merchant of his day; Sebastian Cabot, born at Bristol, of Genoese parents, discovered Newfoundland in 1498; Edw. Colston; Sir Wm. Draper; Thomas Chatterton, the poet, whose uncle was sexton of Redcliffe church, where the Rowley MSS. were alleged to have been discovered; Robt. Southey, Esq.; and Bayley, the sculptor. (*Dr. Seyer's Hist. of Bristol, and the Royal Charters of do.; Municip. Commissioners' Report in 1835; Ann. Reports of the Chamber of Commerce; Eighth Report of the Charity Commissioners, &c., and Private Information.*)

BRITISH EMPIRE (THE), one of the most civilised, powerful, and important states that have ever existed, consists of the islands of Great Britain and Ireland, with the smaller islands contiguous to them, and their dependencies in various parts of the world. Great Britain, the largest, and by far the richest and most populous of the British Islands, includes what were formerly the independent kingdoms of England and Scotland; the former occupying its S., most extensive and fertile, and the latter its N., most barren portion. These two kingdoms, having been united, form with that of Ireland what is called the *United Kingdom of Great Britain and Ireland*, which constitutes not only the nucleus and centre, but the main body and seat of the wealth and power of the empire.

The islands of Great Britain and Ireland are situated in the N. Atlantic Ocean, off the W. shores of continental Europe, opposite to the

N. parts of France, the Low Countries, Denmark, and the S. parts of Sweden and Norway, between 50° and 59° N. lat., and 6° E. and 11° W. long. Great Britain, which, from its superior magnitude and importance, gives name to the United Kingdom and the empire, is not only the largest of the European islands, but one of the largest in the world. It lies to the E. of Ireland, and approaches at its S.E. extremity at Dover to within 21 m. of the opposite coast of France. But as the coast of Great Britain stretches N.N.W. from Dover to Duncansby Head, the extreme N.E. point of the island, while the opposite shore of the Continent recedes in a N.E. direction, the intervening space, called the North Sea or German Ocean, is of very considerable dimensions. To the S. of the British Islands we have St. George's or the Bristol Channel, and W. and N. the broad expanse of the Atlantic.

Great Britain is very irregularly shaped, being deeply indented by numerous gulphs and arms of the sea, but on the whole it approaches to the figure of a wedge, being narrowest at its N. and broadest at its S. extremity. The longest line not intersected by any considerable arm of the sea that can be drawn in Great Britain, extends from Rye in Sussex (lat. 50° 57' 1" N., long. 0° 44' E.), to Cape Wrath in Sutherland (lat. 58° 36' N., long. 4° 56' W.), a distance of about 580 m.; and its greatest breadth from the Land's End (lat. 50° 3' 8" N., long. 5° 41' 31" W.) to a point near Lowestoffe, on the coast of Norfolk (lat. 52° 28' 30" N., long. 1° 46' E.), is about 367 m. But, owing to the indentations already referred to, its breadth in some places is much less, being between the friths of Forth and Clyde under 40, and between the Moray Frith and the Minch under 30, m. from shore to shore. Its area is estimated at 83,823 sq. m., of which England contains 57,812, and Scotland (exclusive of its dependent islands) 26,016 sq. m. The area of the Scottish islands is estimated at 4,224 sq. m.; but this is only a rude guess.

Ireland lies to the W. of Great Britain, between the parallels of 51° 25' and 55° 29' N. lat., and of 6° and 11° W. long. Its figure is rhomboidal; and though it has many noble bays and harbours, it is less indented by gulphs and arms of the sea, and is decidedly more compact than Great Britain. It is every where surrounded by the Atlantic, except on its E. shores, which are separated from Great Britain by St. George's Channel, the Irish Sea, and the North Channel. From St. David's Head in Wales to Carnsore Point, the distance across is about 47 m.; from Port Patrick in the Rhynns of Galloway to Donaghadee, the distance is 22 m., but from the Mull of Cantire to For Point in Ireland, the distance is only 13½ m. The longest line that can be drawn in Ireland, in about the same meridian, extends from the Old Head of Kinsale in Cork to the Bloody Farland Point in Donegal, a distance of about 237 m.: the longest line that can be drawn crosswise in Ireland, in nearly the same parallel of lat., extends from English Rash, on the coast of Mayo, to Quinta Point, at the mouth of Lough Strangford, on the coast of Down, being about 182 m.; but in other places the breadth is a good deal less. So conveniently is Ireland situated in respect of water communication, that there is no part more than 50 or 55 m. distant from the sea, or from one of its arms. The area of Ireland is estimated at 31,874 sq. m.

As separate articles will be appropriated to the description of England, Scotland, and Ire-

and that its dependence, it is only intended to give a right view of these particular resources to the empire as a whole, which could not, with propriety, be given in the description of any one of its particular lands.

Natural advantages of the United Kingdom.—Perhaps no country ever existed more favourably situated, or placed under more advantageous physical circumstances, than the United Kingdom. It is sufficiently extensive to be the centre of a mighty empire; and to support, independent of any extrinsic resources, a very large population, and, consequently, possesses that native and inherent power that is necessary to secure the first of political blessings—national independence. Its insular situation is also of immense advantage; it gives us a well-defended frontier, on which there can be no encroachment, and about which there can be no dispute; and while it renders us comparatively secure from hostile attacks, it affords unequalled facilities for commerce; every part of our frontier being, as it were, a terminus to the “great highway of nations.” The surface of the country is agreeably diversified with hill and dale, mountains and plains; and while the soil is not so very fertile as to yield crops with little labour, and so to encourage sloth on the part of the cultivator, it is in general sufficiently productive, and yields abundant returns to the laborious and skilful husbandman. It has been well observed of Great Britain, and the same thing is equally true of Ireland, that “it is not fertile enough to make men indolent, nor barren to such a degree as to deny grateful, if not ample, returns to the industrious cultivator. In a word, it enjoys the fortunate medium between fertility and barrenness, or (to speak more properly) between easy and difficult culture; inclining rather to the side of difficulty, and affording opportunity sufficient for industry and improvements; which is just the circumstance a person would wish for who truly understands the good of his country. Rich soils infuse ease and indolence into the inhabitants; but soils that require laborious cultivation stimulate industry and invention, and impress on the population a hardy enterprising character.” (*Harle's Essays*, p. 188.)

All the most valuable species of the *Cerealia*, as wheat, oats, and barley, succeed quite as well in the British Islands as in any other country. Potatoes, too, and a vast variety of useful vegetables and fruits, are raised in the greatest abundance. Owing to the peculiar aptitude of the soil and climate, no country can compare with the United Kingdom in the luxuriance of its verdure, and the richness of its pastures. And in consequence principally of this circumstance, but partly, also, of the care bestowed on the selection of the most improved stock, our horses, cattle, sheep, and other useful animals, are all equal, if not superior, to the finest breeds to be found in any other part of the world.

The British Islands have also been singularly fortunate in respect of climate. If we desiderate the clear skies of Italy and the south of France, we also want the long-continued droughts and exhausting heats to which they are subject. Though exposed to sudden changes, we are exempted from all violent extremes of heat and cold. The general impression seems to be that the climate of Great Britain has been considerably modified since 1750; and that our winters have become milder, and our summers less dry and warm than formerly. In most seasons, indeed, the winter can hardly be said to commence

till after Christmas; and in some years there is little if any frost. The great defects in our climate are the prevalence of cold blighting E. winds in April and May; and not unfrequently, of rainy weather in August and September. It is but rarely that our crops suffer from excess of drought; but they occasionally suffer from backward summers, and autumnal rains. On the whole, however, the climate of the British Islands is, notwithstanding its defects, one of the best, if not the very best, in Europe. It requires, indeed, the most anxious and watchful attention on the part of the husbandman; but, instead of being a drawback, that is an advantage. There is also much truth in the remark of Charles II., as quoted by Sir William Temple:—“He thought that was the best climate where he could be abroad in the air with pleasure, or at least without trouble and inconvenience, the most days of the year, and the most hours of the day; and this he thought he could be in England more than in any other country of Europe.”

Among the other physical circumstances that have promoted, in no ordinary degree, the power and prosperity of the empire, may be specified the number and excellence of our harbours, affording asylums for the ships, and depôts for the goods of the most distant countries; and the number of our rivers, their depth, and the facilities they afford to internal communication. The last-mentioned circumstance is peculiarly worthy of remark: Great Britain and Ireland being islands, with no part very remote from the sea, it might be supposed that their rivers would be of comparatively small magnitude, and of but little use in navigation. But the fact is distinctly and completely the reverse. The Thames, Trent, and Severn, in England, and the Shannon, in Ireland, are all navigable to a very great distance. The first, notwithstanding its limited length and volume of water, ranks, as a navigable channel, among the first rivers of Europe; its embouchure is unencumbered by any bar, and it is navigated from the sea to London Bridge, a distance of 45 m., by the very largest ships, and to a much greater distance by barges. The Severn, Trent, and Shannon have been rendered navigable for barges and steam-boats for the greater part of their course; the latter, which flows through the interior of Ireland, almost to its very source! The means afforded by the rivers for facilitating internal communication, have been vastly extended by the construction of canals; and, with the single exception of Holland, the United Kingdom has a greater extent of artificial navigation than any other country.

The mineral riches of Great Britain are not merely equal to those of any other country, but superior. We cannot, it is true, boast of mines of gold and silver, but we possess what are really more important and valuable. Iron, the most useful of all the metals, is found in the greatest abundance, and of an exceedingly good quality, in most parts of the empire. Our tin mines are the most productive of any in Europe; and we have also very productive mines of copper, lead, manganese, &c. Our salt springs and beds of fossil salt are alone sufficient for the supply of the whole world. But coal is by far the most important and valuable of our mineral treasures. It is hardly, indeed, possible to overrate the advantages Great Britain derives from her vast, and, to all practical purposes, inexhaustible beds of coal. In this climate, fuel ranks among the principal necessities of life; and it is to our coal mines that we owe abundant

and cheap supplies of so indispensable an article. Had they not existed, wood must have been used as fuel; and it is quite impossible that any attention to the growth of timber could have furnished a supply equal to the wants of the present population of Great Britain, even though a large proportion of the cultivated land had been appropriated to the raising of trees. But, however great and signal, this is not the only advantage we derive from our coal mines: they are the principal source and foundation of our manufacturing and commercial prosperity. Since the invention of the steam-engine, coal has become of the highest importance as a moving power; and no nation, however favourably situated in other respects, not plentifully supplied with this mineral, need hope to rival those that are, in most branches of manufacturing industry. To what is the astonishing increase of Glasgow, Manchester, Birmingham, Leeds, Sheffield, &c., and the comparatively stationary or declining state of Canterbury, Winchester, Salisbury, and other towns in the south of England, to be ascribed? It cannot be pretended, with any show of reason, that the inhabitants of the former are naturally more ingenious, enterprising, or industrious than those of the latter. The abundance and cheapness of coal in the north, and its scarcity, and consequent high price, in the south, is the real cause of this striking discrepancy. The citizens of Manchester, Glasgow, &c. are able, at a comparatively small expense, to put the most powerful and complicated machinery in motion, and to produce results quite beyond the reach of those who have not the same command over coal, or, as it has been happily defined, hoarded labour. Our coal mines have been sometimes called the Black Indies; and it is certain that they have conferred on us a thousand times more real advantage than we derive from the conquest of the Mogul empire, or than we should have reaped from the dominion of Mexico and Peru. They supply our manufacturers and artisans with a power of unbounded energy and easy of control, and enable them to overcome difficulties insurmountable by those to whom nature has been less liberal of her choicest gifts.

Estimate of the Mineral Produce of Great Britain, on an Average of Years and Prices.

	Quantity.	Value.
Silver	10,000 lbs. troy	£30,000
Copper	13,000 tons	1,300,000
Tin	5,500	550,000
Lead	46,000	950,000
Iron	1,150,000	7,500,000
Coal	25,000,000	10,000,000
Salt, alum, and other minor produce more than		1,000,000
Total value probably exceeds		£20,500,000

Races of People.—At the earliest period to which history ascends, the British islands were occupied by Celts or Gael, who, it is probable, had passed over into Britain from the contiguous coasts of France, and from Britain into Ireland. To the Celtic population of Britain succeeded the Gothic. At a period long preceding the Christian era, the Goths or Scythians, advancing from the east, had occupied a large portion of the N. and N.W. parts of Europe. The Low Countries and the N. provinces of France were in the age of Cæsar peopled by Goths, who had acquired the distinctive appellation of *Belgæ*; and it appears from Cæsar, that long previously to his invasion of Britain, colonies of Belgians had passed over into it, and then occupied its maritime and most fertile portions. (*De Bello Gallico*, lib. v. § 12.) The

Romans, though they subdued Great Britain, did not settle in great numbers in it; and the Belgæ, by whom it had been colonised at the epoch of their invasion, may be regarded as the principal progenitors of the English nation; for, though the various Gothic tribes who passed over into Britain after the departure of the Romans were sufficiently powerful to subdue it, and one of them (the *Angles*) succeeded in giving its name to the greater portion of Britain, they were far too few in number to have occupied it fully, or given it a new language, had their own differed materially from that previously in use. (*Pinkerton's Geog.*, art. *England*, and his *Dissert. on the Goths*, *passim*.) But the ancient and the more recent Saxon and Belgian colonists being essentially the same people, readily amalgamated. The invaders having expelled the original or Celtic inhabitants from the lower and more fruitful parts of the country, the latter were compelled to resort to the fastnesses of Wales, the Highlands of Scotland, and the remote parts of Devon and Cornwall. The facilities which these countries afforded for resisting and eluding an invading force, prevented them being overrun by the Goths. They were never even fully subdued by the Roman legions; and at this moment we find them a distinct race, speaking the language of their remote ancestors.*

The temporary conquest of England by the Danes, and its subsequent subjugation by the Normans, however important in other respects, made no sensible change in the stock of the inhabitants. The Normans, though long settled in France, where they had acquired the use of the French language, originally emigrated from Norway; and belonged, as well as the Danes, to the Gothic family. Except, therefore, in so far as we may suppose the Celtic and Belgic inhabitants to have been blended together, the Gothic blood would seem to have been preserved pretty pure in all the country S. of the Tay, and E. of the Severn and the Exe.

The Romans did not invade Ireland; and the Goths do not appear to have passed over into it, at least in any considerable numbers. Hence its population, in so far as it is not alloyed by emigrants from England, since the invasion under Henry II. and their descendants, may be regarded as of Celtic origin. In fact, the Irish language, a dialect of the Gaelic, is at this moment spoken to the almost total exclusion of English, in various pretty extensive districts of Ireland; and we should be disposed to consider nearly two-thirds of the people of that island, as being lineally descended from the ancient occupants of the country.

Population.—The progress of population in Great Britain and Ireland was long very slow. Latterly, however, it has increased with extraordinary rapidity. This, in the former, has been a consequence of the wonderful increase of manufactures and commerce since 1763, and in the latter, of the splitting of farms, and the endless division and subdivision of the land. The progress of population in the different portions of the U. K., down to the beginning of this century, according to the best attainable information, will be seen in Table at top of next page.

The population of England and Scotland was, for the first time, determined by actual census in 1801; since which a census has been taken every 10 years. In Ireland, an incomplete census was taken in 1813; but it was not till 1821 that the population of that part of the empire was exactly ascertained. For the results of the censuses hitherto taken, see Table in the following page

PROGRESS OF POPULATION IN THE DIFFERENT PORTIONS OF THE UNITED KINGDOM.

England and Wales.		Scotland.		Ireland.		United Kingdom.	
Years.	Population.	Years.	Population.	Years.	Population.	Years.	Population.
1696	5,500,000	1707	1,050,000	1672	1,100,000	1700	7,650,000

III. CLASSIFICATION OF INDIVIDUALS, PRINCIPALLY OF MALES OF 20 YEARS OF AGE AND UPWARDS, IN DIFFERENT DEPARTMENTS OF INDUSTRY IN GREAT BRITAIN AND IRELAND, ACCORDING TO THE CENSUS OF 1831.

Occupation.	England.	Wales.	Scotland.	Ireland.	Total.
Males 20 years of age and upwards:					
Occupiers employing labourers	141,460	19,728	25,887	95,339	262,414
Ditto not ditto	94,883	19,966	53,966	564,274	733,089
Labourers employed in agriculture	744,407	55,468	87,392	507,441	1,355,508
Employed in manufactures, or making machinery for ditto	314,106	6,318	83,993	25,746	430,063
In retail trade, or handicraft, as masters or workmen	964,177	43,226	152,464	298,838	1,458,805
Capitalists, bankers, professional, and other educated men	179,983	5,204	29,203	61,614	275,904
Labourers employed in labour not agricultural	500,960	31,571	76,191	89,876	698,588
Other males 20 years of age, except servants	189,899	11,180	34,930	110,395	346,094
Servants, 20 years of age (males)	70,639	2,145	5,895	54,142	2,811
Male servants under 20 years of age	80,777	1,179	3,969	44,800	89,156
Female servants	518,705	42,274	109,512	268,155	928,646

Present Population. — Supposing, which there is every reason to believe is the fact, that the population of Great Britain and Ireland has continued to increase since the census of 1831 in about the same ratio as during the ten previous years, it will now amount to about 27,500,000. Hence the U. Kingdom is, in respect of population, the fourth state in Europe, being surpassed only in the number of people by Russia, Austria, and France.

Industry. — To attempt any exposition of the causes that have rendered Great Britain so pre-eminently distinguished by her industry and progress in the arts, would lead us into discussions foreign to the object of this work, and which, though that were not the case, our limits would hinder our attempting. It is sufficient to observe that they are of various kinds; and that we are not indebted for our superior wealth and civilisation to one or a few, but to a number of concurring causes: to the various favourable physical and moral circumstances under which we are placed. We have already glanced at the influence of the first; but that of the second class of circumstances has not been less powerful. The security of property and freedom of industry we have long enjoyed in a greater degree than any other European nation, have powerfully promoted and stimulated industry, by impressing every man with the conviction that he would be allowed to enjoy, accumulate, and dispose at pleasure, the fruits of his industry and skill: our free institutions, opening, as they have done, the highest stations to individuals of talent and ability, how humble soever their origin, have diffused through all classes a desire to excel, and a determination to rise superior to every difficulty. It is characteristic of Englishmen —

“Contendere nobilitate
Noctes atque dies, nili prestante labore,
Ad summas emergere opes, rerumque potiri.”

Even the magnitude of our national burdens, which, to a superficial observer, might appear to be a heavy drawback on our exertions, has really been a means of adding to their efficiency. Had they been oppressive, their operation would no doubt have been very different; but it was seen that they might be met by increased exertions, and these have been made: they have, in fact, operated on the public like an increase of the necessary expenses of his family on a private individual; and occasioned efforts of industry, economy, and invention that have more than counterbalanced their influence; and which we should have in vain attempted to produce by any less powerful means.

Pretty full accounts will be found in the articles in this work appropriated to England, Scotland, and Ireland, of the agriculture, manufactures, and commerce of each. Here we shall only endeavour to lay before the reader a few general results; and these, we regret to say, are but of comparatively little importance. Owing to the extreme difficulty of obtaining accurate returns as to the extent or value of any considerable branch of industry, and the limited attention that has been paid to such subjects, but little information has been collected on which it would be altogether safe to rely. The following estimates are, therefore, submitted, not as being free from error, or wholly to be depended upon, but as being believed to be better entitled to credit than most others that have been put forward.

Agriculture. — Extent of cultivated and uncultivated land: —

	Cultivated.	Uncultivated.	Total.
England	Acres. 25,632,000	Acres. 6,615,680	32,247,680
Wales	3,117,000	1,636,000	4,753,000
Scotland	3,043,450	12,900,550	15,944,000*
Ireland	14,603,473	5,340,736	19,944,209*
British Islands (Jersey, Guernsey, Man, &c.)	355,690	755,469	1,111,159
Totals	48,779,618	28,227,435	77,007,048

* The totals for Ireland and Scotland are exclusive of lakes.

The average extent of land, under the different species of crops, in England and Wales, their average produce per acre, and price, have been estimated as follows: —

Crops.	Acres.	Produce per Acre.	Total Produce.	Price per Qr.	Value.
Wheat	3,800,000	34 qrs.	129,320,000	5s.	50,875,000
Barley and rye	900,000	4 —	3,600,000	30	5,400,000
Oats and beans	3,000,000	4½ —	13,500,000	25	16,875,000
Potatoes, turnips, &c.	1,200,000	5½. 5s.	—	—	—
Clover	1,300,000	1 acre.	—	—	13,125,000
Totals	9,200,000	—	146,420,000	—	86,275,000

The price of beans is here reckoned the same as that of oats; but, being usually 10s. a quarter higher, the two may be worth together 17,500,000. Gardens and hop plantations are supposed to occupy about 150,000 acres, producing, at an average, about 15l. per acre, or 2,250,000l. a year. Hence, the total annual value of crops raised in England and Wales will, on this hypothesis, amount to 72,900,000l. (*Statistics of the British Empire*, i. 532., 2d ed.) The land under fallow may be estimated at 1,650,000 acres. The pasture land of England and Wales, estimated at 17,000,000 acres, and supposed to be worth 3l. an acre a year, will consequently yield a total annual value of 59,500,000l., which has been distributed as follows: —

Cattle 1,100,000, at 13l. each	14,300,000
Calves 200,000, at 3l. each	600,000
Sheep and lambs 6,800,000, at 1l. 10s. each	10,200,000
Wool (exclusive of slaughtered sheep)	—
338,000 packs, at 12l. each	4,056,000
Hogs and pigs 555,000, at 1l. 16s. each	1,000,000
Horses 200,000, full grown, annually produced, at 15s. each	3,000,000
Poultry, eggs, rabbits, deer, &c.	1,344,000
Meadow and grass, for work and pleasure horses	13,000,000
Dairy produce, or milk, butter, and cheese	12,000,000
	£59,800,000

The total annual value of the agricultural produce of England and Wales, exclusive of wood, &c., may, therefore, be estimated at about 132,500,000l.; and though there must necessarily be a great deal of looseness in such computations, we do not believe that the result involves any very material error.

In Scotland, the extent of land under different crops, and their produce and value, have been thus estimated: —

Crops.	Acres.	Produce per Acre.	Total Produce.	Price per Qr.	Value.
Wheat	230,000	3 qrs.	690,000	50	1,650,000
Barley	250,000	4½ —	980,000	30	1,470,000
Oats	1,475,000	4½ —	5,737,500	25	7,111,875
Beans and peas	100,000	—	—	—	—
Potatoes	130,000	5½. 5s.	—	—	9,500,000
Turnips	350,000	—	—	—	—
Flax	16,000	8l.	—	—	128,000
Gardens	32,000	13l.	—	—	416,000
Totals	—	—	—	—	£18,865,875

Taking the extent of pasture land in Scotland, exclusive of heaths, wastes, &c., at 2,500,000 acres, and estimating its produce to be worth, at an average, 2*l.* per acre*, its total value will be 5,000,000*l.*; but to this has to be added the value of about 14,000,000 of mountain pastures, heaths, woodlands, and waste land; the value of this land has been estimated, apparently with great moderation, at 3*s.* an acre, which, if accurate, would make a total sum of 2,100,000*l.* Hence the total value of the land produce in Scotland will be—

Value of crops and gardens	-	£13,355,375
of pasture land	-	5,000,000
of uncultivated land and wood	-	2,100,000
		<hr/> £20,455,375

There are no means of forming any tolerably correct estimate of the extent of land under different crops in Ireland. Of its 8,000,000 of people, it is supposed that 5,000,000 are mainly supported by the potato, and 2,500,000 of the remainder principally depend on oats. The average produce per statute acre in oats is 44*l.* Winch. bushels (see *Statist. of the British Empire*, i. 514.); and estimating the consumption of each of the 2,500,000 individuals at 2½ quarters, about 1,110,000 acres are employed in raising food for them. Add to this the quantity required for the partial feeding of others, for seed, the feeding of horses, exportation to England, &c., and the whole extent of land under oats may, perhaps, be taken at from 3,000,000 to 3,500,000 acres. The land under wheat and barley does not, probably, exceed 600,000 or 700,000 acres. The whole extent of cultivable land in Ireland, about 14,603,000 acres, being estimated, tillage as well as pasturage, at 3*l.* per acre, will yield an annual value of 43,809,000*l.*; or, including the produce of the unimproved mountain and bog land, perhaps 44,500,000*l.* may stand for the sum total of the land produce of that country.

Hence, the aggregate annual value of the agricultural produce of the United Kingdom would be—

England	-	£182,500,000
Scotland	-	20,455,375
Ireland	-	44,500,000
United Kingdom	-	<hr/> £197,455,375

Rent.—The only authentic information as to the rent of land in Great Britain was obtained under the Property Tax Act. It appears from the returns made by the property tax commissioners, that the total rental of England and Wales amounted, in 1810, to 29,503,070*l.*, and that of Scotland to 4,851,404*l.* Owing to the extraordinary depreciation of the currency and the rapid rise of prices, in the years immediately subsequent to 1810, the gross rental of England and Wales had increased, in 1815, to 34,330,462*l.*, and that of Scotland to 5,075,242*l.* Since then we have no authentic information to guide us. We believe, however, that we shall not be far wrong, if we suppose the rental of Great Britain to be, at this moment (1839), about identical with its amount in 1810, or to amount to about 34,000,000*l.* In many districts rents are lower now than in 1810; but this fall is probably more than compensated by their rise in other places, resulting from the rapid spread of improvement, and from the influence of

steam-conveyance in opening new markets to the produce of the more remote parts of the country.

The property tax did not extend to Ireland, so that our information with respect to the rental of that important part of the empire is less authentic. But Mr. Griffiths, the engineer, whose means of acquiring accurate information on the subject cannot well be surpassed, submitted to a committee of the House of Lords a carefully compiled estimate of the rental of each county of Ireland (see *IRELAND*) in 1832, from which it results that the gross rental of that kingdom then amounted to 12,715,478*l.*

The profits of the farmers have been very variously estimated; but, on the whole, we believe they may be safely taken at about half the rent. But supposing this hypothesis to be a just one, their aggregate amount would not be represented by half the gross rental of Britain or Ireland, inasmuch as that includes the rental of the lands occupied by proprietors, or the rent which it is supposed they would bring, provided they were let.

Manufactures.—The manufactures of Great Britain are by far the most extensive and important that ever have belonged to any nation. We may, indeed, be said to be purveyors of most descriptions of manufactured articles for all the world; and there are but few nations, how remote or barbarous soever, that are not indebted for some considerable portion of their comforts, and sometimes even of their necessities, to the skill and ingenuity of British artisans. A very large proportion of the people of our own country are engaged in, and directly depend upon, manufactures for support; and they supply the materials of that commerce for which this empire is so peculiarly distinguished; and which extends to, civilises, and enriches, almost every country of the globe.

We regret our inability to lay before the reader any accurate accounts of the value of the gross annual produce of any of the great departments of manufacturing industry. The following estimates must, therefore, be regarded as mere approximations; though we are disposed to think that in most cases they come pretty near the mark:—

Cotton	-	£35,000,000
Woolen	-	22,000,000
Iron and hardware	-	17,000,000
Watches, Jewellery, &c.	-	3,000,000
Leather	-	13,500,000
Linen	-	8,000,000
Silk	-	10,000,000
Glass and earthenware	-	4,250,000
Paper	-	1,500,000
Hats	-	2,400,000

The value of the above articles amounts to a gross sum of 116,650,000*l.* But exclusive of these, there are other departments of manufacturing industry of great value and importance;

such, for example, as the manufacture of spirits and beer, cabinet-makers' goods, &c. In point of fact, however, but a small part of the value of spirits and beer is derived from the labour expended upon their preparation, or extraction from the malt used in their manufacture; and there are no means by which to form any estimate, how rude soever, of the value of cabinet-makers' work. Some information will subsequently be given as to shipbuilding.

But these statements, how imperfect soever, are more than sufficient to evince the vast extent and importance of our manufactures. It would be very desirable, on many accounts, to be able to separate the sums mentioned above as con-

* In the *Statistical Account of Great Britain*, the value of the pasture is estimated at 2*l.* an acre (i. 542.); but we have since seen statements and details that have convinced us that that was an exaggerated estimate.

stituting the gross annual value of our principal manufactures into their constituent parts, that is, to show how much of the total value of any branch of manufacture is made up of raw produce, or of the value of some other branch of manufacture embodied in it, and how much consists of the wages of labour and superintendence, and how much of the profits and wear and tear of capital. But to do this is, in many cases, next to impossible; and in all cases, the greatest care and circumspection are required to avoid falling into the most serious errors. It is necessary also to observe, that considerable care is always required in drawing conclusions from the gross value of any manufacture as to the addition really made by it to the aggregate wealth of the country. Thus, assuming the gross annual value of the woollen manufacture to be about 22,000,000*l.* a year, we should fall into the greatest imaginable error, if we supposed, as is commonly done, that it made an annual addition of that amount to the gross produce of the country. Of this sum of 22,000,000*l.*, a third part, perhaps, may consist of the value of the wool; and the value of the British wool, which is by far the largest portion of the whole, being already included in the estimate of the annual produce of agriculture, would be reckoned twice over, were it also included in the estimate of the produce of the woollen manufacture. The same caution must be used in almost every case; and unless it be carefully attended to, none but the most misleading inferences need be looked for.

The progress made by Great Britain in manufactures since the middle of last century has been quite unprecedented. At that period the quantity of iron produced in England and Wales is not supposed to have exceeded 22,000 tons a year; but the application of pit-coal to the production of iron having soon after become pretty general, the manufacture began gradually to increase, the produce in 1788 being estimated at 68,000 tons, in 1796 at 125,000 tons, and in 1806 at 250,000 tons. Since this last mentioned period, the progress of the iron trade has been such that at this moment (1839) there are certainly not less than from 950,000 to 1,000,000 tons of iron annually produced in England and Wales, and about 120,000 tons in Scotland. The business has now become of the very highest importance. Iron is employed with the greatest advantage in many ways for which it was formerly supposed not to be at all suitable: so much indeed is this the case that iron steam-boats have been constructed for crossing the Atlantic! And it is to the cheapness and abundance of our supply of iron as much as to any thing else, that the superiority of our machinery, and consequently of most branches of our manufactures, is to be ascribed.

But the progress of the British cotton manufacture since 1760 is undoubtedly the most extraordinary phenomenon in the history of industry. In 1764 the imports of cotton wool did not amount to 4 million lbs., whereas they now exceed the prodigious amount of 450 million lbs.! It is difficult to give any very satisfactory explanation of this astonishing progress. Much, no doubt, must be ascribed to the influence of the general causes already specified, but much also has been owing to what may be called accidental circumstances. The cotton manufacture may, in fact, be said to be wholly the result of the inventions and discoveries of Hargreaves, Arkwright, Watt, Crompton, and a few others. And the fact of Hargreaves and Ark-

wright being Englishmen gave us that early priority and superiority in the manufacture which our favourable situation in other respects has since enabled us to maintain. It is seldom an easy matter for new rivals to come into successful competition with those who have already attained to considerable proficiency in any art or manufacture; and they rarely succeed, unless they have some very material advantage on their side. But in this instance, besides having the start of foreigners, the natural and moral circumstances under which our manufacturers have been placed have given them advantages not enjoyed in any thing like the same degree by the manufacturers of any other country. Were any change or revolution effected in machinery that should admit of coal being advantageously dispensed with, it is difficult to say what effect it might have in the long run on our manufactures. We believe, however, that our advantageous situation, the magnitude of our capital, the industry of our workmen, and the determination of all classes to advance themselves in the world, would, under any circumstances, insure our continued prosperity as a manufacturing people. So long, however, as coal continues to be as indispensable in industrious undertakings as at present, and so long as we preserve our free institutions, without the alloy of popular licentiousness and agitation, there is not so much as the shadow of a ground for supposing that our manufacturing prosperity will be impaired. On the contrary, it is reasonable to expect, seeing the increasing wealth of our foreign customers, the greater competition at home and abroad, and the greater attention paid to scientific investigations, that it will go on increasing, and that the discoveries and progress to be made in the next age will surpass those made in the present, wonderful as they have been.

Commerce. — Neither the commerce of Tyre or Carthage in antiquity, nor that of Italy in the middle ages, nor of Holland in the 17th century, could compare for the variety and value of the products which it distributes, and the all but unlimited range which it embraces, to the existing commerce of England. Our products are found in every country, and our flag floats over every sea.

Quæ regio terræ nostri non plena laboris?

And as all commerce is bottomed on a principle of reciprocity, and is sure to stimulate the industry, and to add to the wealth of all who engage in it, we may safely affirm, that while the people of Britain are pursuing only their own interests, they are contributing in the most effectual manner to diffuse the blessings of civilisation and a taste for luxury and refinement. It is impossible, indeed, to overrate the beneficial influence of that commerce of which this country is the centre and mainpring. No one aware of its vast extent can have the smallest doubt that it is by far the most important means of civilisation and improvement ever brought into active operation. And we may unhesitatingly conclude, that instead of having approached, or, as some suppose, passed, its zenith, it will continue to increase with the increasing wealth, and consequently growing wants, of the various nations it is now rousing to activity and enterprise; and that it will derive new vigour, and have its foundations widened and consolidated, by every circumstance calculated to promote the industry and to add to the riches of those with whom we deal.

When we look a little narrowly into the mat-

ter, we find that at bottom society resolves itself into a series of exchanges; that every individual is in some sort a merchant; and that the principal business of life consists in the exchange of one sort of service or article for another. Hence in all countries the mercantile transactions carried on at home, or in the *home trade*, infinitely exceed in number and value those carried on with foreigners, or in the *foreign trade*. The latter, however, is not on that account the less important or valuable. But for the intercourse we carry on with foreigners we should be wholly destitute of many most desirable products—such, for example, as tea, coffee, wine, the precious metals, &c., and of the raw material of many of our most important manufactures, as those of cotton and silk. Generally, too, manufactures are improved and perfected according to the scale on which they are carried on, so that an extensive commerce is at once a consequence and a cause of manufacturing pre-eminence. The cotton-mills of Lancashire and Lanarkshire could not have been constructed had the demand for their produce been confined to the empire only: they have been built not merely to supply the limited consumption of Great Britain and Ireland, but the unlimited consumption of the world!

It is plainly impossible, from the nature of the thing, to form any estimate of the extent of the home trade carried on in any great country, or of the exchanges effected amongst its citizens. Formerly, accurate accounts were kept of the cross-channel trade between Great Britain and Ireland; but, with the exception of corn, no official account is now kept of the products conveyed from the one to the other. Luckily, however, this is not the case with the trade with foreign countries. Heavy duties being laid on most articles imported from abroad, it is necessary for fiscal purposes that their amount should be ascertained with as much accuracy as possible; and it is believed that the declarations of the real value of the exports made by the exporters do not differ materially from the truth.

The trade carried on with colonies, or the colonial trade, though conducted under different regulations and duties, is substantially the same with the foreign trade; and may be, and indeed generally is, considered as a branch of the latter.

We subjoin a few statements respecting the principal articles imported from and exported to the countries with which we have the greatest intercourse.

Russia—Imports from:—Tallow, corn, flax and hemp, flax and linseed, timber, bristles, ashes, hides, iron, and wax. Exports to:—Cotton twist, woollen fabrics, salt, coal, hardware, colonial products, &c.

Sweden and Norway—Imports from:—Timber, iron, and bark. Exports to:—Cottons and cotton yarn, woollens, earthenware, hardware, coffee, indigo, tobacco, sugar, &c.

Denmark—Imports from:—Corn and rapeseed, butter, bristles, wool, hides, and bark. Exports to:—Coal, salt, iron and steel, earthenware, machinery, coffee, indigo, &c.

Prussia—Imports from:—Corn, oak and fir timber, bark, bristles, wool, spelter, flax, &c. Exports to:—Refined sugar, salt, cottons, hardware, earthenware, &c. Our trade with Prussia is principally carried on through Hamburg.

Germany—Imports from:—Wool, corn, wines, butter, linens, hides, clover, rape-seed, smaltz, spelter, saffre, furs, wooden clocks, &c. Exports to:—Cotton stuffs and yarn, woollens, refined sugar, hardware, earthenware, iron and

steel, coal, salt, indigo, coffee, rum, tobacco, cotton wool, spices, &c. A good deal of the imports from and exports to Holland and Belgium are on German account.

Netherlands—Imports from:—Butter, cheese, corn, madder, geneva, flax and tow, hides, linens, seeds, toys, &c. Exports to:—Cotton stuffs and yarn, woollens, hardware, earthenware, salt, coal, and colonial produce.

France—Imports from:—Brandy, wine, silk (raw and manufactured), gloves, madder, eggs, skins, and fruit. Exports to:—Wool, linens and linen yarn, brass and copper manufactures, machinery, coal, horses, &c. Large quantities of Nottingham lace are smuggled into France, and brandy into England.

Portugal and Spain—Imports from:—Port and sherry wines, barilla, wool, raisins, dried fruits, lemons, oranges, olive oil, quicksilver, &c. Exports to:—Cotton stuffs, woollens, linens, hardware and cutlery, iron and steel, soap, candles, leather, and cinnamon.

Italy—Imports from:—Thrown silk, olive oil, straw for plaiting, straw plait and hats, currants, lemons, oranges, wine, barilla, shumac, bark, cheese, lamb-skins, hemp, &c. Exports to:—Cotton stuffs and yarn, refined sugar, woollen manufactures, hardware and cutlery, iron and steel, coffee, indigo, tobacco, pimento, &c.

Turkey, Greece, &c.—Imports from:—Silk, opium, madder, figs, raisins, valonea, oil, cotton, currants, senna, &c. Exports to:—Cotton manufactures and twist, linens, hardware, iron and steel, cordage, woollens, earthenware, indigo, and coffee.

Egypt and Africa—Imports from:—Cotton wool, flax, linseed, senna and other drugs. Exports to:—Cotton manufactures, iron and steel, arms and ammunition, and machinery.

Foreign West Indies—Imports from:—Sugar, coffee, cotton, cigars, &c. Exports to:—Cotton manufactures, earthenware, linen manufactures, hardware, iron and steel, woollens, glass, machinery, &c.

United States—Imports from:—Cotton, tobacco, wheat flour, wheat, rice, skins and furs, hides, staves, &c. Exports to:—Cotton, linen, and woollen manufactures, hardware, cutlery, earthenware, salt, brass and copper, apparel, books, &c.

South American States—Imports from:—Cotton wool, sugar, coffee, bullion and precious stones, cocoa, hides, fruits, bark, dye-woods, furs, &c. Exports to:—Cotton, linen, and woollen manufactures, earthenware, hardware, soap, candles, &c.

African British colonies—Imports from:—Cape and Constantia wines, hides, ivory, skins, aloes, palm-oil, teak timber, wax, dye-woods, sugar from the Mauritius, &c. Exports to:—Cotton, woollen, and linen manufactures, apparel, earthenware, hardware, iron and steel, soap, candles, stationery, fire-arms, salt, machinery, &c.

Asia and Australia—Imports from:—Tea, indigo, cotton, sugar, silk, coffee, wool, pepper, saltpetre, piece-goods, rice, lac-dye, cinnamon, mace, cloves, cocoa-nut oil, whale-oil, ivory, tin, and the precious metals. Exports to:—Cotton stuffs and yarn, woollens, linens, earthenware, copper, hardware, iron and steel, leather, glass, machinery, &c.

American British colonies—Imports from:—Furs, fish, ashes, skins, turpentine, &c. Exports to:—Woollens, cottons, linens, hardware, iron and steel, soap, candles, earthenware, apparel, glass, cordage, coal, butter, cheese, &c.

British West Indies—Imports from:—Sugar,

coffee, rum, cotton, pimento, molasses, mahogany, logwood, fustic, cocoa, cochineal, ginger, hides, &c. Exports to:— Cotton stuffs, linens, woollens, apparel, soap, candles, hardware, iron and steel, fish, earthenware, cordage, beef and pork, arms and ammunition, &c.

The subjoined Tables give a pretty complete view of the commerce of the U. Kingdom. Those who wish for more ample information may refer to the Commercial Dictionary.

I. Official and Declared Value of Exports of British and Irish Produce and Manufactures; and Official Value of Exports of Foreign and Colonial Merchandise from Great Britain; and Official Value of Imports into the same, for the following Years.—(*Part. Paper, No. 243. Sess. 1830, and Finance Account.*)

Years ending Jan. 5.	Exports.		Imports.	
	British and Irish Produce and Manufactures from Great Britain.	Foreign and Colonial Merchandise from Great Britain.	Into Great Britain.	
	Official Value.	Declared Value.	Official Value.	Official Value.
1799	18,556,891	31,252,836	8,760,196	25,122,203
1800	22,284,941	35,903,850	7,271,696	21,066,700

* Records destroyed by fire.

† The great increase in the official, and the comparatively stationary amount of the real value of the exports, has occasioned a great deal of erroneous discussion. The rates by which the official values of the exports are estimated were fixed in 1806, so that they have long ceased to be any test of their actual value, and are of use only as showing the fluctuations in the quantities exported. To supply this deficiency a plan was set on foot by Mr. Pitt, for keeping an account of the real value of the exports from the declarations of the exporters. Now, it has been contended, that, while the great increase in the official value of the exports since 1815 shows that the quantity of the articles exported has been proportionally augmented, their nearly stationary real value shows that we are selling this larger quantity for about the same price,—a result which is said to be most injurious. But the circumstance of a manufacturer or a merchant selling a large or a small quantity of produce at the same price, affords no criterion of the advantageousness of the sale; for if, through improvements in the arts or otherwise, a particular article may now be produced for half the cost of its production 10 or 20 years ago, it is obvious that double the quantity may be afforded at the same price without injury to the producers. And this has been most strikingly the case with the great articles of cotton, hardware, &c. The fall in the price of the former enables us to export and sell at a profit, (for, unless such were the case, does any one suppose the exportation would continue?) at the same price, more than double the cotton stuffs and twist that we exported in 1815! Surely, however, this is, if any thing can be, decisive proof of manufacturing improvement and commercial prosperity.

[For Table II. see next page.]

The means of internal communication in Great Britain are probably superior to those enjoyed by any other country. Our high roads, which, during the first half of last century, were execrable, have been signally improved since the close of the American war; and since the general introduction of the practice of macadamising, they may be confidently pronounced to be the very best in Europe. With the exception of

Holland and Belgium no country is better supplied with canals; and by these means, and the aid afforded by our numerous navigable rivers, the conveyance of the bulkier articles has been rendered both easy and cheap. Railroads seen now, however, to be likely to supersede most other methods of conveyance, in so far at least as the transit of passengers and of the lighter and more valuable species of goods are concerned; and the wonderful speed with which lengthened trains of carriages are impelled by locomotive engines along these roads is among the most valuable and astonishing results of modern science and discovery. By facilitating travelling to a degree that could not, a few years ago, have been conceived possible; rendering all the great markets of the empire easily accessible to the products of the remotest districts; obliterating local prejudices and customs; reducing the country to a homogeneous mass; and producing every where a spirit of emulation and competition, our improved means of communication are exercising an influence of the most powerful kind, and which cannot be too highly appreciated.

Still, however, it has been doubted whether these extraordinary improvements in the arts, and the vast extension of commerce, has conferred any real and important advantage on the bulk of our people. That they have added prodigiously to the field of employment is certain; but it has been contended that the increase of population and consequently of the demand for labour, has been equal, or nearly so, to the increase of employment; that the condition of the people has not been materially improved; and that their command over the necessities, conveniences, and enjoyments of life have not been augmented in any thing like the degree in which their numbers have increased. There is really, however, no truth in these representations. The condition of the great bulk of the people of Britain, and especially of the labouring classes, has been signally, and indeed astonishingly, improved since the middle of last century. The greatest possible ameliorations have been effected in the interval in the diet, dress, and lodging of all classes. Towards the middle of last century, about half the people of England were consumers of barley, rye, and oat bread; whereas, at present, not a tenth part of the population use any bread unless made of wheat. The consumption of butchers' meat, as compared with the population, has also doubled, or more, in the interval (*Statistics of the British Empire*, ii. cap. 5.); and the extraordinary increase in the consumption of tea, sugar, coffee, and such like articles, is too well known to require being pointed out. The improvements that have been made in clothing and lodging arc, if possible, still more remarkable. Linen shirts, that were formerly luxuries, used only by the richer classes, are now worn by every body; and the old, coarse, comfortable home-made cloths have been wholly superseded by the better and cheaper products of the factories. The cheapness, to specify one instance, and extraordinary abundance of cotton fabrics, have given the poorest females the means of greater comfort, neatness, and display in dress, than were enjoyed by the highest classes in the first half of last century. And any one who compares the old farm-houses and cottages, or the houses in the old narrow streets and lanes in any one of our great towns, with the farm-houses, cottages, and town lodgings for the poor, built within the last fifty, and still more, the last thirty years, will at once be sensible of a vast im-

provement. Essential as glass windows may now appear, in the 16th century they were luxuries, all but unknown, in the castles of the principal nobility in England; and in Scotland, in the early part of last century, glass was seldom seen in the windows of the first class of country houses, and never in cottages. (*Statistics of British Empire*, i. 714.) The latter were then, also, almost universally destitute even of chimneys! But the liberal use of these, and of glass, is not the only circumstance in which modern houses excel those built previously to the American war. The former are in all respects superior. They are constructed on a larger scale; the apartments are more spacious and lofty; they are better ventilated; and are supplied with water to an extent of which our ancestors had no idea. It is, in fact, to the better construction of houses, the greater width of streets, and, above all, to the abundant supply of water and the effective system of under-ground drainage that now exists, that the entire freedom of our great towns from epidemic diseases, and the wonderful improvement in the health of the inhabitants are mainly to be ascribed.

Signal as the spread of improvement has been every where throughout Great Britain since 1750, it has been greatest in Scotland. This, no doubt, has been principally owing to the fact of Scotland being previously in a comparatively backward state. But its progress since the epoch referred to, or rather since the close of the American war, has been all but unprecedented; and if at all, has only been surpassed by the progress made by Kentucky, and one or two more of the American states.

In Ireland, we regret to say, improvement has been much less rapid than in any part of Great Britain; but even there a considerable advance has been made; and the fair presumption seems to be, now that the civil disabilities under which the Catholics laboured have been removed, that improvement will proceed with an accelerated pace.

If any thing more than has been already stated were required to establish the astonishing improvement in the condition of the people of Great Britain during the last fifty years, it would be evinced by the decrease that has taken place in the rate of mortality since 1760 and 1770. The extreme limit of human life

11. ACCOUNT OF THE DECLARED VALUE OF BRITISH AND IRISH PRODUCE AND MANUFACTURES EXPORTED FROM THE UNITED KINGDOM, SPECIFYING THE VARIOUS COUNTRIES TO WHICH THE SAME WERE EXPORTED, AND THE VALUES SENT TO EACH, IN EACH YEAR, FROM 1830 TO 1838.

assigned by the Psalmist has not, indeed, been extended; but a much larger proportion of those born arrive at or approach to that limit than formerly. The probable life of a male annuitant 5 years of age (a picked life), at the commencement of last century, has been found to be 39·03 years; whereas it appears that the probable life of a male of 5 years of age, taken at an average of the mass of the population, from 1813 to 1830, was not less than 49·80, or nearly 11 years greater than the former! This extraordinary improvement must, no doubt, be ascribed to a variety of causes: partly to the drainage of bogs and marshes, by which agues and marsh-fevers have been entirely banished from many districts; partly to improvements in the diet, dress, lodgings, and other accommodations of the mass of the people; partly to the greater prevalence of cleanliness; and partly, and since 1800 chiefly, perhaps, to discoveries in medical science and the extirpation of the small-pox. But, however explained, this, and the facts men-

tioned above, show conclusively that the beneficial influence of the extraordinary improvements in arts and sciences made during the last 60 or 70 years has not been counterbalanced by the increase of population, and that it has not been confined to the upper and middle classes. On the contrary, these improvements have been especially beneficial to the labourers. The latter are at this moment incomparably better fed, better clothed, and better lodged than at any former period of our history; and, in point of fact, daily enjoy, and reckon as indispensable, a great number of articles of convenience and luxury that formerly could rarely be obtained even by the richest lords.

Shipping.—The mercantile marine of Great Britain first began to attain to considerable importance in the reign of Elizabeth; and it has continued progressively to increase with the increasing colonies and commerce of the country. The subjoined Tables give a view of its present magnitude, and of the navigation of the empire:—

I. ACCOUNT of the Number and Tonnage of Vessels, with the Number of their Crews, belonging to the British Empire, on the 31st December, 1836, 1837, and 1838 :—

The following Table exhibits an account of the number and tonnage of the steam ships belonging to the different divisions of the British dominions in 1838:—

England.		Scotland.		Ireland.		United Kingdom.		Isles of Guernsey, Jersey, and Man.		British Plantations.		Total.	
Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
1838. 484	43,877	105	13,115	84	17,694	673	74,684	5	709	44	7,323	722	82,716

Ship-building is principally carried on at the ports of London, Sunderland, Newcastle, Hull, Liverpool, &c. The business has of late increased very rapidly at Sunderland; so much so, that while only 60 ships, of the burden of 7,500 tons, were built in that port in 1830, no fewer than 247 ships, of the burden of 59,441

tons, were built in it in 1838! Of late years, many steam-boats and other craft have been built in the Clyde. The ships built in the Thames bear, generally, the highest character. At a rough average, the cost, including outfit, of the new ships annually sent to sea may be estimated at from 10*l.* to 12*l.* a ton.

ACCOUNT of the Number of Vessels, with the Amount of their Tonnage, that were built and registered in the Ports of the British Empire, in 1836, 1837, and 1838:—

	1836.		1837.		1838.

British Plantations	441	66,604	510	71,806	343*	46,811
Total	1,150	156,240	1,515	207,228	1,490	207,270

Money.—The metallic money of the United Kingdom, consists partly of gold, and partly of silver and copper, coins. The standard of our gold coin is 11 parts fine to 1 part alloy: a pound troy of this standard gold is coined into 46 sovereigns and $\frac{3}{4}$ ths of a sovereign, or into 46*l.* 1*s.* 6*d.*; so that the sovereign contains 113·001 grains fine, and 123·274 grains standard, gold.

The standard of our silver coin is 11 oz. 2 dwt. fine to 18 dwt. alloy. Since 1816, a pound of this standard silver has been coined into 66 shillings, so that each shilling contains 80·727 grains pure silver, and 87·27 grains standard. Silver coins form a mere subsidiary currency, and are legal tender to the extent only of 40*s.*

Copper coins are much over-valued in our currency, and are legal tender to the extent only of 1*s.*

But by far the greater part of the considerable transactions in the United Kingdom having reference to money, are settled by the intervention of paper; that is, by the agency of the notes of the different banking companies, or of bills. In England and Ireland, no bank note can be issued for less than 5*l.*, but in Scotland they may be issued so low as 1*l.*; they are all made payable to bearer on demand, either in coin or in notes of the Bank of England. The latter, with the banks of Scotland and Ireland, are the principal banking establishments. Bills vary in every possible way, as to amount, time, and place of payment.

Constitution.—For full details as to this interesting and important head, the reader is referred to the articles ENGLAND, SCOTLAND, and IRELAND. It is here sufficient to observe, that the British constitution appears to have been at its outset substantially the same with the constitution originally established in most of the other European states formed out of the ruins of the Roman empire.† But it is the peculiar boast and happiness of England that she alone has had the good sense or good fortune to preserve that distribution of power among the different orders of the community which at one time prevailed among the French, Spaniards, &c. Our govern-

ment is of the species called mixed, being partly monarchical, partly aristocratical, and partly democratical. The executive authority is vested in the sovereign, or rather in the ministers chosen by him, while the legislative authority is shared by the sovereign and by the houses of Lords and Commons. The former of these houses consists of dignified clergymen, and of nobles whose dignity is hereditary, and who are generally possessed of large fortunes.

At present (1839) it consists of—

The House of Commons.—The predominating power in the state—consists of 658 representatives chosen by electors in the different counties and represented towns; and though the sovereign be not, his ministers are, responsible to it and to the H. of Lords for all acts done by them in their public capacity. According to the theory of the constitution, the H. of C. is chosen by and represents the wishes, feelings, and prejudices of the British people. But if by people be meant the full-grown male pop. of the U. Kingdom, this statement is altogether erroneous. By far the greater portion of the population has not, and never had, any thing directly, and but little indirectly, to do with the choice of the members of the H. of C. Down to the passing of the Reform Act in 1832, the members for counties in England were chosen by persons having a freehold, or a life interest in freehold property, worth 40*s.* a year; and in towns the right of election was usually in the corporation, or in the corporation and freemen. That hostility to the old system that paved the way for the Reform Act was not occasioned so much by the faulty mode in which representatives were chosen in towns entitled to send them to the H. of C., as by the decayed condition of many of these towns. The parl.

* Returns defective.

† "Vous voyez libre," says Montesquieu, "l'admirable ouvrage de Tacite sur les mœurs des Germains, on verra que c'est d'eux que les Anglois ont tiré l'idée de leur gouvernement politique. Ce beau système a été trouvé dans les bois." (*Esprit des Loix*, liv. xi. cap. 6)

boroughs had all been specified previously to the Revolution; and no provision was made in the constitution for admitting representatives for such new boroughs as might afterwards attain to importance, or for the disfranchisement of such of the parl. boroughs as might happen to fall into insignificance. Hence it came to pass that many commercial and manufacturing towns, which had attained to vast wealth and importance after the parl. boroughs were selected, were excluded from all share in the representation, while, on the other hand, many boroughs that had become quite unimportant continued to enjoy this valuable privilege. A distinction of this sort could not be long endured; and but for the engrossing excitement occasioned by the late French war, it would, most likely, have been obviated some twenty years sooner. The Reform Act, by disfranchising a good many decayed and trifling boroughs, and enfranchising the greater ones, and giving the right of voting at the election of members to the holders of 10*l*. houses, has rendered the H. of C. a good deal more democratical than formerly, and has, consequently, made it correspond better with the theory of the constitution. This tendency has, perhaps, also been strengthened by the changes that were at the same time made in the county representation, though that is more doubtful.

STATISTICAL VIEW of the Representation of the United Kingdom.

Places represented.	Number of Members.	Registered Electors, 1838.	Pop. (exclusive of army and navy), 1831.

It remains to be seen whether the changes that have been made in the system of representation will turn out in the end to be beneficial. It is obvious that such a modification in our institutions as should admit the great towns that had grown up since the parl. boroughs were selected to a direct participation in the privileges of the constitution, was alike just and indispensable. It was an insult to common sense to pretend that Gatton and Old Sarum should be represented, and that Manchester and Birmingham should not; and the wonder is, that so revolting an anomaly should have been so long maintained. The only question now is, has the franchise been placed in proper hands? Time only can resolve this; but there are, perhaps, some grounds for apprehension. It appears to us that, in a country like Great Britain, with so great a public debt, and where so much depends on the security of property in opinion, as well as in fact, the power to send representatives to the H. of C. should not have been voluntarily conceded, except to those who, from their position in society, might be presumed to have a substantial interest in the support of the existing order of things. But the occupier of a 10*l*. house or of a 50*l*. farm may be, and in fact not unfrequently is, little better than a beggar. And we are not of the number of those who contend that a person with only 5*s*., or without any thing, will feel himself as much interested in good government, and in the maintenance of that se-

curity so essential to all great undertakings, as the owner of an estate or of a cotton-mill. That such a person has a real interest in the well-being and tranquillity of the empire, is most true; but it is absurd to suppose that he will be so likely to be influenced by a wish for its promotion, or that he will be so little likely to lend a willing ear to the seductive harangues of demagogues, or to give his sanction, in periods of distress or excitement, to dangerous innovations, as a person with some considerable amount of property.

That there are difficulties in the way of the establishment of a *bona fide* property qualification is true, but they are far from insuperable; and provided the qualification were of a reasonable amount, it appears to be the most likely means of securing the election of representatives to whom the affairs of the country might be safely entrusted, and of providing for a really responsible, and, at the same time, safe and judicious system of government.

We believe, however, that the objectionable class of electors alluded to above forms in most, if not in all, instances a minority: and that the good sense and obvious interest of the bulk of the people will be sufficient to hinder any rash or dangerous tampering with our institutions. It were well, however, that steps were taken to give the Reform Act fair play, by putting a stop to the manufacture of fictitious votes. In many instances this practice has been carried to a very great height, and threatens, unless put an end to, to subvert every sound principle of representation.

Perhaps the greatest advantage resulting from the free constitution of the H. of C. has been indirect rather than direct. We owe to it what no other European nation has enjoyed—a really free press. According as the people increased in wealth and intelligence, and members for populous places found it necessary to conciliate public opinion, it became of importance to them to have their speeches printed and circulated over the country. Hence, though the reporting of debates be a breach of privilege, it has long been practised, with the consent of all parties. Members, in fact, speak less to the House than to the reporters, and, through them, to the country; and the censures and comments in which they are accustomed to indulge become a warrant and an apology for similar censures on the part of journalists. It would have been subversive of every principle of justice to punish the latter for what had been proclaimed with impunity by the former. Hence it is that we are really indebted for the freedom of the press, that is, for the palladium and only real safeguard of our rights and liberties—not so much to the votes, as to the debates carried on in the H. of C. Freedom of debate produced freedom of printing; and, consequently, gave us the only effectual security for good government, and the only real check upon abuse. It would require a lengthened essay, or rather a large volume, to point out all the advantages we derive from the freedom of the press; but it is not too much to say, that we are mainly indebted to it for the high place we hold among the nations of the earth; and should we ever be deprived of it, our other institutions would, one by one, be subverted, or be rendered of comparatively little importance, and the sun of Britain's glory would set—and for ever.

Next to the security afforded by the freedom of the press, *trial by jury* has been the grand bulwark of the liberties of the people of Eng-

land. This institution is of very remote origin, and, like representative assemblies, was at one time introduced into several European countries. It is expressly laid down by the great charter, that "*nullus liber homo capiatur, vel imprisonetur, aut exulet, aut abiquo alio modo destruetur, nisi per legale iudicium parium suorum, vel per legem terræ.*" "The founders of the English laws," says Blackstone, "have with excellent forecast contrived that no man should be called to answer to the king for any capital crime, unless upon the preparatory accusation of 12 or more of his fellow-subjects; (the *grand jury*;) and that the truth of every accusation, whether preferred in the shape of indictment, information, or appeal, should be afterwards confirmed by the unanimous suffrages of 12 of his equals and neighbours, (the *petty jury*), indifferently chosen, and superior to suspicion. So that the liberties of England cannot but subsist so long as this *palladium* remains sacred and inviolate, not only from all open attacks, which none will be so hardy as to make, but also from all secret machinations, which may sap and undermine it, by introducing new and arbitrary methods of trial, by justices of the peace, commissioners of the revenue, and courts of conscience." (Book iv. cap. 27.)

With the exception of England, trial by jury, in most other countries, was not long in being either suppressed or perverted; that is, juries were either entirely dispensed with, and the power to try prisoners entrusted to judges appointed by the different governments, or the institution was kept up in name only, its object and spirit being totally changed. Instead of jurymen being "indifferently chosen, and free from suspicion," which is of the very essence of jury trial, they were not unfrequently selected by the crown, or its creatures! When so perverted, this institution, from being an efficient protection against unjust and unfounded accusations, becomes a most convenient and dangerous instrument in the hands of an unprincipled government. Hence, it is always impossible to form any fair estimate of the judicial systems of any two or more countries, or of the protection afforded by each to life and property, from merely learning that trial by jury is established in them. Every thing depends on its organisation. If juries be fairly and impartially chosen from the mass of the people, they are the best bulwarks that can probably be devised for the protection of innocence; but if otherwise — if they may be named, or their election influenced, by judges or government officers, they throw a constitutional veil over the acts of the oppressor, and are, in all respects, most inimical to the public interests.

In England, the selection of jurymen having been always, or at least very generally, made on fair principles, jury trial has been deservedly in the highest degree popular. In most countries, the fact of government bringing a charge against an individual, and his condemnation, have been nearly identical; but it has been quite otherwise with us. Here the charge had to be referred to 12 individuals fairly selected from among the freeholders of the neighbourhood; and unless they were *unanimously of opinion that the charge was well founded*, the accusation fell to the ground, and no farther legal proceedings bottomed upon it could be instituted against the accused.

The signal benefits derived from jury trial in criminal cases, and in charges of treason and sedition; and the fact that, were it given up in one class of cases, it might gradually fall into

disuse in others, seem to be the principal causes of its being continued as a means of trying all descriptions of civil suits. The fair presumption, however, would seem to be, that a large class of civil cases might be as well, or better decided by a judge or judges appointed for that purpose; and one would be disposed to think that trial by jury might now be advantageously confined to that description of civil cases where the facts are disputed, for the investigation of which it is so peculiarly well fitted.

The vital importance of an indifferent selection of jurymen is obvious; but if any doubt should remain in the mind of any one with respect to it, that will be removed by comparing its influence in England with its influence in Scotland: in the former, it has been the best defence of the liberty of the subject; whereas, in the latter, it was the readiest means government could employ to oppress and get rid of any obnoxious individual! This anomalous result was entirely owing to the fact that, in England, juries were fairly selected; while in Scotland, they were nominated by the sheriffs and judges! Luckily, however, this gross abuse has been at last obviated; and Scotland, as well as England, is now in the *bonâ fide* enjoyment of trial by jury.

Religion. — The most perfect toleration is given to the professors of different religious creeds in the U. Kingdom. But, from the Revolution down to 1829, Catholics were excluded from parliament, and were incapable of holding most offices of trust and emolument. These unjust and degrading disabilities were, however, removed at the epoch referred to; and Catholics may now be elected members of the legislature, and are eligible to almost all offices. The repeal of the test and corporation acts, in 1828, removed sundry disabilities under which dissenters previously laboured.

The established church of England has retained the episcopal form of church government, with its subordination of ranks; and is a very richly-endowed institution. Its tenets, which are partly Lutheran and partly Calvinistic, are embodied in the famous 39 Articles. The Kirk, or established church of Scotland, which is Presbyterian in form and Calvinistic in principle, is moderately well endowed. The greatest equality subsists among its members; and, on the whole, it may be said to be an extremely useful and an essentially popular body.

These churches respectively enjoy the confidence and support of the great bulk of the people of England and Scotland. But it is quite otherwise with the established church of Ireland. The latter is identical with the Church of England. Inasmuch, however, as the doctrines of the Reformation never made any considerable progress in Ireland, and as the great bulk of its inhabitants have always been Roman Catholics, the established church has been that of a small minority only, and has never possessed the esteem of the people. On the contrary, they have always regarded it as a usurpation, as originally forced upon them by the arms, and upheld by the power, of England, and as being hostile alike to their religion and their secular interests. Much of the disturbance and disaffection that always prevail in Ireland are to be ascribed to this unhappy constitution of the established church. It is in truth little better than a contradiction and an absurdity to make the church of a small minority the national church, and to assign to it funds that might amply provide for the religious instruction of the whole people. It is not to be supposed that the majority should tamely ac-

quleuse in such a state of things; and common sense would suggest that the Catholic should be made the established religion of Ireland, or, at all events, that the Catholic clergy should participate, in proportion to the number of their adherents, in the endowments now exclusively enjoyed by the established clergy-men.

Revenue and Expenditure.—That portion of the national revenue that is withdrawn from the public by means of taxes, and appropriated to the use of government, amounts at present (1839) to about 50,000,000*l.* sterling, and far exceeds in magnitude the public revenue of any other country. But it must not thence be inferred that taxation is here comparatively heavy. Its pressure is not to be estimated by the actual amount of the sum taken from the people and lodged in the coffers of the treasury; but by the mode in which taxes are imposed, and the ability of the people to bear them. In some countries taxes are imposed on certain classes only; and even where this gross inequality does not exist, they are often imposed on erroneous principles, and in a way that makes their assessment and collection peculiarly difficult and injurious. But in the U. Kingdom taxation presses equally, or very nearly so, on all classes; and, without pretending to say that our system of taxation is perfect, or that it might not be materially improved, it appears, speaking generally, to be founded on sound principles, and is practically as little injurious as it could well be rendered. And if we compare the magnitude of our taxes with that of the national revenue whence they are derived, it will probably be found that the complaints of the peculiarly heavy pressure of taxes in this country are, in a great measure, without foundation.* It is not to the influence

of taxation, but to the expensive style of living, which prevails amongst us, and which luckily (for it is the grand incentive to industry and invention) pervades all classes, that the difficulty many individuals have in preserving their places in society is to be ascribed. Far, indeed, from supposing that the influence of taxation in Great Britain has been hostile to the increase of public opulence and private comfort, we believe it has had a precisely opposite effect. To the desire of rising in the world, the increasing pressure of taxation during the late war superadded the fear of being thrown down to a lower station, and the two together produced results that we should in vain have looked for from the unassisted agency of either. Oppressive taxes would have had an opposite effect; and instead of producing new displays of industry and economy, would have produced only despair and national impoverishment. But it was seen that the increase of taxation might be met by increased exertion and economy; and this increased exertion has, in fact, led to the production of a far greater amount of wealth than was required to meet the increased demands of the revenue collectors.

About three fourths of the public revenue are derived from duties of customs and excise; and the rest from duties on stamps, the assessed taxes, and the post-office. With few exceptions, the duties seem to be judiciously selected; and though it be true that some of them, as those on foreign brandy, tobacco, &c., would be more productive were they materially reduced, the defect is not in the selection of the articles on which to impose duties, but in the too great height to which they have been carried; a defect that admits of being easily obviated.

The following is an account of the nett amount (including the expenses of collection) contributed by each of the three great divisions of the U. Kingdom to the principal branches of the public revenue in 1838: —

	England.	Scotland.	Ireland.	U. Kingdom.
Customs	£ 18,902,169	£ 1,518,981	£ 1,944,190	£ 22,365,340
Excise	10,577,600	2,198,355	1,974,566	14,750,521
Stamps	6,214,628	536,115	461,717	7,212,460
Taxes	3,666,809	276,277	-	3,943,086
Post-office	1,905,255	211,545	229,480	2,346,278
Totals	41,266,461	4,701,271	4,609,933	50,577,715

The expense per cent. of collecting the gross public revenue in 1838 was: —

	Great Britain.	Ireland.	U. Kingdom.
Customs	Per cent. 1.5 0 5	Per cent. 1.1 19 3	Per cent. 1.5 12 1
Excise	6 6 4	9 16 21	6 14 0
Stamps	2 1 74	4 18 34	2 5 3
Taxes	5 10 6	-	5 19 6
Post-office	25 13 94	39 16 44	27 2 11

In the following page will be found a detailed account of the expenditure of the United Kingdom in the years 1836, 1837, and 1838.

Defence — Army. — The formation of a standing army was long regarded by our ancestors with extreme jealousy and aversion, so that its establishment in England is of comparatively modern origin, not dating farther back than the reign of Charles II. It is annually provided for by a vote of the H. of C.; so that it is always in the power of the latter at any time to reduce, or, if it see cause, totally to disband, the army. But the old jealousies of which it was the object no longer exist; and there can be no doubt that the establishment of a properly trained regular military force is not only indispensable to guarantee the national independence from hostile attack, but that it is also by far the best force that can be employed to maintain internal tranquillity and order. It would be worse than useless to waste the reader's time by dwelling on the transcendent merits and services of the British army. It has been employed in every quarter of the world, and has every where exhibited all those qualities that go to form a perfect military force — the most unflinching courage, combined with the greatest patience and fortitude under privations and hardships, and the constant observance of the strictest discipline.

The British army is recruited by means of voluntary enlistment only; and it is to be hoped that all attempts to introduce the conscription into this country will meet with no better success

in future than that which has hitherto attended them. If soldiers could not be procured by other means, we should then admit that necessity formed a valid excuse for the introduction of a conscription. But no such necessity has ever existed. No country that chooses to pay fair wages to its troops, and which treats them as men employed in the service of their country should be treated, will ever want for a supply of voluntary recruits. If we ever be forced to resort to the oppressive and odious resource of conscription, the necessity will have arisen from the adoption of some spurious system of economy, or from something wrong in the treatment of the troops, or both.

The annual Mutiny Act, and the Articles of War issued by the crown, and subjoined to that act, constitute the code of martial law in force in the British army.

We subjoin an account taken from official documents of the regular troops (exclusive of the ordnance) at home, in the colonies and in foreign countries, in 1792, 1815, and 1834.

	1792.	1815.	1834.
At Home and in the Colonies.			
Household cavalry	779	1,504	1,511
Foot guards	3,766	9,619	5,255

In corresponding perpetuities, as estimated by Mr. Finlaison.		1,928,155	-	1,870,745	-	1,830,664	-
	Difference	2,362,662	-	2,531,297	-	2,468,510	-

The charge for the above forces, exclusive of the ordnance, was 4,151,588*l.*, of which 691,133*l.* were to be defrayed by the East India Company. The charge for the ordnance during the same year was 1,263,449*l.*; making the total expense of the effective military force in 1836-37, 5,415,087*l.* But to this has to be added the charge for non-effective services, that is, for half-pay and pensions to officers and men, which amounted, during the same year, to 2,523,578*l.*; making the total cost of the army, including the sum to be repaid by the East India Company, 7,938,665*l.*

The forces embodied in 1833-37, exclusive of the ordnance, were distributed as follows:—

Greatest Britain	25,583
Ireland	18,271
Abroad (not in India)	35,865
India	19,740
Total	109,459

The pay and other emoluments of the officers and men depend partly on the length of their service and partly on the department of the service to which they belong. In the household troops, the pay of privates varies from 1*s.* 9*d.* to 2*s.* 0*d.* a day; in the cavalry of the line it is 1*s.* 4*d.*; in the foot guards, 1*s.* 2*d.*; and in the infantry of the line, 1*s.* 1*d.* Soldiers, however, are not entitled to receive the whole of this sum in money: when at home and in barracks, they are supplied with certain rations, for which 6*d.* a day, and not more, is to be deducted from their pay. The greater part of their clothes and accoutrements are furnished at the public expense; but certain deductions are made from their pay on that account. Pensions are granted for casualties in action, &c., and to soldiers discharged after certain periods of service. (The regula-

tions relating to pay, half-pay, pensions, &c., may be seen in the *Army List*.)

Exclusive of the regular troops, there is also the militia, yeomanry, and police. The first has not been embodied since 1815. The yeomanry is a species of volunteer cavalry that formerly was much more considerable than at present. It is a description of force of which the utility is very doubtful; and it appears to us that wherever a military force has to be employed, the preferable plan is to employ regular troops. Under the new organisation, the police has become a valuable species of force, and is extensively employed in Ireland, and in London, and several towns in England:

Navy. — The naval service has always been exceedingly popular in this country; and the navy has long been reckoned the pride and best bulwark of the empire. The H. of Lords, in an address to Queen Anne, in 1707, laid it down as "a most undoubted maxim, that the honour, security, and wealth of this kingdom does depend upon the protection and encouragement of trade, and the improving and right encouraging its naval strength . . . therefore we do in the most earnest manner beseech your majesty that the sea affairs may be always your first and most peculiar care." And there cannot be a doubt that, in this instance, the lords gave expression to what were then, and have ever since continued to be, the sentiments of the great majority of the British nation.

The battle off Cape La Hogue, in 1693, gave the British navy an ascendancy over that of France, the only other great naval power, it has ever since preserved. During the last war with France, our navy was prodigiously augmented; and the victories of the 1st of June, 1794, of St. Vincent, Camperdown, the Nile, Copenhagen, and Trafalgar, left us the undisputed masters of the ocean.

The ships in commission and in ordinary in 1792, 1815, and 1835, were:—

	1792	1815	1st Rate.	2d.	3d.	4th.	5th.	6th.	Small Vessels, &c.
Ships in commission	1792 13	1815 1	2	10	5	14	12	81	
	1835 1	7	3	5	8	6	13	136	
Ships in ordinary	1792 7	19	102	16	79	30	179		
	1815 12	15	173	13	100	80	167		
	1835 14	16	50	14	75	13	89		

The number of seamen and marines, and the sums voted at different periods for the service of the navy have been:

Years.	Seamen.	Marines.	Total Men.	Sums.
1792	-	-	16,000	£. 1,985,482
1815	-	For 3 Mon.	70,000	
1825	20,000	10 do.	90,000	17,032,700
1830	20,000	3,000	23,000	5,983,186
1831	20,000	35,000	55,000	5,910,855
1832	22,000	10,000	32,000	5,875,086
1833	18,000	9,000	27,000	4,878,624
1834	*18,500	9,000	27,500	4,478,009
1835	17,500	9,000	26,500	4,245,724
1836	21,700	9,000	30,700	4,089,651
1837	24,700	9,000	33,700	4,788,761
1838	25,165	9,000	34,165	4,811,990

The navy is governed by the lord high admiral for the time being, or by a body of commissioners called the Board of Admiralty, of which the power is, in fact, vested in the First Lord. This board has the superintendence of all naval matters: all appointments, &c. of commissioned officers, and warrant officers with some exceptions; promotion, honours, pensions; and the general control of every thing relating to the discipline of the fleet.

* 1,000 first-class boys were first voted this year, and subsequently increased to 2,000 in the following year.

Those who enter the service with a view to obtain commissions, begin as volunteers, and then serve as midshipmen: after 6 years in the latter character, and attaining the age of 19, they pass an examination for the rank of lieutenant — the lowest commissioned officer. But the attainment of a commission, and subsequent promotion, are entirely at the disposal of the admiralty. Certain advantages are enjoyed by those who have completed their education as students at the naval college of Portsmouth. The discipline of the navy is maintained by articles embodied in acts of parliament. Sailors enter the navy by voluntary enlistment; but in cases of emergency they may be obtained by impressment. Of the antiquity and legality of this practice, no doubt can be entertained; but very grave doubts have been entertained as to its necessity and expediency.

King's ships are now classified according to a system of rating adopted in 1816. There are six classes of what are termed rated ships; all three-deckers ranking as first rates; and the following five rates comprising ships whose complements of men are above 700, under 700, 600, 400, and 250 men respectively. Ships of war carrying less than 74 guns are usually styled frigates; less than 20, sloops of war, &c.

The navy estimates for the year 1837-38 were as follows:—

Wages for seamen and marines	1,051,916
Victuals for ditto	452,898
Wages to artificers, &c.	432,870
Naval stores, &c.	359,827
Miscellaneous	235,564
	2,736,075
Half-pay, pensions, &c.	1,548,165
For the service of other departments	27,241
	£. 4,521,481

For an account of the pay, half-pay, pensions, &c., of the different descriptions of officers and men in the sea-service, the reader is referred to the *Navy List*.

Public Debt. — Exclusive of the large sums raised by taxes, the British government has borrowed immense sums. Of the total expenditure of the United Kingdom, during the year 1838, amounting to 51,720,747*l.*, no less than 29,251,040*l.* were required to defray the interest and expense of managing the national debt! Many conflicting opinions have been entertained as to the policy of the borrowing or funding system, and as to the preference to be given to different methods of borrowing; the stating of which would be inconsistent alike with our objects and limits. It is sufficient for our purpose to remark that the public debt has grown up, almost entirely, since the Revolution, and principally during the American and late French wars, especially the latter. Individuals lending money to the public, or, as it is said, contracting for a loan, receive a certain specified amount of government stock, or *funded property*, bearing a specified rate of interest, or, as it is called, *dividend*, payable quarterly at the Bank of England. A lender to the public is not entitled to demand repayment of the principal sum lent; all that he has a right to claim is the regular payment of the interest or dividend on that sum; but he is at liberty to dispose of his right to this dividend, or, in other words, to sell or transfer his stock to any one else. Such transfers or sales are usually effected at the Stock Exchange, in the city of London, and their negotiation affords employment to a considerable number of brokers. The price of stocks is liable to much variation, being necessarily affected by all those circumstances that affect the peace and prosperity of the empire; the abundance or scarcity of money; the

rate of profit, &c. Contrary to what is usually believed, a large proportion of the public debt is held by individuals in the lower and middle walks of life. A large proportion is also held by bankers and other individuals, whose business requires that they should be able readily to command their capital.

It is needless to occupy the reader's time by details as to the various schemes that have been proposed for paying off the national debt, by means of sinking funds and such like devices. Notwithstanding the high patronage under which some of these schemes have been brought for-

ward, and the encouragement they have met with, the reader may be assured that they are universally bottomed on delusion or quackery, or both. "The increase of revenue, or the diminution of expense, are the only means by which the sinking revenue can be enlarged and its operations rendered more efficient; and all schemes for discharging the national debt, by sinking funds operating at compound interest, or in any other manner, unless in so far as they are founded on this principle, are completely illusory." (*Hamilton on the National Debt.*)

ACCOUNT of the Principal and Annual Charge of the Public Debt at different Periods since the Revolution.

	Principal, Funded and Unfunded.	Interest and Manage- ment.		Principal, Funded and Unfunded.	Interest and Manage- ment.
Debt at the Revolution, in 1689	<i>L.</i> 664,263	<i>L.</i> 39,855	Debt at the commencement of the American war, in 1775	<i>L.</i> 128,585,635	4,471,571

Literature.—Some remarks as to the language and literature of England, will be found under the head ENGLAND. Here it is sufficient to observe that the basis of the English language is essentially Saxon, intermixed, however, with a great number of words derived from the Latin, and other languages of Latin origin. It is needless to say that the English have attained to the highest distinction in every department of literature. But in modern times, the distinguishing feature of our literature, is undoubtedly the periodical, and especially the daily, press. To such perfection has the method of conducting the daily journals been

carried, that debates that occur in either house of parliament, are accurately and very fully reported in the morning papers of the ensuing, or it may be, of the same day. These, indeed, are not unfrequently published within two or three hours of the termination of the debate; and being carried to the country by the railway coaches, and other speedy conveyances, the report of a debate ending in the H. of Lords or Commons at 4 o'clock in the morning, may be perused at Birmingham or Bristol, above 100 miles off, by 1 or 2 o'clock of the same day! The other departments of the daily journals; such as communications from

foreign parts; criticisms in various branches of science and literature; and the comments of the editors on the events of the day, are, for the most part, written with great ability; and though strongly tinged with party prejudices, and but little to be depended on when party interests are concerned, they discover a grasp of mind, and an extent and accuracy of information, that are really astonishing, considering the haste with which they have to be composed, and the little time given for correction. Generally speaking, the periodical press of Great Britain is decidedly superior to that of every other country, and displays much practical good sense, and with some few exceptions, the most praiseworthy respect for the decencies of private life, and for the great principles that form the foundations of society.

The Colonies and Foreign Dependencies belonging to the U. Kingdom, and forming part of the British empire, are of great extent and importance. They consist principally of our dominions in N. America and the West Indies, the Cape of Good Hope, Australia, and India. The reader will find in the table on the next page statements of the population, trade, &c., of the greater number of these colonial possessions, and detailed accounts of each will be found under its peculiar head in this work. The common opinion is, that the U. Kingdom is indebted for a large portion of its wealth and power to the possession of these distant territories; but we are disposed to believe that there is but little if any real ground for this opinion. It is true that England, in common with all Europe, has derived infinite advantage from the discovery and settlement of America, and from the intercourse with India by the Cape of Good Hope. But the question is, have we derived greater advantages from retaining the countries we settled in a state of dependence, after they were able to govern themselves, than we should have done by making them free? We are well convinced that those who dispassionately inquire into the matter will find that this is a question which must be answered in the negative. Our colonies in America and the West Indies have never furnished one farthing towards defraying any part of the general expenditure of the U. Kingdom; they are, indeed, exempted, by express statute, from any such charge; at the same time that the fleets and armies required for their protection in war, and their security in peace, are all supplied by the British nation, and cost them nothing. The only advantage, in a national point of view, derivable from them must, therefore, if it exist at all, be found in the trade or intercourse we carry on with them. But it has been shown, over and over again, that the trade with colonies differs in no important respect from that with foreign countries; that, unless it be naturally advantageous for both parties, it cannot be for the advantage of the mother country to engage in it; and that if it be naturally advantageous, it will be carried on to the same or a greater extent, were the colony an independent state. The great and growing intercourse we have continued to keep up with the U. States since they achieved their independence, is a practical proof of the truth of what has now been stated. Our trade with Canada is, on the other hand, a proof of the mischief occasioned by forcing an intercourse where there is no natural aptitude for one. That colony, of the value of which the most ludicrously absurd notions have been entertained, has not, we believe, a single commodity to export which we might not obtain better and

cheaper elsewhere. It is true it supplies us with large quantities of timber, but why? Because, while timber from the N. of Europe is charged, on importation into this country, with a duty of 55s. a load, timber from Canada is charged with a duty of only 10s. This *felo de se* regulation, besides forcing the use of an inferior article, imposes a burden on the people of Britain of about 1,500,000*l.* a year. Surely, therefore, it were for our advantage that it were repealed; and if so, there would be an end of nine tenths of our trade with Canada. While, however, the forcing a trade with colonies is no advantage but the reverse, the effort to keep them in a state of unwilling dependence, after they are desirous to be independent, entails a very heavy expense on the mother countries. Our ascendancy in Canada, at this moment, is wholly dependent on the presence of a large military force, occasioning, one way and another, a direct outlay of little less than 2,000,000*l.* a year; and all this enormous direct and indirect expense is incurred without any equivalent advantage, and with a full conviction in the mind of every man of sense in the empire that, in some ten or twenty years, Canada will be independent, or an integral portion of the United States.

It is said that the West Indian colonies are advantageous, because they supply us with sugar, which yields a large amount of revenue! But in this respect they are merely on a level with China and Virginia, which supply us with tea and tobacco, which also yield a large amount of revenue. Every one, in fact, must see that it is the people of Britain, and not the West Indian islands, that pay the sugar duties. And as sugar could be imported from Brazil and Cuba quite as cheap as it can be imported from the British West Indies, or rather, we believe, decidedly cheaper, it is clear the emancipation of the latter could not be any very material public loss.

Nothing, therefore, can be a greater error than to suppose that we are indebted for any considerable portion of our national greatness to the extent of our colonial dominion. If rightly examined, we apprehend it will be found to be a source of weakness rather than of strength. We derive our superior wealth and civilisation from totally different sources — from the physical and moral advantages enjoyed by the U. Kingdom; and while we possess these, we need not fear that any serious injury will result from the loss of colonial dominion.

Our Indian empire is a foreign dependency, not a colony; it does not enjoy that exemption from taxation, for the benefit of the U. Kingdom, enjoyed by our colonial possessions; and it has occasionally remitted considerable sums as tribute to England. But the magnitude of these sums has been grossly exaggerated; and it has been doubted by various well-informed parties whether, at an average of years, we have received any thing from India.

Malta, Gibraltar, and such like strongholds, are valuable, because they afford convenient and secure asylums for our ships of war and merchantmen, serving also as depôts for our produce, and arsenals, whence we may send out cruisers and expeditions to annoy our enemies in war. They are, as it were, a species of foreign bulwarks, and are of high importance and value, as means of defence and aggression.

For accounts as to the population, revenue, &c., of India, the reader is referred to the articles HINDOSTAN and BENGAL (Presidency of), BOMBAY, &c.

Returns relative to the Population and Trade of the Colonies or Foreign Possessions of the British Crown.

Table of Returns from each Colony or Foreign Possession of the British Crown, stating the Date at which each Colony or Possession was captured, ceded, or settled; the Number of the Population, distinguishing white from free coloured, and apprenticed Labourers at the latest Period; and whether having Legislative Assemblies, or governed by Orders of the King in Council; stating, also, the Value of Exports from, and Imports into, each of these Colonies in 1854.

History. — A sketch will be given in the article ENGLAND of the principal events in the history of that most important part of the empire. The leading epochs in the history of the latter are: —

I. The invasion and establishment of the English power in Ireland during the reign of Henry II.

II. The union of the crowns of England and Scotland in 1604, on the accession of James, King of Scotland, to the throne of England, vacant by the death of Elizabeth.

III. The great civil war in the reign of Charles I., followed by the execution of that monarch in 1649; the establishment of the Commonwealth; and the restoration of Charles II. in 1660.

IV. The Revolution, justly styled "glorious," of 1688, which expelled the family of Stuart from the throne; defined and firmly established the principles of the constitution; and introduced a liberal, tolerant, and really responsible system of government, under our great deliverer, William III., Prince of Orange.

V. The establishment of the legislative union of England and Scotland, 1707.

VI. The accession of the House of Hanover, 1714.

VII. The American war, 1776—1784.

VIII. The war with revolutionary France, 1793—1815.

IX. The legislative union of Ireland with England and Scotland, 1799.

X. The passing of the Reform Act, 1832.

BRITTANY, or BRETAGNE, one of the most considerable of the ancient provinces of France, occupying the peninsula of that name on the Atlantic. It is now distributed among the depts. of Loire Inférieure, Ille-et-Vilaine, Finistère, Morbihan, and Côtes-du-Nord.

BRIVE, a town of France, dép. Corrèze, cap. arrond., in a beautiful and fertile plain, on the Corrèze, 15 m. S.W. Tulle. Pop. (ex cant.) 6,062. It is well built, the houses being all of hewn stone, and covered with slates. It has a fine hospital, an *école normale*, a shady promenade along the river, and is encircled by planted boulevards, which have replaced the ancient ramparts. There is here a tribunal of original jurisdiction, a departmental college, a secondary ecclesiastical school, and a public library. It manufactures various descriptions of woollen goods, with muslins, silk handkerchiefs, &c., and has in its vicinity a *côte à flûte* of cotton. It has also a considerable trade in wine, chestnuts, and cattle, and is the centre of the trade in truffles and *volailles d'offices*. The famous Cardinal Dubois was a native of Brive. (*Hugo*, art. Corrèze.)

BUX, a vil. of France, dép. La Manche, 6 m. N.W. Valognes. Pop. 3,065.

BRIX (ST.), a neat town of France, dép. Yonne, on the road from Paris to Lyons, 7 m. S.S.E. Auxerre. Pop. 1,918. Louvois, the minister of Louis XIV., whose property it was, and his descendants, have attempted, but without success, to introduce manufactures into this town. It has some trade in white wines, produced in the vicinity, which are held in considerable estimation.

BRIXEN, a town of the Austrian empire, prov. Tyrol, at the confluence of the Rienz and the Eisach, 96 m. S.S.E. Innsbruck. Pop. 3,600. It has a cathedral, an episcopal palace, and a college.

BRIXHAM, a sea-port and par. of England, co. Devon, hund. Haytor, 166 m. W.S.W. London, just within Berry Head, which forms the W. point of Torbay. Area of par. 5,210 acres. Pop. of par. in 1831, 5,015. The town is built in a narrow ravine opening towards the sea, and on the cliffs impending over it on either side, and is divided into the upper and lower towns. In the latter the buildings are much crowded, in narrow irregular streets and alleys; but the upper town contains many good houses, as does also the immediate neighbourhood, which is remarkably picturesque. The church in the upper town is an ancient structure, with some interesting monuments: in the lower town is a chapel of ease, which has 300 free sittings; the living is a vicarage (with the perpetual curacies of Churston and Kingswear annexed), in the gift of the crown. It has also a Baptist and a Wesleyan chapel, and a national school, incorporated with an endowed one founded 1634, which educates about 400 boys and girls. There is a pier harbour at the end of the lower town, consisting of an inner and outer basin, which communicate with each other, and are safe and

commodious: the latter was formed at a recent period by the inhab. at the cost of 5,300*l*. The spring tide rises about 24 ft. at the pier-head. The principal trade of the place is connected with the Torbay fishery, in which about 120 vessels, of 20 to 45 tons, and 70 smaller boats, are engaged; the greater part of the fish being forwarded to the London, Bath, and Exeter markets: there are also upwards of 120 vessels, of 50 to 120 tons, belonging to the place, chiefly engaged in the coasting trade of the Channel. There are extensive marble quarries in the neighbourhood; and also an iron mine, whence, of late years, several thousand tons of ore are annually shipped at Brixham for the Welsh furnaces. The market (estab. 1799) is held on Thursdays and Saturdays; a fair on Whit Tuesday and two following days. By far the most remarkable historical event connected with this place, or with Torbay, is the landing of our great deliverer William III. at its pier, on the 6th of November, 1688.

BROADSTAIRS, a small sea-port and watering-place of England, co. Kent, E. coast, Isle of Thanet, half way between the N. Foreland and Ramsgate, 66 m. E. by S. London. There are several good lodging-houses, warm baths, two public libraries, good hotel, assembly-room, &c., and an episcopal chapel, built in 1828. There is a wooden pier (formed in the reign of Henry VIII.), which is accessible for small vessels. Two small fairs are held, April 8. and July 10. There are many vestiges which prove the ancient importance of the place; but it had dwindled to an inconsiderable fishing village, when (within a comparatively recent period) it came into favour as a sea-bathing place.

BROCKHAGEN, a vil. of the Prussian States, prov. Westphalia, reg. Minden, 4 m. S. Halle. Pop. 2,500. It has a gin distillery, and a thread manufactory.

BRODY, a town of the Austrian States, N.E. part of Galicia, near Zloczow, near the confines of Poland, 52 m. E. by N. Lemberg; lat. 50° 7' N., long. 25° 18' E. Pop. 25,000, of whom 18,000 are Jews. It is situated in a marshy plain; and the houses being mostly of wood, and the streets unbrody and filthy, it is well entitled to the name it bears, *brody* meaning a dirty place. But, notwithstanding its unpromising appearance, it enjoys a very considerable trade. In 1775 it acquired the privilege of a free commercial town; that is, a town into which commodities may be imported, and from which they may be exported free of duty. This franchise has rendered it an important emporium; and it has been attended by dealers from the Ukraine and Odessa, Moldavia, Wallachia, &c., as well as the contiguous Austrian and Russian provinces. The principal articles brought from the S. are cattle, especially horses, with hides, tallow, wax, &c., which are exchanged for colonial produce, manufactured goods, hardware, particularly scythes, furs, jewellery, &c. It is a constant practice in the transit trade between Odessa and Brody, to offer as security for the duty on the articles so conveyed, a certain number of serfs, or Russian slaves, taken at a valuation of 100 silver roubles (16*l*.) a head. This security is preferred to a guarantee on land, from its being more convertible. There is a regular exchange with Odessa. The greater part of this important trade is in the hands of Jewish merchants settled at Brody, of whom 40 are said to be opulent, while about 200 more possess smaller capitals. It is the seat of a mercantile tribunal; has a Catholic and three Greek churches; one large and two or three smaller synagogues; a convent and hospital of the Sisters of Charity; grammar and commercial schools, with peculiar schools for Christians and Jews; a theatre, in which, during the fairs, plays are alternately represented in the German and Polish languages; a Jewish hospital, &c. The town, on the estate of Count Pototzki, is a large castle within its precincts. (*Austrian Encyc.*; *Hagemeister on the Trade of the Black Sea*, passim; and *Private Com.*)

BROEK, a village of Holland, 6 m. N.E. Amsterdam. Pop. 800. It is celebrated for the wealth of its inhab., but more for the extreme cleanliness of its houses and streets, the attention to which has been carried to an absurd and ridiculous excess. There is a good description of this village in Chambers's *Tour to the Rhine*.

BROEBERG, a town of the Prussian States, prov. Posen, cap. circ. same name, on the Brza, 6 m. from its confluence with the Vistula. Pop. 8,000. The canal joining the Vistula with the Netz, an affluent of the Oder, runs between this town and Nakel on the Netz. It has a court of appeal for the circ., a gymnasium, and other literary establishments, several distilleries and breweries, and a considerable and increasing trade.

BROMLEY, a par. and town of England, co. Kent, lathe Sutton-at-Hole, hund. Bromley and Beckenham, 10 m. S.E. London. Pop. (1821) 3,147; (1831) 4,002: houses at the latter date, 733; area 4,690 acres. The town is on the N. bank of the Ravensbourne, and chiefly consists of one street of neat respectable houses, extending for some distance along the line of road from

the metropolis to Tunbridge: it is lighted and partially paved. The church is a spacious structure, with an embattled tower; the Independents and Wesleyans have each a chapel; a national school for both sexes is supported by subscr.; there is an almshouse for old people, rent free; a charitable estab., called Bromley College, founded in 1666, and enlarged and endowed by many subsequent benefactors, supports 40 clergymen's widows, who each receives 35*l.* a year, with coals and candles; the edifice encloses two quadrangular areas, and has a chapel, the minister of which receives 150*l.* a year; the charity is under the direction of 14 trustees. There is a weekly market on Thursday, a monthly one, for cattle, every third Thursday, and ann. fairs Feb. 14, Aug. 4, chiefly for live stock. Ann. val. of prop. in 1815, 14,798*l.* It is the central town of a poor law union of 16 pars.; its own rates average 1,294*l.* The inhab. are chiefly engaged in agriculture. From the 8th century the manor has vested, with little interruption, in the bishops of Rochester. The present palace was rebuilt on an ancient site in 1777; it is a plain brick building, on an eminence $\frac{1}{2}$ m. from the town; an ancient spring in its gardens has medicinal properties similar to those of Tunbridge; and being neglected two or three centuries, it was reopened in 1756, and continues to be much resorted to; its weekly market was granted to the town in 1477.

BROMSGROVE, a par. and town of England, co. Worcester, hund. Half-shire, 100 m. N.W. London. Pop. (1821) 7,519; (1831) 8,612: houses at the latter date, 1,862. The town is situated on the W. bank of the Salwarp, in a fertile and well wooded vale, and chiefly consists of one spacious street about a mile in length, paved and lighted. Its church, on a gentle rise, has a tower and spire, together 150 ft. in height, and considered the finest in the co.; there are 3 dissenting chapels; a free grammar-school, founded by Edward VI. (in which 12 boys are clothed and educated, with 7 scholarships, and 6 fellowships in Worcester College, Oxford); and a town-hall, with a market-place under it. The weekly market is on Tuesday; two annual fairs are held, June 24th and Oct. 1st. Nail making is the chief business of the place; there is also a large button manufactory. In the adjoining parish of Stoke Prior there are large salt and alkali-works, in which some of the inhab. of Bromsgrove are employed: the linen manufactory was formerly carried on, but is now extinct. The line of the Birmingham and Gloucester railway passes near the town. The annual value of its real prop. in 1825 was 25,614*l.* It is the central town of a poor law union of 9 parishes; its own rates average 1,859*l.*: it has 5 guardians. A court of requests for debts under 40*l.* is held in the town every third Wednesday. Bromsgrove Lacey, a lofty range, in which the Salwarp, Rea, and some other streams, have their source, lies on the N. of the town.

BROMYARD, a par. and town of England, co. Hereford, hund. Broxash, 110 m. N.W. London. Pop., in 1821, 2,767; 1831, 3,051; houses, 596; area, 9,310 acres. The town, situated near the Frome, in an orchard district, consists of several irregular streets, which are paved and lighted; many of its houses are of wood. There is a spacious church, in the Norman style; an Independent chapel; a free grammar-school, founded by Elizabeth; a national school, for 120 children; and almshouses for 7 old women. The weekly market is Monday; corn, cheese, and butter are the chief articles. Petty sessions for the hund. are held in the town. The par. comprises three townships and one chapelry.

BRONNITZY, a town of Russia in Europe, gov. Novgorod, on the road from St. Petersburg to Moscow, 15 m. E. Novgorod. Pop. 1,200. The Msta is here crossed by a floating bridge of considerable dimensions. In the environs is a coal mound, which appears to be artificial; and with respect to which several curious traditions are current. It was formerly surmounted by a wooden chapel, which has recently been replaced by one of stone. (*Schmitzer, La Russie, &c. p. 175.*)

BRONTE, or **BRONTI**, a town of Sicily, Val di Catania, cap. cant., near the Giarretta, at the W. base of Mount Etna, 22 m. N.N.W. Catania. Pop. 8,871, having declined 283 between 1798 and 1831, when the last census was taken. It has several churches and convents; is healthy; has manufactures of woollens and paper; and the adjacent territory produces corn, wine, silk, pistachio nuts, almonds, &c. Lord Nelson was created Duke of Bronte in 1799, with an income of 6,000 ounce a year.

BROOKLYN, a suburb of New York, on Long Island; see NEW YORK.

BROSLEY, a market town and par. of England, co. Salop, hund. Wenlock, 127 m. N.W. London, on the Severn, by which it is separated from Madely. Area of par. 1,550 acres. Pop. (1831) 4,299. The town consists principally of one long street, with smaller ones branching off to the different collieries and other works. It has a parish church, and chapels for different denominations of dissenters; and there is a chapel of ease at Jackfield,

within the parish. It is within the jurisdiction of the bor. of Wenlock. Courts leet for the manor are held in the town-hall in April and October, at the latter of which four constables are appointed; and a court of requests, for the recovery of small debts is held generally every alternate Wednesday. There are here extensive coal and iron mines, with large iron-foundries; and it is celebrated for its extensive manufacture of tobacco-pipes and garden-pots. A burning spring or well was discovered here in 1711, which disappeared on the sinking of a coal mine in 1755. Owing to the depression of the iron trade, the town declined considerably previously to the last census (1831), there having been a falling off in the population, since 1811, of nearly an eighth part; the pop. at that period being 4,850. Market-day, Wednesday; fairs, Easter Monday and Oct. 29.

BROU, a town of France, dép. Eure-et-Loire, cap. cant., on the Oranne, 24 m. S.W. Chartres. Pop. 2,389. It manufactures serges, and has a foundry and tanneries.

BRUOAGE, a fortified town and sea-port of France, dép. Charente inférieure, on the strait dividing the island of Oléron from the mainland, 8 m. S.W. Rochefort; lat. 45° 52' 13" N., long. 10° 3' 45" W. Its port admits only of vessels of small burden; but it is strong by nature as well as art, and is of importance from its defending the approaches to Rochfort, and the left of the Charente. Around the town are extensive salt marshes, from which salt is obtained in great quantities, and of an excellent quality. To facilitate its shipment, the marshes are traversed by a canal running from the Charente above Rochfort to a little below Bruoage. (*Dict. Géog. &c.*)

BRUCHSAL, a town of the G. D. Baden, cap. balliwick of the Salza, 12 m. N.E. Carlsruhe. Pop. 7,200.

BRUGES, a city of Belgium, cap. W. Flanders, and of an arrondissement, 5 cantons, in a vast level plain of sandy soil at the junction of the canals from Ghent, Ostend, and L'Escluse; 7 m. from the N. Sea, 12 m. E. Ostend, 24 m. W.N.W. Ghent, and 60 m. N.W. Brussels; lat. 51° 13' N., long. 3° 15' E. It is the seat of an episcopal see under the archbishop of Mechlin; the seat of a court of assize, of a high court of justice, and of a court of commerce. Pop. in 1830, 42,198; in 1838, 44,374. The records of births and deaths from 1700 to 1814 show a natural increase of only 8,214 in 114 years; that is, an average annual increase of $\frac{1}{14}$ of 1,000. The city has a circumference of nearly 4½ m., and is entered by 6 gates. It has 6 large squares, in which are held weekly markets and annual fairs, and above 200 streets and lanes; some are wide and handsome, and all are generally clean. Many large and noble ancient mansions, and spacious public edifices, present their pointed gables to the streets, and afford interesting specimens of the ornamental Gothic architecture of the middle ages; they induce the contemplative spectator to revert to the grandeur and opulence of Bruges in the days of chivalry, when its gorgeous halls and courts were scenes of regal pomp and pageantry, and impress him with a feeling of sadness in contrasting its ancient prosperity with its present comparative desolation. Bruges, in common with all the towns of W. Flanders, is destitute of spring-water, so that the inhabitants are obliged, as were their ancestors in the time of Henry, to have recourse to supplies from the clouds. For this purpose, every house is provided with a cistern for collecting rain from its roof; and that which gathers in the ditches of the ramparts is conveyed by means of hydraulic machinery to public fountains and tanks, whence it is distributed in pipes throughout the city. There are 54 bridges across the numerous canals by which the streets are intersected, of which 12 are of wood, and rotatory, and 42 of stone or brick; hence the Flemish name of the place, *Brugges*, that is, *bridges*; in French, Bruges. The Ostend canal presents an extensive expanse of surface that resembles a stately river, and is sufficiently wide and deep to admit the passage of ships of 500 tons from the sea. The canal to Ghent is also navigable for large and heavy vessels. Its *trekschuit*, or passage-boat, is a huge floating hotel, affording every accommodation; but delicate passengers are liable to much annoyance from the state of the nearly stagnant water, which often is nearly black with putridity, and covered with dead fish, owing, it is said, to the extensive steeping of flax in the river Iys, which joins the canal at Ghent. The level character of the country is shown by the fact, that between Bruges and Ghent, a distance of nearly 85 m., this great canal has not a single lock. The central bar or dock of Bruges is capable of containing above 100 vessels always afloat; and the convenient quays, stores, and spacious warehouses by which it is surrounded, afford great facilities for the despatch of business. The city is advantageously situated for both maritime and inland commerce; and though its commercial transactions are now infinitely inferior to those of which it justly boasted in the 15th century, they are perseveringly carried on, with most of the principal ports of France, Spain, Holland, Italy, England, Sweden, Denmark, Norway, and Russia.

"Besides the facilities for internal commerce afforded by excellent roads to the other principal towns of the kingdom, Bruges possesses an important advantage in being traversed by the great national line of railway from Ostend to Ghent, Mechlin, &c."

The leading manufactures of Bruges consist of lace, linen, woollen and cotton goods, and of salt and sugar refining. Breweries are numerous; and several establishments are in operation for the manufacture of soap, pottery, leather, tobacco, and especially for bleaching, distilling, and dyeing. The blue dyes of the stuffs of Bruges are believed to derive their peculiar excellence from the quality of the canal water in which they are scoured. The lace manufacture is the most important. It employs 7,400 persons, or more than one-sixth of the whole population. Children are taught to make lace in at least 300 schools established for this purpose. The exports comprise corn, cattle, and other agricultural produce of the soil, and the products of the various manufactures. The imports consist of wool, cotton, metals, dyewoods, drugs, wines, and miscellaneous foreign productions.

Among the most remarkable public edifices are the cathedral of Notre Dame (Onser Vrouwe), the tower of which is so lofty, that when the atmosphere is particularly clear, it is visible from the mouth of the Thames. The interior contains an exquisitely carved pulpit; a marble statue of the Virgin and Child, attributed to Michael Angelo, and for which Horace Walpole offered 30,000 florins; and two costly old monuments of Charles the Bold, Duke of Burgundy, and his daughter, the wife of the Emperor Maximilian, in richly gilded bronze and silver. The old Gothic hospital of St. John, and the elegant cathedral of St. Saviour, have several celebrated pictures by Hans Memling, Van Dyke, and others. In the great hall of the Hôtel de Ville is the public library, containing many curious illuminated MSS., a missal of the 14th century, and the scheme of a lottery drawn at Bruges in 1445. These, and other Gothic buildings in the city, belong generally to the 14th century, and are ornamented with windows of rich coloured glass, sculptured monuments, and paintings by the old Flemish masters. In the great square is a lofty Gothic tower or belfry, the most beautiful in Europe, and its chimneys or *carillons* are esteemed the most complete and harmonious in the Netherlands, where only superior qualities are approved in this species of musical instrument, or rather machine. In this tower there are 48 bells, some weighing 6 tons: they are played upon every quarter of an hour commonly by means of an immense copper cylinder communicating with the clock, and weighing about 9 tons. Its surface is pierced by 30,500 square holes, so that an infinite variety of airs may be set upon it, by merely shifting the iron pegs that lift the hammers. On particular days a pious professor of music performs the finest pieces by striking with great effort upon huge keys with well-guarded fists, and upon pedals with his feet. Watchmen are constantly posted at the top of this tower to make alarm signals of fire, by ringing a loud bell, and exhibiting in the day, a flag, and in the night, a lantern, towards the point whither the engines are required to hasten, which is further indicated by a speaking-trumpet. The city fire establishment consists of 9 engines and 140 men. The ancient abbey of the Dunes is a vast and solid building, in which is held the episcopal academy. The Jerusalem church is a fac-simile of the Holy Tomb. There is a Béguinage, or convent of Béguins nuns, and also a convent of English Augustin nuns, possessing a richly ornamented church. The city is divided into 7 Catholic parishes, and contains 1 Protestant church. Several other public edifices are worthy of notice, as well as ancient private mansions interestingly associated with important historical events and personages. The council chamber of the Palais de Justice contains an immense chimney-piece of wood beautifully carved, in 1523, with figures of Charles V. and his family as large as life. There is a small theatre, a botanic garden, a museum of natural history, several literary societies, a well-attended atheneum or collegiate school for the higher degrees of education, receiving annually from government 6,350 fr.; a good surgical school, attended commonly by 50 students; and a very flourishing academy of painting and sculpture, in which, besides the student's course, gratuitous instruction is given to others in architecture, design, and drawing. Its gallery of paintings comprises several by the celebrated Van Eyck.

Few cities are better provided with endowed charities and asylums for the destitute and afflicted, and with schools for instructing the children of the poor. The average number of persons in a state of indigence within the city is estimated at 8,000. The poor-house is a central establishment for the two Flanders, and will contain 550 paupers: the number of inmates is generally about 500. The prison is kept remarkably clean, and the walls of its cells are rendered dry and secure by a casing of thick boards of oak. There is a *mon-dé-piété*, or benevolent institution for lending money upon pledges. In

1832 the number of pledges deposited was 106,371, and the amount lent upon them was 740,891 fr. The city authorities exercise a vigilant superintendence in matters affecting the public health, and gold medals are awarded to those medical gentlemen who have manifested a benevolent seal in gratuitous vaccination. The number of children who were vaccinated in 1832 was 10,988, and of 183 who took the small pox, 12 died. The temperature of the atmosphere about Bruges is subject to sudden and extreme transitions; and oppressive heat of the mid-day sun in summer is often succeeded by very chilling evening damps. Health and longevity appear, however, to be kept up to the average points, and those who possess the means of choosing their place of residence often prefer this locality; so that the spacious mansions of the opulent burghers of former times are now tenanted by many of the highest families of Flanders, and by retired independent merchants, to whom this old city would seem to have peculiar attractions. The adjacent rural districts to the W. display the most exuberant specimens of the Flemish farmhouses; and orchards, which abound in every part of W. Flanders, are especially numerous in the vicinity of Bruges, producing excellent cherries, apples, pears, walnuts, plums, and, less commonly, apricots and peaches.

The history of Bruges commences at a very early date. It was a prosperous seat of manufacturing and commercial industry long before Ghent and Antwerp rose to the same distinction. In the 7th century it was rapidly acquiring importance, and under Charlemagne, at the end of the 8th century, its weavers were highly distinguished. During the government of the rich and powerful counts of Flanders, who resided at Bruges from the 5th to the 15th centuries, its woollen manufactures grew and flourished to an amazing extent, so that Philip le Bon, in 1430, to commemorate its great prosperity, instituted the chivalric order of the Golden Fleece. At the Flemish court of this ostentatious Duke of Burgundy, whose hypocrisy, and not his exemption from pride and cruelty, procured him the cognomen of Good, a sumptuous splendour of pagantry was displayed, which no European monarch could imitate, and an absolute power was exercised, which none dared dispute. The records of luxurious banquets and apparel at this period are almost incredible. Not only the dresses of men and women, but the housings of their horses, were of velvet, satin, and gold, profusely spangled with brilliant jewels,—an extravagance which Charles V., in the following century, was obliged to suppress by enacting sumptuary laws. The wealth and splendid attire of the citizens of Bruges had long been subjects of wonder; for when the queen of Philip le Bel, of France, visited this city in 1300, she is said to have exclaimed with astonishment, "I here see the marvels who have more the appearance of queens than myself." The public and private buildings of the city were worthy to display such courtly magnificence; so that Southey, judging from the existing architectural remains of that ancient grandeur, says, in his "Pilgrimage to Waterloo,"—

"When I may read of tilts in days of old,
Of tournaments graced by chieftains of renown,
Fair dunces, grave citizens, and warriors bold—
"If fancy would portray some stately town
Which of such pomp in theatre might be,
Fair Bruges: I shall then remember thee."

This noble city, throughout the 14th and 15th centuries, was the central emporium of the whole commercial world, and had resident consuls and ministers from every kingdom in Europe. In the Hanseatic League, or confederacy of the great European ports for the promotion of commerce, Bruges was the leading city, and the grand depot of naval stores. Her quays were crowded with foreign ships and merchants, and her piles of magnificent warehouses were filled with the wool of England, the linen of Flanders, and the silk of Persia. Her weavers were celebrated for making the most beautiful description of tapestry more than a century before the Gobelin manufacture was commenced under the direction of their descendants. The wealth of the citizens of course was enormous: a single merchant gave security for the ransom of Jean sans Peur, the last Count of Flanders, to the amount of 400,000 crowns of gold. The annual exports merely of stuffs manufactured from English and Spanish wool amounted to 8,000,000 florins, and the florin was then quadruple its present value. This amazing prosperity continued undiminished during the dominion of the dukes of Burgundy; but under the Austrian dynasty, at the close of the 16th century, the rebellious conduct of its inhabitants, in forcibly imprisoning the Archduke Maximilian, induced his father, the Emperor of Germany, to visit the city with such destructive vengeance that henceforth its greatness died away, its trade was transferred to Antwerp, and the religious persecution and brutal ferocity of the Spanish under Philip II. and the Duke of Alva completed the process of its ruin, at the end of the 16th century, by compelling its artisans to escape for their lives

to England, where they found a hearty welcome from Queen Elizabeth, and became the means of establishing the woollen manufactures, for which this country has since become so distinguished. The subsequent history of Bruges, under the dominion of the Spanish, French, and Austrians, is comparatively of little interest.

In glancing over the records of the old cities of Flanders, we find a reckless passion for freedom developing itself in a long succession of obstinate and sanguinary conflicts between the people and their rulers, and often between different towns and parties. By turns we find the victorious citizens, enjoying a short interval of intemperate and insolent triumph, abusing the blessings procured by the death of thousands of their compatriots, and then find them ruinously defeated, and suffering long periods of abject slavery and financial exhaustion under the despotism of their haughty and ambitious conquerors.

Bruges, during its golden age of commercial ascendancy in the middle ages, was the native place of numerous eminent scholastic and philosophic authors, classical commentators, mathematicians, juriconsults, theologians, physicians, and painters. A list of these persons is given in the first of the following works, on the authority of which the statements of the present article principally depend. (*Vander Maelen's Dict. Géog. de la Flandre Occidentale; Guide Books by Coggan, Boyce, &c.; Murray's Hand-Book; Dictionnaire des Pays Bas; Gratian's Hist. of the Netherlands, &c.*) A plan of the city of Bruges, on a large scale, has been published by the Geograph. Estab. of Brussels.

BRUGGEN, a town of the Prussian States, prov. Rhine, reg. Düsseldorf, on the Schwalm, 10 m. S.W. Kempen. Pop. 750. It has a fine Catholic, and a Calvinist church, with linen fabrics, bleach-works, oil-mills, and a tannery.

BRUGUIÈRE, a town of France, dép. Tarn, cap. cant., on the Thoré, 4 m. S. Castres. Pop. 4,000. It manufactures flannels, coverlets, and other descriptions of woollen goods.

BRUHL, a town of the Prussian States, prov. Rhine, reg. Cologne, 4 m. W. the Rhine, and 9 m. S. Cologne. Pop. 1,700. It is surrounded by walls, is well built, and has a seminary for the instruction of schoolmasters; but it derives its principal consequence from the magnificent castle in its vicinity, commenced in 1725 by the elector Clement Augustus, of Bavaria, and finished by Maximilian Frederick. It is splendidly fitted up, and has extensive pleasure-grounds and gardens. (*Schreib.*)

BRUMATH, a town of France, dép. Bas-Rhin, cap. cant., on the Zorn, 12 m. N.N.W. Strasburg. Pop. 4,131. It is supposed to occupy the site of the ancient *Brucumagus*; and the medals, marbles, urns, &c., which have been found here, prove at least, that it had been inhabited by the Romans. Some hard fighting took place in its vicinity, in 1793, between the French and Austrians. (*Dict. Géog.*)

BRUNN, a town of the Austrian States, cap. Moravia, at the confluence of the Schwarza and Zwitawa, 70 m. N.N.E. Vienna, lat. 49° 11' 28" N., long. 16° 36' 35" E. Pop. 34,000, exc. garrison of 3,000 or 4,000. It is built on the declivity of a hill, having the cathedral on its summit and the suburbs at its foot; is encircled by walls, bastions, and trenches, and was formerly defended by the citadel of Spielberg, on the hill of that name to the W. of the town; but the defences of latter having been destroyed by the French, it is now used as a state prison and house of correction; Silvio Pellico was shut up in it for above 8 years. Though narrow and crooked, the streets are well paved, lighted, and provided with foot pavements. Among the public buildings are, — the cathedral, remarkable for the height of its nave; St. Jacob's church, built in 1315, with a tower 276 ft. in height, a bell weighing 115 centners, and some monuments; the episcopal palace; the *Landhaus*, formerly a rich Augustinian convent, now the residence of the governor, and the place of meeting of the states of the prov.; the town-house, a Gothic structure, built in 1511; the barracks, an enormous pile, formerly the Jesuit college, having 7 courts, a fine church, and a riding-school; the theatre, with its assembly-rooms; the Maria school for young ladies, &c. Many of the nobility belonging to the prov. have here fine palaces, which give an air of grandeur to the town. The quarter called the Franzensberg is very picturesque; in the gardens a marble monument was erected in 1818, in honour of the late emperor Francis I. The Augarten, a park laid out as a garden, was opened to the public by Joseph II. Brunn is the seat of a bishopric and of the government of Moravia and Austrian Silesia, of a Protestant consistory, a court of appeal, high criminal and military courts, the *Landrecht*, or nobles' court for the prov., and is the place of meeting of the provincial estates, and the residence of their standing committee. It has a philosophical institute, a gymnasium, a principal normal school; schools for young ladies, tradesmen, and mechanics; a theological seminary, and numerous parish and infant schools, an imperial

society for the encouragement of agriculture and of the natural history and geography of Moravia, to which is attached a valuable museum, a botanical garden, and a public library. It has general, orphan, and lying-in hospitals; a lunatic asylum; with numerous institutions for the relief of the poor. The manufactures of Brun are of very considerable value and importance. Those of woollen goods are the most extensive in the empire; and the town has thence been called the Austrian Leeds. Latterly, however, the cloth trade has been represented as not in a very prosperous state. The cotton manufacture has been introduced, and has made considerable progress; and silk, glass, soap, tobacco, and machinery, are extensively produced. Its trade is very extensive; and it will be still farther promoted by the branch which is to be carried to it from the railway now being made from Vienna to Galicia. (*Osterrischen Encyc.; Murray's Hand-Book, &c.*)

BRUNSWICK (Ger. *Brannschweig*), THE DUCHY OF, in Germany, consists of five detached portions of territory on the rivers Weser, Seine, Ocker, and Aller, between lat. 51° 38' and 52° 59' N., and long. 9° 10' and 11° 22' E. It occupies part of the vast plain which stretches from the foot of the Harz mountains, and their continuation (the Solling) to the German Ocean and the Baltic, with a portion of the rise of those chains on the N. side. The largest portion contains the districts of Wolfenbüttel and Schöningen, in which the cities of Brunswick and Wolfenbüttel, and the towns of Königsmutter and Helmstadt, are situated. The district of Wolfenbüttel is traversed by the Ocker, which rises in the Harz mountains, and is not navigable. The Aller traverses the district of Schöningen, but is not navigable in that part of its course; nor is the Seine navigable, which traverses the district of that name. The Weser, which forms the boundary of the duchy towards Prussian Westphalia for a considerable distance, affords an excellent water communication with the sea and the harbour of Bremen on the one side, and with the states of Hesse and Thuringia, in the heart of Germany, on the other, by means of the Werra and the Fulda, which unite near Münden, and thence take the name of Weser. This river, which forms the main outlet for the waters falling from the N. and W. sides of the Harz, and the Thuringian forest ultimately receives all the smaller streams which previously unite with the Aller, excepting the Bode, which falls into the Saale, a tributary of the Elbe, and which traverses the third and most southern detached portion of territory, the district of Blankenburg. Of the Harz mountains, which, with the Thuringian forest, separate the tributaries of the Elbe from those of the Weser; a considerable portion, valuable for minerals and forests of vast extent, belongs to Brunswick. The summit of the Brocken, and the rude and almost impassable Central Harz, in which granite, mica slate, and primitive formations predominate, belong to Hanover, while the E. and W. falls of the ranges, in which the transition and secondary formations prevail, form part of the Duchy of Brunswick. A portion of this mountain chain belongs jointly to the two governments, and is distinguished by the denomination of *Commonion Harz*. The highest summits within the Duchy are the Wurmberg, 2,980 ft., and the Ackermannshöhe, 2,706 ft. in height. The next considerable mountain, or, rather, forest range, is the Solling, which lies between the rivers Seine and Weser, and is covered with extensive and valuable woods of oak and beech. The summits of this chain are of no great elevation. Iron is found, and sandstone, known under the name of Sollinger stones, is quarried in them. The Klau, a slight range of heights between the Ocker and the Aller, is covered with woods of oak and beech, and contains veins of iron and beds of coal, with occasional mineral springs.

Two small detached portions of territory, viz., the circuit of Thedinghausen on the Weser, to the N.W. of Hameln, and that of Badenburg, are enclosed by the Hanoverian territory, and form part, the former of the Weser district, the latter of the Seine district. Finally, the detached circuit of Kalverde, inclosed within the Prussian province of Saxony, belongs to the district of Schöningen. According to the latest official returns, the population, in 1832, amounted to 245,783 inhabitants, comprised in 41,609 families. The Weimar Almanack gives the following survey for 1833:—

Districts.	Area in sq. m.	Pop.	Towns.	Villages.	Houses.
1. Wolfenbüttel	460	109,000	5	182	12,200
2. Schöningen	280	40,000	5	75	4,500
3. Harz	308	41,500	6	78	4,650
4. Weser	280	37,500	6	70	4,050
5. Blankenburg	170	20,000	6	64	2,500
Total	1,504	245,000	27	467	27,700

The three cities contained:—

Brunswick	33,840 inhabitants
Wolfenbüttel	8,310 do.
Helmstadt	6,273 do.

The various religious denominations are thus classified: Lutheran, 242,700; in 234 parishes, with 399 churches and chapels, directed by 29 superintendents, and 7 general superintendents; the Calvinists have but one parish, and the Catholics three parishes. The most perfect toleration and equality of civil and religious rights are shared by all the Christian persuasions. The Jews, 1,500 in number, have four synagogues. The number of Heretichers (a kind of Quakers) is stated at 100.

A census of the pop. in 1814 gave 307,000 as the number of the inhab., which consequently increased down to 1832 in the proportion of about 1 per cent. per ann.; and, supposing the same rate of increase to have continued down to the present time (1839), the pop. will now be nearly 263,000. We have stated that the hilly parts of the duchy are covered with forests of fir, oak, and beech. According to Dr. Volger, about 390,000 acres are arable and meadow land, 294,000 acres forests, and 228,000 incultivated moors, water, &c. The plain at the N. fall of the Harz is mostly of a limestone soil, alternating with beds of loam, and is fertile; the districts along the Weser and Seine are also fertile; but the predominant feature is sand in those parts. Towards the N. part of the duchy, these fruitful plains merge into the arid and unproductive sandy heaths of Dolgen and Lüneberg. The average produce of corn, of all descriptions, is estimated, by Vellguth at about 575,000 qrs.; oil from linseed, rape, and poppies at 1200 tons, flax 4500 tons, besides tobacco, madder, and hops, in each of which articles, the produce considerably exceeds the consumption. Cattle breeding is carried on successfully in the river districts; and improved breeds of cattle and sheep are found on all the larger estates. Hogs are very extensively reared; but the sausages and hams of Brunswick enjoy so much reputation, that a large importation of hogs takes place from the neighbouring states, the produce of which is sent to all parts of the Continent. Horses are not reared in sufficient numbers to supply the wants of the duchy, and are annually brought from Holstein and Mecklenburg.

The extensive forests, which had suffered, from many years of neglect and wasteful management, have of late been improved under scientific direction, and are divided into 4 groups for ships (*Forstschiffen*), and 61 forester's districts. Timber of valuable quality is annually floated down the Ocker, Seine, Innerste, and Weser, especially from the Harz and the Solling forests, and forms a considerable object of export trade. The game in these forests is not very abundant, consisting of red deer, roebucks, hares, and rabbits, with occasional wild boars. A species of thrush (*Krautvogel*) caught by thousands in the winter season, is esteemed a great delicacy. Fish not very abundant, nor of rare sorts. The mineral riches of the Harz mountains, although no longer so prolific as reported in former times, afford employment to a number of industrious individuals, and are managed partly in conjunction with Hanover and partly by Brunswick alone. The Rammelsberg, near Goslar, of which 3-7ths is the share of Brunswick, and 4-7ths that of Hanover, produced, in two recent years, the following quantities:—

	Gold.	Antimony.	Lead.	Zinc.	Copper.	Sulphur.	Stront.	Alum.
<i>marks, loads</i>								
10 15	603,790	606,100	13,750	124,780	187,000	695,330	60,060	
11 6	1615,310	616,422	13,608	496,925	123,910	754,553	17,976	

Iron is the chief produce of the mines worked separately by Brunswick in the three districts of the Harz, Weser, and Blankenberg. They are all worked on government account, and as well as the salt mines, stone cutting mills, four glass houses, and the porcelain manufactory at Fürstenberg, are under the direction of a mining board at Brunswick. The salt works are very considerable; they are established at Salzdaum and Salzibenthal in the district of Wolfenbittel, and at Schöningen. That at Salzdaum has been worked since the 13th century. The brine spring at Jülisshall is worked jointly with Hanover. In the Brunnenholz, near Helmstadt there is a coal-mine with two shafts, and another near Walkenried, where alabaster and agates are found. Mineral springs occur in several parts; those near Helmstadt and Soesen are frequented by invalids. Asphaltum and other bituminous substances are found in many parts of the Harz mountains, especially at the Rammelsberg and Iberg.

Besides the iron-works, linen weaving is the chief article of manufacture. According to Becker, it is mostly woven in the towns of Schöningen, Königshutter, Schopf, penstadt, Langelsheim, and in several towns of the Harz and Weser districts. Large bleaching-grounds are found at Heckenbeck. Camlets are the only descriptions of woollens woven within the duchy; a spinning-mill for woollen yarn has been established at Bovern; and spinning is a great source of industry amongst the inhabitants of Lutter and Barenberge, and at Lesse. Dyeing is carried on at Schoppenstadt, Kalvörde, and Vorsfelde.

Brewing is extensively carried on in all the principal towns, but the beer is bad, and does not prevent the universal use of brandy amongst the lower classes. The Mumme, a heavy draught extracted from malt, is now principally used by persons in delicate health, and is exported for that purpose to all parts of Germany. Oil and sawing mills are found on nearly all the principal streams, and the preparation of the root of chicory as a substitute for coffee, which attained to a great extent during the exclusion of colonial produce under the continental system, is still favoured by high duties on such produce within the limits of the customs' league. Becker estimates the quantity annually prepared at 6,750 tons. The price of labour is usually 6gg. (about 9d.) per diem, in the country, and something more in towns. Trade, especially the transit trade, is a great source of emolument to the town and duchy of Brunswick, and is principally transacted at its ancient fair, which still keeps up all its importance, and bids fair to succeed to Leipzig as soon as the railway which is now constructing from the Harz shall be continued to some navigable point of the Aller or the Elbe. Brunswick is engaged by treaty in a customs' league with Oldenburg and Hanover (*See GERMANY*), which opens to her the communication with the German Ocean by means of the Elbe and Weser, while the credit and ancient trading connections of the Brunswick mercantile houses fill up a blank which would otherwise be very sensible in that league. The government wisely directs its attention to the encouragement of the different industrial resources, and has preferred establishing a liberally-endowed and well-conducted system of education to the imposition of protecting duties, by which one class of the people is aided at the cost of the others. The foundation of the "Real Institute," which unites with practical instruction in agriculture and the management of forests the scientific information on which the higher branches of these occupations, as well as mining, and the mechanical and chemical arts, ought to be founded, marks an epoch, even in Germany, where so much care is shown for intellectual improvement. Nor are the higher branches of knowledge by any means neglected. The Lyceum, formerly the Caroline College; 2 normal schools for teachers; and 6 gymnasia, afford ample means of cultivating them. The university formerly existing at Helmstadt, the revenues and library of which were transferred during the Westphalian régime to Göttingen, has not been re-established, but Göttingen is regarded as the university of the duchy. There are 63 burghers' schools, and 360 elementary schools, giving one to nearly every village. The revenues of 9 secularised convents and religious foundations are applied to support a number of unmarried young women and other persons on the presentations of the patrons. The charitable foundations are 52 in number.

The inhabitants of the duchy are mostly descendants of the ancient "Brokmanner," a branch of the Sassen or Saxons, and the Low-German language is universal among the villagers, except on the Harz, whose mining population was drawn from Upper Germany, and speaks High-German. The names of some villages, as Weiden, &c., are perhaps the sole remains of the ancient Wendish or Slavonian inhabitants of the north-eastern parts of the duchy. The higher classes of the towns speak High-German, which, as all over Germany, is the language of public business and of the schools. Personal courage and open-heartedness are the leading characteristics of the Brunswickers, and, until the feeling was on a recent occasion wantonly trifled with and abused, they were distinguished by an unshaken attachment to the reigning house. They are allowed to be the best situated, in point of comfort and village economy, of all the Germans, and the aspect of the whole country is indicative of good order and prosperity. The discontent of the oppressed inhabitants who, being long accustomed to the mild rule of wise princes, found the arbitrary measures of the Duke Charles I. insupportable, led in 1830 to the expulsion of that prince, and the transfer of the sovereignty to his second brother William, who has since been recognised as reigning duke by the great powers of Europe. One of the first acts of this prince's sovereignty was in conjunction with the "Landstände," or estates to remodel the constitution which had been given in 1820 under the direction of Count Munster during the minority of the former duke. Instead of two chambers the representation of the people is now conducted agreeably to the old German fashion, to one house of Assembly, but which is composed of elected members; 10 deputies being taken from amongst the owners of the 78 knight's estates within the duchy, 12 from the principal towns, 10 from the villages and peasantry of the open country, whether holding freehold or copyhold property, and 16 chosen from all classes indiscriminately by electors named by each class. With the exception of two members of the higher clergy, which must be chosen, no distinction of rank or property influences or limits the choice of this last portion of the assembly. The

members chosen for the towns and for the country must, however, belong to that class of each which pays the highest amount of taxes, and which is fixed to include one-tenth of the houses in town, and one-fourth of the landed holdings. The Chamber meets every three years, and renews one-half of the members of each class by a new election. The budget is voted for three years, and the Chamber has the right of controlling the expenses of the state, under acknowledgment of the obligation to provide for the dignity and power of the government. This new constitution, which was proclaimed 12th Oct., 1832, provides for many rights of the subject, which are not acknowledged in other German states, amongst others,—that every person who is arrested be brought up for examination within 24 hours, and then delivered over to his proper judge; where the course of justice is impeded by government influence, recourse lies to the Chambers; the right of emigration and removal to any other country unimpeded is acknowledged. Two of the counsellors (judges) of the court of the duchy, are to be chosen by the Chamber; all privileges of various classes of the community are abolished, and perfect equality before the law is established. In the first sittings of the new chamber the manorial dues and services of all emphyteutic fiefs were declared redeemable; the dues in money and kind at 25 years' purchase, the service dues at 18 times their estimated value. The municipal institutions were modified at the same period, and the freedom of the cities rendered easy of acquisition. The magistracy is composed partly of nobles and partly of honorary officers, dependent on the sanction of a council of freemen chosen by the citizens at large, and who vote the sums requisite for the service of the city. The official published statement of the revenue and expenditure for the period 1837 to 1839 gives the following results:—

Revenue.		Expenditure.	
	Doll.		Doll.
Land tax	987,000	Department of justice	470,571
Personal tax	351,559	Do. finance	211,819
Indirect taxes	114,000	Do. war	865,775
Stamps	81,600	Do. police	134,116
Fees of courts	132,553	Extraordinary	277,456
Post-office and tolls	51,117	building expenses	491,760
Lottery		Interest of public debt	346,920
Domains and other branches	590,512	Salaries in various departments and sinking fund	395,156
Total	3,297,664	Total	3,297,664

This estimate contains only the surplus revenue of the domains left after defraying the civil list of the Duke, which amounts to 257,630 dollars annually. The Duke further derives a revenue of 170,000 florins from the duchy of Oels, in Silesia, and a mediated principality under the sovereignty of Prussia, which is an appanage of the second branch of the House of Brunswick. Finally, the estates of the convents and religious foundations secularised at the period of the reformation, and then destined to support the clergy and institutions of education, form a separate fund, which does not enter into the budget, yielding the sum of 340,605 dollars annually. A resolution of the chamber fixed the lowest amount of salary of a parish minister at 400 dollars, and that of a village schoolmaster at 80 dollars per annum, the amount required to make up these sums being chargeable on the budget. The public debt is stated not to exceed 2,300,000 florins, and is being rapidly reduced. On the whole, this little state is one of the best managed in Europe in every department of administration. Respecting the principles upon which taxes are imposed, we have collected the following particulars. For the land-tax, the ground is rated according to four classes, and a separate assessment is laid on each. The personal tax is a capitation assessment in all persons who are of age, and is divided into 10 classes, whose contribution varies from about 3s. 2d. to about 3s. 16s. per annum. The indirect taxes are levied in conjunction with Hanover and Altenburg, according to a moderate tariff, which affords encouragement to native industry, without aiming at forcing precarious manufactures. A tax is levied upon houses, and some tolls on provisions carried into towns for sale; but these are local assessments for municipal purposes.

The present Duke of Brunswick is the lineal descendant of Henry the Lion, the last of the house of Welf, who held the united duchies of Bavaria and Saxony. In their rivalry with the Saxonian house of Hohenstaufen in the 12th century, the party of the powerful Welfs was stronger in Italy than in Germany, and the jealousy entertained of their power in the former country caused all the princes of the empire to unite with the Emperor Frederick Barbarossa in humbling them. Henry the Lion having refused to aid that emperor in his wars with the free Italian cities and the pope, was deprived, by a decree of

the diet in 1180, of both duchies, and only left the possession of his allodial domains of Brunswick and Lüneburg, which were subsequently split into numerous branches, but merged finally in the still reigning lines of Lüneburg (or Hanover) and Brunswick, which is the elder branch. As such, the crown of England would have devolved to this line, which claims descent from the daughter of Henry II. on the extinction of the House of Stuart, had not the Duke of Lüneburg, afterwards George I., by marrying the daughter of Elizabeth, Countess Palatine, the daughter of James I. of England, procured a prior claim to the younger line. Treaties of mutual inheritance exist between the houses of Hanover and Brunswick, and the succession only passes to the female side when legitimate male heirs fail. The intimate family connection which in the last century subsisted between the House of Brunswick and the reigning families of Great Britain and Prussia, engaged the princes of Brunswick in political alliances with these two powers, in opposition to France, and occasionally to Austria. The Prussian army, at the outset of the disastrous campaign of 1806, was commanded by the Duke Charles William Ferdinand of Brunswick, who fell in the battle of Jena. Although he had declared his duchy neutral, and no Brunswick troops were with the Prussian army, yet his lands were immediately seized by the conqueror, and incorporated with the kingdom of Westphalia. His youngest son, Frederick William, after the death of his eldest, and the abdication of his second brother, the sole remaining heir, served for some time in the Russian, and afterwards in the Austrian army. In 1809, this adventurous prince raised a small corps, and attempted, in co-operation with the grand Austrian army, to excite a diversion in the north of Germany; but finding his cause ruined by the victory of the French at Wagram, he crossed the whole of Germany, at the head of a small body, not exceeding 2,000 men, and marched from the Bohemian frontier to the sea coast near Breiten. Eluding and alternately fighting the various French corps which crossed his passage with equal good fortune and bravery, he succeeded in embarking for England, where his troops joined the British army, with permission to retain the black uniform which their bravery had rendered celebrated, and served until 1814 in the peninsula. Having regained his dominions, under the stipulations of the treaty of Vienna, Frederick William fell at the head of his troops while maintaining the position of Quatre Bras, two days before the battle of Waterloo. In the Germanic Confederation, Brunswick ranks as the thirteenth voice, conjointly with Nassau, and has two votes in the Plenum. The contingent to the Confederate army is 2,096 men, consisting of 1,625 infantry, 299 cavalry, and 172 artillery and pioneers.

BRUNSWICK, a city of Germany, cap. of the above duchy, on the Ocker; lat. 56° 18' N., long. 10° 32' E. Pop. 35,000. Bruno, who appeared about the year 842 as Duke of Ostfalia, is said to have first built walls round the little town of Brunswick, to protect it from the incursions of the Normans. Henry the Lion, Duke of Saxony and Bavaria, and the grand champion of Christianity and Germanic civilisation, against the Slavonic nations on the Elbe and the Baltic Sea towards the close of the 12th century, made Brunswick his place of residence, and extended and adorned the city. He finished the cathedral church of St. Blaise, an interesting monument of the Byzantine Gothic style, endowed it with lands and relics brought from Constantinople and the Holy Land, and erected a bronze figure of a lion said to have been cast in the Greek capital, upon a pedestal in front of his palace, on the site of which a barracks now stands. From this period Brunswick became one of the most important cities in N. Germany; and the wealth of its dukes, who were owners of the extensive mines and salt works in the Harz mountains and in the vicinity, was principally expended in the cities of Lüneburg and Brunswick, the seats of the chief lines of the Welf family. In the 13th century Brunswick, which, owing to these resources, had advanced in commercial prosperity, became a member of the Hanseatic league, and flourished as one of the leading cities of Lower Germany. On the decline of the league, the increased power of the territorial princes exposed the city to the vicissitudes which their political speculations drew upon the country; and Brunswick suffered in common with other N. cities upon the advance of the Imperial armies under Tilly and Wallenstein, in the 30 years' war. The division of the reigning house into many branches was also, at that period, disadvantageous to Brunswick, which saw the rival cities of Wolfenbüttel, Celle, Hanover, Göttingen, &c. spring up and prosper as so many diminutive capitals, each the seat of a petty court. The city was further almost drained of its small remains of wealth during the French occupation; but through the industry of its inhabitants, and the celebrity of its fair, held in February and August, and frequently visited by 20,000 strangers, it keeps up its importance as a commercial city. An iron railway has been commenced

from Brunswick to the foot of the Harz mountains, of which a portion as far as Wolfenbützel (about 9 miles), was opened in 1839, having cost 300,000 dollars. Should this undertaking be continued through Hanover to the Elbe, or the Weser, Brunswick will bid fair to succeed to Leipzig and Frankfurt, as the staple mart of English manufactures and colonial wares for the N., and perhaps E. parts of Europe. The fortifications of the city have been levelled since the peace, and converted into agreeable plantations, with walks and drives; and the city, although bearing rather an antiquated appearance, has some good streets, and abounds in interesting remains of the middle ages. The cathedral, and church of St. Giles, which has lately been repaired and fitted up as a repository for works of art, the bronze lion before mentioned, and the town-house with a curious gallery, adorned with the statues of many of the dukes in niches, and the bronze fountain in its vicinity, are justly deserving of notice. The principal streets are the Buhlweg, in which the new palace, a tasteful Greek structure, is built to replace the old residence, burnt by the mob in 1830, the Falsterleben and Wenden streets. The church of St. Andrews, with its steeples, one of which is 318 feet in height; and that of St. Catherine, with paintings by Dieblich, and stained glass windows from designs by Cranach and Dürer, as well as the church of St. Martin, in the pointed Gothic style, are interesting to lovers of the fine arts. Nor is the museum less worthy of attention, in which, amongst a number of inferior paintings, are some of high value of the Flemish and Dutch schools, by Rembrandt, Jan Steens, Vandyke, and Rubens, together with a portrait of Raffaele, said to be by his own hand; and others by Guido, Giorgione, &c. An Ecce Homo, by Albert Dürer, a crucifix, by Benvenuto Cellini, with a collection of antique statues, coins, &c., are worthy of inspection. The celebrated Onyx vase, purchased by one of the dukes of Brunswick, who secured it as his share of booty when Mantua was seized, in the course of the thirty years' war, together with several other objects of value, were carried off, and are still retained by Duke Charles. The Caroline college, now divided into a lyceum or classical college, with a gymnasium or grammar school, and a "real schule" or mechanics' and commercial institute, with a branch for agriculturists and foresters, a college for teachers, several elementary schools, a general and a lying-in hospital, with schools of surgery, orphan and deaf and dumb asylums, are the public institutions for education. It has also manufactures of linen and woollen stuffs, hardware, &c.; and numerous charitable institutions.

BRUNSWICK, a town of the U. States of America, Maine, on the Androscoggin, 26 m. S.W. Augusta, and 30 m. N.E. Portland; lat. 43° 53' N.; long. 69° 55' W. Pop. 3,547. It is a place of considerable trade. On the opposite side of the river is Topsham, with which town it is connected by two bridges. The falls of the river afford a convenient supply of water power, which is used to some extent, to give motion to corn-mills, and woollen and cotton factories. Bowdoin College, founded in 1794, stands on an elevated plateau near the town. It possesses a philosophical and chemical apparatus, laboratory, cabinet of minerals, gallery of paintings, and a library containing above 8,000 vols. A medical school connected with the college was established in 1820. In 1838, the college had 124 and the school 90 pupils.

BRUNSWICK (New). A city of New Jersey, in the United States of America, partly in Middlesex and partly in Somerset co., on the S.W. side of Raritan river, 22 m. N.E. Trenton. Pop. (1830) 7,831. The town lies rather low; but is considered healthy, and has a good deal of trade. It has a court-house, jail, market-house, two churches, a theological seminary, and several places of worship. Rutgers College, founded in 1770, under the name of Queen's College, is a handsome stone building three stories high, with libraries containing upwards of 6,000 vols. Students 93 (*American Alm.*, 1835). The Raritan is navigable as far as New Brunswick for sloops of 80 tons burden.

BRUNSWICK (New). A territory belonging to England in N. America. See New Brunswick.

BRUSSELS (Lat. *Bruxellæ*, Flem. *Brussel*, Fr. *Bruxelles*), capital of the k. of Belgium, and of the prov. of Brabant, about 50 m. E. by S. from the sea, lat. 50° 50' N., long. 4° 22' E.; on the W. bank of a small river, rising near Seneffe, in Hainault, and flowing N. into the Scheldt, through the Rupel, about 2 m. N.W. of Mechlin. The scenery of the adjacent country is beautifully diversified by sloping heights, and green valleys refreshed by the waters of the Senne. A large portion of the city being built on the acclivity of a hill, it presents, when viewed from the W., a picturesque amphitheatre of houses; and the great inequality of the elevation of its site has often induced a comparison with Naples and Genoa. The

figure described by the outline of the surrounding wall resembles that of a pear, the smallest part pointing S.S.W. The greatest extent of the city, from N.N.E. to S.S.W., is about 3 m., and the extreme width, from N.W. to S.E., about 2½ m. Brussels a century ago, was completely surrounded by strongly fortified ramparts, with salient angles, and ditches or moats, supplied from the river Senne. These fortifications are now almost wholly removed, and their site is formed into spacious boulevards, planted with rows of stately linden trees, that encircle two thirds of the city, on the N., the E., and the S. The city wall is overlooked by the boulevards, which command extensive views of the country, and afford an agreeable promenade, extending about 5 m. from the Porte au Rivage on the N., to the Porte de Hal on the S. There are nine of these *portes* or mural gates, several of which are fine old architectural arches of great strength. They communicate with, and bear the names of, the high roads that traverse the kingdom and centre in the capital.

The Senne enters the city on the N.W. side by two branches, and forms, within the walls, four islands, of which the principal are named St. Gery and Bon Secours. This rivulet is only about 30 ft. in width, and from 4 to 6 ft. in depth, and is not navigable in any part of its course. Brussels, however, possesses the advantage of water communication with Charleroy on the S., and with Mechlin, Antwerp, and the ocean, on the N., by means of two spacious and well appointed canals. The width of the Antwerp canal is 45 ft. It was opened in 1851, and cost nearly 2,000,000 of florins (166,000 £.). Five locks overcome a descent of 50 ft., in a course of 17 m., between Brussels and the town of Boom, where the canal joins the Rupel, a large affluent of the Scheldt. The head of this canal, in the N.W. quarter of the city, is furnished with several commodious basins and quays, whence passengers and goods are conveyed in large and handsome barges to the junction of the Rupel. The Charleroy canal cost 4,350,205 florins, and was first opened in 1830. It is carried along the W. boundary of the city in the ancient ditches of the fortifications to the Porte au Rivage, where it communicates with the canal to Antwerp. Fifty-five locks obviate a fall of 432 ft., in its course of 45 m. to Brussels. It passes through a tunnel of 1,175 yards, and is crossed by 55 aqueducts and 36 bridges. The soil of the elevated ground, occupied by the S. and E. portions of the city, is sand, interspersed with fossils, marine substances, calcareous stones, and layers of ferruginous earth; and that of the lower N. and W. section consists of a sandy marsh, mixed with marine substances, and covered with a deep bed of peat or turf. The highest part, on the S. extremity, between the portes of Hal and S. Anne, is about 220 ft. above the level of the sea. The upper town contains the royal court and government offices, the park, the finest squares, streets, and hotels, and the mansions of the higher classes. The central and lower town comprises chiefly the trading and operative portion of the population, and has generally a more crowded and mean appearance, though it still abounds in fine old ornamented buildings, once occupied by the ancient nobles of Brabant. The *Rivage*, at the N. extremity, is inhabited by rich merchants, and presents a constant scene of commercial activity. The total number of houses is about 15,000, of which 700 are inns or hotels; and there are nearly 300 streets, many of which are wide and regular, besides lanes and blind alleys almost innumerable. All are generally paved with large flint stones, and are lighted by about 1,300 lamps, both of gas and oil. The city is abundantly supplied with spring-water, by means of pipes and powerful hydraulic engines, from three subterranean caves at Etterbeek, a beautiful village in the southern vicinity. There are besides ten springs within the walls, 30 fountains, and about 90 pumps. Several fountains are ornamented by elegant obelisks and groups of exquisite bronze and marble sculptures. The most remarkable are *Les Fontaines des Fécules* in the court of the Hôtel de Ville, formed of river gods in white marble, and dolphins in bronze; the *Fontaine de Minerve*, in the Place du Grand Sablon, consisting of a beautiful group of figures in white marble, erected in 1741, by the Earl of Aylesbury, in attestation of his respect for the inhabitants, after residing among them 40 years; and the *Mannikin Pis*, near the Hôtel de Ville, in the centre of the city. This is an exquisite bronze figure, about 2 ft. in height, of an urchin boy who discharges a stream of water in a natural manner. Great value and historical interest are attached to this antique little figure by the old citizens of Brussels, who regard it with peculiar solicitude as a kind of municipal palladium. The ancient part of Brussels is ornamented by many fine specimens of the florid style of Gothic architecture of the 16th century; and the modern part exhibits numerous excellent buildings, erected about 50 years ago; but the newly-built dwelling-houses have commonly the uncouth form and fashion of granaries or manufactories, and are often constructed with very inferior bricks, and with timbers too slender for the lofty tiled roofs. Their uniformity of appearance too is destroyed by the custom of

painting the fronts with strongly contrasted colours—yellow, green, white, &c.—which often produce a glaring effect, more suitable for isolated inns or fancy cottages than the streets of a metropolitan city. In the Rue de la Madeleine and Rue Montagne de la Cour, are many elegant shops, and these are accounted the liveliest and most frequented streets in Brussels, though in appearance and business they are certainly dull, compared with Paris or London; indeed dullness in general forms a common subject of querimonious remark among the French and English residents in the capital of Belgium. Four uniformly built streets surround the large palace garden called the Park, namely, the Rue Royale, which will admit of comparison with some of the finest streets of the European capitals; the Rue Ducale, in which are the palace of the Prince of Orange and the grand concert room; the Rue Bellevue, containing the king's palace; and the Rue Brabant, in the centre of which is the palace of congress, or houses of parliament. The Grande Place, or great market-place, in the centre of the city, is a noble and very interesting square, containing the gorgeous old Gothic Hôtel de Ville, the Maison du Roi, and many other rich specimens of the ancient ornamental architecture. Here, in 1568, counts Egmont and Horne were beleagued by the Spanish viceroy the Duke of Alva, whose persecutions brought ruin and death into almost every house in Brussels. The Place Royale, near the king's palace, is perhaps the finest square in Brussels. The houses around it are remarkably handsome and regular. The Place du Grand Sablon is the largest square, and is used as a market-place. The Place de la Monnaie is also extensive, and approached by several spacious streets: it contains the theatre, the mint, the exchange, and some of the finest cafés in the city. The Place de St. Michel, better known since the Revolution as the Place des Martyrs, is planted with rows of linden trees, and surrounded by uniform and elegant buildings ornamented with Doric columns. This square was chosen for the sepulture of those who fell in opposing the royal forces during the revolutionary struggle in September 1830. There are 14 other squares of less distinction, but which at once serve the purposes of health and ornament. The park is an open oblong space of about 14 acres, on the high eastern side of the city. Its surface is covered with smooth verdant turf, and is formally laid out in broad straight walks and winding paths, which are overshadowed and sheltered by lofty beech and chestnut trees and plantations of acacias. There are several fountains, and many excellent marble statues, busts, vases; and groups of persons and personifications from classical mythology and history are distributed about the grounds. The walks command a great variety of interesting scenery, including the old Gothic edifices of the lower town and the surrounding country, which is very picturesque. In the N.E. corner of the park is "Vauxhall," comprising a small pretty theatre for vaudevilles, and a ball-room. Along the banks of the Antwerp Canal, issuing from the N. point of the city, is the beautiful promenade called the *Allée Verte*, that is, the Green Alley. It is formed of a broad carriage-road, and on each side a footway, divided by four rows of umbrageous elms, extending about a mile and a half. Here the royal fountain, and multitude of all kinds, are seen every fine evening enjoying the freshness of the country air, and the pleasing views of numerous villas and rural scenery. In fact, the environs of Brussels are in general so interesting, that they form the subject of a large portion of every full description of the city. Besides the excursion, of course, to the battle-field of Waterloo, and its surrounding localities, still intensely exciting to the curious, about 35 villages in the more immediate vicinity of Brussels are enumerated in the guide-books as well worth the attention of philosophers and inquisitive strangers. Among their objects of interest are the splendid royal palaces of Laeken and Tervueren, and the great workhouse and penitentiary establishments of Vilvorde and La Cambre. The most remarkable public buildings in Brussels require some notice. The royal palace, at the S. extremity of the park, presents a façade of 120 yards in length, with a central portico and arcades. The style of architecture is plain, and the general aspect of the structure not at all remarkable. The interior too offers little worthy of inspection beyond the usual suites of royal saloons and apartments, which are very superbly furnished, and covered with rich velvet, satin, and gilt. The paintings are neither numerous nor very valuable, with the exception of Vandeyke's *Chapeau de Pelours*. The Palais du Congrès, at the N. end of the park, is a magnificent building, ornamented with fluted Doric columns and appropriate sculptures. Marble stairs on each side of a spacious hall ascend to the two chambers of parliament, which are elegantly fitted up for the reception of the members. The public are admitted into both chambers during the debates, females as well as males; and for this accommodation, the Chamber of Deputies contains a capacious gallery. On the E. side of the park is a palace which, before the revolution

of 1830, was occupied by the hereditary Prince of Orange. It was built in 1820. The exterior is nobly simple, presenting a façade of 230 ft. in length, with a lofty central dome and cupola. The interior is not surpassed by any European palace in sumptuous furniture and elegant decorations. The paintings are not numerous, but of the highest order, comprising some of the most choice productions of the Flemish and Italian schools. The Hôtel de Ville, in the Grande Place, or great central market-place, is one of the largest and most remarkable of those civic palaces, in the florid Gothic style, that are to be seen in perfection only in the Netherlands. It was erected in 1400. The architecture is Lombardo-Gothic, with a great profusion of quaint sculptures, pointed turrets, and other fanciful and intricate ornaments. In the front are 40 windows, and in the lofty sloping roof 80 more. At a point remarkably distant from the centre of the front, an elaborately ornamented pyramidal tower, open throughout to the summit, rises to the height of 364 ft., and commands a fine view of the surrounding country, including the battle-field of Waterloo. It is surmounted by a colossal copper-gilt statue, 17 ft. high, of St. Michael crushing a dragon, which turns about to serve for a weather-cock. The interior of the building is entered by a spacious flight of steps, and the lofty halls and saloons exhibit many curious old paintings, gilded carvings, and specimens of fine tapestry. Opposite the town-hall is a venerable Gothic edifice, built about A. D. 1000, called the Brood Huys (bread house) or Maison de Roi. The Palais de Justice is a large building containing the courts of law: its front displays a noble portico, imitated from that of Agrippa's Temple at Rome. The Palais du Conseil d'Etat, the Hôtel des Monnaies, and several other state offices, are structures more or less elegant; also the theatre, which was opened in 1819, and cost 56,000*l.* Its interior displays very commodious arrangements and tasteful decorations. The stage in front is of greater width than that of the Grand Opéra at Paris. The price of admission to the boxes is 4*s.* 4*d.*, and to the pit 1*s.* 4*d.*. A smaller theatre in the park has been already noticed, and there is also a private one for amateurs. Near the Place Royale is the large and handsome old Palace or Const., founded in 1300, and rebuilt in 1746. When this was the residence of the Spanish and Austrian governors of the Netherlands, it was one of the richest palaces in Europe. It now contains the public library, lecture-rooms, museums, and galleries of paintings and sculptures. The Palace of Industry is a large adjoining building for the exhibition of the manufactures of the kingdom, mechanical models, and new inventions. Brussels contains several grand and venerable cathedral churches, erected in the middle ages. Four only of 16 are considered primary, and belong each to one of the 4 arrondissements into which the city is divided: the others, although little inferior in appearance, are secondary in rank. The cathedral of St. Gudule, the largest and finest in Brussels, was founded in 1010; and here the first chapter of the chivalric order of the Golden Fleece was held by Philip le Bon, in 1435. There is an aspect of imposing grandeur in its spacious front, surmounted by 2 large square towers, from the top of which Antwerp is distinctly visible at a distance of 27 miles, and on a calm day the distant sea can be seen. Against the pillars which divide the lateral aisles from the nave, and support the lofty roof, are placed finely-sculptured statues of the 12 apostles, 10 ft. in height, at an elevation of 25 ft. from the floor. The pulpit is formed of wonderfully carved groups of figures the size of life, representing the expulsion of Adam and Eve from paradise. The glass of the principal window displays a magnificent representation of the last judgment, by the celebrated Flemish painter, Francis Mors, and several other antique painted windows of this noble cathedral are exceedingly brilliant and beautiful. Its altars and sumptuous mosaics of sculpture, marble, and numerous fine paintings, are objects worthy of especial notice. The organ, too, is remarkable for the depth and power of its intonations and perfect unison; but that which most attracts the curious spectator is one of the side chapels—a large and splendidly ornamented oratory—called *St. Sacrament des Miracles*, from its being the sanctuary in which are preserved 3 miraculous consecrated wafers, said to have been stolen by Jews in the 14th century and miraculously recovered. These wafers are still annually paraded with great pomp through the principal streets. The cathedral of *Notre Dame de la Chapelle* is a beautiful Gothic structure, founded in 1134, and but little inferior in dimensions to that of St. Gudule. Its paintings and sepulchral monuments are even more numerous. At the summit of its lofty spire is stationed a watchman, who sounds a trumpet every quarter of an hour during the night, in proof of his wakeful vigilance; and on seeing a fire, he blows a shrill and incessant blast, to hasten the attendance of the engines. The interior ornaments of this fine cathedral consist of numerous paintings, statues, and monumental sculptures, by eminent artists; and a very curious carved pulpit, representing Elijah fed by an

angel under a canopy of palms. The church of *Notre Dame des Victoires* is a profusely ornamented Gothic structure of the 13th century, displaying the most exact symmetry in its plan and proportions. It is ornamented by marble statues and sculptured tombs; its windows are brilliantly painted; and the tones of its organ are exceedingly grand and harmonious. *Notre Dame de bon Secours*, built in the 17th century, is the best attended church in Brussels. Its handsome front facade is surmounted by a lofty dome, and the ornaments of the interior are exhibited to great advantage by the frequent performance of high mass with peculiar sacerdotal pageantry. St. Catherine and St. Nicholas are very irregular and uncouth Gothic edifices of the 12th century, adorned with numerous fine old paintings. The churches of Caudenberg, St. Augustine, and Notre Dame de Finsterre, are handsome specimens of the Grecian style, and were erected in the 17th century. A convent of Béguin nuns, called *Le Grand Béguinage*, built in 1657, at an expense of 332,000 florins, has a beautiful church, which contains many fine paintings. There were here formerly a thousand nuns; at present the number is greatly reduced. There are two other nunneries, the convent of Berlaumont, and that of *Les Sœurs Noires* — the Black Sisters. The Church of England service is performed in several Protestant chapels, for the accommodation of the numerous English residents; and the Jews, of whom there are 10,000 in the whole kingdom, have their general consistory in Brussels, and a handsome synagogue; but the great mass of the population are zealously attached to the rites and doctrines of the church of Rome, while their Lutheran king, Leopold, attends the Protestant service in his private chapel. Previous to the suppression of religious houses in Belgium by the French republican government, at the close of the last century, Brussels contained 31 monasteries, 2 convents of Béguins, 2 of English nuns, and 14 oratories; and during the middle ages, the extent and magnificence of the monastic establishments in this locality were truly amazing.

The two principal medical hospitals of St. Peter and St. John are admirably regulated. There is also a well-managed lying-in hospital, and a military hospital attached to the barracks. Nothing can exceed the care and cleanliness observed in every part of the hospital of St. Peter; indeed to this remarkable attention is attributed the fact that, in the calamitous year of cholera, not one case of that dreadful malady occurred in the wards of this establishment, among a miscellaneous assemblage of 600 patients. The hospital of St. John contains between 200 and 300 beds, and includes a community of the Sisters of Charity. The earnest piety and genuine benevolence which induce these and other exemplary members of the Catholic religious orders to go about doing good, by visiting the sick poor, especially in the hospitals, often excite the admiration of strangers who justly appreciate virtue and goodness, and convey a tacit reproach to the pious Protestant ladies of England. There is an excellent society for gratuitous vaccination, which is efficiently supported, and is very beneficial to the poor.

The civil and military prison of Brussels is an appropriate modern building, having 10 courts of law. It is situated very healthily in the high S.W. quarter of the city, and is under excellent management. The part for civil offences will contain 500 prisoners. There are 3 public cemeteries outside the boulevards, adjacent to the gates of the Hal, Louvain, and Flanders. The English residents in Brussels have also 2 burial-grounds on the roads to Uccle and Louvain. Several commodious bathing establishments are formed upon the river Senne, both within and beyond the city walls, and one for medical steam-baths, in the *Place Royale*, near the king's palace; are the public hotels *de Belle Vue de Flandres*, and *de l'Europe*, which, in the extent and excellence of their accommodations, are not much surpassed by any on the Continent. There are also several large and elegant cafés which might admit of comparison with some of the finest in Paris. The markets of Brussels amount to more than 20, and are all well and abundantly supplied. The principal corn-market, in the lower N.W. quarter, forms one of the finest squares in the city. It is surrounded by handsome houses, and planted with double rows of lofty trees. Adjoining the fish-market, which is one of the best in the kingdom, is the market for poultry, in which are exhibited baskets full of the hinder legs, or *gigots*, of large frogs, neatly twisted and skimmered up ready for dressing. Their appearance is bright and plump, and by no means so disagreeable as to increase the unfavourable prejudice of an English palate. Brussels is amply supplied with culinary vegetables from market-gardens. Butchers' meat is good, and about 6d. a pound. Game is rather plentiful, and poultry abundant. Fresh-water fish are cheap, sea-fish rather dear. Bread is excellent in quality, and two thirds cheaper than in London. Groceries in general are 10 per cent. lower, and tea 50 per cent.

lower, than in England. Ale and beer of a good description are the common beverage. Wines are moderate in price, spirits particularly cheap. Excellent coal is obtained, by the Charleroy Canal, at one third the cost in London; and wood for fuel is cheaply procured from the forest of Solignies. The following tabular abstract of the records for 1838, which are made in imposing municipal taxes upon the provisions brought into the city, will serve to show the amount of different articles consumed in 1838.

Oxen	11,001 in number	Brandy and H-	63,250 gallons
Calves	14,503 —	queens	—
Sheep and lambs	29,199 —	Gin	1,539,590 —
Pigs	5,676 —	Beer	7,148,106 —
Hens	7,109 —	Vinegar	38,384 —
Meat cut up	2,151,550 lbs.	Oil	278,311 bushels
Fresh sea-fish	—	Hay	6,983 tons
—	22,777 value	Straw	9,052 —
—	998 tons	Firewood	1,100,000 cub. metre
Stockfish	199 —	Charcoal	137,546 bushels
Beck herrings	5,569 baskets	Coal	73,360 tons
Pickled herring	—	Timber	19,612 —
—	225 tons	Lime	246,191 bushels
Butter	21,190 cwt.	Bricks	41,058,450 in number
Wines	104,924 gallons	Stones	5,983 tons

The pop. of Brussels, in 1824, was 84,004; in 1830-31, 98,279; and in 1837, 104,265; but these numbers are exclusive of the pop. of the suburbs, amounting to about 30,000.

From the city registers, which are very carefully compiled, we find that the average number of the inhabitants of Brussels, in each of the 14 years, from 1824 to Jan. 1, 1838, was 93,092; the average annual births, 4,037; deaths, 3,700; marriages, 910; and divorces 3.

The climate of Brussels is temperate, moist, and extremely variable. The inhabitants of the upper town enjoy a warmer and dryer atmosphere, and a greater exemption from diseases, than those of the lower town, from which the epidemics that occur most commonly arise. In general the city is healthy, and rarely visited by malignant or pestilential fevers. The air is genial and mild, and the sky often serenely blue. Refreshing breezes blow from the sea, but fogs not unfrequently descend in the morning and evening. The temperature of Brussels, compared with that of Paris, is colder in winter, and less warm in summer; compared with London, it is also colder in winter, but warmer in summer. The dry nature of the soil in the higher part reflects the sun's rays in summer, so as to render the heat extremely oppressive. In general, the weather is more damp and variable than in Paris, and less so than in London.

Among numerous benevolent institutions, are several extensive and magnificently supported almshouses, or asylums for the aged, infirm, and destitute, who have never resorted to public begging. The buildings of these establishments are extremely neat and commodious, and the management is such as to produce the most exemplary order and propriety. Each has from 150 to 200 inmates, and the annual expense of one (near the cathedral of St. Gudule) is defrayed by voluntary contributions, amounting to 25,000 francs, collected from the public houses of the city; to the proprietors of which 5 fr. are awarded for every 300 fr. contributed by their customers. There is a foundling hospital, which had, in 1833, 1,320 inmates, supported at an expense of 150,000 fr. a year, of which 27,300 fr. are furnished by the government. The Orphan Asylum contains about 150, who are taught industrial arts, and provided for until the age of 20. In 1833, there were 10 almshouses, or asylums for the indigent, which supported 3,870 persons, at an expense of 771,654 fr., and according to the official reports of the superintendents of the poor, the total number of paupers in Brussels, to whom relief was administered in the same year, was 31,426, belonging to about 500 families. The Hospice of Beneficence, in relieving 31,426 individuals, expended 159,870 fr. in wages, with the 771,654 fr. supplied by the asylum, make 930,654 fr., or 38,778 fr., devoted to the poor in one year, besides a great extent of private charity. A great and important institution, called the Société Philantropique, has for its object the prevention and extirpation of mendicancy: it is supported by subscriptions. In 1833, the number of pledges received by the Mont de Piété, was 240,940, and the sum lent thereon was 1,806,543 fr.; the number of pledges redeemed was 179,535, and the amount refunded was 1,284,098 fr. In March, 1834, the Central Savings Bank, established in the capital for the whole kingdom, possessed a fund of deposits consisting of 39,971,634 fr., or 1,615,485 l. Very ample provision is made for the instruction of the children of the poor. There are also evening schools for adult mechanics and labourers, and an excellent establishment for instructing the deaf and dumb. In 1832, the schools for poor children, including a numerous one for infants, contained 3,276 scholars, the expense of whose instruction, during that year, was 25,596 fr. A model school receives from the government 1,370 fr. per ann. for its head master,

and for each of two under masters 424 fr. Subsidies to the amount of about 1,200 fr. are also awarded to three other schools, one of which is Jewish, and held at the synagogue. The primary schools connected with the model school were attended in 1833 by 1,780 children. At the same period the total number of scholars at the different schools in Brussels was 8,470. A large school on the Lancastrian system is established in a spacious building erected for the purpose, and supported by a society of benevolent persons; and Sunday schools are numerous attended. For the instruction of youth of both sexes in all departments of scholastic knowledge, and every elegant accomplishment, there are many excellent academical institutions, public and private. The modern collegiate establishment, called the Free University of Brussels, offers every desirable facility for prosecuting a complete course of study in science, language, and literature. Besides a magnificent library, it possesses a chemical laboratory; museums of natural history, mineralogy, geology, comparative anatomy; an anatomical theatre, and chambers for clinical practice. In 1834, the number of students was 210, of whom 30 were devoted to the physical sciences, 89 to law, 62 to medicine, and 39 to polite literature. The Royal Atheneum is a highly useful and prosperous institution, established on liberal and rational principles, and kept in full operation by 15 professors and masters. The attention formerly devoted to the ancient languages, so as to engross exclusively the whole period of youth, is properly divided between ancient literature and the more important modern experimental sciences and industrial arts. In the former department there are usually from 150 to 200 pupils, and in the latter from 350 to 400. The hall for lecturing will hold 1,200 persons. There is a fine veterinary and agricultural college, with 150 students, a military school, and a school for instructing boys scientifically in the principles of commerce, and the operations of the mechanical arts. Several societies and establishments for the promotion of science and literature have a high and well merited reputation. The Royal Academy of Brussels was founded in 1769. The Geographical Establishment, in the Faubourg de Flandres, was founded in 1830, by M. Vander Maelen, an affluent and patriotic gentleman. On the boulevards, at the E. angle of the city wall, is the Observatory, a neat and appropriate edifice, with two towers commanding an extensive horizon. Its site is 190 ft. above the level of the North Sea. This establishment is furnished with an apparatus of very superior philosophical instruments, and serves not only for the prosecution of astronomical and meteorological observations, but for the promotion of all the kindred mathematical and experimental sciences, especially that of horology. Near the Observatory, on the outer side of the city wall, is the Botanic Garden, which is generally allowed to be one of the finest in Europe. An institute of fine arts awards prizes to distinguished students of painting, engraving, sculpture, and architecture, and affords them the means of professionally visiting Rome, and the other celebrated schools and repositories of art. Prizes are also distributed by an academy of painting, sculpture, and architecture, which is numerously attended by students, whose productions form an annual exhibition. There is also a society of friends of the fine arts. A royal conservatory of music is attended by 400 pupils, many of whom become eminent performers; and infirm and aged musicians are assisted by an institution called the Society of Apollo.

For the promotion of mercantile and mechanical knowledge, there is a commercial society, and one for the encouragement of arts and industry. Two medical societies comprise very numerous bodies of learned physicians, and other distinguished men of science. In the old court, or Palace of the Fine Arts, is a museum of natural history, that surpasses in extent and value every other in the kingdom. The departments of zoology, ornithology, entomology, and mineralogy, are especially replete with rare and admirable specimens, including animals from the Dutch East Indian colonies, Russian minerals, and all the volcanic products of Mount Vesuvius. Another portion of the edifice contains the great public library, of nearly 140,000 vols., and 15,000 historical MSS. and minerals. The latter were collected at a very early period, by the dukes of Burgundy, and are of extreme value; many being richly adorned with miniature paintings of exquisite beauty, by the early Flemish artists, and the greater part are splendidly bound in crimson morocco. Above 2,000 vols. of the books were printed in the 16th century. The third division of the palace is occupied by a collection of about 500 paintings, by the great Flemish masters from Van Eyck to Rubens, and his numerous pupils. The library, museums, and gallery, are constantly open to the public. This spacious building serves also for public lectures, which are delivered gratuitously every day, by the most eminent professors, on geology, botany, chemistry, architecture, doctrine of chances, philosophy of history, history of the sciences,

history of Belgium, general literature, hygiene, individual and public, and industrial mechanics. Besides the great literary treasures in the old palace, there is a national library possessing 60,000 vols., and 1,100 MSS.; and several of the public institutions have large and choice collections of scientific and literary works. Brussels indeed affords peculiar advantages to those who require the use of modern publications for study or amusement; not only from its convenient central position between Germany, France, and England, the three great foci of European literature; but that, owing to a very active, yet, perhaps, not strictly equitable, spirit of enterprise among the publishers of the Belgic capital, all the best new French works, in every department of science and literature, are reprinted in Brussels, with equal accuracy and neatness, nearly as soon as they appear in Paris, and commonly at one-third of the original cost. Paris and the Parisians are the models which the people of Brussels are ambitious to imitate. They advert accordingly with much complacency to those points of resemblance which their city exhibits—their circumstance of forming a fashionable promenade beneath umbrageous trees; its palace garden in imitation of those of the Tuilleries; its cafés, that emulate the splendid saloons of the Palais Royal; its grand theatre for the operatic drama, and smaller one for vaudevilles. These, and other copies of the characteristics of the French capital, with a general adoption of the French language, and, among the wealthier classes, an anxious observance of French manners and fashions, have obtained for Brussels the appellation of "Paris in miniature." The common language of the working classes in the lower and commercial parts of the city is Flemish, and a smaller portion speak the Walloon, a language derived from the Gallic tribes antecedent to the Franks. It may, in general, be observed, that the inhabitants of Brussels are possessed of a spirit of enlightened enterprise, and exhibit a zealous disposition to adopt all rational improvements in social institutions, in the physical sciences, and industrial arts; while, in ecclesiastical matters, they retain, with peculiar veneration, many notions and ceremonious customs that belong to remote ages of ignorant superstition. Public charities are supported with great liberality. Modern literature and the fine arts, especially music and painting, are cultivated with ardent emulation. The drama is powerfully patronised, and the performances at the principal theatres are got up in a sumptuous and masterly style. A classification of the inhabit., published in 1833, when the whole amounted to 93,574, shows the number of wholesale merchants to be 350; dealers in wine and brandy, 120; brewers of beer, 55; keepers of estaminets, or houses for drinking and smoking, 200; distillers of spirits, 40; bakers, 125; butchers, 25. At the same time there were 113 doctors of medicine, 81 surgeons, and 46 apothecaries.

The manufactures of Brussels consist principally of its celebrated lace and tulle, and of carpets, fine linen, hosiery, printed cottons, hats, paper, soap, candles, chemical productions, painted porcelain, ivory, sculpture of horse-hair, and caoutchouc, articles of iron, brass, gold, silver, bronze, and cut glass; clocks, lamps, mathematical, optical, and surgical instruments. The establishments are numerous and of the highest description for brewing beer, refining sugar and salt, cabinet-making, carriage-building, lithography, type-founding, and printing and binding books. In the year 1833 there were 45 printing-offices, all in active operation. In addition to the commerce arising from its manufactures, and the consumption by the inhabitants, Brussels possesses an important transit trade, by means of its two canals, consisting of all kinds of grain, coarse timber, iron, stones, lime, bricks, and various other products of the soil and of foreign countries. The number of canal boats which entered Brussels during the 3 months, April to June, in 1833, was 1,560, of 80,727 tons. Cheap and expeditious conveyance to Antwerp is supplied by the railroad, the carriages of which proceed from Brussels every alternate hour. The establishments connected with commercial operations are—the Commission Supérieure d'Industrie et de Commerce, Tribunal de Commerce, Chambre de Commerce, Société Générale pour favoriser l'Industrie, Société du Commerce de Bruxelles, six insurance companies, the Entrepôt, Royal Exchange, Custom House, and very commodious public rooms called the Brussels Lloyd's, where merchants meet for the transaction of business and perusal of the daily papers. There are two large annual fairs for the sale of all kinds of merchandise; one of 12 days, commencing May 22; the other of 14 days, beginning the 18th Oct.

The municipal authority of Brussels is vested in a burgo-master and four sheriffs. They constitute the city regency, whose sanction must be obtained to all measures affecting the rights and interests of the citizens. The supreme court of law, and other national tribunals, seated in the capital, are noticed in the article on Belgium, where further particulars are given respecting some of the institutions here mentioned.

Brussels is believed to have been founded in 660, and to have been valued in 1044. A code of municipal laws was formed in 1229, involving the principle of trial by jury. About 1300, sixty trades were incorporated in nine classes, to represent the citizens in all questions of taxation. Liberal notions of government continued to prevail, and the population and extent of the city were much increased. In the general persecution of the Jews during 1370-71, hundreds of that race were put to death in Brussels, and the amount of their confiscated property in the province of Brabant was nearly 13,000,000 florins. Under the Dukes of Burgundy, at the commencement of the 15th century, Brussels became a distinguished seat of learning and the arts, and was the residence of a magnificent court, which greatly promoted the progress of science, literature, commerce, and manufactures, especially the weaving of lincens and woollens, and beautiful tapestry. In 1480, during the dominion of the House of Austria, the city was desolated by a dreadful plague, which destroyed 34,000 inhabitants, and produced a famine, whose effects lasted 4 years. Brussels was highly prosperous under the Emperor Charles V., who often dwelt in its palace, and made it the scene of his final abdication in 1555. The intolerant and oppressive proceedings of Philip II. kindled that rebellion in the Low Countries which ended in the establishment of the independence of the United Provinces. In 1568, the martyrs of freedom, Counts Egmont and Horne, were beheaded in the Grande Place. Alva's violent exaction of exorbitant taxes at length excited a general revolt of the citizens, and after many changes and party contentions, and the loss, in 1574, of 27,000 inhab. by the plague, the Spanish governors, in 1594, gave up the place to the Austrian dynasty, under which the arts and sciences again revived and prospered.

Brussels, in 1695, was unsuccessfully besieged and bombarded by the French, under Marshal Villeroi, when 11 churches and convents were destroyed, with 4,000 houses. In 1706 the keys of the city were delivered to the Duke of Marlborough, and in 1746 it was again attacked by the French under Marshal Saxe, to whom it capitulated after a siege of three weeks. In 1794, after the storm of the French revolution had burst upon it, and Belgium was annexed to France, it became the chief town of the department of the Dyle. In 1803 Napoleon entered the city with great pomp, at the head of 10,000 troops, with a body-guard of the citizens in splendid uniform. Twelve years afterwards, on his return from Elba, Brussels was the head-quarters of the British army, and sent forth the troops who, on the plains of Waterloo, put an end to the ambitious career of that extraordinary individual. From that period Brussels, conjointly with the Hague, was the capital of the kingdom of the Netherlands, until the Belgic revolution of Sept. 1830, which made it the capital of Belgium. (*Documents obligingly communicated by M. Vander Maelen of Brussels; Annales of Brussels; Homberg's Brussels and its Environs; Guide to Brussels and Belgium, Paris; Gratton's Hist. of the Netherlands; Dictionnaire des Pays Bas; Traveller's Guide through Belgium, Hague; Addison's Handbook for Residents in Belgium, Brussels, &c.*)

BRUTON, a town of England, co. Somerset, hund. and par. Bruton, on the Brue, 24 m. S. by E. Bristol. Pop. 2,131. It is well built, consisting principally of three streets, having a common centre, with a good market-house, where the sessions for the E. division of the co. are sometimes held. Here is a well-endowed hospital, founded by a native of the town, for the support of poor men and women, and for the support and education of a certain number of children. In 1838 this town had 4 silk-mills, employing in all 356 hands. Market, Saturday, fairs for cattle 26th of April and 19th of Sept.

BUCHOREST or BUKHOREST, a city of Wallachia, of which it is the cap., being the residence of the hospodar, and of a Greek archbishop, on the Danubian, over which there is here a bridge, 37 m. (direct dist.) from its confluence with the Danube, and 280 m. W.N.W. Constantinople; lat. 44° 26' 45" N.; long. 46° 47' E. Pop. variously estimated at from 60,000 to 80,000. It is situated in a vast swampy plain, is divided into above 60 quarters, and though of comparatively recent origin, it is not built according to any regular plan, and presents a curious display of barbarism and civilisation in its mud cabins, brick houses covered with shingles, and spacious hotels; and in the vulgar finery of the boyars, or nobles, and the rags and filth of the other classes. It also presents a curious mixture of European and Oriental habits and costume; half the inhab. wearing hats and coats, and half calpac and pelisse. Some of the streets are paved; but they are mostly boarded over, or rather covered with trunks of trees, or other large logs laid transversely, instead of a pavement; and from the flatness of the ground, and the slovenliness of the inhab., all the filth of the streets collects under this rude floor. The streets are thence called *potii*, or bridges, and, according to

Dr. Walsh, they "are really bridges floating on rivers of filth. In winter this is continually splashing up through the interstices, and in summer it rises in clouds of black dust; and at all seasons is attended with a foul unwholesome odour, generating putrid fevers and the plague." The palace of the hospodar, or prince, an immense old pile, and the metropolitan church, are in the largest square in the centre of the town. Near to them is the fire tower, 60 feet in height, whence a full view of the city is obtained. It has a vast number of churches, each with from 3 to 6 spires, or towers! It has also about 20 monasteries and convents, and 30 khans, or Oriental inns, with several hospitals, one of which, for the military, managed by German physicians, is said to be very well conducted: another hospital, founded in 1835, by a bequest left by Prince Brankovano, is also stated to be worthy of notice. There is a wooden theatre, where French plays and Italian operas are sometimes performed. The other principal buildings are a large bazaar, and the residences of the consuls, or ambassadors of the different European powers. Since the final emancipation of the prov. in 1834 from the rapacious and brutal despotism of the Turks, improvements of all kinds have begun to be set on foot, and the most praiseworthy efforts have been made to supply all classes, especially in the capital, with the means of education. In this view the college of St. Sauvain has been organised, which furnishes instruction to 500 pupils. The French language has been adopted as the basis of instruction, and the institution is under the direction of a gentleman who resided long in Paris. In addition to this four other schools have been opened in the city, where instruction is afforded gratuitously to all who choose to accept it. There is also a lyceum for the Greeks; and a public library, a society of belles lettres, and an agricultural society, have been established.

Formerly the boyars used to ride on horseback; but about 40 years ago they adopted the practice of riding in carriages, and now would hardly cross to the opposite side of the street without using one of them. When Dr. Clarke was here, the number of carriages was estimated at 4,000, and, at present, it is probably not materially diminished. But Bucharest is principally distinguished by profligacy of manners. Gambling-houses are most abundant; and prostitutes are more numerous in it than in any other European city of nearly the same size: a tax upon them has, in fact, been suggested as the most prolific source of revenue, but in this respect, as in most others, some improvements have taken place.

The trade of the town is very considerable. The exports consist of wool, butter, wheat, hides, yellow berries, tallow, honey, wax, &c., sent by the Danube, or by Varina, to Odessa, Constantinople, &c.; they also export immense herds of horned cattle, hogs, &c. to Germany, whence they import almost every thing they have, from the cheapest necessities up to the most expensive luxuries. There are considerable numbers of German artizans, particularly of watchmakers and jewellers, in the town.

The old cap. of Wallachia was Tergovist; but in 1698 the seat of government was transferred to the present city, then only a miserable village, belonging to a boyar, called Buchor, from whom it has taken its name. (*See WALLACHIA; and Walsh's Journey from Constantinople to England, cap. 11; Macmichael's Journey from Moscow to Constantinople, pp. 107-120; Clarke's Travels, viii. 261, &c.; Revue de Deux Mondes for May, 1830, &c.*)

BUCKFASTLEIGH, a par. and town of England, co. Devon, hund. Stanborough, 172 m. S.W. by W. London. Pop., in 1821, 2,240; 1831, 2,415; houses, 450; area, 6,720 acres. It consists of one main street, on the face of the great western road from London to Plymouth; and of another, branching from it on the W. side down the incline, and ending at Lower Town. German speaking, the houses are meekly built. It is paved, but not lighted. The church is on an eminence overlooking the Dart, on the N. of the town in the meadows beneath which there are some remains of an ancient Cistercian abbey. The inhabitants are chiefly employed in wool-combing and weaving serges, for which there are three or four manufactories in the town. There is also a copper mine in the parish, that is, or was recently, in work; and limestone is quarried and burnt in considerable quantities, for manure to the surrounding district. There are fairs held, for the sale of live stock, the third Thursday in June, and second Thursday in Sept. The weekly market has been long discontinued. The annual value of property in 1816 was 5,802. There are the remains of an ancient encampment in the parish.

BUCKINGHAM, an incl. co. of England, having N. Northamptonshire, E. the co. of Bedford, Hertford, and Middlesex, S. Berks, and W. Oxford. Shape very irregular; area 472,320 acres, of which about 440,000 are supposed to be arable, meadow, and pasture. The value of

Aylesbury, one of the richest tracts in the empire, occupies the middle of the co., and has, on either side, ranges of hills. It is about equally divided between tillage and pasture. The grass lands are partly used for the dairy, and partly for fattening. Agriculture but indifferent; there is a great waste of horse power, and a proper rotation is not always observed. Sheep are an important stock, and the average weight of their fleece is supposed to have been increased, during the present century, from 3 to 5 lbs.; many hogs are also kept; and large quantities of ducks are raised at Aylesbury and other places. There are some large estates. Farms of a medium size average about 180 acres. Leases pretty common; but they are not granted for a sufficiently long term, and are defective in not laying any restrictions on the tenant as to cropping. Average rent of land in 1810, 21s. 13d. an acre. Cottages generally good, and most of them have gardens. The manufacture of pillow lace has greatly declined; but a good deal of straw plat is made in the parts of the county next to Bedford. Minerals of no importance. The Thames bounds the co. on the S., and the Ouse partly intersects it, and partly bounds it on the N. It contains 8 hundreds, and 202 parishes, and had, in 1831, 28,159 inhab. houses, 31,149 families, and 146,529 inhab., of whom 71,734 were males, and 74,795 females; it returns 11 mems. to the H. of C., viz. 3 for the co., and 2 each for the boroughs of Aylesbury, Marlow, Buckingham, and Wycombe. Sum expended on the relief of the poor in 1837-38, 61,634. Annual value of real property in 1815, 662,472l.; profits and professions in do., 222,982l.

BUCKINGHAM, a par., parl. bor., and town of Eng. co. Buckingham, hund. of same name, on the Ouse, 50 m. N.W. London. Area of par., 5,330 acres. Pop. of par., 1821, 3,465; 1831, 3,610: houses at the latter date, 740. Except on the N. side, the town is surrounded by the Ouse, over which there are three stone bridges. It consists chiefly of one long street, which is paved and lighted; houses of brick, and neatly built. The church, with a good tower and spire, was built in 1780, principally at the expense of the Temple family. It has a free grammar and green-coat school for 96 boys, and a national school for 300 boys and girls; two ancient hospitals, supporting 6 green-coat and 10 blue-coat pensioners; and a few minor charitable benefactions. The weekly market is on Saturday, and there are 10 annual fairs for cattle and sheep. A branch of the Grand Junction Canal extends to the town, by which coals, &c. are supplied. No particular manufacture is carried on: in the neighbourhood are paper and corn-mills, and a few lime quarries. Under the Municipal Reform Act there are 4 aldermen and 12 councillors, and the limits of the bor., which were previously co-extensive with the par., are restricted to that portion of it on which the town stands, and which comprises about three-fourths of the pop. The town was incorporated by a charter in 1st of Mary, for services rendered by its inhab. in the Duke of Northumberland's rebellion: the corporation was a self-elected body, consisting of a bailiff and 12 chief burgesses, who, till the passing of the Reform Act, returned 2 mem. to the H. of C. The last-mentioned act not merely gave the suffrage to the 104 householders of the bor., but included with them the 107 householders of the par., and those of several of the adjoining parishes. Registered electors, in 1838, 341. There is a court of gen. sessions for the bor. held twice a year. It is the seat of the summer assize for the co. The gaol was built in 1758, by Lord Cobham, through whose influence the act for holding one of the assizes here was procured; both having previously been held at Aylesbury. The revenue of the corporation does not exceed 634l. a year. Under the Poor Law Amendment Act it is the central town of a union of 30 parishes. Buckingham is a polling town for the co. Till within a recent period, the manufacture of lace by hand furnished employment to many of the women and children. The dual title of the Temple family is derived from the town. (*Lysons's Mag. Brit. t. 1. Camden, Brit. & For. Trav. &c. &c.*)

BUDA (*Slov. BUDIN; Germ. OFEN*), a royal free city of Hungary, of which, in conjunction with Pesth, it is the cap. and seat of government, on the right bank of the Danube, immediately opposite to Pesth, 116 m. W. Debretzin, and 135 m. E.S.E. Vienna; lat. 47° 29' 44" N., long. 19° 2' 30" E. Pop. about 41,000. The pop. of Pesth may be estimated at 65,000; so that, if we regard them as one city, its pop., exclusive of the military, will be about 106,000. Buda is built on and round the last hill of a range which decreases in height as it approaches the Danube, and is divided into 6 quarters. The upper town, or citadel, occupies the centre and highest part of the city, the Schlossberg; it is enclosed by bastioned walls, but is no longer of any importance as a fortress. Although the smallest division, it contains most of the finest buildings. The royal castle, or palace, begun in 1749, is a quadrangular structure of great extent, containing 203 apartments, some of which,

* Literally, oven, from its natural sudatories, or hot-baths.

as the throne-room, audience-hall, and drawing-rooms, are extremely magnificent. In this building are kept the regalia of the kingdom, to which the Hungarians attach an extraordinary degree of importance. A large garden surrounds the palace; and Dr. Clarke says that the view from one of its balconies, elevated on a rock above the Danube, is one of the most striking he had ever seen. The church of the Virgin's Ascension, and the Garrison church, both Gothic edifices, the State's palace, high judicial chamber, town hall, residence of the commandant, arsenal, post-office, and many other military and civil public buildings, are situated in this quarter. To the N., and at the base of the rock on which the citadel stands, is the lower, or "Water-town," which in some parts vies with the former division in elegance. It contains the church of St. Anne, and several others. The *Landstrasse*, a well built quarter; the new town, a cheerful suburb toward the E., reaching to the bank of the Danube; the *Raizenstadt*, or *Tobacco*, to the S., the most populous quarter of all; and the "Christina town," to the S.W. extending into the rich and beautiful Christina valley, are the other divisions of Buda. The chief remaining buildings deserving notice are the churches of the Capuchins, the Elizabethan nuns of St. Florian, the Greek church, the synagogue, several monasteries and convents, the palace of the primate in the Landstrasse, with the palaces of Counts Sandoz, Teleki, Erdöky, Zichy, Tschy, Bathany, &c. A well appointed observatory, attached to the University of Pesth, stands on the Blocksberg, an adjacent hill to the S., 300 feet above the level of the river. Copious hot springs, strongly impregnated with sulphur, issue from the sides of the hills on which Buda is partly built, and especially from the Blocksberg. The successive occupiers of the place, Romans, Turks, and Christians, have taken advantage of these springs, and have converted them into commodious baths. Of those constructed by the Romans, only broken fragments now remain; but the Turkish baths are in a perfect state of preservation, and the largest appropriated to the use of the town, is a fine specimen of Saracenic architecture. The finest of the modern baths, that of the "Emperor," in the vicinity of the Landstrasse, is surrounded by gardens and pleasure-grounds. There is here also a good theatre, with other places of public amusement, including numerous fine promenades. Amongst the many establishments devoted to science and education in Buda, are an arch-gymnasium (high college), a high school in each of the different quarters of the city, a school of design, Illyrian female schools, a public library, cabinets of mineralogy, conchology, &c. Many of the nobility, the Franciscan friars, and other bodies, possess good libraries, to which liberal access is permitted: in the royal palace there is a gallery of paintings. There are various charitable institutions, including four hospitals. A bridge of boats, about 2 m. in length, across the Danube, connects Buda with the modern and finely-built city of Pesth, on the opposite bank of the river; but this is about to be superseded by a magnificent suspension bridge, the construction of which, if it be not already, is to be immediately commenced.

The summit of the Blocksberg commands a fine view of the surrounding country, and especially of the river and the opposite city. "The bridge of boats appears alive with the crowds that are continually passing; on this side is Buda, full of architectural anomalies, yet, from that very circumstance, an object of peculiar interest: on the other, Pesth, laid out in all the regularity of street, and square, and mall, and public garden. There is not a greater contrast between the old and new towns of Edinburgh than between Buda, the ancient capital of the Magyars, and Pesth, a city of yesterday's growth. The one wanders from terrace to terrace, in dark and dingy masses, or stretches in a long line wherever, between the river and the basis of the hill, a space of level ground can receive it: the other, a series of streets which cross each other at right angles, shines in all the splendour of the most rigidly adhered to, and meretricious, but best calculated to preserve an appearance of uniformity, even in separate edifices." (*Ulcig.*) Add to this striking contrast the vastness of the river, the passing of barges, ships, and steam-packets, in the very centre, as it were, of Europe, and the scene and the associations connected with it must be admitted to be of no common kind.

Buda is the usual residence of the viceroy, or palatine, and the general commandant of the kingdom, the seat of the vice-regal council, and the highest administrative authorities. It has much less of a bustling and commercial character than Pesth. There are few manufactures of linen, woollens, silks, velvet, leather, gunpowder, earthenware, &c., and a cannon-foundry; but its principal trade is in its fine wines, of which about 280,000 cimers are produced annually from the vineyards around the heights in its neighbourhood.

Buda is believed by some writers to be either the

Curia of Ptolemy, or the *Aquincum* of the Itinerary of Antoninus. It was held by the Romans till nearly the end of the 4th century. Attila made it occasionally his residence. Arpad, the Magyar chief, made it his head quarters in 900; and it then became the cradle of the Hungarian monarchy. It was enlarged and improved by succeeding Hungarian monarchs, and made a free city by Bela IV. in 1246. It was taken by the Turks, under Solymán, in 1526; but was recaptured by Ferdinand I. king of Bohemia, brother of the emperor Charles V., in the following year. It was again taken by Solymán in 1529, and was held by the Turks till 1686, when it was taken by the Imperialists, after a desperate resistance. Joseph II. removed the seat of the Hungarian government thither in 1783. In 1810, the Taban quarter, and a part of the Water-town, were destroyed by fire. (*Oesterri. Nat. Encyclop.*; *Murray's Handbook for S. Europe*; *Gleig's Bohemia*, &c.; *Clarke's Travels*, viii. 336, 8vo. ed.)

BUDUKHSHAN, a prov. of Central Asia, now a dependency of the khan of Koondooz, between lat. 36° and 38° N., and long. 70° 30' and 72° 30' E.; lying N. and N.E. a chain of mountains, inhabited by tribes claiming a Macedonian origin; S.E. and S. the Bolor-Tagh mountains, and the high country of the Caufirs; and W. the other territories of Koondooz. It consists of the valley of the Koocha, a tributary of the Oxus, which rises at its S.E. corner, and soon becomes a considerable river, unfordable even at Budukhshan (Fyzabad). The scenery of this country, and its natural productions, have been spoken of in high terms by all who have visited it: it contains ruby mines, and cliffs of lapis lazuli. Near the Oxus the former are still worked by the khan of Koondooz, and the latter article, much of which was formerly sent into China, is obtained by lighting a fire under the cliffs, and when hot, dashing cold water upon them, which causes them to fracture. The ruby mines were well known to the emperors of Delhi, and at a much earlier period: they are at a place called Gharan, on the verge of the Oxus; are dug in low hills; and the gems imbedded in limestone like round pieces of pebble or flints. The inhabitants of Budukhshan are Tadjiks; very social and hospitable; speaking the Persian language, and retaining the manners and customs prevalent N. of the Hindoo Koosh before the Tartar invasion. Neither Uzbeks nor Tinkies had settled in the country before the chief of Koondooz overran it about 16 years ago, by whom its own chief was dethroned; since which its peasantry have been driven out, and a rabble of lawless soldiery quartered in their stead. The capital is also called Budukhshan, or Fyzabad, and is near the E. bank of the Koocha, in lat. 36° 28' N., long. 71° 23' E. It is said to have been peopled from Balkh, and most of the inhabitants are of the Shink sect. This country suffered much from a terrific earthquake, in January, 1832, which appeared to exhibit its chief violence in this valley, and destroyed many roads and villages and a great part of the population. (*Burnes's Trav. into Bokhara*, iii. 174-178.; *Elphinstone's Caubul*, li. 387, 388.)

BUDWIKIS, a town of Bohemia, cap. circle of the same name, on the r. bank of the Moldau, 75 m. S. Prague. Pop. 7,400. Is well and regularly built, and partially fortified. Contains a cathedral, 7 churches, a court of jurisdiction for the circle, gymnasium, philosophical academy, and diocesan seminary. Has manufactures of woollen cloth, muslin, damask, saltpetre, and musical instruments; and considerable trade in horses and corn. (*Oesterreichische Nat. Encycl.*)

BUENOS AYRES (*Good Air*), a charit. city of S. America, cap. of the repub. of La Plata, on the S.W. shore of the estuary of the great river La Plata, 125 m. W. by N. Montevideo, and 90 m. N.W. Point Piedras; lat. 34° 30' 29" S., long. 58° 23' 34" W. Pop., according to Sir W. Parish, perhaps 100,000; from 15,000 to 20,000 of whom are foreigners, chiefly English and French. The city is built upon a bank from 15 to 20 ft. above the level of the river. Including its suburbs, it extends N. and S. for upwards of 2 m., with a breadth in its centre of about 1½ m. It is built on a uniform plan; the streets, which are all straight, intersect each other at right angles at every 150 paces, dividing it into a number of squares, each having an area of about 4 Eng. acres. The principal streets, which were formerly all but impassable in wet weather, while in the dry season they were obscured with clouds of dust, are now tolerably well paved, and provided with footpaths on either side. The houses and other buildings have also been greatly improved within the last few years, and their interior rendered much more comfortable; upper stories are now generally added to them; chimneys, that were formerly all but unknown, are common; they are supplied with English grates, and with coals carried out from Liverpool as ballast. Most sorts of European furniture have found their way into the residence of the upper classes. Almost every house in the principal streets has a garden both before and behind it; and

many have latticed balconies in which odoriferous shrubs are reared. Though on the edge of one of the greatest rivers in the world, water in Buenos Ayres is both scarce and dear. The wells, though numerous, afford nothing but hard, brackish water, unfit for culinary purposes. There are no public cisterns; rain-water is, indeed, carefully collected in a few private tanks; but the mass of the people have to pay high for their daily supply, which instead of being raised from the river by machinery, and conveyed in conduits to public pumps, is carried about in butts mounted on bullock-carts. The quarter of the city inhabited by *Mestizos* and negroes is wretched and filthy in appearance, and strongly contrasts with the opulence and taste displayed in the other parts. The *Plaza*, or great square, contains the cathedral, and the town-hall, a handsome stone edifice, built by the Jesuits; and a whole side of it is occupied by the *Herona*, a range of piazzas, 180 yards long, and above 20 in width, enclosing a double range of shops. In the centre of the square is a small obelisk, erected to commemorate the declaration of independence. The town-hall is chiefly used as a prison, but meetings of the municipality are sometimes held in the upper rooms; and from the balcony the citizens are harangued on public occasions. The cathedral, a large handsome edifice, with a cupola and portico, has its interior profusely decorated with carving and gilding, and its dome painted in compartments, representing the acts of the apostles. The church of the Franciscans, and that of the convent of Mercy, are next in rank, and have steeples and cupolas nearly in the same style as the cathedral. In the former there is a painting of the Last Supper, well executed by a native Indian artist. There are many other Catholic churches, several convents and nunneries; a Protestant church, Presbyterian chapel, &c., a foundling hospital, orphan asylum, and other benevolent institutions. These edifices are all built of fine white stone, found in the plain not far from the city. The fort, which contains the residence of the supreme director and the government offices, is a square brick and stone building, near the river. The university, one of the most celebrated in S. America, occupies a very extensive building, which has been recently fitted up at a great expense; a suite of six rooms in this building contains the state library, a good collection of about 25,000 vols.

The estuary of the Plata is very broad, but is also in most parts shallow, encumbered with sand-banks, and infested with sudden gusts of wind called *pamperos*. Its navigation is consequently attended with a good deal of difficulty, and ships bound for Buenos Ayres generally take pilots on board. There is no harbour, and vessels drawing 16 or 17 ft. water anchor in the outer roads, called the *Amarradero*, 7 or 8 m. from the shore, loading and unloading by means of lighters. This, too, is an operation by no means free from danger, boats being sometimes swamped in crossing the bar between the outer and inner roads. From the want of a pier, and the shallowness of the water on the beach, even the boats are not able to come close to the shore, but are met at a little distance from it by a rude sort of ox-carts, into which they deposit their goods, at no little risk, and sometimes much loss. These unfavourable circumstances, which might, however, be materially improved by a little exertion and outlay on the part of the government, operate as a heavy drawback on the trade of the city, and tend proportionally to augment that of Montevideo, which is more easily accessible. But notwithstanding the competition of the latter, and the great increase of its trade of late years, Buenos Ayres is still the principal outlet for the produce of the vast countries traversed by the La Plata, and especially for the provinces situated on its right bank.

The Quantities and Value of the principal articles exported in 1837 were:—

Products.	Quantity.	Price.	Value.
Spanish dollars	258,713 No.	-	258,743
Marks of silver	4,881 —	at 8	39,048
Gold	21,999 oz.	17.	377,000
Do. uncoined	362 —	-	6,164
Ox-hides	828,635 No.	4	3,294,540
Horse-hides	25,367 —	14	355,146
Jersey beef	174,877 quintals.	2	349,754
Horns	131,456 No.	60 per mil.	36,070
Horse-hair	70,372 arrobas of 25lb.	3	211,116
Sheep's wool	161,706 —	2	323,412
Chinchilla skins	3,817 dozzens	4	15,268
Nutria skins	51,853 —	2½	129,634
Tallow	100,249 arrobas	14	150,375
Cotton	166 —	-	1,500
Sheep-skins	56,188 dozzens	2½	140,470
Fur	14,069 fanegas	4	56,268
Corn	4,150 —	3½	14,525
Sundries	-	-	108,519
Total	-	-	5,637,138

* To this amount may be added, as allowance for short manufacture, &c., about 50 per cent. additional.

Within the last few years the trade in wool, in consequence of the great improvement effected in the breed of sheep, has become of considerable and rapidly increasing importance. In 1827 the export of this article to Great Britain amounted to only 19,444 lbs.; whereas in 1837 it amounted to 2,207,951 lbs. Corn, which for a considerable period was not produced in sufficient quantity for home consumption, has within the last 2 or 3 years become an article of export: it is sent chiefly to Brazil. Most of the jerked beef, and numbers of mules, are exported to the Havannah. The total value of the imports, in 1837, amounted to about 7,000,000 dollars, or 1,487,000*l.*; of which those furnished by Great Britain amounted to near a half, or to 606,104*l.* The imports hence chiefly consist of cotton (by far the most important article), linen, woollen and silk manufactures, hardware, cutlery, earthenware of all sorts, glass, leather, hats, &c.; with about 40,000*l.* or 50,000*l.* worth of foreign and colonial produce. France supplies Buenos Ayres with jewellery, perfumery, and other articles of luxury, to the value, in 1836, of 231,373*l.*; the imports from the U. States in the same year amounted to 76,966*l.*, and consisted chiefly of coarse unbleached cloths, spirits, soap, sperm candles, dried and salted provisions, tobacco, furniture, and deals. Germany sends woollen and linen cloths, and Rhineish cottons; the Netherlands, firearms, swords, &c.; Holland, butter, cheese, Westphalia hams, &c., chiefly by way of Antwerp, the principal mart for Buenos Ayres hides on the Continent. The Baltic furnishes iron, cordage, canvass, pitch, deals, &c.; the Mediterranean trade is principally in Sicilian and Spanish produce, particularly cheap wines, brandies, olive oil, maccaroni, dried fruits, and paper. Spanish goods are in little demand, though some serges, velvets, sewing silk, and snuff, are imported. The annual importation of Spanish and Sicilian wines is from 10,000 to 12,000 pipes, besides about 1,000 pipes of brandy. The *yerba mate*, or Paraguay tea, formerly an export article of some consequence, has now been nearly superseded, even in Buenos Ayres, by tea; the other Chinese imports are silks, crapes, nankeens, porcelain, and numerous minor articles. The trade with Chili and Peru is insignificant. The markets of this city are well supplied with butchers' meat and fish. Poultry is dear, a couple of fowls selling for as much as an ox. Vegetables and fruit generally are also dear; milk in quality and price is much the same as in London, and all the butter used is imported.

The inhab. of Buenos Ayres are said to be observant, intelligent, and desirous to improve. Education receives a considerable share of attention. Several years since, besides the university, a superior academy, and a military college, there were 8 public schools, for whose support the corporation contributes about 7,000 dollars annually, and 5 other schools exclusively for the benefit of the poor, under the charge of different monasteries, and supplied with books and stationery at the public expense. It is rare to meet with a boy 10 or 12 years of age in the city who cannot read and write. There are several printing presses; and various weekly journals advocating liberal principles are published.

Buenos Ayres was founded by Don Pedro de Mendoza, in 1534, but in consequence of the opposition of the Indians to the settlement, it was obliged to be abandoned at two subsequent periods, and was not permanently colonised till 1580, after some sharp actions with the natives. In 1620 the city was erected into a bishopric, and in 1700 contained 16,000 inhabitants. In 1776 it became the seat of the viceroyalty of La Plata; and in 1778, when the trade of the river was thrown open by Spain, its trade and consequence began rapidly to augment. In June 1806 it was taken by the British, but retaken by the Spanish in the same year. In 1810 the revolutionary movements began that ended in the emancipation of Buenos Ayres and the states of La Plata from Old Spain. The declaration of independence appeared on the 9th of July, 1816. (*See W. Parik's Buenos Ayres, &c.; Mod. Trav. xxx. Part. Reports, &c.*)

BUENOS AYRES (REPUBLIC OF). *See* PLATA (LA), (REPUBLIC OF).

BUFFALO, a city of the U. S. of America, New York cap., co. Erie, at the W. extremity of Lake Erie, where it contracts into Niagara river, 293 m. N.W. New York, and 22 m. S. Niagara falls. Pop. (1835) 15,611; (1839) 25,000. It stands partly on a low marshy tract, intersected by Buffalo Creek, which forms its harbour, and partly on an elevated terrace, leading to a still higher plateau. The principal streets descend from the high ground over the terrace towards the creek and harbour, and are crossed by the others generally at right angles. According to Capt. Marryat (*Diary in America*, 1839), "Buffalo is one of the wonders of America. It is hardly to be credited that such a beautiful city should have risen up in the wilderness in so short a period. In the year 1814 it was burnt down, being then only a village; only one house was left standing, and now it is a city with 25,000 inhab. It is remarkably well built; all the houses

BUGNE (LE).

in the principal streets are lofty and substantial, and are either of brick or granite. The main street is wide, and the stores handsomer than the majority of those in New York. It has 6 or 7 very fine churches, a handsome theatre, town-hall, and market; and 3 or 4 hotels, one of which is superior to most others in America; and of these we must add a fine stone pier with a lighthouse, and a harbour full of shipping, and magnificent steam boats. It is almost incomprehensible that all this should have been accomplished since the year 1814. And what has occasioned this springing up of a city in so short a time, as to remind you of Aladdin's magic palace? The opening of the Erie canal, from Lake Erie to the Hudson river; and New York passing through the centre of the most populous and fertile states." The city also contains a literary and scientific academy; a Lyceum, having a library and chemical apparatus; and numerous public and private schools. Several other public institutions are in course of being established; among which are an hydraulic association, Sailors' and Boatmen's Friend Society, and the university of W. New York. In 1835, 99 buildings were erected at the cost of one citizen.

Buffalo-creek, formed by the confluence of several small streams, is navigable for about 8 m. A bar at its mouth has been dispersed so as to admit vessels drawing 8 ft. water into the harbour; and a pier, 1,500 ft. in length, with a lighthouse upon it, has been carried out into the lake, to facilitate their ingress and egress. Still, however, the harbour is not accessible at all seasons, on account of the accumulation of ice brought down by the W. winds, and a ship-canal has been cut from it to the lake W. of the town, which has done a good deal to obviate this inconvenience. From its position on the best channel of intercourse between the W. regions and the Atlantic, as well as its being the only port of entry for the Niagara district, Buffalo is a place of great and increasing trade. In the city and its environs, a variety of manufactures are carried on, including two steam-engine foundries, woollen and felt factories, grist and saw mills, a brewery, and many other works. The value of the manufactures produced in 1835 amounted to 2,073,500 dollars. During the same year 720 steam-boats and 1920 other vessels arrived and departed, and the amount of tolls received reached 105,963 dollars. The aggregate burden of vessels belonging to the port in the year ending the 30th September, 1834, was 9,015 tons. Nearly two-thirds of the merchandise received at Buffalo by the canal, in 1835, was intended for the city and its suburbs; and the increase in the consumption of such property in 1835 over 1834, was more than 40 per cent. The city had, in 1835, 3 banks; and 6 newspapers were published, 3 of which appeared daily: 51 mails arrived and departed weekly during winter, and 58 in summer.

Buffalo was an inconsiderable place previously to 1812, in which year it was made a military station. Its destruction in 1814 was effected by a party of British and Indians; but in 1817, it again contained more than 100 houses, many of which were large and elegant. In 1832, it was incorporated as the "City of Buffalo," divided into five wards, and the government vested in a mayor and common council chosen annually by the citizens. (*N. York Gazette*, &c. pp. 439-444.)

BUFFON, a small vil. of France, dép. Côte d'Or, on the Armançon, 12 m. N. Semur. This village belonged to the illustrious author of the *Histoire Naturelle*, Georges Louis Le-Clerc, created, by Louis XV., Comte de Buffon, by which name he has since been distinguished.

BUG (an. *Hypasis* or *Bogus*), a river of European Russia. It rises near Blosyako, in the S.W. corner of Volhynia, and pursues a S.E. course past Bratzlaff, Olytiopol, Vosnesensk, and Nicolaeff, 25 m. below which it falls into the estuary of the Dnieper. It is navigable from Vosnesensk. The entrance to the Bug is without the bar of the Dnieper; happily, too, it has no bar of its own, and has deep water as far as Nicolaeff.

BUGIA or BOUJELIAH, a sea-port town of Africa, reg. Algiers, on the declivity of a mountain, at the mouth of the Aduse, 122 m. E. Algiers. The port, which is large, is formed by projecting neck of land, great part of which was anciently faced with stone. There is some anchorage off the town in 8 or 10 fathoms, but N.E. winds throw in a heavy sea. Previously to the French occupation, the town was protected by half ruinous walls, and by a castle on the summit of a hill, which also commanded the roadstead. The inhabs. manufacture ploughshares, mattocks, &c. of the iron obtained from the neighbouring mountains, and great quantities of oil and wax are brought down to this place by the Kabyles, for shipment. The town is built of, and stands upon, the ruins of a more considerable ancient city. It was bombarded by Sir Edward Spragg, in 1671. (*Shaw's Barbary*, p. 43. 4to. ed.)

BUGNE (LE), a town of France, dép. Dordogne, cap. cant., a little above the confluence of the Vézère with the Dordogne, 16 m. W.N.W. Sarlat. Pop. 2,437. It is advantageously situated, well built, and carries on dif-

ferent branches of the woollen manufacture. It is also the entrepôt of the wines and other products of the surrounding cantons, which are shipped thence to Bordeaux, and has a considerable trade in cattle, hogs, &c.

BUIS (I.E.), a town of France, dép. Drôme, cap. cant., on the Ouzèze, 10 m. S.E. Nîmes. Pop. 2,147. It is ill built, but has some fine promenades and a handsome square, surrounded by a double row of trees. It has some trade in wool, cloth, hats, and jewellery.

BUJALANA, a town of Spain, Andalusia, prov. Cordova, being 22 m. E. from the city of that name, and 7 m. from the Guadalquivir. Pop. 14,500. It is well built, with broad streets, has two convents for either sex, two hospitals, a college, and a foundling hospital. It has some woollen fabrics, and a large fair which commences on the 26th of August. Though its modern name be of Arabic origin, it is believed that this town occupies the site of the *Culparnia* of the Romans; and it has various inscriptions, and other antiquities of Roman origin. (*Milano*.)

BUKUIR, an island and fort in the Indus, 165 m. N. Hyderabad. The fort, which is constructed of brick, is about 300 yards from the left, and 350 from the right bank of the Indus. But it has no strength in its works, and is formidable only from its position. (*Burnes*, i. 256, 12mo. ed.)

BUKOWINE, a ci-devant prov. of the Austrian empire, now included in Galicia, which see.

BULGARIA (an. *Messa Inferior*), a large prov. of Turkey in Europe, included in the kaiserlik of Rumelia; lying between lat. 42° 30' and 41° 10' N., and long. 22° 14' and 29° 30' E.; having N. Wallachia and Bessarabia, W. Servia, S. Roumelia, and E. the Black Sea. Length, N.E. to S.W., about 350 m.; breadth varying from 40 to 100 m. Area, loosely estimated, from 30,000 to 34,000 sq. m. Pop. 1,800,000? The country is for the most part mountainous, and eminently so in the S., where the principal chain of the Balkan mts. forms its boundary: the Danube constitutes its N. limit; but excepting that river, Bulgaria possesses none of any magnitude, although sufficiently watered by small streams. Its climate is temperate, and its soil fertile and well adapted for the culture of corn, vines, the mulberry, and other fruit trees, and tobacco. There are but few marshes; the pasturages are extensive and rich, and feed numerous herds of cattle: the higher lands are often covered with forests of pine, oak, beech, &c. The Bulgarians are descended from a Slavonic ho'de, formerly inhabiting the banks of the Volga, who crossed the Danube and established themselves in this country in the 7th century, and have since gradually spread themselves over a large part of the region S. of the Balkan. The present race have laid aside the military character of their ancestors: they are a pastoral people, living in small hamlets of about 40 or 50 houses each, and occupying themselves chiefly in agriculture and cattle-breeding, with some manufactures, as those of coarse woollen cloth, hide-barrels, morocco leather, and attar of roses. Large garbans are devoted to the culture of roses; and we are indebted to the Bulgarians for the finest and most elegant of perfumes. Dr. Walsh says that the people are kind, hospitable, and benevolent; forming a striking contrast to the "rude and brutal" Turks found amongst them. The women, who mix freely with the men, are handsome, industrious, and dress neatly: all wear trinkets; and the girls have their heads uncovered, and their hair braided and ornamented with different coins, as amongst the Albanians. The male peasantry dress in brown sheep-skin caps, jackets of undyed brown wool, which their wives spin and weave, white cloth trousers, and sandals of raw leather, and carry no weapons of offence. They live in houses of wickerwork plastered, the interior being clean and comfortable. Their language is a dialect of the Servian. Ever since the 9th century their religion has been that of the Greek church; but they have few monks, and in those they have the service is performed in Greek, a tongue which they do not understand. Schools and books are equally rare with churches, and except the shop-keeper and priest of a village, scarcely any one can read or write; yet notwithstanding this gross ignorance, crimes are singularly scarce, and travellers in their country are not secure only, but experience the kindest treatment. *Spontæ sua, sine lege, fidem rectique colantur.* Bulgaria is divided into four sandjaks, viz. those of Silistria, Rustchuk, Widin, and Sophia; its chief towns are Sophia the capital, Shumla, Silistria, Rustchuk, Nikopol, Widin, and Varna. (*Mattæ Bræn*—*Walsh's Journey from Constantinople*, &c. pp. 164 to 170.)

BUNDARECUNDI, a large division of Hindostan, prov. Allahabad, between lat. 26° 3' and 26° 25' N., and long. 77° 49' and 81° 33' E.; having N. the Jumna; S. Berar and Malwah; E. Boglindur; and W. Scindia's dom.: area 23,477 sq. m. Pop. (*Hamilton*, 1828) 2,400,000. The country is mountainous, and imperfectly cultivated; the mountains belong to the Vindhyan chain, and run in parallel ranges through the distr., each successively but-

treassing a table land; the country is naturally very strong, every hill being a natural fortress, and often crowned by an artificial one; but the highest summit is no more than 2,000 ft. above the level of the sea. The Cuno, Desan, and Betwah, are the chief rivers, but none of them is of much importance; there are several large artificial reservoirs or lakes, formed by masonry, erected across the currents of various streams for the purposes of irrigation. The soil is of every variety, from the rich black loam to the sterile conkar; the valleys and lowlands are generally of the former, and, when properly watered, yield abundant crops: the summits of the hills, although mostly rocky, are covered with small copse-wood: the face of the country often presents detached pieces of jungle, but there are no forests, and a few scattered and stunted oak-trees form the only large timber. Bundarecund is celebrated for its diamond mines in the table-land of Pannah, where they are said to be found wherever the soil is gravelly. This soil is from 2 to 8 cubits deep, mostly very red, but elsewhere of a dark brown; it contains many small pebbles, with which the diamonds are found intermixed, but never adhering to any other stone or pebble. The workmen lift up the gravelly earth; throw it into a shallow pit filled with water; and, after washing out the earth, examine the pebbles on a board. Much time is fruitlessly lost, but a very few diamonds found in the course of the year repay the workman, since he receives $\frac{1}{2}$ the value of those above the size of a filicet, $\frac{1}{4}$ the value of those as large as a pea, &c. Very few are now found worth more than 100*rs.*, and their profits are comparatively insignificant. The mines are the exclusive property of the rajah of Pannah, they are supposed to be identical with the Panassa of Ptolemy.

Bundarecund is now either substantially British territory, or possessed by chiefs tributary to the British, who, since 1803, have retained the internal administration of their dom., on an acknowledgment of allegiance, and the right of interference on our part. The British distr. (1832) contained 2,119,000 kunchi begas in cultivation, yielding a revenue of about 300,000*rs.* a year. Hindoo usages have been less affected here by foreign rule than in most other parts of India; the people are generally ardent, industrious, and obedient to the constituted authorities, though their chiefs are restless and turbulent. Their language is a dialect of the Sanscrit. They are usually possessed of but little personal property; there is little trade or capital stirring, and these circumstances, together with the bare and open character of the country, are probably the causes of *dacoity* or gang-robbery being so unusual. Atrocious crimes are rare; footpad robbery and *cozzashy*, or robbery on horseback, are the only serious offences, and these are most common on the skirts of Scindia's prov., whence small parties of Pindarries occasionally enter on ravaging excursions: burglary and theft are not common. The zemindars consider it highly disreputable to connive at such outrages, and frequently expel from their villages or estates persons of suspected character. The punchayat, or arbitration system, in the settlement of disputes, has been always very much resorted to here.

At the fall of the Delhi empire, the Malirats, under Ali Bakhadar, possessed themselves of part of this prov. but were unable to establish their authority in the villages and hill fortresses. Bundarecund was occupied by the British troops in 1804, and erected into a magistracy under the Benares court of circuit. In 1817 that portion of it now belonging to the Bengal presid. was finally ceded by the Peshwa, to whom Ali Bakhadar had been nominally subordinate. (*Hamilton's Hindostan*, i. 317–334; *Martin's Statist. of the Colonies*, p. 275–368; *Reports on E. I. Affairs, and Appendices*.)

BULSALI, a sea-port town of Hindostan, presid. Bombay, on the Gulph of Cambay, 45 m. S.W. Surat; lat. 20° 36' N., long. 73° 3' E. Its trade is considerable, chiefly in grain, jaghery, and timber; its manufactures are mostly coarse ghiummas and oil cloths. Rice and sugar-cane are cultivated in its vicinity.

BUNGAY, a town of England, N. border, co. Suffolk, hund. Waveney, on the Wangford, 92 m. N.E. London: it consists of 2 par., having together an area of 2,090 acres, and a pop. of 3,734. Having been almost wholly destroyed by fire in 1688, it is comparatively new, well laid out, and well built. The market-place, said to be the best in the co., has two fine crosses; and the town has also a neat theatre, and assembly rooms; a free grammar-school, with an exhibit to Emanuel College, Cambridge, and several other schools; the remains of a Benedictine monastery; some manufactures of hemp; and a considerable trade in malt, corn, coal, flour, lime, &c. Here is also the celebrated printing establishment of the Messrs. Child, which has produced many reprints, in a cheap form, of some of the principal English classics. The trade of the town is promoted by the Waveney, being navigable thence to Yarmouth. Market, Thursday; fairs, 14th May, and 25th Sep.

BUNKER'S HILL, a steep hill 110 ft. in height, Mas-

achusetts, U. States, in the centre of the peninsula on which the town of Charlestown is built, and about 1 m. N. Boston. Here on the 17th June, 1775, was fought one of the earliest and most remarkable battles of the American revolutionary war. The provincial troops having established themselves on a portion of this height, during the night, a British force advanced to dislodge them; but though the latter ultimately effected their purpose, the resistance made by the Americans was such, that the British lost 1054 men killed and wounded, while the American loss was only 450, killed and wounded. In 1825 the erection of a granite obelisk, intended to be 220 ft. high, was commenced on the hill, in memory of the action; but in 1836 it was only one third finished.

BUNPOOR, a town or village of Beloochistan, cap. prov. Kohistan; 14 m. N. the Bushkur mts.; lat. 27° 47' N., long. 69° 20' E. It is small, and ill built; at one time it had been surrounded by a mud wall, but the whole is now gone to decay. The citadel of the chief, strong enough to resist any attacks from the Persians, is built on the summit of an extraordinary mound of earth, said by tradition to have been artificially raised by an immense army of Giebers, who at a remote period passed this way. Pöttinger says, "that if really artificial, it must have been raised with vast labour, as the earth could not have been procured nearer than the mts." The neighbourhood of Bunpoor is desolate and impoverished, destitute of agriculture, and even of date-trees. The inhabs. are the Rukhsabance Belooches, the leading tribe amongst the Nharoos; the language spoken at Bunpoor is Persian and Beloochee mixed. The revenues of the chief are usually farmed out, and in lieu of them he received (1810) 26,000 rupees, 140 camels, 140 matchlocks, 140 sheep or goats, 140 measures, of 160 lbs. each, of wheat, and the same of dates. (*Pöttinger's Beloochistan*, &c. p. 176.)

BURDWAN (*Chittagham*, productive), a distr. of Hindostan, presid. and prov. Bengal; between lat. 22° and 24° N., and long. 87° 20' and 88° 25' E.; having N. Booriboom, E. Nuddea, S. Hooghly, and W. the Jungle Melahs distr.; area 2,000 sq. m. Pop. (1822) 1,487,300. It is one of the most productive territories of India, and being environed by jungles N. and S., "appears like a garden surrounded by a wilderness." The uncultivated are but 1-8th part of the extent of the cultivated lands: the chief articles of produce are indigo, sugar, cotton, tobacco, and mulberry-trees. A principal part of the wealth of Burdwan consists in its coal mines: the coal-field appears to be very extensive; the coal is of good quality, and preferred to any other at Calcutta. Several mines, about 130 m. from that city, are worked by an English company, which employed, in 1831, from 2,000 to 3,000 natives in mining, and 300 or 400 boats in conveying the coal to Calcutta; the mines being on the banks of a river connected with the Hooghly. It is not sold at the pit's mouth, but delivered at about 20s. a chaldron in Calcutta; Singapore, Penang, Madras, and Ceylon, are also supplied hence: the wages of the miners are from 5s. to 8s. per month. Fine iron-ore is found in the neighbourhood of the coal, and a great deal of stone. Commerce has been greatly facilitated by the opening of roads to Hooghly, Culna, and Cutwa; the zemindars are opulent, and many of them reside in the capital of the presid.; the land-revenue in 1829-30 was 284,750*l*. There are few villages in which there is not a school for the rudiments of education, and there are some private endowments for the purpose; but no regular schools of Hindoo or Mohammedan law exist here: the proportion of Mohammedans to Hindoos is about 1 to 5. Burdwan became subject to the British, with the rest of Bengal, in 1760: the titular rajah enjoys, at present, but little consideration; and his zemindari is now greatly diminished from its original size. (*Hamilton's Hindostan*, i. 153-155; *Evid. of Mr. Bracken, on Coal*, &c. Reports, 1831.)

BURDWAN, a town of Hindostan, prov. Bengal, cap. of above distr., and seat of a zillah court; 60 m. N.N.W. Calcutta; lat. 23° 15' N., long. 87° 57' E. Pop. about 54,000, 2-7ths of whom are Mohammedans. The Burdwan rajah has here a large palace, an English summer-house, and spacious gardens, &c.

BURFORD, a par. and town of England, co. Oxford, hund. Bampton; 63 m. W.W. London. Pop., 1821, 1,686; 1831, 1,846; houses, 885; area, 2,170 acres. It is pleasantly situated by the small river Windrush, but is very indifferently built. The church is partly in the Norman, partly in the later Gothic style, and has a very fine spire, surmounted by a tower. The Baptists, Friends, and Wesleyans, have chapels. There are almshouses for 16 poor widows; a free school, with an endowment producing 84*l*. a year, held in the town-hall, where, till 1636, the co. assizes were held. There is a weekly market on Saturday and fairs held the last Saturday in April, and July 30th, for live stock and cheese. Saddlery was once a considerable branch of manufacture: there was also a large traffic in wool and corn; both have greatly

declined; and the property of the town has been still further depreciated by the alteration in the line of road from Oxford to Cheltenham, which previously passed through and now avoids it. Edgehill, where Fairfax beat the royalists, is in the neighbourhood. The celebrated Wilmot, Earl of Rochester, was educated in its school. It gives the title of earl to the Duke of St. Albans.

BURG, a town of the Prussian states, prov. Saxony, reg. Magdeburg, on the Ille, 13 m. N.E. Magdeburg. Pop. 13,500. It is walled, has 3 gates, 4 reformed churches, a grammar school, an hospital, a workhouse, &c. It is also the seat of a provincial council, a board of revenue, a district court of justice, &c. A very extensive woollen manufacture is carried on, and it has some dyeing establishments and snuff factories.

BURGOS, a city of Spain, cap. prov. same name, on the Arlançon, and on the high road from Madrid to Bayonne, at the foot of a mountain, 134 m. N. Madrid, 59 m. S.W. Vittoria; lat. 42° 21' N., long. 3° 38' W. Pop. 12,000. It is of an irregular shape; streets clean, and handsome, particularly that leading to the cathedral, but it has a deserted impoverished appearance. It has a modern square, surrounded with a portico, supported by large columns, with houses upon a uniform plan, but small and mean. It is only, in fact, worth mentioning from its bronze statue of Charles III., almost the only one of the sort in Spain; though, according to Bourgoing, it is ill designed and executed. The cathedral, a well preserved chef-d'œuvre of Gothic elegance, is about 300 ft. in length, by above 250 in width. Its exterior is inferior to none in Spain; but the interior, though remarkable for the beauty of its workmanship, is inferior to the cathedrals of Toledo and Seville. Having been the cradle of the two most renowned captains of Spain, Ferdinand Gonzales, and the Cid Campeador, Burgos contains a triumphal arch in memory of the former, and a monument to the latter. There are three fine stone bridges over the Arlançon, in the space of half a league. Two of them communicate with the suburb of the city, on the opposite bank, called Vega, and the third, with the royal hospital, remarkable for its cleanliness and salubrity. There are some fine meadows on the banks of the river, and there also is the famous convent of Las Huelgas, whose abbess possessed almost royal privileges. Close to the city is the monastery of Miraflores, where John II. and his queen have magnificent tombs, and where also there are, or were, some paintings remarkable for their colouring. There are three military roads from Burgos, one to Oviedo and Gijon, another to Agreda, and a third to Santafia. The approaches to, and promenades of, the town are well ornamented with trees; but though it be one of the coldest parts of Spain, fuel is scarce and dear. Miffano mentions an hospital for deserted children, and four other hospitals, exclusive of that already specified. Formerly the greater part of the wool exported from Spain used to pass through Burgos, and it still has some manufactures of leather, woollens, and hats, and two *lavaderas*, or washing pools for wool.

La Borde contends, notwithstanding what has been affirmed to the contrary, that Burgos did not exist in the time of the Romans, from its not being mentioned by Ptolemy nor any other ancient geographer; its want of any ancient monuments, and its being insulated and out of the line of the ancient military road. He maintains that its foundation cannot be carried farther back than the reign of Alphonso I., and that it was Alphonso III. who ordered the castle to be built. It was formerly the residence of the counts of Castile, and many of the Castilian kings, and was then celebrated for its wealth and prosperity, and for its woollen manufactures and fairs. But it has since greatly declined: it suffered much during the late contest with France, and still more in the present civil war. (*Miffano*; *Bourgoing*, *Tableau de l'Espanne*, 37; *De la Burde*, ii.; *Ingils*, i. 40.)

DE LA BURGUNDY, one of the old French provinces, now distributed among the depts. of Côte-d'Or, Saône et Loire, Yonne, Nièvre, Aube, Haute Marne, and Ain.

BURHAMPORE. See BOORHAMPORE.

BURLINGTON, a town of the U. S. of America, Vermont cap., co. Chittenden, on a bay of the same name, a short distance S. of the entrance of the Onion river into Lake Champlain, 36 m. W.N.W. Montpelier, and 100 m. S. Montreal. Lat. 44° 28' N.; long. 73° 15' W. Pop. 3,325. It is the chief commercial town of the State, and has a considerable trade with N. York. It contains a court-house, jail, bank, academy, and various places of public worship. The University of Vermont, established in 1791, is situated on an elevated spot E. of the town, and 1 m. from the lake. It was partly destroyed by fire in 1824; but has been rebuilt, and consists of three brick edifices, containing a chapel, 46 rooms for the students, a philosophical apparatus, and a library of above 6,000 vols. Its funds are chiefly derived from landed endowments. Students in 1838, 105.

BURNHAM, a par. and village of England, co. Bucks,

hund. Burnham; 30 m. E. London. Pop., 1821, 1,918; 1831, 2,137; houses, 363; area, 4,110 acres. The village is a short distance from the Thames: its church is an ancient structure; and there is a national school. Fairs are held Feb. 23, May 1, and Oct. 2. Its ancient market has been long discontinued. The ann. val. of prop. in 1815 was 10,361*l*. Its poor-rates average 1,167*l*. It is a place of great antiquity. The moated site of a palace of the kings of Mercia is still traceable. A nunnery, founded 1168, existed till the general suppression.

BURNLEY, a market town of England, Lancashire, hund. Blackburn, par. Whalley, on the Burn, 180 m. N.W. by N. London, 30 m. N.E. by S. Lancaster, and 21 m. N. Manchester. Pop., in 1801, 3,305; 1821, 6,378; 1831, 7,551. Its name is derived from the river Burn or Brun, on which it is situated, which unites with the Calder immediately below the town. It stands in the middle of a narrow valley, and has been greatly improved and enlarged within the last 20 years. It is mostly built of freestone, and is well paved, lighted, and abundantly supplied with water. St. Peter's parochial chapel, built shortly after the Conquest, has been replaced by a more recent structure, built at different periods. It has in it the burial-place of the Towneley family, where, among other monuments, one has been erected to the memory of Charles Towneley, Esq., whose fine collection of marbles is now in the British Museum. The Independents, Baptists, Wesleyan and Primitive Methodists, and Rom. Catholics have places of worship. A free grammar-school was founded in 1578, to which the sons of tradesmen and others in the lower walks of life are admitted on paying a fee of 2*l*. 2*s*. a year: the fee paid by the sons of the higher classes being 3*l*. 2*s*. There are several other schools, and numerous charitable endowments and institutions. There are 6 county magistrates residing in the neighbourhood; 2 or more of whom usually attend the petty sessions, which are held here every Monday. The town is a station for receiving votes at the election of members for the N. division of the co. The woollen manufacture, which was once carried on extensively, and which still exists here, has been nearly superseded by that of cotton, which is carried on upon a great scale in the town and neighbourhood. There were in the town and on its bounding streams, in 1835, 17 cotton mills, mostly wrought by steam, and employing 2,040 work-people; and since then the trade and pop. of the town have greatly increased: the latter is now (1839) estimated at above 10,000. The articles produced are principally common printing calicoes. There are also extensive bleaching and printing works, with iron and brass foundries, machine manufactories, breweries, tanneries, rope-works, &c. The town is mainly indebted for its rapid growth and progress in manufactures to the abundance and cheapness of the coal found in its immediate vicinity, or rather directly below it; for here, as at Whitehaven and some other places, parts of the town have sunk, from the roof of the coal mines not being properly supported. It is also well supplied with freestone, slate, &c. It has an easy communication with the surrounding districts by means of the Liverpool and Leeds canal, by which it is nearly encircled. Markets are held on Monday for corn, and on Saturday for general purposes: fairs on March 6, Easter eve, May 9 and 13, July 10, and Oct. 11; also for cattle on alternate Mondays, for woolcons on the second Thursday in July, and for horses on the third Thursday in Oct. A branch of the Commercial Bank of England, and the banking-house of Birkenhead, Alcock and Co., are established here. (*Burns's Lancashire, &c.*)

BURNTISLAND, a royal burgh and sea-port town of Scotland, co. Fife, on the N. shore of the Frith of Forth, 5½ m. N. Newhaven. Pop. (1831) 1,842. It is a dull, but a clean and well-built town, having a main street running at right angles to the harbour, and some subordinate streets. It has a town-house, a parish church, a Presbyterian dissenting chapel, and a good school-house. Its harbour, though the best on the N. side of the Forth, nearly dries at low water; but it is said that this serious defect might be obviated at a moderate expense, by the extension of the piers. A considerable number of boats are employed in the herring fishery; but this branch of industry has greatly declined. It used to be exclusively carried on in the Frith of Forth during the winter season. That department is now, however, wholly abandoned; and the boats sent out by the Burntisland curers are employed, in summer only, at Fraserburgh, or Wick. Their annual take may amount to 16,000 or 18,000 barrels; but only 746 barrels were cured at Burntisland in 1837. One or two ships are annually sent to the N. Sea whale-fishery; and, exclusive of these and the herring-boats, a few coasting and other trading vessels belong to the port. Burntisland has been of late a good deal resorted to in summer by sea-bathers. It has long formed one of the principal stations for the landing and embarkation of passengers crossing the Frith of Forth, the number so conveyed amounting to 16,636 a year, at an average of three

years ending with 1836. It is at present (1830) proposed to vest this ferry in a joint stock company, and to construct low-water piers. In the vicinity of the town is a large distillery. Burntisland unites with Kinghorn, Dysart, and Kirkcaldy, in sending a mem. to the H. of C., and had, in 1838-39, 53 registered electors. (*New Statist. Account of Scotland, art. Burntisland, &c.*)

In 1601, the General Assembly met at Burntisland, when James renewed his vows as a covenanter. It is a curious fact that the existing quays were built by Cromwell.

BURSA, BRUSA, or PRUSA (an. *Prusa ad Olympum*), a famous city of Turkey in Asia, Natolia, cap. Sanjack, 62 m. S. Constantinople, lat. 40° 9' 30" N., long. 29° 4' 45" E. Pop. estimated at 40,000 by Klueneir, and at 100,000 by Fontanier; but probably about 60,000. It is beautifully situated, at the extremity of a fertile, well-watered, and well-wooded plain, on the lower acclivities of Mount Olympus. Including the suburbs, which are more extensive than the city properly so called, it extends 2 m. from E. to W. and 1 m. from N. to S. (*Th. Kerr.*) It is not well built; the houses being principally of wood, on the model of those of Constantinople: it is very subject to fires; and the streets are, for the most part, narrow. Tournefort says, that the latter are *bien pavé et propre, surtout dans le quartier du bazaar*; whereas, according to Mr. Turner, who visited the town in 1815, "all the streets are badly paved, and most of them narrow and dirty." No doubt, however, this is one of the cleanest of the cities of Turkey; for a great number of streams that have their sources in the upper parts of the mountain flow down several of the streets, and supply almost every house with a fountain. The castle, on a perpendicular rock near the centre of the town, most probably occupies the site of the acropolis of the ancient Prusa. Within its walls is a mosque, formerly a Greek church, in which are the tombs of Sultan Orchan, his wife, and children. The chief ornaments of the city are its mosques, which are exceedingly numerous. The most magnificent are those of the sultans Achmet and Osman, and the Oolah, or great mosque, in the centre of the city. The warm baths of Bursa are famous all over the East: the principal is that of Kaplutchia Hamman, about 1½ m. N.W. from the city. The heat of the water, which is slightly impregnated with sulphur, does not exceed 100° Fah. The water is received into a fine building, where there is every accommodation for bathers of both sexes. The *brascetin*, a large building with shops and warehouses, and the bazars, which are extensive, are well supplied with merchandise, particularly with raw silk and silk stuffs. Great quantities of silk are produced in the adjacent plains; and very excellent silk and silk and cotton stuffs are manufactured in the city, and furnish, with raw silk, carpets, and velvets, the principal articles of export. The khans and colleges, or medresses, of Bursa are numerous; and may vie with those of any other city of the Ottoman dominions. On the whole, considering the fertility of the surrounding country, the beauty of the situation, and its comparative cleanliness, it is one of the most agreeable of Turkish cities. "Here, indeed, it is, and at Damascus (if any where), that the destroying frenzy of the race of Othman seems to have been arrested in its career; and its manners successfully deluged by the productive powers of indulgent nature." (*Brown.*)

Bursa was founded by Brousas, the protector of Hannibal, and was long the cap. of Bithynia. We hear little of it after it came into the possession of the Romans, though it was always famous for its baths, and admired for the beauty of its situation. It was one of the most considerable cities of the Greek empire. It was taken by Orchan, son of Othman the founder of the Othman dynasty, in 1356, and became the seat of the Turkish power and the ordinary residence of the sultans till a murder at the seat of government to Adrianople. (*Tournefort, letter 21.; Kinacir's Asia Minor, &c.* p. 245; *Walpole's Trav. in various Countries*, ii. 109, &c.; *Turner's Levant*, iii. 163, &c.)

BURSLEM, a market town and par. of England, co. Stafford, N. division of Pirehill hund., 2½ m. N.W. Newcastle-under-Line, 19 N. Stafford. Pop. (1831) town 11,250, par. 12,714. It stands on a gentle eminence, near the Trent and Mersey canal, and is the principal town in that important district called the Potteries, the principal seat of the earthenware manufacture. It contains many well arranged manufactories, neat and convenient dwelling-houses for the workmen and overlookers or superintendants of works, and some handsome houses for the proprietors. Its principal buildings are, a neat market-house or town-hall, an edifice of modern erection nearly in the centre of the town, one part of which is used as a police-office, and another as a news-room, which is well supplied with metropolitan and provincial papers; the old church, dedicated to St. Peter, built of brick, with a stone tower of much greater antiquity than the body; and a new district church, a handsome edifice, erected in 1828, under the authority of the com-

missioners for building churches. Burslem was originally a chapelry in the parish of Stoke, but was formed into a separate parish by act of parliament, in 1807. It is lighted with gas, and has a police force under the provisions of a local act. The living is a curacy in the archdeaconry of Stafford. There are places of worship for Baptists, Independents, Primitive Wesleyans, and New Connection Methodists, and Roman Catholics, all of which, as well as the churches, have Sunday-schools attached to them. There is also a national school, and a free grammar-school for a limited number of boys. In 1886 there were here in all 37 day and 11 Sunday schools. At a very early period Burslem was distinguished for its clay, and for its manufacture of earthenware and pottery, for which, in the 17th century, it was the principal place in the kingdom. The greater part of the inhabitants are engaged in the potteries, and in the earthenware manufacture, which has been brought to a state of beauty and excellence nearly approaching that of China. In *Domesday Book* this town is written *Barcardeslun*. The market days are Monday and Saturday. Fairs for cattle and horses are held in Feb., April, June, October, and December.

BURTON-ON-TRENT, a market town and par. of England, partly in the N. division of Offlow hund., co. Stafford, and partly in the hund. of Repton and Gresley, co. Derby. Pop. (1831) 6,988, of which were resident in the town 4,400. The town, situated in a fertile vale on the N. bank of the Trent, 12 m. N.E. Lichfield, 22 m. E. Stafford, 128 m. N.N.W. London, consists chiefly of one long street running from the place where the abbey stood to the bridge, and of another intersecting it at right angles. Of late it has been considerably improved, and is now paved and lighted with gas. The town-hall, erected at the expense of the Marquis of Anglesea (the lord of the manor), who owns the greater part of the property in the neighbourhood, is a handsome building, and contains, in addition to the usual offices for transacting public business, an elegant suite of assembly-rooms. The old church, dedicated to St. Mary and St. Modwen, formerly connected by a cloister with the abbey founded in 1004, was rebuilt in 1722. The new church, erected in 1823 in the Gothic style, is a handsome edifice. But the most celebrated structure of the town is the ancient bridge over the river, erected prior to the Conquest, and substantially repaired in the reign of Henry II. It has 37 arches, and is 1,545 ft. in length, being considered the longest bridge in England. The government of the town is vested in a high and low steward, and a bailiff, appointed by the lord of the manor. The bailiff is also justice of peace and coroner. A court leet and a court baron are held annually, as also two probate courts for proving wills. There is likewise a court called the "Gaoler's Court," held every third Friday before the steward or his deputy, for the recovery of debts not exceeding 40s., the jurisdiction of which extends over the whole parish. The power to try and to execute criminals, and to hold courts of pleas to any amount, was formerly enjoyed by the town, but has long since ceased. The inhabitants, by virtue of the letters patent granted in the 11th of Henry VIII., are exempted from serving the office of sheriff, and from being summoned as jurors at the assizes and sessions for the co. There are various places of worship for Independents, Wesleyan Methodists, and General and Particular Baptists. There are also Sunday-schools attached to the different churches and chapels; a national school, and a free grammar-school, founded and endowed in 1520 by the then abbot, William Beane. In 1835 there were in all 19 day and 6 Sunday schools. There is also a literary institution, entitled "The Burton Permanent Subscription Library;" an almshouse for 11 poor women; a dispensary; and a savings' bank. Considerable estates for charitable and other purposes are vested in trustees in the time of Leland. Burton was famous for its alabaster-works, but how long they were continued is not known. The principal manufacture carried on at present is that of its justly famous ale. Contrary to general usage, the brewers prefer in its preparation hard water to soft; and though the Trent runs close by, they use that water only which they obtain from their pumps. It has also fabrics of hats, cotton, tammies, and light woollen stuffs; with iron furnaces and manufactures of tools; two or three rope-walks, tanneries, a cotton factory, &c. The Trent and Mersey canal (or Grand Trunk) passes Burton, and unites with the Trent about 1 m. lower down; and the Trent itself, which falls into the Humber, is navigable for vessels of some burden from Gainsbro' up to the town; so that, by means of the facilities thus afforded and otherwise, the town can easily communicate with almost all parts of England. The old abbey, a once magnificent pile, of which now scarcely a vestige remains, enjoyed many privileges: the abbots occasionally sat in parliament. Burton suffered greatly during the civil commotions in the reign of Charles I., and was several times taken and retaken by the contending parties. The market-day is Thursday. There are 4 annual fairs, one

of which lasts 15 days. The 6 days before Oct. 29. are for horses; the others are for cattle, horses, and pedlary; a cheese fair has also recently been opened.

BURTSCHELD, or **BORCKETTE**, a town of the Prussian States, prov. Rhine, reg. Aix-la-Chapelle, of which city it is almost a suburb. Pop. 5,200. It has broad streets, good houses and promenades. There are here important manufactures of cloth, cassimeres, and needles. The last, which is conducted on a large scale, and with great success (employing, with the needle manufacture in Aix-la-Chapelle, nearly 1,000 work-people), is principally carried on by Protestants driven from Aix-la-Chapelle. It has several hot springs; they, however, differ essentially from the springs of the neighbouring city, and resemble those of Wiesbaden. (*Schreiber; Murray's Hand Book.*)

BURY, a par., parl. bor., and town of England, co. Lancaster, div. Bolton, hunds. Salford and Blackburn. The town is situated on the left bank of the Irwell, 2 m. above its confluence with the Roch; 8 m. N.N.W. Manchester. The townships of Bury and Elton, included in the parl. borough, comprise an area of 4,360 acres; and had, in 1831, 13,450; and, in 1881, 15,140 inhabitants. The general appearance of the town has been greatly improved of late years, by widening the streets and approaches, and the erection of handsome modern structures. The church is a large handsome structure, rebuilt in 1773; besides this, there are 5 episcopal chapels in the parish, and about 20 dissenting places of worship; 1 of the former, and 7 of the latter, being in the town. There is a free-school, founded in 1726, the present income of which is 442*l.*; it has 2 exhibitions, either to St. John's Coll., Cambridge, or Brasenose Coll., Oxford; 75 scholars are educated; 3 in classics, under the head master; the rest in accounts, &c., under the second master; and 10 girls, under a mistress. Another school, founded in 1748, for 80 boys and 30 girls, has been changed to a national school, and a spacious school-room been built for it. Here is, also, a dispensary, a public library, a mechanics' institute, several public news-rooms, and a horticultural society; all established within a recent period. The weekly market is held on Saturday; and three annual fairs, on March 31, May 3, and Sept. 16. The manufactures are annually increasing in amount and value. The principal branches consist of cotton and woollen spinning, and weaving, both by hand and power-looms; with calico-printing, bleaching, and machine-making. Within a recent period, additional reservoirs have been formed on the banks of the Irwell, and the advantages of the numerous mountain-streams that feed it have been greatly extended. In 1836, there were in the parish 82 cotton-mills, and 15 woollen-mills, employing altogether 1,265 horses, and 49 water-wheels, with the power of 477 horses. There were, at the same time, 2,067 power-looms, employed in weaving calico; 6,954 in weaving fastian; and 280 in weaving woollen goods. There were in all 8,135 hands then employed in these manufactories, independently of those employed in other factories, coal-mines, &c.; the last employ between 600 and 700 hands. There is a canal and railway communication between Bury, Bolton, and Manchester, for goods and passengers. The ann. val. of prop. in the township only was estimated, in 1815, at 16,540*l.*; and in 1822, at 31,954*l.*; that of the entire parish, in 1815, at 60,902*l.*; and in 1829, 100,993*l.* Three courts-leet for the manor are held annually, in April, Whitsuntide, and Oct.; their jurisdiction is co-extensive with the parish. A court-baron is held every third week, for the recovery of debts under 40*l.*; and petty sessions are held every Friday in the town. The Reform Act conferred on Bury the privilege of returning 1 mem. to the H. of C. Houses in the parl. borough, in 1832, 3,497, of which 353 were rated at 1*l.* and upwards; registered electors, in 1837-38, 678.

The parish of Bury extends over 22,600 acres; and had, in 1831, a pop. of 47,829. Besides that of Bury, it comprises 4 townships, and 3 chapelrys. The greater part is a stiff loam, varying in fertility; a small portion only is under the plough. It contains good quarries of building stone, and those of Horncliff produce excellent flags and slates. There are 9 coal-mines wrought, so that the factories and inhab. have an abundant supply of fuel within the limits of their own parish. The first distinct notice that occurs of the manufactures of Bury is in Leland's Itinerary, in the reign of Henry VIII.; they were then exclusively of woollen, which is still carried on to some extent. In 1739, John Kay, a native of Bury (though at the time residing in Colchester) invented the fly-shuttle; and in 1760 Robert, a son of the former, the drop-box, by which patterns of various colours are woven, nearly with the same facility as plain calico; the setting of cards by machinery also originated in the same family, and in Bury. In 1791, Henry Whitehead, the postmaster of Bury, suggested the mode of picking the ends of broken yarn, in spinning, without stopping the machinery, as had previously been necessary. But the circumstance which

chiefly contributed to bring Bury into repute, as the seat of any peculiar branch of the cotton manufacture, was the establishment of large print-works by a firm, of which the late Sir Robert Peel, Bart., was at the head: the perfection to which calico-printing was there brought, not only enriched the parties, but added largely to the wealth and importance of the town. This establishment, with its numerous workshops, warehouses, and dwellings, is still in full activity; as are also the large manufactories of the same company on other streams, notwithstanding the many changes that have taken place in their ownership. The Right Hon. Sir Robert Peel, the present distinguished parliamentary leader, was born at Chamber Hall, in the immediate vicinity of the town. (*Baine's Hist. Lancashire & Parl. Papers and Reports.*)

BURY ST. EDMUNDS, a par. bor. and town of England, co. Suffolk, hund. Thingoe, 60 m. N.E. by N. London. Pop., in 1821, 9,999; in 1831, 11,436; houses at latter date, 2,292. It is finely situated on a gentle eminence, on the W. side the Lark, amidst a richly cultivated, diluvial district. Streets broad, well paved, and lighted; houses mostly uniform, and well built, and the whole town has a cheerful, neat appearance. St. Mary's church (finished in 1433) is a fine Gothic structure, with a low Norman tower. St. James's church, finished after the Reformation, is a handsome building. Its belfry, at some little distance, was originally the grand entrance into the burial-ground of the old monastery: it is of a quadrangular shape, 80 feet in height, remarkable for strength and simplicity, and forms one of the finest extant relics of Saxon architecture. There are 2 Independent chapels; and the Catholics, Friends, Baptists, Methodists, and Unitarians, have each places of worship. There is an ancient guildhall, in which the courts are held; a shire-hall for the assize courts; a county gaol on a building plan built in 1805; and a bridewell (an ancient Norman building). The free grammar-school (founded by Edward VI.) has 6 exhib. to either of the universities, a scholarship in Corpus Christi, and another in Jesus College, Cambridge; it educates 100 boys, and holds a highly respectable station amongst English schools. It has also a charity school for 10 boys; 2 others where 50 girls are clothed and instructed; and 2 Lancastrian schools for boys and girls, established in 1811. There are 98 almshouses, endowed by various benefactors, and under the management of trustees, who have about 2,000*l.* a year in their hands for various charitable purposes. Clapton's Hospital (whose annual revenue is 3,000*l.*) supports 6 widowers and 6 widows, decayed housekeepers; the General Hospital (established in 1825) accommodates 40 patients. There are also a theatre, built in 1819, with concert, assembly, and billiard-rooms; a good subscription library, a mechanics' institute, and botanical gardens, supported by subscription. Weekly markets are held, one on Wednesdays for corn, the other on Saturdays for general provisions. The annual fairs are held on Easter Tuesday, a pleasure fair; Oct. 1., for horses, cattle, butter, and cheese; a great fair, commencing Oct. 10., and lasting about 3 weeks; and Dec. 1. About a mile from the town the Lark becomes navigable to Lynn for barges, whence coals and other commodities are brought. Spinning yarn was formerly a great source of employment to the poor of the town, but at present it has no manufacturers.

The bor. is co-extensive with the 2 parishes of St. James and St. Mary, the area being 2,435 acres; it is divided into 2 wards, and governed by a mayor, 3 aldermen, and 18 councillors. Petty sessions for the bor. are held every Thursday; a manor court, for small debts, every third week; a court of pleas, monthly; and courts of general sessions, thrice a year, in Feb., June, and Nov. The quarter sessions, and assizes for the co., are also held in the town. The total number of offenders committed in 1834 was 450; in 1835, 490; the assizes, 296 at the 1st quarter sessions, and 76 at the local courts. The property of the corp. consists of lands and houses in the bor., the livings and tithes of both parishes, and the tolls of the markets and fairs; the ann. average revenue is 1,000*l.*; a fee-farm rent is paid the crown, and a stipend of 100*l.* to each of the church ministers. Ann. value of real prop. in 1834, 47,784*l.* The poor-rates for the year ending Ladyday, 1837, amounted to 6,627*l.* The bor. has returned 2 mem. to the H. of C. since the 12th of James I.; previously to the Reform Act, the right of election was in an alderman and 36 burgesses; the former had a casting vote, and was returning officer; it was, in fact, a nomination bor., in the hands of 2 peers of opposite political principles. It has about 780 houses of the ann. value of 10*l.* and upwards; and had, in 1837-38, 655 registered electors.

A monastery was founded here in 633, to which, in 903, the body of St. Edmund, the Saxon king, was transferred, whence the name. Canute expelled the secular monks, and transferred thither a convent of Benedictines, from Norfolk; his, and other subsequent endowments,

made this abbey inferior only to that of Glastonbury; it possessed the franchise of many separate hundreds, and the right of coinage; its abbots sat in parliament, and had power to inflict capital punishment, and determine all civil suits within the liberty. The abbey gateway and bridge, and portions of the walls, still remain; its ann. value, in 26 Hen. VIII., was (according to Dugdale) 1,659*l.*, (Speed) 2,336*l.* 18*s.* There were a few other establishments, of minor importance, in the town, previous to the general suppression.

Sir Nicholas Bacon, bishops Gardiner and Prettyman, and Dr. Blomfield (the present Bishop of London), were born in the town. It confers the title of viscount on the Koppel family. Tockworth, the magnificent seat of the Marquis of Bristol, is within about 3 m. of the town.

BUSACO, a convent of Portugal, prov. Beira, on the ridge called the Sierra Busaco, 17 m. N. by E. Coimbra. Here, on the 27th September, 1810, a French army of 65,000 men under Marshal Massena, were repulsed with great loss in an attack on the position occupied by the Anglo-Portuguese army, about 40,000 strong, under the Duke of Wellington. But, though unable to force this position, Massena succeeded in turning it, when the allies retreated upon the lines at Torre Vedras.

BUSHIRE (more properly ABU SHIHR, or ABU SHAIHR, Arab, *the father of cities*), a sea-port town of Persia, prov. Fars, and, excepting Bussorah, the principal port of the Persian Gulf, on the N.E. coast of which it is situated; 120 m. W.S.W. Shiraz, and 255 m. S. by W. Isfahan; lat. 29° N., long. 50° 48' E. Pop. uncertain, and variously estimated at from 8,000 to 15,000. It is built at the N. extremity of a low sandy peninsula, about 11 m. in length, by 4 m. in breadth at its widest part, on its E. side enclosing a deep bay or harbour. The town is thus surrounded on all sides by water, except towards the S., where a mud wall (useless as a fortification), about 3 m. in length, has been built across the isthmus between the bay and the sea. Viewed from the sea, it has rather a handsome appearance. It is, however, a mean wretched place, without bustle or movement of any kind. The whole number of dwellings are said not to exceed 1,500, of which a third, at least, are reed enclosures, scarcely deserving even the name of huts, as most of them are unroofed. The houses are built chiefly of a friable stone, composed of sand and shells imbedded in clay, and the best of them are constructed of burnt bricks brought from Bussorah; but excepting the E. I. Company's factory, the residence of the governor, and a few good dwellings of the merchants, there is scarcely one comfortable, and certainly not one handsome, edifice in the place. Some of the principal houses have *bandroozes*, that is, wind-catchers, or spires of a square form, open at each side; and which, acting as a funnel, and admitting the air from every quarter, ventilate and cool the houses. The streets are so many narrow unpaved alleys, without order or regularity, or sufficient height of wall on either side to shelter the passenger from the sun. The mosques are all open buildings, and interior to those seen in the smallest villages of Arabia; there are but few coffee-houses, and the solitary bath is small, filthy, and badly attended. Water is excessively bad; that fit for drinking having to be brought in goat-skins a distance of 16 m. In dry and windy weather, the dust and flies constitute an almost intolerable nuisance. On the S.W. side of the town, facing the outer road, the beach, which is level and sandy, is bent by an almost constant surf, though not so violently as to prevent the landing of boats in moderate weather. The N.E. side, facing the inner harbour, has a wharf or two for landing goods, and is better sheltered. Owing to the numerous sand-banks, the inner harbour is not always easily accessible even for boats; but it is always preferred as the safest and best landing-place. Ships of more than 300 tons burden lie in the outer roads 6 m. from the town, and there is good anchorage, subject, however, to all the fury of violent N.W. and S.W. winds, which are very prevalent, often obliging ships to part their cables and bear up for Karak, or elsewhere. Ships of 300 tons burden or less may anchor in the inner roads to the N. of the town, but still 6 m. distant. By reason of a bar, the inner harbour is only accessible, at high water springs, to ships drawing 18 ft., and at other times to vessels drawing 8 or 9 ft. The water immediately to the E. of Bushire is deep; and it appears from the older descriptions of the place, that the company's cruisers were formerly able to anchor close up to the N.E. side of the town; but the channel leading up to this will now scarcely admit of small dows, except they be lightened. Some islands in the N.E. part of the bay give sufficient shelter to native boats and other small craft.

Bushire is the principal entrepôt for the supply of Persia with Indian goods. It has a considerable trade with Bombay and Calcutta, especially the former; and through them receives most of the goods brought to it from Europe, China, and the E. Archipelago. Few ships touch at Bushire without also touching at Bussorah,

and conversely. The imports from Bengal are rice, sugar, indigo, pepper, and spices, with a small assortment of muslin and piece-goods. From Bombay are brought iron, steel, tin, lead, woollen cloths, cutlery, &c., with sugar, sugar-candy, preserved ginger, porcelain, &c., the produce of China, and cassia, cloves, nutmegs, and other productions of the E. Archipelago. The demand for English cotton prints is said to be increasing in Persia, while that for the fabrics of Germany and Switzerland is diminishing. Coffee is supplied from Mocha and other Arabian ports, but to no great amount, as it is not in very general use in Persia. The returns to India are mostly in horses for cavalry service, dates, and dried fruits, assafœtida, carpets, Cashmere, and Kerman shawls, Kerman wool, tobacco, old copper, turquoises, attar of roses, rosewater, &c., but chiefly in money. The other exports of Bushire are raw silk and silk goods, Shiraz wine, grain, gall-nuts, pearls, yellow-dye berries, and various drugs. The Russian provinces on the Caspian derive their supplies of indigo from Persia, by way of Bushire. The trade of the port is crippled by the customs laid on goods passing to the capital, and the unjust and injudicious appropriation of goods on the part of the government. Formerly it was much injured by the pirates; but, thanks to British interference, these are now all but suppressed.

The merchants of Bushire are about equally divided between Persians and Armenians; the latter are the more active, intelligent, and wealthy. There are no Jews of any note, as at Bussorah; nor Banians, as at Muscat. The E. I. Company has a resident here. The pop. generally is a mixture of the Persian and Arab races. (*Nebeker; Kinnier's Memoir; Buckingham's Travels; Dict. of Commerce.*)

BUSSORAH, called also BALSORA, BASRA, and RUSSRA (Arab, *a margin*), a city of Turkey in Asia, pash. Bagdad, the most E. place of note in the Turkish dom., and the principal port of the Persian Gulph, on the right or S.W. bank of the Euphrates, or, as it is here called, the Shat-ul-Arab (*river of the Arabs*), 70 m. from its mouth, and 45 m. below its junction with the Tigris, 270 m. S.E. Bagdad, and 220 m. W.N.W. Bushire: lat. 30° 29' 30" N.; long. 47° 54' 15" E. Pop. probably 50,000. The form of the city is irregular, oblong, lying E.N.E. to W.S.W., or at right angles with the course of the river, from which it is a few hundred yards distant. Length about 3 m., breadth opposite the river about 1 m.; circuit estimated at from 7 to 9 m. The space actually occupied by buildings does not, however, comprise above a fourth part of this area, the rest being laid out in corn-fields, rice-grounds, date-groves, and gardens, intersected by a number of little canals. Bussorah is surrounded by walls, built of sun-dried bricks, with a parapet at the top, having loopholes for musketry, and occasional ports for cannon, but of these very few are mounted: it has few gates, and is divided into 70 *mahalle*, or quarters. Two canals, cut from the river, surround the city on either side, within a few yards of the walls, and uniting beyond the W. wall, form a complete ditch to the fortifications. A third canal leaves the river nearly midway between the other two, and is carried through the whole length of the city, serving at once to supply the inhab. with water for domestic purposes, to irrigate the fields and gardens within the walls, and to admit of the transportation of goods. These canals are filled by the flood, which usually rises 9 ft., and left nearly dry at ebb-tide. They are mere channels dug out of the soil, without being lined by masonry; and the few brick-built bridges thrown over them in different parts of the city are of the meanest kind. Bussorah is wretchedly built; the streets are narrow and unpaved; and, notwithstanding the facilities afforded by the ebb and flow of the tide in the canals for the removal of impurities, it is most disgustingly filthy. No stone of any kind, and scarcely any wood, excepting that of the date-tree, which is very unfit for carpentry, are found within many miles of the city, which is mostly constructed of sun-dried bricks. The English factory, the seat of the *Mutasallim* (residence of the governor), one or two of the principal mosques, and perhaps half a dozen mansions of the richest inhab., are the only buildings of kiln-dried bricks, and in fact, the only decent edifices in the place. There are about 40 mosques, innumerable *khans* and coffee-houses, and a wretched bath: the bazars, though stocked with the richest merchandise, are not arched, as in Bagdad and other Persian cities; but are miserable structures, covered only by mats laid on rafters of date-trees. Bussorah is a place of considerable trade, being the grand emporium of the Turkish empire for Indian and other eastern produce. Its situation is, in this respect, so favourable, that notwithstanding the obstacles arising from bad government and unsafe access, both by land and sea, it continues to command a considerable traffic; almost every inhab. being in some way or other concerned in trade. At the mouth of the

Shat-ul-Arab there is a bar which has commonly on a spring tide, but the channel within is deep, and ships of 500 tons burden, provided they cross the bar at spring tides, may, without difficulty, ascend the river as far as the city. At an average, 5 or 6 British ships arrive in the course of the year from India; but the principal part of the trade is carried on in Arabian bottoms, particularly in those belonging to Muscat. The imports are muslins and piece-goods, pepper, and other spices, drugs, rice, sugar, indigo, silk, cotton yarn, Surat manufactures, shawls, China-ware, and paper, tree-woods, coffee, lac, beads, sugar-candy, and other articles, the produce of India; with lead, iron, steel, tin, quicksilver, cochineal, &c., exported to that country from Europe. The returns to India are mostly made in the precious metals, Arabian horses, pearls, dates (a staple product of Bussorah), copper, gall-nuts, raw silk, gold fringe, coral, gum, rosewater, assafœtida, almonds, dried fruits, &c. Of these, gold and silver coin and horses constitute the principal articles. The average cost of the horses sent to Bengal is, on their arrival at Calcutta, including all expenses, about 2,000 rupees, or 200*l.*; thus of those sent to Bombay is about 800 rupees, or 80*l.*, each. From Persia, Bussorah imports shawls, assafœtida, and fruits, and a few horses from Bushire; coffee, dates, and gums, from Arabia; pearls from Bahrein; coral from the Mediterranean, by way of Aleppo, &c. Amongst the returns to Persia, through Bushire, are a good many English cotton prints, received at Bussorah from the Black Sea, Smyrna, and Constantinople. A taste for British cottons and woollens is now forming in all the vast countries watered by the Euphrates and Tigris, which it is of importance to this country to promote and encourage. (For the import and export duties on commodities, see TURKEY.)

The trade with Aleppo and Bagdad is conducted by means of caravans. The naval force of Bussorah was once sufficiently powerful to command the whole of the Persian Gulph, and to suppress the marauding expeditions of the pirates who have infested it. It has now, however, dwindled to almost nothing.

The boats used upon the canals are of many different kinds, two of which may be worth notice. The first is a light canoe, long, narrow, and drawing only a few inches water, and impelled forwards by two boaters, who stand in the head and stern, and often use short paddles alternately from side to side, presenting the appearance which Arrian, in his account of the voyage of Nearchus, describes as belonging to the boats at Kopros, the men in which seemed not so much to row as to dig the water with their oars, and to toss it up as a labourer throws up the earth with his spade. The second is a circular kind of boat of basket-work covered with bitumen, of shallow draught, capable of containing six or eight persons, and which are paddled or spun along, making a circular motion. The ebb tide occupying always twice as long a time as the flood, and the channel being much too small for the convenient passage of the vessels employed on it, great activity and corresponding confusion takes place for a short period only, after which most of the craft are grounded till next tide. Great inconvenience sometimes occurs from laden vessels losing the springs and lying till the next spring tide in the centre of the channel, and blocking up all passage for smaller vessels, an inconvenience which a little outlay in widening the canal would effectually obviate. But what improvement need be looked for from a Turkish government? About half the inhabitants are Arabs, one-fourth Persians, and the remainder a mixture of Turks, Armenians, Jews, Catholic Christians, and Koords. The Turks are few, perhaps not above 500; they, as well as the Arabs, are of the Sunnite sect, excepting a small body of Arab Christians, who call themselves Subbees, or disciples of John the Baptist. The Persians, who are of the sect of the *Schiists*, engross most of the intermediate stations in commerce, as those of clerks, shopkeepers, mechanics, &c., while among the Arabs, a man is either in easy circumstances or a mere labourer. The Armenians do not exceed 50 families; they are chiefly merchants and brokers: they have a small church, with two or three priests. The Jews amount to about 100 families; they are similar to their tribe elsewhere. The Catholic Christians are about 20 families: some are natives of Bussorah, others are recent settlers from Bagdad and Aleppo. The Subbees are a singular sect, scattered over the plain of the Euphrates, very limited in numbers, and constantly intermarrying. They practise no fasts, but baptism is frequently performed on the same individual; their places of worship are all temporary; they are very particular as to the purification of their food; and are said to hold a breach of trust in abhorrence. They are mostly mechanics and handicraftsmen, especially smiths and workers in metals. The Indians in Bussorah are chiefly Banians; and the sepoys of the British factory guard are mostly Hindoos. Some few have their women with them; altogether, they may amount to 200. The few Koords are mostly engaged under the Turks in inferior offices of trust, and in the

* Niebuhr estimated the pop. at from 40,000 to, at most, 50,000 (*voyage*, ii. 179. Fr. ed.), and Kinnier and Kinnier at 60,000. Buckingham, a very inferior authority, estimates it at nearly 100,000.

BUXTON, a town, and fashionable watering-place of England, co. Derby, W. London. Pop., in 1821, 1,036; in 1851, 1,211: houses 121. It stands in a valley surrounded by hills of considerable elevation, except at the narrow opening, through which the Wye flows. The old town stands on much higher ground than the modern one, and consists of one wide street, in which are a few respectable inns and lodging-houses, but the greater number are low ancient buildings: it has a market-place, with an old cross in the centre. The new part commencing with the Crescent, extends along the Bakewell road. This is an elegant range, in the Grecian style, comprising two hotels, a library, news

BUZANCOIS, a town of France, *dép.* Indre, cap., partly on the banks of the Indre, and partly on islands in its channel; the connection between its different divisions being maintained by means of five bridges, 14 m. N.W. Chateauroux. Pop. 4,587. But though the situation be exceedingly good, the town is very ill built, and presents a confused mass of old houses, interspersed with narrow crooked streets and alleys. There are in its environs some considerable fountains, and it carries on some trade in wool. (*Hugo, art. Indre &c.*)

C.

CABES, or GABES, a sea-port and city of Barbary, reg. Tuni, at the bottom of the gulph of the same name (*Syrta Minor*), near the foot of Mount Hancara, on the right bank of a small river; lat. $33^{\circ} 53' 55''$ N., long. $7^{\circ} 44' 14''$ E. Pop. doubtful, but said by Mr. Blaquiere to amount to 30,000. It is defended by a castle in pretty good repair. Streets regular, but narrow and filthy. Owing to the gradual filling up of the bay, its port is now only accessible to vessels of small burden. The chief article of export is a powder made of the odoriferous leaves of a plant called *hennah*, raised in the surrounding gardens. This powder is used as a pigment by the ladies of the East, and is, consequently, in great demand.

Cabes is said, by Dr. Shaw, to be the *Epictus* of Scylax, and the *Tacepe* of other ancient geographers. Ruins of the ancient city, among which are several square granite columns, 12 ft. in length, are met with on a rising ground, about 1 m. from the new city. The little river which runs through the city (the *Trion* of the ancients) is diverted into a great number of channels, for the purpose of watering the hennah gardens. (*Shaw's Travels*, p. 113. 4to ed.; *Blaquiere's Letters from the Mediterranean*.)

CABINDA, a sea-port town of Lower Guinea, cap. Eu-Goyo, on the Atlantic, 50 m. N. from the mouth of the Zaïre, lat. $5^{\circ} 33'$ S., long. $15^{\circ} 40'$ E. Pop. unknown. It is distinguished by its beautiful situation, and the fertility of its territory, which have obtained for it the title of the paradise of the coast. Its harbour is safe and commodious. The exports are slaves, ivory, wax, and wax. The natives are unenlightened, and difficult to deal with. The Portuguese have frequently attempted, but without success, to get a footing in this place.

CABRA (an. *Exagrum*), a town of Spain, prov. Cordova, near the source of the river of the same name, partly on two hills and partly in a plain planted with vines and olives; 24 m. S.S.E. Cordova. Pop. 11,890. Some of the streets are wide and straight, with streams of water running through them, and good houses with magnificent fronts. There is a large, but irregular square; many public and private fountains and promenades; some ancient mosques, and other ruins. Here is, also, a college, with chairs of grammar, grammar, philosophy, mathematics, and design. The products consist of tiles, bricks, white soap, coarse linen and hempen cloths, with wines, brandy, vinegar, oil, and flour. There are nearly 400 gardens attached to the town, which supply most parts of the district with fruit and vegetables. The neighbourhood produces marble of various kinds, gypsum, and clay for bricks and pottery. The crater of an extinct volcano is situated in the precincts of the town. It was a place of consideration among the Romans, and also with the Moors. (*Milano*.)

CABRERA, a small island of the Mediterranean, belonging to Spain, 9 m. S. Cape Salinas, Majorca.

CACAMO, a town of Sicily, prov. Palermo, cap. cant., 24 m. S. E. Palermo. Pop. 6,563.

CACERES, a town of Spain, prov. Extremadura, cap. district; 41 m. N. Merida; on a mountain ridge, washed by three rivers, along one of which there are nearly 3 m. of gardens; 24 m. W. Truxillo. Pop. 10,000. It has an episcopal palace, some good public buildings, with many good private houses. It has, also, a Jesuits' college, the most sumptuous in the prov.; a public school; a seminary, or college, with professorships of grammar, and the Latin and Oriental languages, philosophy, divinity, medicine, and jurisprudence; an hospital for infirm persons, widows, and orphans. It was formerly united to Portugal, and was then of much more consideration than at present. It has some flour-mills, fulling-mills, with tanneries, *lavaderos* for washing wool, dyeing-works, &c. It appears to have been a Roman station, some magnificent ruins having been discovered in and within a short distance of the town. (*Milano*.)

CACHAO, or KE-CHO, often called by the natives *Bak-then*, the largest city of the empire of Anam, cap. of its N. div. or Tonquin, on the right bank of the Tonquin river, about 80 m. from the Gulf of Tonquin, and 225 m. N.N.W. Hue; lat. 21° N., long. $105^{\circ} 34'$ E. Pop. probably not far short of 100,000. (*Crauford*.) It is of great extent, but defended only by a bamboo stockade. Chief streets wide, and mostly paved with brick or small stones; the others narrow and unpaved. Some houses, chiefly those belonging to foreigners, are built of brick; but the greater number are of only mud and timber. Public edifices spacious, especially one royal palace, and the ruins of another; the walls surrounding each of which are reported to be of vast extent. It has a considerable trade, and had formerly both English and Dutch factories. The imports are long cloths, chintzes, arms, pepper, &c.; the exports, gold, fine silk fabrics, and lacquered wares, the best of the East. The N. branch of the Tonquin river, which once admitted much larger

ships, is said, in consequence of the accumulation of sand at its mouth, to be now impracticable for those above 200 tons burden. The city being composed to so great an extent of inflammable materials, is very subject to destructive fires; and a rigid police is always on the alert to prevent the use of those for domestic purposes for more than a few hours in the day. It was nearly burnt to the ground by some incendiaries in the course of the 17th century. (*Crauford, Emb. to Siam, &c.*; *Hamilton, &c.*)

CACHAR, or HAIRUMBO, a territ. of India beyond the Ganges, formerly governed by its own rajah, but, since 1832, substantially a British gov., subordinate to the prelad. Bengal. It lies between lat. 24° and 27° N., and long. 92° and 94° E.; having N. Assam; E. Cassay; S. Tipperah; and W. Sylhet and Jynteah: length, N. to S., about 140 m.; area and pop. as follows (*Pemberton*, 1835):—

	Sq. m.	Pop.
S. Cachar	2,866	50,000
Central Cachar	2,224	14,000
N. Cachar	1,417	(6,000) ?
	6,507	70,000

This prov. is surrounded on three sides by mountain chasms: on the N. the Naga mountains, cut it off from the Dharmpoor district and the valley of the Brahmaputra; on the W. the boundary is formed by the same chain, which, running S., forms the E. frontier of Chittagong and Aracan, and opposite Sylhet and Mueppoor is from 2,000 to 4,000 ft. high; on the E. is an elevated chain, running E. and W., and inhabited by the Kookies. Another range runs parallel to the latter, in about lat. $25^{\circ} 20'$ N., dividing Southern from Central and Northern Cachar, and from 4,000 to 6,000 ft. high; all these ranges are covered from base to summit with vast forests. The plains are mostly in S. Cachar, where their height above the sea is about 200 ft. (*Pemberton*.) The chief rivers are the Barak, Kapile, Jomuna, and Dhumserree. The first rises amongst the mountains between Cassay and Assam, in lat. $25^{\circ} 30'$ N., and long. $91^{\circ} 20'$ E., and flows with a very tortuous course for 180 m. through S. Cachar, which it leaves at Rangit (Sylhet). It varies considerably in width, but is sometimes 150 or 200 yds. across, and is navigable for boats of some burden to 20 m. above Bauskandee; during the rains it has 30 or 40 ft. depth of water, and the country through which it flows is inundated from June to November. The mountain-streams afford ready access to the forests, and are of farther service in floating down timber, rattans, bamboos, &c., from which much revenue has been realised by the former rajahs. No lakes have been enumerated. During the S. W. monsoon there are frequent and long-continued falls of rain, beginning in February or March, from which period vegetation proceeds with great rapidity. The excessive moisture renders the climate unhealthy; and ague, dysentery, and diarrhoea, are frequent; but it modifies the heat in summer, reducing it four or five degrees below the temp. of Calcutta in the cold season, fires, morning and evening, are found essential to comfort. The fertility of the soil is very great: rice and other grain, sugar-cane, and cotton, the latter especially, N. of the central hills, grow luxuriantly. Timber is very abundant in the mountain ranges, and has always been an important source of wealth: in other parts a dense and lofty reef and grass jungle rapidly springs up after the rains, affording cover for vast numbers of wild deer, buffaloes, elephants, &c.

S. Cachar is a valuable addition to our eastern possessions; its fertile plains, which are continuous on the W., with the well watered ones of Sylhet, extend E. as far as the Jore river, a tributary of the Barak. There are 1,450 sq. m. of surface, S. the Barak; 1,700 of which are a fertile plain, now almost wholly unoccupied, although the traces of numerous villages abound on the banks of the rivers. N. of the Barak there are 1,000 sq. m. of surface, 480 of which are estimated to be arable land of a very fine quality. This tract is daily becoming better inhabited, and immediately along the banks of the Barak there is a belt of rich cultivation not surpassed in any part of Bengal, and the tracts contiguous to it are in process of being cleared; a considerable emigration appears to have taken place thither from Bengal. The pop. of S. Cachar consists of three or four different classes, viz., 1. Cacharees; 2. Mussulman Bengalees, who are the chief of the petty landholders; 3. Hindoo Bengalees; and 4. mixed tribes, as Nagas, Kookies, and Cassayers: the first two have long inhabited the S. and E. hills, but tendered little homage to the Cachar rajahs; and the Cassayers have been settled there by the British government, and, by their bold and military qualities, form a valuable protection against the other hill tribes to the inhabitants of the plains. From 1831 to 1834 the revenue of S. Cachar increased from Rs. 30,000 to 40,400 rupees; the gross charges in the latter year were 31,000 rupees.

From the central ridge, looking N., is seen a vast mass

of dark and dense forest, bounded by the Kopili, Jmona, and Dhunacee rivers; extending for about 70 m., and broken only by a few specks of cultivation, and the scattered huts of a few Cacharees and Kookies, who earn a livelihood principally by the cultivation of cotton, which they barter for other produce to the inhabitants of Assam and Dhurrumpoor. About 6,000 of the pop., in Central Cachar, are probably aborigines; the remainder are Kookies and Lolongs, most likely from the S. and S.E. Emigration from Sylhet into Cachar has been greatly encouraged by the assignment of lands at the low rate of 3 annas per bega, to be held rent free for 1,000 days, at the end of which time the quantity of land cleared was to be assessed. Capt. Pemberton thinks that for some years neither N. nor Central Cachar will yield much revenue; but the tranquillity insured to their W. neighbourhood by the possession of these districts, renders them important. The revenue derived from the whole prov. by a former rajah is said to have been a lac of rupees a year. The people of the central hills bring cotton, ivory, wax, iron-ore, and bamboos, into Central Cachar; about 2,000 jarool timbers (half the number formerly exported) are sent down the Barak into Sylhet for building large *chumam* boats. The other exports are salt, coarse silk, and limestone.

Routes.—Three routes through Cachar into Cassay part from Banskandee near the E. extremity of the cleared plains: viz., those of Aque, Kala Naga, and Khongjnee. By the former, or most N., the distance from Banskandee to Jaenenagur, in the Cassay central valley, is 46 m.; the first 30 m. of which pass through a dense forest abounding in swamps, and intersected with small streams, which rapidly become impassable after rains. The Kala Naga route is in all these respects preferable, and also crosses the Juree river 8 m. from its confluence with the Barak, up to which point the latter is navigable for boats of 500 mams. The third route passes over the hilly country of the Kookies, and is useless for military purposes. (See *CASSAY*.) Several roads toward the central hills traverse S. Cachar, which all unite in one valley, and thence run through the central and N. divisions toward Assam, into which there are three separate routes through Cachar from Sylhet. The military protection of this prov. is entrusted to two companies of the Sylhet light infantry. Cospoor is the anc. capital, but Sitchar, S. the Barak, is the present residence of the chief authorities. The Cacharees are strong, robust, fairer than the Bengalese, and like the Chinese in features. The original Haurumbian dialect is said to have been monosyllabic, but is now nearly extinct; the language and written character of Beugal having usurped its place. The Kookies, who have been for years gradually advancing it, are supposed by Capt. Pemberton to be of Malay origin; they are seldom much more than 5 ft. in height; their complexions nearly as dark as those of the Bengalese; voices soft, and language harmonious. Small parties, of from 10 to 30 of them, formerly made frequent secret incursions within our frontiers, in search of human heads, which would seem to be necessary articles at the performance of certain of their religious ceremonies, if we may so abuse the phrase. Although checked, these incursions are still far from being prevented.

Cachar was unknown to the British until 1753; when Mr. Verelst led a small force into it. In 1774 it was invaded by the Birnese, and some time after rendered tributary by them. In 1810 they placed the rajah of Munnipoor on the throne of Cachar; and, from 1818 to 1823, a civil war for supremacy between that chief and his two brothers devastated the prov. By the treaty of Zandaboo, in 1826, Cachar was placed under British protection, and the rightful rajah re-established; but on his death, in 1830, without any heir, it became, in 1832, an integral part of the British territory. (*Pemberton's Rep. on the E. Frontier*, pp. 184–210.)

CADEROUSSE, a town of France, dep. Vaucluse, on the left bank of the Rhone, which at this point encloses a considerable island, 3 m. S.W. Orange. Pop. 3,262. It has some silk flatures, and its territory is productive of corn, silk, and madder.

CADIZ, a famous city and sea-port of Spain, in Andalusia, on the Atlantic, 53 m. S. Seville, and 60 m. N.W. Gibraltar; lat. $36^{\circ} 31' 7''$ N., long. $6^{\circ} 18' 52''$ W. Pop. (1888) 58,525. The city occupies the rocky and elevated extremity of a long, low, narrow tongue of land, projecting about 5 m. N.N.W. from the Isle of Leon, and enclosing between it and the main-land a spacious bay, which has every where good anchorage, and some excellent harbours. The port of Cadiz is formed by a mole projecting from the city into the bay; but it is accessible only to small vessels, ships of large burden anchoring 3 m. off shore. The bay is divided into the inner and outer bays by the promontory, having at its extremity the fort of Malagorda. The isthmus joining the city to the main-land is in parts not more than from 200 to 300 yards across, and is very strongly fortified: the access to the city from the sea is in some places rendered im-

practicable by the steepness of the rocks, the occurrence of sandbanks and of sunken ledges; and being every where defended by ramparts, bastions, and detached forts, it would, were these kept in proper repair and well garrisoned, be all but impregnable; so that, as respects convenience and security, Cadiz, with its bay and dependencies, is probably unmatched, and certainly not surpassed, as a naval depot. Streets straight, and though rather narrow, are remarkably well paved, clean, and lighted with lamps. The houses, in general lofty, have a court in the centre; they are mostly built of white free-stone, and some of them are ornamented with painted balconies. There are several squares; but, with the exception of that of San Antonio, in the centre of the city, they are all of very limited dimensions. The ramparts afford, perhaps, the finest marine promenade that is any where to be met with: the view on the E. side extends across the bay to St. Mary's and the other towns by which it is lined, and to the mountains in the distance: on the W. the eye ranges over the boundless expanse of the Atlantic.

With the exception of the fortifications, Cadiz has no public buildings of any importance. The most conspicuous is the lighthouse of San Sebastian, on the bastion of that name, having the lantern elevated 172 ft. above the level of the sea. There are two cathedrals—an old and a new; but the latter is unfinished, and, when the city was visited by Mr. Inglis, its interior was converted into a rope-walk, and other parts into a mahogany warehouse. There is a custom-house, several hospitals, churches, convents, &c.; but none of them require any particular notice. The town labours under a great deficiency of water, having none that is potable but what is brought in vessels across the bay from St. Mary's, or what is collected in cisterns. Being almost surrounded by the sea, the climate is comparatively temperate; the summer heats are, in fact, less violent than in Madrid, though it be so much farther south, while the cold of winter is not nearly so severe. It is not unhealthy; but, like most other towns on the S. coast of Spain, is occasionally visited by epidemics. The great drawback upon it as a place of residence is its want of trees and shade, and the impossibility of getting into the fields or the country, except by crossing the bay, or travelling the whole length of the isthmus. There is a tolerable theatre, where Italian operas are sometimes performed; but those who wish to enjoy the national diversion of bull-fights must cross the bay to St. Mary's. Morals here are said to be, if possible, even at a lower ebb than in other Spanish cities. Lord Byron's statements (*Childe Harold*, l. 565.) may, perhaps, be suspected of poetical exaggeration; but, according to Mr. Inglis, "female virtue is a thing almost unknown, and scarcely appreciated."

The *Caracca*, or royal dockyard, is situated at the bottom of the inner bay, about 6 m. from the city, on the channel separating the Isle of Leon from the mainland. This used formerly to be a very complete establishment; and as many as 5,000 men were kept constantly at work in it. Now, however, it is all but deserted, and is said not to possess the means of fitting out a single ship. (*Scott's Ronda and Granada*, ii. 74.)

The commerce of Cadiz was formerly very extensive. For a lengthened period, indeed, she possessed a monopoly of the trade with the vast possessions belonging to Spain in the New World; and notwithstanding the abolition of the monopoly in 1778, she continued to engross by far the larger portion of the trade with the countries in question down to their emancipation. This event gave a blow to the commercial importance of Cadiz, from which it has not recovered. Its influence might, no doubt, have been in a great measure obviated, had the Spanish government adopted a more liberal policy in relation to its intercourse with other countries. But oppressive duties and restrictions have gone far entirely to destroy the foreign trade of Spain; and have thrown what little remains almost wholly into the hands of the smuggler; and Cadiz not being very suitable for the operations of the latter, has suffered accordingly. To raise its commerce from the depressed situation in which it had fallen, government made it, in 1829, a free port, that is, a port into which goods might be imported, and from which they might be exported, free of duty. In consequence of this privilege, it immediately became a principal depot for the foreign products destined for the Spanish market; and the smuggling carried on from the town was so great, that, in 1832, government not choosing to reduce the duties which occasioned it, and being unable otherwise to repress the abuse, withdrew the privilege, so that the trade again relapsed into its state previously to 1829. It has still, however, a larger share than any other Spanish town of the trade with Cuba, Puerto Rico, and Manila, the only remaining colonies of Spain; and it, or rather its dependency, St. Mary's, is the centre of the sherry trade, all the wines of Xeres being shipped either from the one or the other.

The principal articles of import are fabrics of linen,

wool, silk, and cotton, of which, however, a large proportion is destined for re-exportation; sugar, cocoa (of which there is a very great consumption in Spain), coffee, and other colonial produce; timber, tobacco, hides, salted fish, &c. Wine forms by far the principal article of export, the quantity shipped from Cadix and the different ports round the bay may be estimated at about 30,000 butts a year, of the value of near 1,000,000*l.* sterling; of which about a half in quantity, and far more than a half in value, comes to England: the other articles of export are—quicksilver, provisions, brandy, salt, wool, oil, &c. In 1834, the value of the articles imported is said to have amounted to 1,186,000*l.*, and that of the exports to 1,700,000*l.* In 1837, the import of sugar was 150,534,774 *lbs.*; of coffee, 36,584,515 *lbs.*; of leaf tobacco, 1,196,195 *lbs.*; and of cigars, 143,704,500 in number. Subjoined is a statement of the navigation of the port with foreign countries and the transatlantic possessions of Spain, in 1834:—

Ships of	Entered.		Sailed.	
	Ships.	Tons.	Ships.	Tons.
England	290	52,962	264	27,825
United States	43	8,390	55	13,471
Russia	45	5,093	23	6,718
France	43	1,077	17	1,775
Sweden	7	1,464	30	4,359
Portugal	57	5,160	20	805
Brazil	4	501	15	3,440
Hanse Towns	18	2,656	10	1,139
Nardina	8	1,336	11	2,143
Holland	14	2,463	5	532
Belgium	10	2,110	1	120
Peru	3	119	6	1,367
Buenos Ayres	6	1,019	4	967
Monte-Video	2	515	7	1,580
Denmark	1	100	11	1,646
Other countries	36	1,523	37	5,462
Colonies	99	15,406	62	9,620
Totals	665	86,958	570	80,892

The pop. and wealth of the city have declined with its trade. The number of inhab. has fallen off from about 70,000 to under 60,000; and many of the houses are unoccupied, and even rapidly falling to decay. The sea-wall erected on the S. side of the city, to defend it against the encroachments of the sea, which is justly regarded as one of the greatest works of the kind ever undertaken and completed, has been allowed, for want of timely repair, to fall into a state of dilapidation. The fortifications are also getting into a bad state; and the appearance of the city is characteristic of the paralysed and abased state of the monarchy.

Cadix is very ancient, having been founded by the Phœnicians. In 1596 it was taken and sacked by the English, by whom it was again ineffectually attacked in 1623 and 1702. In 1809 it became the asylum of the Cortes, and was blockaded by the French till 1812. In 1823 it surrendered to the French under the Duc d'Angoulême. (*Scott's Roma and Granada*, li. 64—75; *Inglish's Spain* in 1830, li. cap. 15; *Penny Magazine*, May, 1839; *Dictionnaire du Commerce*, art. Cadix; *Milano*; *Townsend*, &c.)

CAEN, a town of France, dép. Calvados, of which it is the capital, in an extensive valley between two large meadows, at the confluence of the Odon with the Orne, about 8 *m.* from the embouchure of the latter, 30 *m.* S.W. Havre; lat. 49° 11' 12" N., long. 0° 31' 38" W. Pop., ex com., 39,886. This is a well-built, improving town. The streets are generally broad, straight, and clean; and the houses of freestone have a good appearance. It was formerly a place of considerable strength, being defended by a castle, and surrounded by massive walls, flanked with towers. The latter and the walls have almost disappeared: the castle, which was of great size and strength, was partly demolished at the Revolution; the portion of it that still remains is now used as a prison. There are 4 squares, of which the Place Royale, ornamented with a statue of Louis XIV., is the finest. A *cours*, or public walk, shaded by magnificent elm trees, extends for nearly a mile along the banks of the river. There are some fine old churches, of which the most interesting is the *Abbaye aux Hommes*, built by William the Conqueror; it is a large, plain building, with two very high spires; and contains, among other interesting monuments, the tomb of the Conqueror; but the latter was violated by the Huguenots, in 1562, and the bones dispersed. The *Abbaye aux Femmes*, also very ancient, is now the Trinity Hospital, one of the best managed establishments of the kind any where to be met with. The church of St. Peter has the finest spire in Normandy; and several of the other churches deserve notice. Among the other public buildings are the hotel of the prefecture, the Hôtel de Ville, the Palace of Justice, the Hôtel Dieu, &c. Caen has been long celebrated for its university, founded in 1431, by Henry VI., king of England. It was remodelled after the Revolution, and now exists under the title of an *académie universitaire*.

CAERMARTHEN.

There are here, also, a royal college, or high school, with from 450 to 500 pupils; a secondary school of medicine; a primary normal school; a school of hydrography; a public library, containing 47,000 volumes; a botanical garden, with a good collection of plants; a school of architecture and design; a deaf and dumb school; museums of pictures and natural history; with numerous societies for the promotion of literature, and the fine and useful arts; a theatre, &c. It is the seat of a royal court for the depts. of Calvados, Manche, and Orne; and for tribunals of original jurisdiction and commerce. In its vicinity is a *maison centrale de détention*, which, in December 1833, had 481 male, and 288 female inmates: when finished, it will contain 1,600. Manufactures important and valuable. They consist principally of laces, and of thread and silk, the making of which employs a vast number of people; stockings and caps, table linen, a variety of cotton fabrics, coarse and fine earthenware, cutlery, hats, with brewery, oil-works, &c. At high water, vessels of 150 or 160 tons come up the river as far as the town, where they lie alongside fine quays. In 1837, the value of the imports amounted to 1,092,980 *fr.*, and that of the exports to 151,585 *fr.*

Several large fairs are held for the sale of the products of the town, and of the horses, cattle, butter, fowls, &c., of the surrounding country. In consequence of its excellent establishments for education, and other advantages, Caen is a favourite resort of English families. It has produced several distinguished men; among whom are Malherbe, the father of French poetry; the learned Luet, bishop of Avranches, Tannegui, Lefèvre, &c.

Caen is not very ancient. It became of importance under the dukes of Normandy, by whom it was fortified. It has undergone several sieges, and fell finally into the possession of the French in 1448, when it was taken from the English by Durolot. It was taken by the Protestants in 1562, when it suffered severely. (*Hugen. art. Calvados*.)

CAERLEON, a decayed town of England, co. Monmouth, hund. Usk, par. Llangatock, on the Usk, 18 *m.* S.W. Monmouth. Pop. in 1831 only 1,071. This was the *Isca Silurum* of the Anglo-Roman, and was then of great importance, being the cap. of the prov. of Britannia Secunda. At a later period, it was celebrated as a seat of learning, and in the 12th century, Giraldis Cambrensis gave a lively, though perhaps exaggerated, picture of its wealth and magnificence. Several Roman antiquities have been dug up in the town and its vicinity, and in several parts the Roman walls are still visible. An elliptical concavity, the longest diameter measuring 74 yds., and the shortest 64, and 6 yards in depth, is situated in a field close by the Usk, near the S.W. side of the town. The country people call it Arthur's Round Table; but no doubt it is the remains of an amphitheatre. Within the course of last century stone seats were discovered on opening the sides of the concavity; and, in 1706, an alabaster statue of Diana was found in it. It has a well endowed charity school for maintaining and educating 30 boys and 20 girls, till they attain the age of 14, when they are apprenticed, the former having 7*l.* and the latter 4*l.* each. (*Beauties of England and Wales. Coe's Monmouthshire*, &c.)

CAERMARTHEN, a marit. co. of S. Wales, having S. Caermarthen Bay, which unites with the Bristol Channel, E. the cos. of Glamorgan and Brecon, N. Cardigan, and W. Pembroke. Area, 623,360 acres, being the largest co. in the principality. Surface very various, in part mountainous, and in part consisting of low fine vales: the largest and most elevated of the latter is the vale of Towy, stretching for about 30 *m.* along the river of that name, by which the co. is intersected, with an average breadth of about 2 *m.* Exclusive of the Towy, Caermarthen is separated from Cardigan by the Taf, and in part from Glamorgan and Pembroke by the Loughor and the Taf. The portion of this co., S. and E. of the Towy, adjoining Glamorgan, is included in the great coal-field of S. Wales: at Llanelly there is also an abundant supply of iron-stone, and considerable iron-works. Soil of the arable land mostly a sandy loam, wrought, admirably adapted to the turnip husbandry, and in general very productive. But agriculture here, and indeed in the greater part of Wales, is in an extremely backward state. The occupiers are, for the most part, uneducated, and strongly attached to ancient practices. Drainage, though the first and most essential of improvements, is almost wholly neglected; tenants are not usually under any restrictions as to management, and the common practice is to take corn crops in uninterrupted succession from the land till it be completely exhausted. The farm implements and stock are also bad; and the whole system evinces the want of intelligence, capital, and industry. (*Kennedy and Grainger on Tenancy*, p. 169.) Average rent of land in 1810, 7*s.* 2*d.* an acre. Manufactures unimportant. Principal towns, Caermarthen, Llanelly, and Kidwelly. It contains 8 hundreds, and 78 par., and had, in 1831, 18,920 inhab. houses, 20,719 families, and 100,740

inhab., of whom 48,683 were males and 52,057 females. It returns 2 mems. to the H. of C. for the co., and 1 for the bor. of Caermarthen. Registered electors for the co. in 1837-38, 5,125. Sum paid for the relief of the poor only in 1837-38, 27,964. Annual value of real property in 1815, 282,030.

CAERMARTHEN, the cap. of the above co., and a co. by itself, finely situated on an irregular acclivity on the N.W. bank of the navigable river Towy, 7 m. N. from its embouchure in Caermarthen Bay, Bristol Channel; lat. 51° 51' 10" N., long. 40° 19' W.; 180 m. W. by N. London. Pop. (1821) 8,906; (1831) 9,995. A few of the streets are tolerably wide, well paved, lighted with gas, and contain many respectable houses; but the rest are narrow and crooked, and those leading to the river steep, and the pop. much crowded: the best houses are on the Milford line of road. The supply of water is bad and inadequate. There is a large plain church, several dissenting chapels, and a grammar school, from which scholars were admitted to take orders previously to the estab. of Llanpeter college; a Presbyterian college for young men intended for that ministry (of which the corporation nominate the master and 6 scholars); a Lancastrian and a national school. The guildhall, a handsome edifice raised on a hill, and under it the market-place for corn. It has also a theatre, and bor. and co. gaols; the latter is on part of the site of the old castle (of which some remains are still left), on the brow of the hill rising abruptly from the river; along which the quay extends. The river is crossed by a fine bridge of 7 arches. Markets, Wednesday and Saturday; and cattle fairs, April 15., June 3. and 4., July 10., Aug. 12., Sept. 9., Oct. 3., Nov. 14. and 15. There are no manufactures of any importance in the town; but, as it furnishes the populous district in the vicinity with articles of general consumption, its trade is considerable. Principal exports (all coastwise), bark, marble, slate, lead ore, leather, corn, butter and eggs; imports, general cargoes of British and colonial produce, and manufactures, and timber and deals. At an average, 10 cargoes a year are imported from abroad, the vessels sailing outward in ballast. Custom duties between 2,000. and 3,000. a year. About 40 vessels belong to the port, and vessels of 50 to 150 tons are built here. It is a creek, comprised in the port of Llanelly. Vessels of 200 tons may ascend to the bridge at spring tides; but many obstructions are suffered to accumulate in the river, so that they are frequently obliged to discharge 2 m. below. The salmon fishery, which was once very extensive, has much decreased. Races are annually held in Sept., 4 m. up the vale of the Towy. It is the central town of a poor law union of 16 par. ; its own average rates amount to 4,024.

Caermarthen has returned 1 mem. to the H. of C. since the reign of Henry VIII. The limits of the present par. bor. coincide with those of the ancient bor., but Llanelly is now joined with it, as a contributory bor. Previously to the Reform Act, the elective franchise in Caermarthen was exercised by persons admitted *ad jure* burgesses, under qualifications of a freehold estate within the bor., or *granted*, and servitude of apprenticeship for 7 years. Registered electors in both bors., in 1837-38, 868. The election of a mem. for the co. takes place here. The limits of the municipal bor. are now restricted to the town and a small space round it. It is divided into 2 wards, and governed by a mayor, 6 aldermen, and 18 councillors; a sheriff and recorder. Courts of petty sessions are held weekly; fortnight courts, for the recovery of debts, and courts of general sessions twice a year, for the bor. : the assizes and 3 of the general quarter sessions of the co. are also held in the town. Its ancient castle, in the last civil war, was at first garrisoned for Charles I., taken subsequently by the parliamentary forces, and dismantled by order of Cromwell, in 1648. Caermarthen must, on the whole, be considered a flourishing and increasing town. A column has been erected at its W. end by public subscription in memory of the public services of Sir T. Picton, who fell at Waterloo, and had previously represented this bor.

CAERNARVON, a market co. of N. Wales, separated from Anglesea by the Menai Strait, extending from Conway, on the N., in a S. W. direction along the shore to the extremity of the peninsula of Llyn opposite Bardsey Island, having E. part of Cardigan Bay, and the cos. of Merioneth and Denbigh. Area 348,160 acres. This is the most mountainous co. in the principality, being traversed in its whole extent by the Snowdon range (see SNOWDON); it has, however, some limited tracts of comparatively low fertile land. The Conway, which has its sources in the co., and forms for a considerable distance the line of demarcation between it and Denbigh, is the principal river; but there are several streams of inferior dimensions, and some small lakes. Lead and copper ores have been found within the co., and have been wrought to some extent, but not with much success. The slate quarries belonging to Lord Penryn, near Bangor, employ about

1,600 men and boys, and are the most extensive and valuable in the empire; and other slate quarries in this co. employ about 1,700 men and boys. Soil of the greater part of the arable land hazelly loam. Agriculture, though a good deal improved, is still in a comparatively backward state; leases are either not granted, or they contain no proper regulations as to management; a proper rotation of crops is not generally observed; the land is not generally clean and in good heart; and the implements are still, in many instances, defective. Oats is the principal corn crop. Breed of cattle small and hardy. Average rent of land in 1810, 5s. 2d., an acre. The older class of farm buildings and cottages, especially the latter, are as bad as possible; but luckily they have been in many parts replaced by others of a new and improved character. Manufactures unimportant. Principal towns, Bangor (a city), Caernarvon, and Conway. Caernarvon is divided into 10 hundreds, and 69 par. ; and had in 1831, 13,221 inhab. houses, 14,553 families, and 66,448 inhab., of whom, 32,168 were males and 34,280 females. It sends 1 mem. to the H. of C. for the co., and 1 for the town of Caernarvon and its contributory bors. Registered electors for the co., 1837-38, 2,650. Sum expended for the relief of the poor only in 1837, 18,803. Annual value of real property in 1815, 131,217.

CAERNARVON, a sea-port and par. bor. of N. Wales, cap. of the above co., on the S.E. side of the Menai Strait, at the mouth of the Seint, 7 m. S.W. from the Menai Bridge, and 205 m. N.W. London. Pop. in 1821, 5,210; in 1831, 6,877. This town, with its magnificent castle, was built by Edward I., between 1282 and 1284, as a place of strength to secure his newly achieved conquest of Wales. The walls, constructed by the Conqueror, round the town, are still pretty entire. They are flanked with round towers, and had originally two principal gates, but others have been since added. Within the walls, the streets, though narrow, are regular; but of late years, new streets and buildings have been erected without the walls, and the whole town has been much improved: it is well supplied with water, and lighted with gas. Pennant says of it, that it "is justly the boast of N. Wales, for the beauty of its situation, the goodness of its buildings, the regularity of the plan, and, above all, the grandeur of the castle, the most magnificent badge of our subjection." (*Tour in Wales*, li. 404. 8vo. ed.) The par. church is 1 m. from the town; but the latter has a handsome chapel of ease, and 4 dissenting chapels, and a British and a national school. The town-hall is over one of the ancient gateways, and one of the old towers is fitted up as a prison: there is also a co. hall, a small theatre, and a modern market-house for provisions, the old one being now used for corn. Many opulent families reside in the neighbourhood, and the town is much resorted to in the proper season by sea-bathers. To accommodate them and other visitors, an excellent hotel has been built by the Marquis of Anglesea, and there are also hot and cold baths, assembly and billiard-rooms, &c. Outside the walls, a fine terrace walk along the Menai, resorted to in the summer evenings by all descriptions of people.

There are no manufactures of any importance. The harbour, which has of late been a good deal improved, admits vessels of 400 tons, but the trade of the port, which is mostly with Liverpool, Bristol, and Dublin, is principally by small coasting vessels and steamers. The principal export is slate, brought from the quarries by a railway. The removal of the coast duties on slate has occasioned a great increase of demand here and in other ports whence it is exported. (*Returned Report*.)

Previously to the Reform Act, Caernarvon returned 1 mem. to the H. of C. conjointly with the contributory bors. of Conway, Cricketh, Nevins, and Pwllheli, the right of voting being in the resident and non-resident burgesses. To these contributory bors. the Reform Act added Bangor. The limits of the ancient bor., with which the par. bor. coincides, are about 8 m. in circ. Registered electors in all the bors. in 1837-38, 1,089. The limits of the municipal bor. extend about 14 m. round the town. Corporation revenue about 700. a year. The assizes and general quarter sessions for the co. are held here. Market-day Saturday; fairs, March 12., May 16., Aug. 12., Sept. 20.

Caernarvon Castle is one of the noblest and most magnificent ruins of its kind in the empire. The walls, which enclose an area of about 3 acres, are 7 ft. 9 in. thick, have within them a gallery with slips for the discharge of missiles, and are flanked by 13 strong pentagonal, hexagonal, &c. towers. A narrow chamber in the Eagle Tower was the birthplace of Edward I., the first Saxon prince of Wales. Near the steep bank of the river Seint, at a small distance from the castle, is an ancient Roman fort, the walls of which are still pretty entire. At a small distance from this, and 14 m. from the Menai, is the site of the ancient Roman station of *Segontium*, whence, it is most probable, Edward I.

derived part of the materials for building the castle and town of Caernarvon. (*Pennant's Wales; Hingley's dist.*, &c.)

CAERPHILLY, a town and chapelry of S. Wales, co. Glamorgan, hund. Caerphilly, par. Eglwys-islan, between the Taf and the Rumney, 7 m. N. Cardiff. Pop. of the par. in 1831, 2,818. The town is an irregular collection of ancient and modern houses; but it has a good appearance, and being surrounded by mountain ranges that open on the E. and W., the scenery is grand and picturesque. It has a neat episcopal chapel, and 3 dissenting places of worship. Market, Thursday, and fairs for cattle, corn, and cheese, April 5, Trinity Thursday, July 19, Aug. 25, Oct. 9, and Nov. 16. Manufactures of cheques, and linsey-woolsey shirting for miners, employ about 100 persons; the rest are engaged in the mines and quarries of the neighbourhood or in agriculture. It was anciently a bor., but lost its privileges in the reign of Henry VIII. Its castle, whose magnificent ruins show that it must have been one of the finest in the kingdom, was of Norman origin, and enlarged at successive periods, but chiefly by the favourite of Edward III., Hugh le Despencer, for whom it was wrested from the Mortimers, its ancient possessors.

CAESAREA, a ruined and deserted coast town of Palestine; lat. $32^{\circ} 23' 37''$ N., long. $34^{\circ} 44' 45''$ E. Under the Romans, it was the cap. of the district in which it stands, and the residence of a proconsul. An artificial harbour, a castle, the walls of the city, and two aqueducts, are among the most perfect remains, but a great extent of ground is covered with the ruins of public and private buildings. It owed its existence, or importance, to Herod the Great, who named it *Cæsarea*, in compliment to Augustus, b.c. 22. It figures in the early history of Christianity as the place where Peter converted Cornelius and his house (Acts x. 1.), and as the scene of Paul's memorable speeches to Felix and Agrippa (Acts xxiv., xxv. and xxvi.). Vespasian made Caesarea a Roman colony, under the name of Flavia Colonia, and it continued to flourish till A.D. 636, when it fell into the hands of the Saracens. In 1101 it was taken by the Crusaders, and in the wars of this period it sank never to rise again. (*Robinson*, i. 189–192.; *Hogg*, ii. 185.; *Ptolemy*, v. 16.; *Josephus*, *Bel. Jud.* xxi. 5.)

CAFFA. See KAFFA.

CAGLI (an. CALIS), a town of the Papal States, deleg. Urbino and Pesaro, at the foot of Mount Petraro, at the confluence of the Cantiano and Busso, 14 m. S. Urbino. Pop. 4,000. It has a cathedral, and 4 convents for monks, and 4 for nuns.

CAGLIARI (an. *Calari*), a marit. city of Sardinia, of which it is the cap., on a bay of the same name on the S. shore of the island, lat. $39^{\circ} 12' 13''$ N., long. $9^{\circ} 44' 44''$ E. Pop. about 26,000. (*Smyth*). In the middle ages, it appears to have been restricted to a triangular space, on the summit of a hill about 400 ft. above the beach, now called the "Castle," which is walled round, and has a citadel on its N. side. To this were successively added the Marina, a portion extending down the W. face of the hill from the Castle to the sea, which is surrounded by a slight wall, flanked by some bastions, and is walled off by a wide but shallow ditch; the quarter of Stampace, to the W. of the Castle; and that of Villanova to the E. The modern city consists of these four portions; there is besides a suburb nearly a mile in length, called St. Avandrès. Cagliari has an imposing appearance from the sea. The Marina is tolerably well built, but Villanova quite otherwise; and the streets generally are narrow, irregular, dirty, steep, and paved with round pointed stones. There are, however, some excellent and even splendid public buildings, and many spacious private houses. The Castle is the part in which the nobility and state officers reside. It contains, the vice-regal palace, a fine edifice; the cathedral, built by the Pisans, with a front in great part of marble; a handsome mausoleum of Martin, king of Sicily; a celebrated cryptic sanctuary; the citadel, and three large square towers, good specimens of Pisan art; the university, with its four faculties of theology, law, medicine, and philosophy, and between 20 and 30 students; and other public seminaries. The Marina is inhabited chiefly by merchants, and by the foreign consuls; it contains a good bonded warehouse, an arsenal, lazaretto, and mole. In Stampace are the corn-market and storehouses. Cagliari contains besides about 30 churches, 21 convents, to one of which, belonging to the Jesuits, there is a very handsome and richly ornamented church attached; 2 hospitals, a female orphan asylum, a public library, with 15,000 volumes, museums of antiquities and natural history, a college of nobles, a *seminario*, a small theatre, mint, 3 prisons for galley-slaves, &c. At the S. angle of the Marina wall there is a very commodious *darsena*, or pier-harbour, capable of containing 14 or 16 vessels of a tolerable size, besides small craft. The port is one of the best and safest in the Mediterranean. Ships usually lie about a mile S.W. by S. from the mole, in 6 or 8 fathoms water,

on an excellent bottom of mud. The Gulf of Cagliari, which extends from Pula on the W. to Cape Carbonara on the E. 34 m. across by 12 m. deep, has good anchorage every where, after getting into soundings. The city being placed on a hill, is healthy, notwithstanding the immediate proximity on its W. side of the stagnant lagoon of Cagliari, 6 or 7 m. long by 3 or 4 m. broad. This lake abounds with fish and aquatic birds. To the E. of the city, there are some good salt-works. Cagliari possesses a royal manufactory of tobacco, and has manufactories of cotton fabrics, cake saddles, soap, candles, and other furniture, tanneries, &c. Its trade is chiefly in corn, legumes, salt, oil, and wine. From the portion of commerce it enjoys, Cagliari has, on the whole, a busy appearance. Provisions of all kinds are cheap and plentiful, except water. The Castle is supplied from cisterns and extremely deep wells. Extensive remains exist of a fine ancient aqueduct, which might be restored at a comparatively small expense. There are several other Roman antiquities, including a tomb in tolerably good preservation, and an amphitheatre excavated in the rock near the city walls. Vestiges of the ancient Greek city may be still traced beyond Stampace. A good carriage-road of recent construction connects Cagliari with Sassari.

Cagliari is the seat of a royal *audencia*, or head tribunal, and of the *cortes*, or states-general of the island; of a tribunal of commerce, an intendant-general, a general-commandant, and an archbishop with the title of primate of Sardinia.

This city is very ancient, its foundation being carried back to the fabulous ages. It was the residence of the king of Sardinia from 1738 to 1814, during the occupation of his continental dominion by the French. The latter bombarded it unsuccessfully in 1733. (*Smyth's State of Sardinia*, p. 205–222., &c.; *Marmora, Voyage en Sardaigne*.)

CAHEL, an inl. town of Ireland, co. Tipperary, prov. Munster, on the Suir, 96 m. S.W. by S. Dublin. Pop. in 1821, 3,288; in 1831, 3,408. Pop. of par. in 1831, 6,026; of whom 113 are of the established church, and 5,913 R. Catholics. The town is well built; the parish church, a good Roman Catholic chapel are large fine buildings; the Society of Friends have also a meeting-house. There is a market-house, bridewell, fever hospital, dispensary, schools on the foundation of Erasmus Smith, and large cavalry barracks. The staff of the Tipperary militia, and a party of the constabulary, are stationed here. The Earl of Glengall's mansion is in the town. Races take place annually in the neighbourhood. A manorial court is held every six weeks; petty sessions weekly. The linen and straw-plat manufacture are carried on upon a small scale; much is done in the corn trade. Markets are held on Fridays, fairs on 8th February, 12th April, 26th and 27th May, 20th July, 18th and 19th September, 20th October, and 7th December. The post-office revenue in 1830 was 388*l.*, and in 1836, 511*l.* The contemplated railroad from Tipperary to Killaloe will pass through the town, as does one of the mail-coach roads from Dublin to Cork, and that from Waterford to Limerick. The mail car from Clonmel to Limerick also passes through Caher. (*Railw. Rep.*)

CAHORS, a town of France, dep. Lot, of which it is the cap., on the Lot, 60 m. N. Toulouse; lat. $44^{\circ} 25' 59''$ N., long. $1^{\circ} 27' 17''$ E. Pop. ex com. 10,914. It stands principally on an eminence, almost surrounded by the Lot, and is for the most part ill built, with narrow, crooked streets. It was formerly defended on the land side by towers and ramparts, that stretched across the isthmus; but of these only the ruins now remain. It is traversed by the great road from Paris to Toulouse, and has 3 bridges over the river, one of which, built in the 12th century, is surmounted by 3 enormous towers. The cathedral has been supposed to be partly of Roman construction; but it is pretty certain that the most ancient part of the building is not older than the 6th century. With the exception of the hotel of the prefecture, the ancient episcopal palace, few of the other public buildings deserve notice. It is the seat of a bishopric, and has tribunals of primary jurisdiction and of commerce. Cahors had a university, founded in 1332; the famous jurist Cujas was, for a while, one of its professors, and Yvenon was of the number of its pupils. The university was united to that of Toulouse in 1751. At present it has an *académie universitaire*; a royal college or high school, with about 250 pupils; a diocesan seminary, with 150 pupils; a primary normal school; a public library with 12,000 volumes; a theatre; a society of agriculture, &c. The manufactures, which are not very considerable, consist principally of some descriptions of woollen goods and paper. There is contiguous to the town a departmental nursery. The excellent red wine, called the *vin de Graves*, is raised in its territory; and it has a good deal of trade in that and other wines, and in oil, hemp, flax, &c.

Cahors is supposed to be the ancient *Divona*, the capital of the *Caturci*. The Romans embellished it with several fine edifices, of some of which there still remain a

few vestiges. The principal of these are a portico, supposed to have made a part of the public baths; with the ruins of a large theatre or circus, and of an aqueduct for conveying water into the town. There have also been dug up fragments of columns, mosaics, and numerous medals of Tiberius and Claudius. In more modern times, it has undergone many vicissitudes. In 1860, it was besieged by Henry IV., and being taken, after an obstinate resistance, it was, despite Henry's efforts to the contrary, given up to military execution. (*Martinizère*, art. *Cahors*; *Hugo*, art. *Lot*, &c.)

CAIPIIA, or KAIFA, a small marit. town of Palestine, at the foot of Mount Carmel, on the W. side of the Bay of Acre. The harbour is one of the best along the coast (see *Acre*), and the ancient river Kishon flows past the town. It has a fortress with a garrison; but the most important and interesting building in the place is a hospice maintained by the monks of Mount Carmel, where strangers of all nations and religions are lodged and entertained. The Kishon is referred to in the song of Deborah and Barak (*Judges* v. 21.). It is famous also as the place where Elijah slew the prophets of Baal (1 Kings, xviii. 40). (*Robinson*, i. 193.; *Hogg*, ii. 178.)

CAIRO, or KAHIRA (*El Cha'irah*, Arab., "the Victorious," called by the inhabitants *Muarr*), the modern cap. of Egypt, and the second city of the Moham-medan world; chief residence of the Pacha, and seat of his government, near the right or E. bank of the Nile, about 12 m. above the apex of its delta, 112 m. S.E. Alexandria, 97 m. S.S.W. Damietta, and 75 m. W. Suez; lat. 30° 3' 21" N., long. 31° 18' 46" E. Pop., including its port of Boulac, Old Cairo, &c., about 240,000; of whom about 190,000 are Egyptian Moslems, 10,000 Copts, from 3,000 to 4,000 Jews, and the rest strangers from various countries (*Lane's Mod. Egypt*, &c.) Shape oblong, being nearly 4 m. in length, by 1½ to 2 m. in breadth, on sloping ground, midway between the Nile, and the E. mountain range of Mokattam, and occupying an area of about 3 sq. m. The distance of its N. extremity from the Nile at Boulac is upwards of a mile; but from its S; extremity to the bank of the river where Old Cairo stands, is somewhat less than ½ m. The intervening tract is laid out in gardens or otherwise cultivated, and watered by a canal. Viewed from a distance, Cairo has a magnificent and interesting appearance; but, like most other E. cities, its interior has a very different aspect from its exterior. It has, however, though still susceptible of much improvement, been, within these few years, quite changed from the wretched place so often depicted by travellers. Filth of every description, putrid ditches, drains never cleaned, unburied carrion, fragments of vegetable matter, all in various states of decomposition; want of free circulation of air, clouds of dust, and multitudes of deformed beings, are amongst the nuisances formerly complained of: but, according to more recent observers, the rigid police established by Mehemet Ali has already effected so desirable a change, that, for cleanliness, as well as order, quiet, and the absence of crime, Cairo "may now rank with the best governed capitals of Europe." (*MS. Account of Cairo*.) The clouds of dust, apparently the most difficult to deal with, have, as well as the want of a free circulation of air, been in a great measure obviated, by the removal of a number of high mounds of sand, scoria, ashes, earth, broken pottery, and other rubbish, which formerly encircled the city, some of them elevated 150 ft. above its level, and by the continual watering of the public thoroughfares.

On entering Cairo, the European visitor is gratified and interested with the entire contrast this city presents to all he has left behind him in Europe. In the words of a British resident, "here every thing is oriental; the style of the buildings, the shaded streets, the aspect and costumes of the people, the quiet and repose universally prevailing; no rattling of carriages and carts; no rushing, busy crowds, intent on their different pursuits; but in their stead, the solemn camel and his patient little attendant, the donkey, making their noiseless way under their burdens; the people gathered in groups around the doors of the *cafés*, chatting or smoking;—the shop-keeper listlessly reclining in his stall;—the sentinel, half asleep at his post, while the guard within lies stretched in profound repose;—all yielding to the influence of a climate as delightful as it is salutary; and which fortunately acts as an opiate, to some extent, against the many physical ills the people are exposed to from a bad and rapacious government." Cairo at present contains 240 principal streets, 46 public places (squares), 11 bazars, 140 schools for the instruction of children, 300 public cisterns, 1,166 coffee-houses, 69 public baths, 400 mosques, and several considerable hospitals. The whole city is enclosed by a stone wall, terminated on the S.E. by a detached and scarped rock rising more than 200 ft. above the level of the Nile, on which stands the citadel. This fortress, with the city walls, was built or restored by Saladin, about 1176. The walls have battlements, and lofty

towers at about 100 yards apart. They are, however, of little strength, and have been suffered, in many parts, to fall to decay. There are four gates, praised for their grandeur and magnificence. The streets still continue to be unpaved, and are mostly so very crooked, narrow, and irregular, that they might more properly be called lanes. There is but one as wide as Cranbourne Alley. Though deprived of a great deal of light, they are rendered cool, by the upper stories of the houses projecting over them, so as not unfrequently to meet each other.

By a stranger who merely passed through the streets, Cairo would be regarded as a very close and crowded city; but that this is not the case is evident to a person who overlooks the town from the top of a lofty house, or from the minaret of a mosque. The great thoroughfare streets have generally a row of shops along each side. Above the shops are apartments, which do not communicate with them, and which are seldom occupied by the persons who rent the shops. To the right and left of the great thoroughfares are by-streets and quarters. Most of the by-streets are thoroughfares, and have a large wooden gate at each end, closed at night, and kept by a porter within, who opens to any persons requiring to be admitted. The quarters mostly consist of several narrow lanes, having but one general entrance, with a gate, which is also closed at night; but several have a by-street passing through them." (*Lane's Mod. Egypt*, i. 7, 8.) The Jewish quarter is, as in all other cities, the filthiest; the Copts, Franks, and other nations, generally speaking, inhabit distinct quarters, though there is no restriction in this respect, the whole city being free to all. In the Frank quarter, where also many of the Armenian and Syrian Christians reside, the streets are rather wider than elsewhere. The houses are solidly constructed and lofty, being mostly two stories high, and frequently more; their lower parts are built or coated with the soft calcareous stone of the Mokattam mountains, the layers of which in front are often painted alternately red and white; their upper parts are commonly of brick; their roofs, which are flat, serve for many domestic purposes, and are the resort of the family in the cool of the evening. Most considerable houses enclose an open unpaved court, into which the doors and the windows of the principal apartments open. The windows of the upper apartments generally project 1½ ft. or more, and are commonly formed of wooden lattice-work close enough to shut out much of the light and sun, and to screen the inmates from observation, while they admit the air; occasionally, glass windows, which sometimes are finely stained, are made use of. The front doors of the larger houses are handsomely carved, painted, decorated with Arabic inscriptions, and furnished with iron knockers and wooden locks. The court-yard and ground floors commonly contain wells, fountains, pools, stables, and other domestic offices, and a hall sometimes very handsomely fitted up, in which the master of the house receives his visitors; the upper apartments are those of the women and children, and are reached by caravanseras, called by Mr. Lane *wekalehs*, and designed for the reception of merchants and their goods, are somewhat differently laid out; and such persons as have neither a wife nor a female slave are usually obliged to take up their abode in one of these buildings. (*Lane*, i. 30.) There are several open spaces or squares: *Esbekiah*, the principal, is surrounded by many of the finest palaces and other structures in Cairo; its centre is laid out as a garden, and is, like some of the other squares, annually overflowed by the inundation of the Nile. The waters of this river are conducted into the city by a canal, believed by Voynce, Shaw and others, to be the *Annua Trajanus* (ΤΡΑΙΑΝΟΣ ΠΟΤΑΜΟΣ) of Ptolemy's Geog. (lib. iv. c. 5.), and which, commencing at Old Cairo, runs through the whole length of the modern town, filling a number of public and private basins, and irrigating numerous gardens planted along its banks.* The citadel is, in many respects, one of the most interesting monuments in Cairo. Clarke (*Trav.* v. 127—129) adduces several authorities to prove that it stands upon the ground once occupied by the Acropolis of the Egyptian Babylon, erected by Cambyzes upon the site of the still more ancient Latopolis, a city almost as old as Memphis. This much, however, seems certain, that a similar structure existed here previously to the time of Saladin, to whom, according to Shaw (*Trav.* 265.), the restoration, rather than the construction, of the citadel should be ascribed. The rocky hill on which it is built is separated by a chasm about 400 yards wide from the Mokattam hills. Its walls are massive, rest on a foundation of scarped rock, and have recently been put into a respectable state of repair; but, being commanded by the Mokattam hill, on which a

* Previously to the annual inundation, the mouth of this canal is closed by a mound or pillar of mud, which, Dr. Clarke says, is called *Azee*, or "the Bride." The rushing in of the water carries away this mound; and this circumstance is believed by several authors to have given rise to the fabulous story of the annual sacrifice of a virgin to the Nile. (See Clarke, v. 108, 109.; Niebuhr, *Trav.* i. 69, &c.) The opening of the canal is celebrated with great rejoicings.

fort has been placed, and being open both on the R. and W. to the fire of artillery, it could not hold out for any length of time against a European force. Within its precinct are the palace and harem of the pacha, the mint, the council-chamber or divan, a mosque built by Mehemet Ali, a military arsenal, and various other public offices and works of the Mameluke monarchs. The pacha's palace and harem are plain white-washed buildings, presenting nothing remarkable, and the new mosque has some bas-reliefs in marble imported from Genoa, conceived and executed in the worst taste. The Egyptian coin is all struck in the mint, but the process hitherto pursued has been of the rudest kind. The arsenal contains foundries for brass and iron cannon, manufactories of small-arms, and workshops for the supply of all sorts of military equipments. Taken altogether, it is the finest establishment in Egypt. But the greatest curiosity in the citadel is Joseph's Well, supposed to have been dug by Saladin. It is 45 ft. in circ. at its mouth, being cut through soft calcareous strata to the depth of 276 ft., or to the level of the Nile, from which its water is most probably derived. A winding staircase conducts to its bottom, and Clarke observes, that for the general perfection of the work, "it may be compared rather to the labours of the ancient Egyptians than to any modern undertaking." From the ramparts of the citadel is displayed a noble panorama. To the E. are seen the obelisk of Heliopolis and the tombs of the Mamelukes, backed by an arid desert; to the S. the lofty quarries of Mount Mokattam with ruined castles, mouldering domes, and the remains of other edifices, above, below, and stretching beneath the heights far into the plain: S.W. and W. are the grand aqueduct, mosques, and minarets, the Nile, the ruins of Old Cairo, and the island and groves of Rhoda; beyond the river, on the S.W., the town of Ghizeh, amidst groves of sycamore, fig, and palm trees; still more remote, the pyramids of Ghizeh and Saccara; and beyond these the great Libyan desert. N.W. and N. may be discovered the green plains of the delta, sprinkled with white villages; and N. to N.E., as the foot of the spectator, is the city of Cairo, surrounded in the latter direction by heaps of sand. In 1311, this fortress was the scene of the massacre of the Mamelukes, by order of Mehemet Ali. In 1824, 4,000 individuals, and a great portion of the citadel, were destroyed by the explosion of a powder magazine.

Much yet remains in Cairo to evince the success with which the dynasties of Mussulman princes, who governed Egypt previously to the Ottomans, strove to beautify this city; and we might look in vain throughout the modern Saracenic world for any court so approaching in excellence the metropolitan mosque of El-Ashar, with those of Sultan Hassan, the Muristan, Hassan Ain, El Ghoree, and Zitkennab, the gate called Bab-el-Nasr (*Gate of Victory*), and one or two of the other gates; the aqueduct on the road to Old Cairo, and the tombs of the Mamelukes. The principal mosque—that of El-Ashar, or Lazarus—is in the middle of the most populous quarter. That of Sultan Hassan, said to be a work of the 13th century, is the largest mosque; its dome is considered the finest in Cairo, and beneath it, in its interior, is the harem tomb of the sultan, who here it bears. The body of the mosque is closed by a bronze door beautifully inlaid with silver, and is surrounded by a large open square court, with shrines under fine bold arches. This mosque is also remarkable for the height of its two minarets, the variety of marbles used in its construction, its arabesque ornaments, mosaics, and inscriptions. The mosque of Tagiloum is the most ancient of all, having been erected about 887, by the sultan Achmed Ebn Tagiloum, the founder of a new dynasty in Egypt, nearly a century before the city of Cairo was built. It consists of a vast open court surrounded by a colonnade of marble and granite pillars, supporting a double row of arches of the latest Saracenic style, and bearing a great resemblance to the Patio de los Naranjos adjoining the mosque at Cordova. It contains rich and delicate carving, but is now much neglected. The mosque of Hassan Ain, on the contrary, is greatly thronged, being considered by far the most holy in Egypt, and surpassed in sanctity by few in the Mohammedan states. Outside the walls of the city, and between them and the Mokattam hill, are the celebrated tombs of the Mameluke sovereigns, some of which are fine bold specimens of the Arabic style of architecture of the 13th and 14th centuries; they are chiefly of white marble, and abound with fine arabesque ornaments and carving. There are several other cemeteries in different parts of the environs.

Old Cairo, which is believed by Pococke to have succeeded to the town and fortress of the Egyptian Babylon (*Descr. of the East*, i. 95.), is chiefly occupied by Copts: it contains 12 Christian churches, some of them large and sumptuous buildings; the ancient granaries, bearing the name of Joseph; a grotto, castle, &c., and a machine for raising the water of the Nile into the

ancient aqueduct. This, which is exclusively appropriated to the supply of the citadel with water, is raised on arches, and proceeds from Old Cairo by a winding course, and a length of about 2 m. Boulac, the port of Cairo, contains the principal manufactures, and is the seat of most of the trade. It is dirty, nearly as large as Blackwall, and presents the same busy scene, attended with much more noise. "On the banks of the river," says Captain Scott, "are heaped up pyramids of millet, peas, and corn, the property of the government, and placed there, exposed to the sun, dew, and rain, ready for shipment. The shore is lined with boats of all descriptions, discharging their cargoes or advertised for hire." Along the banks of the Nile, between Boulac and Old Cairo, embosomed in groves of orange, sycamore, and acacia, are a number of handsome palaces, the most conspicuous of which is that belonging to Ibrahim Pacha. This palace is built in the Turkish style, and contains some handsome apartments, gaudy furniture, and a large collection of Egyptian antiquities. Its extensive gardens and plantations occupy the plain between it and Cairo; towards the Nile the grounds are laid out in terraces ornamented with statuary, which give them quite a European appearance. In the Nile, immediately opposite Cairo, are the two considerable islands of Boulac and Rhoda; the latter, which is nearly 2 m. in length, is almost entirely the property of Ibrahim Pasha, and is laid out as pleasure-grounds open to the public. Its S. extremity, however, between Old Cairo on one bank, and Ghizeh on the other, is occupied by popcorn, magashier, and millet. Here also is the celebrated Nilometer, a graduated pillar in a large square well, having a subterraneous communication with the river. From a court leading to this structure a flight of steps descends to the water, called the Steps of Moses, from a tradition of that being the spot where the deliverer of the Jews was found amongst the bulrushes.

Most of the higher class of Turks, and individuals holding chief public employments, have their residences in Cairo, where they live in much splendour. These are gathered in the square of *El Esbekiah*; and it was in the garden of one of these that the French general Kleber was assassinated. Some of the public houses are very spacious, and greatly ornamented; and several public fountains are worthy of notice. There are about 20 stone bridges over the canals of the city and plain, but none worthy of special notice. The coffee-houses are generally very plain, and the shops are merely small recesses capable of holding two or three persons. Each separate bazar is usually devoted to one kind of commodity.

The commerce of Cairo appears at present to be in a very depressed state, owing, as is said, to the injuries inflicted on it by the pacha's monopoly system, the rapacity of his government, the insecurity of property, the alleged corruption of the courts of law, the depreciation of the currency, and various other causes. The plan now acted on, of transporting all the produce to Alexandria to be disposed of, has also occasioned the removal of many of the principal merchants to that city. Numerous houses are becoming untenanted, and falling to ruin; and the new ones that are raised are comparatively mean and poor. There is now no display of Cashemeres, rich silks, and velvets, as we are told there were in the times of the Mamelukes; no crowding of strangers to the capital of Egypt. Matters are every year getting worse; and we are assured that, "unless a change of system takes place soon, Cairo may be blotted out of the map as a place of commerce." The most flourishing trade is that of slaves, for which there is a regular market. Georgians, Nubians, Abyssinians, &c., are met with; but the principal supply comes from Darfur, and other countries in the interior. Black slaves are met with in every family in Cairo. Two English hotels have been opened for travellers and the steam communication with India has been established; but neither steam conveyances nor railroads, though much talked of, have yet come into operation, to aid the commerce of Cairo. The only Egyptian steamboat on the Nile is the private property of the pacha, and is reserved for his own use.

Within the city Mehemet Ali has established an extensive cotton factory; a gun factory, furnishing annually 10,000 muskets; a manufactory of saddles, bridles, knapacks, belts, and every other leather equipment required for the army; a copper-mill, and machinery for boring gun-barrels, both driven by steam; a paper-mill, &c. At Boulac he has a foundry; a cotton-mill; a woollen cloth factory, with dye-works attached; a cotton-printing establishment; chemical works, &c.; and at Mabetta, not far distant, there is a large cotton factory worked by steam, and furnished with the newest machinery in use in Europe. Besides these, the pacha has large gunpowder and saltpetre factories in the neighbourhood, and a large lan-yard on the road to Old Cairo. These establishments supply the clothing and accoutrements required for the army and navy, as well as most articles in common use throughout the country.

Cairo has always been, and still is, the seat of the best schools for Arabic literature and Mohammedan theology. The mosque of El Azhar has attached to it a library and college, where lectures on the Koran, law, ethics, mathematics, medicine, &c. were formerly delivered to students, who flocked to it from every part of the Mohammedan world. But Mehmet Ali having appropriated the greater part of the property belonging to this mosque to the service of the state, the college attached to it has considerably declined. This, however, is but a trifling deduction from the advantage that has already resulted, and which, no doubt, will continue to result, from the teaching, introduced by the pacha, of the rudiments of European arts and sciences into the public schools. Nothing short of government interference could have effected this signal improvement. There are 3 primary schools in Cairo, which afford education to 600 boys, who are also clothed and fed. At Boulac there is a school of engineers, with 180 pupils. At Aboosabul, within a mile of the city, is a preparatory school, with 1,500 pupils; a school of medicine, with 200 students; a veterinary school at Schoobra; a school for accountants, &c.; and schools for the artillery and cavalry service at Ghizeh, and elsewhere in the vicinity. The prejudice against these schools was at first so strong that the pacha was obliged to resort to compulsion to obtain scholars, and to give them regular pay. The latter is still continued; but compulsion is no longer necessary to obtain pupils. Regimental schools are also established, and primary schools are attached to the greater number of the mosques. The pacha has established a printing press at Boulac, from which a weekly paper in Arabic issues; and at which many popular works in history and science have been printed for the use of students. The principal charitable institutions in and near Cairo are—a military hospital, in the square of El-Eskehiah, capable of accommodating 1,000 patients; another large military hospital about a quarter of a league from the city, composed of four ranges of buildings, enclosing a square, and containing 64 spacious apartments, with 40 beds each; museums of physics and natural history, a chemical laboratory, and all necessary offices. In the city is an hospital for the Egyptian navy, with two general hospitals; and a lying-in hospital, under the direction of a French female practitioner, with a number of pupils. There is also a lunatic asylum; but the unhappy inmates are caged and chained, and present a melancholy and revolting sight. All the medical establishments are under the superintendence of the well known Clot Bey, the originator of most of them. The courts of law are held in a large new building, erected by the pacha.

Most European nations have vice-consuls resident at Cairo: it is the seat of the patriarch of the Coptic church; there are both Roman Catholic and Greek convents presided over, by dignitaries called patriarchs; and two English missionaries are established in the city. There are, however, comparatively few European inhabitants in Cairo, and they are for the most part poor and without influence. The city is usually garrisoned by two regiments of 4,000 men each, one stationed within the citadel, and the other encamped outside the walls.

The neighbourhood of Cairo abounds with places and objects possessing great interest. The pyramids and the remains of the city of Heliopolis, the *On* of the Scriptures, are treated of under the articles GHIZEH, EGYPT, &c. About 2 m. N. from the city, the country palace of Shoobra, belonging to the pacha, is pleasantly situated on the bank of the river, and connected with Cairo, for the whole distance, by a fine avenue of acacias and sycamores. Mehmet Ali resides here without any pomp for a great portion of the year, and the grounds, which have been agreeably laid out, are generally open to the public. A few miles to the N.E. of Shoobra, is the scene of the victory obtained by Kiober over Youssef Pacha, in 1800.

Cairo is supposed to have been founded by Jauhar, an Arab general under the first Fatimite caliph, in 970. The caliph Moos afterwards made it the capital of his dominions, which distinction it retained till the overthrow of the Mameluke sovereignty by the Turks, in 1517. It was the residence of the pacha of the Turkish province of Egypt till 1798, when it was taken by the French, who retained it until its capture by the English and Turks, in 1801. Not long after the re-instatement of the Turkish rule in Egypt, Mehmet Ali became viceroy; and under him Cairo has once more become the capital of a virtually independent and extensive empire. (*M.S. Account of Cairo*; *Lane's Modern Egyptians*, vol. i.; *Clarke's Trav.* vol. v.; *Scott's Egypt and Candia*, pp. 125, 217., &c.)

CAITHNESS, a marit. co. of Scotland, occupying its N.E. extremity, having W. Sutherland, and N. E. and S. the ocean. Dunnet Head, on the N. shore of this co., lat. 58° 40' N., long. 8° 22' W., is the most northerly point in G. Britain: area, 446,080 acres, of which above 90,000 are cultivated, 6,400 waste, and the remainder

mountains, moors, and mosses. The mountains lie principally along the confines of Sutherland, terminating to the S. in the stupendous precipice called the Ord of Caithness. But with this exception, the rest of the country is mostly undulating or flat, consisting principally of vast tracts of mossy moors, covered with low stunted heath, and destitute of wood. Principal rivers, Thurso, Wick, and Dunbeath. Owing to its being nearly surrounded by the sea, the winters are less severe than might have been expected, but the summers are in general cold and wet. Property in a few hands, and mostly entailed. Farms often small: and the practice of underletting, and of stipulating for payment of a portion of the rent in services of various kinds, used to be very prevalent. These practices are now, however, on the decline; and notwithstanding its remote situation, this co. has astonishingly improved within the present century, by the opening of new roads, consolidating small farms, taking in waste land, improving the breeds of cattle and sheep, &c. A great number of superior farm-houses and offices have been constructed of late years; but, generally speaking, the huts of the peasantry are still poor and miserable. Oats, bear or bigg, and potatoes, are the principal crops. Average rent of land in 1810, 1s. 6d. an acre. Wick and Thurso, its only towns, are, at present, the principal seats of the British herring fishery. Lime-stone is abundant, and is burned with turf. The inhab. of Caithness are of Scandinavian or Gothic origin; and, except along the border of Sutherland, Gaelic or Erse is neither spoken nor understood. All ranks and orders speak English. Caithness contains 10 par., and had, in 1831, 6,036 inhab. houses, 6,904 families, and 34,529 inhab., of whom 16,359 were males, and 18,170 females. It sends 1 mem. to the H. of C. for the co., and Wick unites with other boroughs in returning a representative. Co. constituency in 1838-39, 433. Valued rent, 37,266*l.* Scotch; annual value of real property in 1815, 35,469*l.*

CAJAZZO, a town of Naples, prov. Terra-d'Avellino, cap. cant., on a hill near the Volturno, 11 m. N.E. by E. Capua, 10 m. S.W. It is very ancient, and is defended by a castle built by the Lombards. Besides a fine cathedral, it has several other churches, with convents, a college, an hospital, and a seminary. Its territory produces good wine.

CALABOZO, an int. town of Venezuela, prov. Caracas, in the *Ulanos*, near the Guarico river, 11 m. N. R. by E. Capat; lat. 8° 55' N., long. 67° 42' W. Pop. 5,000. It has a good church, and several villages surrounding it: many of its inhab. are prosperous cattle-farmers. The pools in its neighbourhood swarm with electrical eels. (*Humboldt's Pers. Nar.* iv.)

CALABRIA, an extensive prov. of the Neapolitan dominions, the most S. portion of Italy, between 37° and 40° 7' N. lat., and 15° 32' and 17° 13' E. long.; having N. the prov. Basilicata, N.E. the Gulph of Taranto, S.W. the Strait of Messina, and in the rest of its extent the Mediterranean: it comprises the chief of the two peninsulas at the extremity of Italy, and forms what is called the foot of the Italian boot. Shape very irregular; it is 165 m. in length, N. to S., but varying in breadth from 15 to 70 m. Area 6,789 sq. m. Pop. (1833) 969,180.

In most points, Calabria affords a striking contrast to the peninsula of Otranto, on the other side of the Tarantine Gulph; its shores are extremely irregular, and present many capes or headlands: the principal are those of Colonne and Rizzuto, on the E.; Spartivento, on the S.; and Valtiano, on the W. coasts: the principal gulphs are those of Taranto (which it assists in forming) and Squillace, on the E.; Gioja and S. Eufemia, on the W. shores. By far the greater part of Calabria is mountainous; the principal Apennine chain enters it at Mount Pollino, and runs at first S. near the shore, as in Italy, then E., and lastly in a S. direction to its extremity. It consists of lofty and remarkable branches to the E., the Silense mountains, which occupy most of the central and wider region of Calabria. The Apennines here attain a greater height than in the central prov. of the king. of Naples, and the summits of many of them are covered with snow from Dec. till March. Monte Sila is 4,632 ft., Monte Alto (Aspromonte), 4,110 ft., and the pass of Nicaastro, 3,246 ft., above the level of the sea.

The plains are few, and of no great extent; the largest are in the N.E., on the banks of the Crati and Coselle, and on the E. coast; in the W. the lowlands consist of only a succession of narrow valleys. The mountain streams are numerous, discharging themselves into both seas; the larger rivers, which, however, require no particular notice, are mostly in the central parts of Calabria. There are many small lakes around the E. shore, but none worthy of especial notice. Calabria produces corn, rice, oil, wine, agrum, and fruits of every kind; silk, sugar, manna, wild honey, tobacco, saffron, resins, liquorice, many medicinal plants, and dyes; forests of oak, elm, chestnut, &c.; it has also veins of gold and silver, iron, marble and alabaster; and yields besides crystal, rock salt of the purest kind, and sulphur. Great

numbers of fish surround the coasts, and game abounds in its forests. It is divided as follows:—

	Ares. Sq. m.	Pop.	Chief Towns.	Pop.
Calabria Citra	3,519	285,360	Cosenza - Rosarno - Cassano - Bisignano - Reggio -	18,000
Calabria Ultra I.	1,484	250,800	Cantanzaro - Monteleone - Squillace -	17,000 11,461
Calabria Ultra II.	1,786	335,000		

No part of Europe presents more magnificent scenery than Calabria. On entering it from the N., at Monte Giordano, the undulating hills are lost; the Apennines assume a bold and steep character, and are broken by deep hollows and ravines, and clothed with forests of massive timber. The Bruttian forest of Silla, which occupies to a great extent all the S. part of C. Citra, and the N. of C. Ultra II., consists of oak, elm, sweet chestnut, beech; and pine and fir toward the summits of the mountains. In other parts the Apennines are covered almost to their tops with woods of fine cypress, laurel, hazel, olive, orange, and cedar trees; near Carlati the manna-ash prevails. There are many pastures, however, in the region of La Silla; but habitations are very thinly scattered through it, and towns or hamlets are very few. Around the coast of Calabria Citra there are some cultivated tracts; that near Roseto yields olives, capers, saffron, corn, and cotton, on the high lands near the sea; the latter is cultivated also at Cassano. Trees are wanting on the banks of the Neto, and the country about Cotrone is one of the most uninteresting in Calabria. From Cantanzaro to Squillace the ground is level; the soil full of brackish stilly deposit, and fertile in corn, maize, and mulberry-trees. At Chiaravalle the fields are cultivated with flax; the vines are few, cherry orchards numerous, and hedges of holly, woodbine, and sweet-briar, and banks of heart's-ease and wild strawberry. S. Calabria has many towns and villages, various culture, and fine woods; its scenery is decidedly superior to that of Sicily. The environs of Reggio are celebrated for their beauty, and its neighbourhood is well stocked with cattle; from Tropaea to Monteleone the country is like a park, but quite unenclosed, adorned with large clumps of olive-trees. Thence to the Apennines is a wooded vale, through which the Angitola winds; beyond this is a marshy country; and on the banks of the Amato is the field of Malda, celebrated for the action fought there in 1806. N. of Nicastro the main road passes through a fine plain embraced by the mountains, and on the high grounds hence to Cosenza the breaks in the woods display on either side views of wooded vales, sprinkled with towns and villages, and the sea beyond. Some flat grounds prevail N. of Cosenza, as on the banks of the Crati, which are fertile in corn, vines, and mulberry-trees, but subject to malaria; towards the Gulph of Policastro there is a tract of pasture land, feeding many flocks of sheep.

Calabria is subject to earthquakes: a most terrific visitation of this sort occurred in 1793, which swallowed up a great many towns and villages. Near S. Basile there are traces of former volcanoes, and the soil is one mass of lava. Several spots are renowned for the events of ancient history; numerous are the sites of ancient Greek cities, as Sybaris, Crotona, &c.; near Cape Vaticano, Sextus Pompeius defeated at sea the navy of Augustus. Alaric the Goth, the conqueror of Italy, was buried under one of the tributary streams of the Crati. No Italian prov. of equal extent possesses so many Gothic remains.

The arts and manufactures of Calabria are in a very depressed and backward state. Silkworms are cultivated largely in some places, and silk is produced in tolerable quantity, and of good quality. It has a darker colour than in other Neapolitan provinces, in consequence of feeding the worms on the leaf of the red mulberry, which prevails in every part of this territory. The condition of the peasantry is generally bad; a consequence, principally, of the feudal privileges and exactions of the barons. Smuggling is very prevalent, and outlaws and mendicant friars are both very abundant. The country, and its inhabitants, though susceptible of the greatest improvement, are alike uncultivated and savage. No attention is paid to the education of the peasantry, so that the grossest ignorance and superstition are widely prevalent.

The peasants are neither so tall nor so good-looking as those of the rest of Italy. The outline of their faces is African; their complexion a pale olive, or copper-colour; their hair coarse, black and frizzled; but they have beautiful teeth, and their countenances are expressive, and mixed with a look of melancholy and wildness. They are vigorous, agile, active, and nervous; quick, gay, courageous, faithful, and hospitable; but irritable and prone to passion. In the N. a solidity, like that of

the Germans, is manifest in their disposition; while, in the S., their manners approach more to those of the Greeks. Many Greeks reside in S. Calabria, who are much handsomer in their persons and dress than the Calabreses. The dress of the latter varies; in the S. it is like that of the Sicilians, and bonnets are worn; in the N. they wear hats; the men dress in a short close jacket, and close hose, both of black cloth; leathern gaiters, and shoes of undrest skin, tied with thongs of the same; or else in a coarse long jacket, coming down far below the waist; wide hose full of plaits; and ill-cut gaiters of coarse cloth, fastened across with cords; the females wear a large full-platted petticoat of dingy scarlet. The Calabreses speak a peculiar Italian dialect, pronouncing the *d* and *t*, the *p* and *b*, alike, &c. They are generally poor; the marriage portion of a girl is frequently only a small piece of vineyard, or even a single fruit-tree. Gipsies are numerous, occupying themselves in making small iron articles, bodkins, &c.

History.—Before the dominion of the Romans, Calabria was subdivided into many republics, forming part of Magna Græcia, a region that comprised all Italy S. of Naples. After the fall of the Western empire, it fell successively under the rule of Odoacer, Theodoric, and subsequently of the Greek emperors, who possessed it till the year 929, when the Arabs, from Sicily, established themselves in a few forts, whence they extended their rule over the rest of the province. A century and a half afterwards, it was conquered by the Normans, when it formed a part of the dominions of Robert Guiscard, Duke of Apulia, with the history of which province its own is subsequently connected. (*Rampoldi, Corografia dell'Italia*, i. 350–352, ii. 350; *Hoffmann, Europa und Seine Bewohner*, i. 41; *Swinburne's Two Sicilies*, i. 241–352, ii. 426–472; *Craven's Tour in the S. Prov. of Naples*, 201–240.)

CALAHORRA (an. *Calagurnis Nasicæ*), a city of Spain, prov. Sorla, on the *Cidacos*, near its confluence with the *Ebro*; 24 m. S.E. Logroño, 43 m. S.S.W. Pampeluna. Pop. 6,667. It has a cathedral and an episcopal palace. The neighbourhood produces grain, pulse, hemp, flax, fruit, wine, and oil. This was a Roman town of some note, the reputed birthplace of Quintilian.

CALAIS, a sea-port town of France, dép. Pas-du-Calais, cap. cant., on the Straits of Dover, 20 m. N.N.E. Boulogne; lat. 50° 57' 31" N., long. 1° 51' 16" W. Pop. 10,858. The town is of a square form, and is well fortified; being surrounded by walls and bastions, and protected on the W. side by a strong citadel, commanding the town and harbour, and towards the sea by several forts; the country round may, also, in case of necessity, be laid under water, by means of sluices. It is generally pretty well built, the houses being of brick, and the streets broad and straight; but it is said to be *peu animé*, and *très-monotone*. It labours under a great deficiency of spring-water, the want of which is but indifferently supplied by the rain-water, collected in cisterns. In the middle of the town is the *place d'armes*, having round it several good houses, and a handsome Hôtel de Ville. The gate on the road to Paris, constructed in 1685, is a fine piece of architecture. The parish church, erected by the English, is a large, fine building, with a lofty spire. A tower, near the Hôtel de Ville, serves as a light-house; the light, which is revolving, being elevated 118 ft. above the level of the sea. A pillar has been erected on the spot where Louis XV. landed on his return to France in 1814. The Hôtel Dessin, comprising, besides an excellent inn, a theatre, public baths, and a posting establishment, is the finest building in the town. The ramparts, which are planted with trees, form an agreeable promenade. Calais derives its principal importance from its being the nearest French port to England: it is only 204 m. from the South Foreland, and 224 m. from Dover, with which, and Ramsgate, London, and other English ports, it has daily or very frequent communication. The entrance to the harbour is between two wooden piers, nearly 4 m. in length. Unfortunately it dries at ebb tide, and within the piers has only from 15 ft. to 18 ft. at high water, according to the winds. There is, however, excellent anchorage-ground in the outer roads, from 2 to 3 m. N.W. from the harbour. There is here a tribunal of commerce, schools of hydrography and design, a public library, with 12,000 vols., &c. Manufactures trifling, consisting of soap and oil-works, salt refineries, &c. Vessels are fitted out for the cod, herring, and mackerel fisheries, and a considerable trade is carried on in salt and spirits; at present, however, its principal dependence is on the resort of travellers to and from England. It communicates with the *Aa*, and consequently, with St. Omer, by means of a canal about 121 m. in length.

Edward III. took Calais, after a lengthened and memorable siege, in 1347. The obstinate resistance made by the beleagued is said to have so much incensed the conqueror that he determined to put to death six principal burgesses of the town, who, to save their fellow-

citizens, had magnanimously placed themselves at his disposal. But, if he ever really formed any such resolution, he was driven from it by the tears and entreaties of Queen Philippa. The English retained possession of Calais for more than two centuries, or till 1558, when it was taken by surprise by the Duc de Guise. In 1596 it was taken by the Archduke Albert; but in 1598 was restored to France by the treaty of Vervins. It deserves to be mentioned, to the honour of Calais, that it is one of the very few towns of France in which no individual lost his life on account of politics during the Revolution. (*Hugo, art. Paa-du-Calais; Purdy's English Channel; Hume's England*, cap. 15.)

CALAIS (ST.), a town of France, dép. Sarthe, cap. arrond., on the Anille, 26 m. E. S. E. Mans. Pop. 3,783. It has a fine Gothic church, a large square or place, and two promenades; and is the seat of a tribunal of primary jurisdiction, and of a communal college. There are manufactures of serges, linen, and cotton stuffs, with tanneries and glass-works. The country round is barren, being principally occupied with heaths and forests.

CALASCIBETTA, a town of Sicily, val Calanissetta, cap. cant., 15 m. N. E. Calanissetta. Pop. 5,073. There are in the environs numerous castles.

CALATABELLOTA, or CALTABELLOTA, a town of Sicily, val di Girgenti, on the summit of a lofty mountain near to, and overlooking, the course of the river of the same name, 10 m. N. E. Sciacca. Pop. 4,662. It is very difficult of access, and is said by Swinburne to be the worst situated place, as respects the comforts of life, he had ever seen.

Triccala, a strong city of ancient Sicily, was situated within a short distance of the modern town. This city is famous in history, from its having been the stronghold of the revolted slaves during the dangerous servile insurrection that broke out in Sicily, 104 or 105 years a.c. Owing to the strength of the city, and the talents of their leader Athenio, the insurgents were able to defend themselves for 4 years; and were not subdued till a considerable army, headed by Aquilius, the colleague of Marius, was sent against them. (*Ancient Universal Hist.* xii. 20. 4vo. ed.) In more modern times, Roger I. defeated the Saracens, with great slaughter, in the vicinity of this town. (*Swinburne's Two Sicilies*, ii. 258. 4to. ed.)

CALATAFIMI, a town of Sicily, val di Trapani, cap. cant., 7 m. S. W. Alcamo. Pop. 8,283. It is ugly and ill built. Its castle, now in ruins, stands on the summit of a hill, in a commanding situation. The environs are well cultivated. (*Swinburne*, ii. 231.)

CALATAGIRONE, or CALTAGIRONE, a town of Sicily, val di Catania, cap. distr., on the declivity of a mountain, 35 m. S. W. Catania. Pop. 21,616. It stands in a salubrious situation, and is said to be the richest and best governed city of Sicily. Streets clean, spacious, well paved, and tolerably lighted; many of the palaces and other public buildings are handsome, and the market is well supplied with provisions at moderate rates. It is the seat of a bishopric; has several churches and convents, a royal college, an hospital, and an orphan hospital. The inhabitants are industrious, and are said to have made the greatest proficiency of any in the island in the useful arts. A kind of soft argillaceous earth is found here, and manufactured into tolerable imitations of the Saxon porcelain; groups of figures, in the various costumes of Sicily, are also formed from it with infinite taste. The neighbourhood affords saffron and yellow ochre, hitre, soda, and other colouring materials. A grand festival and fair is held for 15 days in October, during which great sales are made of cattle, cloth, honey, wax, poultry, and agricultural produce. It is supposed from the existence of sepulchres and other remains of antiquity, to occupy the site of the *Hybla Herrea* of the ancients. (*Swinburne*, ii. 307; *Smyth's Sicily*, p. 197.)

CALATANISSETTA, a town of Sicily, cap. prov. of the same name, in a large and fertile plain, near the right bank of the Salso, 62 m. S. E. Palermo. Pop. 16,563. It is well built; has broad and straight streets, a fine square; no defence, but a castle, and has a civil and criminal court. In its environs, at a place named Terra Pilata, are two saluses that emit hydrogen gas.

CALATAYUD (an. *Biblitis*), a city of Spain, Aragon, cap. district, on the Jalón, at its confluence with the Jiloca, at the foot of a hill, 45 m. S. W. Saragosa, 115 m. N. E. Madrid; lat. $41^{\circ} 25' N.$, long. $1^{\circ} 33' W.$ Pop. 8,998. It has a large square, full of shops; pleasant and shady promenades; a fountain with 11 *fets d'eau*, and a magnificent *lavadero*; an episcopal palace; a hall for the meetings of the Junta; a house of industry, two hospitals, and barracks for 4,000 troops. Streets and houses regularly built, and there are 3 bridges over the river. It has several elementary schools, and 2 grammar-schools, with manufactures of common cloths, brown paper, leather, &c. The soil abounds in cathartic salts, and there are several chalybeate springs, and extensive caverns, from whose roofs hang concretions, said to be sulphate of lead. The town has three

suburbs. It is rather a desirable place to live in, though dull, provisions being good and abundant. This was a Roman town, and is celebrated as being the birthplace of Martial, who has eulogised its manufactory of arms. (*Milano*.)

CALATRAVA LA VIEJA, in Spain, the remains of the ancient city of Calatrava, the *Oretum* or *Oria* of the Romans, on the Guadiana, prov. La Mancha, 12 m. N. E. Ciudad Real, 15 m. N. Almagro. The order of the Knights of Calatrava had its origin here. The city being menaced by the Moors, in 1155, was abandoned by the Templars, who had held it for 10 years, and Sancho III. promised it to any one who would undertake its defence. Raymond, abbot of Fitero, and Diego Velasquez, offered themselves for the task, and were furnished with money, arms, munitions, &c. A crusade was proclaimed, and plenary indulgences were granted to all who should be found at the defence of Calatrava. The Moors, alarmed at the report of these preparations, abandoned their enterprise, and Velasquez, in his turn, made several incursions into their territories. On this, the king confirmed the grant, with new donations. The order was then regularly organised, in two classes, one for the service of the choir, and the other for the field; but the knights, on the death of Raymond, separated themselves from the monks, and chose a grand master distinct from the abbot, who returned with his monks to Fitero. The knights subsequently acquired great fame and riches in their contests with the Moors; but having sustained serious reverses, and quarrelling among themselves, the pope adjudged the grand-mastership in perpetuity to the crown of Spain. The order has at present about 80 commanderies. (*Perron, Collect. Historique des Ordres de Chevalerie*; p. 79. Paris, 1820; *Milano*, ii. 265.)

CALCUTTA, a celebrated city of Hindostan, prov. Bengal, cap. of the British dom. in the East, and seat of the supreme governm., in a level tract on the E. side of the Hooghly river, an arm of the Ganges, about 100 m. N. of the Bay of Bengal; lat. $22^{\circ} 23' N.$, long. $88^{\circ} 29' E.$ Pop. (1837) about 230,000, exclusive of perhaps 150,000 more, who come daily from the suburbs into the city. On approaching Calcutta from the sea, the stranger is much struck with the magnificence of its appearance; the elegant villas on each side of the river; the government botanical gardens; the spires of the churches and temples, and the strong and regular citadel of Fort William, including Fort William, the esplanade, &c. Calcutta extends along the bank of the river, from Kidderpore to Cossipore, a distance of 6 m., with a variable breadth, but averaging about 1½ m. A handsome quay, similar in many respects to that of Petersburg, called the Strand, is continued for 2 or 3 m. along the bank, from the point at which the esplanade meets the city: it is raised 40 ft. above low water mark, and furnished with about 30 principal ghauts; or flights of steps, for landing, &c. The Hooghly is here about a mile in width at high water, or least twice as broad as the Thames below London Bridge, and is like that river, crowded with shipping; vessels of all descriptions, up to 600 tons burden, being able to lie almost close to the quay. The residences of Europeans are mostly detached from each other, built in the Grecian style of architecture, and situated in Chowringhee (the S. portion of the city, lying at the edge of a portion of the esplanade), or in the suburbs in that quarter, as Garden Reach, where the villas exhibit much beauty, and are surrounded by plantations of mango, jack, and other fruit trees. The citadel, or Fort William, which stands near Kidderpore, about ½ m. S. W. the city, is not only the strongest and most complete fortress in India, but in the British dominions; it is, however, large, and would require for its proper defence, 10,000 men. It is an octagon; the five faces on the land side are regular, the three others, toward the river, vary according to circumstances. The bastions have very salient orillons, and every curtain is covered with a large half-moon, mounting 26 pieces of cannon: the outworks are very extensive, but not much raised above the level of the surrounding country, and Fort William does not, therefore, make an imposing appearance from without. It contains an excellent arsenal and a cannon-foundry, &c.; its interior is beautifully laid out in walks and grass-plots, shaded with rows of trees, intermixed with piles of shells and cannon balls. It is usually garrisoned by one strong European regiment, two native regiments, and a strong detachment of artillery; was built by Lord Clive soon after the battle of Plassey; and has cost the E. I. Comp. from first to last 2,000,000*l.* Calcutta has no defence other than this fortress; the ditch and mound, constructed by the early settlers as a barrier against the Maharatras, were destroyed by Marq. Wellesley, and their place is now occupied by the "circular road," which marks the boundary of the liberties of Calcutta, and of the administration of English law. Between the fort and the city there is an extensive open plain called the Esplanade, being a continuation of the glads, the fashionable resort for driving and riding, as Hyde Park

is in London. On it is the government-house, in a line with which there is a range of very handsome dwelling-houses. Chowringhee, formerly a collection of huts, is now a village of palaces, and extends for a considerable distance into the country. Calcutta, when viewed from the Chandel ghaut, or from any other spot to the S., certainly gives the impression of a very noble city; this impression, however, as is common in all eastern cities, is soon dissipated on penetrating into its interior. Behind Chowringhee, the native or "Black Town" stretches along the river to the N., and exhibits a remarkable contrast to the part inhabited by Europeans. Its streets are dingy, narrow, and crooked, and consist of "huts of earth baked in the sun, or of twisted bamboos, interspersed here and there with ruinous brick bazars, pools of dirty water, cocoa-trees, and little gardens, and a few very large, very fine, and generally very dirty houses, of Grecian architecture, the residences of wealthy natives. There are some small mosques of pretty architecture, and very neatly kept, and some pagodas, but mostly ruinous and decayed; the religion of the people of Bengal being chiefly conspicuous in their worship of the Ganges, and in some ugly painted wooden or plaster idols, with all manner of heads and arms, which are set up in different parts of the city. I fill up this outline with a crowd of people in the streets, beyond any thing to be seen even in London; some dressed in tawdry silks and brocades; more in white cotton garments; and most of all black and naked, except a scanty covering round the waist; besides figures of religious mendicants with no clothing but their long hair, and beards in elf locks; their faces painted white, yellow, or dirty red; their beads in one glastly lean hand, and the other stretched out like a bird's claw to receive donations; marriage processions, with the bride in a covered chair and the bridegroom on horseback, so swathed round with garlands as hardly to be seen; tradesmen sitting on the ground in the midst of their different commodities; and old men, looking on, perched, naked as monkeys, on the flat roofs of the houses, or karts drawn by oxen, and driven by wild looking men with thick sticks, so unmercifully used as to undecieve perfectly all our notions of Brahminical humanity; attendants with silver maces, pressing through the crowd before the carriage of some great man or other; no women seen, except of the lowest class, and even these with heavy silver ornaments on their dusky arms and ankles; while coaches, covered up with red cloth, are seen conveying the inmates of the neighbouring seraglios, to take what is called 'the air'; a constant creaking of cart wheels, which are never grained in India; a constant clamour of voices, and an almost constant thumping and jingling of drums, cymbals, &c., in honour of some of their deities; and add to all this, a villainous smell of garlic, rancid cocoa-nut oil, spiced butter, and stagnant ditches; and you will understand the sounds, sights, and smells, of what is called the 'Black Town' of Calcutta." Under the administration of the Marquis of Hastings, large sums were spent in the improvement and ventilation of Calcutta, a street 60 ft. wide was carried through its centre in its longest diameter, and several squares were laid open, each having a tank, or reservoir, in the middle, surrounded by planted walks. The largest square, which is near the S. extremity, is 500 yards on each side, and contains a tank 60 ft. deep. There are no covered ways, as in the cities of Persia, Turkey, &c., though, from the violent heats and rains, such would be very desirable. The bazars in the native town are very inferior, and the shops and warehouses have all a mean appearance: the public buildings there are few and small, and there is not a single minaret in the whole place. The most remarkable public edifice is the government-house, which is, to say the least of it, a more showy palace than London has to produce. It was built by the Marquis Wellesley, and consists of a centre and four wings, connected together by circular passages, so constructed as to obtain the benefit of the air from whichever quarter the wind blows. The wings contain the private apartments, and that on the N.E. the council-room; the centre has two very fine rooms, the upper one of which is the ball-room, and both are lighted by a profusion of lustres, while at the same time they exhibit much good taste: the architecture of most of the building is of the Ionic order. The other chief edifices are the town, and custom-houses, the mint, St. John's cathedral, and another English church, all of which are contiguous to the government-house; the Scotch Presbyterian church, a very handsome structure; the Portuguese, Greek, and Armenian churches; the courts of justice, barracks, gaol, hospitals, &c. There are many public colleges and benevolent institutions; as the Hindoo, Mohammedan, and Anglo-Indian colleges, and the college at Fort William; the Calcutta grammar, free, and other charity schools; the military and female orphan asylums; poor-funds, &c.; besides many bible missionary, and other religious associations. On the N.W. side of the river are the extensive suburb of Howrah, opposite the "Black Town," and the botanic garden, opposite the citadel. Near the latter is the

bishop's college, a handsome building in the Elizabethan Gothic style, occupying three sides of a quadrangle 150 ft. square, erected in 1830, for the education of a clerical body, by the Society for the Propagation of the Gospel, at the suggestion of Bishop Middleton. The botanic garden is beautifully laid out, and covers 300 acres of ground: between it and the bishop's college there is an extensive plantation of teak, which, although not in its native soil, thrives exceedingly well. There are several dry and other docks on both sides the river, in which vessels of any size may be built and repaired; but the ships constructed here are of inferior durability to those built at Bombay, in consequence of the framework being of inferior wood, and the viable portions and upper works alone of teak; all the timber in Calcutta also, without the fact being outwardly obvious, suffers greatly from the devastations of the white ant. In every part, this city is covered by an amazing multitude of little pools, or reservoirs, yet the soil on which it stands is remarkably deficient in springs, none having been met with even after boring down 140 ft., till 1828, and subsequently, when Dr. Strong found some in isolated spots, at a depth of 70 ft. The drainings of the place, with such portions of the refuse as are not devoured by crows, kites, vultures, adjutants, and pariah-dogs, which abound in the streets, and at night by foxes and jackals from the surrounding country, are conveyed away, by a canal, to a large shallow salt lagoon about 4½ m. distant, towards the E. Between the city and this lagoon the country is filled with gardens, orchards, and villages, but is little inhabited by Europeans. The tract to the N. is drier, healthier, and more open; and the two great roads to Dumduin, the artillery cantonment, and Barrackpore, the country seat of the Governor-general, lie over a vast extent of fertile country, divided into rice-fields, orchards, and gardens, and swarming with population. The vicinity of Calcutta is very pleasing; "as soon as its boundary is passed, the roads wind through beautiful villages, overhung with the finest and most picturesque foliage the world can show, of the banyan, the palm, the tamarind, and the bamboo. Sometimes the glade opens to plains covered with the rice-harvest, or to a sight of the broad, bright river, with its ships, and wooded shores; sometimes it contracts into little winding tracks, through fruit-trees, gardens, and cottages; the gardens fenced in with hedges of aloe and pine-apple; the cottages neater than those of Calcutta, and mostly of mats and white wicker-work, with thatched roofs and cane verandahs, with gourd trailing over them, and the broad, flat plantain clustering round them." The rainy season at Calcutta generally begins about June 12, and terminates October 14. The average fall of rain for three recent years was 59·83 inches; the annual mean of the barometer is 29·764; of the thermometer, 78° 13'. The most pleasant and temperate period of the year is from Oct. to March; by the middle of April, the weather becomes oppressively hot, often rising to 100° Fahr. The lowest temp. in Dec. 21, 1835, was found to be 62° 2° Fahr.

Calcutta enjoys a very extensive internal navigation, by means of the Ganges, and its numerous arms and tributaries; and it monopolises the whole of the external trade of Bengal. It is now, in fact, Calcutta, perhaps excepted, the greatest emporium of the East; the gross amount of its imports and exports amounting to from 10,000,000L to 12,000,000L a year. The principal foreign trade is in the hands of English merchants, but there are others amongst the Persian, Hindoo, Portuguese, Greek, Armenian, &c. inhabitants, who are in an extensive way of business. The native Portuguese and Armenian merchants have latterly been declining, both in wealth and importance, while, on the other hand, the Parsees have increased in numbers and opulence, and there are several possessing a capital of 250,000L.

In the Year 1837-38 the Value of Imports at, and Exports from, the Port of Calcutta was as follows:—

	Imports.	Exports.
	L.	L.
Great Britain	2,050,483	2,719,222
France	155,586	221,806
Sweden	5,903	10,625
South America	45,465	2,019
North America	73,945	180,787

Pepper	50,048 —	68,016
Piece goods	—	665,269
Salt (duty paid)	317,415 —	134,901
Spirits, ale, cider, &c.	—	58,311
Twist and Yarn	5,567,399 lbs.	615,456
Wines	—	98,730
Woods	—	45,403
Woolens	—	94,400
Exports.		
Opium	19,600 chests	2,129,839
Indigo	95,861 bazar mds.	1,124,768
Sugar	814,771 —	671,891
Saltpetre	458,796 —	265,287
Rice	1,695,881 —	247,329
Raw cotton	903,891 —	186,117
— silk	12,479 —	465,452
Piece goods	1,176,104 pieces	470,013
Gunny bags	4,067,551 No.	38,311
Hides	1,130,500 —	80,721
Lac	47,587½ bazar mds.	109,392

A Table, showing the total amount of the import and export trade of Calcutta, &c. in 1836-37 and 1837-38, is inserted below.

Innumerable small craft daily arrive from the interior, laden with the produce and manufactures of the different provs., and the Calcutta market is well supplied with an abundance of excellent provisions: game, snipes, wild ducks, teal, and ortolans, are comparatively cheap; stall-fed venison is as fat as in England, but without flavour: an immense variety of fruits of fine quality appear on European tables; and an exquisite luxury is met with in the *tapasvi* or mango-fish (so called because it is in season with the mango fruit), and which has been hitherto found only in the rivers of Bengal, the Birman empire, and Cambaja rivers.

The population of the city is unequally distributed: its N. and central portions, especially the former, are very densely inhabited; the S. part much less so, owing to the dwellings of Europeans being so much more widely dispersed. The following is the latest census (1837), giving the relative proportions of the different races of resident inhabitants:—

Hindoos	- 137,651	Brought up	209,466
Mohammedans	- 58,744	Chinese	- 363
Half Castes	- 4,746	Jews	- 307
English	- 3,133	Arabs	- 351
Portuguese	- 3,181	Madrassees,	
French	- 165	Parassees, and	
Armenians	- 636	Native Christians	144
Mughas (Aracanese)	683		
Persians, called	527	Low Castes	19,084
Moguls			
Carry forward	209,466	Total	229,714
Males	- 144,911		
Females	- 84,803		229,714

The number of houses, huts, &c., in 1837, was 65,496, exclusive of the suburbs. Calcutta is the seat of the chief Protestant bishop of India of the Established Church of England; of the supreme courts of justice; of one of the courts of circuit and appeal for the presidency of Bengal; of a vicar-apostolic of the Romish church, with authority over 14 priests and 10 churches, one of which is in that city.

European society in Calcutta is gay and convivial; and fetes and dinner-parties, both numerous and splendid, are given by the government officers and wealthy private individuals. A certain degree of formality and stiffness is, however, very prevalent; and the Brahminical institution of *castes* would appear to have communicated itself to all ranks and classes of Europeans.

Bishop Heber observes, that the large dinner-parties, in addition to the geographical situation, and other local peculiarities; the aspect and architecture of the place; the multitude of servants, want of furniture in the houses, &c., tend, except in respect of climate, to give Calcutta a striking resemblance to Petersburg. Besides private parties, there are public subscription assemblies, with *conversations*, concerts, and a theatre, though the latter is but little frequented. It is usual with Europeans to rise early, the pleasantest part of the day being the first of the morning; after *tiffin* (lunch), which is taken between 2 and 3 o'clock, many persons, during the summer heats, retire to sleep for two or three hours; at sunset the fashionable drives of the Esplanade are crowded with European vehicles of all sorts, and the dinner-hour soon after succeeds. The equipages of Calcutta embrace barouches, chariots, tilburies, gigs, &c., as in England, drawn by a breed of horses which have been greatly improved through the government stud and importations from Europe and Arabia: but a grotesque and peculiar appearance strikes

AN ACCOUNT showing the Total Amount of the Import and Export Trade of Calcutta in 1836-37 and 1837-38; showing also the Amount of the Trade with each Country, and the proportion *per cent.* which the Trade with each Country bears to the Total Amount of the Trade. (*Bell's Review of the Commerce of Bengal for 1836-37 and 1837-38.*)

the age of the European in the intermixture of Asiatic countries, black complexion, &c. in the scene. Most visits at short distances are paid in palanquins, the bearers of which are from Malabar, Behar, or the northern Circars, and run silently, bare-headed, and almost naked. The Anglo-Indian, or half-caste population, the product of an intercourse between Europeans and natives, are more numerous in Calcutta than any where else in India; they are intelligent, industrious, and generally well educated, and possess a degree of consideration in the eyes of the native population, though they are without any political influence. All of them speak English, as well as the native dialect. Many of the half-caste females, daughters of mothers of high caste, are educated in the seminaries in and near Calcutta, and often marry Europeans, when they are said to make most unexceptionable wives and mothers: their children, in this case, lose in one or two generations all distinctive mark of their Indian origin. A considerable number of the new seminaries, and the retired traders who have become wealthy, reside in Calcutta; where they have houses handsomely furnished in the European style; drive the best horses and equipages; have adopted some English habits and tastes; speak the English language; enter into the politics of the British empire, and are not ignorant of English literature. With all this, the education of their sons is often miserably neglected, and they turn out mere spendthrifts; but the fact is sufficiently and generally manifest, that the native inhabitants of all ranks show a willingness to learn and speak English, an increasing anxiety to send their children to our schools, and a growing neglect of caste and other national prejudices; tendencies which, if properly taken advantage of, may, ere long, be turned much to our mutual benefit.

The great bulk of the natives have a very bad character, being proficient in intrigue, falsehood, and chicanery; prone to perjury, theft, gambling, and all kinds of dishonesty, and of a cowardly disposition: but it is generally admitted that the morality of the native inhabitants of Calcutta is at a lower ebb than that of those in the provincial districts. A perceptible amendment in the morals and pursuits of the people is, however, said to be taking place. The Bengalee dialect, which had long been looked on with much prejudice by the natives of India, is now reviving, and various works are published in it every year. Numerous periodical works, newspapers, &c., issue from the press in Calcutta; amongst which are the *Bengal Hurkaru* and *Chronicle*, the *Calcutta Courier*, and the *Englishman*, daily; one paper twice, and another three times, a week; 6 weekly ones; of which one is in the native tongue, and another, the *Reformer*, an English paper, conducted by native gentlemen; various other native publications; and 5 monthly, and 2 yearly (English) journals. There are several distinguished scientific, literary, and other associations, in Calcutta; as the Asiatic Society, which owes its origin to Sir W. Jones; the Medical and Physical, Agricultural and Horticultural, Societies; the Chamber of Commerce, Trade Association, &c. To the very able monthly journal of the Asiatic Society we have been much indebted in this and various articles of the present work.

In 1698 the British factory was removed thither from Hooghly; but in the early part of the last century Calcutta was but a paltry village, belonging to the Nuddea district, and inhabited chiefly by husbandmen. Chowringhee was also but a straggling village, and a forest jungle, interspersed here and there with patches of cultivated land, covered what is now the Esplanade, so late as 1756. In that year Suraj-ul-Dowlah, the subahdar of Bengal, dispossessed the English of their settlement; in which occasion 146 Englishmen, who had been left to defend the factory, were shut up at night in the black hole (a part of the old fort, taken down in 1818), of which number only 23 were found alive next morning. Col. Clive, with some Madras troops, retook Calcutta Jan. 1, 1757; since which it has been quietly retained by the British, and risen to its present degree of importance. (*Hamilton's E. I. Gaz.* 1. 3:5—325; *Hamilton's Hindostan*, 1. 48—61.; *Heber's Journal*, &c.; *Journals of the Asiatic Soc. of Great Britain and Bengal*, &c.; *Mod. Trav.* ix. 36—115.)

CALDER, a river of England, in Yorkshire, rises on the S.E. side of Bolesworth-hill, in the grand central range of English mountains, and flowing in an E. direction, at a little distance from Halifax and Dewbury, and past Wakefield, unites with the Aire at Castleford. This river is of great importance in the canal system of Yorkshire and Lancashire, and has been rendered navigable for a great part of its course. Another river of the same name rises on the W. side of the same hill, and flowing W., falls into the Ribble. It is of very inferior importance. (*See* *MURRAY*.)

CAJICUT, a marit. distr. of Hindostan, prov. Malabar, which see.

CALICUT, a marit. town of Hindostan, cap. of the

CALIFORNIA.

above district, and of the prov. Malabar, 86 m. S.W. Seringapatam, and 386 m. W. S.W. Madras; lat. $11^{\circ}18'$ N., long. $76^{\circ}30'$ E. Pop. 35,000. The principal exports are pepper, teak, sandal-wood, cardamoms, cofr, cordage, and wax; but Calicut is destitute of any good harbour. This was the first place in India made by the Portuguese under Vasco de Gama, who arrived here 18th May, 1498. In 1509 the Portuguese were repulsed, with great slaughter, in an attack on the place, and their commander killed. In 1768 it was taken by Hyder Ali, and Tippeco afterwards destroyed the fort and town, obliging the inhabitants to migrate to Nelluru; but on the conquest of the prov. by the British in 1780, most of them returned to it, and in 1800 Calicut again numbered 5,000 houses. (*Hamilton's E. I. Gaz.* 1. 325.; *Journal of the Asiatic Soc.* ii. 346.)

CALIFORNIA, a country of N. America, extending along its W. coast from $22^{\circ}48'$ to 42° N. lat., and between long. 107° and 124° W., having N. the W. territories belonging to the U. States, E. Mexico and the Gulph of California, and S. and W. the N. Pacific Ocean. It is naturally divided into Old or Lower, and New or Upper, California; which, as they differ widely, both as to formation and products, we shall notice separately.

CALIFORNIA (LOWER), a long narrow peninsula on the W. coast of N. America, between $22^{\circ}48'$ and 32° N. lat., and $109^{\circ}18'$ to $116^{\circ}30'$ W. long., having N. Upper California, E. the Gulph of California, which separates it in almost its entire length from the Mexican prov. of Sonora, and S. and W. the N. Pacific Ocean; length about 700 m.; breadth varying from 30 to 100 m., with an average of 50 or 60 m.; area 38,000 sq. m. Pop. perhaps not more than 14,000 or 15,000. (*Forbes*.)

A chain of rocky mountains, not more than 5,000 ft. in height, runs through the centre of the peninsula from S.E. to N.W. The surface of the country consists of groups of bare rocks broken by ravines and hills, interspersed with tracts of a sandy soil nearly as unproductive. It is, in fact, one of the most barren and unattractive regions within the temperate zone. In some sheltered spots, where the soil has not been carried away by the torrents from the mountains, or in others which chance to be fertilised by small streams (which are very scarce), there is mould of great fertility; but such spots are rare and of small extent. There are some tolerable harbours; but the same barrenness reigns around them that prevails elsewhere, and renders them ineligible as situations for towns. Lower California is said to be rather rich in minerals. At its S. extremity there are argenteiferous lead ores; in other parts there are mines of gold and silver; but of these none are now wrought, with the exception of those of San Antonio, in or about the 34th parallel, which afford a trifling produce. The climate is excessively dry and hot: unlike Mexico, the rains, except in the most southerly parts of the peninsula, occur during the winter months; summer rains scarcely occur N. of Loreto, near lat. 26° N. Violent hurricanes are frequent, but not earthquakes. Timber is very scarce, and by far the greater portion of the country is incapable of producing a single blade of corn. The sheltered valleys only near the different missions are cultivated with maize, and yield a variety of fruits. Dates, figs, &c., are dried, preserved, and exported; wine is also made and exported, and a kind of spirit is distilled from the muscat. Cattle are rather numerous as compared with the population, and feed in part on the leaves of the musquito tree, a species of acacia. Wolves, foxes, deer, goats, several snakes, lizards, and scorpions are amongst the wild animals; and the fertility of the sea, if properly taken advantage of, would make amends for the indomitable barrenness of the land. The pearl-fishery in the Gulph of California has been famed from its first discovery, and in the 17th and 18th centuries large quantities of pearls were obtained by the Spanish adventurers. Violent means, attended with frequent loss of life to the Indians, were often resorted to, to carry on the fishery; it was customary with the Spaniards to kidnap and employ by force as divers all the inhabitants of the coasts and islands of the gulph they could lay their hands on. When the Jesuits had settled in California, they obtained the prohibition of such practices towards the Indians under their protection; and divers were then brought from the opposite or Mexican side of the gulph, in which none were allowed to fish for pearls but such as had the viceroy's licence. When prosecuted to its greatest extent, from 600 to 800 divers were employed; the fishery was carried on by vessels of 15 to 30 tons burden. The oysters were divided as follows: two for the "armador," or owner of the vessel; two for the "busos," or divers; and one for the king, whose fifth, at the commencement of the 17th century, often produced a value of no less than 12,000 dollars per annum for every bark employed. The oysters were then immediately opened. The pearls found in those belonging to the divers were equally divided amongst them, and either sold on the instant to the armador, to whom they were always indebted for their outfit and previous advances, or to dealers on shore, who supplied

them with spirits, chocolate, sugar, cigars, &c., and who often reaped more profit than the armadores. In 1828, Captain Hall says the estates were differently distributed; the largest were the first laid aside for the Virgin, and of the rest, 8 were the share of the owners, 3 of the divers, and 1 only of the government. Sixteen or 18 small vessels are now annually employed in the gulph, each of which obtains, in favourable seasons, from 500 to 1,000 dollars' worth of pearls. In 1831, four tolerably large vessels from the opposite coast of Mexico, with 180 divers, together obtained pearls to the value of 2,660. (*Forbes*). Pearls, tortoise-shell, a few bullocks' hides, dried beef, dried fruits, cheese, soap, &c., constitute all the exports of Lower California, which are mostly sent to San Blas and Masatlan, in small coasting vessels. The imports are — provisions, clothing, agricultural and domestic utensils, supplies for the ceremonies of the church, and a small amount of the ordinary luxuries of life.

This country was discovered by Hernando de Grijalva in 1524; but no settlement was made by the Spaniards till towards the conclusion of the succeeding century, when some Jesuits established themselves here, with the view of converting the natives. They found the latter feeble, timid, and indolent, little advanced above the rudest state of barbarism; living by hunting and fishing and the spontaneous produce of the soil, destitute of agriculture; the men without any covering whatever, and any fixed forms of government or religion apparently unknown. Loreto, considered the capital, and various other small settlements, were established in different parts of the country by the Jesuits, who instructed the natives in agriculture, and persuaded many of them to adopt settled habitations; but this civilisation has taken no real root, and the Indians appear to be rapidly diminishing. Perhaps half the natives of Lower California have been nominally converted to Christianity. (*Forbes, Alex., California, 1839, 1-75; Coulter, Dr., in Grog. Journ., vol. v. &c.*)

CALIFORNIA (UPPER OR NEW), in its widest sense, comprises all that extensive portion of N. America between lat. 32° and 42° N., and long. 107° and 124° W. Within these limits it includes the territory discovered by Sir E. Drake, named by him New Albion; and has N. the W. territories claimed by the United States; E. the river Colorado, which separates it from Mexico; S. Lower California; and W. the N. Pacific Ocean. The E. and central parts of this region are occupied by the Rocky Mountains, an immense chain running N. and S.; and on the W. side of these, by a dry and sandy plain or desert, about 700 m. in length, with a breadth of about 100 m. at its S., and 200 m. at its N. extremity. This plain forms the E. boundary of the inhabited, and indeed only habitable portion of Upper California. The part inhabited by Europeans and other foreign settlers is merely a tract extending along the shore of the Pacific for about 500 m., and bounded inland by the first range of hills, with an average breadth of 40 m.; area about 20,000 sq. m. Pop. (1831) 23,000. This territory has been thus divided:—

Presidios or Jurisdictions.	Pop. 1831.	Ch. towns.	Pop.
San Francisco - -	6,398	San Francisco -	371
Monterey - - -	4,143	Monterey - -	708
Santa Barbara - -	2,303	Santa Barbara -	613
San Diego - - -	7,261	San Diego - -	1,275

The first ridge of mountains met with on passing inland is a continuation of the central chain of Lower California, which, after entering this portion of the country, divides into several ranges, which diverge from each other as they advance N. Some of the more inland ranges are constantly capped with snow, and it is supposed in about 42° N. lat. they join the table-land, which divides the waters flowing into the Columbia river from those which fall into the Bay of San Francisco. Surface of the country near the ocean very diversified; in some places elevated into ranges of hill from 1,000 to 3,000 ft. high, in others spread out into extensive plains. Some of the hills seem chiefly composed of sandstone; the soil elsewhere is often light and sandy, though fertile, or of the richest loam: in some spots it is marshy, but generally it is characterised by dryness. Upper California possesses several good harbours: San Francisco, in lat. 38°, is one of the largest and best on the W. coast of America. The country immediately behind the first range of mountains is said to be superior even to that near the shore, and to consist of plains, lakes, and hills, beautifully diversified, very fertile, and abounding with timber. The plain between the first and second mountain-ranges contains the two Tule lakes. These, which are of very considerable dimensions, are connected by a river, which, following a N.W. course, falls, after escaping from the N. extremity of the upper lake, into the Bay of St. Francisco. After the Rio Colorado, the largest rivers are those which fall into the Bay of St. Francisco: the principal is the Sacramento; the only river in the country which has a S. direction, it is navigable for several hundred miles inland, and, like the Colo-

rado, runs through a country capable of sustaining a large population. The San Jacinto and Jesus Maria are both large and navigable streams, discharging themselves into the same bay; the Rio de San Buenaventura has a N.W. course of nearly 300 m., and falls into the Bay of Monterey. The other streams are mere rivulets, and the general infrequency of rivers and springs is the chief defect of the country; though water may be obtained in most places by digging. The climate of California, and indeed of all the country on the W. side of the Rocky Mountains, is considerably warmer than that of the country in the E. parts of America, in the same latitudes. Near the Colorado, the heat of summer is sometimes intense, reaching 140° Fahr. (Coulter): during the month of December, 1836, Capt. Beechey found the mean temperature at San Francisco 58° 2° Fahr. So far as known, minerals are of very little importance: E. of Santa Ynez (about lat. 34° 30'), a small silver mine was wrought for some time, and small quantities of gold have been found in one of the streams falling into the S. Tule lake; but excepting these, limestone and clay, none else have been discovered of any value; and in this respect, as well as in its abundance of vegetable and animal life, and the fertility of some of its districts, it strikingly contrasts with Lower California. There is a profusion of forest trees, including oak, elm, ash, beech, birch, planes, and many varieties of pine, which grow to a large size, and are often spread out into extensive forests. Its abundance of timber, and the goodness of its shores, afford great facilities for ship-building and the acquisition of maritime importance. Although many fine fruits are easily cultivated, few are indigenous. Amongst those which are, is a species of vine, producing grapes of considerable size, and so plentiful, that considerable quantities of brandy are made from them. Among the wild animals, Forbes reckons the American lion (*Felis concolor*), the American tiger (*Felis onca*), buffaloes, stags, roes, elks, the wild mountain cat, bears, wolves, jackals, numerous herds of wild cattle, foxes, polecats, otters, beavers, hares, rabbits, and a profusion of other kinds of game. The elk, and argali (*Ovis pygargus*, Cuv.) are domesticated; the bison is hunted for its skin, which is used in many parts of Spanish America as a bed or carpet. Birds are exceedingly abundant. Otters and beavers are found in all the rivers, lakes, and bays; but their numbers have greatly decreased, since the country began to be more settled. Captain Beechey estimated the annual export of skins in 1824 at 2,000; and the quantity is now probably less than this, though it might no doubt be increased by a better system of hunting. The sea contains exhaustless stores of fish.

The Indians of Upper California are seldom more than 5 ft. in height, and of a dark copper-colour; they have projecting lips, broad and flat noses, low foreheads, over which their hair, which is long and straight, grows down near the eyebrows; beard generally scanty. They have a timid carriage, are indolent, pusillanimous, and without any of the boldness, industry, and activity evinced by the Indians nearer the pole. Excepting those that have been converted in the different missions, the women go nearly, and the men entirely, naked. They are filthy in their habits, have few articles of furniture, and live in wigwams built in great part of a kind of bulrush, of which also they construct their rafts, and what clothing they use. In their primitive state they have no agriculture, but subsist on wild herbs, seeds, which the women collect and grind into a meal, fish, the *Testaceæ* on the shores, the products of the chase, and whale's flesh and blubber, whenever that animal is cast upon the shore; an event which occasions great rejoicing.

In 1831, 18,700 Indians, nominally converted to Christianity, resided in the 21 missions. The men are employed in agricultural labours, or in the warehouses and laboratories of the mission; the women are occupied in spinning, grinding corn, and other domestic duties. All are fed and clothed by the friars, to whom they are, in fact, slaves; their moral and condition of life have been somewhat improved; but their numbers are evidently diminishing. The whole of the free settlers, including those of mixed blood, do not exceed 5,000. The greatest part of the lands, and especially those to the S. of Monterey, are in the hands of the missionaries; those parts, however, which, both as to fertility and climate, are best suited for emigrants, lie N. and E. of the Bay of Francisco: these are as yet unoccupied, and peculiarly favourable for the culture of grain, and for the rearing of cattle. In 1831, the harvest produced 16,432 bushels, of which 7,857 were wheat, and the rest maize, barley, &c.

The potato thrives in California, and, as well as all green pot-herbs, was introduced by the Europeans: the soil and climate are found very suitable for flax; hemp of good quality was formerly cultivated to a considerable extent. The vine (*Vitis vinifera*) thrives in an extraordinary degree, and wines and brandies of a superior quality are made in large quantities. California has analogous latitudes with the finest wine countries in the world, and will probably, at a future period, be-

come celebrated for its wines. The olive is produced in very great perfection. Cattle, however, have hitherto been the staple produce of the country. Their increase since their introduction, in 1760-70, has been quite extraordinary, the stock in 1831 being, of—

Branded Cattle	216,797	Mules	2,844
Sheep	155,455	Goats	1,673
Horses	32,401	Hogs	854

besides numerous herds running wild. Its chief exports are hides, tallow, and cattle, with small quantities of wheat, wine, raisins, and olives; the whole amounting in value, perhaps, to 26,000*l.* a year. The chief imports are various kinds of useful manufactures, with deals, salt, silks, candles, &c. The *presidios* are military governments, administered formerly, under the Mexicans, by a commandant, with a body of about 250 inferior troops. The head places of the *presidios* are commonly a square of about 100 yds., surrounded by a wall of unburned bricks, and containing a few houses, barracks, church, &c.; at a short distance from each is a small fort; but all are very ill kept and insignificant. In their neighbourhood are some *ranchos*, or national farms, set apart for the use of the soldiers. The various missions are clusters of houses usually built in a square, with a territory of about 15 sq. m. each, free from government taxes, and each subordinate to a Franciscan friar, termed a *prefecto*. There are small *fort* towns, inhabited by retired soldiers, &c., which have their own mayor, town-council, and internal jurisdiction. This country was in part discovered by Cobrillo, a Spanish navigator, in 1542, and its N. part, called New Albion, by Sir F. Drake, in 1578. In 1768 it was first colonised by the Spaniards, and until after the revolution in Mexico, formed a province of that country. In Nov. 1836, the people of Monterey and its vicinity rose, attacked and subdued the garrison, expelled all the Mexican functionaries and troops, declared California independent, and established a congress of deputies for its future government. (*Forbes's California*, 1839, pp. 78—325; *Coulter, Dr.*, in *Geog. Journal*, vol. v.)

CALLAH (EL), a town of Barbary, reg. Algiers, on a mountain, and surrounded by ramifications of the Atlas, 15 m. N.E. Mascara. It is a dirty and ill-contrived town, having neither drains, pavement, nor causeways. It has a citadel, and a large manufactory of carpets and *burnouses*, or woollen cloaks. Several villages in the neighbourhood are engaged in the same employment. Dr. Shaw thinks, that it may have been the *Githui* or *Affac* of Ptolemy. (*Shaw's Travels*, 2d ed. p. 28.)

CALLAN, an Inl. town of Ireland, co. Kilkenny, prov. Leinster, on the King's River, an affluent of the Nore, 72 m. S.W. by S. Dublin. Pop. of the town, liberties, and parish, in 1821, 5,678; in 1831, 6,111; and in 1834, 6,262; of which 197 were of the established church, and 6,065 R. Catholics. The town was anciently walled, and a place of considerable strength; but was stormed and dismantled by Cromwell in 1650. The streets form a cross, with lanes branching from them, and the houses are, in general, very indifferent. The parish church is an anciently a monastic building; the Roman Catholic chapel is modern. There is also an Augustine friary, with a large chapel, a national school, a dispensary, and a loan fund. A party of the constabulary is stationed here. The corporation, which consists of a sovereign, burgesses, and freemen, returned 2 mem. to the Irish H. of C. till the Union, when it was disfranchised. The liberties extend to a considerable distance round the town. The only trade is in grain. Markets, held in a small market-house, on Tuesdays and Saturdays; and for pigs, on every Monday from January to May. Fairs held on 4th May, 13th June, 10th July, 31st August, 10th October, 4th November, and 14th December. Post-office revenue in 1830, 233*l.*; in 1836, 318*l.* The mail coach from Dublin to Cork passes through Callan, and a car plies to it from Clonmell three times a week, conveying an average of four passengers each trip. (*Stat. Surv.* & *Railway Rep.*)

CALLANDER, a bor. of Scotland, co. Perth, valley of Menteith, beautifully situated on the left bank of the Teith, 16 m. N.W. Stirling. It may be regarded as the threshold of the Highlands in this quarter, and is surrounded on all sides except the S. by stupendous mountains, forming part of the Grampians; Benledi, the highest and most striking, being 3,009 ft. above the level of the sea. Pop. 1,300. Gaelic and English are both spoken, and the Highland dress is partially worn. A classical interest has of late years been imparted to this town, and to the district with which it is connected, by Sir Walter Scott's poem of "The Lady of the Lake." Loch Katherine and the Troasachs ("bristled country"), so celebrated in that poem, lie 10 m. W. from Callander; and the activity and prosperity which mark this neat little town are chiefly ascribable to the advantages it derives from lying in the

line of the great thoroughfare leading to these romantic scenes. Not fewer, at an average, than 50 strangers are said to sleep in Callander every night during five months of summer and autumn, on their way to and from the Troasachs. The place abounds with inns, and most families let beds for the accommodation of travellers. The head inn, lately built, would do no discredit to any town of the kingdom. Manufactures have not yet found their way to this place. The town is built on *fecus*, or building leases, holding of the noble family of Perth, now represented by Lord Wuloughby d'Kresby; to each of which is attached an acre or more of ground, varying in yearly rent from 1*l.* 10*s.* to 3*l.*, so that each family has a source of employment within itself, almost peculiar to Callander. The only public building in the town is the parish church, a modern edifice, with a spire. It has also an efficient parish school.

CALLAO, a sea-port town of Peru, about 6 m. W. from Lima, of which it is the port, on the N. side of a projecting tongue of land, opposite to the barren island of San Lorenzo, which protects the W. side of its bay; lat. 12° 3' 45" S., long. 77° 4' 10" W. The houses in the town are mean and poor, with mud walls and flat roofs. It is well fortified. The roadstead is by far the best on the Peruvian coast, with good anchorage in from 7 to 10 fathoms. There is a rudely constructed pier, within which vessels of large burden may load and unload. There is a very good carriage road from Callao to Lima. The present town is of comparatively modern origin; the former town having been wholly destroyed and submerged in a dreadful earthquake that occurred in 1746, which also destroyed great part of Lima. In calm weather the ruins of the old town are still visible under the water at a short distance from the present town. In November, 1820, Lord Cochrane cut out the Esmeralda, a large Spanish ship of war, from under the guns of the castles of Callao. These surrendered to the independents in the course of the following year. (*Stevenson's S. America*, i. 134. &c.; *Hall's S. America*, &c.)

CALLÉ (LA), a factory founded by the French African Company, on the N. coast of Africa, reg. Algiers, near the Tunisian frontier. It stands on a peninsulated rock nearly surrounded by the sea, and was well fortified. This was formerly the principal seat of the coral fishery carried on along the Barbary coast. It was nearly destroyed by the Algerines in 1827.

CALLIANKE, an Inl. town of Hindostan, prov. Aurangabad, presid. Bombay, 24 m. N.E. that city; lat. 19° 15' N., long. 73° 15' E. It is the cap. of a distr. of the same name, and stands on the S. bank of the Calias river, surrounded by ruins: it is, however, populous, and carries on some trade in cocoa-nuts, oil, coarse cloths, brass, and earthenware. It sustained many sieges during the wars between the Moguls and Maharrats. The district of Callianee is a strong hilly country extending along the sea-coast, opposite the islands of Bombay, Salsette, &c., bounded E. by the W. Ghauts, and containing the towns of Baasein, Panwell, Chowli, Rajapoor, &c.: its towns are large and tolerably well peopled; but its villages small, meanly built, and thinly scattered. (*Hamilton's E. Ind. Gaz.*, 1827.)

CALLINGTON, a town and par. of England, co. Cornwall, middle div., F. hund. Area of par. 2,600 acres. Pop. of do. 1,348. The town, in a low and unpleasant situation, is 7 m. S.S.W. Tavistock. It was made a bor. in the 27th of Elizabeth, and returned 2 mem. to the H. of C. from that period down to the passing of the Reform Act, when it was disfranchised. The right of election was in the owners of burgage tenures paying scot and lot.

CALLOSA DE ENSARRIA, a town of Spain, Valencia, 18 m. S.S.W. Denia, near the confluence of the Guadent and Algar, in a mountainous country that produces fine raisins, and excellent wine, almonds, and fruit. Pop. 6,100.

CALLOSA DE SEGURA, a town of Spain, Valencia, 4 m. E. Orihuela, on the river Segura. Pop. 4,443. Charcoal, known by the name of *graniza*, is here manufactured from the stalks of hemp; it is said to be superior to any other for the manufacture of gunpowder, and is or was used in the preparation of that made for the Spanish artillery. (*Mithann, Sup.* p. 159.)

CALMAR, or **KALMAR**, a sea-port town of Sweden, cap. prefecture of same name, on the W. side of the narrow strait of the Baltic separating the island of Oeland from the continent, 90 m. N.E. E. Carlscrona; lat. 56° 40' 30" N., long. 16° 26' 15" E. Pop. 5,346. It stands on the small island of Quarnholm, which communicates with the mainland, where there is a suburb, by a bridge of boats. It is built of wood, and is strongly fortified. The castle, in the suburb, formerly looked upon as one of the keys of the kingdom, is now occupied as a house of correction. Calmar is the seat of a bishopric, and has an academy and a dockyard. The cathedral is a fine stone building; and the hotel of the prefect, the hotel

de ville, and some other public edifices, are of the same enduring material. Its port is small, but safe and commodious. There are manufactures of woollen stuffs, tobacco, and potash; with breweries, &c. Previously to the annexation of the provinces of Schonon and Blekingen to Sweden, this town was of much greater consequence than at present. Its importance as a fortress has declined; and its commerce, which was formerly very considerable, has been mostly transferred to Stockholm; but timber, alum, tar, hemp, &c., are still exported.

This is a very old town. Having been burnt down in 1647, it was rebuilt on the island of Quarnholm, being previously situated on the mainland where its suburb now stands. It has been the scene of some very important events in Swedish history. Here, in 1397, was concluded the famous treaty which united the kingdoms of Sweden, Denmark, and Norway under the vigorous sceptre of queen Margaret, surnamed the Northern Semiramis. But in its consequences this treaty was very ruinous to Sweden. Here also, in 1520, Gustavus Vasa disembarked to deliver his country from the domination of foreigners and of a sanguinary tyrant. Louis XVIII. resided at Calmar in 1804, and erected at Stensø a tablet in honour of Gustavus. In 1800 a fire destroyed a great number of the houses, with the buildings of the academy. (*Dict. Géographique, &c.*)

CALNE, a par. bor., market town, and par. of England, co. Wilts, hund. Calne, the bor. being situated on the great coach road from London to Bristol, 82 m. W. from the former, and 25 m. E. from the latter. The bor. formerly comprised 885 acres, and had, in 1831, a pop. of 2,640; but the Boundary Act made the limits of the par. bor. coincident with those of the par., which includes an area of 7,964 acres, and had, in 1831, a pop. of 4,795. The town is well built, with stone houses, and is well paved and lighted with gas. "It is clean and respectable; but the manufacture of cloth, which used to be carried on to a considerable extent, has for some years been on the decline; and several factories, which appear in perfect repair, are now untenanted." (*Municipal Boundary Report*.) "It has become a mere country town, of respectable appearance and considerable extent. It has the advantage of inland water communication by a cut from the Kennet and Avon canal, and is a place of much thoroughfare." (*Boundary Report*.) The church, a large ancient structure, has a tower by Inigo Jones; and there are various dissenting chapels. The town-hall was erected at the expense of the Marquis of Lansdowne. The grammar-school, founded in 1680, has two exhibitions to Queen's College, Oxford; and there are British and national Sunday schools, &c. A court for the recovery of small debts is held once every 6 weeks.

Calne is a bor. by prescription: it began to send mem. to the H. of C. in the reign of Edward I.; and regularly sent 2 mem. from the reign of Richard II. down to the passing of the Reform Act, which deprived it of one of its mem., and at the same time extended the limits of the bor. as stated above. Previously to the Reform Act the right of voting was in the burgesses, who might be indefinitely increased. Registered electors, in 1837-38, 178. The municipal lim. coincide with those of the old bor. Bowood, the magnificent seat of the Marquis of Lansdowne, lies about 14 m. W. from the town. Market-day, Tuesday; fairs, March 6, July 22.

CALVAIOS, a dep. of France, so called from a chain of rocks of that name that stretches along part of its coast, bounded N. by the English Channel, E. by the dépt. Eure, S. by Orne, and W. by that of La Manche. Area 556,093 hectares. Pop. 501,775. Surface mostly flat, the only hills of any consequence being in the arrond. of Vire, in the W. corner of the dep. Soil of the plains composed principally of calcareous clay; the soil of the valleys, of which there are several of large extent, is principally alluvial, and that of the hilly parts sandy. Minerals unimportant, with the exception of coal, of which about 340 quint. (met.) are annually produced at Littry. Climate rather cold and moist. There are several rivers, but none of them is navigable for any considerable extent inland. Coasts in most parts inaccessible; and the dep. has no good harbour. Pasturage is more attended to than tillage; but the latter is in a more advanced state than in most other departments. The average produce of wheat is estimated at about 1,400,000 hect., and that of barley, oats, rye, and buckwheat, may be taken at about the same more. Apples are largely cultivated, and cider is the common beverage of the country. The potato culture has recently been much extended. Oxen but little used in field labour. Meadows very extensive, extending over about 123,000 hectares, and their management well understood. In the valleys, large herds of cattle are fattened for the markets of Paris, Rouen, and Caen. They are bought lean in the departments of Finistère, Côtes-du-Nord, Sarthe, Mayenne, &c. The dairy is also an object of much attention; and large quantities of superior butter and cheese are produced. Total stock of cattle estimated at

160,000 head. The horses of this part of Normandy are reckoned the finest in France: stock estimated at 80,000, exclusive of 13,000 mules and asses. Sheep have been vastly improved during the present century. Annual produce of wool 310,000 kilogs. Great numbers of hogs are fattened. The forests cover nearly 40,000 hectares. The lace manufactory is widely diffused, particularly about Caen; and the spinning and weaving of cotton and wool occupy a great number of hands; there are, also, paper-mills, oil-mills, tanneries, refineries of beet-root and foreign sugar, distilleries, &c. The mackerel and herring fishery is successfully carried on along the coast. The dep. is divided into 7 arrond., and sends 7 mem. to the Chamber of Deputies. Number of electors, 4,191. Public revenue in 1831, 18,948,586 fr. Principal towns, Caen, Lisieux, Bayeux, Falaise, Honfleur, and Vire. *Hugo, art. Calvados.*

CALVI, a sea-port town of Corsica, N. W. coast of the island, on an elevated peninsula in the gulph of the same name; lat. 42° 34' 7" N., long. 8° 45' 16" E. Pop. 1,457. It has a good harbour and road; but derives its principal consequence from its strong citadel, flanked with five bastions. It was taken by the English in 1794, but not till after a siege of 51 days.

CAMARGUE (LA), a river island of France, dép. Bouches-du-Rhône, being, in fact, the delta of the Rhône. It is of a triangular form, and extends from Arles to the sea, having E. the Great Rhône, or main branch of the river, N. and W. the Little Rhône, and S. the sea. It is quite flat, and is supposed to contain about 55,000 hectares, of which about 12,000, lying principally along the river, are cultivated; the rest consists of lagoons, marshes, wastes, &c. The lagoons, particularly that of Vulcaris, are very extensive: they are mostly situated in the centre of the island and along the sea coast, where the ground is lowest. Except in certain districts, where sand predominates, the soil is, in general, very fertile. The cultivated portion produces excellent crops of wheat and barley; and the marshes and other ground feed large flocks of sheep during winter, with great numbers of cattle and horses. The latter have many properties of the Arab horses, and are hardy, and highly esteemed for the saddle. The oxen are a small breed, but strong and active; and being bred up in a state of the most perfect freedom, are very wild. Considerable tracts are covered with a salt efflorescence, a consequence of the subsoil consisting of sea sand. The pernicious influence of this salt impregnation is in some parts counteracted by inundating the country with the waters of the Rhône. A good deal of salt is produced. It is proposed to attempt the drainage of the lagoon and marshes, by cutting a canal for that purpose. In summer the air is very unhealthy. (*Dict. Géographique*;) Hugo (tom. i. 223.) estimates the area of the island at 142,451 hectares, or at between $\frac{1}{2}$ and $\frac{3}{4}$ part of the entire dep.; but this is an obvious exaggeration.)

CAMBAY, a marit. town of Hindostan, prov. Gujrat, in the Gulcwar's dom., formerly a celebrated and flourishing sea-port, but now much decayed, through the filling up of the hay, at the head of which it stands, by the deposits brought down by the rivers. It lies 72 m. N. N. W. Surat, 200 m. N. Bombay Pop. about 10,000. Almost equally divided between Hindu and Mohammedan. Various Hindoo and Mohammedan edifices are still to be seen, amongst which is a very beautiful mosque, close to the nawab's residence. Its main court contains 360 pillars of a handsome red sandstone, the material for which was brought, it is said, from Cutch. There are also the remains of a subterranean temple, said by some to be of Jain, but believed by others to be of Buddhist origin: it consists of two chambers, one over the other, and about 20 ft. sq. In the lower chamber three sides are occupied by empty niches; in the fourth there is a double row of white marble idols, having in their arms a gigantic idol 7 or 8 ft. high; they are all white, with a mild aspect, the legs crossed, and a lotus flower on the sole of the foot. In the upper room the figures are similar, and in one corner there is a black marble idol of the same size and appearance as the one beneath; none of the other figures here are more than 2 ft. high. Many emigrants from Persia formerly settled here, after the civil wars in that country and conquests of Nadir Shah; and it has still 30 or 40 Parsee families. The silversmiths here emboss very neatly, by filling the articles to be operated on with gum lac, and then grinding the surface with a small chisel; but the chief industry consists in the manufacture of coral, nellan, bloodstone, agate, &c. ornaments. These stones, when intended for beads, are chipped into a roundish figure, and afterwards rolled together in bags for several weeks, till they become perfectly spherical: when a flat surface is required, the stones are sawn by means of a mixture of gum lac and quartzose substances, which readily fuse together, and harden as they cool, when they are formed into cutting instruments. Cambay formerly exported silks, chintzes, gold, stuffs, &c.; but these manufactures have dwindled away; the town was given up as a trading station by the E. I. Company, who keep only

a Parsee agent there. Heavy goods have almost ceased being shipped at Cambay, and most of the Gujrat cotton is now sent to Gogo. The surrounding country is pleasant and rich, but not generally well cultivated; it yields ample returns of wheat and Hindostanee grains, indigo, cotton, oil-seeds, and excellent tobacco: some grain and indigo are exported to Bombay, and tobacco, from which many imitations of Manila cheroots are made. This city and territory prospered under the Moguls; in 1780 it was tributary to the Maharatta pelshwa, since whose fall his rights have devolved on the British gov., to whom the nabob now yields allegiance. (*Hamilton's E. I. Gaz.* 1. 328.; *Lord, in Journ. of Asiat. Soc.* vol. 11.)

CAMBERWELL, a par. of England, co. Surrey, 5 div. Brixton, hund. a suburb of the metropolis, on its S. side. Area, 4,570 acres. Pop. (including the hamlets of Duiwich, Peckham, and part of Norwood) in 1821, 17,966; 1831, 28,231. The more ancient part of what is usually designated the village of Camberwell, including the green, is mostly occupied by shops, &c., and is paved, and supplied with water from the works of the S. London Company. The more modern mansions are mostly detached handsome houses, occupying the rising ground to the S. and S.E. of the former; known as the Grove, Champlain, Denmark, and Hill villas. These villas are mostly occupied by the families of merchants who either are, or have been, connected with the active business of the metropolis. The church, supposed to have been built in 1520, and enlarged and improved in 1786, is in the later Gothic style, having a low embattled tower, with many interesting monuments. There are 3 chapels of ease.—Camden church, another on Denmark Hill, and one beside the Surrey Canal, built by the church commissioners in the Grecian style, and forming the district church of St. George. There are also 3 dissenting chapels; a free grammar-school, founded in 1619, for 12 boys, is endowed with an estate valued at 200*l.* a year, but is at present let on a beneficial lease, producing 60*l.* There is also a green-coat school, on the national plan, on Camberwell Green, and a similar one, attached to Camden church, founded in 1810; 3 or 4 other schools have small endowments; and there are some minor charities. The grounds of the S. Metropolitan Cemetery, in this parish, form an extensive enclosure, tastefully laid out, with a chapel and other offices, catacombs, &c. The agricultural portion of the parish is fertile; and market-gardens and nurseries employ part of the population. The major part, however, are more or less engaged in the general business of the metropolis. The Surrey Canal terminates in it. On Ladland Hill, S. of the village, is a quadrilateral Roman camp, with a double entrenchment. In digging the canal, in 1809, a Roman way was discovered, formed of square blocks of chalk, secured with oak piles, which has made some suppose that this was the place where the Roman legions first crossed the Thames: 3 ancient wells, on Well Hill, in the parish, are supposed to have originated the name.

CAMBODJA, or CAMBODIA, a country of India beyond the Ganges, formerly one of the most flourishing in that peninsula; but at present divided between the empire of Anam and the kingdom of Siam. It lies between lat. 8° 30' N. and 15° 40' N., and long. 103° and 107° E.; having N. Laos, P. Cochín China, W. Siam, and S. the ocean. It is bounded E. and W. by two of the great mountain chains, which, passing S. from Yunnan, traverse the Ultra-Gangetic peninsula: on the sea-shore, it presents a vast alluvial flat, stretching for a considerable distance inland. It has several rivers, one of which, the Mekon, ranks amongst the largest in Asia; and another, the river of Saigon, is perhaps, in all respects, the finest river of that continent for navigation. (*Craufurd.*) The interior of Cambodja is scarcely at all known by Europeans: it contains large forests, producing some teak, and many *sao* trees, a hard black timber called *guo*, eagle and rosewood, and various other woods fit for cabinet-work, dye-woods, areca, stick lac, sugar-cane, pepper, &c. The celebrated gamboge gum is said to be obtained from a species of *Garcinia*, by making incisions in the bark, from which the gum exudes, and is collected in vessels, in which it soon becomes concrete and fit for the market without further preparation. Besides the articles already named Cambodja exports cardamoms, ivory, hides, horns, bones, dried fish, &c. In considerable quantities, and imports silks, China and lacquered ware, tea, sweetmeats, tin, and *sidenague*. (*See SAIGON.*) In person, manners, laws, and state of civilisation, the inhabitants more closely resemble the Siamese than any other people: most of them are Buddhists; but there are a few Christians. The latter faith was first introduced by the Portuguese Jesuits in 1624.

In 1809, in consequence of dissensions in the country, it was invaded by both the Siamese and Anamese, when the latter made themselves masters of Penompen, the modern capital, together with the person of the king, and took possession of a large tract of country on the sea-coast, from communication with which, the Emperor of Anam, in 1819, interdicted all foreigners, de-

claring Saigon the emporium of his S. provinces. In 1820, the final partition of this country took place. (*Craufurd's Mission to Siam; Hamilton's E. I. Gaz.*)

CAMBODJA, an Isl. town of India beyond the Ganges, the ancient cap. of the above territory, on both sides the Mekon, nearly 300 m. from the sea; lat. 13° N., long. 104° 35' E. The Chinese writers of the 13th century give a very florid description of its magnificence at that period (*see Ritter, Asien Erdkunde*): it is now in a state of decay.

CAMBOURNE, a town and par. of England, co. Cornwall, hund. Penwith. Area of par. 6,500 acres. Pop. of do (1821), 6,219; (1831), 7,559. This is a neatly built and, for the most part, modern town, on an elevated site, 12 m. W. N. W. Falmouth, near the B. W. limits of the chief mining district of the co., many of the oldest and most productive mines of tin and copper being in its immediate neighbourhood, and furnishing employment, not only to the inhab. of the town, but to the 3 or 4 considerable hamlets, and the cottages every where dispersed over the parish. The church is a handsome structure, in the later Gothic style; there is also a chapel of ease, and several large dissenting chapels, chiefly for the various sections of the Wesleyan Methodists; a free school, founded in 1763, for 12 boys and 8 girls, has a revenue of 21*l.*; there are also several large Sunday schools. Market, Saturday; fairs, chiefly for cattle, March 7. Whit-Tuesday, June 29, and Nov. 11. Petty sessions for the hund. are held weekly in the town.

CAMBRAY, a well-fortified town of France, dcp. du Nord, cap. arrond., on the right bank of the Scheldt, 32 m. S. Lille; lat. 50° 10' 37" N., long. 3° 13' 47" E. Pop. 17,846. Its fortifications were improved by Vauban, and it is further defended by a strong citadel. It is pretty well built, and has a magnificent *place d'armes*. Its principal public buildings are the cathedral, the hôtel de ville, and the theatre. It has a tribunal of original jurisdiction, a communal college, a diocesan seminary, with 330 scholars; a secondary school, a society of emulation; with schools of design, sculpture, painting, and anatomy; a public library containing 30,000 volumes, &c.

Cambray was formerly an archbishopric; and has to boast of having had Fenelon, who died here in 1715, amongst its prelates. It is painful to have to state that, in 1793, during the revolutionary phrenzy, the body of Fenelon was torn from the grave, and the lead of his coffin cast into the Scheldt. The old cathedral was, at the same time, totally destroyed. To atone, as far as possible, for these enormities, a handsome monument, the work of David, the sculptor, was erected to the memory of Fenelon, in the present cathedral, in 1825, under which his remains have been deposited. In 1802, the archbishopric of Cambray was changed into a bishopric.

This town has been long famous for its manufacture of fine linens and lawns, whence all similar fabrics are called in England *cambrics*. It also produces thread; and has several branches of the cotton manufacture; and has some tanneries, salt refineries, &c. A great number of hands are occupied in the adjoining communes in the linen manufacture. It has a considerable trade in wool, flax, butter, hops, &c. The navigation of the Scheldt begins here, and it communicates with St. Quentin by a canal.

This is a very ancient city, having been a place of considerable importance under the Romans. It is celebrated in diplomatic history for the famous league, known by its name, concluded here in 1607, against the republic of Venice; and for a treaty of peace negotiated in 1529 between Francis I. and Charles V.: it was taken from the Spaniards by Louis XIV. in 1667, and was confirmed to France by the treaty of Nimeguen. The British took it by escalade in 1815, after the battle of Waterloo. (*Dict. Géog.; Hugo, art. Nord; Murray's Hand-book, &c.* p. 169.)

CAMBRIDGE, an inland co. of England, having N. co. Lincoln, E. Norfolk and Suffolk, S. Essex and Hertford, and W. Bedford, Buckingham, and Northampton. Area, 548,480 acres, of which about 500,000 are supposed to be arable, meadow, and pasture. Surface, except in the S. parts, where it is diversified for the most part flat and naked. Soil clayey and stubborn. It is divided into two portions by the river Ouse, and is watered besides by the Cam and the Nene, or Nen. The most northerly portion of the co. consists principally of the district called the Isle of Ely, which has separate jurisdiction within itself. This district, which is naturally a marsh, is included within the great level of the fens; and is rendered habitable only by a most expensive system of drainage, by which the water is raised and conveyed away in channels, kept at a higher level than the surrounding country. Agriculture is in rather a backward state, the land under tillage being frequently foul and out of order. Wheat, oats, beans, and potatoes, are the principal crops in the fens; and barley in the elevated grounds. Flax and hemp are also raised in the fens; and cole is extensively cultivated as food for sheep. The

CAMBRIDGE.

rich meadows in the valley watered by the Cam are principally appropriated to the dairy husbandry, and Cambridge butter has long enjoyed a high reputation. The large, thin, cream cheese, made at Cottenham, is admitted to be the first of its class. Heavy cart horses are extensively bred. The rich grass lands are mostly depastured by short-horned cattle, and long-woolled sheep. Cambridge, as well as Huntingdon, is overrun with pigeon-houses. Estates of all sizes: some large, but many small, some being worth only from 30*l.* to 50*l.*, and 100*l.* a year. Size of farms equally various, and held mostly at will. Farm-houses inferior, and cottages decidedly "bad." Average rent of land in 1810, 16*s.* 6*d.* an acre. Manufactures and minerals of no importance. The co. contains 14 hundreds, exclusive of the Isle of Ely, and 107 parishes. Principal towns, Cambridge, Ely, Wisbeach. In 1831 it had 26,712 inhab. houses; 30,210 families; and 143,955 individuals, of whom 72,031 were males, and 71,924 females. It sends 7 mems. to the H. of C., viz. 3 for the co., 2 for the University, and 2 for the bor. of Cambridge. Registered electors for the co. in 1837-38, 4,040. Sum of the assessed value of the co. in 1837-38, 58,567*l.* Annual value of real property in 1815, 705,372*l.*; do. of trades and professions in do., 23,687*l.*

CAMBRIDGE, a parl. bor. and town of England, co. Cambridge, hund. Ikenildish, the seat of one of the great English universities, on the Cam; 48 m. N. by E. London. Pop. (1821), 14,142; (1831), 20,917: houses at the latter date, 4,217. It is situated in an extensive level tract, that scarcely presents any inequality, with the exception of the Cog Magog hills, 4 m. S.W. of the town; and the greater part of its public structures, with their walks and gardens, are embosomed in wood. Owing to these circumstances, the approach to Cambridge is unimpressive; but the noble chapel of King's College, the tower of St. Mary's, and the spire of Trinity Church, rise above the trees, and break the general uniformity of the outline. The greater portion of the town stands on the S.E. bank of the river. The streets are mostly narrow and irregular. There are two principal lines, which unite on the N.E. side, near the iron bridge over the Cam; from these smaller streets diverge on either side, all of which are paved, and are lighted by gas. The chief supply of water is derived from an spring 3 m. distant, and conveyed by an aqueduct, under some of the principal streets, to a public conduit in the market-place. For this the town is indebted to Hobson, the horse hirer, whose determination to let his horses in strict rotation gave rise to the well-known proverb of "Hobson's choice." There are 14 distinct parishes, and a corresponding number of churches. St. Mary's, a stately Gothic structure, forms one side of a quadrangle, in which the public library and senate-house are also placed; it is surrounded by the parish and the university: St. Sepulchre's, built in the reign of Hen. I., in imitation of that of the Holy Sepulchre at Jerusalem; and Trinity Church, an ancient cruciform structure, are the only churches worth notice. The Baptists, Independents, Friends, Primitive Methodists, and Wesleyans, have each a chapel. There is a free grammar-school, founded by Dr. Perse in 1615, originally for 100 scholars, but now educating 16; they have preference of the Perse fellowships and scholarships in Caius Coll.: a national school, founded in 1608, and extended in 1816, educates 600 boys and girls: in this the old, or Whiston charity schools, have merged. In 9 distinct sets of almshouses, 56 poor persons are wholly or partially supported: there are also benefactions for various other charitable purposes, held in trust by the corporation; and a general infirmary, called, from its founder, Addenbrooke's Hospital, in which about 1,000 patients are annually relieved. The market-place occupies two oblong squares in the centre of the town, at the head of which stands the shire-hall (built in 1747), and behind it the town-hall (rebuilt in 1793). The gaol, built on Howard's plan in 1810, is in the yard of the ancient castle (of which little more than the gateway remains) at the N.W. end of the town—the only comparatively elevated portion; near it is an artificial mound, whence an extensive view is commanded. The various structures connected with the university form, essentially, a part of the town, mostly on its W. side, but these will be more appropriately noticed in the subsequent article. No dramatic performances are allowed in the town; but there is a theatre in the adjoining village of Barnwell, which is opened in fair time. There is a musical society on a large scale, and great musical festivals are held, at intervals, in St. Mary's church. The Cam, formed by the junction of several small streams about 4 m. from the town, is made navigable for barges up to the town: it joins the Ouse, not far from Ely, by which a water communication is continued to Lynn Regis. There is a daily market for general provisions; but the chief supply is on Saturday. Two annual fairs are held—the first, commencing June 23, lasts 3 days; it is held on a common near Jesus Coll., and called Pot Fair, from the

CAMBRIDGE (UNIVERSITY) OF). 509

quantity of earthenware brought, to it: there is a large horse-fair on the first day. The other is Stourbridge fair, anciently the largest in the kingdom, and still of considerable resort, though much curtailed both in duration and importance: it is held in a field near Barnwell, and now lasts 14 days; on 2 of these, horses are sold, and on the others the chief traffic is in wool, hops, leather, cheese, and iron. There are no manufactures carried on; but its situation, at the head of the inland navigation from Lynn, occasions a considerable trade in corn, coal, timber, oil, iron, &c. Since the more perfect drainage of the fens, and the formation of good roads towards and along the E. and S.E. coasts, over tracts previously impassable, it has become a considerable thoroughfare, and derives some business from that source: its chief traffic, however, is, directly or indirectly, connected with the university, and the supply of its various wants. The ann. val. of real prop. is 91,501*l.* Under the Poor Law Amendment Act its 14 pars. are formed into a union, the average annual rates of which are 9,974*l.*: there are 30 guardians. The paving and lighting are managed by commissioners under two local acts. The annual assessments levied for the purpose average 8,000*l.* The limits of the ancient bor. have been adopted both in the Parl. and Municipal Reform acts, and comprise an area of 3,196 acres. It is divided into four wards, and governed by a mayor, 10 aldermen, and 30 councillors. Courts of petty and quarter sessions, and a court of pleas, are held for the borough, from the jurisdiction of which the members of the university may claim personal exemption. The heads of it are united with those of the corporation in the commissions of peace that are issued for the borough. The police is also under their joint control. The improvements in the navigation (which of late years have been very considerable) are under the direction of conservators, 3 of whom are appointed by the university, 3 by the corporation, and 3 by the county magistrates. The ann. rev. of the town corporation averaged, in 1835, about 1,700*l.* a year, and is derived from rents of lands and tenements, and tolls of the fairs and markets, which they receive, though the entire control of these, as well as the licensing of public-houses, be vested in the university: there are also 31*½* acres of common land under the management of the corporation, but on which the inhabitants generally have a right of pasturage. Cambridge has returned 2 mems. to the H. of C. from the earliest records of parliament. Previously to the Reform Act the right of election was limited to the freemen of the bor. not receiving alms. Registered electors, 1837-39, 1698. The quarter sessions and assizes for the county are held in this town. The first historic mention that occurs of Cambridge is in 871, when it was ravaged by the Danes. The castle was built by Wm. the Conqueror. In 1249 the first notice of dissensions between townsmen and students occurs. In 1381 (the period of Wat Tyler's riot) the university charters were seized and destroyed by the townsmen, for which Richd. II. deprived them of their own, and vested the university with their privileges. Hen. VIII. restored their charter, but with modifications which made them, in many respects, still subordinate to the university. In 1643 the town was garrisoned by Cromwell, who had, previously, twice represented it in the H. of C. No subsequent event of public importance is connected with its history. Bp. Jeremy Taylor and Rd. Cumberland (the dramatic writer) were natives of Cambridge.

CAMBRIDGE, a town of the U. S. of N. America, Massachusetts, co. Middlesex, on the Charles river, 3 m. W.N.W. Boston, with which, and the adjacent town of Charleston, it is connected with bridges. Pop. about 6,000. It is, in conjunction with Concord, the co. town, and the courts are held alternately in each. There is a court-house, county gaol, arsenal, and several places of public worship. It is the seat of Harvard University, formerly Harvard College, the oldest and best endowed institution of the kind in the Union: it was founded in 1638. The medical school connected with the university is at Boston. The university library, the second in America, contains upwards of 45,000 vols. besides a students' library, with upwards of 4,000 vols. The philosophical apparatus and cabinet of minerals are valuable and complete. Here are a chemical laboratory, an anatomical museum, and a botanical garden, occupying 7 acres of land. Since its establishment, this university has received large benefactions both from the state and private individuals. A greater number of students have been educated here than at any other college in the Union. The number attending in 1838 was 219.

CAMBRIDGE (UNIVERSITY) OF). This celebrated seat of learning and education derives its origin from certain public schools, established in the town at a very remote, but uncertain period, perhaps in the 7th century. The students who resorted to those seminaries lived in lodgings in the town; nor did they, till the 13th century, assume the regular form of a university, as that term was understood in the middle ages. In general, four branches of education, or faculties, were recognised: that of arts, initiatory to the others, and embracing the three superior,

and four subordinate sciences, or, as they were called in the language of the time, the *trivium* and *quadrivium*, — the first comprising the study of grammar, rhetoric, and logic; and the second, that of arithmetic, music, geometry, and astronomy; and the faculties of theology, law, and medicine. In each of these, there were usually two degrees, that of bachelor and master; and the functions of a university, as at present, was to impart the necessary instruction in each, and to confer degrees, or certificates of proficiency. Except the public schools, there were, at first, no other buildings appropriated to academical purposes; but subsequently, public halls or hostleries came to be established for the convenience of the students, and the introduction of some better system of discipline. The students resorting to each of these chose a principal, or rector, from amongst themselves, whose appointment was sanctioned by the governing body of the university: residence in those halls was, however, never insisted on as an essential requisite. The colleges are of still later origin, and derive their existence from private munificence; the object being to provide lodging and subsistence to a limited number of the poorer class of students. Originally, the masters of arts were the public instructors, and were bound to teach others some of the subjects pertaining to their respective faculties: convenience ultimately came to limit this function to a certain number of masters, who also came to form chiefly, or wholly, the governing body; and

hence the distinction of *regent*, and *non-regent* masters. The appointment of professors in the different faculties, paid by salaries, instead of fees (as was the case with the regent masters) completed the university system on the recognised plan of the period. The general right of lecturing was, however, retained down to a recent date. Such, probably, was the system pursued through the 14th and 15th centuries. The greatest number of students frequenting the university during the period when the public halls formed the residences of the great majority, was in the 18th century. From the earlier part of the 14th, downward, the numbers diminished considerably; partly from civil war, partly from the declining reputation of scholastic philosophy, and subsequently, from religious differences; so that, at the Reformation, the halls had been mostly deserted, and the greater part of the students were those on the foundation of the different colleges, which had become numerous, and were nearly the only institutions that survived the religious confusion of the age. These came in the 16th century to admit independent members in residence, who were not on the foundation; others came to be established, and the remaining halls were converted into colleges. The ascendancy of the college system, however, was effected gradually, through a considerable period, till completed in the reign of Elizabeth. The following are the existing collegiate establishments of Cambridge, in the order of their foundation: —

Names.	Date of Foundation.	Founders.	Visitors.	On the Foundation.	Of the Senate.	Total on the Boards.
St. Peter's Coll., or Peterhouse	1257	{ Hugh De Balsam, Bp. of Ely - }	Bp. of Ely -	{ 14 Found. and 2 Bye Fellowsh. 55 Scholarsh. One fourth of Found. Fell. must be in Orders - }	91	194
Clare Hall -	1396	{ Dr. Baulow; but re- constituted by Eliz. De Burgh - }	Chancellor and 2 others app. by a grace of the Senate -	{ 10 Sen., 9 Jun., 3 Bye Fellowsh., 44 Scholarsh., 4 Exhib. - }	77	164
Pembroke Hall -	1343	Countess of Pembroke	The Queen -	{ 14 Found., 2 Bye Fellowsh., 23 Scholarsh., several other bye ones - }	46	128
Gonville and Caius Coll. -	1349	{ Edw. Gonville; John Caius, in 1558, increased and obtained a new charter - }	Master of Corpus Christi, Sen. Dr. of Physic, Mast. Trinity Hall -	{ 12 Sen., 17 Bye Fellowsh., 26 Scholarsh., 8 Exhib. 1 Scholarsh. in Chem. 4 in Physic - }	129	285
Trinity Hall -	1350	{ W. Bateman, Bp. of Norwich - }	Lord High Chancellor -	{ 12 Fellowsh., 2 in Orders, 17 Scholarsh. Fellowsh. usually held by Graduates in Civil Law - }	47	140
Corpus Christi Coll.	1351	{ The Brethren of Cambridge guilds - }	V.C., 2 Sen. D.D. in extraordinary cases, the Queen	{ 8 open, 4 appropriated Fellowsh., 8 Found., many Bye Scholarsh. This Coll. possesses a valuable MS. library, left by Archbp. Parker - A Provost, 7 Fellow., and 70 Sch., law; the latter supplied by a regular succession from Eton Coll. Scholarsh. are exempted from Univ. exam. and authority of its officers within their own precincts, by a special compaction between this society and the University - }	90	231
King's Coll. -	1441	Henry VI. -	Bp. of Lincoln -	{ 19 Found., 1 Bye Fellowsh., 26 Scholarsh. - }	76	107
Queen's Coll. -	{ 1446 1465 }	{ Merg. of Arjou: re- founded by Consort of Edw. VI. - }	The Queen -	{ 4 Found., 6 Bye Fellowsh., 45 Scholarsh. - }	128	315
Catharine Hall -	1475	Robt. Woodlark	The Crown -	{ 16 Found., 1 Bye Fellowsh., 46 Scholarsh. and Exhib. - }	80	211
Jesus Coll. -	1496	Jno. Alcock, Bp. of Ely	Bp. of Ely -	{ 15 Clerical, 2 Lay Fellowsh., 50 Scholarsh. and Exhib. This Found. is for Divinity - }	80	183
Christ's Coll. -	{ 1451 1505 }	{ Hen. VI., Countess of Richmond & Derby - }	V.C., and 2 Sen. D.D. -	{ 32 Found., 21 Appropria. Fellowsh., 114 Scholarsh. - }	101	217
St. John's Coll. -	1511	Countess of Richmond & Derby	Bp. of Ely -	{ 4 Found., 15 Bye Fellowsh., 43 Scholarsh. - }	575	1125
Magdalen Coll. -	1519	Lord Audley	Palace of Audley End -	{ 60 Fellowsh., 69 Scholarsh., &c. The Fellows are chosen from the Scholarsh. ineligible if M.A., or of sufficient standing for that degree. The Master is appointed by the Crown - }	79	189
Trinity Coll. -	1546	{ Hen. VIII., augmented by Mary: it occupies the ground of several suppressed Coll. and hostels - }	The Queen -	{ 12 Found., 3 Bye Fellowsh., 4 Found., and several other Scholarsh. - }	907	1754
Emmanuel Coll. -	1584	Sir W. Mildmay	V.C., 2 Sen. D.D. in some cases Mast. of Christ's, and 2 Sen. D.D. in others	{ 9 Found., 3 Approp. Fellowsh., 20 Scholarsh. A mathematical Lecturesh. - }	112	314
Sidney Sussex Coll.	1598	{ Lady F. Sidney, Countess Sussex - }	Sir J. S. Sidney	{ This Coll. will consist of a Master, 2 Pro., 1 Engl. Law, 1 of Physic, 16 Fellowsh., and 6 Scholarsh. Charter states objects of Found. to be Law and Physic and other useful arts and learning: the buildings are being erected - }	47	91
Downing Coll. -	1800	Sir G. Downing -	The Crown, by the Lord High Chancellor -		27	52

Each of these colleges is governed by laws and usages of its own (for the most part established by the respective founders), and is subject to the inspection of its own visitor or visitors, appointed by the foundation charter. Except at King's and Trinity, the heads (masters) of these colleges are elected by the fellows, for life, from amongst themselves; in general, they must be in orders, and are allowed to marry; their incomes (which vary considerably) arise from the proceeds of a double fellowship, livings attached to the office, &c. They exercise supreme authority in the discipline of their college in respect to education, and the conduct of those *in statu pupillari*, and are associated with the general government

of the university, as will subsequently be noticed; but, as respects the government of their college, they form part of the general legislative council, and are assisted by foundation fellows, who form the governing body in each college. In regard to these last, the ordinary practice is to elect to vacancies, each from the respective students of its own establishment, and, for the most part, from amongst those studying with a view to taking holy orders; time, however, is allowed by the statutes for graduates to make choice of a profession, and, consequently, those who decline after the limited period taking orders have to vacate any fellowships they have been appointed to; vacancies also occur by acceptance of college liv-

ings (which, as they fall in, are offered by seniority to the respective fellows,) or by other livings or situations, statutorily incompatible, or by marriage, which is against the statutes in all the colleges; so that, from these and other circumstances, the succession of fellows, in most of the colleges, is tolerably rapid: when in residence, a considerable part of their board is provided. The incomes are very various, and in each college vary from year to year, being contingent on the college revenues, much of which is derived from rents, varying with the prices of corn, from the falling in of leases, &c. The college expenses also vary, and are paid from a fund set apart for general purposes, and derived partly from taxation of the fellows, partly from room-rent, &c.

The *foundation scholarships* are subject to different regulations and conditions, peculiar to each college; but they are always elected from among the under graduates, and in the larger colleges, where these are numerous, they form a sort of minor prizes, to be contended for like those of the fellows. The emoluments attached to these scholarships are very various in amount; in regard to discipline and education, they are precisely on the same footing as the independent students.

The *exhibitions* are annual pensions, given in some instances by the colleges, but mostly by free endowed schools elsewhere, to assist such youths as, having been educated at them, are sent to the university: *exhibitioners* are not usually accounted on the foundation. Besides these, there are students of an inferior class, termed *sizarers*, who are provided for wholly or in part by the foundation. The officers of the establishment, such as dean, bursar, &c., are selected by the fellows of each respective college from among their own body; as also the college tutors, &c., to whose charge all the students, whether on the foundation or not, are committed. The whole of these must necessarily be in residence; but in respect to the other fellows, this is not in general required, though a number usually do reside, some as private tutors, others for the purpose of study. In some colleges, probationers have to pass an examination previously to being admitted as fellows on the foundation. The instruction given at each of those colleges is preliminary to taking the first university degree of B. A., and is exclusively adapted and directed to that object. This is chiefly attained, not through the public lectures of the university professors, but through the private labours of the respective college tutors. The character and extent of this instruction is determined by the university, by which the degree is granted; but no one is admissible unless he have been entered at, and resided within the jurisdiction of one of the colleges or licensed halls, and has been under the collegiate instruction of his house. Thus the university is formed by the union of 17 colleges, devoted to academic pursuits and the study of all the liberal arts and sciences: it is incorporated (13 Eliz. c. 29.) by the name of 'The Chancellor, Masters, and Scholars, of the University of Cambridge;' and though, as we have seen, each college is a body incorporate, bound by its own statutes, it is likewise controlled by the paramount laws of the university. The statutes of the 12th of Eliz., which were sanctioned by parliament, and confirmed some former privileges, are the foundation of the existing government, and form the basis of all the subsequent legislation; in fact, no grace of the senate is considered valid which is inconsistent with the statutes of Eliz., and certain nearly contemporary interpretations of them; or with king's letters, that have been accepted and acted on by the university.

Each college furnishes members both to the executive and legislative branches, collectively termed the senate; the present number of which is 2,705. It is divided into 2 houses, called the regents' and non-regents' house. The former, or upper house, is composed of masters of arts of less than 5 years' standing, and doctors of less than 2 years; its members wear hoods, lined with white silk; all the rest, who retain their names on their respective college boards (for which a small annual fee is charged), constitute the lower house, and wear hoods of black silk; hence the distinction of white and black-hood houses. Doctors of more than 2 years' standing, and the public orator of the university (who may be considered as the secretary), may vote in either house, at pleasure. Besides these, there is a council called the *caput*, chosen annually on the 12th Oct. It consists of the vice-chancellor; a doctor in each of the three faculties, of divinity, civil law, and physic; and 2 masters of arts, as the representatives of the regent and non-regent houses. In practice, these are mere nominees of the vice-chancellor; and as the approval of the caput is essential previously to any 'grace,' or legislative proposition, being voted on in either house, the substantive government of the university vests in him. He also fixes the days when congregations, or meetings of the senate, are to be held for transacting university business; these, in term time, are usually once a fortnight; but there are also certain fixed times by statute for congregations to be held, for conferring degrees, electing officers, &c.

Graces which pass both houses, under the sanction of the caput, become acts of the senate, and if of a public nature, become statutes of the university. An assembly of the senate held out of term time is called a convocation; but, by a grace passed *pro forma*, it is converted to a congregation, and the business proceeds in the usual way. The chief officers of the university are, a chancellor, in whom the executive authority vests, except in matters of mayhem and felony, within the limits of the jurisdiction, which is a mile round, reckoned in any direction from any part of the suburbs; the office is biennial, or for such longer period as the tacit consent of the university may choose to allow. A high steward, who has a special power to try scholars impeached of felony within the limits, and to hold courts leet, which is done, by deputy. His election is by a grace of the senate. A vice-chancellor, elected annually by the senate (on the 4th of Nov.) from the heads of colleges. In the absence of the chancellor, the powers of that officer vest in him, by the statutes, and he is also, *ex officio*, a magistrate for the university, town, and county. A commissary, appointed by the chancellor, to hold a court of record for all causes to be tried and determined by the civil and statute law and university custom, in respect to all privileged persons under the degree of M. A. A public orator, who may be said to be the speaker of the senate. The assessor, an officer to assist the vice-chancellor in his court. Two proctors, or peace officers, elected annually, to enforce proper discipline and behaviour in all who are *in statu pupillari*, as well as various other duties. They must be M. A. of 2 years' standing, at least, and are nominated in turn by the different colleges, in a prescribed and peculiar cycle of 51 years. There are many other offices of minor importance; but the two moderators must be noticed, who are nominated by the proctors, and appointed by a grace of the senate, to act as the proctors' substitutes in the philosophical school, and alternately superintend the exercises and disquisitions in philosophy, and the examinations for the degree of B. A.; and also the eight classical examiners, nominated by the several colleges in term (according to the same cycle as the proctors), and elected by a grace of the senate; four of these are examiners of inceptory bachelors, and four of the junior sophis. In Lent term.

The University is represented in the H. of C. by 2 men, chosen by the collective body of the senate, the vice-chancellor being returning officer. The privilege was granted by charter, in 1 James I.

The public professorships in this university are, Lady Margaret's, of divinity, founded 1502; the regius professorships of divinity, civil law, physic, Hebrew and Greek, founded by Henry VIII. in 1540; those of Arabic, one founded by Sir F. Adams, in 1632, the other, the Lord Almoner's; the Lucasian professorship of mathematics, in 1663; that of music, in 1684; that of casuistry, founded in 1683; of chemistry, 1702; the Plumian professorship of astronomy and experimental philosophy, in 1704; that of anatomy, in 1707 (there is a good anatomical museum connected with this); those of modern history and of botany, 1724; that of geology, in 1727, by Dr. Woodward, who left his collection of minerals in connection with it; that of astronomy and geometry, founded in 1749; the Norrisian professorship of divinity, in 1760; of natural and experimental philosophy, in 1783; the Downing professorships of English law, and of medicine, founded in 1800; that of mineralogy, in 1808; and, lastly, of political economy, in 1828. These professors are paid from various sources: some of the foundations have estates appropriated to the purpose; others are paid by ancient stipends, in part; and some from the privy purse, or by government. One has 400*l.*, another, 300*l.*, the rest 100*l.* annually. The appointment of some of them rests in the senate, of others, in the crown, and of others, again, in special bodies of electors. None of them can be said to be directly concerned in the education of the students, as the attendance on the courses of lectures given by them is not made essential to any of the students (with the exception of those proceeding to the bachelor's degree in civil law and medicine, who are required to bring testimonials of attendance on the courses connected with those subjects). The public income of the university arises chiefly from the proceeds of the rectory of Burwell, from matriculation, and other fees (about 3,000*l.* a year from all these sources), and from the trading profits of the Pitt or university press. The funds are managed by the vice-chancellor and specific trustees, and 3 annual auditors are appointed by the senate to pass the accounts. Its library claims (under the copyright act) a copy of every volume, map, and print published in the United Kingdom; it is also endowed with a portion of the proceeds of two estates; besides this and occasional donations, a quarterly subscription of 1*s.* 6*d.* is paid by all the members, except *sizarers*, towards its support. A new and splendid building, from designs by Mr. Cockerell, is now in course of erection intended for the reception of the library, and for public lecture-rooms. As this was much wanted, and

the university had no disposable funds for the purpose, a subscription was set on foot, and 20,000*l.* have been collected to effect it. The printing establishment has also, within a recent period, been enlarged and improved, from funds appropriated to that purpose by the committee for managing the sums collected for a public memorial of the late Right Hon. Wm. Pitt. The Fitzwilliam museum, consisting of a splendid collection of books, paintings, drawings, &c., was left by Viscount Fitzwilliam to the university, in 1816, together with funds for the erection of a building to receive it, which was commenced in 1827. The university also possesses a collection of pictures, left by Mr. Meenan, an observatory, built in 1834, at an expense of 18,000*l.*, and a botanic garden of 3 or 4 acres. The Cambridge Philosophical Society may also be briefly adverted to here; it was established in 1819, for the promotion of scientific inquiry, and the advancement of philosophy and natural history; in 1832, it was incorporated by charter, and all, except honorary members, are required to be graduates of the university.

The degrees conferred by the university are those of Doctors in the three faculties of divinity, civil law, and medicine; and in the science of music; that of Master of Arts; and the degree of Bachelor. In each of the foregoing. Except in the honorary degree, last named, all examination in regard to proficiency is in reality discontinued, and the higher degrees are conferred as of right on those who have obtained a particular standing, without reference to qualification, or (with trifling exceptions) to residence. The academical year consists of 3 terms, viz., Michaelmas, Lent, and Easter; and the following are the chief regulations necessary for proceeding to degrees: premising first, that the mode of admission on the boards of a college is either by personal examination of its tutors and officers, or (the more usual plan) through a recommendatory certificate, specifying the age, qualifications, &c., of the candidate, signed by an M.A. who has graduated at the university, and accompanied by a deposit called caution-money. This is usually done before the end of Easter Term; and, if deemed satisfactory, the name is at once entered on the boards of the college, and the student usually comes into residence the October following, when the academical year begins.

Bachelor of Arts.—12 terms on the boards of some coll., 10 of which in residence.

Master of Arts.—B.A. of 3 yrs. standing.

Bachelor of Divinity.—M.A. of 7 yrs. standing; under the 8th statute of Eliz., those who have been admitted on the boards of a coll. after 24 yrs. old, and have remained so 10 yrs. (the 2 last of which must be in res.), are admissible without having taken any other—these are called 10 yrs. men.

Doctor of Divinity.—B.D. of 5, and M.A. of 12 yrs. standing.

Bachelor of Civil Law.—Of 6 yrs. standing complete, 9 terms of which in res. or B.A. of 4 yrs. standing.

Doctor of Civil Law.—B.C.L. of 5 yrs., or M.A. of 7 yrs. standing.

Bachelor in Medicine.—Of 5 yrs. standing, 9 terms of which in res.

Doctor in Medicine.—Similar to that degree in civil law. 12 terms in residence.—M.A. or B.A. of 2 yrs. standing.

Bachelor of Music.—The name must be entered on the boards of some coll., and an exercise performed.

Doctor of Music.—Usually B.M.

Persons having the rank of privy counsellors, bishops, noblemen, and eldest sons of noblemen, are entitled to have any of those degrees conferred on them without complying with the regulations; and knights and baronets from that of M.A. downward. By a grace passed in 1825, these are to be examined and approved in the same way as others, but they are admissible after keeping 9 terms, but though none can claim a degree in right of nobility, &c., yet honorary ones are often conferred, without examination or residence, on eminent individuals.

The respective orders in the different colleges rank as follows:—

1. *The Heads of Coll.*, who are generally of the degree of D.D.
2. *The Fellows*, who are doctors, masters, or bachelors of the different faculties.
3. *Noblemen*, who are graduates, doctors, and *Me. A.*, not on the foundation (the name must be kept on the coll. boards, the cost of which varies from 2*l.* to 4*l.* a year.
4. *Bs.D.*, who are 10 yrs. men.
5. *Bachelors of Civil Law*, and of *Physic*: these wear the habits, and enjoy all the various privileges of M.A., except that of voting in the senate.
6. *Bachelors of Arts*, who are considered in *status pupillari*.
7. *Follow Commoners*, usually younger sons of the nobility, or sons of men of fortune, &c., who have the privilege of dining at the same table as the fellows.

8. *The Scholars*, who are on the foundation.

9. *Pensioners*, who pay for their chambers, commons, &c., and comprise the chief part of the students.

10. *The Sizar*, students of limited means, who usually have free commons, and other emoluments.

Since, as we have seen above, all substantial examination for degrees is limited to the initiatory ones of *bachelor* (of which that of B.A. is the first, and only really important step), the necessary education of the different coll. is of course directed to that object, and contingent, in its nature and scope, on the qualifications which the university deem fit to exact at their public examinations, and the class-books they order to be adopted for the purpose. The ordinary course of study for B.A. may be comprised under three heads:—natural philosophy, theology and moral philosophy, and the *belles lettres*; and for the attainment of these, the students attend the lectures of the college tutors, which are not formal harangues, but rather of a catechetical nature, intermixed with reading and discussion; at each of which a limited number of the students go through a certain portion of some mathematical or classical work with the tutors. Half-yearly or yearly college examinations usually take place, in addition to these lectures, when the names of the students are arranged in the order of their respective merits. The first public examination of a student takes place in the Lent and October terms of the second year from the commencement of his academical residence. After the examination, the candidates are arranged in two classes—those who have passed with credit, and those to whom the examiners have only not refused their certificate of *approval*. A second examination takes place, in Michaelmas term, of those who have been absent from the former by permission, or were not then approved of: this is termed, in university phrase, the “*double go*.” Those anxious to take honours usually engage a private tutor (who is not necessarily of their own coll.) after this, in order to secure more exclusive attention and assistance. The usual fee of a private tutor is 50*l.* a year. After this preparatory step, those who are candidates for honours perform the college exercises under the superintendence of the moderators: these are usually Latin theses, propounded and opposed in a syllogistic form. The senate-house examination, for the degree of B.A., commences on the Monday preceding the first Monday in Lent term, and continues six days. The previous division of the candidates for honours into four classes has recently been discontinued, and the same questions are now proposed throughout the examination, to all whom the moderators judge, from the previous public exercises in the schools, to be qualified for examination as candidates for mathematical honours; and of the six examiners, two confine themselves to mathematical subjects, two to Homer and Virgil, &c., and two to Paley’s Evidences and Moral Philosophy, and to Locke’s Essay on the Human Understanding, &c. The whole is conducted by writing, and the various subjects and problems may be seen in the annual registers of the university. Those who are not candidates for honours, called *walkers*, are classed and examined separately, the subjects being—the Acts of the Apostles in Greek, one Greek and one Latin classic, Paley’s Moral Philosophy, and certain questions in mathematical and mechanical science, specified in a printed schedule. The degrees are conferred on such of the questionists as pass, to the satisfaction of the examiners, by a subsequent grace of the senate, when the oaths of allegiance and supremacy are taken, and a declaration of adherence to the doctrines of the Church of England is required to be signed; but previously to this, on the last examination day, the mathematical *tripos* or list of those who succeed in obtaining an honour, is exhibited, formed into three divisions, that of *wranglers*, and of *senior* and *junior optimes*, arranged according to merit, or “*bracketed*,” where two individuals are considered on an equality. The senior wranglership is the highest academical honour obtainable in the kingdom. On the fourth Monday after the general admission *ad respondendum questioni*, an examination commences of all such as have obtained an honour at the mathematical examination of the previous January, and who voluntarily offer themselves for the purpose in classical learning at this examination (which continues five days), translations are required of passages from the best Greek and Latin authors, and written answers to questions arising immediately out of such passages. The names of those who obtain honours are arranged in three divisions (like those in the mathematical *tripos*), in a list which forms the classical *tripos* of the year. There are two *tripos* days, one for *wranglers* and *senior optimes*, the other for *junior optimes*, when these are publicly announced.

The annual prizes of the university form another subject of competition: the classical ones are—the chancellor’s gold medals, given to 2 commencing B.A., &c., who, having attained senior optimes at least, show themselves most proficient in classical learning: these prizes were first instituted in 1751. A third, first given by the Duke

of Gloucester, and continued by the present chancellor, is for the best English ode, or English poem in heroic verse. Many of these have been published, under the title of "Cambridge Prize Poems;" the competition is limited to resident undergraduates. The members representing the university also give 4 prizes, of 15 guineas each, which are bestowed on 2 B.A.s and 2 under graduates, who compose the best dissertations in Latin prose. Brown's 3 gold medals, of 5 guineas each, to under graduates, are given for the best Greek ode, the best Latin ode, and the best Greek or Latin epigram. Porson's prize consists of one or more Greek books, given for the best translation of some passage in Shakspeare, B. Jonson, Massinger, or Beaumont and Fletcher, into Greek verse. The mathematical consist of 2 annual prizes, of 25*l.* each, left by the Rev. R. Smith, and given to 2 commencing B.A.s who prove the best proficient in mathematics and natural philosophy. The examination takes place soon after the admission of questionists: the competition is open, and the adjudicators are the vice-chancellor, the master of Trinity, and the Lucasian, Plumian, and Lowndean professors. The second or even lower wranglers occasionally become first prize men; hence it forms, in some sort, a court of appeal from the decisions of the examiners. *Cateris paribus*, preference is given to candidates of Trin. Coll. In theology, there are the Norrisian and Hales's prizes. The *Scotmonian* is a poetical one; the subject is proposed in January, and the poem is to be sent in by Michaelmas: that which obtains the premium is printed from the produce of the estate left for the purpose, the remainder of which is given to the author. (A selection of these poems has been published in 2 vols. 8vo.) *The university scholarships* are also publicly contended for, and are given to the most successful candidates in classical reading and composition: in this respect they rank first in the classical competitions of the university, and are usually extended beyond the ordinary range of text-books. The examination is the same for all, but most importance is usually attached to the Pitt scholarship, it being less frequent as well as of greater pecuniary value.

Very different opinions have been, and may be, entertained as to the merit and demerit of the system of instruction pursued at this and the sister university. Mathematics, and the sciences closely connected with and dependent on mathematics, form the distinguishing characteristic of the studies pursued at Cambridge; and the chief examinations, as well as the public lectures, honours, and emoluments, are principally rendered subservient to their advancement. A critical knowledge of the structure of the Greek and Latin tongues is that to which attention is mainly enforced at this university, in respect to classical attainments. Original composition forms no part at either tripos examination, but it is made a leading feature in the competition for scholarships and other prizes.

Of the importance of mathematical studies no doubt can be entertained; but very great, and apparently well founded doubts may be entertained whether the exclusive attention given to them at Cambridge be the best means of educating accomplished statesmen, lawyers, divines, country gentlemen, or even manufacturers. The truth is, that this and the other university are institutions that belong to a different age; and though they have been materially modified, a great deal yet remains to be done before they become suitable places for educating the noble and aspiring youth of a great commercial and manufacturing country like Great Britain.

Lodging within the walls of a college is not enforced on under graduates, provided there be no vacant rooms; which may probably account for the greater increase of students matriculated in this than in the sister university, where residence within the walls is enforced. In 1748 there were 1,464 members on the boards; in 1838, 5,555; in the present year, 5,628; of which 2,000 are members of the senate. The collegiate buildings of many of the establishments have been greatly improved and augmented of late years. Those of Trinity are the largest of any single college in either university; those of St. John have also been increased by a large quadrangle on the left bank of the Cam, forming one of the finest collegiate edifices in the kingdom. (*The Statutes of the University*, printed in 1785; *The University Calendar*, published annually; *Classical Exercises in Verse of Cambridge*, 1st and 2d series; *Whewell's Principles of University Education*; *Coloured Plates of the Costumes*, by E. Horriadan; and *Contabrigia Illustrata*; are works that may be advantageously referred to as embodying the best information on most of the various matters connected with this university.)

CAMELFORD, a bor. and town of England, co. Cornwall, hund. Losenewth, on the Camel, 305 m. W.S.W. London. Area of par. 2,750 acres; pop. of do. (1831) 1,349. The town is mainly built, but the streets are wide and well paved. It has a commodious town-hall, built in 1806; a free school, founded in 1679, has an annual revenue of 26*l.* 10*s.* and there are a few minor charities. Market,

Friday; fairs for cattle, Friday after March 10, May 26, June 17, and 18, and Sept. 5. Inhab. mostly engaged in agriculture. Campeachy returned 2 mems. to the H. of C. from 1st Edw. VI. down to the passing of the Reform Act, by which it was disfranchised. The franchise vested in a self-elected corporate body, consisting of a mayor and 31 burgesses.

CAMERINO, a town of the Papal States, cap. deleg. on a hill, 16 m. S.W. Ancona. Pop. 4,900. It is a pretty well built town. Among the public buildings are the cathedral, which contains some pictures of the great masters, as does the church of Omamnia; and the archiepiscopal palace, a fine building surrounded with columns. In the principal square is a bronze statue of Pope Sixtus V. It has 13 monasteries, and 7 convents for women; and is the seat of an archbishopric, of a tribunal of primary jurisdiction, and of a university founded in 1727. A good deal of silk is spun and manufactured here; but the business is rather declining.

CAMMIN, a town of the Prussian States, prov. Pomerania, cap. circ., on the Dievenow, about 5 m. above where it falls into the Baltic, 35 m. N. Stettin. Pop. 2,200. It was formerly the seat of a bishopric, suppressed in 1648. The fine cathedral still remains, and the chapter continued down to 1812. There is here an asylum for noble ladies, and an hospital. Distillation is carried on to a considerable extent, and the fishery is very active.

CAMPAGNA, a town of Naples, prov. Principato Citra, cap. distr., surrounded by high mountains, 18 m. E. Salerno. Pop. 7,000. It is the seat of a bishopric; has a superb cathedral, 3 parish churches, several convents, a college, an hospital, and a *mont de piété*.

CAMPAN, a town of France, dép. Hautes Pyrenées, cap. cant. on the Adour, 16 m. S.S.E. Tarbes. Pop. 4,248. The houses are mostly built of marble. This town gives its name to a beautiful valley, fertile, *riante*, and full of life and industry. The houses are clean and comfortable; and the neat, well laid-out garden and respectable dress of the peasantry, evince their comfortable condition. (*Ingli's Switzerland*, &c. p. 260.)

CAMPBELTON, a sea-port and royal bor. of Scotland, co. Argyle, being, though not the capital, by far the most important town in the co., on the E. coast of the long narrow peninsula of Cantire. Pop. 4,869. It consists of two leading streets crossing each other at right angles, with adjoining streets of an inferior description. It is built on the S.W. side of a large salt-water loch, or inlet of the sea, about 2 m. in length by 1 in breadth, forming an excellent harbour, having from 6 to 13 fathoms water. Two conical insular hills lying in the mouth of the bay, and intercepting the view of the sea, make the harbour look land-locked. Campbelton was at one time a small fishing village under the name of Dalauran; but having begun to rise into importance, it was made a royal burgh in 1700, when its present name was conferred on it in honour of the noble family of Argyle, on whose property it is built. The par. boundaries of the burgh are very extensive, embracing a considerable space of ground on both sides the loch not yet built on. It has, at present (1839) no fewer than 28 distilleries, which, at an average pay 100,000*l.* to the excise, and produce about 600,000 gallons of spirits yearly. There are 47 maltsters, but in many instances the same person is both distiller and maltster. The inhab. also engage extensively in the herring fishery, a branch of trade that at one period of the year gives employment to several hundred individuals. Many of the females are engaged in tambouring; while hand-loom weaving is pretty extensively carried on in connection with the cotton manufacture in Glasgow. Coal is got within 4 m. of the burgh, and is brought thither by means of a canal. There is a good quay projecting into the bay, but accessible only at high-water. The expenditure of a small sum on its extension might render it available for vessels of all sizes at all seasons of the tide. There is a regular steam communication with Glasgow and various parts of the mainland, as also though less frequently, with Ireland. The climate of Campbelton is regarded as particularly agreeable and salubrious: hence the number of families that resort thither, either as occasional visitors or permanent residents. The burgh has two places of worship connected with the established church, in one of which the service is performed in Gaelic, and three dissenting chapels. It unites with Oban, Inverary, Irvine, and Ayr, in sending a mem. to the H. of C. Registered electors in 1832-39, 263.

CAMPEACHY, a sea-port town of Mexico, W. coast of the peninsula of Yucatan, on the Rio Francisco, 95 m. S. by W. Merida, lat. 19° 51' 15" N., long. 80° 38' 15" W. Pop. fluctuates from about 7,000 to about 14,000. It is walled and defended by some fortifications which, however, are of little importance. It has a pier about 30 yds. in length; but the water is so shallow that only small boats can come up to it, vessels of considerable burden anchoring at certain distances off shore, according to

their draught of water. It is, in common with the whole of this coast, supplied with fresh water that which is obtained from wells being brackish. It derives its entire importance from its being the great seat of the logwood trade; that valuable dye-wood, sometimes called Campeachy wood (*Hæmatoxylon Campeachianum*), being found in greater perfection and abundance in the adjoining district than any where else. The imports of logwood into this country in 1835 mostly from Campeachy, amounted to 5,637 tons. The other exports are wax, the produce of wild, stingless bees, with some small quantities of cotton, &c. Campeachy was founded in 1540, and suffered much at different times from hostile attacks, having been sacked by the English in 1659, by Scott a pirate, in 1678, and by the buccaners in 1685 (*Hæmholdt; Blount's American Pilot, &c.*)

CAMPLI, a town of Naples, prov Abruzzo Ultra I, cap. cant, 5 m N Teramo Pop 6,892 It has a cathedral, three collegiate churches an abbey of Celestine monks, several convents, an hospital, and a *monastero*

CAMPOBASSO a town of Naples, cap prov Sannio, on the declivity of a mountain, 3 m N E Naples Pop 8,000 It is fortified, is the seat of a civil and criminal court, and has a collegiate and four parish churches, several convents, a royal college, an hospital, and an almshouse. The best cutlery made in Naples is produced here, and being traversed by the excellent road forming a communication between the capital and the towns on the Adriatic, it has an extensive commerce (*Dict Géog; Balbi Abbrégé* ed 1837 p 414)

CAMPO FORMIO, a town of Austrian Italy, prov Friuli, 4 m S W Udina Pop 1,600 It is famous in diplomatic history for the treaty of peace concluded here on the 17th of October, 1797, between Austria and France

CAMPO-MAYOR, a fortified and frontier town of Portugal, prov Alentejo 12 m N N F lvas and 15 m N W Badajoz Pop 4,400 It is ill built with narrow dirty streets, and old low houses, has a collegiate church, two convents, an hospital, and a workhouse. It was nearly destroyed in 1713 by the explosion of a powder magazine (*Mémoires*)

CAMPOS, a town of the isl of Majorca in an extensive plain, 24 m S E Palma, and 7 m from the sea. Pop. 4,491. It has in its vicinity a hot well that is in considerable reputation, and considerable quantities of salt

are made along the coast. The surrounding plain is very fertile (*Mémoires*)

CANADA, a vast territory of N America, belonging at present to Great Britain, lying principally in a N L and 9 W direction, along the N side of the St Laurence, and the N and E sides of lakes Ontario Erie, Huron, and Superior, between 57° 50' and 90° W long and 42° and 59° N lat. The other portion of Canada or that on the S side of the St Laurence is of comparatively limited dimensions. It stretches along the river from near Montreal, to Point Gaspé, at its embouchure having on the S the territory of the U States and New Brunswick. On the N Canada has Labrador and the inhospitable territories belonging to the N W Company, the boundary in this direction being the elevated grounds, or watersheds, separating the rivers which run S to the St Laurence and the great lakes from those which run N to Davis Straits and Hudson's Bay. The boundary of that portion of Canada which lies to the S of the St Laurence cannot be exactly defined, a considerable extent of territory (9 000 sq m) lying to the N of the state of Maine being claimed both by the British and the Americans. The length of Canada from Amherstburg, on Detroit river, the extreme 9 W limit of the prov, to Sablon Harbour on the strait of Belle Isle its extreme N E limit, is about 1 450 m, its breadth may vary from 300 to 400 m. Its area has been estimated at about 850 000 sq m, and its pop is at present (1839) probably little short of a million. It is wholly within the basin of the St Laurence of which it includes the entire N and a small part of the S division.

This great territory is divided into the provs of Upper and Lower, or as they might be designated English, and French Canada. The Ottawa or Grand River which has its sources in about 48° 30' N lat and 80° W long and flows in an E S E direction till it unites with the St Laurence near Montreal forms nearly in its whole extent the line of demarcation between the two provs. Lower Canada comprising the whole territory lying N of the Ottawa on both sides the St Laurence while Upper Canada comprises all the territory lying S and W of that river. The latter is entirely in island pr v but from its having the great lakes and a part of the St Laurence for its boundary it has a vast command of internal navigation and a ready access to the ocean. Subjoined is an account of the divisions of the provs, and their pop in 1835 and 1831

Districts		Area in sq m	Pop 1835	Acres cultivated	Acres occupied but uncultivated	Assessment of 1d of 1835

The N. portion of both Upper and Lower Canada consists of a table-land, little of which has been hitherto explored. In Upper Canada, E. of Huron, it has an average elevation of perhaps from 1,300 to 1,800 ft. It is covered with forests interspersed with ravines swamps, and torrents, and abounds with lakes which, any where but in the neighbourhood of the immense lakes of this continent would be deemed of considerable size. The coast of Lower Canada, N E of the Saguenay, is less elevated S W. of that river, but of a very uninteresting description. The interior of this part of the country is described by the Indians and Esquimaux, by whom almost it is traversed, as composed of rocky cliffs and low hills, scattered over barren plains, diversified with thick forests of limited plains, and chequered with small lakes. There seems reason to suspect that the Indians once entertained of finding here tracts of fertile land will never be realised, but hopes are

still cherished that the district may contain valuable minerals. The greater part of the immense district of Quebec presents a "chaos of mountains, lakes, and torrents, tenanted only by wild beasts, and a few wandering Indians" (*Murray*). From the mouth of the Saguenay to Cape Tourment, near Quebec the shore of the St Laurence is bold and desolate, but W of this point a plain country begins to extend inland with a variable breadth of from 18 to 40 m, rising into the table-land behind it by successive terraces. The cultivated country N of Quebec does not extend far, being hemmed in by hill ranges. But as these ranges gradually recede from the St Laurence and the country, at first diversified by varied eminences, sinks into a level plain, the surface of settled and cultivated land increases, and this is especially the case as we approach and penetrate Upper Canada. The peninsula or great plain of this prov, between lakes Huron, Erie, and Ontario, comprising about

20,000 sq. m., consists, for the most part, of alluvial soil, on a calcareous substratum. It is of varying fertility; but, on the whole, is believed to be the best grain country of any of the more N. portions of the American continent. A large part of this fine plain is still covered with lofty forests: it has, however, some prairies, or natural meadows; but these are not extensive. At some remote period it had evidently formed part of the bed of a vast inland sea, of which the five great lakes having been the deepest, are now the principal remaining portions. N. of Lake Ontario, two terraces intervene between the plain on the shore of the lake and the tableland in the N., descending somewhat in fertility as they increase in height, and separated from each other and from the plain by two ranges of hills of moderate elevation. The most S. of these two ranges unites near long. 80° with a third, which passes N. and S. from Natasawanga Bay, in Lake Huron, to the W. extremity of Lake Ontario. The combined range, after encircling the head of the latter lake, crosses the bed of the Niagara river, forming the ledge over which are the celebrated falls, and is finally lost in the territory of the United States.

That part of Lower Canada S. of the St. Lawrence, extending between long. 72° 30' and 74° 30', and entering into the distr. of Montreal, consists, for the most part, of an extended plain almost completely flat, except that some detached hills diversify the surface, one of which, that of Rouville, is 1,100 ft. in height. It is less extensive than the plain on the opposite shore of the river, and contains no large towns, but it is in many districts equally fertile and well watered, and the cities depend on it for a large proportion of their supplies. To the S. and E. it ascends by degrees into the mountainous region, forming the boundary between the British and U. States' territories. The aspect of the S. shore of the estuary of the St. Lawrence, between long. 69° 30' and 72°, though bold and hilly, is not mountainous, as on the opposite shore; and the hill ranges are interspersed with valleys and even plains of some extent, many of which, from the encouragement afforded by the contiguous markets of the cap., have been brought into very tolerable cultivation. About Kamouraska, the country is diversified by more abrupt eminences, while pop. and culture become more limited; and in the district of Gaspé the mountains rise into two chains of considerable elevation, enclosing between them a lofty tableland or central valley. The most southerly of these chains bounds on its S. side the valley of the Ristigouche and St. John rivers. The upper part of the basin of the St. John forms the disputed territory to the N. of the state of Maine, — a region at least 600 or 700 ft. above the level of the sea, covered with forests, lakes, and rivers, and, according to McGregor and other authorities, equal in point of fertility to any part of America, enclosed by mountain ranges on the N., S., and W., and divided into two nearly equal parts by the St. John River, running from W. to E.

Beside the great lakes bounding the W. outline of the country, Canada contains, as has been already said, numerous minor, yet still considerable, bodies of water. In Lower Canada, the lakes and rivers have been estimated to cover 3,200 sq. m. of surface; the principal of the former hitherto discovered are Lake St. John, with an area of 540 sq. m.; those of Manicouagan, Piretibié, and others N. of the St. Lawrence, and Memphamagot, &c., S. of that river. In Upper Canada, the chief known are Nipissing Lake, Temiscaming and St. Ann's, in the high tableland; and the Simcoe Lake in the upper terrace country of Home district.

Just the rivers falling into the St. Lawrence or into the lakes which form a part of its system, there are some deserving of especial mention here for their utility as regards navigation or their agency in fertilising the soil. In the peninsula of Upper Canada, the Thames originates in the district of London, by the union of several streams near lat. 43° and long. 81°, and after a course of about 150 m., chiefly S. W., falls into Lake St. Clair, situated between those of Huron and Erie. The Thames is navigable for large vessels to Chatham, 15 m. up, and for boats nearly to its source. It intersects and waters a fine and fertile country. Besides Chatham, small towns, with the pompous names of London and Oxford, are situated upon its banks. Next in magnitude to the Thames is the Ouse. This river rises in the Home district, about lat. 44°, long. 80° 10', runs generally S. E., and falls into Lake Erie near its N. E. extremity. Parallel to this river for about 50 m., runs the Welland or Chippeway River, which in one part of its course forms a portion of the canal between the Ouse and Lake Ontario, by means of which the falls of Niagara are avoided. The Trent, in the district of Newcastle, connects the small lakes Balsam, Sturgeon, and several others in the upper terrace country, with the Rice Lake, and, after a tortuous course, discharges itself into the Bay of Quinté in Lake Ontario. It is said to be navigable for boats in the whole of its course. The Lake Balsam is separated by only a short

portage from that of Simcoe, which discharges its waters into Gloucester Bay (Huron Lake) by the Severn River. A short and valuable line of direct communication between the lakes Huron and Ontario is apparently impeded only by the intervention of this short portage, and by the rapids of the Severn, which river is, however, no more than 20 m. in length. The other affluents of the St. Lawrence and the great lakes are elsewhere treated of. (See LAURENCE, ST., &c.) If we except the St. John in the disputed territory, the Ristigouche, which bounds the district of Gaspé S., and falls into Chaleur Bay, is the only river of any importance in Canada not belonging to the St. Lawrence basin. (*Bouchette, Darby, McGregor, Hall, &c.*)

Climate. — The climate of Canada is subject to great extremes of heat and cold; the thermometer ranging between 102° above, and 30° below, the zero of Fahr. In such an extensive region there is, of course, some difference in this respect: as we ascend the St. Lawrence, not only a more S. parallel is reached, but the country is less wild and exposed than that near its entrance; so that, whilst Quebec has been said to have the summer of Paris and the winter of Petersburg, the great plain of Lake Erie has the climate of Philadelphia. Still the Canadian climate, as a whole, must be considered very severe: all the streams are locked up by ice, and the ground is covered every where, to an average depth of 5 or 6 ft., by snow, for 4 or 5 months of every year. Frosts usually commence in Oct., whilst the weather, by day, is still mild and serene. But with Nov. begins a succession of snow-storms and tempests, from the N. and E., accompanied by a great increase of cold; and this sort of weather usually continues to the 2d or 3d week of Dec., when the atmosphere again becomes serene, but the cold still more intense, so that the rivers become suddenly frozen over. Towards the latter part of April, or in late seasons, the beginning of May, the ice begins to break up (often with loud reports like the discharge of cannon); a sudden increase of temperature stimulates vegetation, and makes its growth almost perceptible to the eye; so that spring and summer can scarcely be recognised as distinct seasons. May and June are occasionally wet, to the hindrance of the farmer, whose seed-time this is (to be followed by harvest towards the end of Aug.); but usually the summers are very fine. Thunder-storms are often of great violence, and the aurora borealis is frequent and vivid: of the prevailing winds, those from the S. W. are usually accompanied by clear and serene weather; those from the N. E. by continued rain in summer, and snow in winter; whilst a N. W. breeze is usually dry, with severe cold. Fogs (except in the district of Gaspé) are of unusual occurrence. It seems to be the general opinion of the inhab. that the winters are gradually becoming less severe; and this may be attributable to the clearance of the forests and the increased extent of cultivated surface; for, whilst the state of climate (especially of humidity) influences vegetation, that, in turn, reacts on climate. Humboldt's reasoning and tables (*Mémoires d'Arcueil*, tom. iii.) may be satisfactorily referred to for the conditions that have the greatest and most permanent influence on the Canadian climate.

The length and severity of the Canadian winter is a heavy drawback on the country, and lays the farmer under serious difficulties and privations not experienced in countries where the climate is milder, as in the contiguous territories of Indiana and Illinois. For five or six months almost all agricultural operations are suspended, so that time is not left in the rest of the year for the proper preparation of the ground for the crops and other necessary labours. It is clear too, that horses, cattle, and other farm stock, must require a proportionally large supply of fodder for their keep; and to these causes Mr. Shreff is principally inclined to ascribe the leanness of the animals, the high price of produce, and the cheapness of labour as compared with the U. States. (*Tour in America*, p. 354.) In these respects, however, there is a material difference between the lower and the upper province. In the latter the severity and the length of the winter are considerably diminished. The soil too is generally better; and the quality of the wheat improves as we draw nearer to the S. limit of the province.

Most of the causes that contribute to make the climate of the northern part of America more severe, and subject to greater extremes than that of Europe, in the same parallel, bear with especial force on the Canadian regions. The greater portion of these provinces is covered by extensive forests; the trees composing which (especially in the more northern and eastern parts) do not, generally speaking, attain the same lofty size as those of the U. States, nor flourish with the same exuberant vitality; the pine family, and various species of evergreens, are the most numerous and predominant. Amongst various other kinds of trees, are, the silver and American fir, Weymouth and Canadian pines, white cedar (*Thuja occidentalis*), maple, birch, American ash, bass wood, hickory, two or three species of wild cherry, and numerous species of oak. Like the rest of the

American continent, most of the plants and animals differ specifically from those of the Old World. Many of the smaller kinds of annual and perennial plants are common to Canada and regions lying much further to the S., which may be accounted for by the high summer temperature, whilst the deep winter snows effectually protect their roots through the severest seasons; but the trees and larger shrubs, which find no such shelter, belong for the most part to more northern and arctic regions. Of the smaller plants, the *Zizania aquatica* may be noticed as peculiar to Canada, and abounding in most of the swamps (a grass not unlike rice, and affording food to birds, and occasionally to the Indian tribes), and the ginseng, and Canadian lily, common to this country and Kamtchatska. From the sap of the maple (*acer saccharinum*), as it rises in the earlier part of spring, sugar is made in considerable quantities; in collecting which, from trees scattered over thousands of acres, whilst the snow still covers the ground, much hardship is frequently endured: these districts are called sugaries, and are a valuable description of property. The mode of procuring it is by inserting a small cane shoot through an incision made in the bark, the sap being received in a wooden trough placed under it; it is afterwards boiled, and then left to cool into a hard solid mass, of a dark brown colour, which is moulded by the form of the jars which contain it; the value of the article is about half of that produced from the sugar-cane. Most of the oak growing in the woods is unfit for ship-building, and the greater part of the timber used for that purpose is imported from New England. The species called the live oak, which grows in the warmer parts of the colony, is, however, said to be well adapted for ship timber; the various kinds of wood available for no other purpose, serve to supply the put and pearl-shell manufactures. Amongst the wild animals, ranging through these unclaimed regions, are the American elk, yellow deer, bear, wolf, fox, wild cat, racoon, martin, otter, and various species of *Fiverre* and *Muscula*; the beaver, hare, grey and red squirrel; and in the more southern parts, the buffalo and roebuck: the bears usually hybernate, if the season has enabled them to get sufficiently fat for the purpose; if not, they migrate to a more southerly climate. (*Richardson's Fauna Borealis*, p. 16.) Amongst the birds, may be noticed the wild pigeon, quail, partridge, and different kinds of grouse; of the water birds, the species are very numerous, as might be inferred from the general character of the region, where, in the basin of the St. Laurence, and the numerous lakes occupying the elevated table-lands around it, half the fresh water on the surface of the globe is collected; a humming bird (the smallest of its genus) is also indigenous, and may be seen in the Quebec gardens, flitting round the flowers, and constantly on the wing. Amongst the reptiles, the rattlesnake is occasionally met with. Fish, in great variety and abundance, are found in the lakes and rivers; in which respect few streams can rival the St. Laurence; the sturgeon is common, and the salmon and herring fisheries are considerable; seals are also met with occasionally, in large shoals, in the lower parts of the river. Forests can only exist where the prevailing winds bring with them sufficient moisture, but they may usually be taken as a measure of the fertility of the soil, no less than of the humidity of the climate: in this respect, therefore, taken generally, Canada must be considered a fertile region; the upper province much more so than the lower one. Tobacco, hemp, flax, and the different kinds of grain and of pulse, are successfully cultivated; as are all the commoner fruits and vegetables of England; melons of different species abound, and are probably indigenous; as are also the strawberry and raspberry: these last flourish luxuriantly in the woods; and on the plains behind Quebec are gathered in great quantities, and taken to that market. Pears and apples succeed well, both there and at Montreal; and on the shores of Lake Erie, the grape, peach, and nectarine, as well as all the harder kinds of fruit, arrive at the greatest perfection.

Canada does not appear to be rich in minerals, but iron abounds in some districts; veins of silver-lead have been met with in St. Paul's Bay (50 m. below Quebec), and coals, salt, and sulphur, are also known to exist in the colony. No volcanoes have been discovered, but authentic accounts are preserved of several violent earthquakes: amongst others, one in 1663, when tremendous convulsions, lasting for six months, extended from Quebec to Tadoussac (130 m. below it), which broke up the ice of the rivers, and caused many great land-slips and dislocations; in 1791, earthquakes were also frequent and violent, in the same region; and the shores, both of the Gulf and River St. Laurence (like those of the great lakes, as previously noticed), present many proofs of former convulsions in the horizontal banks of recent shingle and shells, and in elevated lime-stone strata, with wave-scooped marks, and lithomous

perforations, that occur on various parts of the shores. (*Lyell's Geology*, vol. II.)

People.—The majority of the population in Lower Canada are of French origin, and are for the most part descendants of settlers from Normandy, established in the colony previously to 1759. Their number at that period was about 70,000, and in 1831 they had increased (according to the census) to upwards of 400,000; the most rapid augmentation probably of any on record from births alone. Neither the conquest, nor the long period which has since elapsed, has wrought any great change in their character and habits; nor has their increasing numbers induced them to make any considerable encroachments on the wilderness around: on the contrary, they have continued within their original limits, subdividing the land more and more, and submitting to a constantly decreasing ratio of comfort. They are frugal, honest, industrious, and hospitable, but cling with unreasoning tenacity to ancient prejudices and customs; by temperament, cheerful, social, engaging, and (from the highest to the lowest) distinguished for courtesy and real politeness, they retain all the essential characteristics of the French provinces under the ancient regime, and present the specimens of an old, uneducated, stationary society, in a new and progressive world. For several families, however, large, but not very valuable, properties: the class wholly dependent on wages is a very small one; and the great majority consists of a hard-working yeomanry (usually called *habitans*), amongst whom there is almost a universal equality of condition and property, and of ignorance too; for scarcely one of them can read or write. From the public colleges and seminaries established in the cities and other central points by the early possessors of the country, chiefly by the Jesuits (where the education resembles that of our public grammar-schools, and is entirely in the hands of the Catholic clergy), between 200 and 300 annually finish their education, and are dispersed through the community: nearly the whole of these are of the class of *habitans*, and return to reside amongst them, mostly as notaries or surgeons; and thus, living on terms of complete social equality, though with greatly superior knowledge, in communities which possess nothing in the shape of municipal institutions, they possess almost despotic influence over popular opinion and conduct in all public matters. The *habitans* under the old feudal tenures have cleared two or three belts of land along the St. Laurence, and cultivate them on the worst system of small farming; their farms and residences being all so connected, that the country of the seignories appears like a continuous village. They spin and weave their own wool and flax, and make their own soap, candles, and sugar. What energy and enterprise there exist in the community (beyond the portion required by this sort of routine) is exerted in the fur trade and in hunting, which, it appears, they still monopolize through the whole valley of the Mississippi. (*Lord Durham's Report*, pp. 11—13.) The Anglo-Saxon portion of the population of Lower Canada consists almost wholly of persons who have emigrated from the United Kingdom, or the descendants of such, subsequent to 1759. A considerable addition was made to their numbers by U. S. loyalists in 1787; at a subsequent period many families from Vermont have settled in the townships adjoining that state, and since the formation of the American Land Company many have emigrated through their exertions. A majority of the labouring class in this portion of the population are Irish Catholics; the rest are English or Scotch Protestants, by whom the resources of the country, so far as they have been called forth, have been mainly developed. It is also by these that the internal and foreign commerce has been created, which is wholly in their hands, as well as a large portion of the retail trade of the province; besides this, they possess the best cultivated farms in the province, and are owners of fully half the more valuable seignories. (*Lord Durham's Report*, p. 14.) The inhabitants of the upper province consist principally of the descendants of U. S. loyalists, previously to 1787, and of subsequent settlers, or their descendants, from the United Kingdom and the States: an extensive emigration from the former, subsequent to 1823, nearly doubled the previous population of the province. Of the immigrants from the U. Kingdom, many were half-pay army or navy officers, a great of the working classes a considerable proportion were Irish. The Catholic population of the upper province is estimated at one fifth part of the whole: in the back part of the Niagara district some Dutch settlers are established; and a few French families along the Detroit. The population at present is estimated at 400,000, scattered for the most part along an extensive frontier, with very imperfect means of inter-communication; the more thickly-settled districts being, of course, in the occupation of the older section of residents, who are for the most part owners also of the wild lands in those districts. The number of immigrants from the U. Kingdom, which landed at the port of Quebec in the nine years ending

1834, amounted to 263,089; of these, 165,000 proceeded to the upper province; but of the whole number, from 50 to 60 per cent., re-emigrated, after a short residence, to the U. States. The greatest number which emigrated in any one year was in 1832, when 51,746 arrived at Quebec; the smallest number was in 1838, when 4,992 only reached that port. Within the period spoken of there were also 30,000 estimated to have reached the provinces by way of New York and the Erie canal; a like proportion of whom also re-emigrated. (*Lord Durham's Report*, pp. 76, 77, *Append. C.*) The arrangements made for conveying and locating these immigrants (mostly of the poor labouring classes, and two thirds of the number Irish) were most imperfect and unsatisfactory; causing an enormous amount of suffering to them, and a very great inconvenience and alarm to the residents of Quebec. The crowded state of the vessels, and deficiency of food, induced disorders of an infectious nature, so that a quarantine station had to be established at Grosse Isle (a desert spot about 10 m. below Quebec, and a fever hospital on Point Levi), to obviate the spread of infection through the city; and funds had to be raised and distributed, by a voluntary society, to relieve the wants of such as were unable to obtain or find for employment.

The disturbances of which Canada has been recently the theatre, and which, it is not very likely, will soon subside, will most probably prevent, for a lengthened period, any considerable influx of immigrants. And, certainly, if we look to the well-being of the immigrants, which is the principal consideration, this is not much to be regretted. There can be no doubt that the valley of the Mississippi offers incomparably greater advantages to industrious immigrants, whether with or without capital, than can be enjoyed in any part of Canada. It has a better climate, a better and a cheaper soil, and is free from the greater number of those social grievances that disturb and embitter society in Canada. The wonder, in fact, is, not that so many of the emigrants to Canada have left it for the U. States, but that any considerable portion of them should have remained behind.

The native Indian tribes still occupy portions of this colony on lakes Superior and Huron, and along the whole extent towards the N. boundaries; but their numbers are rapidly diminishing, and they are fast degenerating from their original spirit and character, so that the utter extinction of the race seems inevitable, as civilization advances on the wilderness, to which only they appear to be adapted. Various attempts have been made, from 1776, downward, to settle and instruct them in agriculture and the arts, but with very little success. There are five of these settlements in the lower province; the number of Indians at which is estimated at 3,437, the most numerous being the Iroquois and Algonquins. (*Parl. Report, 1837; Report of Gen. Darling, 1828.*) It is stated in these reports that some years back the Indians were able to supply our requirements (then suffering from famine) in some corn; but they have been driven back by subsequent settlers; and the introduction of the fur trade has also tended to indispose them from settling: those located on the reserves of the colony are a degenerate race, and live much like the gypsies amongst us. Those of the Six Nations (who were the firm allies of the British in the first American war) are estimated at 2,149; the Mohawks of the Bay of Quinté 337; the other tribes at 6,428; they occupy tracts along the rivers St. Clair, Aux Sables, Detroit, Thames, Ouse, and Credit; lakes Simcoe, Rice, Mud, and Balsam, and Point Peter: the great Manitouanling (containing about 1,000,000 acres) is also appropriated to Indians, who choose to settle. The lands are held under the crown in joint tenancy to them and their posterity, and are not allowed to be leased or sold without its consent. Besides the above, there are other tribes round the shores of lakes Michigan, and the S. side of Lake Superior (about 2,000 in all), who consider themselves as owing allegiance to the British crown, and attend to receive presents annually: there are also many tribes on the N. sides of lakes Huron and Superior, who consider that vast tract their own, and occupy it as hunting-grounds. Large sums have been expended by religious societies in futile efforts to improve them; and the Indian department of government has occasionally cost 150,000*l.* in a single year: the object of the last, however, has rather been to make the services of the Indians available in war, than with a view to their permanent improvement; the Hudson's Bay and Canada companies have, also, not scrupled to employ them in the same way; and the report above referred to states, that "though a change of system in both respects 'the fate of the Indians is sealed.' But the truth is, that, however it may be changed, their fate is 'sealed.' Experience has sufficiently proved that the red men are incapable of any real civilisation; and nothing can prevent their extermination other than the abiding by a determination not to enter their territories, or to interfere in any degree with their grounds, habits,

or pursuits. But would such a determination be either politic or proper? We answer, certainly it would not. America has been settled, civilised, and improved only through perpetual encroachments on the natives; and to say that these should cease, would be to say that vast tracts of fine country should be doomed to continued barbarism.

Distribution and Tenure of Lands in the Lower Province, Government, &c. About 1-28th part of the area of the prov. is estimated to be under some sort of cultivation. The extent of land surveyed in each district, down to 10th July, 1838, was—in the Montreal district, 2,286,750 acres; Three Rivers, 2,094,908 do.; Quebec, 1,383,666 do.; Gaspé, 400,639 do.; making a total of 6,169,963 statute acres. (*Lord Durham's Rep., Append. B., p. 176.*) This is divided into townships averaging about 70,000 sq. acres, and is exclusive of an allowance of 5 per cent. for highways, and of a block of land, set off for the British American Land Company, in the co. Sherbrook, distr. of Three Rivers, containing 585,089 acres. The land comprised in the seigniorial districts amounts to about 8,300,000 acres; of this last, the whole has been granted by the crown, subject to an obligation to concede to actual settlers, and 4,300,000 acres have been thus conceded. Of the township land 3,500,000 acres have been disposed of "for other than public purposes." The grants made by the French government previously to the conquest were on one uniform system. *Seigniories* (or manors containing from 9 to 36 sq. leagues) were created in favour of certain leading individuals, who were bound to grant or "concede" a specified portion to any applicant; the profit, to the seignior, being derived from payment of a small rent, from services which the *centnaire* (or tenant) was bound to perform; from 1-12th of the corn ground (by compulsion) at the seigniorial mill; and from a fine on the transference of the property (other than by inheritance).

This wretched sort of tenure, copied in great part from the feudal system existing in France previously to the Revolution, was unfortunately maintained after the British acquired possession of the country. The consequence has been that the French pop. has been confined to a comparatively limited extent of territory, and has never amalgamated with the British; for, by enabling every individual to obtain a portion of land, which, as the pop. increased, became gradually less, without any immediate outlay, young men were tempted to remain at home; and being subject to feudal regulations and services, the occupiers were bound, as it were, to a routine system. Hence the French Canadian exhibit a singular want of activity and enterprise; and the portion of the prov. which they occupy has a dense and a poor pop., strongly attached, as already seen, to ancient habits and modes of existence.

Since the prov. came under the British government, the plans under which land has been granted and sold have differed very widely at different periods; but have very rarely, indeed, been established on sound principles. The township lands have been granted in many modes, differing both in their character and object: at first, they were granted to settlers in free and common socage, with a reservation to resume all, or any part, if required for military purposes, but subject to no other conditions: the quantity, so granted to each individual, being limited to 100 acres for himself, and 50 acres additional for each member of his family; the governor having authority to increase this amount, by 1,000 acres. These favourable terms were meant to attract settlers from the colonies, which now form the U. States. In 1775 this arrangement was superseded, and the *Quebec Act* of the preceding year having restored the French code and language, corresponding instructions were given, that future grants should again be made in fief and seignior, and three seigniories were thus created. In 1791 the regulations of 1763 were revived, though with certain conditions annexed to them, which in practice were avoided; and this mode continued till 1826: but the constitutional act of 1791 also enacted that a reserve for the support of a Protestant clergy should be made, in respect of every grant, equal in value, as near as could be estimated, to 1-7th part of the land granted. The crown reserves, to a like extent, originated in the view of supplying, first by sales and ultimately by rents, an independent source of revenue, and obviating the necessity of taxes, and consequently of such disputes as had led to the independence of the U. States. These reserves, however, have proved most serious obstacles to the welfare of the colony, which the mis-construction, or violation, of the act, has aggravated, by increasing their extent beyond what appears to have been contemplated. (*Lord Durham's Report, Append. B., pp. 6, 7.*) From 1806, downward, no new townships were granted; and the grants, on to 1814, were in lots of 200 acres, to actual settlers, and few in number. From the last date, grants were made on "location tickets," requiring the erection of a house, and the clearing and cultivating 4 acres, before the title was perfected. In 1826 the new mode of selling land by auction, at a minimum

upset price, was adopted, the purchase-money being payable by four annual instalments, without interest. In 1831, the purchase-money was to be repaid by half-yearly instalments; and in 1837, to obviate the bad effects of giving credit on such sales, the purchase-money was made payable at the time of sale: but in practice this has not been effected. Besides the grants made under these different regulations, other exceptional ones have been made—mostly in reward of public services; such as those to the militia of the rocky provinces, and of that of 1819—many valid claims in these respects still remaining to be settled: there has also been an exceptional sale of nearly 800,000 acres to the British N. American Land Company. The crown reserves must be considered as virtually abandoned when the auction sales were introduced; and an act of the imperial legislature has authorised the sale of 1-4th part of the clergy reserves, at a rate not exceeding 100,000 acres annually. In these various ways, about 3,500,000 acres have been disposed of. (For some remarks on the policy of these grants, see *post*.) Of late years a revenue has been derived from timber property in both provinces: originally the right of cutting timber was a monopoly in the hands of contractors, for supplying that article for the navy, who usually sold licenses to merchants and lumber-men, by whom all the legal trade was in consequence engrossed. In 1824 licenses to cut were first offered by government by auction: the value of an acre of timber, at the price charged for these, is often very much greater than that required for land, and the first instalment has been paid frequently for land solely in the view of cutting down the timber. The Ottawa is the chief seat of the trade, which is, in a great measure, forced and factitious; and which, while it is of no real advantage to Canada, entails a heavy burden on Great Britain. In fact, but for the unjust and oppressive regulation by which a duty of 55s. a load is laid on Baltic timber, while timber from British America is only charged with a duty of 10s., very little, indeed, of the latter would be imported. The amount received on the sales of crown land in the lower province, from 1828 to 1837 inclusive, was 33,853*l*.; on clergy reserves, 50,425*l*.; timber duties, 58,085*l*. In the upper province, for the same period, crown lands 33,853*l*.; clergy reserves, 114,618*l*.; timber duties, 58,085*l*. The timber is chiefly red and white pine and oak.

Each district has its own judges, whose jurisdiction (except Gaspé) is independent of the others, and only subject to the court of appeal. A sheriff is also appointed for each district, and grand voyer, or general inspector of the roads. These appear to be the only characteristics; but as respects judicial affairs, Gaspé is dependent on Quebec; and the roads of St. Francis are surveyed by the grand voyers of Montreal and Three Rivers. The subdivisions of these districts are counties, townships, parishes, and extra-parochial places: that of Montreal has 19, Quebec 13, Three Rivers 5, St. Francis 3, and Gaspé 2 counties, respectively; they are chiefly political subdivisions, marked out for the purpose of returning members to the provincial parliament. The parishes and townships are merely divisions for such local purposes as the repairs of roads, inspection of fences, water-courses, &c.: each is subdivided into sections (not exceeding 10); the parishes vary much in extent, and those which are Catholic also serve for limits, in the ecclesiastical jurisdiction of that church: the townships usually enclose a square of 10 miles. There are in all 175 seigniories, 33 fiefs, and 160 townships. The cities of Quebec and Montreal were incorporated under temporary acts, which have been allowed to expire without renewal; these were the only municipal corporations in the province. In the Catholic parishes, churchwardens are appointed, and in some localities, "a council of notables," to manage the secular affairs of the church, and what are called the funds of "the *fabrique*," under old French ordinances, so doubtful and contradictory, as to cause frequent litigation. The income of their clergy is derived from the 26th bushel of all grain grown by the parishioners; this, however, is contingent on the proprietor being a Catholic. When an estate passes into Protestant hands, this right is lost: and hence the natural aversion of the priests to any Protestant settlements being made within the seigniories; nor is there any provision for the Catholic clergy, in the event of any part of the French population settling beyond the seigniories, which, no doubt, has had some effect in confining it within their limits. There are no provisions or regulations for the poor; and this as well as all other local matters, were under the immediate direction and control of the colonial legislature, whose time appears to have been chiefly occupied by affairs, such as usually come under the cognisance of parish vestries and corporations in England. The ecclesiastical government of the Church of England rests in the bishop of Quebec (whose jurisdiction extends over both provinces), an archdeacon of Quebec, and under them rectors for each parish, and ministers for each mission—

when formed: there are 44 clergymen, and 53 churches and chapels, finished and in progress. The bishop states that from 15 to 20 additional clergymen are required for the present wants of the colony. (*Lord Durham's Report, Appendix C., p. 59.*) There is also a Catholic bishop of Quebec, paid by the government out of certain public revenues, and under him a body of secular clergy, for the seigniories, and some female monastic establishments. The Protestant dissenters have places of worship, and ministers in various parts of the province. The ministers of what are called "missions," are paid through the medium of the Society for Propagating the Gospel, to whom an annual parliamentary grant is made for the purpose. The ministers of the Church of Scotland are in part paid by the general government, and in part by their congregations; the other sects support their own clergymen. As respects charitable institutions, and the relief of the poor, certain sums are granted annually by the legislative assembly, under certain acts "for securing and supporting the indigent, the insane, and foundlings;" and for "the aid of such religious communities as receive and administer relief to sick and infirm persons, and foundlings;" other benevolent societies, unconnected with religion, are occasionally assisted in the same way; these are mostly managed by nuns, or by benevolent Protestant ladies. The general hospital of the Grey nuns, the Ladies' Benevolent Society, the orphan asylum, and the house of industry, at Montreal; the convent of Ursuline nuns at Three Rivers; the Hôtel Dieu, and two other asylums, at Quebec; are the chief of these: 4,000*l*. 6s. 8d. currency were granted for this purpose in 1838: this has exclusive reference to the *resident* poor. For emigrants, an hospital was established by a provincial act of 1823; a fever hospital was also subsequently erected at Point Lévi, and a fund created, to give medical assistance to sick emigrants, and assist indigent ones to reach their destination; a poll-tax of 5s. currency on those coming out under government sanction; and 10*l*. on all others was also levied on ship-masters, and the amount divided, equally, between the Quebec Emigrant Hospital and Society, and the Montreal General Hospital, and Emigrant Society; besides which occasional grants have continued to be made, for these purposes, by the legislature, from time to time. For the relief of mariners, a duty of a penny a ton is levied on every vessel arriving from any port out of the limits of the province: the portion received at Quebec goes to support the marine hospital there, which was built by a public grant; that received at Montreal goes to the general hospital of that city: various acts have also passed to establish depôts for the relief of shipwrecked mariners. There are four such at Anticosti, one near Cape Chat, and another at Magdalen River. Another class of persons have become regular objects of legislative relief; viz. the small farmers of particular localities, in consequence of the failure of their crops; in some cases, to supply immediate want; in others, to enable them to procure seed corn, and seed potatoes; this is usually done by way of loan—the repayment being quite hopeless: the pernicious tendency of this, and the gross partiality and abuses it has occasioned, are stated, in a very forcible way, in Lord Durham's Report (p. 35, and Appendix B., pp. 22, 23.). As respects the vagrant poor, much complaint is made by townships bordering on the seigniories, of the burden caused by an influx from these; whilst no township poor are found levying contributions in the seigniories. In the Quebec district a like complaint is made, by parishes on the S. bank, of similar visitations from those on the N. side: but they do not appear to have hitherto produced any remedial measures.

According to the system of elementary schools established by the provincial legislature, each county was divided into districts (usually smaller than the parishes or townships): the number has varied under different acts, but lately there were said to be about 1,000 schools, with 40,000 scholars; and the funds granted for their support amounted to 25,000*l*. annually; the patronage and irresponsible management of this grant (amounting to half the whole ordinary civil expenditure of the province) were vested in the county members. The teachers appointed were for the most part so utterly ignorant as to be unable to write, and the extent of their exertions amounted to teaching the children the catechism by rote. When the act sanctioning this gross political job came to be renewed, the legislative council properly refused their sanction. (*Lord Durham's Report, p. 35.*) There is an act still in force (41 Geo. 3. c. 17.) "by which a majority of the inhabitants" of any parish or township, by petition to the government, may subject the whole of it to the expense of erecting schoolhouses, and accommodation for teachers, but none have availed themselves of it.

The superior colleges and schools, that exist under the management of the Catholic clergy, have been previously noticed: at present there exists no means of college education for Protestants within the province, and con-

sequently the desire of obtaining general and professional instruction annually draws a great many young men to the U. States: in respect to the commoner kinds of education, the British pop. are scarcely better off than the French.

The roads and bridges of the province are under the control of a "grand voyer" and deputy for each district, a surveyor of roads for each parish or township, and an overseer of highways for each section of either of the latter. The grand voyer opens new roads, and sees established ones kept in repair throughout the district; and decides, by a *procès verbal*, the share each farm ought to contribute of whatever work is done by "joint labour." There appears to be no appeal from his authority: the other officers are his representatives, each within his respective bounds. Two kinds of public highways are recognised—*front and bye roads*: the former are those which run between two ranges of "concessions" or through the front range of the river; the different portions of these are maintained by the farms which they limit: those of the townships are usually of a square form, whilst the seigniorial farms have 10 breadths to 1 length; and hence the latter have the smallest extent of road to maintain. The bye-roads are repaired by "joint labour," and so, in fact, is a considerable portion of the other, such as hills, marshes, bridges, or any parts of more than average difficulty, as well as through all unwooded and all unenclosed lands. The proprietors being "all those to whom the road is useful" that is, those who must pass over it to get to church or market. No local rates are levied for these purposes, but charges, usually defrayed in England by parish or county rates, frequently come out of the provincial treasury for such purposes, and large sums have from time to time been granted by the legislature, and disbursed by commissioners appointed by the governor. Mr. Bouchette, the surveyor general (*Top. Dir.*), states the annual expenditure for roads and canals, from 1814 to 1830, to be 384,172*l.* of which, however, 25,000*l.* was granted for the Welland Canal in the upper prov. This heavy expenditure does not appear to have produced corresponding results, for the roads in general are very bad, and the lines of communication very incomplete: in this respect, the blocks of land called "crown," and "clergy reserves" have proved the greatest nuisances, for they are dispersed over every part of a township, one between every two settlements. The present law, whereby the roads are regulated, was passed in 1796, and the system sanctioned by it appears to be generally reprobated by the settlers; and turnpikes have been suggested as very desirable for the colony, and also the establishment of a highway rate.

Government of the Lower Province.—Previously to its suspension, the constitution of this prov. rested on the authority of an act of the Imperial parliament, passed in 1791 (31 Geo. 3. c. 31.). By this act (which proposed to extend the forms and advantages of the British constitution to the colony) a legislative council and a house of assembly were created; each of these had the power of framing laws, which, to be valid, required the assent of both houses, and of the provincial government, by which they were transmitted to England, for the sanction of the crown: the council was to consist of not less than 15, nor more than 23 members, to be nominated by the crown during life. The House of Assembly was composed of 52 members, and now of 83 members; those of the counties elected by proprietors of land of the ann. val. of 40*l.*, those of the towns by the owners of tenements of the ann. val. of 5*l.*, or by renters of tenements of 10*l.* a year, having been residents in the colony, and paid not less than one year's rent: the members were elected for four years, but the governor had the power of dissolving the house within that period. It was ordained that they should meet annually at least: their functions and powers resembled and were nearly as extensive as those of the British House of Commons. The executive government remained, as before, in a governor appointed by the crown, who is assisted by an executive council of 15 members; and for carrying on the provincial government the crown appears to have at first almost wholly relied on its territorial resources, and on duties imposed by Imperial acts that had been passed prior to the introduction of this representative system into the colony. At length the government was obliged to accept the assembly's offer of raising an additional revenue by fresh taxes: this gave the latter some control in the levying and appropriation of part of the public income, and step by step they obtained the entire control, every portion of the reserved revenue being given up to them in 1832 (with the exception of the casual and territorial funds), by the 1st and 2d Wm. 4. c. 23. But it still remained without the least control or influence over the conduct or appointment of the public functionaries, by which the affairs of the province were administered; hence, the contest was continued after its financial demands had been conceded; and the civil list appears to have been refused, in consequence of the determination of the assembly not to give up its only

means of subjecting the executive council to any sort of responsibility; for the legislative council was confessedly, in practice, merely an instrument in the hands of the executive council to restrain the popular branch of the legislature, to which it was generally opposed; hence, from first to last, "the assembly were in a state of continuous warfare with the executive, for the purpose of obtaining the powers inherent to a representative body, by the very nature of a representative government." (*Lord Durham's Report*, pp. 28–31.) The great business of the colonial legislature appears to have consisted in what is usually called parish business in England; this was the necessary consequence of there being no local bodies, with authority to manage local affairs, or levy local rates; hence the general practice of making parliamentary grants for local works; and the situation of such a colony makes these of such primary importance, that the number of roads and bridges constructed is the test by which the merits of a colonial legislature are usually estimated. In this respect, however, the views of the assembly of Lower Canada appear to have been very narrow and exclusive, and to have afforded just cause of complaint to the upper province, by causing the suspension of their vigorous efforts to connect their territories with the great highway of the St. Lawrence. Nor is the character of their other legislative measures such as to entitle the assembly to any great share of admiration or respect. During the 45 years of its existence, it effected little or no reform in the acknowledged evils of the civil code; and its attempts in this respect had exclusive reference, not to the law itself, but merely to its administration; and resulting, as they did, in statutes passed only for limited periods (which were sometimes renewed and sometimes allowed to expire), they for the most part caused additional uncertainty and confusion. (*Lord Durham's Report*, Appendix, B., pp. 12–13.)

The principal officers of the government are appointed by the crown, and hold their appointments during pleasure. The chief of these are,—the assistant civil secretary, provincial secretary and registrar, receiver-general, inspector-general of accounts, &c.; there are also 6 collectors of customs; 3 judges at Quebec, and 3 at Montreal; with numerous other functionaries. There is also an unpaid magistracy, appointed by the crown, who are required to possess immovable property, beyond all liabilities, of at least 300*l.* currency; and commissioners who sit in the small cause courts, which are held weekly in the cities, and on the first and third Saturday of each month in the rural districts, with power of adjournment. As regards the superior courts of justice, the judges presiding in each district have supreme jurisdiction. The delay, expense, and uncertainty in the administration of the law in civil suits, is much and justly complained of. Trial by jury was introduced, with the rest of the criminal and civil law of England, in 1763; the juries were, at first, exclusively taken from the cities, and subsequently (by a government order) were selected by the sheriffs, from these, and from the adjacent country, for 15 leagues around. An act was subsequently passed, extending these limits to the whole district; this gave the French an entire preponderance, and, as it was a temporary act, the legislative council refused to renew it, and consequently it expired in 1836; since which, there has been in reality no jury law whatever, and the composition of juries has been wholly in the hands of government, who have directed the sheriffs to act in conformity to the previous mind. All this, in the excited state of the public mind, prevents any chance of impartial verdicts where *rancor* interferes, and destroys all confidence in the administration of criminal justice. The French code of civil law was re-established in the province in 1774, by an Imperial act, usually called the *Quebec Act*; from this, commercial cases have been subsequently excepted, but there is great difference of opinion as to what constitutes a commercial case.

The external trade of Lower Canada (as well as a considerable portion of that of the upper province) is carried on through the medium of the ports of Quebec, Montreal, St. John's, Coteau du Lac, and Stanfield. From the U. Kingdom Canada imports coals, metals, cordage, E. India produce, and various kinds of British manufactures; from the British W. India colonies, sugar, molasses, rum, coffee, and hard woods; from the U. States beef, pork, biscuit, rice, and tobacco. Owing to the unjust and oppressive preference given to Canadian timber in the markets of Great Britain, it forms by far the principal article of export from the colony. The next article is corn, especially wheat, which, however, is supposed to be mainly derived from the U. States; and then follow ashes, furs, fish, &c. In 1834, the total value of the exports from Canada amounted to 1,018,932*l.* The imports chiefly consist of cottons, woollens, silks, linens, glass, hardware, coal, &c. Their total value in 1834 was 1,063,648*l.* The total revenue derived from taxes in 1836 amounted to 102,027*l.*

Canada was ceded by France to England in 1763:

it had previously been governed by French military authority; from thence, to 1774, it was under the rule of an English governor and council, with *English law*, administered in the English language only. From 1774 to 1791 it was governed by an English governor and a legislative council, appointed by the crown, with *English criminal*, and *French civil law*; and from 1791 downward, by the constitution, previously explained; the colony being then divided into two provinces, each with an independent legislature. Down to 1774, the line of policy pursued was that which, had it been vigorously and systematically followed up, would certainly have re-ounded most, in the end, to the advantage of the colony; inasmuch as it would have gradually subverted the institutions and language of France, and established in their stead the institutions and language of England. But the Quebec Act of 1774 introduced a new and more liberal, but at the same time a short-sighted and most mistaken, policy. If Canada was to be preserved as an English colony, it is clear it should, in as far as possible, have been made English in its laws, its language, and in the feelings and prejudices of the people; and no institution should have been tolerated that might have prevented the gradual and complete amalgamation of the French with the English settlers. The Quebec Act unfortunately proceeded on totally different principles. In order to conciliate the colonists, it substituted the old system of civil law, or that called the *Code des Paris*, for the civil law of England, and it directed the use of the French language to be resumed in the law courts. It is probably true that these concessions, by gratifying the Canadians, had some effect in hindering them from joining the American colonists of English origin in their great and successful revolt; and consequently contributed to preserve the prov. for the British crown. Without stopping to inquire whether this has been of any advantage to Great Britain, we incline to think that the difference of language, and the peculiar circumstances under which the French Canadians were placed, would have effectually prevented them, though the Quebec Act had never been heard of, from making common cause with the colonists of New England and the other American colonies. But, whatever opinion may be come to as to this, there can be no doubt that the establishment of French laws and language in the prov. has tended to insulate the French pop., to maintain them as a distinct race, and to restrain, and in a great degree prevent, all intercourse between them and the colonists from England: in point of fact, the French in Canada are now almost as much a distinct people as in 1760. The *Nation Canadienne* has no sympathy, and but little communication, with Englishmen; on the contrary, a broad line of demarcation and a deep-rooted antipathy subsists between them; and we are afraid that there is but little hope of tranquillity being restored in the prov. otherwise than by the complete triumph and ascendancy of one or other of the races.

The institution of a representative assembly in 1791 was intended by Mr. Pitt; as a boon to the Canadians, and it was supposed would attract them still more strongly to British interests, which most probably it could not have been much longer refused; but it might have been foreseen from the outset that a representative assembly, fairly chosen by the colonists, could not long act in harmony with a legislative council nominated by the crown, and having a veto on its measures. The two bodies were in complete contradiction to each other; and yet it is plain that unless a veto on the proceedings of the assembly were placed in the hands of the legislative council, or directly in those of the executive government, the colony would have been in fact. The truth is that it is not possible to establish a really responsible representative government in a colony; such government can exist only in an independent state. It is also obvious that while the proceedings of a representative assembly possessing the confidence of the inhab. of a colony may be controlled and thwarted by the agents of the mother country, there must be endless dissensions and disputes, unless, indeed, the latter concede all that is demanded, and content themselves with the name of rulers, while all real authority is engrossed by others.

It would be to no purpose, even if our space permitted, to attempt to trace the history of the disputes that have prevailed in the colony during the last twenty years. They had all, or mostly all, their origin in the same cause—the desire of the assembly to acquire additional powers, and of the executive to withhold them, or to concede such only as it would have been unsafe to deny. In the course of this struggle the assembly succeeded in redressing some abuses, and in acquiring some valuable privileges. But in such cases the conceding of any privilege, how important soever, is productive only of a temporary respite from fresh demands. The pretensions of the leaders of the assembly rose at length to such a height, that to concede them would virtually have been to concede the independence of the colony; and as neither the government nor people of Britain were prepared for such a step, the outbreak

that took place on the part of the Canadians, and the subsequent suppression of the constitution, and the occupation of the country by British troops, seem to be only the necessary results of the peculiar circumstances under which the colony has been placed.

Distribution of Ground in Upper Canada, Government, &c. The surveyed portion of Upper Canada comprises 15,583,444 acres, in 11 districts, and between 300 and 40 townships. The pop. in 1835 was 336,500; the number of men embodied in the militia 39,499, forming 68 regiments. Wheat and tobacco are the chief exports. Of the surveyed lands, 450,000 acres are reserved for roads; 2,395,687 acres are clergy reserves; 13,660,938 have been granted and appropriated, and there remain for future grants 1,147,019 acres. About 1-48th part of the area is considered to be under cultivation. The modes of granting have been the same as those described in the lower province. The crown and clergy reserves have also been made on the same principle as those of Lower Canada; in two cases the government has delegated the disposal of its waste lands to others: the district of Talbot (48,500 acres) to Col. Talbot; and the crown reserves (1,384,413 acres) and a block of land in the Huron district (of 1,100,000 acres) to the "Canada Company;" about 1-30th part of the granted land is under cultivation.

The profuse manner in which these grants have been made, many very extensive tracts having been given to parties who had no intention of settling upon them, coupled with the great extent of the clergy and state reserves, has had a most injurious influence over the colony, and has materially retarded its progress. The lands thus given away to individuals not settling upon them, and reserved, by interposing uncultivated desert tracts between the actual settlers, render it, in all cases, much more difficult and expensive, and sometimes all but impossible, to form roads and other means of communication; so that the cultivators are frequently cut off from a market for their produce; and being settled only in particular districts, they are less able to combine for municipal and such like purposes, and for the establishment of schools and churches, and the undertaking of public works that require co-operation.

Lord Durham ascribes the backward state of Canada, as compared with the adjoining districts of the U. States, mainly to the influence of the circumstances now glanced at. But though their disastrous operation be established beyond all doubt, they are by no means the only, nor even the principal, cause of the backward state of the colony. Quite as little providence was manifested in the granting of lands in the greater number of the American states when they were colonies of England, and yet their progress was one of unexampled prosperity.

Were this the proper place for such investigations, it might be very easily shown that that plan for the disposal of public lands by auction at a fixed upset price, which Lord Durham is so anxious to recommend, would be very little better than the system he has so justly censured. "When," says Mr. Shireff, "the extent of unoccupied surface, the extent of soil which is occupied and remaining unoccupied, and the value of millions of acres which have never been surveyed, are considered, the price of Canadian land is extravagantly high, and far above its intrinsic value to actual settlers. Land, like other things, is cheap or dear by comparison; government land in the U. States being sold at 6s. 3d. an acre, Halifax currency, ought to make the British government blush for its policy in Canada. The price of land surrendered by the six nations, and covered with forest, is fixed at 15s. an acre, which is more than double the price of government land in the western U. States, superior in quality, situated in a finer climate, clothed with luxuriant grass, and without an obstacle to immediate cultivation. It is population alone which imparts value to land, and a more effectual method could not be devised for preventing a further influx of inhab. to Upper Canada, and drawing away many of those already settled, than government adhering to the present prices of land." (*Tour through N. America*, p. 365.)

This is the statement of an excellent judge of agricultural matters, and is obviously quite correct. But whatever the upset price may be, the plan of selling land in any colony, and especially in one in the situation of Canada, seems highly objectionable. The preferable plan would be to make grants of lands to all settlers on a uniform system, in some proportion to their available capital, with a limitation of the maximum quantity to be assigned to any individual; and making it a condition of all grants, that they should be forfeited in a given time, unless certain specified improvements were effected upon them within that time. The tax, not exceeding 1d. in the pound, is levied both on cultivated and waste lands; the former being valued at 20s. the acre, the latter at 4s. The whole amount of taxation of a farm of 100 acres, in the upper province, is about 18s. This tax began to be levied by the provincial government in 1820. If 8 years are in arrear, the sheriff is authorised to sell; but this has been done only in a few

instances, when the owners allowed it as the cheapest and easiest way of making a title to the rest of their land. The number of churches built, or in progress, connected with the Church of England is about 90; the number of clergymen 73; the number of followers are estimated at 150,000, by the Bishop of Montreal, within whose diocese the province is included, and under him are the archdeacons of York and of Kingston. (*Lord Durham's Report*, Appen. C., p. 67.) The Presbyterians of the Scotch church, the Catholics, and the Wesleyans, are the other chief sects; the latter are said to outnumber any of the rest. The ministers of the Church of Scotland are supported partly by stipends from the government, partly by their respective congregations; the Catholics have a bishop, who resides at Toronto, and who also receives an annual grant from the government to aid in the maintenance of himself and priesthood; the ministers of the other sects are wholly supported by their congregations. By the Constitutional Act of 1791, reserves of land were set apart in this, as in the lower province, for the maintenance of "the Protestant clergy;" the economical evils resulting from this mode of raising religious funds have been previously noticed, but another important question has arisen, which has reference solely to their application: the chief point at issue being, whether the words "Protestant clergy" are to be understood in an exclusive or general sense. The adherents of the Church of England have claimed, from the first, the sole enjoyment of the funds, though (even if all who belong to no other sect be supposed to be within their pale) they are in a considerable minority, and likely so to continue; the adherents of the Church of Scotland claim to be put entirely on a level with the Church of England, and have demanded an equal division of the funds between the two; the other Protestant sects affirm that the term includes them also, and have formally claimed that an equal provision shall be made for them. But besides these sectarian claimants, there is another party, comprising the Catholics, and no inconsiderable portion of the members of the other sects, who affirm the justice of a broader principle, and contend that the funds shall either be applied to the purposes of all religious creeds, whatever, or that leaving each sect to provide for its own establishment, the law shall be set aside, as inexpedient, and the funds appropriated to the general purposes of government, or to the support of some general system of education. In 1835, the governor (Sir J. Colborne) established 57 rectories, which are supposed to convey the same privileges and authority as English ones, even to the right of levying tithes. Previously to this, though the clergy of the Church of England were an endowed body, and in the receipt of a much larger share of public money than the other sects, they possessed no exclusive privileges or authority. Hence the measure was regarded by the other sects as placing them in a position of legal inferiority, and caused so much indignation, that some are disposed to rank this as the chief predisposing cause of the recent insurrection; nor has a subsequent opinion in favour of the legality of the measure given by the English law officers of the crown, in 1837, tended to recommend it. (*Lord Durham's Report*, pp. 62-65.)

The educational establishments of the colony are very insufficient and defective: a college has been established at Toronto; but the mode in which it has been established, and the regulations adopted in it, are amongst the grievances publicly set forth by the colony; the most valuable portion of the lands originally set apart for the support of schools throughout the country having been diverted to its endowment. There have been, occasionally, grants by the legislature for the purposes of education, but the schools are few, and of an inferior kind, even in the best settled districts, and in the remote ones there are none. It must also be understood that a very considerable portion of this province is, as yet, without roads, mills, post-offices, or churches; hence the intercommunication of the different settlers is of a very limited and uncertain description; nor has any adequate system of local assessment been established to improve or create internal means of communication. Funds have been occasionally voted, as in the lower province, by the provincial legislature, for the purpose; but, as they were at the disposal of the House of Assembly, which chiefly represents the interests of the older and more settled districts, they were not usually applied where they were most needed. At present the state of the provincial finances precludes any such aid being granted, in consequence of the debt incurred by attempting to carry into effect a resolution, many years since adopted, of removing or obviating all the natural impediments in the course of the St. Lawrence, and effecting a continuous ship navigation from its mouth to the head of Lake Huron. With this object in view, the House of Assembly took a large portion of the shares of the Welland Canal (which had been commenced by a few spirited individuals), and it subsequently undertook the Cornwall Canal, to avoid Long Sault Rapids; but the

House neglected to ensure the continuation of their plan in the lower province, which was indispensable to its completion, and as the legislature of the lower province declined to co-operate with them, the works have been suspended, after encumbering the province with a public debt of 1,000,000*l.* sterling. As the external trade of the province is conducted through the medium of Lower Canada (not so much because it is a matter of necessity as in consequence of revenue laws), this, also, has a prominent place in the list of grievances. In the mean time, the United States, having created a St. Lawrence of their own, from the shore of Lake Erie, through the state of New York, by the Erie Canal, the colony has become anxious to participate in the benefit derivable from it, by making New York a port of entry, and being allowed to land goods there, under as low a duty as if they were imported by the St. Lawrence. New York is, in fact, the natural and proper channel of communication with Upper Canada, the voyage by the St. Lawrence being incomparably more tedious and dangerous than that by New York, while, owing to the accumulation of ice, it is impracticable long after the Erie Canal is open.

The Constitutional Act of 1791 (which separated the provinces) gave a similar form of government to both, so that it is unnecessary to repeat here what has been previously stated in respect to its working in Lower Canada. A lieutenant-governor, appointed by the crown, is at the head of the executive, and is also usually the commander of the forces. The civil and criminal code of England, and the forms of procedure in her courts, are adopted in those of the colony; which has, also, an unpaid magistracy, and sheriffs for each district, as in the lower provinces. The expenses of the civil administration are defrayed by duties on articles imported from the United States, by a portion of the customs' duties collected in Lower Canada, and by a small land-tax; the military expenditure, the funds for the partial support of ministers of the churches of England, Scotland, and Rome, and for presents to the Indian tribes, being defrayed by the general gov., or, in other words, by the people of Britain. The colonial revenue, which is about 50,000*l.*, hardly suffices to pay the interest of the debt incurred in the formation of the canals, in consequence of which, the few and imperfect local works in different parts of the province have been left to be provided for by local assessments.

The recent political disorders that have occurred in this province may be dismissed very briefly. There is here no war of races, as in Lower Canada; and financial disputes, so long the subject of contention there, have been more smoothly arranged in the upper province, though it has a deficit, and the other a surplus; revenue; there is however great disorganisation, much bitterness of party feeling, and many real grievances requiring redress. There exists no chief centre in the province, where the general sentiments of the different parties may be gathered, and a prevailing tone given to their purposes and actions; but, on the contrary, many local centres, differing in opinion and in supposed interests from each other, and having little intercommunication. The removal of those restrictions which make the subjects of the United Kingdom, who emigrate thither, be considered aliens, as much as if they had chosen to settle in the United States, and for a more prolonged period, is loudly, and justly, complained of. But these, after all, are subordinate matters, and here, as in the lower prov., the real struggle is, whether the colony shall be self-governed, or really independent. Other grievances may be redressed, and the connection of the colony with the mother country preserved; but the demand for a really responsible executive, as already seen, substantially equivalent to a demand for separation.

The government has been, for a considerable period, in the hands of a party known throughout the province by the designation of "The Family Compact," who are in possession of the higher public offices, and distribute the minor patronage, and whose interest is still paramount in the executive and legislative councils. By grant or purchase, this party is also in possession of the greater portion of the waste lands of the province, and their influence predominates in the chartered banks. To the monopoly of political power possessed by this party an opposition gradually arose, and gathered more and more strength, till it obtained a majority in the House of Assembly, which, on a dissolution, was lost again, and on a subsequent one recovered. This alternating state of things continued through four or five general elections, neither party preserving the mastery for two successive ones. The mode in which the clergy reserves should be disposed of was the most important question raised by the reformers in this struggle; and, though various methods of appropriating these were advocated by various sections of the party, all united in appealing to the people against the exclusive claims of the Church of England, whilst these claims were uniformly and strenuously supported by their opponents. This struggle

was at its height, when a third party, consisting of emigrants from the United Kingdom, within a short period doubled the population of the colony. Of these both the old parties became equally jealous; those who enjoyed the power and privileges of office, and those who were struggling for ascendancy, betraying equal anxiety to exclude the new settlers from political power; nor did they, for a considerable period, appear in the field as a distinct political party, though subsequent events have made it probable that the distinction of old and of new settlers will become an absorbing element in the political divisions of the colony. The objects of the original reformers were uniformly defeated by the influence of their opponents in the legislative council; so that, finding the practical inutility of a majority in the House of Assembly only, they ultimately directed their attention, not to the re-organisation of that council, like the Lower Canadians, but to the securing of a responsible executive administration. Both these parties have shown an equal degree of jealousy in respect to the interference of the general government; whilst the party subsequently introduced wish that its influence in the colony were increased. It has not been ascertained what proportion of the colonists were prepared to join Mackenzie's treacherable enterprise, in the event of a successful commencement; though it appears improbable that his views were sympathised with to any serious extent, notwithstanding the great political dissatisfaction of the period, caused by the result of the elections, which secured the old party a majority in the House of Assembly, and enabled them to carry some obnoxious measures. But it is probable that this dissatisfaction was the proximate cause of that ill-planned and worse conducted affair, which, however, was sufficient to show that, without some signal change, the tranquillity and preservation of the colony must depend rather on the extent of the military force and the vigour of the government, than on the attachment of the colonists to the mother country.

The measures that have been proposed for obviating the diversified and complex evils that have accumulated in these colonies, are, in the first place, their reunion, under one legislature; by which all disputes relative to the division and amount of revenue would cease, and the completion of the great works, undertaken to make the St. Lawrence available to the upper province, would be promoted; but the primary object, avowedly proposed to be effected by the measure, is the annihilation of the majority possessed by the French party in the lower province; and this is contended for, on the ground of imperative necessity, and in preference either to more despotism, or more indirect means of governing the colony. In a legislative assembly composed of the representatives of both provinces, it is expected that the French party would be outnumbered; and thus, order and progressive improvement being secured, the ultimate amalgamation of the two races is predicated, as in the state of Louisiana. There are, however, many, and some very weighty objections to this plan; and it is by no means certain that it would effect the object in view. To remedy the other grievances, a modification of the spirit, rather than of the form, of the previous constitution, is relied on; and it is proposed to be supported by a good system of municipal institutions. Amongst other secondary measures, the removal of all such civil disabilities as new settlers are now liable to is proposed, and the repeal of the law which forbids American citizens holding land in the colony.

But supposing these measures were adopted, and that they had the anticipated effect in amalgamating the English and French colonists, and redressing other grievances, still the question remains, would they be sufficient to tranquillise the colony, and to attach it to British interests? All experience says that they would not. Nothing, we may depend upon it, will satisfy the Canadians, or any people in their situation, short of substantial or total independence; and the latter would be in all respects more for our advantage than the former. Were the duties on Canadian timber reduced to the same level as those on Baltic timber, we question whether Canada would be found to possess a single article that could be advantageously exported to this country, or that we might not buy cheaper and better elsewhere. It no doubt has afforded an extensive outlet for emigrants, and has been in so far useful; but in all other respects its occupation has always been, and will most probably continue to be, productive of little except loss. And, even with respect to emigration, it is by no means clear that the field would be at all narrowed by Canada becoming independent, or connected with the U. States. The presumption seems, indeed, to be very much the other way; and notwithstanding the efforts that have been made to attract emigrants to Canada, they seldom have been so numerous as those to the U. States, and would have been incomparably fewer, had they been aware of the real situation of the two countries. The people of Britain would, therefore, do well to reflect dis-

passionately on the state of the Canada question. We believe most men of sense admit that, sooner or later, Canada will be independent, or be incorporated with the U. States. But if so, what should be our policy in the mean time? Having put down rebellion for the present, the question is, are we resolved to maintain an army of 10,000 or 15,000 men in Canada? to expend directly, and indirectly, some three or four millions a year in preserving a mere nominal ascendancy in a colony, by the independence of which we should certainly lose nothing? If such be our determination, it may be doubted whether we have profited much by the dear-bought experience afforded by the American war. We deny that Canada contributes, in any way whatever, either to the strength or security of Great Britain. On the contrary, the connection with it is an evident source of weakness; and, while it multiplies the chances of our being involved in disputes with other powers, it supplies no means of carrying them on, and distracts and lessens those in our possession. National pride may prevent our relinquishing this costly and worthless dominion, but good sense, and the most obvious views of expediency, would suggest the policy of voluntarily anticipating what must, in the end, necessarily happen; and of providing for the independence of Canada, under a system of friendly and mutually beneficial relations with this country.

History.—Canada is said to have been first discovered by Sebastian Cabot, in 1497; if so, it was comprised with the rest of the extensive line of coast, he explored, under the general name of Newfoundland, subsequently limited to the island so called. The French first attempted to make those discoveries available, and are said to have framed a map of the gulph so early as 1508. In 1525 the country was taken possession of in the name of the king of France, and in 1535 Cartier explored the river, naming it St. Lawrence, from having entered it on that saint's day. Quebec, however, the first settlement, was not founded till 1608. For a considerable period subsequent to this the colonists appear to have been engaged in a series of sanguinary contests with the native Indian tribes, and to have been often on the brink of being extirpated: the strife, however, ultimately terminated in a friendly compact, which converted the Indians into available auxiliaries against the English. Quebec was taken by the British forces under Gen. Wolf, in 1759, and the whole territory formally ceded by the Treaty of Paris, in 1763. The seigniorial rights, the various holdings and tenures under them, and the endowments of the Catholic church, were left undisturbed; and all the estates, including all the unappropriated lands in the prov., held at the period by the French king, became vested in the British crown. In the years 1812-13-14, the lakes, and especially the shores of Niagara, were the scene of a succession of severe contests; the war was wholly a frontier one, and the militia on either side being engaged in it, near relatives were found often contending in opposite ranks, so that common was aggravated to civil warfare; and Indians also were employed, and increased its horrors. The grievances and complaints of Lower Canada first obtained the attention of parliament in 1828, when a select committee of the H. of C. reported on them. The legislative assembly's claims were,—the right of appropriating all the crown revenues as they pleased, and also all those accruing from parliamentary and provincial statutes, and the settlement and alienation of all the wild lands of the province; but the most important point, without which the rest would be conceded in vain, according to their statement, was, that the legislative council should be elected by the people, and thus assimilated to the senate of the United States. Another H. of C.'s report led to the nomination of Lord Gosford (who was also appointed governor), and two other commissioners, and five reports and appendices, published in 1837, are the only result of their labours. In the divisions which took place in the House of Assembly, the British party divided from 8 to 11 in a house of 88 mem. The grievances of the upper province were set forth in the report of a committee of their H. of Assembly, who adopted it, and laid it before the king. The extent and abuse of the crown patronage; the virtual irresponsibility of the executive; the mode of conducting the business of the provincial post-office; the management of the Toronto College; the provision made for the ecclesiastical estab., and for the maintenance of certain sects only (the House say they "recognise no particular denomination as established in Upper Canada, with exclusive claims, powers, or privileges"); the partiality shown in the choice of magistrates; the absence of control over the crown revenues; and the failure on the part of the local to carry into effect the recommendations of the general government, are the most prominent of the grievances set forth. Subsequent to the report of Sir P. Head, reduced Sir J. Colborne, gov., in 1836; and during his government the outbreak under Mackenzie took place. CANANDAIGUA, a town of the U. S. of America, New York, cap. co. Ontario, beautifully situated on an acclivity at the outlet of the considerable lake of the same name, 86 m. E. Buffalo, and 95 m. N. N. W. New York. Pop. (1835) about 3,000. It consists chiefly of two parallel streets, running N. and S., intersected at right angles by several others. It contains a large square, in which are the court-house, prison, town-house, and principal hotel; and it has a stato-arsenal, various places for public worship, 2 or 4 banks, male and female academies, several large mills and manufactories of different kinds, and (in 1836) 3 printing offices, each issuing a weekly newspaper. The inhab. are intelligent, liberal, and hospitable. Within 3 m. of the town, on both sides the lake, are several sulphuretted hydrogen springs. Canandaigua was founded in 1788, and from its position on its lake, and in the vicinity of the Erie Canal, is a place of considerable commercial importance. (*Gordon's Gazetteer of New York.*)

CANANORE (Canara), a marit. town of Hindostan, prov. Malabar, at the bottom of a small bay, 45 m. N. W. Calicut, and 66 m. S. S. E. Mangalore; lat. 12° 42' N., long. 75° 27' E. It trades with Bengal, Arabia, Sumatra, and Surat, from which it imports horses, piece goods, almonds, sugar, opium, silk, benzoin, and camphor: its exports are chiefly pepper, cardamoms, sandal wood, coir, and shark-fins. It is the cap. of the talook of Chericut, a lofty and uneven track, extending for 2 m. inland from the fort, and some years since containing together with the town about 11,000 houses. Its territory is now subordinate to the British, but has long been governed by a succession of female sovereigns whose authority has extended over most of the Laccadive islands.

Cananore is the head military station of the British dominions in Malabar prov. (*Hamilton's E. I. Gaz. l. 340.*; *Madrás Almanack.*)

CANARA, a marit. prov. of Hindostan, presid. Madras, comprising the ancient countries of Tulava and Halpa, with small portions of Malabar and the Hindoo Kankana. It lies chiefly between lat. 12° and 15° N., and long. 74° and 76° E.; having N. Goa and Dharwar (Beyapoor), &c. the latter province and Mysore, S. Coorg and Malabar, and W. the ocean; length, N. to S., 230 m.; average breadth about 35 m.; area 7,477 sq. m. Pop. (1837) 759,776. It is mostly bounded by the W. Ghauts, but includes a portion of the country above them, called Carnata, of which the name of this distr. is a corruption, most improperly applied. Surface generally rugged and uneven. It has no considerable river, but a number of minor ones, of which Mangalore is the chief. The coast in the S. is occupied by a chain of salt lakes. Soil and climate very similar to those of Malabar. Granite and laterite are amongst the prevailing rocks, and near the sea shore there is much sandy soil, on which cocoa-palms are grown in great number. The periodical rains are extremely heavy, and set in from the middle of May till the end of Sept., during which ships leave the coast, and a stop is put to all traffic. The country abounds in forests: those in the N. producing teak, and other large timber, sissoo, *bassia latifolia*, prickly bamboo, the varnish-tree of Birmah, *ruz tomicia*, *mimosa catrchu*, cassia, sandalwood, wild pepper, a species of nutmeg, &c.; those in the S. containing teak, mango, caryota palm, and much jungle, greatly infested with tigers. Canara is the granary of rice for Arabia, Goa, Bombay, and Malabar; and both the climate and soil, especially in the valleys, are highly adapted for its culture. Sometimes 50 bushels a year are obtained from an acre; and in the S. the land frequently yields two or three crops during the same period. Besides rice, sugar-cane, pepper, betel-nut, and leaf, cucurbitaceous plants, &c., are grown. Husbandry is better here than in Malabar; the plough is a neat implement, and manure of both leaves and dung is made use of: some cultivators employ 25 ploughs, although full half of them use no more than one. Rice is thrashed by beating handfuls in the straw against a bamboo grating. There are no barns, and the grain is kept in straw bags hung up in the houses: carts are not used, the roads are bad, and goods have to be conveyed on the heads of the peasantry. There are neither horses, asses, nor goats. Black cattle, in 1836-7, estimated at 573,412 head, sheep at 544,326 head; hogs are kept, and eaten only by the lowest ranks. All the lands in the S. are private property, but generally much encumbered with mortgages: in the N. mortgages are much less frequent, and the cultivated lands only are the property of individuals: government claims all the hill, forest, and waste land. In S. Canara inheritance in land, goods, honorary dignities, and whatever else is capable of being conveyed, descends in the female line; and instead of a man's own children, those of his sister, or maternal aunt (as is the case in all the country in the S. part of the Malabar coast) become his heirs, while he has a corresponding right over them, to the extent of selling them for slaves. In Karnata Proper, above the Ghauts, these laws are reversed, and a man's children

inherit his property. The lands mostly belong to individuals, who let them, and even frequently mortgage them to cultivators; the land assessment is moderate, being about 30 per cent. on the produce; but the cultivators generally are as much depressed as elsewhere, since they have about 20 per cent. to pay to their landlords, and out of the remaining 50 per cent. to provide live and dead stock, and subsist the slaves. Land, when sold, usually fetches from 8 to 12 years' purchase-money on the clear rent. Slavery is very common, and almost all the supposed aborigines are slaves. The total number was, a few years ago, estimated at 82,000; but their proprietors are said to treat them well. Many different tribes inhabit Canara. The Jains (*Sac Hindostan*) are more numerous here than in any other part of India, and many ancient Jain temples exist in tolerable perfection. Nairs inhabit the inland parts, where, together with Bunts and Sudras, they own most of the land. There are about 50,000 R. Cath. in Canara, mostly descendants of the Portuguese, Dutch, French, and Danish colonists. Canara is not celebrated for manufactures; the chief are those of sugar from the palm, and salt on the coast. The exports consist principally of rice, betel-nut, black pepper, ginger, cocoa-nuts, and oil and raw silk; the imports are cloths, cotton, thread, blankets, tobacco, black cattle, and sandal-wood, for export to Bombay. The total public revenue, in 1836-7, was 2,758,460 rup., of which, 1,671,215 were derived from land, 274,430 from salt, 240,551 from land customs, &c. All the chief towns, viz. Mangalore, Barcelore, and Calicut, are in the S.

Tulava was governed by its own princes till A. D. 782; from that year till 836 it was subject to the rajahs of Bijanagur; and afterwards to the princes of Ikeri. It escaped the Mohammedan conquests till 1765-6, when Hyder invaded and conquered it, after which it suffered all the horrors of anarchy, till the death of Tippoo in 1799, when it passed into the hands of the British, and under them has become a tranquil and orderly district. (*Hamilton's W. & E. I. Gaz. l. 330-340.*; *Madrás Almanack*, &c.)

CANARY ISLANDS (believed to be the *Fortunate Islands* of the ancients), a group in the N. Atlantic ocean, belonging to Spain, between 27° 40' and 29° 24' N. lat., and 13° 32' and 18° 20' W. long., 135 m. N. W. Cape Bojador, in Africa, and 650 m. S. W. Cadiz. This group consists of seven principal islands, as follows:—

Name.	Area, sq. Eng. m.	Pop. (1742).	Pop. (1836).
Teneriffe	817.7	60,218	85,011
Canary	758.3	53,304	68,010
Palma	718.5	17,580	33,089
Lanzarote	323.5	7,210	17,434
Fuerteventura	326.1	7,382	15,885
Gomera	169.7	6,251	11,742
Hierro	82.2	3,687	4,441
Total	3,256	136,192	223,640

Besides these, several small islands, viz. Graciosa, Clara, Allegranza, &c. called the Little Canaries, are situated to the N. W. of Lanzarote, and connected with that island by a bank, on which there is, for the most part, 40 fathoms water. Lanzarote is the most easterly, Allegranza the most northerly, and Hierro, or Ferro, the most southerly and westerly of the group. This last-mentioned island has acquired considerable celebrity, from its having been selected by the early modern geographers as the point where they placed the first meridian, or from which they began to reckon the longitude. In some countries this method of reckoning is still kept up; but the English and French adopt for their first meridians those passing through the Observatories of Greenwich and Paris. The most W. part of Hierro, or Ferro, La Dabessa, is 18° 9' 45" W. of the meridian of Greenwich, and 20° 30' W. of that of Paris. The islands are all of volcanic origin, very mountainous, their coasts precipitous, and the channels between them very deep. The greatest height of some of them above the level of the sea is as follows:—

Teneriffe (Peak)	11,400 ft.	Lanzarote (Montana)	
Canary (El Cambré)	6,648	Fincau	2,000 ft.
Fuerteventura (India)	2,830	Allegranza	939

Teneriffe and its peak, a half extinct volcano, which may be seen at a distance of more than 150 m., will be found elsewhere described (*TENERIFFE*). In all the islands there are plentiful traces of extinct volcanoes; but in that of Lanzarote one burst forth in 1825, which still continues active. The basaltic cliffs in that island rise almost perpendicularly to the height of 1,500 ft.; Allegranza appears wholly composed of a mass of lava and cinders. The Canaries have no rivers, properly so called, but they are watered by numerous brooks, which rise in the higher mountain regions, and, during rains, suddenly swell to torrents. There are few safe roadsteads, and no close harbours: the Great Canary island has, perhaps, more safe anchorages than any of the others, and the Bay of Las Palmas at its N. E. extremity offers a spacious haven for ships, secure from all winds except those from the S. E.,

which seldom blow with any violence. The climate, though hot, is generally healthy; the heat being tempered by the levation of the land, and the prevalence of N. and W. breezes. The temperature is in most parts very equable; the average in Dec. and Jan. has been found to be 67°, in Aug. 76° Fah. The range of temperature is seldom more than four or five degrees in the twenty-four hours. The S. and S.E. winds occasionally cause pestilential maldies in the E. canaries, and bringing intolerable heats, and clouds of locusts, scorch up and desolate the country. The fertility of the lands is in proportion to their humidity. In some parts they produce abundance of wheat, maize, and other kinds of corn, dates, figs, guavas, lemons, olives, and numerous other fruits, of both the torrid and temperate zones; the sugar-cane, tobacco, cotton, orchill, and many perfumes and medicinal plants. They contain, also, woods of pine trees, laurel, arbutus, &c. and excellent pasturage. The average annual quantities of the principal articles of produce in the entire group, are said to be:

Wine	-	33,800 pipes	Rye	-	41,000 bushels
Wheat	-	370,500 bushels	Pulse	-	50,000 —
Millet	-	212,400 —	Potatoes	-	787,000 cwt.
Barley	-	354,400 —	Barilla	-	830,000 —

Canary is, perhaps, the best watered and most fertile island; and it and Teneriffe are the two best cultivated. Teneriffe is the principal seat of the vine culture; the Vidueno and Malvasia wines are exclusively the produce of that island: the vine is, however, largely grown in the others, and the wines produced exported to Europe under the name of Teneriffe. The best wine in the E. Canaries is that of Lanzarote, where the grapes grow on a soil of decomposed scorie. Much brandy is distilled and exported. Amongst the other chief products are silk, honey, wax, and cochineal. Game is very plentiful; and they are said to be without either ferocious or venomous animals. Cattle and poultry have been introduced from Europe. The canary-bird (*Fringilla Canaria*, Linn.) is still found in these islands; but in its wild state its colour is grey or linnet-brown; the plumage of those we are accustomed to see, has derived its hue from repeated crossings. The fishery, which is principally carried on along the opposite African coast, occupies a great number of hands; and it is said that Spain might, in case of emergency, procure 2,000 able young seamen from the islands without distressing the fishery. Sugar, with coarse woollens, silks, and linens, are amongst the manufactures.

The quantities of the principal articles imported and exported in 1833 were as follows:—

Imports.		Exports.	
Sugar	- 6,832 arrobas	Silk	- 4,424 lbs.
Coffee	- 908 —	Almonds	- 130 —
Brandy	- 20,058 —	Brandy	- 17,125 —
Corn	- 30,540 doll.	Corn	- 121,200 doll.
Paper	- 3,360 reams	Pulse	- 5,000 lbs.
Soap	- 2,199 quintals	Fish	- 5,125 arroba
Oil	- 13,389 arrobas	Barilla	- 180,461 —
Tallow Candles	- 107 —	Wine	- 8,684 pipes
Wine	- 8 pipes	Orchilla	- 460 arroba
Leather for soles	- 46,000 lbs.	Moss	- 815 —
Wax	- 800 —		

1,275 lbs. of cochineal were also exported in the same year, and flax, woollens, cottons, glass, earthenware, drugs, iron, staves, salt fish, hams, cheese and butter, are imported. The total value of the imports and exports were:—

	Imports.	Exports.
Foreign countries	11,573,325 reals	5,870,188 r. v.
America	1,069,698 —	428,356 —
Spain	2,614,216 —	3,073,508 —
Total	15,257,216	9,371,050

Santa Cruz in Teneriffe, and Las Palmas in Canary, are the principal commercial ports. The present inhabitants are probably almost wholly of Spanish origin. The islands are governed by the Spanish laws, the administration of which is directed by an *audiencia* in Great Canary. The governor of the Canaries, who is president of the *audiencia*, resides at Santa Cruz. The three easterly islands form one bishopric, and the four westerly another. There are 41 monasteries, and 15 convents, with 428 regular clergy; and the people are said to be equally ignorant and bigoted. They are not, however, deficient either in industry or enterprise. On the contrary, many of them emigrate to America, the Philippine islands, &c., where they are distinguished by their adventurous spirit. But, at home, such of them as are not engaged in the fishery, are sunk in comparative apathy, produced by vicious laws and institutions. The lands are parcelled out in immense estates, held under strict entail, and the plan followed in letting them to the actual occupiers being as bad as possible, industry

is at the lowest ebb, and few or rather no improvements are ever attempted, or even so much as thought of. The military force is composed of 25,000 men. (For descriptions of Santa Cruz, Lagunas, and Orotava, see TENERIFFE.) Las Palmas, in the Great Canary, near its N.E. extremity, lat. 28° 8' N., long. 20° 23' 20" W., has a handsome sea-port town with 18,000 inhab., a cathedral, hospital, college, a mole, many public-fountains, and a well-supplied market. In good weather ships anchor within half a mile of the town, but the roadstead is but indifferent. The other chief towns are, Arecife, or Port Naos, in Lanzarote, a well-built town, with 2,500 inhab.; Cabras, 1,600 inhab., in Fuerteventura; La Hila, in Gomera; and Santa Cruz, in Palma.

When these islands first became known to Europeans of modern times, they were inhabited by a race of people called Guanches, of a tall, athletic, and vigorous frame (though this has probably been exaggerated), and who made a determined resistance to the invaders. Though unacquainted with the use of iron, they appear to have arrived at a considerable degree of civilization; they cultivated music and poetry with success, had a kind of hieroglyphic writing, believed in a supreme being, in a future state of rewards and punishments, and embalmed their dead. Many of their mummies have been found in modern times in caves in various parts of the islands. They are placed erect upon their feet, and are in so remarkable a state of desiccation, that some of them do not weigh above from 6 to 8 lbs. Their government was oligarchical. Humboldt and Dr. Prichard think that the Guanches were either intimately connected with, or descended from the Berbers of N. Africa. Many of the Guanches were reduced to a state of slavery by the Spanish and other European traders, by whom the islands were first visited; and those who escaped the scourge of slavery, war, and famine, were mostly carried off by a pestilence in 1494.

The Canaries were first discovered by accident, about 1330 by the crew of a French ship driven thither in a storm. After several unsuccessful Spanish expeditions, John de Bethencourt, a French gentleman, sailed with a fleet from Rochelle in 1400, and took possession first of Lanzarote, and subsequently of Fuerteventura, Gomera, and Ilhierro. Bethencourt's heir subsequently disposed of these to a Spanish nobleman, and they afterwards became the property of the Spanish crown: the conquest of the other islands was effected by Spain before the termination of the 15th century. (*Humboldt's Personal Narrative*, vol. i.; *Tablas de Revenue*, &c. 1835; *Journ. Grog. Soc.* 1836; *Prichard's Researches*, ii. 24.)

CANCALE, a sea-port town of France, dep. Ille-et-Vilaine, cap. cant., 9 m. E. St. Malo; lat. 48° 40' 40" N., long. 1° 51' 30" W. Pop. 5,151. It is situated on the W. side of St. Michael's Bay. At a short distance from the town there are some large rocks, within which there is good anchorage in 5 or 6 fathoms. Excellent oysters are found in the bay, and make a considerable article of traffic. The English made, in 1758, an unsuccessful descent on the coast here. (*Diet. Grog.*)

CANDAHAR, a fortified city of Caubul, cap. (1838) of an indep. territory held by a Banrikaye chief, brother of the sirdar of Caubul, in a plain near the Urgundaub river; 200 m. S.W. Caubul, 260 m. S.E. Herat; lat. 32° 20' N., long. 66° 15' E. Pop. 50,000, the greater proportion of whom are Afghans. It is said to be of an oblong form, enclosed by a bastioned mud wall, on the ramparts of which three men may walk abreast, and a ditch, 9 ft. deep, recently constructed, surrounds the whole. Candahar is regularly built, most of the streets meeting at right angles: its houses are generally of brick, and often with no other cement than mud. Four long and broad bazars meet in the centre of the city, in a small circular space about 45 yards in diameter, and covered with a dome, where proclamations are made, and the bodies of criminals exposed. The principal bazars are each about 50 yards broad; their sides are lined with well-supplied shops one story high; and there is a gate at the end of each opening into the surrounding country, except the N. bazar, having the palace at its end, a structure in no respect remarkable externally, but containing many courts and buildings, and a private garden. There are many caravanseras and mosques: the principal building of the latter kind is the tomb of Ahmed Shah, an elegant, but not a large, structure, with a handsome cupola, formerly an inviolable sanctuary. A great variety of trades are carried on, and the streets are filled with a noisy and bustling crowd from morning till night; but, unlike most other Afghan cities, there are here no water sellers, the city being well supplied by canals from the Urgundaub, whence dug canals or open water-courses are carried to the different streets; and there are, also, numerous wells. Three of the principal bazars were at one time planted with trees, and had, it is said, a narrow canal running down the middle of each; but many of the trees have withered, and if the canals ever existed, they are no longer visible. The

vicinity of Candahar is fertile, and abounds with gardens and orchards, producing the finest fruits and vegetables, especially pomegranates; with corn, tobacco, madder, as-saictida, and artificial grasses. The climate is mild and healthy. Were the city the seat of a just government, it would be the centre of a rich circle of cultivation; but the chiefs who, by oppressions of all sorts, have contrived to raise about 50,000 annual revenue from the land, have also, by their exactions, banished much of the trade and opulence of the city. Persian traditions, and the conjectures of European geographers, agree in assigning the foundation of Candahar to Alexander the Great. The present city was built by Ahmed Shah in 1773 or 1754, who made it the capital of his dominions, an honour which his successor Timur transferred to Caubul. (*Elphinstone's Caubul*, ii. 129-134.; *Conolly's overland Journey*, ii. 91-93.)

CANDEISH, a soubah or prov. of the Deccan, Hindostan, between lat. 20° and 22° N., and long. 73° and 77° E.; having N. Malwah, E. Gundwana, S. Berar and Aurangabad, and W. Gujrat: length, E. to W., about 210 m.; average breadth, 80 m. It contains parts of three mountain ranges, viz. the Sautpoora mountains in its N.; the Chandore, or Adjuntah range, S.; and the Sydares mountains, or W. Ghauts, in its S.W. parts: its principal plain is between these ranges, and opens E. into the plains of Berar, and W. is continuous with those of Surat, from which it is separated by a thick and extensive jungle. The Tuptee river flows through this plain. The Nerbudda forms the N. boundary. Candesh, though interspersed with low barren hills, has a large extent of very fertile territory, watered by copious streams and limpid rivulets from the table-lands, which greatly enhance its natural beauties. For thirty years, however, before the British became possessed of it (1819), it had been the scene of continual anarchy, and much of the best land, especially N. the Tuptee, had become overgrown with an uninhabited forest, abounding with the ruins of former villages, and swarming with tigers. This prov. is comprised within the several territories of the Gulcower, Sindia, the Nizam, and the British government; the land in those parts belonging to the latter is granted on the most easy terms to the cultivators, but some length of time must elapse before the country recovers its former prosperity. The existing villages are mostly built of mud, and protected by a mud wall and fort, without ditch or outwork. The hill ranges, and the whole country along the courses of the Nerbudda and Tuptee rivers, are inhabited by Bheels, who have been here less disturbed than in any other part of India. They are of small stature, dark complexion, prone to rapine and thieving, go armed with a bow and arrow, and in many respects resemble the hill-people of Bhaurulpore. They eat beef and pork, drink spirits, and bury their dead; yet they pretend to be Hindoos of the Brahmin and Rajpoot castes. They have contributed greatly to the devastation of the province.

Candesh formerly contained a large number of Mah-ratta fortresses: its principal towns are Hoorhanpoor, Aseerghur, Ilindia, Nundoorpoor, and Gaudia. Numerous Arab colonists settled here, and early in the 15th century Candesh was an independent kingdom, governed by sovereigns claiming descent from the caliph Omar, who had their capital at Aseerghur: toward the end of that century, it was completely subdued and annexed to the Mogul empire. The decline of Candesh may be dated from 1802, when Jeswant Row-Holcar ravaged it; next year it was depopulated by famine, and subsequently ruined by the exactions of the peishwa's officers, and the predatory incursions of the Bheels, Pindarries, and insurgent bands of the Arabs, who had established themselves in the strongholds. On the British conquest, in 1818, when Holcar's possessors in Candesh fell under our dominion, these refractory tribes were either brought into subjection or pacified; or else, as the Arabs, obliged to emigrate from India, after having been paid what they were legitimately entitled to by the British government. (*Hamilton's E. I. Gaz.* i. 343-345.; *Reports*, &c. on *Affairs of the E. I. Company*.)

CANDISH, an Isl. zillah or distr. of Hindostan, prov. Candesh, presid. Bombay; between lat. 20° and 21° 42' N., and long. 73° 37' and 76° 22' E.; having N. the collectorate of Surat and Sindia's dom., E. the latter, and those of the Nizam, S. the Nizam's dom. and the collectorate of Ahmednuggur; and W. a portion of the Gulcower's territory: shape somewhat rhomboidal; length, E. to W., about 180 m.; greatest breadth 115 m.; area 12,527 sq. m. Pop. 478,800. This distr. is capable of great improvement, being for the most part overgrown with jungle; very complete embankments on the various streams, and many dilapidated, though substantially-built dams and aqueducts for irrigation, are met with, which might be again rendered available at a small expense. In 1820, when Col. (now Gen.) Briggs entered upon the civil management of this distr., there were 80 distinct bands of freebooters ravaging it, and out of 2,700 villages, 1,100 had been altogether desolated during

the preceding 30 years of anarchy. The Bheels were at that time in the habit of levying a kind of *black mail* upon the villagers, consisting of a portion of the produce of the land; but, by conciliatory treatment, in less than 10 years most of them had returned to their former occupations as village watchmen and guardians, and only one gang of 40 individuals remained to infest the country when Col. Briggs left it. The agricultural classes are peaceable and inoffensive, but timid and destitute of energy. There are no large or wealthy landholders, excepting the proprietors of certain jaghires granted for military services by the British government. The village constitution exists, but the ryotwarry system has been introduced into this distr., to which, in the opinion of gentlemen who have held civil offices in it for a considerable time, it is, from various causes, extremely ill adapted. Grain, cotton, and indigo, are the chief articles of culture; but there is a vast quantity of waste land, and the cultivation and revenue have both diminished of late years, owing to the difficulty of disposing of the produce, from the general fall of prices, want of roads, &c.

Civil justice is administered by the *punchayet*, or native arbitration; and in criminal cases, while Colonel Briggs superintended the distr., trial by jury was established, which is said to have worked exceedingly well. Schools are common in Candesh distr.; every Brahmin, and all who have any thing to do with mercantile business, are instructed in reading, writing, and accounts: in 1825 there were 189 schools in all, attended by 2,022 scholars, or 1 in 18 for the whole male population. The Mohammedans are said to be the most ignorant of the population. (*Hamilton's E. I. Gaz.* i. 345, 346.; *Briggs's Evidence*, in *Reports*, &c.; *Hodge's Evidence*, in *ditto*.)

CANDIA or MEGALOKASTRON, a fortified mar. city, cap. of Crete, on the N. shore of that island, near its centre, 34 m. W. Spinalonga, and 64 m. E. S. Canea; lat. 35° 21' N., long. 24° 8' 15" E. Pop. 12,000, 9,000 of whom are Mohammedans. This city, and hence Crete itself, derived its name of Candia from the word *khandak*, signifying an entrenchment in the language of the Saracens, by whom it was built. Its present fortifications are of Venetian construction; they are massive, bastioned, and furnished with outworks; the scarp wall, a beautiful specimen of art, is in most places 50 ft. in perpendicular height; the sea wall is not above 20 ft. in height, irregular, and but badly flanked. The port is formed by two moles, which, bending towards each other, project about 250 yards into the sea, and are defended at their extreme points by forts. It is at present so choked up by sand and the ruins of the old Venetian docks and arsenal, that a vessel drawing more than 8 ft. water cannot enter. The city has four gates, three on the land side and one towards the sea. Principal streets wide, roughly paved, but clean, well furnished with fountains, and adorned with clumps of trees. Houses generally well built, but have seldom more than one story above the ground floor. The bazars, which are good, have quite a Turkish appearance. In the E. part of the city, the houses are mostly interspersed with gardens. Candia is the residence of the pasha and seat of the provincial council, and of a Greek archbishop. Chief buildings, — governor's palace, the Greek cathedral and other churches, many mosques, a synagogue, the remains of two Roman Catholic churches, a light-house on the W. mole, and some good baths. The arched vaults built for the Venetian galleys still exist, and several other relics of Venetian sway are found. The country immediately round Candia is not particularly fertile. Its prov. comprises all the E. part of the island, and produces chiefly wheat, barley, raisins, and a little cotton. (*Scott's Trav. in Egypt and Candia*, i. : *Pashley*; *Consular Reports*, &c.)

CANDIA. See CRETE.

CANDY, an Isl. town of Ceylon, at the head of an extensive valley in lat. 7° 17' N., and long. 80° 36' E., about 1,400 ft. above the level of the sea, 80 m. E.N.E. Colombo, and 95 m. S.W. Trincomalee. Pop. about 3,000. It is surrounded by woody hills and mountains, varying from 200 to 2,000 feet in height, and stands on the border of an artificial lake; but its situation, though beautiful and romantic, is insecure. At a distance of 3 m. it is nearly surrounded by the Mahavelli Ganges, where navigable only for small boats. Excepting those inhabited by the chiefs, which are tiled, the native houses are built entirely of clay, and thatched. Temples very numerous, and considered almost indispensable appendages to the houses of the opulent; in the greater number lights are constantly kept burning; and in one of them the celebrated tooth, said to have belonged to Boodhi, is still preserved! Since the capture of Candy, residences for the governor and commandant, and a gach, have been built by the British, and several missions and other schools established. There is no church, but the district court-house and missionary school-room are made use of for divine service. Candy was anciently the cap. of an indep. kingdom of the same name, which comprised the central mountainous country of Ceylon. It was

taken by the British in 1815. (*Heber's Nar.* iii. 173; *Hamilton's E. I. Gaz.*)

CANEA or KIANIA (an. *Cydonia*), a sea-port and the principal commercial town of Crete, cap. prov. of same name, on the N. shore of the island, 25 m. from its W. extremity, 64 m. W.N.W. Candia, and about 140 m. S. the island of Syria. Pop. 8,000, about 5,000 of whom are Mohammedans, and 1,000 foreigners, chiefly Helles and Ionians, who engross most of the import trade. The town, inclusive of the port, forms an irregular square, enclosed by walls, with bastions and a ditch on the land side. The present fortifications were constructed by the Venetians, but are inferior, both in magnitude and disposition, to those of Candia. The port is formed by a mole about 1,200 ft. in length, prolonged from the N.E. extremity of the town to the N.W., where it is terminated by a light-house opposite to a fortress defending the harbour's mouth. The port has recently undergone great improvements: it is the best in Crete, and capable of containing many vessels of 300 tons burden. Streets wide and well paved, but not clean; houses lofty, old, and rickety, but shops good. At the N. part of the town is a kind of citadel, formerly containing the arsenal, docks, &c. The Venetian galleries vaults are still in good preservation. There is a small but excellent lazaretto, and several soap manufactories. (For the exports, &c., see CRETE.) Canea is the residence of the provincial governor and of several European consuls, and the seat of the provincial council, and of a Greek bishopric. Strabo and Scylax describe the site and port of Cydonia so as to leave no doubt that Kania stands upon the identical spot. No vestiges of the ancient city are now to be seen, though some existed at the close of the 17th century. The plain around Canea is celebrated for its beauty; its province comprises all the W. portion of the island. (*Scott's Egypt and Candia*, ii. 306-312; *Pashley's Trav. in Crete*, i. 1-17; *Consular Report*, &c.)

CANICATTI, a town of Sicily, prov. Girgenti, cap. cant., 16 m. S.W. Caltanissetta. Pop., with cant., 17,384. It is well built. The greater part of the population consists of agriculturists.

CANNÆ, an inconsiderable place in Naples, prov. Terra-di-Barì, near the Ofanto (the anc. *Asclæda*), 8 m. W. S.W. Barietta. It is adjacent to the site of the ancient city of Cannæ, so famous for the decisive victory gained in its vicinity by Hannibal, over the Romans, in the year 217 B.C. Never were the talents of a great general more conspicuously displayed than on this occasion. The army of Hannibal was very inferior in numbers, and perhaps, also, in the quality of the troops, to that of his enemies; but the ability of the commander made up for every other deficiency, and, with a loss of only 4,000 of his own men, he put 50,000 Romans to the sword, and took 10,000 prisoners! (The English reader will find a good account of this great battle in Ferguson's *Roman History*, cap. 5; the classical reader will resort to Polybius and Livy.)

The scene of action is marked out to posterity by the name of *Campo di Sangue*, "field of blood," and spears, heads of lances, and other pieces of armour, still continue to be turned up by the plough.

The city of Cannæ was destroyed the year before the battle; but it was afterwards rebuilt, and was a bishop's see in the infancy of Christianity. It seems to have been abandoned in the middle ages for the cities along the coast. (*Swinburne's Two Sicilies*, i. 108. 4to. ed.)

CANNES, a sea-port town of France, on the Mediterranean, dép. Var, cap. cant., 25 m. E. Draguignan; lat. 43° 38' 31" N., long. 7° 1' E. Pop. 3,997. It is situated on the declivity of a hill projecting into the sea; has a fine quay, an old Gothic castle, and an old church. Its port is neither deep nor commodious, and can only be used by fishing boats and small coasting vessels. Napoleon landed in the vicinity of Cannes on the 1st of March, 1815, on his memorable return from Elba. (*Hugo, art. Var.*)

CANOSA (an. *Canusium*), a town of Naples, prov. Terra-di-Barì, cap. cant., near the Ofanto, 15 m. S.W. Barietta. Pop. circa 4,000. The old city, said to have been founded by Diomedes, or in a period anterior to the records of Roman history, was in ancient times one of the most considerable cities in this part of Italy for extent, population, and magnificence in building. Its walls are said to have embraced a circuit of 16 m.; and various ruins still remain to attest its former grandeur. Among these are the remains of an aqueduct and of a vast amphitheatre, with tombs (of which a very singular one was discovered in 1813), columns, triumphal arches, &c. Great numbers of stilted vases of the best period have been found here, surpassing in size and beauty those found in the tombs of any other ancient city, not excepting even Nola. The modern town occupies the site of the ancient citadel; and is said by Swinburne to be a "most pitiful remnant of so great a city." The ancient cathedral, built in the 6th century, still remains. Its altars and pavements are rich in marbles; and the

CANTELEU.

verde antico columns that support its roof are the finest that Swinburne, no mean judge, had ever seen. There is here, also, the mausoleum of Bohemund, so celebrated in the *Gryssatronic Libérate*.

Canusium was the place to which the wreck of the Roman army fled after the battle of Cannæ. It seems to have been at the acmé of its prosperity under Trajan. It was reduced to its present deplorable situation by a series of disasters inflicted on it by the Goths, Saracens, and Normans. (*Cramer's Ancient Italy*, ii. 252; *Swinburne's Two Sicilies*, i. 400. 4to. ed.; *Cramer's Calabria*, p. 90.)

CANOURGE (LA), a town of France, dép. Lozère, cap. cant., in an agreeable and fertile valley, on the Urgan, 9 m. S.S.W. Marvejols. Pop. 1,959. It carries on some branches of the cotton and woollen manufactures, the products of the latter being formerly in extensive demand, and has some trade in cattle and grain. Excavations made in the vicinity in 1829 have been the means of discovering a number of vases and other remains of Roman pottery, which appear to have been manufactured on the spot. (*Hugo, art. Lozère.*)

CANTAL, an inland dep. of France, formed of parts of the ancient districts of Haute-Loire and Vendée, between 44° 37' and 45° 26' N. lat., and 2° 5' and 3° 14' E. long., bounded by the following depts.: viz. N. Puy-de-Dôme, E. Haute-Loire, S.E. Lozère, S. Aveyron, and W. Lot and Corrèze. Area, 582,950 hectares. Pop. 262,117. This is one of the least productive, poorest districts of France. Surface much encumbered with mountains. The highest summit, that of the Plomb-de-Cantal, in the centre of the dep., and whence it takes its name, is elevated 1,856 metres (6,090 ft.) above the level of the sea. We every where find indications of the action of subterraneous fires and volcanos; and though steep, the mountains furnish, in summer, excellent pasture. Valleys not very extensive. Between Murat and St. Flour there is a level plateau, which may be said to be the granary of the dept. Climate severe, the snow generally lying on the summits of the mountains for seven or eight months together. Several rivers, flowing in different directions, have their sources here; among which may be specified the Cère, Alagnon, Ruc, Arcueil, &c.: the Dordogne runs along its N.W. frontier. Agriculture in the most backward state; the occupiers being generally poor, and wedded to old practices. The produce of wheat and oats is insufficient for the consumption; but the inhabitants live principally on buckwheat, rye, potatoes, and chestnuts. The last, indeed, is the staple article of food in an extensive district, thence called *Châtignieray*. Hemp and fine flax are also raised, with various descriptions of fruits, and a little very bad wine. The principal wealth of the dep. consists in its mountain pastures and meadows; partly occupied, in summer, in dairy farming, and partly in the fattening of cattle and sheep. Large quantities of cheese and butter are annually produced. The ordinary yield of a cow is estimated at 75 kilograms of cheese, and 15 ditto of butter. The best cheeses are made in the environs of Salers; they weigh from 70 to 80 lbs.: great numbers of pigs are fed on the refuse of the dairies. Large herds of cattle are also fattened on the mountains; and it is said that the value of an ox is increased, in the course of a summer, from 150 to 220 fr. The native breed of sheep is small, and have fine fleeces. Large flocks are brought from the more S. departments, to be fattened during the summer, the fattening and pasturage grounds being often let to the proprietors of herds and flocks from the neighbouring depts. Horses small and hardy, and used for the light cavalry. Numbers of mules, asses, and goats, are also raised; the skins of the latter are sent to Millaud to be made into parchment. Honey is an important product. Manufacturing industry is at a very low ebb in this dept. There are a few fabrics of coarse woollens and lincens; and these, with coarse lace, copper and braziers' work, wooden articles, paper, tanneries, &c., include almost all that is worth notice. Numbers of the people annually emigrate in search of employment to Paris, and other parts of France, Spain, &c. Hugo gives a most unfavourable account of the state of the bulk of the population, who are said to be ignorant, lazy, rude and brutal in their manners, and depressed by poverty. The inhabitants of the mountains and plateaux suffer severely from the scarcity of fuel, and cold in winter. To obviate the influence of the latter, they lie in bed as long as possible; and have their cottages so planned that the family occupies the middle space between the cattle and the barn! Cantal is divided into four arrond., and returns 4 members to the Chamber of Deputies. Number of electors between 1,100 and 1,200. Public revenue in 1831, 4,519,327 fr. Chief towns, Aurillac, St. Flour, Murat. (*Hugo, art. Cantal, Dict. Geog.*; *Mitlé-Brun*, viii. Eng. trans.)

CANTELEU, a town of France, dép. Seine Inférieure, on the summit of hills which command the right bank of the Seine, at the entrance of the forest of Roumare, 4 m. W. Rouen. Pop. 3,591. It commands a fine view of Rouen and the hills by which it is surrounded, the course

This city is of great antiquity, as is proved by the notice of it in the itinerary of Antoninus, and by many Roman remains. A staple of wool was granted by Edward III.; but its chief importance previously to the

Reformation was derived from its numerous religious establishments, and the influx of pilgrims of all ranks and conditions. It was also the most frequented thoroughfare to the Continent, and is noticed as such in the charter granted by Henry IV., where it is called, "a city near the sea, and as it were a port and entrance by which foreigners come to the kingdom." During the last war, a large body of military were usually stationed here, for whose reception there are three sets of cavalry and infantry barracks. The outer walls of a castle of the Norman period still exist. (*Illustr. Views of Metropol. Church of Canterbury, and Hist. Descr. Ato. 1686; Canterbury Guide, &c.*)

CANTON (called by the Chinese *Sang-Ching*, the provincial city), a marit. city of China, on its S. coast, cap. prov. Quang-tong, and residence of the provincial authorities; the principal emporium of the East, and the only port in China at which any Europeans are established. It stands on the N. bank of the *Choo-kiang*, or Pearl River, and the E. bank of its affluent, the *Pe-kiang*, 60 m. N.N.W. the Chinese Sea, and 1,300 m. S. by W. Pekin. Lat. $23^{\circ} 7' 10''$ N., long. $113^{\circ} 14' 30''$ E. It is nearly square, about 6 m. in circ., built generally upon level ground, except on its N. side, and is divided into two unequal parts, the outer, or Chinese, and the inner, or Manchou (Tartar) city, which are surrounded by one wall, and separated by another. The walls are partly of sandstone and partly of brick, about 20 or 25 ft. thick, and from 25 to 40 ft. high. A line of battlements, with embrasures at intervals of a few feet, raised on the top of the walls all round, are in some places mounted with cannon. The city is farther defended by three forts on the land side, and two on Pearl River; but as a place of strength Canton is insignificant. The outer walls are pierced with 12 gates, and 4 others lead through the inner wall from the old to the new city; all of these are usually opened at dawn, and shut at an early hour of the evening, and strictly guarded, to prevent the exit or entrance of any one, except upon special occasions. The suburbs are, perhaps, as extensive and populous as the city itself. They fill up the space between the walls and the water's edge on both rivers; those on the W. side are much the largest. The city and suburbs are laid out in a precisely similar manner. Streets numerous, and generally short and crooked, though sometimes of considerable length. They vary in width from about 2 to 16 ft., but are commonly from 6 to 8 ft. wide, paved with little round stones, and flagged, close to the houses, with larger ones, chiefly of granite. Each is closed by strong gates, secured and guarded at night; and streets of business are each devoted to one distinct branch of trade. Several canals, used for the conveyance of passengers and goods, intersect the city and suburbs. Two of the largest run along the outside of the E. and W. walls, and communicate by a third, which passes through the new city. Several smaller ones branch off from these on either side; they are crossed in many places by stone bridges. Houses built chiefly of brick; but mud, stone, and wood, are also used in their construction, and many of the habitations in the old city are said to be composed entirely of the former material. Near the river they are raised on wooden piles, and elsewhere are generally erected on solid foundations. Scarcely any are more than one story in height; the roofs of many are flat, and being surrounded with a breast-work, they form terraces frequented by the family in the cool of the evening. The floors are usually composed of indurated mud, marble, or other flagstones, or tiles joined by cement. Windows small, the place of glass being supplied by paper, mica, thin shell, &c. Very little iron is used. The better sort of residences are built within a court, surrounded by a wall, 12 or 14 ft. high, and the interior of those of the opulent Chinese are in general very richly furnished. The houses of the middle orders, in which about 1-3 of the population reside, have no court, nor any superabundant room; those of the lower orders, which are very numerous along the banks of the canals, in the N. part of the old city, and in the extreme parts of the suburbs, are wretched mud hovels, in which 6, 8, 10, or sometimes even double that number of individuals, are crowded into one low, dark, and dirty apartment. The foreign factories, or *hongs*, as the Chinese call them, are situated in the S.W. suburb, where they extend from E. to W. for about $\frac{1}{4}$ fur-long. They occupy a muddy flat, which has been gained from the *Choo-kiang* river, which they face, being separated from it by a quay about 100 yds. wide. This space, which is considered as belonging to the European merchants, is railed in, and forms a promenade, called *Respondentia Walk*. Near it is another small open space, about 80 or 60 yds. sq., walled in, and laid out as a garden, with gravel walks, flower-beds, &c. These narrow limits bound all the territory assigned to foreigners within the Celestial empire: even the quay and enclosures were not obtained without considerable difficulty, and the European merchants cannot erect few steps on the water's edge without express permission

from the authorities. There are 13 hongs, or factories, including the British, Dutch, American, French, Austrian, Swedish, Danish, Parsee, &c. They are amongst the handsomest buildings in the city, and usually consist of 3, 4, or more brick or granite buildings surrounding a kind of close or court: two tolerable European hotels occupy portions of two of them. The English hong far surpasses the rest for elegance and extent; this, the Dutch, and the American hongs, are the only ones which have their national flags flying; the British flag, which had been hauled down at the expiration of the E. I. Company's charter, was again raised in April 1837. (*Fengui in China*, i. 240.) Contiguous to the hongs are three noted thoroughfares, Old and New China streets, and Hlog Lane. The first two are amongst the best streets in the suburbs, rather wider than the generality of the public ways, pretty regularly paved, and lined with shops, in which a considerable amount of business is sometimes transacted. The filthy street, or alley, appropriately named Hlog Lane, has an infamous notoriety as being the place where foreign seamen are intoxicated, robbed, and maltreated, and where, owing in a great measure to their imprudence, most of the disturbances have arisen which have led to serious disputes between the Chinese government and the foreign traders. Except in those devoted to the European trade, most of the shops open to the streets, and the most valuable kinds of wares are exposed, apparently without any protection from theft: but the sharp eye kept by the dealers, the gates at the end of the streets, which may be shut in an instant, and a most vigilant police, commonly prevent any frauds. Burglaries are rare, but loss by fire is frequent; to avert which, in the winter months, an additional body of watchmen occupy watch-towers erected on bamboo poles high above the roofs of the houses, and an alarm, given by bells or other means, quickly spreads through the city. The Chinese have very generally adapted the use of the engine of our armies, which they manufacture sufficiently well to answer the purpose; but Mr. Davis says, that the foolish notion of fatalism which prevails among the people makes them singularly careless as regards fire. In 1822 a fire broke out, which destroyed the British factory and above 10,000 other houses. The loss of the E. I. Company on this occasion was estimated at 500,000*l.* sterling, 3-5ths in woollens. Canton is subject to inundations, which carry away many mud hovels, and frequently fill the lower apartments in the hongs to the height of several feet. The city is tolerably well supplied with water by several reservoirs, many wells, the canals, &c., and some fine springs on its N. side, both within and without the walls.

A large part of the pop. of Canton resides on the water. For 4 or 5 m. opposite the city, and both above and below it, the river is crowded with vessels and rafts of all descriptions and sizes. Every one is registered, and the whole number in the neighbourhood of the city is reported to amount to 84,000 (*Chinese Rep.*). Many of these are called egg-boats, which are no more than 12 or 15 ft. long, about 6 ft. broad, and covered with a low bamboo shell, not only accommodate whole families, but contain coops in which large broods of ducks and chickens are reared. Others are immense rafts of timber on which many individuals live. Some of the floating-houses are, however, handsome residences; their hull is large and broad, and the building in the centre is surrounded by a spacious wooden terrace, and supports another on its roof, both of which are ornamented with flowers, evergreens, &c. The narrow channel left between the stationary shipping and the shore is so incessantly thronged with barges, and craft of all kinds as to render landing or embarkation usually a difficult undertaking. Upwards of 120 different temples are enumerated in and adjacent to the city, and this does not include the whole number. The principal is the Buddhist temple on the island of Honan, in the river opposite Canton. Its buildings are numerous, and chiefly of brick; with its courts, and its gardens, 6 or 8 acres, which are surrounded by a lofty wall. The stilts which reigns within this barrier forms a striking contrast to the turmoil which prevails without. The pathway to the great central temple leads through two wide court-yards laid out with gravel walks, and planted with rows of trees; in the gateway separating these courts are two fierce-looking colossal figures, seated on huge pedestals of granite. The principal hall is about 80 ft. sq.; its walls are hung with crimson tapestry, tablets, &c., and its roof is ornamented with grotesque paintings and figures in relief: in the centre of the hall are three enormous, heavy, gilded figures representing the "Past, Present, and Future," before which incense is continually burning. In various other halls there are shrines of inferior deities, and the remainder of the building is occupied chiefly by the dwellings and offices of the priests, of whom there are nearly 200. There are two other considerable Buddhist temples in the N.W. part of the old city, one of which, founded about A. D. 280, has about 200 inmates, and 3,500 acres of granded property. In the old city there is also a Mohammedan mosque, with a

dome and minaret 160 ft. in height: there are about 3,000 Mohammedans in Canton. Without the walls, on the N. side, there is a lofty pagoda 5 stories high. There are several charitable institutions, but they are mostly of recent foundation. Vagabonds and beggars are very numerous in Canton, but not more so than in many large cities of Europe. A foundling hospital established in 1698, with accommodations for 300 or 300 children, and supported with about \$400. a year; a retreat for the aged, infirm, blind, &c., supported by imposts on foreign ships bringing rice to the port, and an hospital for lepers, all on the E. side, without the city walls, are amongst the chief native charities. A general hospital in the S.W. suburb, established by an American missionary society in 1838, has been productive of much benefit. But the best maintenance for the poor consists in the manner in which both law and custom enforce the claims of kindred. In the old city, are the residences of the lieutenant-governor, Tartar-general, treasurer of the provincial revenue, literary chancellor, criminal judge, &c.; and in the new city, those of the prov. governor, and the grand *hoppo* or commissioner of the customs on foreign trade. These residences, and others of the hong-merchants, and some wealthy citizens, are little inferior, except as respects the size of the premises, to the palaces of the old city is the grand hall for the examination of candidates for literary honours. There are 14 high schools, and about 30 colleges in Canton; three of the latter have each 200 students. It is estimated that about half the inlab. are able to read.

We have no information on which it would be safe to place any reliance as to the pop. of Canton. It is estimated in the *Chinese Repository* (vol. II. 307.) at 1,235,000; but the data on which this estimate is made are far too loose to entitle it to any weight. Mr. Davis does not think it possible that 1,000,000 could be stuffed within its precincts; and it is probable that the pop. does not exceed half the number mentioned in the *Repository*.

The manufactures of Canton are numerous and important. It is said in the *Chinese Repository* that there are about 17,000 persons employed in the weaving of silk, and that 80,000 are engaged in the manufacture of all kinds of cloth. There are said to be 4,200 shoemakers; besides great numbers of persons who work in wood, brass, iron, stone, &c. The book trade is considerable. The persons engaged in these trades are all formed into distinct communities, and have each their own laws for the regulation of their business. But a large portion of the manufactures required for the consumption and trade of Canton are carried on at Puh-shan, a large city a few miles W. from Canton. It may surprise our readers to learn that combinations to support the prices of goods and the wages of labour are very general, and are vigorously maintained.

Trade.—All the legitimate trade of China with European nations (Russia excepted) is conducted at Canton. The Russians are the only nation not permitted to have a resident or factory here; the commerce between the two empires, which is very extensive, centres at Kiachta, on the border of the empire, in Mongolia. The policy which has determined this regulation, as well as that which has fixed the only foreign mercantile port at almost the greatest possible distance from the capital, is probably dictated not only by a jealous fear of strangers passing the boundaries of the empire, but also from a desire, on the part of the government, to obtain the greatest amount of transit duties. The European trade, now so immense, originated in a commercial treaty between Emmanuel, King of Portugal, and the Emperor of China, in 1517. In 1634, some British ships first touched at Canton. In 1680, the direct trade of the E. I. Company with China commenced. In consequence of the extraordinary increase in the demand for tea, which, from being a luxury seldom seen, so late as the reign of Queen Anne, even in the houses of the nobility, has become a necessary of life, used by the poorest classes, the British trade with Canton has progressively and rapidly increased since 1700; and the great mass of the foreign commerce (which, inclusive of that of the junk, is estimated at 30,000,000 dollars yearly) is carried on by the English and Americans. Until the expiration of their charter, in 1834, the British trade was entirely in the hands of the E. I. Company; and during the last 3 or 4 years of their monopoly, that body imported tea (which has always been the principal export from China) into England to the amount of 31,500,000 lbs. annually. After the expiration of their charter, the quantity imported was still greater. In 1834, no less than 150 British vessels, with a united tonnage of 82,470 tons, resorted to Whampoa, near Canton, and brought away 33,641,300 lbs. of tea. The import of that article subsequently diminished; but it is still greater than at any period during the Company's monopoly. In the season from October 1. 1835 to April 10. 1837, the British traders took away 33,211,333 lbs. of tea, in proportion of 1 part green to 3½ black. The total value of tea exported that year was 20,285,068 doll. Next to tea, raw silk and

silk piece-goods are the principal articles of export; their aggregate value having amounted in 1837 to above 10,000,000 dollars; then follow treasure, sugar, and a host of inferior articles.

The trade between British India and China has been greater in amount and importance than that between China and England. The principal export from India was formerly raw cotton, chiefly from Bombay; but opium has long exceeded that article in importance, having latterly been clandestinely imported into China to so vast an amount, that its value has rather exceeded that of the tea exported. Very recently, however, the Chinese government have, in appearance at least, set vigorously to work to suppress the trade in opium, and to exclude it from the empire. But those best acquainted with China believe that the taste for the drug is too firmly rooted among the population to admit of the government succeeding. The probability, however, seems to be, that the events that have occurred, particularly the confiscation of the opium belonging to British merchants, will lead to very material changes in the trade, and perhaps, too, in our relations with China.

A fleet of 50 or 60 vessels, of 300 or 400 tons burden, are annually despatched to Canton from the United States, and the whole of the American trade is valued at about 10,000,000 dollars. About the same number of pounds of tea are annually imported into America. The Dutch usually send 16 or 17 vessels during the season; but many come from Batavia; and the import direct of tea from Canton into Holland, is not more than 3,000,000 lbs. a year. About 3 or 4 French ships annually have appeared of late years at Whampoa: the trade of Spain, Sweden, Denmark, and Austria, with Canton, is very small. For further and full details as to the commerce of Canton, see *Commercial Dictionary*.

The Choo-kiang opposite Canton is deep enough for vessels of 800 or 1,000 tons burden; but foreign ships only come up the river as far as Whampoa, about 15 m. below the city, loading and unloading by means of native boats. The Hong merchants are the only individuals legally recognised as traders with foreigners by the government, and no foreign ship is allowed to come up the river until a Hong merchant has become security for the payment of her import and export duties, the good behaviour of all her crew, &c., while within the limits of the empire. There were, until lately, 11 Hong merchants, who formed a joint-stock partnership to indemnify each other for losses to which they were continually subject, from bad faith on the part of those they dealt with, the turbulent behaviour of foreigners, the exactions of the mandarins, &c. There are now 12 separate firms, the coalition between them having been abolished. These merchants enjoy great consideration, and frequently accumulate large fortunes; but their situation in other respects is not very enviable; they live in a state of constant anxiety lest their securities should misconduct themselves; are the marked victims of men in power; and having once undertaken their office, are never suffered to retire. But other native traders, called *outside merchants*, are allowed to deal with foreigners; their number being unlimited, the greatest competition exists among them. It is said that they also are closely watched by the mandarins, and are sometimes squeezed out of sums of money on various pretences. The state officers of this city, receiving little or no salary from the government, but frequently purchasing their appointments, derive their profits chiefly by extortion; and Canton has the character of being not only the most licentious, but the most corruptly-governed city of the empire. We incline, however, to think that in these respects it is not so bad as is represented; and that the foreigners, from compliance of the restraints under which they are placed, exaggerate the rapacity and capriciousness of the Chinese, in order to prejudice their governments against them, and to induce them to adopt coercive measures.

Canton is peculiarly the emporium of Chinese manufactures, and the shops are crowded with articles of the neatest and most minute workmanship. The markets devoted to eatables are less attractive to European tastes; and puppies, cats, owls, horse-flesh, worms, slugs, and even snakes and other reptiles are exhibited as tempting delicacies. All are sold by weight, and a cat and a pheasant frequently fetch the same price. The arts of *puffing* are not forgotten in Canton; in the suburbs, staring labels and boards are common enough over the shop doors inviting the custom of the passengers, by means of laudatory mottoes, &c., written in English and other languages; and many of the Chinese shopkeepers have acquired sufficient English, and the free and easy style so well adapted to captivate the British seamen, and make them part with their money. The streets are generally clean, but abound with *cripples* and miserable objects, beggars, and vagabonds of all descriptions. No wheeled carriages are ever seen in them; the only vehicles used are sedan chairs slung on poles, which some of the government functionaries and

more opulent natives are privileged to use. They are not allowed to Europeans, who are also destitute of any place of public amusement, prohibited entering the walled city, and interdicted all female society.

As soon as the season for business has terminated, an edict from the emperor comes to Canton, ordering the removal of the foreign merchants to Macao, where they remain for several months. During the summer, excursions are made by both Chinese and Europeans to Fankien, a village about 2 m. higher up the river, above Canton, where there are some gardens laid out in the English style. The scenery in this direction is delightful. "Beyond the city, and when clear of the buildings, and the crowds of boats which throng the passage, the river winds about in a beautifully serpentine manner. The country opens gradually, and displays both hill and dale covered with luxuriant vegetation. On every remarkable eminence, pagodas are erected, and ghos-houses adorn the banks in every direction. In the midst of the stream, often dividing it into two or three separate channels, are romantic islands, either under the hand of the agriculturist, or covered with trees to the water's edge." (*Fankien in China*, iii. 203.) Canton, although extremely hot in summer, is much colder in winter than might be expected from its lat., and fires are often agreeable.

According to native historians, Canton was founded by one of the last sovereigns of the Chow dynasty, who reigned about 2,000 years ago. About the year 700, it became a regular mart for foreign trade, and the residence of an imperial commissioner of customs. The former city was utterly destroyed in 1650 by the Tartar dynasty now on the throne, after a siege of 11 months, during and subsequent to which, vast numbers of persons are said to have perished. (*Chinese Repository*, Cant.; *Davis*, *The Chinese*, &c.; *Hamilton's E. I. Gaz.*; *Dowling's Fankien in China*; *Official Tables*, &c.) CAPACCIO, or CAPACIO NUOVO, a town of Naples, prov. Principato Citra, cap. cant. 26 m. S.E. Salerno, and 4 m. from the sea. Pop. 2,500. It has 2 fine parish churches, and a convent. The cathedral is at Capaccio Vecchio, a small place in the vicinity, destroyed in the 13th century by the emperor Frederic II. The inhabitants having fled to S. Pietro, gave it the name of Capaccio Nuovo.

CAPE BRETON, a large and most irregularly shaped island of British America, separated from the N. extremity of Nova Scotia, of which prov. it is a part, by a narrow, navigable channel. It forms the S.E. boundary of the Gulf of St. Lawrence, and lies between 45° 27' and 47° 4' N. lat., and 59° 45' and 61° 38' W. long. Area estimated at near 4,000 sq. m. Pop. (in 1839) probably about 35,000. Militia (in 1834) 6,651. The coast is, for the most part, rocky and elevated; and it is every where indented by deep gulphs and arms of the sea, by one of which, the Bras d'Or, it is very nearly separated into two great divisions. This island sea has deep water throughout, and affords the greatest facilities to navigation. The island has many fine harbours; that of Sydney, the cap., on the E. coast, being one of the best in the prov. Louisbourg, so famous in the history of America in the reign of George II., lies on the S.E. coast of the island. It was a strongly fortified settlement established by the French in 1720, and reckoned the key of their possessions in this part of the world; but having been taken by the English in 1745, was first dismantled, and afterwards entirely abandoned.

The climate of Cape Breton is subject to considerable extremes. The mean summer heat is said to be 80° Fahr., whilst in winter 20° below zero is not a very uncommon degree of cold. The temperature, however, is subject to more variation, and is less uniformly severe than the continent in the same parallel. The frost usually sets in about Dec., and between that and the end of April, there are sometimes intervals of a week or two of mild weather. The spring is short, and vegetation very rapid: May is the sowing season, and the harvest is gathered in Aug. and Sept.; on the E. coast, the summers are usually dry; on the W. they are usually more moist.

This island terminates a low mountain range, which traverses the whole province of Nova Scotia (from S.W. to N.E.), and consists of granite, trap, and slate, in alternating strata; the slate being in narrow, and the trap in broad belts: beyond these, are granawacke, sandstone, limestone, gypsum, and several other formations, which for the most part rest on an amygdaloid base. In this more recent portion are extensive beds of coal, said to resemble that of Newcastle, and well adapted for steam, and other general purposes; it also yields an abundance of excellent gas. Cape Breton is supposed to contain a sufficiency of this, to supply the world for centuries. The mines at present in work are near Sydney: they were leased by the crown (in 1837) for 60 years to the General Mining Association, on payment of 3,000*l.* sterling a year for 20,000 chaldrons, and 2*s.* currency for every chaldron beyond that quantity; which terms embrace the other mines of the prov., wrought by the same company, who have several steam-engines, and employ

CAPE DE VERD ISLANDS.

regularly about 500 men. Since the commencement of their operations, the demand has steadily increased, and is supposed likely to proceed in an increasing ratio, from the circumstance of the only available mines of the U. States, at present, being those of Anthracite, in Pennsylvania, to which, for general purposes, the Cape Breton coal is much superior: the produce, in 1837, was 70,000 tons; above half of which went to the States, the remainder to Nova Scotia and Newfoundland: the price at Sydney was 14*s.* 6*d.* per ton, currency. These mines were first opened about 50 years since, and have continued from that period to be wrought; but, previously to 1827, on a very imperfect system, and to a very limited extent. Iron and copper have also been met with, but neither has yet been attended to. Lime (gypsum), well adapted for agricultural purposes, is abundant, and at places perfectly accessible to shipping: there are also brine springs of great strength, which it is supposed may be in time made available, by means of the refuse coal, in the manufacture of salt for the fisheries: excellent freestone for building purposes is also met with.

The vegetable products resemble those of the neighbouring continent; the woods being composed of hemlock, black and white spruces, the white and red pines, oak, beech, birch, maple, &c.: the timber trade has been gradually diminishing. The greater part of the shipments at present are from the Bras d'Or, opening from the little Bras d'Or, on the Atlantic side, the spruce firs, &c. are mostly of stunted growth, but supply fuel to the different fishing settlements: these, however, are conducted with little energy, and to a much more limited extent than the great capabilities of the stations would seem to admit of. The fish most commonly taken are cod, halibut, haddock, mackerel, shad, smelts, and alwives; sturgeon and salmon are also caught in the streams, and the lakes and ponds abound with trout and perch. The inhabitants engaged in the fisheries are chiefly French, Canadians, and Scotch, from the Western Islands. Those engaged in the timber trade and agriculture are chiefly Scotch and Irish emigrants, and a few are the descendants of U. S. loyalists. Those engaged in the coal-mines are mostly skilled labourers from Scotland. There are also about 300 Indians, for whom some tracts are reserved, on which they cultivate maize and potatoes: they are an inoffensive tribe, and support themselves chiefly by fishing, wandering along the shore in the summer, and returning to a fixed winter station. The returns relative to farming produce, cattle, &c., show the same figures for several successive years, so that probably little reliance can be placed on them. The quantity of land in cultivation, in 1831, was said to be 85,000 acres (*Bouchette*); the common kinds of grain, maize, and potatoes, are cultivated; but the island does not, at present, produce sufficient for its own consumption. The exports consist of timber to the U. Kingdom, fish to the W. Indies, and coal to the U. States, and corn. The imports consist of British manufactured goods; corn, manure, &c., from the U. States, and colonial products. Total value of the imports, in 1834, 10,801*l.*; of the exports, 22,148*l.* Between 300 and 400 vessels, varying from 20 to 200 tons, are registered in the island, and some shipbuilding is carried on, which is included in the provincial returns.

Sydney, which is the chief settlement, contains 80 or 90 houses, all with gardens attached, and regularly disposed, so that its appearance is very neat and respectable; the courts of justice for the island and the residences of the gov. officers are in this little town, which was founded in 1823: its pop. is between 500 and 600. The rest are all small fishing settlements, on different parts of the sea coast, or round the borders of the Bras d'Or. Cape Breton is a co. of the province of Nova Scotia, and returns 2 m. to the H. of Assembly in Halifax. It is comprised within the diocese of the Bp. of Nova Scotia; but the great majority of the inhab. are Catholics. Legal provision is made for the poor, and there are also other local assessments to defray the charges. The French formed the first settlement on it, in 1712; a detachment of British troops, from New England, took possession of it in 1745, and from that period it has remained under British government. (*Bouchette's Brit. Dom.*; *Lord Durham's Report*, and *Append.*; *Geog. Trans.*; *McGregor's Brit. America*, &c.) CAPE CLEAR, a bold promontory, rising 400 ft. above the level of the sea, on the S. side of Cape Ireland, near the W. extremity of St. George's Channel, and about 7 m. S.E. from Baltimore, co. Cork, Ireland. Adjoining the Cape is a lighthouse of the first class, with revolving lights, having the lantern elevated 455 ft. above the level of the sea. The lighthouse is in lat. 51° 26' 29" N., long. 9° 29' 20" W. This is the point from which ships leaving St. George's Channel for the W. usually take their departure, and those arriving prefer making it their landfall.

CAPE DE VERD ISLANDS (*Port Îles Verdes*), a group in the N. Atlantic Ocean, belonging to Portugal, between lat. 14° 20' and 17° 20' N., and long. 22° 20' and

25° 30' W., about 330 m. W. Cape de Vord, on the W. coast of Africa, which, as well as the islands, derives its name from the greenish tinge given to the adjoining sea by the abundance of sea-weed. The group consists of 10 or 12 islands, besides islets and rocks, having a united area of about 1,700 sq. m., and a pop. (1831) of 88,461, — 30,000 of whom, are said to have been swept off by a famine in 1823. (*Cowenbach*.) They are, in general, mountainous, rocky, and very ill supplied with water; are all evidently of volcanic origin; and in Fogo, the most elevated of the group, an active volcano still exists. The heat is extreme from November to July, and for the rest of the year storms and fogs are prevalent, and the climate is exceedingly unhealthy. Droughts are of frequent occurrence; and sometimes, as was the case previously to 1833, no rain falls for 3 or 4 years together. The soil, where not composed of volcanic matters, is chiefly calcareous or sandy, dry, stony, and in many parts barren. Vegetation is consequently partial; but, in various places, it is very vigorous, and rice, maize, bananas, oranges, melons, pomegranates, and other fruits, both of Europe and the tropics, grow abundantly. The first two products constitute the chief food of the inhabitants; but agriculture is neglected, and the wheat that is consumed is brought from America. This, however, is not so much a consequence of the poverty of the soil, or the indolence of the inhabitants, as of the rapacity and short-sightedness of the government which deceives the cultivators of every thing that can, under any pretext, be laid hold of. Oranges, lemons, melons, &c., come to great perfection, and the guavas, figs, sweet potatoes, and gourds, are excellent. Vines and sugar-canes are cultivated to some extent; but the making of wine is prohibited. Indigo and cotton are indigenous. One of the principal products is orchilla weed, which here attains to great perfection; it is monopolised by the government, and is supposed to yield a revenue of about 50,000*l.* a year. Some parts are well wooded, chiefly with the tamarind tree, *Adansonia*, palms, &c. Goats, asses, and poultry, are the most numerous domestic animals; monkeys, wild cats, wood pigeons, and other birds, and turtles are plentiful. There is no dangerous animal; but clouds of locusts often do much damage to the crops. Chief manufactures those of leather and salt. Notwithstanding the severe droughts, the actual produce of these islands in cotton, indigo, fruits, salt, goat-skins, and turtle-oil, might give them a considerable value under a more intelligent government. The other chief articles of export are cotton, indigo, some cattle, ox hides, cotton cloths, and rum. St. Jago, the principal island and most southerly of the group, contains the towns of Ribiera Grande, formerly the cap.; but during the dry season, the governor-general now usually resides at Port Playa, which has a good harbour, and is occasionally touched at by vessels bound for India. Fort San Juan in the island of St. Vincent, is better decidedly the best harbour in the group. Ships in it are completely sheltered from wind and sea. In St. Nicolo, the island second in importance, very good cotton stuffs, stockings, &c., are made. The pop. are a mixed race of Portuguese and negroes; but all have an exceedingly dark colour.

These islands were first discovered in modern times, in 1480, by Antonio de Noli, a Genoese navigator in the service of Prince Henry of Portugal, by which nation they were soon after taken possession of, and colonised. (*Macle Braz*, iv. 467—468; *Parey's N. Atlantic Ocean*, &c.)

CAPE HAYTIEN, a sea-port town of Hayti, originally called by the Spaniards Guarico, and afterwards by the French Cape François, or Le Cap., on the N. shore of the island, 90 m. N. Port-au-Prince, lat. 19° 40' 20" N., long. 72° 14' W. Pop. probably from 12,000 to 16,000. This town, formerly the cap. of the island, was, previously to the revolution, "remarkably beautiful, and must have been, during its glory, the best agreed-on residence in the W. Archipelago." Streets broad and squares; houses chiefly of stone, with handsome awnings, large markets, and a copious supply of water. "But now little more is to be seen than the traces of its former grandeur: even in the Place d'Armes, the handsomest square in it, some of the finest houses are unroofed, and plantain trees

are growing in the middle of the ruins. The church, which was handsome, is in ruins, as are the theatre, government house, Jesuit's college," &c. (*Mackenzie*.) It is built on the verge of a very extensive, well-watered, and fruitful plain; but being screened on the N. and W. by a mountain (Morne Cap), it is exposed to all the violence of the sun's rays, and is, in consequence, not very healthy. The harbour and road, to the E. and S. of the town, are protected on the N. by a projecting tongue of land. The entrance is rather difficult; but the anchorage is good, and the quays handsome. The defences towards the sea are respectable. The arsenal was constructed in the reign of Louis XV. Under the French, Cape Haytien was, as well as Port-au-Prince, occasionally the seat of government; and it continued to enjoy this distinction under Toussaint and Christophe. Its trade, though greatly fallen off, is still very considerable. It is principally carried on with the U. States. (*Mackenzie's Notes on Hayti*, i. 152, &c.)

CAPE HORN, a famous promontory of S. America, commonly regarded as the S. extremity of that continent. In point of fact, however, Cape Horn does not belong to the continent, but to a small island of the same name, the most S. of the Tierra del Fuego group, separated from the continent by the Straits of Magellan, or Magalhães. Cape Horn is the most S. point of the island; and is high, black, precipitous, destitute of all vegetation, and having a most desolate appearance. According to Weddell, it is in lat. 55° 59' 31" S., and long. 67° 14' W.; Malespina places it in lat. 55° 53' 30" S., and 67° 21' 15" W. The dangers attending the doubling of Cape Horn have, in consequence of the improvements in navigation, been very greatly diminished. The coast may be approached with comparatively little danger; the water being deep, and free from either rocks or shoals. Different opinions are entertained as to the proper season for passing the Cape. Captain Hall prefers the summer (that is, the winter of the N. hemisphere) on account of the greater length of the day, and the comparative fewness of icebergs and floating masses of ice, which are always dangerous. (*Hall's S. America*, ii. Append. 16.)

CAPE OF GOOD HOPE, a celebrated promontory near the S.W. extremity of the African continent, lat. 34° 23' 40" S., long. 18° 32' 25" E. It was first seen by Europeans (in modern times) in 1489, Bartholomew de Diaz, a Portuguese commander, having been its discoverer. Diaz, however, merely saw it; the violence of the winds, the shattered condition of his ships, and the turbulence of his crews, prevented him from doubling it; and these circumstances doubtless induced him to name it *Cabo Tormentoso*, or "Stormy Cape." But his sovereign, John II., of Portugal, believing it to be at or near that remote extremity of Africa which the Portuguese had been so long endeavouring to reach, designated it *Cabo di Buena Esperanza*, or "Cape of Good Hope," which is a translation. Vasco de Gama doubled it in 1497, after which it continued for more than a century and a half to be indiscriminately resorted to by European navigators. (For the rest of its history, see succeeding article.)

CAPE OF GOOD HOPE (COLONY or), an extensive colony, or rather territory, so called from the above cape, belonging to Great Britain, in S. Africa, comprising the greater portion of the extremity of that continent S. of lat. 29° 30', and between long. 17° and 27° 30' E. It has N. the country of the Boesmans (Bushman), Hotentots, &c., from which it is separated N.W. by the Koussie or Sand River, and N.E. for a considerable distance by the Nu-Gariep, afterwards called the Orange River; E. it has the country of the Kafirs or Caffres, from which it is in part separated by the Keiskanna River; and S. W. the Indian and Atlantic Oceans, on which it has a coast line of about 1,150 m., broken by numerous bays, the principal of which are St. Helena, Saldanha, and Table Bay on the W., and False Bay, St. Sebastian's, Mosel, Plettenburg, St. Francis, and Algoa Bays on the S. coast. Length of the territory, E. to W., about 550 m.; average breadth, N. to S., 240 m., giving an area of nearly 130,000 sq. m. Pop., subdivisions, &c., according to the Cape Register of 1838, are as follow:—

Provinces.	Districts.	Area in sq. m.	Whites.		Blacks.		Total.		Pop. to sq. m.	Births.	Marriages.	Deaths.	Chief Towns.

more opulent natives are privileged to use. They are not allowed to Europeans, who are also destitute of any place of public amusement, prohibited entering the walled city, and interdicted all female society.

As soon as the season for business has terminated, an edict from the emperor comes to Canton, ordering the removal of the foreign merchants to Mosco, where they remain for several months. During the summer, excursions are made by both Chinese and Europeans to Fahtsen, a village about 2 m. higher up the river, above Canton, where there are some gardens laid out in the English style. The scenery in this direction is delightful. "Beyond the city, and when clear of the buildings, and the crowds of boats which throng the passage, the river winds about in a beautifully serpentine manner. The country opens gradually, and displays both hill and dale covered with luxuriant vegetation. On every remarkable eminence, pagodas are erected, and ghos-houses adorn the banks in every direction. In the midst of the stream, often dividing it into two or three separate channels, are romantic islands, either under the hand of the agriculturist, or covered with trees to the water's edge." (*Fan-qui in China*, iii. 203.) Canton, although extremely hot in summer, is much colder in winter than might be expected from its lat. and fires are often agreeable.

According to native historians, Canton was founded by one of the last sovereigns of the Chow dynasty, who reigned about 2,600 years ago. About the year 700, it became a regular mart for foreign trade, and the residence of an imperial commissioner of customs. The former city was utterly destroyed in 1650 by the Tartar dynasty now on the throne, after a siege of 11 months, during and subsequent to which, vast numbers of persons are said to have perished. (*Chinese Repository*, Cant.; *Davis, The Chinese*, &c.; *Hamilton's E. I. Gaz.*; *Downing's Fan-qui in China*; *Official Tables*, &c.)

CAPACCIO, or CAPECCIO NUOVO, a town of Naples, prov. Principato Citra, cap. cant. 25 m. E. Salerno, and 4 m. from the sea. Pop. 2,500. It has 3 fine parish churches, and a convent. The cathedral is at Capaccio Vecchio, a small place in the vicinity, destroyed in the 13th century by the emperor Frederic II. The inhabitants having fled to S. Pietro, gave it the name of Capaccio Nuovo.

CAPE BRETON, a large and most irregularly shaped island of British America, separated from the N. extremity of Nova Scotia, of which prov. it is a part, by a narrow, navigable channel. It forms the S.E. boundary of the Gulf of St. Lawrence, and lies between 45° 37' and 47° 3' N. lat. and 60° 42' and 61° 38' W. long. Area estimated at near 4,000 sq. m. Pop. (in 1839) probably about 38,000. Militia (in 1834) 6,651. The coast is, for the most part, rocky and elevated; and it is every where indented by deep gulfs and arms of the sea, by one of which, the Bras d'Or, it is very nearly separated into two great divisions. This island sea has deep water throughout, and affords the greatest facilities to navigation. The island has many fine harbours; that of Sydney, the cap., on the E. coast, being one of the best in the prov. Louisbourg, so famous in the history of America, and the reign of George II., lies on the S.E. coast of the island. It was a strongly fortified settlement established by the French in 1720, and reckoned the key of their possessions in this part of the world; but having been taken by the English in 1745, was first dismantled, and afterwards entirely abandoned.

The climate of Cape Breton is subject to considerable extremes. The mean summer heat is said to be 80° Fahr., whilst in winter 20° below zero is not a very uncommon degree of cold. The temperature, however, is subject to more variation, and is less uniformly severe than the country in the same parallel. The frost usually sets in about Dec., and between that and the end of April, there are sometimes intervals of a week or two of mild weather. The spring is short, and vegetation very rapid: May is the sowing season, and the harvest is gathered in Aug. and Sept.: on the E. coast, the summers are usually dry; on the W. they are usually more moist.

This island terminates a low mountain range, which traverses the whole province of Nova Scotia (from S.W. to N.E.), and consists of granite, trap, and slate, in alternating strata; the slate being in narrow, and the trap in broad belts: beyond these, are granwacke, sandstone, limestone, gypsum, and several other formations, which for the most part rest on an amygdaloid base. In this more recent portion are extensive beds of coal, said to resemble that of Newcastle, and well adapted for steam, and other general purposes; it also yields an abundance of excellent gas. Cape Breton is supposed to contain a sufficiency of this, to supply the world for centuries. The mines at present in work are near Sydney; they were leased by the crown (in 1837) for 50 years to the General Mining Association, on payment of 3,000*l.* sterling a year for 30,000 chaldrons, and 2*s.* currency for every chaldron beyond that quantity; which terms embraces the other mines of the prov., wrought by the same company, who have several steam-engines, and employ

regularly about 500 men. Since the commencement of their operations, the demand has steadily increased, and is supposed likely to proceed in an increasing ratio, from the circumstance of the only available mines of the U. States, at present, being those of Anthracite, in Pennsylvania, to which, for general purposes, the Cape Breton coal is much superior: the produce, in 1837, was 70,000 tons; above half of which went to the States, the remainder to Nova Scotia and Newfoundland: the price at Sydney was 14*s.* 6*d.* per ton, currency. These mines were first opened about 50 years since, and have continued from that period to be wrought; but, previously to 1827, on a very imperfect system, and to a very limited extent. Iron and copper have also been met with, but neither has yet been attended to. Lime (gypsum), well adapted for agricultural purposes, is abundant, and at places perfectly accessible to shipping: there are also brine springs of great strength, which it is supposed may be in time made available, by means of the refuse coal, in the manufacture of salt for the fisheries: excellent freestone for building purposes is also met with.

The vegetable products resemble those of the neighbouring continent; the woods being composed of hemlock, black and white spruces, the white and red pines, oak, beech, birch, maple, &c.: the timber trade has been gradually diminishing. The greater part of the shipments of furs are from the W. basin, opening from the little Bras d'Or; on the Atlantic side, the spruce fir, &c. are mostly of stunted growth, but supply fuel to the different fishing settlements: these, however, are conducted with little energy, and to a much more limited extent than the great capabilities of the stations would seem to admit of. The fish most commonly taken are cod, halibut, haddock, mackerel, shad, smelts, and alewives; sturgeon and salmon are also caught in the streams, and these and the lakes abound with trout and perch. The inhabitants engaged in the fisheries are chiefly French Acadians, and Scotch from the Western Islands. Those engaged in the timber trade and agriculture are chiefly Scotch and Irish emigrants, and a few are the descendants of U. S. loyalists. Those engaged in the coal-mines are mostly skilled labourers from Scotland. There are also about 300 Indians, for whom some tracts are reserved, on which they cultivate maize and potatoes: they are an inoffensive tribe, and support themselves chiefly by fishing; wandering along the shore in summer, and returning to a fixed winter station. The returns relative to furs, peltries, cattle, &c., show the same figure for several successive years, so that probably little reliance can be placed on them. The quantity of land in cultivation, in 1831, was said to be 85,000 acres (*Bouchette*); the common kinds of grain, maize, and potatoes, are cultivated; but the island does not, at present, produce sufficient for its own consumption. The exports consist of timber to the U. Kingdom, fish to the W. Indies, and coals to the U. States, and corn. The imports consist of British manufactured goods; corn, meal, &c., from the U. States, and colonial products. Total value of the imports, in 1834, 10,501*l.*; of the exports, 22,182*l.* Between 300 and 400 vessels, varying from 20 to 300 tons, are registered in the island, and some shipbuilding is carried on, which is included in the provincial returns.

Sydney, which is the chief settlement, contains 80 or 90 houses, all with gardens attached, and regularly disposed, so that its appearance is very neat and respectable; the courts of justice for the island, and the residences of the gov. officers are in this little town, which was founded in 1823: its pop. is between 500 and 600. The rest are all small fishing settlements, on different parts of the sea coast, or on the borders of the Bras d'Or. Cape Breton is a co. of the province of Nova Scotia, and returns 2 m. to the H. of Assembly in Halifax. It is comprised within the diocese of the Bp. of Nova Scotia; but the great majority of the inhab. are Catholics. Legal provision is made for the poor, and there are also other local assessments to defray co. charges. The French formed the first settlement on it, in 1712; a detachment of British troops, from New England, took possession of it in 1745, and from that period it has remained under British government. (*Bouchette's Brit. Dom.*; *Lord Durham's Report*; and *Append. i. Geog. Trans.*; *M'Gregor's Brit. America*, &c.)

CAPE CLARE, a bold promontory, rising 400 ft. above the level of the sea, on the S. side of Clare Island, near the W. extremity of St. George's Channel, and about 7 m. S.E. from Baltimore, co. Cork, Ireland. Adjoining the Cape is a lighthouse of the first class, with revolving lights, having the lantern elevated 453 ft. above the level of the sea. The lighthouse is in lat. 51° 26' 29" N., long. 20° 29' 29" W. This is the point from which ships leaving St. George's Channel for the W. usually take their departure, and those arriving prefer making it their landfall.

CAPE DE VERD ISLANDS (*Porto Verde*), a group in the N. Atlantic Ocean, belonging to Portugal, between lat. 14° 20' and 17° 20' N., and long. 24° 20' and

CAPE HAYTIEN.

25° 30' W., about 320 m. W. Cape de Verd, on the W. coast of Africa, which, as well as the islands, derives its name from the greenish tinge given to the adjoining sea by the abundance of sea-weed. The group consists of 10 or 12 islands, besides islets and rocks, having a united area of about 1,700 sq. m., and a pop. (1831) of 88,460, — 30,000 of whom, are said to have been swept off by a famine in 1833. (*Comstock*.) They are, in general, mountainous, rocky, and very ill supplied with water; are all evidently of volcanic origin; and in Fogo, the most elevated of the group, an active volcano still exists. The heat is extreme from November to July, and for the rest of the year storms and fogs are prevalent, and the climate is exceedingly unhealthy. Droughts are of frequent occurrence; and sometimes, as was the case previously to 1833, no rain falls for 3 or 4 years together. The soil, where not composed of volcanic matters, is chiefly calcareous or sandy, dry, stony, and in many parts barren. Vegetation is consequently partial; but, in various places, it is very vigorous, and rice, maize, bananas, oranges, melons, pomegranates, and other fruits, both of Europe and the tropics, grow abundantly. The first two products constitute the chief food of the inhabitants; but agriculture is neglected, and the wheat that is consumed is brought from America. This, however, is not so much a consequence of the poverty of the soil, or the indolence of the inhabitants, as of the rapacity and short-sightedness of the government which deceives the cultivators of every thing that can, under any pretext, be laid hold of. Oranges, lemons, melons, &c., come to great perfection, and the guavas, figs, sweet potatoes, and gourds, are excellent. Vines and sugar-canes are cultivated to some extent; but the making of wine is prohibited. Indigo and cotton are indigenous. One of the principal products is orchilla weed, which here attains to great perfection; it is monopolised by the government, and is supposed to yield a revenue of about 50,000*l.* a year. Some parts are well wooded, chiefly with the tamarind tree, *Adansonia*, palms, &c. Goats, asses, and poultry, are the most numerous domestic animals; monkeys, wild cats, wood pigeons, and other birds, and turtles are plentiful. There is no dangerous animal; but clouds of locusts often do much damage to the crops. Chief manufactures those of leather and salt. Notwithstanding the severe droughts, the actual produce of these islands in cotton, indigo, fruit, salt, goat-skins, and turtle-oil, might give them a considerable value under a more intelligent government. The other chief articles of export are cotton, indigo, some cattle, ox hides, cotton cloths, and rum. St. Jago, the principal island and most southerly of the group, contains the towns of Ribiera Grande, formerly the cap.; but during the dry season, the governor-general now usually resides at Port Paya, which has a good harbour, and is occasionally touched at by vessels bound for India. There is a sandbar in the island of St. Vincent, it is however, decidedly the best harbour in the group. Ships in it are completely sheltered from wind and sea. In St. Nicolo, the island second in importance, very good cotton stuffs, stockings, &c., are made. The pop. are a mixed race of Portuguese and negroes; but all have an exceedingly dark colour.

These islands were first discovered in modern times, in 1460, by Antonio de Noli, a Genoese navigator in the service of Prince Henry of Portugal, by which nation they were soon after taken possession of, and colonised (*Malte Brun*, iv. 487—489; *Ferry's N. Atlantic Ocean*, &c.)

CAPE HAYTIEN, a sea-port town of Hayti, originally called by the Spaniards Guarico, and afterwards by the French Cape Francois, or Le Cap., on the N. shore of the island, 90 m. N. Port-au-Prince, lat. 19° 46' 30" N., long. 72° 14' W. Pop. probably from 12,000 to 16,000. This town, formerly the cap. of the island, was, previously to the revolution, "remarkably beautiful, and must have been, during the glory, the most splendid residence in the W. Archipelago. Streets broad and well paved; houses chiefly of stone, with handsome squares, large markets, and a copious supply of water. "But now little more is to be seen than the traces of its former grandeur: even in the Place d'Armes, the handsomest square in it, some of the finest houses are unroofed, and plantain trees

CAPE OF GOOD HOPE.

531

are growing in the middle of the ruins. The church, which was handsome, is in ruins, as are the theatre, government house, Jesuit's college," &c. (*Mackenzie*.) It is built on the verge of a very extensive, well-watered, and fruitful plain; but being screened on the N. and W. by a mountain (Morne Cap), it is exposed to all the violence of the sun's rays, and is, in consequence, not very healthy. The harbour and road, to the E. and S. of the town, are protected on the N. by a projecting tongue of land. The entrance is rather difficult; but the anchorage is good, and the quays handsome. The defences towards the sea are respectable. The arsenal was constructed in the reign of Louis XV. Under the French, Cape Haytien was, as well as Port-au-Prince, occasionally the seat of government; and it continued to enjoy this distinction under Toussaint and Christophe. Its trade, though greatly fallen off, is still very considerable. It is principally carried on with the U. States. (*Mackenzie's Notes on Hayti*, i. 152, &c.)

CAPE HORN, a famous promontory of S. America, commonly regarded as the S. extremity of that continent. In point of fact, however, Cape Horn does not belong to the continent, but to a small island of the same name, the most S. of the Tierra del Fuego group, separated from the continent by the Straits of Magellan, or Magalhães. Cape Horn is the most S. point of this island, and is high, black, precipitous, destitute of all vegetation, and having a most desolate appearance. According to Weddell, it is in lat. 55° 59' 21" S., and long. 67° 14' W.; Malespina places it in lat. 55° 58' 30" S., and 67° 21' 15" W. The dangers attending the doubling of Cape Horn have, in consequence of the improvements in navigation, been very greatly diminished. The coast may be approached with comparatively little danger; the water being deep, and free from either rocks or shoals. Different opinions are entertained as to the proper season for passing the Cape. Captain Hall prefers the summer (that is, the winter of the N. hemisphere) on account of the greater length of the day, and the comparative fewness of icebergs and floating masses of ice, which are always dangerous. (*Hall's S. America*, ii. Append. 16.)

CAPE OF GOOD HOPE, a celebrated promontory near the S.W. extremity of the African continent, lat. 34° 33' 40" S., long. 18° 32' 20" E. It was first seen by Europeans (in modern times) in 1486, Bartholomew Diaz, a Portuguese commander, having been its discoverer. Diaz, however, merely saw it: the violence of the winds, the shattered condition of his ships, and the turbulence of his crews, prevented him from doubling it; and these circumstances doubtless induced him to name it *Cabo Tormentoso*, or "Stormy Cape." But his sovereign, John II., of Portugal, believing it to be at or near that remote extremity of Africa which the Portuguese had been so long endeavouring to reach, designated it *Cabo da Buona Esperanza*, of which the name we give it is a translation. Vasco da Gama doubled it in 1487, after which it continued for more than a century and a half to be indiscriminately resorted to by European navigators. (For the rest of its history, see succeeding article.)

CAPE OF GOOD HOPE (COLONY OR), an extensive colony, or rather territory, so called from the above cape, belonging to Great Britain, in S. Africa, comprising the greater portion of the extremity of that continent S. of lat. 25° 30', and between long. 17° and 27° 30' E. It has N. the country of the Boesmans (Bushmen), Hotentots, &c., from which it is separated N.W. by the Koussie or Sand River, and N.E. for a considerable distance by the Nu-Gariep, afterwards called the Orange River; E. it has the country of the Kaffers or Caffres, from which it is in part separated by the Kelskanna River; and S. and W. the Indian and Atlantic Oceans, on which it has a coast line of about 1,150 m., broken by numerous bays, the principal of which are St. Helena, Saldanha, and Table Bay on the W., and False Bay, St. Sebastian's, Mossel, Plettenburg, St. Francis, and Algoa Bays on the S. coast. Length of the territory, E. to W., about 550 m.; average breadth, N. to S., 240 m., giving an area of nearly 130,000 sq. m. Pop., subdivisions, &c., according to the Cape Register of 1838, are as follow:—

Provinces.	Districts.	Area in sq. m.	Whites.		Blacks.		Total.		Pop. to sq. m.	Births.	Marriages.	Deaths.	Chief Towns.

Topography.—The whole country consists of three successive plateaus increasing in elevation according to their distance from the sea, and separated from each other by as many chains of mountains. The first great chain running E. and W., the Lange Kloof, or Long Pass, "encloses between it and the S. coast an irregular belt of land from 30 to 60 m. in width, indented by several bays, covered with a deep and fertile soil, intersected by numerous streamlets, well clothed with grass and small arborescent or frutescent plants, well wooded in many parts with forest trees, supplied with frequent rains, and enjoying, on account of its proximity to the sea, a more mild and equable temperature than the more remote and interior parts of the colony." (*Harroul*.) The next great chain, the Grootte Zwaarte Bergen (Great Black Mountain), is considerably more rugged and lofty than the first, reaching sometimes to 4,000 ft. in height, and consisting in many places of double and even treble ranges. The belt or terrace enclosed between it and the first chain is about the mean width of that between the first and the sea. Its surface is very varied; it is composed in some parts of barren hills, in others of naked arid plains of clay, called *karroo*, and again in others of fertile and well-watered patches of land. The temperature is here less uniform than in the grounds skirting the sea. The third great mountain chain, the Nieuwveldt Gebirge, between 320 and 330 is continuous towards the E. with the Schneeuw-bergen (Snow Mountains), the highest range in S. Africa, the loftiest summit of which is estimated at not less than 10,000 ft. in height, and is covered with snow for nearly half the year. Between this and the second chain is the *Great Karroo*, an arid desert plain nearly 300 m. in length by from 80 to 100 m. in breadth. "This is not a sandy plain, and bears no resemblance to the Sahara or Arabian deserts. It consists of a sort of table-land, or elevated basin, thinly covered with an argillaceous soil, largely impregnated with iron, upon a substratum of rock or gravel. Some large portions of it are perfectly level, but in others the surface is diversified by slaty hills, and eminences, some of which would appear considerable save for the lofty mountains which bound the Karroo on all sides except towards the E., where it extends into Camdeboo. Its medium height above the level of the sea is estimated at about 3,000 ft. It is crossed by many beds of rivers, or rather torrents, most of which run from N. to S., and find an exit for their waters to the coast through a few breaks in the S. chain of mountains. These rivers, however, are for the greater part of the year either entirely dried up or furnish only a few scanty pools barely sufficient for the wild animals, sebras, quaggas, ostriches, &c., which frequent this inhospitable region. Not unfrequently even those brackish pools and fountains also fail, as was the case at the time of our journey; and then the Karroo becomes almost impassable by man, and a large portion of it uninhabitable even by the wild beasts."

"In such a region, where rain is rare, and dew almost unknown, the vegetation must of necessity be at all times extremely scanty; and in summer, when the sun has dried the soil to the hardness of brick, it ceases almost entirely. Except along the courses of the temporary rivers, which for the most part are marked by a fringe of mimosa, not a tree nor a bush, nor a blade of grass, decks the wide expanse of the waste. Low stunted shrubs resembling heath; numerous species of fig marigolds, and ice-plants (*mesembryanthemum*), ghams-bosch (*adansia*), gorteria, asters, &c.; some sorts of prickly euphorbia, and other succulent plants; and bulbs, whose roots nature has fortified with a tenfold net of fibres under the upper rind, to protect them during the long droughts, are alone able to subsist in the arid Karroo. During the dry season even these appear to be for the most part parched into a brown stubble, thinly scattered over the indurated or slaty soil; but in the early spring, when the ground becomes moistened with the fall of rain, these plants rush into vegetation with a rapidity that looks like enchantment; and in a few days millions of flowers of the most brilliant hues enamel the earth. It is chiefly at this season, when the whole dreary waste may be said to be transformed into a vast flower-garden, that the colonists of the Schneeuw-berg, the Nieuwveldt, the Bokkeveldt, and the Roggeveldt, whose alpine farms are then chilled with keen frosts and the piercing mountain winds, descend into the Karroo

to pasture their herds and flocks on the short-lived vegetation." (*Pringle's Sketches*, p. 397.)

From the W. coast the country ascends in a similar manner towards the interior by successive plateaus, separated by mountain chains, the loftiest of which, the Roggeveldt (Rye-field) Mountains, reach to upwards of 5,000 ft. above the level of the sea, and unite about long. 21° with the Nieuwveldt chain. To the N. of all, and near the boundary line of the territory, there is a chain of mountains, the height of which is estimated at 5,000 ft. The whole tract of country to the N. is much more sandy, barren, and thinly inhabited, than that to the E., which seems to increase in beauty and fertility in proportion as it is distant from the Cape. The third great chain of mountains forms the watershed, or division between the streams which flow N. into the country of the Bojesmans, and those which have a S. or W. course through the colonial territory. On its N. side rise the Great Riet, Braak, and other affluents of the Orange River; on its S. side, the Great Doorn (Thorn), the Gamba, or great Lion, Camtoos, Sunday, Great Fish, and other rivers. The principal streams on the S. coast are the Great Berg (or Mountain) and Olifant or Elephant River; both are navigable by small craft for about 20 m. inland, but the mouth of the former is choked up with a bed of sand, and that of the latter has a reef of rocks across it. The chief of those which discharge themselves on the S. coast are the Breede or Broad River, the Gaurits, Camtoos, Sunday, and Great Fish Rivers. Nearly all of them, unfortunately, have bars or other obstructions at their mouths, rendering them in great part useless for navigation. The Broad River, however, may be navigated by small craft for about 30 m., and its mouth, which is called Port Beaufort, allows vessels of 200 tons to enter in safety. The Gauritz, formed by the union of several other streams, is in the rainy season a large and rapid river; but in the summer months has only a very weak current, while the bar at its mouth is then generally dry. The Camtoos has within its bar a wide basin deep enough to float a ship of the line, but the bar itself is formidable, and frequently dry, at oblique tides. Besides the above there are a number of smaller rivers; but, for the most part, they are either dried up during a part of the year, or run in such deep chasms as to be nearly unserviceable.

Considering the great extent of coast, good harbours are few. Saldanha Bay, 65 m. N.N.W. Cape Town, is by far the most commodious. Ships lie safely in Table Bay at Cape Town during the prevalence of the S. E. monsoons from Sept. to May; but after this, when the N. W. winds set in, they are obliged to resort to Simon's Bay, in False Bay. This harbour is protected on the W. by the peninsula of the Cape, and affords shelter all the year round; it is consequently much frequented by our ships of war, transports, and store-ships in their voyages to and from the E. Indies, and is the station of the Cape squadron. Plettenburg's Bay is open to the S.E.; but affords safe anchorage in 8 or 10 fathoms water, and desirable shelter, during strong N.E. or N.W. gales, to vessels intending to make Table Bay. Algoa Bay, the most E. but one, is exposed to the prevailing winds; but it contains good anchorage; Port Elizabeth, the principal port next to Cape Town is seated on it.

Climate.—Though in general temperate and healthy, the climate is neither steady, agreeable, nor suitable for agricultural purposes. In the S.W. districts rains, in the cold season, are profuse; but in summer they are of rare occurrence, and during the greater part of that season the ground is parched up with drought. The deficiency and irregularity of the rains are, in fact, the great disadvantages of the colony. In some of the more northerly tracts bordering on the Great Karroo there has occasionally been no rain for three years together; and even in the more favoured districts of Albany and Uitenhage, and generally throughout the greater part of the colony, the rain, when it does come, descends in torrents that swell the smallest streams to an extraordinary magnitude, and occasion great damage. Sometimes the S.E. wind is really a species of simoon, and is not only excessively hot, but is loaded with impalpable sand, which it is all but impossible to shut out; but as the breeze continues, it gradually cools, and usually, in about 24 hours, becomes supportable. The mean temp. of the year, at the cap., is about 67° Fahr., that of the coldest month being 57°, and of the hottest 79°. Cape Town is a customary place of resort for invalids from India, who certainly benefit by the change; though perhaps they have been led to visit it as much from its being within the limits of the E. I. Company's charter, which entitles servants of the Company resident there to full pay, as from its salubrity.

The beautiful white cloud frequently seen during the S.E. monsoon, resting on Table Mountain, and hence called the "Table Cloth," is occasioned by the condensation of the moisture in the air, cooled by contact with

the mountain. During the prevalence of this phenomenon, the cold air often rushes down the sides of the mountain with such impetuosity, as to be fatal to shipping in the bay. Hall-storms are occasionally very violent and destructive. Owing probably to its elevation, the cold of winter in the Great Karroo is much more severe than could have been anticipated from its latitude. (See *Cape Almanac* for 1838, &c.)

Geology, minerals, &c.—The general geological character of the Cape is that of a region of sandstone resting upon a base of granite. In proportion as the latter rock is near the surface, as occurs on and round Table Mountain, springs are abundant; but wherever the granite lies at a considerable depth, as is the case throughout a great portion of the country, the contrary obtains. The territory generally suffers from a deficiency of water. Limestone is found in the E.; clays and sand of various kinds compose most of the surface of the plains; an alluvial loam and black peat mould are very abundant in some of the lands skirting the sea. Very pure and white alum; saltpetre and salt, with which the ground in some of the N. parts of Graaf Rhenet and in the Great Karroo are impregnated, coal, iron, galena, &c., are found in the Cape. Opalium, bloodstone, &c., are amongst the chief mineral products. Sulphurous, nitrous, and other mineral springs, are not rare, and several natural salt-pans exist at a considerable distance from the coast. In Beaufort district fossil remains of the mammoth have been met with. (*Mod. Trav. &c.*)

Vegetable Products.—The *Flora* of the Cape is very remarkable; its species are extremely numerous, varied, and elegant; but they want the aroma, whose sweetness fills the flower-gardens of Europe. Bulbous plants are particularly plentiful; and the tribes of *iris*, *triat*, *antholiza*, *gladiolus*, *amaryllis*, and *geranium*, are both abundant and beautiful; and some of the most magnificent plants that adorn our gardens and greenhouses are brought from this part of the world. Still, however, as Malte-Brun has judiciously remarked, "the vegetation of the Cape Colony does not satisfy either the eye or the ideas of a European. Rocks and sands every where prevail. The fields are separated by deserts; the green turf, scattered as rhin, nor where presents a close sward. The forest is filled with pointed trees, have neither a delicious coolness nor a solemn darkness." (Book 70.) The Cape olive tree, and the *sophora* (a tree like the ash), furnish some wood for joinery; but, except on the E. frontier, in the distr. of George, and in some spots near False Bay, there is generally a great deficiency of timber and fire-wood. The only spontaneous vegetable product that is turned to much account, is the aloë, which grows over a large surface in the distr. of Zwellendam, and for which the farmers sometimes get as much as 20s. a load at Cape Town.

Animals.—The elephant, rhinoceros, hippopotamus, lion, leopard, hyena, jackall, xelra, quagga, masked bear, antelopes of various kinds, monkeys, racoons, squirrels, &c., are natives of the Cape; but many of these have now become comparatively rare, at least within the old limits and accessible districts of the colony. The rhinoceros is nearly extirpated; the hippopotamus is found only in the Great Fish and Kei rivers; and the elephant and lion have retired from all the old settled districts. Leopards and hyenas are still, however, by no means uncommon, particularly in the eastern districts, and are exceedingly voracious and destructive. The Cape buffalo (*Bos Caffr*) is a powerful and a formidable animal, which has not hitherto been tamed, and is probably untameable. Antelopes of all kinds are exceedingly numerous; and it is said that as many as 5,000, 10,000, and even 40,000 springboks have sometimes been seen bounding along in a single herd! Eagles, vultures, and other large birds are met with. In the Great Karroo, and along the skirts of the N. deserts, the ostrich is abundant: it is occasionally seen in large flocks, and is eagerly hunted for the sake of its plumage, which meets with a ready and advantageous sale. It is very wary and difficult to come near: small birds are numerous and beautiful, but deficient in song. Lizards and other species of amphibia are met with; and the serpent tribe is both numerous and dangerous. Some rivers are well stocked with fish; but in general this is not the case, a consequence probably of the greater number of the rivers being nearly dried up in the hot season. A particular variety of locust (*Gryllus devastator*, Lich.) occasionally commits dreadful ravages. They always come from the N., and are no doubt bred in the interminable deserts of the interior. Their inroads appear to be periodical. They are devoured by the Bushmen and Hottentots.

People.—The European inhabitants consist in part of the English authorities and English settlers; but the majority are of Dutch, German, or French origin, being the descendants of the original settlers. The blacks are Hottentots and Kaffers; the remaining portion of

the pop. consists of Malays and Afrianders (the offspring of a black woman and a Dutch father). The Dutch, in the more civilised districts, are distinguished for sobriety, prudence, and economy, and by their hospitality and benevolence towards whites; but various travellers, and Mr. Barrow in particular, have given a very unfavourable picture of the boors, or farmers of the interior, describing them as indolent, rude, and brutal in their manners, and cruel and unfeeling towards their slaves and the native inhabitants. But whatever of truth may be in these statements is accounted for by the circumstances under which the boors are placed, at a great distance from each other, and leading in general a pastoral semi-barbarous life. We believe that there is really no ground whatever for accusing the Dutch of unusual barbarity in their intercourse with the natives. In this respect they are unfortunately quite on a level with other European nations. And these who read the works of Dr. Philip and Mr. Pringle, and the official papers with regard to the late Kaffer war, will most probably be of opinion that we, at all events, have no very peculiar right to censure them. We have elsewhere given pretty full accounts of the Hottentots and Kaffers. Like their savage and uncivilised tribes, the latter, both, but especially the Hottentots, suffered severely from the settlement of whites among them, by whom they have been despoiled of their lands; and those that were not exterminated or driven into the desert, were reduced to a state of substantial slavery. At length, however, the British government interposed in favour of the natives; and by an order in council dated the 15th of Jan. 1829, placed them on the same footing, in respect of civil rights, as the other free subjects of the colony. This wise and liberal measure made less immediate change than was anticipated in the condition of the natives. They can no longer, indeed, be flogged at the pleasure of their masters, nor their children forcibly taken from them, nor be sold along with the estates on which they lived; but in other respects their condition is nearly the same. They continue to be without consideration in society, and are now, as formerly, the servants of the colonists; who employ them, partly as cultivators, but mostly as shepherds and herdsmen, occupations for which they are extremely well fitted.

The Kaffers on the E. border are both physically and mentally a superior people to the Hottentots, and less easily subdued. The E. part of the British territory has been at different times much harassed by them, and in 1835 it suffered very severely from one of their invasions, provoked, as has been alleged, by the encroachments of the colonists. It is, we are afraid, in vain to expect that the conflicting interests of the colonists and the aborigines should ever be reconciled, or that European civilisation should ever take any firm root amongst the latter. Very little communication takes place between the negroes, Afrianders, and Malays, each race holding the others in contempt. (*Pringle's Sketches*; *Thompson's Trav. II.*; *Quarterly Review*; *Cape in 1822*; *Ritter, &c.*)

Agriculture.—According to the official returns for 1833, the land in cultivation in the colony is estimated at about 224,000 acres, of which 124,494 were in wheat, 46,626 in barley, 12,339 in rye, 49,645 in oats, 20,554 in vineyards and gardens, &c. The pasture land was, at the same time, estimated at 17,510,000 acres, and the waste land at 9,767,000 acres. (*Colonial Returns* for 1833; *Board of Trade Papers*.) The crop lands are principally situated in the districts of Worcester, Stellenbosch, and the Cape in the W. and in Albany in the E. Agriculture is in a backward state, though, perhaps, not so much so as is usually stated. The boors are industrious, sober, and parsimonious; but they are, at the same time, strongly attached to ancient habits and routine practices. Better implements have, however, been introduced, and various improvements effected of late years. Agriculture is injured by the Dutch law of succession, which, by dividing a man's property equally among his children, hinders the accumulation of capital in masses, and the formation of proper farming establishments. (*Thompson's Travels*, p. 324. 4to. ed.) In some limited districts the soil is very fertile, and the crops and quality of the grain excellent; but the greater part of the arable land is but of indifferent quality, and the crops are very liable to be injured by droughts, hail-storms, rust, &c. It would appear, from the official returns already referred to, that 124,500 acres in wheat, in 1833, produced only 524,147 bushels! But this must evidently be an error, as a return of less than 5 bushels an acre would not defray the expense of cultivation. Probably *muids* (a *muid* is equal to about 3 bushels) are meant; and even on this hypothesis, the return would be very indifferent.

The farms occupied by graziers are often of very great extent, comprising from 3,000 to 10,000 acres and upwards; those in tillage are comparatively small. The boors are, for the most part, proprietors of the farms which they occupy, paying a quit rent to government as

CAPE OF GOOD HOPE (COLONY OF).

the original owner of the soil. Such a thing as land on rent, from the owner to another, is almost unknown. The transfer of land from one individual to another is effected with the utmost facility, and "without the possibility of fraud." Property seldom remains long in one family. Owing to the law of equal succession, farms are frequently sold on the death of the owner; sometimes the whole is purchased by one son, but it is frequently split into parts. Hence there is here, as Mr. Colebrooke says, no attachment to or preference of one's native place; so much land of such a quality, or worth so much, no matter where, is the only thing a Cape Dutchman cares for! (*Cape in 1823*, p. 104.)

The vineyards are mostly in the vicinity of the Cape, where the vine-growers occupy freehold farms of about 120 acres each. The vine (*Vitis vinifera*) has been long introduced to the Cape, and has for a lengthened period been cultivated with more or less attention. The culture, however, made no great progress till 1813, when the duty on Cape wines imported into this country was reduced to a third part of the duty levied on the wines of Portugal and Spain. But, excepting Constantia, Cape wine, whether from the vines being planted in an unsuitable soil, or from a want of care in the preparation of the wine, or both, has an earthy taste, and is generally very inferior; and the consequence of this reduction of the duty has merely been to increase the quantity grown and imported, without in any degree improving its quality, and to make it be employed as a cheap and convenient menstruum for adulterating more expensive wines. It were well, therefore, were this fictitious encouragement withdrawn, and Cape wine charged with the same duty as other wine. At present the average

consumption amounts to about 520,000 gallons a year; of which we believe two thirds or more is employed to adulterate sherry and Madeira.

Constantia is produced on a farm of that name at the E. base of Table Mountain, 8 or 9 m. from Cape Town. Its soil consists of decomposed sandstone, and is consequently more analogous to the soils which produce fine wine in Europe than the richer clayey soils where the ordinary vineyards are planted. Greater care is also taken in the production of the wine, and in consequence of these, and probably other causes, it is very superior. It is luscious, sweet, has a strong flavour, and being produced in limited quantities only, fetches a pretty high price. It is probable, however, that Constantia, or a wine closely approaching to it, might be produced in other parts of the colony, were sufficient pains taken. (*Henderson on Wines*, p. 256., &c.)

In 1833, 1,294 acres were under potatoes, which yield two crops a year. The fruits of N. Europe, as cherries and apples, have somewhat degenerated, but figs, apricots, almonds, and oranges are as good as in France. Grapes are particularly good on the W. coast. Tobacco succeeds well except in clayey soils, or in situations exposed to the S. E. winds; but its culture is, notwithstanding, confined within very narrow limits. Tea was introduced by the Dutch, and some was raised of a tolerably good quality; but, how favourable soever in other respects, labour is too dear in the Cape colony to allow of tea being made a profitable article of culture. Dried fruit and aloes are important articles of export.

A return of agricultural produce for some of the districts is given in the *Cape Ann. Register*, for 1838. We regret that, in many respects, it is so incomplete.

Districts.	Wheat.	Barley.	Oats.	Other grain and legumes.	Potatoes.	Wine.	Brandy.	Hay.
Cape district	30,950 muids	6,900 m.	15,075 m.	2,005 m.	1,850 m.	1,770 leag.	80 leag.	2,620,000 lbs.
Stellenbosch	22,611	7,130	15,393	2,365	1,000	13,020	620	
Worcester	13,303	7,434	1,943	1,943	—	546 galls.	80 galls.	
Swellendam	25,668	18,299	12,099	3,400	885	510 leag.	184 leag.	
George	24,735	13,713	1,824	2,409	150	218	230	
Beaufort	907	529	—	—	—	61	62	
Albany	30,000	2,500	6,000	6,950	8000 lbs.	—	—	300,000 —
Graaf Reinet	4,980	1,594	95	—	—	152	62	

The remainder of the productive surface is, as has been said, chiefly pasture land, and the *Cape Register* gives the following as the numbers of live stock belonging to some of the chief grazing districts.

Districts.	Horses.	Horned Cattle.	Sheep.	Goats.	Pigs.
Stellenbosch	6,253	14,539	7,911	8,020	
Worcester	6,450	14,629	11,577	11,460	
Swellendam	26,249	31,574	50,383	85,468	1,174
George	5,674	19,751	26,266	16,884	265
Beaufort	1,451	7,398	sheep & goats	224,700	
Albany	2,755	38,945	104,000	21,000	
Graaf Reinet	8,191	44,755	sheep & goats	701,399	

The climate is not unsuitable for sheep, and great endeavours are making to improve the breed by the introduction of merinos from England and Australia. The native breed of sheep is very inferior; it is remarkable only for the size of the tail, which sometimes weighs 30 lbs.: its wool is good for nothing. But the wool of the Cape merinos fetches a high price. Goats, which are very numerous, serve for the food of the Hottentot farm-servants; oxen are used for draught in large teams. Herds of all these animals wander during the day over large grazing farms of from 3,000 to 6,000 acres, and at night are shut up in *kraals*, or inclosures. Hogs attract only a small share of attention, but turkeys, geese, ducks, and other poultry are reared in great numbers. (*Barrow*, ii. 1. *Ritter, Geogr. Generale*, p. 161, 162.; *The Cape in 1823*; *Mod. Trav.*, &c.)

Fisheries, Mines, Manufactures, &c.—The fisheries are somewhat important. In 1836, 47 boats were employed in the whale, seal, &c. fisheries, and during that year, 18 whales, 88 seals, and other fish were taken, their total value amounting to 3,349*l*. Mining industry has made little progress; but slate, lime, and building stone are quarried. Almost every farmer in the interior makes his own candles and soap, the alkali necessary for the latter being furnished by the consumption of a kind of *salsola*, which grows plentifully on such parts of the waste tracts as are at all watered. The other manufactures are mostly confined to those of leather, hats, snuff, saddles, ties, rope, and a few other articles of a necessary kind; a few wind, water, and saw-mills now exist in most of the districts, and in Cape Town there is a steam

flour-mill. There are several breweries and spirit distilleries, which, as well as other manufacturing establishments, are most numerous in the W. part of the territory.

Commerce.—The cultivators of the interior send their surplus agricultural produce, wool, butter, soap, candles, ostrich feathers, skins, &c., to the principal towns at stated intervals, and take back in return European manufactures, tobacco, brandy, coffee, &c. The chief foreign imports of the colony consist of woollens, cottons, hardware, earthenware, fire-arms, furniture, paper, books, haberdashery, soap, and portions of most other articles in use in the U. Kingdom, piece goods; sugar and teak timber from India; tea from China; sugar from the Mauritius, &c. The principal articles of export are—wines, corn to the Mauritius and Rio Janeiro, hides, skins, horns, salted provisions, horses, wool, butter, ivory, whale oil, aloes, argol, &c. The hides, skins, and horns come chiefly from the E. province. The salt beef and other cured meats are very good, and are largely exported to the Mauritius. The export of wool has, for some years past, been greatly on the increase, and it is probable that it will in time become one of the greatest and most profitable staples. We subjoin an account of the quantity and value of the principal articles of colonial produce exported from the Cape colony in 1836.

Description and Quantity of Articles.	Value.	L.	s.	d.
Alcay	220,287 lbs.	2,135	5	0
Argol	21,748	1,758	17	0

Wool	373,203 lbs.	86,169	0 0
Other articles		9,361	15 0
Total value		273,985	4 0

The gross amount of the trade in 1836 was as follows:

Ports.	Imports.	Exports.
	L.	£.
Cape Town	780,673	336,199
Port Elizabeth	87,946	47,307
Simon's Town	25,243	677
Total	891,162	384,383

Exclusive of supplies to H. M.'s navy, &c., which amounted to 3,082.

During the same year, 486 ships entered the different ports of the colony, having a united tonnage of 134,875 tons; outward bound ships 479, tonnage 130,512 tons.

Weights, Measures, &c.—The weights generally in use are those which were introduced by the Dutch. Some of these are as follows:—

Pound { 16 ounces }	=	8½ lb. avoird.
Muid (4 scheepels)	=	3 imp. bushels nearly
Leaguer	=	120-6 imp. gallons
Type	=	91-6 —
Aum	=	3½ —
Anker	=	7-9 —
Flask	=	0-4946 —
12½ els	=	100 English yards
47½ morgen	=	100 English acres.

The coin in circulation is exclusively British. There was estimated in 1838, to be 530,000. gold and silver circulating medium: the amount of paper currency in the same year was set down at 198,740*l.* (*Cape Register*, 1838.) The paper six-dollar is worth 1*s.* 6*d.*

Public Revenue is derived from custom duties of 3 per cent. on British goods arriving in British bottoms, and 10 per cent. on all others, various licenses, auction and transfer duties, port dues, land store and rents, postage, assessed taxes, tithes, and duties on stock and produce, interest of money in the government banks, discounts, &c., tolls and ferries, fines, &c. It amounted, in 1836, to 158,697*l.*; the public expenditure for the same year was 147,579*l.*, exclusive of that incurred in England on account of the colony.

The Government is vested in a governor, with a salary of 6,000*l.* per ann., nominated by the crown, and assisted by an executive council composed of the commander of the forces, the chief justice, auditor-general, treasurer, and accountant-general. A legislative council, composed of five official and an unlimited number of unofficial members, has been established by the government in England, the debates of which are carried on with open doors. Each prov. is administered by a lieutenant-governor, and each district by a civil commissioner, subordinate to whom are the field cornets, magistrates superintending tracts of country 15 or 20 m. in circuit each, with jurisdiction in trifling disputes, and power to call out the burghers of their field-cornetcy armed. These magistrates, unless on the Kaffer frontier, receive no salary, but are exempted from all direct taxes.

Justice is administered by a supreme court of judicature, presided over by a chief justice, with a salary of 2,500*l.*, and three puisne judges, whose salaries are 1,500*l.* a year, a high sheriff, and deputy sheriffs for each district, a court of vice-admiralty, police and matrimonial courts, &c. Civil and criminal circuit courts are held. The laws in operation are a modification of the Dutch civil and criminal code, and "Statutes of India," established before our taking possession of the colony, and supplied, when found deficient, by the *Corpus Juris Civilis*. Trial by jury in criminal cases has been established. The Dutch language, formerly used in courts of law, has been superseded by the English.

CAPE TOWN.

535

Religion, Education, &c.—The Dutch and English Reformed Lutheran, Roman Cath., and Presbyterian churches in the Cape are all entirely or in part supported by the government. There are numerous missionary schools; and Bell's, Lancasterian, and other free schools in each district, which, in 1836, were attended by 1,869 pupils, and received the support of the government to the amount of 1,465*l.* A joint stock institution, entitled the "South African College," with five professors, was established at Cape Town in 1829.

The Military Force consists of three regts. of infantry, the head-quarters of two being at Cape Town, and of the other at Graham's Town; a detachment of royal artillery, a party of the royal engineers, and a regiment of mounted riflemen, termed the Cape cavalry, the privates and non-commissioned officers of which are principally Hottentots.

The naval force is under the command of a rear-admiral, with authority along the E. and W. coasts of Africa, and the Mauritius and St. Helena.

The possession of this colony is important from its being, as it were, the key of the Indian Ocean, and forming a depot whence ships and troops may be despatched with facility and expedition to most parts in S. India, the E. Archipelago, and Australia. It is probable, too, that in time it may become, intrinsically, a valuable colony; though, from the limited extent of its fertile land, and the other disadvantages attending it, a rapid progress need not be looked for. The average number of emigrants leaving the U. Kingdom for the Cape of Good Hope, during the six years ending with 1837, has been 325 a year.

History.—In 1620, two English E. India commanders, by a proclamation dated from Saldanha Bay, took possession of the Cape in the name of Great Britain; but no settlement was subsequently established by the English, and in 1650, the Cape promontory was colonized by the Dutch, who afterwards made settlements in Saldanha Bay and elsewhere; and disregarding, like other colonising adventurers, the rights of the original inhabitants, gradually extended their encroachments, till their territory reached nearly to the boundaries of that of the British territory at present. In 1795, the English took possession of the Cape; but at the peace of Amiens, in 1800, restored it to its former masters. In 1806, it was again taken by the English, to whom it was finally ceded in 1815.

CAPE TOWN, a sea-port town of S. Africa, the cap. of a small distr. and of the above described British territory, on its S. W. coast, S. shore of Table Bay, at the foot of Table Mountain, about 22 m. N. from the Cape of Good Hope; lat. 33° 55' 56" S., long. 18° 21' E. Pop. (1838, including its distr.) 19,743, of whom 14,041 were whites, and 5,702 negro apprentices. It is regularly laid out, and contains several good squares; its streets, which are straight and wide, cross each other at right angles, many of them being watered by canals, and planted on either side with trees, in the Dutch fashion. Houses, mostly of brick or red granite, are "flat roofed, and chiefly white, with green windows; they are spacious and convenient, having an elevated terrace, here called a stock, in front, and small gardens behind, usually with a trellage clothed with vines." (*Colebrooke*.) Upon the shore, at the E. extremity of the town, is the castle, a pentagonal fortress of considerable strength, containing some public offices, barracks, &c., and having outworks which command both the bay and the roads to the country. On the W. side of the town, Table Bay is defended by four batteries, placed round and on the hill called the Lion's Rump; on its E. side, the town is protected by fortified lines of defence.

The principal public buildings are the government house, with extensive gardens, the burgher senate house, barracks, commercial exchange, custom house, town and distr. gaol, military depot, tax office, English, Dutch, Lutheran, and Presbyterian churches, R. Cath., Independent Wesleyan, and missionary chapels, Somerset Hospital, and two others, the theatre, Freemasons' Lodge, South African College, police office, &c. Cape Town is the seat of the supreme court of justice for the colony, the Vice-Admiralty Court, a court for the recovery of small debts, a government bank, called the Lombard Discount Bank, and contains a savings' bank, a public library, four public free schools, and many literary, scientific, religious, and benevolent associations. The town and distr. contain several water-mills, tanneries, hat, candle, snuff and soap factories, an iron foundry, breweries, distilleries, sawing and steam-mills, &c. It is plentifully supplied with good water.

Table Bay is capable of containing any number of ships, and forms a safe and, on the whole, good harbour, except during the months of June, July, and August, when it is exposed to a heavy swell from the W. A wooden jetty projects for half a furlong into the bay from the E. end of the town, near the castle, alongside of which ships discharge or take in cargoes. Ships that only take in water or refreshments lie in the outer anchorage. A lighthouse, furnished with double lights, stands on the

shore, near the W. extremity of the bay, about 2 m. N.W. the town. In the year ending Jan. 5. 1837, 521 British ships, of the burden of 53,258 tons, and 57 foreign ships, burdened 30,694 tons, entered; and 230 British, and 66 foreign ships cleared from the port. The value of the imports in the same year from Great Britain and her colonies amounted to 755,525*l.*, and those from foreign countries, chiefly from the port of Boston (U. S.) and France, to 24,147*l.* The amount of the exports to various countries of colonial and non-colonial goods, in British bottoms, in the same year, was as follows: Great Britain, 215,477*l.*; Madras and Calcutta, 9,884*l.*; New South Wales, 24,004*l.*; St. Helena, 17,081*l.*; Mauritius, 44,150*l.*; other countries, 7,808*l.*; total, 318,414*l.* And in foreign bottoms: to Boston (U. S.), 16,115*l.*; other ports and countries, 1,670*l.* Making the total exports, 286,194*l.*

British residents in India frequently resort to the Cape for their health; and the town has generally the appearance of bustle and gaiety; balls and the theatre are the favourite amusements; but "music is here a passion with the negro only." The environs of the Cape are very picturesque, and between it and the mountains which surround it, many handsome private gardens have been laid out.

Cape Town was founded by the Dutch in 1650, and remained subject to them until taken by the British in 1795. It was restored by the treaty of Amiens, but being again captured by the British in 1806, was finally ceded to us with the rest of the colony in 1815. (*Cape Almanac and Register*; *Cape in 1822*, &c.)

CAPITANATA, a prov. of Naples, which see.

CAPO D'ISTRIA (an. *Ægidia*), a sea-port town of Illyria, gov. Trieste, circ. Istria, on a small island in the Gulph of Trieste, connected with the main land by a causeway 4 m. in length, 8 m. S. Trieste. Pop. 5,000. It is fortified and defended by a citadel, and contains a cathedral, with about 30 other churches, and several handsome buildings; but the streets are narrow, and have a gloomy appearance. It is the seat of a bishopric, and has some superior schools, and a prison. Its inhab. manufacture salt, leather, and soap, and trade besides in wine, oil, and fish. The town is ill supplied with water, and not remarkably healthy. Its harbour is large, but little frequented except by fishing boats. Capo d'Istria belonged, in the middle ages, alternately to the Venetians and the Genoese. (*Oesterr. Nat. Encyc.*; *Dict. Géographique*, &c.)

CAPPOQUINN, an isl. town of Ireland, co. Waterford, prov. Munster, on the Blackwater, 106 m. S.W. by S. Dublin. Pop. in 1821, 1,326; in 1831, 2,389. Pop. of the parish of Lismore, in which it is situated, in 1834, 15,838, of whom 494 were of the established church, 45 Protestant dissenters, and 15,299 R. Catholics. The town, which was a place of some celebrity in the wars of 1641, is finely situated on the N. bank of the river, over which it has a wooden bridge. The public buildings are, a church, a Roman Catholic chapel, and a school-house. Petty assizes are held every alternate week, and a party of the constabulary is stationed here. At Mount Mellary, near the town, is an abbey of Trappists, who lately removed thither from France. Fairs are held on 17th March, 31st May, 6th July, 20th September, and 29th October. Post-office revenue in 1830, 249*l.*; in 1836, 282*l.* The mail-coach from Waterford to Cork passes through the town, and a car, carrying an average of three passengers each trip, plies between it and Lismore. The tide flows up the Blackwater to this place, but the navigation to Lismore is chiefly by a canal, four miles long. (*Smith's Waterford*; *Railway Rep.*)

CAPRI (an. *Capreae*), a small island belonging to Naples, on the S. side of the entrance to the Gulph of Naples, about 4 m. W. Cape Campanella (an. *Promontorium Minerve*). Pop. about 3,000. It is about 10 m. in circ., and is mostly surrounded by lofty perpendicular cliffs. It principally consists of two great masses of rugged calcareous rocks; but though the largest portion of its surface be wild and impracticable, it is in parts very fertile; and these being cultivated with great assiduity yield the finest crops, with the choicest grapes, olives, and other fruits. But the most valuable product of Capri is its stock doves and quails, particularly the latter, which at certain seasons of the year are caught in vast numbers. Swinburne says that rows of nets are placed across every break in the woods, or chasm in the rocks, to intercept these birds in their annual flights; and that the quantity taken is almost incredible.

Capri is famous, or rather, perhaps, infamous in history, from having been for about 16 years the retreat of Tiberius, who is reported to have here abandoned himself to the most detestable debaucheries, while his proscriptions filled Rome with blood. The crafty tyrant was most probably led to select this spot for his favoured residence, as well from the difficulty of its access, as from the mildness and salubrity of the climate, and the unrivalled magnificence of the prospects which it affords. The island is said to have built no fewer than 12 villas in different parts of the island, some close by the sea, and

others in more elevated situations. (*Tacit.*, *Annal.* iv. § 67.) After his death, these were destroyed by order of the senate; but the ruins of some of them still remain; and the sculptures found in these, and the medals that have been dug up, go far to establish the accuracy of what would otherwise appear to be the singularly exaggerated statements of Tacitus and Suetonius, as to the private life of the emperor.

There are two towns on the island, Anacapri, near its W. (*see* ANACAPRI), and Capri, the cap., on its S.E. shore. The latter, situated on the acclivity of a ridge, has about 1,300 inhab., and a cathedral and some other churches. (*Swinburne's Two Sicilies*, li. 1-9, 4to ed.; *Cramer's Ancient Italy*, li. 182, &c.)

CAPUA (an. *Capua* or *Capuvæ*), a city of Naples, prov. Terra di Lavoro, cap. cant., on the left bank of the Volturno, in a fine plain, 18 m. N. Naples; lat 41° 7' N., long 13° 56' 30" E. Pop. 15,000, ex. gar. It was fortified Vauban; has a strong citadel, and is reckoned one of the keys of the kingdom; for though far removed from the frontier, it is the only fortress that really covers the approach to Naples. Swinburne calls it a "neat little city," but it is said by Simond to be "an ugly, dirty place, and noisy beyond all bearing," and was supposed that the latter statement is nearer the mark than the former. It has 3 principal streets, 2 magnificent gates, 2 fine squares, and 3 public fountains. The principal public buildings are the cathedral, the cupola of which is supported by 18 antique columns, the Church of the Annunciation, the palace of the governor, the Hôtel de Ville, the barracks, and the theatre. It is the seat of an archbishopric; has no fewer than 18 parish churches, several convents for both sexes, a royal college, a seminary, a military school, and 4 hospitals. A great fair is annually held on the 23rd November.

The ancient Capua was situated about 2½ m. from the modern city, which has nothing in common with the former, except that it was partly built out of its ruins. The remains of its amphitheatre, said to have been capable of containing 100,000 spectators, and of some of its tombs, &c., attest its ancient splendour and magnificence. The considerable town of Santa Maria di Capua occupies part of the spacious enclosure of the old city. The amazing fertility of its territory, and the commercial spirit of its inhab., rendered Capua one of the largest and richest cities of ancient Italy. Its citizens warmly espoused the side of Hannibal, and that great general took up his winter quarters here after the campaign of Cannæ. It has been said that this was a false step; that he ought to have marched direct from Cannæ to Rome; and that his soldiers, enfeebled by their residence in this luxurious city, henceforth lost their former superiority. But there seems to be little or no foundation for these statements. Hannibal, though victorious at Cannæ, was so far from being able to attack Rome, that he was repulsed in an attempt upon Naples; and the fact that he maintained himself without assistance from home, for a dozen years in Italy after he had wintered in Capua, and defeated, during that period, several Roman armies, completely negatives the idea of his troops having been enervated. It was hardly, perhaps, necessary to say so much on such a point; the authority of Hannibal being of incomparably greater weight than that of those who have presumed to find fault with his proceedings. The old city was destroyed by the barbarians. (*Swinburne's Two Sicilies*, li. 490, 4to. ed.; *Simond*, p. 333; *Cramer's Ancient Italy*, li. 208; *Montesquieu's Grandeur et Décadence des Romains*, cap. 4.; *Ferguson's Roman Republic*, cap. 5.)

CARACAS, an inland city of Colombia, cap. of the repub. of Venezuela, prov. Caracas, in a mountain valley nearly 2,900 ft. above the level of the sea, 12 m. S.S.E. La Guayra; lat. 10° 30' N., long. 66° 56' W. Pop.; previously to 1812, 40,000; in 1834 only 22,000. This city is finely situated, and in the enjoyment of a temperate and healthy though variable climate; but it is exposed to the attacks of earthquakes: it has the advantage of being nearly surrounded by the Guayra and several other rivulets, which supply many public and private fountains, and wash the streets. It is well and regularly built; the streets are sufficiently wide, paved, and cross each other at right angles; there are several squares, the principal of which, the Plaza Mayor, has the cathedral on the E., the university on the S., and the prison on the W. side; but is disfigured by ranges of low shops collected in its centre, where the fruit, vegetable, and fish markets are held. Most of the public buildings are of a religious character; the cathedral is spacious, but heavily built, and it is probably to this circumstance that its preservation was owing during the great earthquake of 1812. Previously to that year there were 8 other churches, the handsomest of which, Alta Gracia, was built by people of colour; but this and the other churches, 9-10ths of the houses in the city, and between 9,000 and 10,000 inhab., were totally destroyed by the terrible catastrophe that then happened. There are 3 convents, 2 nunneries, and 3 hospitals; besides a theatre capable of holding

perhaps 1,800 persons, the pit of which is not roofed. The houses in Caracas are at present inferior to what they were before the earthquake of 1812, at which period those of the upper class were also very well furnished; they are now chiefly of sun-dried clay or mud, the roofs tiled, and the walls whitewashed. La Guayra, which is the port of Caracas, is the chief trading town in Colombia; but its merchants are for the most part the agents of others in Caracas, and all negotiations are conducted in the capital. This city was founded by Diego Loesda in 1567, and under the Spanish government was the seat of the captain-general of Venezuela.

CARAVACA, a town of Spain, prov. Murcia, 42 m. W.N.W. Murcia, on a river, and at the foot of a mtn. ridge, both of the same name; lat. 31° 0' N., long. 1° 56' W. Pop. 12,458. It has 4 convents, 3 hospitals, a Jesuits' college, &c. The remains of the ancient castle of Santa Cruz are on a height commanding the town. In a mountain on the W. is the cavern of Barquilla and its beautiful stalactites. The vicinity contains marbles of various colours, and produces grain, pulse, wine, oil, hemp, flax, *esparto* or Spanish rush, and pasture for sheep and goats.

CARCAJENTE, a town of Spain, prov. Valencia, 7 m. N.E. N. Sagunto. Pop. 8,300. It is in the centre of a large plain, planted with white mulberry trees, and intersected by canals. Its streets are spacious, and the comfortable appearance of the houses announces the prosperity of the place. Many Roman remains are found here. Its vicinity produces silk, wheat, maize, pulse, rice, abundance of oranges, pomegranates, and garden stuffs. (*Mitane*.)

CARCASSONNE, a city of France, dép. Aude, of which it is the cap., on the Aude, by which it is intersected, 7 m. W. Narbonne; lat. 42° 12' 54" N., long. 2° 21' E. Pop. (ex cent.) 14,331. It consists of two parts—the city, situated on a hill on the right bank of the river, and the new town, on a plain on its left bank, the communication between them being maintained by a bridge of 10 arches. The city, which is very ancient, is surrounded by double walls, and has an old castle; it is ill built and filthy, and is said to be at once *un cloaque et un labyrinthe*! The new town is well built; has broad streets intersecting each other at right angles, a square shaded by magnificent plane trees, and a monumental college. There is a fine promenade along the canal. The fortifications by which the new town was formerly surrounded have been demolished to make room for gardens and boulevards. Principal public buildings—cathedral, with a fine spire, the church of St. Lazarus in the city, formerly the cathedral, the episcopal palace, the hotel of the prefecture, the Hôtel de Ville, the barracks, the theatre, &c. The halls or covered markets are worth notice. It is the seat of a bishopric; has tribunals of primary jurisdiction and commerce, a departmental college, a primary normal school, a diocesan seminary with 116 pupils, a secondary ecclesiastical school, a royal society of agriculture, a public library with 6,000 vols., &c.; it has also an hospital and a workhouse. Carcassonne has long been famous for its manufacture of fine woollen cloth, patronised by Colbert; this, however, has much fallen off, though, exclusive of minor articles, it still furnishes annually about 30,000 pieces of cloth, of which about 24,000 are sold in France, and 6,000 in the Levant. There are also fabrics of stockings, linens, and soap; with paper-works, distilleries, tanneries, nail-works, &c. Its commerce, which is very considerable, is greatly facilitated by the canal du Midi, a branch from which comes to the town, and serves it as a port.

Carcassonne is very ancient, having been of considerable importance in the days of Caesar. It fell successively into the hands of the Visigoths and Saracens, and suffered much during the wars of the Albigenes. Its last count ceded it to France in 1247. (*Hægo*, art. *Aude*, *Dict. Géog.*)

CARDIFF, or CARRDIFF, a parl. bor. and sea-port of S. Wales, cap. co. Glamorgan, on the E. bank of the Taf, about 1½ m. above its embouchure in the estuary of the Severn, 25 m. W. Bristol, and 21 m. S. by E. Merthyr Tydvil. It has increased very rapidly, the pop. in 1801 having been only 1,870, while in 1831 it was 5,187. The two principal streets, at right angles to each other, are well built; but behind these there are several courts, alleys, and lanes of very inferior houses; and some new streets, mostly occupied by Irish labourers, are of the same description. The castle, on the N. side of the town, is of great antiquity; it is in excellent repair, and is partly occupied by its noble proprietor, the Marquis of Bute. Besides the church of St. John, which has a lofty tower, there are places of worship for Baptists, Methodists, Independents, &c. There is here, also, a co. gaol, a guildhall, where the assizes are held, a theatre, a bridge over the Taf, of five arches, and numerous schools and charities. Cardiff has become a place of very considerable trade, being, in fact, the port of Merthyr Tydvil, and of the principal mining district of S. Wales. The exports of iron amount to about 125,000 tons a year, and those of

coal to about 250,000 tons, exclusive of corn and other agricultural produce. The products of Merthyr are brought down to Cardiff by the Glamorganshire Canal, which unites with the sea about 1 m. below the town. But as this canal was constructed about 40 years ago, its basin did not afford sufficient accommodation for the vastly increased traffic of the place. To obviate this inconvenience, the Marquis of Bute has constructed, at his own expense, a ship canal and docks a little below the town. These works are on the most magnificent scale. The inner basin occupies a space of not less than 18 acres; and there is an outer basin occupying a space of about 1½ acre, for the accommodation of ships and steamers of large burden. These great works are now (1839) almost complete. They will, no doubt, add greatly to the trade and importance of Cardiff; and it is to be hoped, also to the fortune of their public-spirited proprietor. The limits of the parl. and municipal boundaries coincide, and comprise an extent of 1,191 acres. It is joined with the bors. of Cowbridge and Llantrissant, in sending 1 mem. to the H. of C. Previously to the Reform Act, the franchise was vested in the burgesses. Registered electors in 1837—58,590. Markets, Wednesday and Saturday fairs, June 22, and Sept. 30.

CARDIGAN, a marit. co. of S. Wales, stretching, in the form of a crescent, along the S.E. shore of Cardigan Bay, having N. the cos. of Merioneth and Montgomery, E. Radnor and Brecon, and S. Caermarthen and Pembroke. Area 432,000 acres. Surface mountainous and hilly, interspersed, however, with several fine valleys, of which the principal are those of the Teify, or Tely, Rheddiol, and Ystwith, so called from the rivers, the largest in the co., by which they are intersected. The soil along the shore of this co., particularly between Llan Rhaytyd and Llan Noy, is a light sandy loam, and is, perhaps, the finest turnip and barley soil in the empire; it is, in fact, in some places alleged to have produced, with little or no manure, an uninterrupted succession of good, or at least tolerable, barley crops, for a period reaching beyond the memory of man! (*Davies's S. Wales*, i. 163.) But this continued succession of corn crops has unhappily been tried in places where the soil is less capable of supporting such abusive treatment; and, altogether, agriculture is here at a very low ebb, being quite as far behind, if not more so, than in Caermarthen, which see. Estates of all sizes, from the smallest patches, which in some distrs. are very numerous, up to several thousands a year. Farms similarly divided. Average rent of land, in 1810, 4s. 8½d. an acre. Silver, lead, and copper, have all been found in Cardiganshire; and at one time the silver mines were an object of great attention, and yielded a considerable produce; but for a lengthened period they have been wholly abandoned, and little or no attention is now paid to those of copper and lead. Slates are quarried in different parts of the co., and are largely exported to Glam. and Aberyst. Manufactures are unimportant. Principal towns, Cardigan, Aberystwith, Tregaron, Lampeter, &c. At the last-mentioned place is a college, established in 1822, for the education of the Welsh clergymen. Cardiganshire contains 5 hunds. and 65 pars., and had, in 1831, 13,645 inhab. houses, 13,652 families, 64,780 inhab., of whom 30,863 were males and 33,912 females. It returns 1 mem. to the H. of C. for the co., and 1 for the bors. of Cardigan, Aberystwith, Lampeter, and Adpar. Registered electors for the co., 1837—38, 1,829. Sum paid for the relief of the poor only in 1837—38, 16,592. Annual value of real property in 1815 145,933.

CARDIGAN, a sea-port and parl. bor. of S. Wales, cap. co. Cardigan, on the N. bank of the Teify, 5 m. from its embouchure in St. George's Channel, 196 m. W.N.W. London. Pop. of old bor. (1831) 2,795; but the present parl. bor., which includes the suburbs of Bridgend and Abbey Hamlet, had, in 1831, a pop. of very near 3,000. The principal street is spacious, but the others are narrow and irregular, and the town contains a large proportion of small mean tenements. Rectitude, however, not only the number of houses has been a good deal increased, but their quality has also been materially improved. (*Boundary Report*.) A stone bridge crosses the river, and connects the town with Bridgend, in Pembrokeshire; and there is another bridge across a deep inlet of the river on the W. side of the town. It has an ancient church, a free grammar-school for 30 boys, a national, and another charity school, in which 180 children are educated; a handsome co. hall, and a co. gaol. Two towers, the remains of its ancient castle, still exist on a commanding site above the river. Market, Saturday; annual fairs, Feb. 13th, April 8th, Sept. 6th, and Dec. 18th. The town has no manufacture of any consequence. A bar at the river's mouth is a great impediment to navigation, and makes the entrance to the harbour very dangerous in rough weather. In moderate weather, and at spring tides, vessels of from 300 to 400 tons may come up to the town; but the general trade is confined to vessels of from 15 to 100 tons. There belonged to the port, in 1827, 275 vessels, of the burden of 14,456 tons, manned by 1,080

seamen; but of these ships a good many very rarely visit the port: the latter extends from below Fuliguard on the S. to Aberaron on the N. Exports, slate, corn, and butter; imports, coal, culm, timber and deals, limestone, and articles of general consumption.

Cardigan, conjointly with Aberystwyth, Lampeter, and Ader, returns 1 mem. to the H. of C. Previously to the Reform Act, the franchise (in Cardigan) was vested in the burgesses, who were created by being presented by a jury of burgesses at the court of the corporation. Registered electors in the 4 bors., in 1837-38, 939. The town is divided into 2 wards, and governed by a mayor, aldermen, and councillors.

CARDONA, a fortified town of Spain, Catalonia, in a rugged country on the Cardener, 55 m. N.W. Barcelona. Pop. 3,962. Near it, on the S.W., is a mountain of solid rock-salt, which neither the erosion caused by the rains, nor the mining operations that have been continued for ages, seem to have power materially to diminish. (See CATALONIA.) Being exceedingly hard, the rock is first blasted with gunpowder, and afterwards dug out with pickaxes: it is then ground, and laid up in the government storehouses. Vases, crucifixes, and other articles, are made out of it, which stand very well in the atmosphere of Spain, but soon liquify in a moist climate. (*Mitkano; Townsmd.*, l. 190.)

CARENAN, a town of France, dép. Le Manche, cap. cant. on the Tante, near its embouchure, 15 m. N.N.W. St. Lô. Pop. 2,801. It is situated in the middle of a marsh, and is indifferently fortified, and unhealthy. Small vessels come up to the town, which has some manufactures of lace and cotton.

CARIACO, a marit. town of Venezuela, prov. Cumana, in a large plain near the head of the gulph of the same name, 38 m. E.N.E. Cumana; lat. 10° 30' N., long. 63° 40' W. Pop. 7,000. The town is small, and its climate is unhealthy; but it has some trade, and its vicinity is extensively cultivated with cotton, &c. (*Geog. Account of Colombia*.)

CARIATI, a sea-port town of Naples, prov. Calabria Citra, cap. cant., on a high promontory washed by the Ionian Sea, 18 m. S.E. Rossano. Pop. 8,000. Though the seat of a bishopric, it is a desolate, wretched-looking place, surrounded by dilapidated walls, and having a castle in ruins. It has suffered much from the attacks of the Turks and Algerines, and more recently from the depredation of brigands, who, in 1806, made the cause of legitimacy subservient to their own predatory purposes. It is now, however, beginning to improve. The best manna of Calabria is found in its environs, and the rivers furnish fish in abundance. (*Craven's Calabria*, p. 223.)

CARIGNANO, an inl. town of N. Italy, king. of Sardinia, div. of Turin, cap. distr., on the left bank of the Po, which is here crossed by a wooden bridge, 11 m. S. Turin. Pop. 7,000. It is surrounded by old walls, has a handsome square, a fine church, several convents, two hospitals, and a college, and some remains of its ancient castle. A good deal of silk is produced in the neighbourhood, and there are several fisheries in the town. Carignano is also celebrated for its confectionery. It has been several times taken; the French sacked it in 1844. (*Ranspoldi; Dict. Géog.* &c.)

CARINI, a town of Sicily, prov. Palermo, cap. cant., on the rivulet of the same name, near where it falls into the sea, 12 m. W. N.W. Palermo. Pop. (inc. cant.) 8,684. It stands on a rising ground in a beautiful situation; is a respectable and clean town; and has a Gothic castle, with several churches, convents, and public buildings.

Near Carini are the ruins of the ancient *Hyccara*, a small but rich city, sacked by Nicias, who, on that occasion, captured Lais, the famous courtesan. (*Smyth's Sicily*, p. 69.)

CARINTHIA AND CARNIOLA (Germ. *Kärnten und Krain*) DUCHIES or, two contiguous inland provinces of the Austrian empire; the former being included in the ancient *Noricum*, and the latter in *Illyria*: they now respectively form the northern and central portions of the kingdom of Illyria as established in 1815, chiefly between lat. 45° 30' and 47° 10' N., and long. 12° 40' and 16° 40' E.; having N. Salzburg and Styria, E. Styria, S. Croatia and Istria, and W. a part of the government of Trieste, the Lombardo-Venetian kingdom, and the Tyrol. Area, 13,959 sq. (359 69 Germ.). Pop. (1880) 748,785, about 3-4ths of which belong to Carniola. These provs. compose that part of Illyria forming the government of Laybach, and are divided into 5 circles, viz. Carinthia into Klagenfurt and Villach, or Lower and Upper Carinthia; and Carniola into those of Laybach, Adelsberg, and Neustadt. The whole country is mountainous: the great Alpine chain which passes from the Tyrol through Styria into Hungary (see AUSTRIA, EMPIRE or, p. 285.), bounds Carinthia on the N., and its southern parallel chain, with its second ramification of the Julian and Carale Alps, runs through the W. and S. parts of Carniola, and on its N. separates it from Carinthia. The great Alpine chain consists in its whole extent of granite, gneiss, quartz, mica, and clay-slate, and other

primary rocks, and contains many metallic ores: the Carnic and Julian Alps have chiefly a calcareous formation, and the latter abound with ravines, caverns, and grottoes. They are comparatively poor in metallic products. There are fertile valleys between the mountain ranges; but the country generally is sterile and bare, and does not yield corn enough for the consumption of its inhabitants, the deficiency being made up by imports from Hungary. Carinthia is more abundantly watered than Carniola; the Drave intersects the former prov. in its whole length; the Save rises in the latter, and runs with a S.E. course through its N. and E. divisions: both greatly assist the traffic of these provinces. There are several moderate-sized lakes, as the Worthsee, Ossiacher-see, Muhlschutter-see, in the central part of Carinthia, and the Celknitzsee and others in the W. and N.W. parts of Carniola, besides many small ones. The temperature depends chiefly upon the elevation; but, except in S. Carniola, the climate is generally cold, and unfavourable to agriculture. According to Becker (*Handel's Lexicon*, 1836), the surface of the conjoined provs. is thus divided:—Arable land, 678,993 Eng. acres; vineyards, 23,909 do.; meadows and gardens, 792,015 do.; commons, 1,085,089 do.; forests, 2,174,177 do.: total, 4,750,285 do.

The respective quantities of the chief agricultural products are stated to be:—Wheat, 88,184 Eng. quarters; rye, 187,261 do.; barley, 126,862 do.; oats, 351,674 do.; wine, 3,350,601 Eng. imp. gall.

Wheat, barley, and wine, are principally produced in Carniola; rye and oats in Carinthia. Buckwheat, millet, hemp, and flax, are also grown, and the flax of Carniola is said to be the best in the empire. The extent of surface devoted to gardens and vineyards in Carinthia is very inferior to that so appropriated in Carniola, in the S. of which duchy the finest apricots, peaches, apples, pears, and plums, are produced, besides a considerable quantity of good wine. On the other hand, in Carinthia, the pasture lands are extensive, and cattle are reared in much larger numbers than in Carniola, as will be seen by the following table from Becker's *Handel's Lexicon*, 1836; and the *Nat. Encycl.*—

	Horses.	Oxen.	Cows.	Sheep.
Carinthia	38,552	110,546	165,842	227,671
Carniola	14,903	48,569	65,696	65,004

The horses, which are large and strong, are bred mostly in the valley of the Gail, and elsewhere, in Upper Carinthia. The sheep yield only inferior wool. Hogs and goats are plentiful. The Alps are inhabited by bears, which make great havoc amongst smaller animals. Chamois, deer, hares, foxes, &c., are, however, found, as well as a great variety of feathered game. The rivers and lakes, and especially the Drave and the Ossiachersee, abound with salmon, trout, and other superior fish. Bees are numerous, especially in S. Carniola; of late years the rearing of silk-worms has increased. The principal wealth of Carinthia is in the produce of its mines. Iron is found throughout the whole extent of the primary Alpine chain, and is also mined in the Carnic Alps. Copper is mined in several places, but although the quantity of ore is inexhaustible, the hardness of the stone in which it is found, and other difficulties oppose serious obstacles to the attainment of any great supply of metal. The lead mine of the ore-mountain near Villach is the largest and most productive of that metal in the empire: it yields annually 33,000 centner of pure metal; other mines in the duchy afford yearly about 20,000 centner. Zinc, silver, and quicksilver, are likewise met with, and near Hilttenberg antimony is found in conjunction with iron. These metals are some in lead mines in Carniola, but those of the greatest importance in that prov. are the celebrated quicksilver mines of Idria, the richest in Europe. Coal, peat, marble, building stone, various clays, talc, asbestos, jasper, beryl, opal, emerald, garnets, are found in various parts of the country. The following shows the average annual produce of some of the mines in both provinces:—Bar iron, 271,926 cwt.; cast iron, 9,942 cwt.; lead and lead ore, 60,883 cwt.; copper, 78 cwt.; coals, 49,614 cwt.

Manufacturing industry in Carinthia is mostly confined to working up its raw produce, and especially its metallic ores. The *Nat. Encyc.* a few years since enumerated 30 furnaces, and 61 forges, iron-plate and steel works. It gives 130,537 centner as the quantity of iron and steel wares annually made. Besides these manufactures, there were 2 of woollen, one of silk, and many of cotton fabrics, and a white-lead factory: most of these were in the capital. In Carniola the manufactures are more important, although still inferior in amount to those in many other Austrian provinces. Most on the rural male population follow linen weaving; in addition to their agricultural occupations; while their wives spin thread. Both these articles are generally coarse; but there are some fine linen and lace manufactures, and many of woollen cloth, flannel, worsted stockings, lea-

ther, &c. Iron manufactures, and others of wooden articles, also occupy many hands, and in Laybach there is a very extensive porcelain and earthenware factory. The principal exports from Carniola are steel wares, timber, and wooden articles (to about 163,500 guilders), glass wares, linens (about 2,600 pieces), felt hats, wax, wine, to Carinthia; flour to Trieste; quicksilver to Lower Austria, &c. Its imports are Hungarian and Italian wines, salt, oil, fruit, colonial produce, with coffee, sugar, various manufactured fabrics, tobacco, a large supply of horned cattle, &c. The exports of home produce are not probably much below the value of its imports; but considerable wealth is derived to the prov. from the traffic through it, and conveyance of goods from Austria, Carinthia, Croatia, &c., to Trieste, and the other ports on the Adriatic. The town of Gottschee, where a German colony is situated, has a remarkable commercial activity, and its goods are widely diffused over Hungary and the N.W. provinces of the empire, as well as in many other parts of Europe: Laybach, the cap., is the other chief place of trade. The exports of Carinthia are almost confined to its raw and manufactured mineral products, and cattle. Klagenfurt, the cap., and Villach, are its principal commercial towns. The inhab. of these provs. are mostly of the Slavonian race, denominated Wendes or Vandals; in Carinthia, however, those of German are to those of Slavonian stock as 172 to 95. The Drave formerly separated the two races. Carinthia has been always considered as a German prov. of the Austrian empire, and has enjoyed peculiar privileges, which it has its own diet, consisting of 4 ranks—the upper clergy, nobility, knights, and the representatives of the royal burghs and market towns; but its internal administration is subordinate to the government authorities at Laybach. The high criminal and other judicial courts of Carinthia are at Klagenfurt. The Lutheran religion made considerable progress in this prov. in the 16th century, until checked by the government: there are now scarcely 20,000 Protestants, mostly in Upper Carinthia. The state assembly in Carinthia is most respects similarly constituted with that of Styria, with which prov. it was formerly united. The whole pop. of Carniola is Roman Catholic—a robust, contented, and frugal people. The Carinthians have, to a great extent, the character and disposition of Italians. They are said to be more inclined to indolence than their southern neighbours, and are often ignorant and superstitious. Both provs. formed parts of the empire of Charlemagne, and afterwards belonged to the dukes of Friuli. After passing through various hands, the house of Austria became possessed of Carinthia in 1245, and of Carinthia in 1321. In 1809 these countries were annexed to the empire of Napoleon, and remained connected with it till 1814, when they were restored to Austria. (*Oesterr. Nat. Encyc. art. Karnthen and Krain; Dict. Géographique.*)

CARIFE, a town and valley in Venezuela, prov. Cumana, 40 m. S.E. that city. The town is the chief seat of the Chayma Indian missions. The valley is celebrated for a remarkable cavern in a limestone formation, at least 4,800 ft. in depth, and for some distance 60 or 70 ft. high. It is inhabited by multitudes of birds, called gucharos, a species of *Caprimulgus*, the young of which are annually destroyed in great numbers by the Indians, for the sake of the fat with which the lining membrane of their abdomen is laden, and of which excellent oil is made. Humboldt visited this cavern. (See his *Personal Narrative*, vol. ii.)

CARISBROOKE, a par. and village of England, Isle of Wight, liberty W. Medina, situated by a rivulet, at the base of a conical hill, surmounted by a castle or fortress, 73 m. S.W. London. Pop. of par., 1,880 in 1845, and of the (1831) 4,713. Some portions of the fortress are very old; but it was repaired and greatly augmented in the reign of Elizabeth. The walls of the old fortress (a parallelogram enclosing an area of 1½ acre, with its keep in the centre) are comprised within the more modern fortifications, which enclose an area of about 20 acres. The latter have 5 bastions, and a deep moat; and are connected with a fine terrace, nearly 1 m. in length. The par. church stands on an acclivity opposite the castle: it is a Norman structure, originally attached to a Cistercian monastery, founded in the reign of the Conqueror; some remains of which exist at a farm-house on its site. The most celebrated event in the annals of Carisbrooke Castle is the confinement of Charles I. for 13 months within its walls, immediately previous to his being delivered up to the parliamentary forces. Subsequently, his children were also imprisoned in this castle; and his eldest daughter died in it, at the age of 15. It continues to be the residence and head-quarters of the governor of the Isle of Wight; and a considerable body of troops are usually stationed in it. There are many pleasant villas scattered over the parish, within which, also, is the general workhouse of the island; whose inmates, in 1831, made an augmentation of 676 persons to the pop.

CARLEE, a small village of Hindostan, prov. Aurun-

gabad, 34 m. N.W. Poonah, near which are some remarkable cave-temples, excavated in a spur from a chain of hills running E. and W.; the chief cavern is said to be 6,000 ft. above the level of the sea, and faces due W. A little to the left, before the entrance, stands a large pillar, surmounted by three sculptured lions back to back. The temple is entered under a noble horse-shoe arch, through a small square doorway in a kind of porch, the ceiling of which in great part fills up the arch, and abounds with laboured workmanship. To one third of its height, it is covered with various figures in bas-relief; and one of these in a dancing attitude is exceedingly graceful: the ends of this screen are occupied to the same height with the figures of gigantic elephants, projecting in alto-relievo, and well carved. After entering the cave, which is 40 paces long by 14 broad, Mrs. Graham observes, "when we looked round, we almost fancied ourselves in a Gothic cathedral." Unlike the Buddhist cave-temples of Baug, Ellora, &c., the roof is arched, rising to an astonishing height, supported by 72 pillars along each side, and above these by ribs of oak, which are fitted by teeth into corresponding holes in the rock above. The pillars are mostly hexagonal, each with a bell-shaped capital, surmounted by two elephants with their trunks entwined, and each carrying one female, and two male, figures. On several of the columns there are inscriptions, which have recently been translated (see *Journal of the Asiatic Soc. of Bengal*, vol. iii.), and from one of them it would appear that the cave was constructed A.D. 76. The cavity is semicircular at its termination; opposite the entrance is a structure with a dome, on which is fixed a huge teak umbrella, an ornament common in the temples of Buddha; but no separate cells, opening from the main temple, have been noticed, though such have been supposed characteristic of Buddhist structures. (*Erschke in Bombay Trans.* lii. 512, &c.; *Graham, Journal of a Resid. in India*, pp. 63–65; *Mod. Trav.* x. 269–272, &c.)

CARLENTINI, a town of Sicily, prov. Syracuse, 19 m. N.W. Syracuse. Pop. 4,179. It was built by Charles V. for the head-quarters of the Sicilian army; but the design was never completed, and since the earthquake of 1693, by which it was partially destroyed, it has become a miserable place. (*Smyth's Sicily*, p. 169.)

CARLINGFORD, a sea-port town of Ireland, co. Louth, on the S. side of Carlingford lough, 10 m. E. Dundalk. Pop., in 1831, 1,319. Carlingford lough is 8 m. in depth, by from 1 to 1¼ m. wide, with deep water and secure anchorage, but being situated between lofty mountains, is liable to sudden squalls. The bar at the entrance has 8 ft. water at low-water spring, 17 ft. at ordinary high water, and 26 ft. at springs. This bay is well stocked with excellent oysters, the fishing of which employs most part of the pop. of Carlingford. It returned 2 mems. to the Irish parliament, but was disfranchised at the Union. (*Nimmo's Sailing Directions for the Irish Coast*, &c.)

CARLISLE, a city of England, co. Cumberland, on a gentle eminence, in an extensive plain at the confluence of the Eden, Caldew, and Peteril, which nearly surround it, 260 m. N.W. London, and 96 m. N. by W. Manchester. Pop. in 1801, 10,231; in 1821, 15,486; in 1829, 20,006. The great increase of pop., particularly since 1821, is attributed to the increase of manufactures, and the influx of Irishmen and Scotchmen to the mills and railroads.

The Eden is crossed by an elegant and expensive bridge, finished in 1817, consisting of 5 large and 5 smaller arches; the Caldew has two bridges, and the smaller stream of the Peteril one. The principal streets diverge from the market-place, an irregular area in the middle of the town: though not regularly arranged, several of the streets are well built, and the houses are generally well paved and lighted, and plentifully supplied with water.

Carlisle is the seat of a bishopric, founded by Henry I., and remodelled by Henry VIII. after the dissolution of the monasteries, with whose lands he largely endowed it. The ecclesiastical jurisdiction extends over 93 par., containing the whole of Westmoreland and great part of Cumberland. The revenues of the see amounted, at an average of the three years ending with 1831, to 2,213*l.* a year. The cathedral, having been repaired at different periods, exhibits various kinds of architecture; and the E. window is said to be the finest specimen of the kind in England. The dignitaries, beside the bishop, are a dean, 4 prebendaries, and 8 minor canons. The only part of the nave of the cathedral which remains forms the parochial church of St. Mary: that of St. Cuthbert is a plain building, erected in 1778. There are two chapels of ease, both built in 1828—Trinity church, in the perpendicular Gothic style, in the suburb of Caldew-gate; and Christ Church, in the early English style, in the suburb of Botcher-gate; each has accommodation for 2,000 persons. The other places of worship are those of Presbyterians, Independents, two denominations of Methodists, Baptists, R. Catholics, and the Society of Friends. The grammar-school was founded by Henry VIII. There are also Lancastrian and national schools, St. Patrick's

chool for educating 400 children of all denominations, a school of industry for females, &c. The county infirmary is in the town, and it has a fever hospital, a dispensary, &c. An academy for the encouragement of the fine arts was formed in 1832, a mechanics' institute in 1834, and a literary and philosophical institution in 1835: a handsome building, erected in 1839, for the accommodation of these societies, contains a museum and a theatre for lectures. There are two subscription libraries and newsrooms,—one of the latter a chaste new building opened in 1831,—and two weekly newspapers. The environs afford many delightful rides and walks. Races take place in autumn at the Swifts, a fine course on the S. bank of the Eden. The ancient castle, which stands on an eminence over the river, consists of an outward and inner wall, each of great thickness, and of a great square tower, constructed according to the ancient mode of defence. The ramparts command a very fine view. It has a governor, Lieut.-governor, &c.; but is now used only as an infantry barrack and armory.

The city, technically so called, which formed the ancient bor. of Carlisle, is confined within limits which, in 1831, had only a pop. of 9,386. It is a corporation by prescription; its obtained confirmations and extensions of its privileges by a series of 18 charters, terminating with 13 Charles I., which was the governing charter. Under the new municipal act, the government is vested in a mayor, 10 aldermen, and 30 common-councilmen, chosen annually by the rate-payers, whose number in 1838 was 989. There are eight guilds or fraternities of trades; admission into any one of which is by birth or apprenticeship only; and admission into one of the guilds is a preliminary requisite to the freedom of the city. Carlisle has sent 2 mem. to the H. of C. since the reign of Edward I.; the right of election, previously to the Reform Act, being in resident and non-resident freemen. The boundaries of the parl. bor. were extended by the Boundary Act, so as to embrace, not merely the city, but also the suburbs and a considerable contiguous circle. Pop. of parl. bor. in 1831, 31,072; houses taxed at 10s. and upwards, 887. Registered electors in 1837-38, 1,013. The election of members for the E. division of the co. is also held here.

The court of the mayor and bailiffs sits weekly, and holds personal pleas to any amount. Petty sessions are held on Wednesday and Saturday. The police consists, besides a constable for each township, of a superintendent, 3 day men, and 20 night men. There is no city gaol, prisoners being confined in the county gaol, an extensive and well-constructed building at the S. entrance to the city, or in the house of correction: a subterraneous passage, through which the prisoners are brought to trial, connects both these places of confinement with the county court-house. The county assizes, and the quarter sessions, at Easter and Midsummer, are held in this building, which was erected in 1810 on the site of the ancient citadel; it has two magnificent towers. The revenues of the corporation, amounting to about 1,800*l.* a year, arise from tolls, rents, and shares in public companies.

The buildings for corporate and other public purposes connected with the government of the place, are the town-hall, guildhall, and council-chamber. Cotton is the staple manufacture of the town, 8 mills for the spinning of cotton, employing 1,486 hands, having been at work here in 1839, exclusive of factories for weaving checks, gingham, and other fabrics, both in the city and along the Gaidew. One of the mills recently erected has a chimney 306 ft. high! The hating trade is also extensive; and there are several dye-works, print-works, iron-foundries, tanneries, and breweries. Coal for manufacturing and domestic purposes is brought from Gillingall, 12 m. distant; and from other collieries, about 30 m. distant. A considerable part of the manufacturing pop. of Carlisle used to be in a very depressed condition; but, on the whole, the city is thriving, and its general aspect is good. The situation of the city, on the great N.W. road from Lancashire to Glasgow and Edinburgh, tends to increase its trade, which is still further promoted by the railway constructed between it and Newcastle. The navigation of the Eden being greatly impeded by shoals, a canal, suitable for vessels of 100 tons' burden, has been cut to Bowness, on the Solway Frith, 11 m. distant. The trade with Liverpool and Ireland is carried on by steamers.

The following table shows the amount of tonnage for a series of years, distinguishing the amount inwards and outwards; also that of the foreign from the coasting trade:—

Years.	Coastwise.		Foreign.	
	Inwards.	Outwards.	Inwards.	Outwards.
	Tons.	Tons.	Tons.	Tons.
1825	14,326	7,908	2,159	719
1830	16,768	18,708	2,197	841
1837	27,678	34,221	2,512	647
1839	35,948	35,976	2,548	865
1851	34,049	35,094	2,040	
1853	31,550	35,598	2,289	741

Markets are held on Wednesday and Saturday; fairs on the Saturdays before Whit Sunday and Martinmas; also a statute-fair on 26th Aug. and 14 days after, during the continuance of which no attachment from the city civil courts can be executed; and another on 19th Sept. The banks are, the Carlisle City and District Bank, the Carlisle and Cumberland Banking Co., a branch of the Cumberland Union Banking Co., the house of Monkhouse, Head, and Co., and a savings' bank. The village of Stanwix, N. of the Eden, may be considered as a suburb of Carlisle, though not included within its corporate or parliamentary limits. Its ancient church, dedicated to St. Michael, is built on the site and out of the ruins of the Roman station of Congraata, which stood along the rampart of the wall of Severus. Pop. of the village in 1831, 545. (*Hist. and Antiq. of Carlisle; Municipal Reports; Sessional Papers; Dugdale's Cathedrals.*)

Carlisle was a Roman station, under the name of Luguvallum, as is attested by vestiges of the Roman wall, and by many Roman relics discovered here at various times. The Saxons called it Caer Lull, whence its present name is derived. William the Conqueror built the castle; and during the wars between England and Scotland, Carlisle was a frequent object of attack. It surrendered, without making any opposition, to the pretender Charles Edward, in 1745; but on his being compelled to evacuate it, on the approach of the British forces, he left behind him a small garrison, which surrendered at discretion: the officers of this garrison were subsequently executed at London as traitors, and their heads exposed on the gates and walls of Carlisle.

CARLOFORTE, a sea-port town of the Sardinian States, on the small island of San Pietro, near the S.W. coast of Sardinia; lat. 39° 8' 28" N., long. 8° 17' 28" E. Pop. 2,830. The streets are in "tolerable" order, and it is surrounded by a wall, and has some fortifications. It is moderately healthy. The inhabitants are engaged in the anchovy and coral fisheries, and in the manufacture of salt. (*Smyth's Sardinia, p. 310.*)

CARLOTA, L.A. a town of Spain, prov. Cordova, cap. dep. of its own name, 17 m. S.W. Cordova. Pop. 3,102. It is one of the chief seats of the foreign colonists planted in Andalusia in 1768, in the view of peopling and fertilising the Sierra Morena. It is a pretty town, and the inhab., who are clean and thriving, have some manufactures of cambray and linen cloths. (*Anglia's Spain in 1830, li. 42; Milano.*)

CARLOW, or CATHERLOUGH, an incl. co. of Ireland, prov. Leinster, lying mostly on the E. side of the Barrow, having S. and E. Wexford and Wicklow, N. the latter and Kildare, and W. Queen's co. and Kilkenny. Area 219,863 acres, of which 23,030 are unimproved mountain and bog. Surface on the S. border mountainous, but elsewhere gently undulating. Besides the Barrow, by which it is partly intersected and partly bounded, it is watered by the Slaney, &c. The uplands are light gravelly; in the lowlands a fertile loam. This is one of the principal dairy cos. in Ireland; and the stock of cows has latterly been a good deal meliorated by the introduction of Ayrshire, and other improved breeds from Great Britain. Estates middle-sized; and that minute division of land among the occupiers, so destructive of the best interests of the country, has prevailed less here than in most other parts of Ireland. Agriculture is, in consequence, in a much more advanced state here than in many other Irish cos.; there is a considerable breadth of land under green crop; and improved farming implements are pretty generally introduced. Average rent of land 15*s.* an acre. Manufactures and minerals of no importance. Carlow is divided into 5 baronies and 60 parishes, and sends 3 mems. to the H. of C. viz. 2 for the co., and 1 for the bor. of Carlow. Registered electors for the co. in 1837-38, 1,428. In 1831 Carlow had 18,375 inhabited houses; 14,609 families; and 81,998 inhab., of whom 40,149 were males, and 41,839 females.

Carlow, a parl. bor., the principal town of the above co., and the place where the assizes are held, on the Barrow, where it is joined by the Burien, 45 m. S.W. Dublin. The town, properly so called, lies wholly on the left bank of the Barrow; but it is connected by a bridge with the suburb of Graigue, on the opposite side of the river in Queen's co.: this suburb has been included in the parl. bor., which extends over a space of 496 acres, and had, in 1831, a pop. of 10,714. It is a well-built, thriving town. It has an old castle, now in ruins, but once a place of considerable strength and importance; a parish church with a spire; a handsome R. Cath. cathedral church, opened in 1834; a R. Cath. college and convent; barracks; a lunatic district asylum for the cos. of Carlow, Wicklow, Wexford, and Kilkenny, erected in 1830 at a cost of nearly 26,000*l.*; an elegant new court-house; a co. gaol; co. infirmary, &c. Besides the R. Cath. college, fitted for the accommodation of 200 students, there is a diocesan school, and numerous charity-schools both for Protestants and Catholics. There are also several charitable institutions.

Being situated on a navigable river, communicating with Waterford on the one hand, and with Dublin, by means of the Grand Canal on the other, Carlow has a very considerable trade. It is a great mart for the agricultural produce, particularly the corn and butter, of the surrounding country, great quantities of which are sent down the river to Waterford for exportation. It has also some large flour mills, and an extensive malt-busness; and furnishes considerable supplies both of flour and malt to Dublin. It has 2 breweries and a distillery; and paid duty, in 1836, on 39,577 bushels of malt. Postage, in 1830, 1,391*l*.; in 1835, 1,441*l*. The Bank of Ireland has opened a branch here.

Carlow is a place of great antiquity, and has various charters; by the last of these, in 1671, the bor. consists of a sovereign, elected annually, and 12 self-elected free burgesses. From 1618 down to the union with Great Britain it sent 2 mems. to the Irish H. of C., and since the union it has sent 1 mem. to the Imperial H. of C., who, till the passing of the Reform Act, was returned by the sovereign and burgesses. Registered electors in 1837-38, 410. (*Railway Report*; *Boundary Report* &c.) CARLOWITZ, a town of the Austro states, Slav. voula, within the military frontier, circ. Peterwardein, on the right bank of the Danube, 4 m. S.E. Peterwardein. Pop. 5,800, mostly of Servian descent. Most part of its houses are mere huts, and it is only in part paved. It contains a Greek cathedral, two other Greek churches, a lt. Cath. church, an hospital, seminaries for the Greek and Cath. clergy, a Greek lyceum, and a Cath. high-school. The subordinate jurisdiction of the town is in the hands of an equal number of R. Cath. and Greek magistrates. It is the seat of a Greek archbishop, the only one belonging to that church in the Austrian empire, to whom all the Austro-Greek clergy are subordinate. (*Oesterr. Nat. Encycl.*)

CARLSBAD, a town of Bohemia, famous for its hot springs, on the Teplé, near the Eger, 72 m. W.N.W. Prague. Stationary pop. about 2,700. It lies in a low narrow valley, surrounded by hills, covered with every variety of foliage, and affording the most extensive and varied prospects. The town consists principally of lodging-houses, hotels, &c., for the accommodation of visitors to the waters; but it has some good shops and private houses, with a theatre, assembly and reading rooms, an hospital, &c. The Sprudél, the principal spring, is the hottest in Europe; its temperature being about 56° Reaum., or 165° Fahr. The expansive force of the steam below forces up the water in jets to a considerable height, and to guard against the danger that has sometimes arisen from the obstruction of the apertures by which the water and vapour escape, it has been covered over by a solid bed of masonry. There are several other springs, that of Mublbrunnen, which is the most commonly drank, has a temperature of 138° Fahr. Baths of all sorts are fitted up with every accommodation. The waters are efficacious in a great variety of complaints, but chiefly in those of the liver and kidneys. The walks and promenades in the neighbourhood of the town have a great deal of romantic beauty and interest. The number of visitors in the season varies from 4,000 to 5,000.

This, which is the most fashionable and aristocratic watering place in Europe, is of comparatively recent origin. The springs are said to have been discovered in 1376, by the emperor Charles IV., who, when hunting in the vicinity, was attracted to the spot by the cries of a hound that had fallen into one of the springs. The town belongs to the emperor. A congress was held here in 1819. (*Murray's Hand-Book for S. Germany*; *Spencer's Germany and the Germans*, i. 32.) CARLSBURG, CARLSBURG, a royal town of Transylvania, co. Unter-Albena, on the N. bank of the Maros, 32 m. N.W. Hermannstadt; lat. 46° 5' 21" N., long. 23° 25' 10" E. Pop. 11,300. It consists of the Upper town or citadel built on a hill, and the Lower town, situated beneath it. The citadel is surrounded by walls with 7 bastions, and its principal gate is adorned with some fine sculptures. The town has a handsome R. Cath. church, containing the tombs and monuments of John Hunyadi, and several royal and other personages; the fine residence of the bishops of Transylvania, a canons' college, containing the provincial archives, royal mint, observatory with a fine collection of apparatus, several libraries and scientific collections, an arsenal, barracks, &c. There are also an hospital, an ecclesiastical lyceum, college, and primary school. From the Lower town a bridge 210 paces in length passes over the Maros. It is worthy of remark that the Jews, who are naturalised in no other part of Transylvania, enjoy in Carlsburg the full rights of citizenship, under the protection of the bishop. (*Oesterr. Nat. Encycl.*)

CARLSGRONA, or CARLSKROON, a sea-port town of Sweden, on the Baltic, cap. prefecture Bleking; lat. 56° 10' 9" N., long. 15° 33' 25" E. Pop. 11,500. The greater part of the town is built on the small rocky island of Tros-oe, and the rest on some adjoining islets; the communication with the mainland being maintained,

partly by a mound, and partly by a wooden bridge. The harbour is large and safe, with a pier sufficient to float the largest ships. It has 3 entrances, but the only one practicable for large vessels is on the S. side of the town, and is defended by two strong forts. The dry docks constructed here, for the building and repair of men-of-war, have been formed at a vast expense; they are of great extent, and have been cut out of the solid granite rock. It is the principal, or rather, the only, station of the Swedish fleet. The town is well built, consisting partly of brick, but principally of wooden houses. The arsenal, and other buildings, connected with the docks and shipping, are on a large scale; and there are also 2 handsome churches, an hotel for the prefect, an hospital, a lazaretto, &c. There is a great deficiency of good water; that which is obtained from the wells sunk in the town is brackish, so that when rain-water falls, recourse has to be had to springs distant about 3 m. There are some manufactures of canvas and linen, with anchor forges, tanneries, &c. The trade of the town is but inconsiderable; the exports consist principally of iron, copper, steel, potash, tar, pitch, &c. Christiana is the summer residence of the king, Charles XI., who, in 1680, conferred on it considerable privileges, and removed the fleet thither from Stockholm. It has since continued to be the principal station of the Swedish fleet; but the Admiralty, which had been long seated here, was, in 1776, transferred to Stockholm. In 1790, it suffered severely from a fire. (*Cocce's Travels in the North of Europe*, iv. 292.)

CARLSHAMN, a sea-port town of Sweden, prov. Bleking, cap. liehrad., on the Baltic, at the mouth of the Nie. 55 m. W. Carlsröum; lat. 56° 12' 40" N., long. 14° 51' E. Pop. 4,150. It has 2 churches, an hospital, with considerable manufactures of canvas, woollens, and tobacco, and building-yards. The harbour is small, but safe. The exports consist of iron, timber, potash, pitch, and tar, tobacco, &c. Being built principally of wood, it has sometimes suffered severely from fires.

CARLSRUHE (*Charles's Rest*), a city of Germany, cap. of the grand duchy of Baden, circ. Middle Rhine, residence of the grand duke, and seat of the administration and principal state authorities, in the fine plain of the Haardwald (Stag's Forest), which surrounds it on the N. and W.; 4 m. E. the Rhine, 37 m. W.N.W. Stuttgart, 67 m. S. by W. Darmstadt, and 42 m. N.E. Strasburg. Lat. 49° 56' N., long. 8° 22' E. Pop. 20,500 (*Berghaus*), more than 2-3ds of whom are Protestants. It is built in the form of an outspread fan, or rather wheel, round the grand-ducal palace, from which, as a centre, 32 public routes radiate, 11 of which, forming the principal streets, have been built on both sides; several of these streets stretch into the forest. The high, or long street, runs from E. to W., intersecting those above alluded to, and dividing the city into a N. and S. portion. Carlsruhe is in part walled, and has 7 gates. It is a handsome, but rather dull town. Streets broad, well paved, furnished with foot-paths, and well lighted at night. Houses built in a great variety of styles, but those of wood are daily giving place to brick edifices. There are 2 public squares, and facing the palace, at the point of union of the principal streets, is a semicircular range of elegant buildings, comprising the government offices, and others attached to the palace. The grand-ducal residence, a plain building, composed of a centre and two wings, contains the *Bleythurm* (lead-tower), from the summit of which there is an extensive prospect; a cabinet of coins and natural objects; a library of 80,000 vols.; and the church attended by the court. Towards the E. extend the large garden and park belonging to the palace, which are thrown open to the public. There are several other palaces belonging to the nobility deserving of notice, and 90 public buildings, including 4 Protestant and Catholic churches, a synagogue, town-hall, in which both chambers of the senate meet; a museum, the grand-ducal, and another theatre, a new mint, the post-office, infantry and cavalry barracks, arsenal, cannon-foundry, and several hospitals. It may be well mentioning, that Sultz, a fashionable London tailor, is the founder of one of these hospitals, which he endowed with 100,000 florins: in return for his generosity, he has been created a baron. The city is supplied with water by an aqueduct, from Durlach, distant 24 m. E. by S.; it is adorned by several public fountains, and in the centre of the principal square is a stone pyramid, erected to the memory of the founder of the city. Its chief establishments for education are a lyceum, polytechnic, military, medical, and veterinary schools, and academies of architecture, painting, &c. It possesses an excellent botanic garden, a gallery of paintings, and a society of arts, under the patronage of the grand-duke. Carlsruhe is not a place of considerable trade. It has some manufactures of silks, carpets, woollens, snuff, chemical products, furniture, carriages, clocks, jewellery, and articles of luxury, but the prosperity of its inhabitants mainly depends on its being the seat of the court, and the residence of the principal

officers of state. It is quite a modern city, and has risen around a hunting-seat built by Charles William, Margrave of Mecklen, in 1715. (*Bergheus, Allg. Lander und Volk*, 1838; *Cannabich, Lehrbuch der Geogr.* p. 490, 491; *Murray's Handbook*, &c.)

CARLSTAD, a town of Sweden, cap. prefecture of the same name, on the island of Tingvalia, the mouth of the Klar, on the lake Weser; lat. 59° 16' N., long. 18° 30' E. Pop. 2,600. It is built of wood on a regular plan; has a handsome cathedral, a gymnasium, an observatory, an agricultural society, a cabinet of natural history, and a tobacco manufacture; and is the seat of a bishopric, and the residence of the prefect. The opening of the Gotha canal has added considerably to its commerce. It exports copper and iron, corn, salt, timber, &c.

CARLSTADT, a royal free town of Austrian Croatia, co. Agram, cap. circ. of same name, at the confluence of the Korana and Dobra with the Kulpa, immediately beyond the limit of the military frontier, 32 m. S.W. Agram. Pop. inclusive of its suburb Dubovacs, 6,300. It is well built, though mostly of wood; has a small fortress, originally intended to resist the incursions of the Turks, and which is surrounded by ramparts, trenches, and palisades; and contains a handsome parade, barracks, and arsenal. It has 6 Cath. churches, a Greek church, a gymnasium, superior and girls' schools, a civic and military hospital, &c., and the residence of a Greek bishop. Considerable quantities of the liquor called *rosoglio* are produced here. Its trade is unimportant, but its inhab. derive considerable profit from the conveyance of goods to the ports of the Adriatic. It was founded by the Archduke Charles, whose name it bears. (*Oesterr. Nat. Encyc.*)

CARMAGNOLA, an Ital. town of N. Italy, and Sardinia, div. Turin, cap. distr., near the Po, 15 m. S. by E. Turin. Pop. 2,300. It is said to be well built and laid out: many of its streets, as well as its public squares, are ornamented with porticos. It contains several churches and convents, and an hospital, and has 2 suburbs. It has considerable trade in silk, flax, hemp, corn, and cattle, for which 2 large markets are held weekly. This town formerly belonged to the marquise of Saluzzo: it was taken by the French in 1691 and 1796.

CARMEL (MOUNT), a famous mountain of Syria, extending from the plain of Esdras in a N.W. direction till it terminates in the steep promontory, forming the S.W. extremity of the Bay of Acre. The name, Mount Carmel, is usually confined to this promontory; the height of which is variously estimated at from 1,500 to 1,900 ft. This mountain is famous in Scripture history, more especially in that of Elijah, being the place where he destroyed the prophets of Baal. (1 Kings, xviii.) In more modern times, the mountain has been occupied by monks, who have resided in grottos cut out of the rock, and in a monastery built near the summit. The latter was destroyed in 1831, but has since been rebuilt. (*Robinson's Palestine*, i. 184.)

CARMONA (an. *Carmo*), a city of Spain, prov. Sevilla, cap. dep. of same name, 30 m. E.N.E. Sevilla, 56 m. W.S.W. Cordova. Pop. 20,296. It stands in a picturesque situation on an isolated hill, looking down upon the plains of Andalusia; it is well built, and has 7 churches, 9 convents, and 2 hospitals, some Roman antiquities, and a beautiful Moorish gate. It has some manufactures of coarse woollen and heupen cloth, hats, glue, soap, delft, shoe leather, and wax candles; but most of them are in a decaying state. Its environs are very fertile, particularly in vines and olives; and Townsend says that there were above 100 oil-mills in the town and its immediate vicinity (vol. ii. p. 196.). It was a place of importance under the Romans, and Caesar conferred on it the privileges of a Roman city. Under the Moors it was celebrated for its castles, palaces, and fountains, of which hardly any remains now exist. (*Mittheil. Insigis*, ii. 47.)

CARNAC, a village of France, dép. Morbihan, on a height at a little distance from the sea, 30 m. S.E. L'Orlent. It is remarkable for very extensive remains of what is believed to have been a druidical monument. These consist of 11 ranges of granite stones, standing in lines nearly perpendicular to the coast. These stones are of great thickness, and from 9 to 10, perhaps 20 ft. in height. The French writers say that they are generally about 30 ft., and that the highest are 22 (French) feet above ground. But Mrs. Stothard distinctly asserts that this is an exaggeration; that the highest do not rise more than 15 ft. above ground, and that the medium height is from 9 to 12 ft. (*Letters from Normandy*, p. 266.) Their number is said to exceed 4,000; the smallest end is fixed in the ground, and in some instances flat stones, supported by two of those that are upright, form vast gateways. The object, and the epoch of the construction of this extraordinary monument, are alike unknown. It has exercised the ingenuity of the antiquaries of Bretagne; but their researches have not been more successful than those of our own antiquaries on the subject of Stonehenge.

CARNATIC, a very extensive marit. prov. of S. Hindostan, comprising a considerable portion of the territory under the Madras presidency. It extends along the Coromandel coast, from Cape Comorin to the river Gondigam, or between lat. 8° and 16° N., and long. 77° 15', and 80° 30' E., having N. the Northern Circars, W. the Balaghaut east districts, the provs. Salem and Coimbatore, and the Cochin and Travancore dominions, and S. and E. the Indian Ocean, the Gulph of Manar, and the Bay of Bengal. Length N.E. to S.W. 560 m., average breadth about 90 m. Its area, population, divisions, &c., are as follows:—

Districts.	Area in sq. m.	Pop. (1836-7.)	Land revenue (1836-7.)	Total revenue (1836-7.)
Nellore and Ongole	12,000	846,572	1,399,814	2,474,880
N. division Arcot	8,300	506,531	1,875,486	2,277,181
S. division Arcot	4,500	559,259	1,975,598	2,405,073
Chingleput	2,225	336,219	875,362	1,592,582
Madras	20	630,000	65,264	65,264
Trichinopoly	5,169	1,498,851	1,498,851	1,615,338
Tanjore	8,625	1,128,730	3,487,765	4,469,442
Madras	7,658	1,185,411	1,750,791	2,401,495

The E. Ghauts intersect the prov. in a N.E. or N. direction throughout its whole extent N. of lat. 11° 20', dividing it into the Upper and Lower Carnatic, or the countries above and below the Ghauts, differing of course greatly in elevation and proportionally in climate. The principal rivers, the Pennar, Palaur, Cavery, and Vagah or Vaygaroo, all rise in the table-land above the Ghauts, and fall into the ocean on the Coromandel, or E. coast of India. The climate of the Lower Carnatic is one of the hottest in the peninsula, though in the immediate neighbourhood of the coast it is sometimes mitigated by sea-breezes; that of the Upper Carnatic is similar to that of Mysore. The primitive rocks of this region are chiefly sienite, with a small proportion of felspar, and all the soil of the prov. appears to consist of the debris of disintegrated sienite mountains. Near the sea, sand and loam prevail upon the surface, sparingly intermixed with the remains of marine animals. Elsewhere, according to circumstances, loam is more or less prevalent, mixed with various proportions of gravel and sand, strongly impregnated with iron, and containing frequently large quantities of soda and common salt, which effloresce upon the surface in dry weather. Near Madras the soil is heavy, and abounds with salt: thence to Vellore, and in many other parts, it is so sterile as to nourish only the common bread tree (*Melia azadirachta*), the *Robinia mitis*, &c. Rice is the principal crop in the low country; in the highlands all kinds of small grains are cultivated. Sugar is grown only in small quantities, the soil not being rich enough for the canes. Tobacco and a little indigo are cultivated; but the latter is not for exportation. The cotton raised is chiefly of the dwarf kind (*Gossypium herbaceum*). Irrigation being here generally of extreme importance to the success of the crops, numerous and extensive tanks have been constructed in such districts as are not traversed by considerable rivers. Famines and scarcities are not unfrequent in this part of India. The farms are mostly tilled by Sudras. During the first few years after our acquisition of the Carnatic, the land revenue of extensive tracts was rented out to a set of middle-men or temporary zemindars, who undertook certain parts to the heads of villages. That this system was not without its defects, is certain; and partly in the view of obviating these, and partly in order to secure a greater amount of revenue, the *ryotwar* system has been generally introduced. The principle of this system is to supersede all middle-men and head farmers, and to bring the collectors into immediate contact with the *ryots*, or cultivators, who are directly assessed with such a rent as it is supposed the land will bear: the more prosperous persons in a village being at the same time compelled to make up for the deficiencies of their less fortunate neighbours, and the assessment is perpetually varying. Notwithstanding our respect for the able men by whom this system has been recommended, it is not going too far to say, that it is a curse upon the country, and that till it be abolished, or very materially modified, nothing but impoverishment need be looked for. Most of the pop. are Hindoos of the Bramminical sect; there are comparatively few Mohammedans, and Hindoo customs are retained in wonderful purity throughout the prov. Madras, Pondicherry, Tranquebar, Tanjore, Arcot, Dindigul, &c., are the chief cities and towns. Formerly there were a vast number of strong hill forts; but most of them are now crumbling into ruin. Few provs. exhibit so many large temples and other public monuments of former civilisation and wealth: the temples are all built on a uniform plan, and inclosed within a four-sided wall, 15 or 20 ft. high.

The Moors first invaded the Carnatic in 1810, but it was not finally in their possession till the reign of Au-

ringrebe. In 1717, it was severed, with the Mogul territories in the Deccan, from the throne of Delhi. After the wars, which lasted with little intermission throughout a great part of the 18th century, the Carnatic was conquered by the British in 1763; but it was not finally ceded to us till 1801. (*Hamilton's E. I. Gaz.* 1.359-364; *Madras Almanac*.)

CARNIOLA. (See CARINTHIA and CARNIOLA.)

CARNWATH, a village of Scotland, E. part of Lanarkshire, 25 m. S. W. Edinburgh. It has of late been greatly increased and improved; the numerous new houses that have been erected are handsome, and built according to a definite plan; and manufacturing industry has been introduced. The inhab. amount to about 960, "the great body of whom are employed in weaving, and dependent on Glasgow for employment." (*New Statist. Acc. of Scot.*) But the par. is not less important than the town, containing, as it does, rich and apparently inexhaustible fields of coal, limestone, and iron-stone. The Wilson-town iron-works were commenced in 1780-81; and, in 1807, the monthly pay of the workmen employed was not less than 3,000*l.* Owing, however, to the enormous barraments into which the company (the Messrs. Wilson) fell, the works, after languishing some years, entirely stopped in 1812, and continued suspended till 1821, when, having passed into other hands, they were revived, and have ever since been in operation, though not to the former extent. The following extract from the *New Statist. Account* contains ample information respecting the busy villages by which Carnwath is surrounded, and which have sprung into existence within the last 50 years: "Newbigging contains a population of 200, entirely weavers; Brachead, a mixed population of 120, weavers and labourers; Forth 300, chiefly miners, as being close upon Wilsontown; and Wilsontown 400, miners and labourers of all kinds belonging to the works." Here is a plain new church, a dissenting chapel, a parochial and other schools, and a subscription library.

CAROLINA (LA), a town of Spain, prov. Jaen, 35 m. N. N. E. Jaen, lat. 38° 18' N., long. 4° 35' W. Pop. 2,800. This is the town of the foreign colonies settled in the Sierra Morena in the reign of Charles III. The district where they are established was previously a desert, and abandoned to banditti; but Don Pablo de Olavido, who then held a high office in the government of Seville, conceived the design of colonising the Sierra with foreigners, who should support themselves by their own labour. Most of the settlers were Germans, and each received 500,000 sq. ft. of land, free from rent for 10 years, and after that to be subject to tithes only. With each allotment the government gave, also, 10 cows, 1 ass, 2 pigs, 2 fowls, and seed for the land, with a house and a bakehouse. The settler was restrained from disposing of the land to any one in possession of another lot, but was to be entitled to another equal grant on bringing the first into cultivation. But notwithstanding these and other advantages, the scheme has not been very successful. The funds assigned to carry it into operation were not regular, and the government was in too much haste to draw a revenue from the new pop. to reimburse itself for the first advances. Still the people present a striking contrast to the villagers in most other parts of Spain, being comparatively industrious and active. Corn, pasture, potatoes, and cabbages, are raised in the spots best suited to them. The cottages are of better construction than the cabins of the Spanish peasantry, and have most necessary articles of household furniture; and their inhab., instead of sitting wrapped up in cloaks in a state of stupid apathy, are all busy with something or other. They have assimilated themselves in language and religion with their neighbours: there are 58 of these townships. (*Inglaterra*, ii. 28. c. seq.; *Milano*.)

CAROLINA (NORTH), a marit. state of the N. American Union, between 33° 50' and 36° 30' N. lat., and 76° 30' and 84° 20' W. long.; having N. Virginia, W. Tennessee, S. W. and S. Georgia and S. Carolina, and S. E. and E. the Atlantic Ocean, E. to W., 430 m., average breadth 118 m. Area 51,000 sq. m. Pop. (1830) 737,987, of whom 245,601 were slaves. The greater part of the coast is fenced by a line of long, low, narrow, sandy isls., separated from the mainland in some places by narrow sounds, in others by broad gulphs or lagoons. The passages between them are mostly shallow and dangerous, and Ocracoke Inlet is the only one N. of Cape Fear, through which even small vessels can pass. The shores of the isl. are generally regular and unbroken, while that of the mainland is deeply indented by numerous inlets, the principal of which are Albemarle and Pamlico sounds. The only harbour of any importance is formed by the estuary of Cape Fear river, near the S. extremity of the state, and has 18 ft. water.

The surface may be classed under three divisions—the low level, nilly, and mountainous country. The low country comprises nearly all the E. half of the state, and for 80 or 80 m. inland consists of a dead flat, intersected with swamps and marshes, the most extensive of which, Alligator Swamp, more than 50 m. long, by 30 broad,

occupies the peninsula formed by Albemarle and Pamlico sounds. The swamps are mostly covered with a luxuriant vegetation, and have extensive forests, chiefly of pine, cedar, and cypress trees. Beyond this region, the surface swells into hills, and in the most W. part rises into mountains. These belong to the Appalachian chain, which here rises to an elevation of 3,000 ft. They form two principal ranges, the most W. called the Iron Mountains, and the more E. the Blue Ridge; the intermediate valleys are estimated at about 1,000 ft. above the level of the Atlantic.

Most of the rivers in this state have more or less a S. E. course, and flow directly into the Atlantic. The principal are the Roanoke, Neuse, and Cape Fear rivers. The latter is the only one wholly within the state; it is navigable for small vessels to Fayetteville, 130 m. from its mouth. The Neuse, which opens by a wide estuary into Pamlico Sound, traverses the centre of the state, and is navigable for boats in most parts of its course. The Roanoke enters the state from the N., and flows into Albemarle Sound, after a course about 270 m. It can be ascended by vessels of considerable tonnage for about 30 m. from its mouth, and by small craft to 70 m. higher.

The climate varies according to elevation; a difference of more than 6° Fahr. exists in the annual mean temp. of the E. and W. extremities of the state. In the low country, the summer is sultry, and pestilential diseases prevail; elsewhere it is very healthy, and the winters often severe.

Soil In the plains for the most part sandy and sterile. In the hilly country also there are some pine barrens; but these are less extensive than in Virginia, &c. Along the banks of the rivers, and W. of the mountains, there are lands of a rich black mould and of great fertility. The forests of the interior contain oak, hickory, maple, ash, cypress, cedar, black walnut, &c. Apples, pears, strawberries, the fig tree, vine (*Vitis vinifera*), wild vine, &c., attain perfection: the cherry-trees grow to an immense size, and peaches thrive every where. Snake-root, sarsaparilla, and other valuable drugs are found. Cotton and rice are staples. Large quantities of the former are raised on the sandy isls., and in the low country; rice is cultivated principally on the more solid tracts, interspersed amongst the swamps. All kinds of European grain, pulse, and flax are produced in the interior; and a great deal of pitch, tar, turpentine, and lumber are obtained from the pine forests. Maize thrives well; but the wheat is generally of inferior quality. The leaves of the canes, with which many of the lower lands are overgrown, afford good fodder for the cattle during the winter. Hogs are the most numerous of the domestic animals. The wolf and wild cat are almost the only formidable wild quadrupeds. Wild turkeys are plentiful. The Roanoke and other rivers abound with large fish. Alligators of an enormous size infest the swamps and lower courses of the rivers; and snakes, including the rattlesnake, are numerous.

The portion of N. Carolina lying along the E. declivity of the Appalachians contains the principal portion of what is called the gold district of the U. States. The metal is partly obtained from mines and partly from washings: at one time it promised to be of considerable importance, gold to the amount of 475,000 dollars being supplied to the national mint by this state in 1833; but it has since progressively declined, and in 1838 only furnished 66,000 dollars. Iron of excellent quality is plentiful, and coal and lead have recently been discovered.

Cotton factories are rapidly springing up, but with few exceptions are confined to the spinning of coarse yarn. In consequence of its want of harbours, N. Carolina has little direct foreign trade, and nearly all its commerce is with the neighbouring states. Its principal exports are cotton, rice, tobacco, lumber in vast quantities, tar, pitch, turpentine, wheat, and Indian corn. There are several canals, but none of any great extent. Only two railroads lie wholly within this state; the Raleigh and Gaston, and the Wilmington and Raleigh. Both were expected to be completed in 1838. Their length is nearly 360 m., and the cost of their construction was estimated at about 2,500,000 dol. Others intersect the N. portion of the state, and several railway companies have been either incorporated, or projected. In 1837 N. Carolina had 3 banks, and 7 branch banks, with a united capital of 2,525,000 dol. This state is divided into 62 counties. Raleigh is the cap.; the other chief towns being Fayetteville, Wilmington, and Newbern.

The legislative power is vested in a senate and a house of representatives. Both are elected annually by the people, each co. sending 1 mem. to the senate, and 2 to the H. of R. Electors of senators must possess 50 acres of freehold property; but the right to elect mems. of the H. of R. belongs to all freemen above the age of 21. The executive power is in the hands of a governor, assisted by a council of 7 mems., chosen by a joint vote of the two houses. The state sends 13 representatives to Congress.

N. Carolina is divided into six circuits, in each of

which a circuit court is held half yearly. The judges are appointed by a joint vote of the two houses, and hold office during pleasure. The number of the militia in 1838 was upwards of 65,000. Education is rather backward, but advancing. There is a university, and academies are established at various places. An act passed in 1839 will, it is believed, occasion the establishment of a common school in every district: unluckily, however, the schools have hitherto been open only to whites. The earliest attempts made by the English to colonise America took place in this state; but the first colony, planted on the Roanoke river, in 1587, is supposed to have been cut off by the natives. In 1550 fresh settlements began to be made, and in 1687, the colony obtained a representative government. In 1717 Carolina was brought under the direct control of the crown, and in 1730 divided into N. and S. This state zealously joined in the revolutionary struggle. (*Darby's View of U. S.; Mitchell's U. S.; American Almanac for 1840; Stuart's Three Years in America, &c.*)

CAROLINA (SOUTH), one of the U. States of America, in the S. part of the Union; chiefly between lat. 32° and 35° N., and long. 78° 40' and 83° W., having N. and N.E. N. Carolina; E. and S.E. the Atlantic; and S.W. Georgia, from which it is separated by the Savannah. Shape somewhat triangular. Length, N.W. to S.E., 240 m.; average breadth 130 m. Area about 31,000 sq. m. Pop. (1820), 502,741; (1830), 681,185; of whom 314,401 were slaves. Surface very different in different parts; but its changes are, for the most part, gradual. The whole coast S. of Winyaw Point is broken into a number of low islands, and is flat, sandy, and alluvial. It continues so for nearly 100 m. inland, where a range of small and sterile sand hills stretches across the state N.E. to S.W. This tract is succeeded by a picturesque country of hills and valleys, clothed with extensive forests; and farther W. the country continues to rise till, at the border of the state, it terminates in a table-land, some peaks of which are estimated to rise to more than 4,300 ft. above the level of the Atlantic. This region forms part of the Appalachian, or Alleghany chain. The coast has several excellent harbours of the second class; but few of the first order. Those of Charleston and Port Royal are the best, and the only ones accessible for large ships. The chief rivers are the Savannah, Santee, and Pedee; but all of them are shallow at their mouths: further inland, the river navigation is much better than on the coast. The Savannah may be ascended by small river craft, and steam-boats, as far as Augusta, 130 m. from its mouth. Much of the soil consists of a swampy land, applied to the culture of cotton and rice; more of the latter being produced in S. Carolina than in any of the other states. The low sandy islands along the coast, though apparently of very little value, furnish what is called the "sea-land" cotton, being the very best description of cotton that is any where produced. It is longer in the staple than any other variety, and is strong and even, of a silky texture, and a yellowish tinge. It degenerates if it be attempted to be raised at any considerable distance from the shore. It brings a much higher price than any other sort of cotton: but as it can be raised only in certain localities, its quantity is limited, and, apparently, unsuceptible of increase. The export of Sea-land cotton from the U. States—that is, from S. Carolina and Georgia—during the year ended 30th Sept. 1838, amounted to 7,286,240 lbs. Short-stapled cotton is raised in the more inland parts of the country; and wheat, maize, and other grain, as well as tobacco and indigo, are grown upon the high lands. There are many pine barrens, and some unproductive sandy wastes; but the soil is generally extremely fertile, especially in those tracts lying along the courses of the rivers. In the lower parts of the country the winters are very mild, and snow does not long remain. Hurricanes and heavy dew, and pestilential fevers and other diseases are then generated. The N. and W. parts of the state are, on the contrary, reckoned very healthy; frost and snow occur annually, from Nov. to Jan. The changes of temperature are, however, every where very sudden; and at Charleston the thermometer has been known to vary 46° in a day! The forests yield large quantities of oak, beech, hickory, ash, cypress, and other fine timber. Cotton, rice, and maize are the only considerable articles of export. The swamps on the banks of the rivers are well adapted for hemp, corn, and indigo. The culture of wheat, barley, oats, and Indian corn was, until lately, much neglected; and large quantities were annually imported. Tobacco is now more generally cultivated than indigo, which was formerly next in importance to cotton and rice; the sugar-cane is chiefly confined to the district of Beaufort in the S. Field labour is performed entirely by slaves, who, in the low country, comprise more than three fourths of the pop. Planters and farmers generally wealthy, hospitable, and charitable; the former lead somewhat luxurious lives; but the latter are of frugal and industrious habits. Wild animals, such as bears, wolves, foxes, wild cats, &c., are much scarcer than formerly. The rattlesnake has become rare. Alligators, of large size, infest the marshes and mouths of the rivers. Iron of good quality, is found; and some gold has been found in the sands of some of the rivers: the latter, however, is not so plentiful as in either N. Carolina or Georgia; and the quantity, which latterly has been decreasing, only amounted, in 1838, to 13,000 dollars. The value of the domestic produce exported during the year ending 30th Sept. 1837, was 11,138,992 dollars. The value of the imports, which consist chiefly of manufactured goods and wines, amounted, in the above year, to 2,510,860 dollars. The state is divided into 80 counties. Columbia, situated near the centre, is the cap. and seat of government; but Charleston is the largest town, and the principal emporium. The other chief towns are Savannah, Augusta, Camden, and Beaufort. The state contained, in 1837, 10 banks, with a united capital of 8,636,118 dollars. The establishment of free schools throughout S. Carolina, commenced in 1811; and the sum appropriated annually for this purpose is usually from 37,000 to 38,000 dollars. According to a report made in 1835, there were 749 free schools, which afforded instruction to 8,718 pupils. The state college, the state is at Columbia. (Respecting this and others, see art. COLUMBIA and CHARLESTON.) The S. Carolina railroad, from Charleston to Hamburg, on the Savannah road, 150 m. in length, was completed in 1833, and others are in progress. The state government consists of a senate and house of representatives; the executive power is vested in a governor and Lieutenant-governor, who are both elected for 2 years, and are again eligible for office after a lapse of 4 years. The senate consists of 45 members; half of whom are chosen for 4, and the other half for 2 years. The house of representatives is composed of 134 members, chosen every 2 years. The legislative assembly meet annually at Columbia. The chancellors and judges are chosen by ballot of the senate and house of representatives; and hold office so long as their conduct is approved. This state sends 9 mems. to the H. of representatives, and 2 to the senate in congress. S. Carolina was first colonised about 1670; but no permanent settlement was formed till the foundation of Charleston, in 1680. In 1695, the cultivation of rice, and subsequently of cotton, were introduced by Governor Smith. The 2 Carolinas were separated, and a royal government established in 1719; and the state continued prosperous until the beginning of the disturbances, caused first by Indian warfare, and afterwards by the revolution, in which it took a prominent part, and suffered severely. Its constitution was formed in 1790; but has undergone several amendments in 1801, 1816, and, as regards judicial matters, again in 1835. (*American Almanac, 1837-38-39.; Darby's View of the U. States; American Encyclopedia; Mitchell's U. States; Stuart's Three Years in N. America, p. 40-51.*)

CARPATHIAN MOUNTAINS.

CARORA, an inland town of Venezuela, prov. Coro, in a dry and sterile plain, 94 m. S.S.W. Coro; lat. 10° 13' N., long. 70° 26' W. Pop. 6,000? It is well built and contains three handsome churches and a convent: its climate, though hot, is salubrious; it is supplied with water by a small rivulet. Its vicinity abounds with the Indian gins, aromatic balsams, gums, &c., and excellent cochineal; but these resources are neglected for the breeding of cattle, which occupies many of the inhab. The town has manufactures of leather, and of hammocks from the fibre of the *agave-fetida*; the inhab. are industrious, and have a brisk trade in the products of their industry with Coro, Maracaybo, and Cartagena. Most of the inhabitants are Mestizoes, Mulattoes, and Indians. (*Geog. Account of Colombia, l. 136, 137; Mod. Trav. xxvii. 213, 214, &c.*)

CARPATIAN MOUNTAINS, a very considerable range, enclosing Hungary on the N. and E., covering the principality of Transylvania, and forming the N.E. portion of the great mountain system of S. Europe. Including a lower range, called Kleine Carpathian (Little Carpathians), these mountains commence on the left bank of the Danube, in the neighbourhood of Presburg; lat. 48° 8' N., long. 17° 6' E.; thence they run N.E. to the borders of Sillesia, where, in lat. 49° 30' N., long. 18° 30' E., they meet the mountains of Moravia, through which they are connected with the Sudetes and other Bohemian ranges. After this they bend round to the E. and S.E., separating Hungary from Galicia and the Buckowine, and Transylvania from Moldavia: they continue the last course as far as lat. 45° 30' N., long. 26° 30' E., where the main ridge turns due W., and forms the boundary between Transylvania and Wallachia. Finally, about the long. of 28° E., it turns S.W., and again meets the Danube at the town of New Orsova, lat. 44° 44' N., long. 22° 30' E. Between its extreme points, therefore, the Carpathian system describes a curve of about 800 m., and, except at its S.E. corner, one of a very regular and gradual kind. Its width is various, but generally considerable; the largest

line that can be drawn across it, in a direction perpendicular to its course, is from Boksan, in the Banat, N.E., through Transylvania, to Puttna in the Bukowine, about 240 m. From the great S. bend of the Danube at Walseen, or from Mount Matra (about 35 m. E. of the bend) to the neighbourhood of the Vistula, the mountains measure 140 m. from S. to N.; but towards the N.E., between the Upper Theiss and the sources of the Dniester in Galicia, they are not more than 70 m.; and on the W., between the rivers Waag and Morava, they are less than 30 m. across. At a rough calculation, they may be said to cover 90,000 sq. m. With regard to elevation, the Carpathians do not attain the height of other great ranges, as the Caucasus, or the Alps; the highest measured peaks being under 9,000 ft. The highest ascertained eminences are in the county of Zips, the most N. part of the chain, between the meridians of 19° and 21°; and among these, the following are the most noted:—

Lomnitz Peak	-	-	8,779
Great Keskard ditto	-	-	8,647
Great Krivan Ridge	-	-	8,482
Gold mine on ditto	-	-	7,093
White Sea Peak	-	-	7,075
Limestone rocks, above the Fleisch Bank	-	-	6,529
Fleisch Bank	-	-	6,307
Kohlback	-	-	6,207
Orun See (Green Lake)	-	-	5,191
Brook at foot of the Fleisch Bank	-	-	4,999

The lower peaks, and subordinate ranges, vary from 2,000 or 3,000 to a few hundred feet in elevation. But if height be not, ruggedness is a very striking feature of the Carpathians: the roads among them are generally difficult, sometimes impracticable for horses; and the whole effect of their appearance is one of great majesty. The descent towards Galicia is much more abrupt than that towards Hungary, and in the S.E. and S. the steepest sides of the mountains are towards Moldavia and Wallachia. The rivers, which mark the limits of the Carpathian system, are, on the N., the Vistula, as far as its junction with its most important affluent the San, and the Dniester; on the E. the Sereth; on the S. the Danube, from the mouth of the Sereth to that of the Morava, which marks the extreme limit of the mountains towards the W. Within these bounds, however, are contained a large quantity of flat land in Galicia and Wallachia, together with the greater part of the Hungarian plain; on the other hand, the bed of the Danube at Orsova is nothing but a cleft between the Carpathians and the N. branches of the Balkans, and at Walseen, in like manner, it can scarcely be said to break the continuity of the former with the offshoots of the Styrian Alps. (*Townson's Trav. in Hung., passim*; *Born's Trav. in Banat and Transyl., passim*; *Clark's Trav. II. 557*, &c.; *Bright's Trav. in Lower Hung.* p. 101. &c.; *Korabinsky's and Bright's Maps*.)

Geology.—The most ancient rocks are found only on the highest parts of the Carpathians, and not always there (*Born*, p. 202.); one of the highest ridges in the Alpine country of Zips consisting of calcareous limestone. (*Townson*, p. 248.) Granite, however, forms the substratum, or rather the main bulk and nucleus of the whole mass, and sometimes, even at slight elevations, lies at no great depth. Hornblende in small quantities, gneiss in much larger, and trap very considerably distributed, form the mass of the other older rocks; but the formation most worthy of notice is a kind of conglomerate, formed of hardened clay, quartz, spar, and lithomarga, which, from its richness in ore, has obtained in Hungary the title of *Metallic Rock*, and which is met with most abundantly throughout the whole range, from Bessarabia to the mountains of Italy. Limestone, old and recent, occurs in immense quantities, and in the Alpine regions, Townson found stratified rocks of the first kind, of the amazing thickness of 2,100 ft. (*Trav.* p. 355.) Basalt, porphyry, porphyritic basalt, jasper, petrosilex, lava, obsidian, and a whole host of substances, volcanic, and the result of aqueous deposition, are scattered in the wildest confusion among the lower ranges, giving unquestionable evidence of the extensive agency of both fire and water, but so little defined, that the best observers decline to offer an opinion as to the origin of many of the appearances. (*Born*, p. 202—214. *et pass.*; *Townson*, pp. 275—303. *et pass.*) It is worthy of observation that the more recent formations, as sandstone, &c., observable in other countries, are singularly scarce in the Carpathians. (*Born*, pp. 206, 211. &c.)

Hydrography.—These mountains form the dividing line between important river systems. The N. faces give birth to the Vistula and Dniester, but with these exceptions, no river that reaches the sea has its source within them. The affluents of these two, from the N. slope, are, however, extremely numerous, though not comparable to those that pour from the S. and E. faces, to swell the stream of the Danube, to which river, also,

the drainage of the N.W. face is conveyed, with the exception of an insignificant portion, which finds its way to the Oder. The running water of the Carpathians belongs, then, to two systems, the Black Sea and the Baltic; and there are no lands better irrigated than those over which it flows; the Theiss, Maros, Aluta, and many others, would be called important rivers in most parts of the world, and the smaller streams and sub-tributaries are absolutely innumerable. (*See DANIUS, VISTULA, DNIESTER, HUNGARY, &c.*)

Mineral Productions.—The sides of the Carpathians are rich in the productions of the vegetable kingdom, and abound in animals of the most useful kind. The decomposed volcanic matter, which forms so large a portion of the soil, accounts for the first, and consequently for the second of these results. The particulars of both will be, however, better treated of under the heads of the different countries through which the mountains run. (*See HUNGARY, TRANSYLVANIA, GALICIA, &c.*) It is intended here to restrict ourselves to a brief account of their mineral wealth, in which respect they stand pre-eminent among the various ranges of Europe. Nearly every metal, and all in abundance, are produced in the Carpathians. The richer mines of Transylvania and the Banat yield for 1 cwt. of ore 125 oz. of gold, and 68 oz. of silver (*Born*, p. 102.), and all the mountains of these beautiful countries are full of signs of undiscovered metals. It appears, however, that native gold and silver is scarce, except in the S.E. districts, but all the other ores are mixed with these precious metals throughout the whole range. (*Born*, pp. 215, 217.) Clark says (II. 674.) that the stamping-works at Schemnitz employ 1,000 hammers, each hammer stamping three quintals of ore per day; the return averaging 12,000 forins per month, clear profit to the government. It would be endless to go through a detail of all the wealth of these mountains; suffice it to say, that copper, iron, lead, cobalt, antimony, sulphur, and saltpetre, are found in large quantities; cinabar also appears, but not in sufficient abundance to tempt the miner; and in many places there are large fields of Rock-salt or Rock-nalk in the immediate neighbourhood of these mountains. The Polish mines of Galicia have long been famous, and from all appearances, their treasures are actually inexhaustible. In a word, the Carpathians appear to be an extensive mine, where nearly all the varieties of metallic wealth are produced; in addition to which, their recesses yield the opal, one of the noblest and most valuable of gems. (*Born*, pp. 99, 178. *et pass.*; *Townson*, pp. 305—310, 375—391. *et pass.*; *Clark*, II. 556—578.; *Bright*, pp. 146—182.)

Name.—The Carpathians were known to the ancients, and by their present name, *Karpavus* (*Ptolemy*, II. 5.); and they applied the same name to that part of the Mediterranean which lies about the island of Rhodes. (*Ptolemy*, v. 2.; *Strabo*, x. 488.) Its etymology is not very clear; but Strabo, in speaking of the sea, calls it also Crapathian (*Kēpavēn*); and though it be not very easy to connect the ideas of these mountains with that of the remote shore of Asia Minor, it is something remarkable that the German term for the former is *Krapack*, of which the Greek of Strabo seems only a softened form. The Hungarian name for these mountains is *Tatara*.

CARPENTARIA (GULFA or), an extensive arm of the sea, deeply indenting the N. coast of New Holland, between 10° 40' and 17° 30' S. lat., and 157° and 142° E. long. No settlements have, as yet, been founded on its coasts.

CARPENTRAS, a city of France, dép. Vaucluse, cap. arrond., in an agreeable situation, at the foot of Mont Ventoux, and on the left bank of the Auzon, 15 m. N.E. Avignon; lat. 44° 3' 28" N., long. 5° 2' 43" E. Pop. 2,520. The town is surrounded by high walls in good repair, flanked by several towers, the most remarkable is that surmounting the *port d'Orange*. It is well built, but the streets are narrow, winding, and the suburbs. There are some good houses without the walls. It is well supplied with fountains, and water is conveyed into the city by two aqueducts, one constructed by Clement V., and one by the town, in the early part of last century. The principal public buildings are the hospital, erected in 1757, without the walls; the cathedral, a large Gothic pile, with a spire of the age of Charlemagne; the magnificent palace, now the palace of justice; contiguous to the latter is an ancient triumphal arch. There is also a public washing-house, theatre, &c. It is the seat of a tribunal of primary jurisdiction, and has a departmental college, a Jewish synagogue, a society of rural economy, a public library, with 22,000 vols., and some valuable manuscripts. It has distilleries, dye-works, tanneries, and madder-mills, with fabrics of soap and aquafortis; and has a considerable trade in silk, madder, and excellent fruits.

Carpentras is very ancient, having been, under the Romans, a principal town of Gallia Narbonensis. It was successively attacked and pillaged by the Vandals,

Lombards, Saracens, and other barbarians. During the residence of the popes at Avignon, it began to revive; and was, for a short period, under Clement V., the seat of the holy see. The bishopric of Carpentras, said to have been founded in the 3d, was suppressed in the course of the present century. (*Hugo, art. Faucluse, Dict. Géog. &c.*)

CARRARA, a town of the duchy of Massa, on the Lavenza, about 34 m. from the Mediterranean, and 60 m. W. N. W. Florence. Pop. 6,000. It has an unfinished cathedral, several churches, a convent, and an academy of sculpture. Several artists have fixed their residence here, attracted by the convenience of obtaining marble almost cost free; and the sale of rude marble and of articles of sculpture forms an important branch of traffic.

The marble quarries from which this town derives its entire celebrity and importance, have been wrought from the age of Augustus, and probably from a still more remote epoch. They are found in the lower ridges of the hills which unite in the Monte Sagro. The beds of the dove-coloured (*berzoglio*) marble are the nearest to the town. Higher up the valley are the beds of white marble. Only a few of these beds produce marble of such a grain and transparency as to be highly prized by the statuary; and if the quarries succeed in obtaining one block in ten that preserves throughout a good colour, they are satisfied. Still higher up, the marble becomes of a dull, dead colour; but of this much larger blocks may be obtained. The principal quarries of veined marble are in a parallel valley. Notwithstanding the vast quantities that have been dug up since these quarries began to be wrought, the supply of marble in this district seems to be now as inexhaustible as ever. About 1,200 men are, or lately were, employed in the quarries. It is pretty certain, however, that the demand for Carrara marble would be much greater were it not for the heavy duty imposed on its export. This has led to the opening of rival quarries at Seravezza and in other parts of Italy. (*Conder's Italy*, ii. 45; *Simond's Italy*, p. 576; *Bowring's Report on the Statistics of Tuscany*, &c. p. 53.)

CARRIBEEAN SEA is the name given to that arm of the Atlantic Ocean included between the Carribee Islands on the E., Hayti and Jamaica on the N., Guatimala on the W., and the N. coast of S. America on the S.

CARRIBEE ISLANDS, or LESSER ANTILLES, the name sometimes given to that portion of the W. Indies that includes the vast chain of islands which extends, in a circular sweep, from Anguilla on the N. to Trinidad on the S. They comprise the whole of the Windward and the more S. portion of the Leeward Islands. The principal islands, reckoning from the N., are, St. Christopher, Antigua, Guadeloupe, Dominica, Martinique, St. Lucia, Barbadoes, St. Vincent, Grenada, Tobago, and Trinidad. They derived their name from having been mostly occupied, at the period of their discovery, by a tribe of Indians, called Carribs or Caribbees, now nearly extinct. The reader will find an excellent account of the Carribs in Edward's *Hist. of the W. Indies*, book i. cap. 2.

CARRICKFERGUS, a parl. bor. and sea-port of Ireland, co. Antrim, prov. Ulster, on Carrickfergus Bay, or Belfast Lough, 55 m. N. Dublin, 9 m. N.N.E. Belfast. Pop. in 1821, 8,023; in 1831, 8,698; and in 1834, 8,860; of whom 1,387 were of the established church, 6,499 Protestant dissenters, and 974 Roman Catholics. The castle, on a rock projecting into the sea, was built or much strengthened by the English shortly after their first landing in Ireland under Strongbow. King William landed here on the 14th of June 1690, 16 days previously to the battle of the Boyne. In 1760, it surrendered to a French naval force under Thurot, who soon after evacuated it on the appearance of the English squadron under Commodore Elliot, by which Thurot's squadron was captured, after an engagement in which he lost his life. On the 24th of April, 1778, Paul Jones captured the Drake sloop of war in the bay; but called off without making any hostile attempt on the town.

Carrickfergus consists of the town within the walls, parts of which still remain; and of suburbs on the E. and W. sides, called the Scotch and Irish quarters. It is pretty well built, and has a respectable, though antiquated appearance; it is not lighted, and is but indifferently supplied with water. The church, a large cruciform building, with a fine modern spire, has, in one of the transepts, a large mural monument of the Donegal family; there is also a Roman Catholic chapel, and places of worship for Presbyterians, Independents, Methodists, Quakers, and Unitarians. The castle, kept up as a fortress and magazine, has a number of heavy guns mounted on the walls, and is garrisoned by a company of foot. The town and the adjoining district, containing 16,700 acres, forms a co. independent of that of Antrim, within which it is enclosed on every side, except towards the sea. By its ruling charter, granted by James I. in 1613, who also, in 1622, granted it a charter of the staple, the corporation consists of a mayor, sheriffs, 16 aldermen, 23 burgesses, and an indefinite number of

freemen, who were classed in 8 guilds, now kept up only in form. It returned 2 mem. to the Irish H. of C.; and sends 1 mem. to the Imperial H. of C. Registered electors, in 1838-39, 1,431. The mayor, as admiral of the liberties, has jurisdiction along the coast, from Fairhead, co. Antrim, to Beerlomas, co. Down. The assizes for co. Antrim are held here in the court-house in the county prison, a large and expensive, but ill-arranged building. There is a small local police. The rural district is watered by numerous streams, and in it is Lough Mourne, covering 90 acres, at an elevation of 556 ft. above the level of the sea. Tanning is carried on to a considerable extent; a distillery paid duty in 1836 for 15,482 gallons of whiskey. There were in the town, in 1839, 2 cotton-mills, and 1 flax ditto; the former employing 256, and the latter 113 hands. The inhab. derive their principal support from the concourse of strangers at the assizes, and during the bathing season; and from the fisheries. Excepting haddock, all kinds of fish that frequent the Irish coast are abundant; as are oysters celebrated for their size and flavour, scallops and lobsters. A pier has been lately built for the use of the fishermen; but it is defective, in not being accessible at low water. The greater part of the fish is sent by land to Belfast for sale. Markets are held in an antiquated market-house on Saturdays; fairs on 12th May and 1st November. A branch of the Northern Bank was opened in 1836. Post-office revenue in 1830, 3277; in 1836, 4257. Two *caravans*, conveying 10 passengers each, and 10 cars, with four passengers each, ply daily to Belfast; and two coaches, with 10 passengers each, daily to Larne. The port was long the chief mart on this part of the coast; but in 1687, the corporation having sold its exclusive privileges to the crown, the business has since been almost wholly transferred to Belfast; its trade being, at present, confined to the import of coal, and the export of cattle and grain. Shipping in 1835, 3,200 tons. The largest vessels may enter the bay at low water, but are prevented from discharging at the town, through the want of a landing-pier with sufficient depth of water. The appearance and manners of the inhab. exhibit striking indications of their Scotch descent. The lower class are industrious, frugal, and honest. Though wealthy residents are not numerous, many are in a state of respectable independence; most industrious persons attain the means of comfortable subsistence, and very few are in a state of destitution. (*McSkimin's Carrickfergus; Stat. Surv.; Fishery Rep.; Railway Rep.*)

CARRICKMACROSS, an inh. town of Ireland, co. Monaghan, prov. Ulster, 46 m. N.W. by N. Dublin. Pop. in 1821, 1,641; in 1831, 2,979. It consists of one long street, in which is the church, a R. Cath. chapel, which serves as the cathedral for the R. Cath. bishop of Clogher, and a Presbyterian meeting-house. A grammar-school, endowed by Lord Weymouth, is now (1838) being rebuilt. There is also a dispensary, a mendicity society, a savings' bank, and a bridewell. Petty sessions are held every fortnight; a party of the constabulary is stationed here. There is a tanyard, a brewery, and a distillery; which last paid duty, in 1836, on 168,509 gallons of spirits; duty was also paid on 14,964 bushels of malt. Markets are held on Thursdays, and on corn on Wednesdays and Saturdays; fairs on 27 May, 10 July, 27 Sept., 9 Nov., and 10 Dec. Post-office revenue in 1830, 3982; in 1836, 4717. The mail-coach from Dublin to Londonderry passes through the town; and a mail-car, carrying at an average 2 passengers each trip, plies daily to Dundalk. (*Stat. Survey; Railway Rep.*)

CARRICK-ON-SHANNON, an inh. town of Ireland, prov. Connaught, cos. Leitrim and Roscommon, on the Shannon, 85 m. W. N. W. Dublin. Pop. in 1821, 1,673; in 1830, 1,428. Pop. of par. 17,063; of which, 2,091 are of the estab. church, and 15,002 R. Cath. It lies principally on the Leitrim bank of the river, being connected with a small suburb on the Roscommon side by a bridge, and has a new church, a R. Cath. chapel, 2 Methodist meeting-houses, and a co. infirmary and dispensary. It was incorporated by James I. in 1613, under a provost, 12 burgesses, and an unlimited number of freemen; and returned 2 mem. to the Irish H. of C.; but was disfranchised at the Union. The assizes for the co. Leitrim, of which it is the co. town, are held here, as are general sessions, in Jan. and July, and petty sessions on alternate Mondays. The co. court-house, gaol, and bridewell, are in the town. A party of the constabulary is stationed here; and it has an infantry barracks. A great trade in butter, grain, and provisions, is carried on by the Shannon, now rendered navigable to Lough Allen. Yarn is also manufactured. Markets are held on Thursdays, in an enclosed marketplace; and fairs on 18 Jan., 20 Mar., 12 May, 6 June, 11 Aug., 14 Sept., 22 Oct., 21 Nov., and 16 Dec. Post-office revenue in 1830, 3554; in 1836, 8117. The mail-coach from Dublin to Sligo passes through the town; and a mail car plies daily to Cashcarrig, conveying, at an average, 2 passengers every trip. (*Stat. Surv.; Railway Rep.*)

CARRICK-ON-SUIR, an incl. town of Ireland, prov. Munster, cos. Tipperary and Waterford, on the Suir, 85m. S.W. by S. Dublin. Pop. (1821) 7,466; (1831) 9,626; being almost wholly R. Cath. The town, situate at the S.E. extremity of the Golden Vale, and near the junction of the cos. Tipperary, Kilkenny, and Waterford, consists of an open area surrounded with houses, and a long street leading to a bridge across the river, connecting it with the suburb of Carrick-frog, formerly C. murgiffin, in co. Waterford. It has a par. church, a R. Cath. chapel, an abbey, a nunnery, a fever hospital and dispensary, an almshouse, and the ruins of the castle built by an ancestor of the Earl of Ormonde. Some traces of the town walls are still visible. The woollen manufacture was carried on under the auspices of the Ormonde family till the close of last century; but all traces of it have now disappeared, and the labouring pop. are very poor and miserable. Tanning and brewing are still carried on; duty was paid in 1836 for 13,941 bushels of malt; and there is a considerable trade in grain and provisions. Large vessels come up the Suir to Miltown, about 4 m. lower down, whence their cargoes are conveyed to the town by lighters. A local act, lately passed, authorises river improvements, which, if effected, will enable vessels of larger tonnage to discharge at the town. Petty sessions are held every fortnight. A party of the constabulary is stationed here. Markets are held on Saturdays; fairs on the first Thursday of every month. A branch of the National Bank was opened in 1838. The post-office revenue in 1830 was £134, and, in 1836, 716. By a grant of William III. the par. is exempted from co. rates. A mail-coach and a car, from Waterford to Ilmerick, pass daily through the town; as do cars from the former city to Clonmel and Thurles: a car, plying 6 days in the week, from the town to Kilkenny, carries, at an average, 3 passengers every trip. (*Mason's Paroch. Survey; Railway Rep.*)

CARRON, a village of Scotland, celebrated for its iron-works, co. Fife, 2 m. N.E. of Kirkcaldy, on the Carron, a stream which falls into the Firth of Forth at Grangemouth. The iron-works were first set on foot in 1760. The Carron company, which is chartered, had an original capital of 50,000. sterl., divided into 600 shares; but that is understood to have been greatly augmented since its formation. In addition to the periodical dividends, "there is an accumulating undivided capital of landed, mineral, and other fixed property, with a large stock of materials and implements" for carrying on the works. (*Nimmo's Hist. of Strathgairn*, edit. 1817, p. 721.) The Carron iron-works were long the most extensive in Scotland, and were for a while, perhaps, the most extensive in Britain; but they are now far surpassed by similar establishments in Scotland, such as those of Gartsherrie, Calder, and Clyde, and by vast numbers in England. The works are employed in the smelting of iron ore, and the manufacture of all kinds of cast-iron goods, whether for civil or warlike purposes. But they were chiefly celebrated during the late French war, for the manufacture of cannon, mortars, howitzers, carrouades, (so called after Carron, where they were first made), bombs, and such like warlike instruments. Since the peace, this branch of business has been well nigh annihilated, except for the supply of a limited foreign demand. These pieces of ordnance, after being cast and bored, are proved by water forced into the chamber by a powerful compressing machine,—a method more esteemed than the old powder-proof. (*Ib.* p. 721.) The consumption of coal in the works is about 200 tons per day. The company convey their goods to Liverpool and London (at both of which they have warehouses), and other places, in their own vessels, which vary from 15 to 20 in number. The Forth and Clyde canal runs within a 4 m. of the works, so that the access to both seas is most convenient. The company have cut a canal from the interior of the works down to the Carron Wharf at Grangemouth, 3 m. dist., on which lighters ply and carry their goods for shipment at the latter place. The supply of water is abundant, derived partly from the river, and partly from artificial reservoirs, which cover about 250 acres of ground. The whole people employed in the works, mines, and pits, or otherwise by the company, is, on an average, about 2,500.

CARTAGENA, or **CARTHAGO**, a marit. city of New Granada, and the chief naval arsenal of that repub., cap. prov. of same name, on a sandy peninsula in the Caribbean Sea, connected with the continent by a narrow neck of land, 410 m. N. Bogota; lat. 10° 26' N., long. 75° 34' W. Pop. 18,000? It has, on its E. side, a suburb called Ximant, standing on an island, and almost as large as the city itself, with which it communicates by a wooden bridge. Both the city and its suburb are surrounded by strong fortifications, and at a short distance from them on the mainland they are overlooked by a strong fort placed on an eminence about 160 ft. high. These works are, however, commanded by a contiguous hill, rising to the height of 550 ft. above the sea, and which, instead of a fortification, has on its summit an Augustine monas-

tery! The possession of this hill has several times led to the capture of the city.

Cartagena is famous for its port, one of the largest and best on the N. coast of S. America. It lies to the S. of the town, between the peninsula on which it is built and the island of Tierra-Bomba, and the mainland. The anchoring ground is excellent; and, being completely landlocked, vessels lie in it as if in dock. It had originally two entrances,—the *Boca Grande*, close to the city, and the *Boca Chica* (narrow passage), several miles farther S. The former, however, was blocked up by the Spaniards, subsequently to Adm. Vernon's attempt upon the place in 1741, by sinking several ships in the channel. The *Boca Chica* is defended by two strong castles. Cartagena contains a handsome cathedral, several other churches, convents, &c., and some fine public cisterns. The city and its suburbs are well laid out; streets regular, and well paved; houses mostly of stone, and of one story above the ground floor, with balconies in front, and lattices instead of windows. A recent French traveller, speaking of the town, observes that it presents a melancholy aspect with its long galleries, short and clumsy columns, and streets darkened by projecting terraces, &c.; but he admits that, how singular soever the construction of the houses, they appear to be well contrived for supplying the indispensable luxury of fresh air. The great drawback upon the place is its climate, which is intensely hot. It is not unfrequently visited by the yellow fever, and is beset with tormenting and destructive insects. The importance of Cartagena has greatly declined of late years; but it is still the principal dépot for the goods of Bogota, Popayan, and Quito, and has a considerable foreign trade. Its artisans are ingenious, and excel in the manufacture of shell articles. The packet boats between Colombia, the U. States, and Europe, sail from this place. In 1837 the value of the specie and bullion exported is supposed to have amounted to about 340,000, and that of ordinary merchandise to about 20,000. (*Revue de l'Économie Publique*, viii. 335.) Cartagena was founded in 1533, and was long considered as the great bulwark of the Spanish possessions in S. America. It was taken by a Corsican pirate in 1544, by Sir F. Drake in 1583, and by the French in 1697. Under the Spaniards, it was a bishopric, and the seat of a captain-general, and of one of the three tribunals of the Inquisition in America. It is still the residence of a bishop. (*Geog. Account of Colombia*; *Mod. Trav.* xviii. 282—288.)

CARTHAGO, or **CARTHAGO**, an incl. town of New Granada, prov. Popayan, on the left bank of the Vieja, a little before its junction with the Cauca, 163 m. N.N.E. Popayan; lat. 4° 45' N., long. 76° 8' W. Pop. 5,500. It has a handsome appearance, and contains a cathedral, two parish churches, and a Lancastrian school. Its trade is chiefly in cattle, dried beef, furin, cacao, and tobacco. Its whole district is rich in mineral products: its climate is hot and dry, but healthy. (*Mod. Trav.* xviii. &c.)

CARTHAGE (Lat. *Carthago*, Gr. *Καρχηδών*), a famous marit. city, long the rival of Rome, with which she waged a long and desperate war, and at last perished for the empire of the world, situated on the N. shore of Africa, in the immediate neighbourhood of Tunis. But such is the mutability of human affairs, and so complete the destruction that has overtaken this celebrated city, *dives opum, studiisque asperima belli*, that even her position has been matter of dispute among the learned!

Glacé l'ait Carthage, e a pema i segai
De l'ait se ruine il lido serba i

But the plans of M. Falbe seem to have put to rest all doubts as to the situation of Carthage; and, combined with the learned and elaborate dissertation of Bureau de la Malle, give not only a satisfactory explanation of the form and situation of the city, but of all that can be ascertained respecting it from the most careful examination and comparison of ancient authors. Referring such of our readers as may wish for full information as to this interesting subject to the sources now mentioned, we shall content ourselves with stating that Carthage was principally built along the coast of the peninsula to the N.E. of Tunis, from a little N. of the goletta or entrance of the lagoon of Tunis to Cape Carthage (lat. 36° 51' 30" N., long. 10° 26' 45" E.), and then round to Cape Quamart. It was defended on the land side, where it was most open to attack, by a triple line of walls of great height and thickness, flanked by towers, that stretched across the peninsula from the lagoon of Tunis to the sea on the N. The harbour lay to the S. of Cape Carthage, and was entered from what is now the Gulph of Tunis. Having less to fear from attacks by sea than by land, the city had on that side only a single wall.

At the period of its greatest splendour Carthage must have been one of the richest and finest cities of the ancient world. It consisted of three principal divisions, viz. the *Byrsa*, or citadel, built on an eminence, the summit of which was occupied by a magnificent temple in honour of Æsculapius; and it also contained the fa-

which the Carthaginians had trained and accustomed to that mode of life, could be treated as subjects, properly so called; for the nomadic tribes were subject to Carthage only so far that they paid her tribute; and their hatred of those who disturbed their aboriginal mode of life, fomented as it was by the oppressions of the Carthaginian government, frequently broke out in revolt when the approach of an enemy gave the signal. But the Carthaginians appear to have attached less importance to their possessions in Africa than in other parts. At an early period they became masters of Sardinia, the Balearic Islands, and Malta. We have already noticed their vigorous and long-continued efforts to make themselves masters of Sicily; and had they succeeded in this, the foundations of their power would probably, as Heeren supposes, have been established on a solid basis. The failure of their efforts to effect the conquest of Sicily, and the loss of Sardinia, that was taken from them by the Romans, seem to have impelled them to attempt the subjugation of the entire Spanish peninsula. They had also several settlements along the W. coast of Africa; and it is probable, though not certain, that Madeira and the Canary Islands (*Fortunate Insule*) were included in their dominions.

The commercial operations of Carthage embraced the whole ancient world, and have only been surpassed by those of Europe since the discovery of America and the passage to the East Indies by the Cape of Good Hope. But the greatest difference of opinion exists as to the extent to which the Carthaginians carried their maritime expeditions; and while some geographers restrict their limits between the S. coast of Britain on the N. and Cape Bojador on the S., others contend that they reached the coasts of the Scandinavian peninsula, circumnavigated Africa, and even visited the shores of the New World! We have elsewhere seen (*ant.*, p. 24.) that it is probable, from the statement of Herodotus, that the circumnavigation of Africa was really performed by Phœnician mariners; but there is no ground whatever for supposing that it was ever performed by the Carthaginians, or that they ever approached the shores of America. The only really authentic information, as to their navigation, is embodied in the account of the voyage of Hanno along the W. coast of Africa; and it is so very difficult to identify the localities mentioned in it, that critics assign to it a length of 3,000, and others of not more than 700 miles.

The merit of being the first who, in modern times, drew attention to the *land trade* of the Carthaginians belongs to Heeren, whose researches have placed the connection of Carthage with the central nations of Africa in a clear and striking light. We have already, however, adverted to this interesting subject, and must refer those wishing for more comprehensive details to Heeren's work. It is sufficient here to remark that the internal trade of Africa seems to be alike unchanged and unchangeable. The countries to the S. of the great desert of Sahara are destitute of two most important articles, salt and dates, which abound in the countries N. of the Sahara; while, on the other hand, the S. countries have ample supplies of gold dust, ivory, drugs, gums, and slaves, all articles in great demand along the Mediterranean. Here are the wants and materials that go to form an extensive and mutually beneficial intercourse; and the oases found in the desert, and the camel furnish the means of carrying it on. It is, in fact, carried on at this moment by caravans, nearly in the same manner that it was carried on by the Carthaginians and negroes 2,500 years ago; and the probability is that it will continue in time to come to flow in the same channels. (*See ant.*, p. 31.) It is impossible to enumerate the various articles of Carthaginian traffic, seeing that they most probably included the commodities of every known country and climate. The exports from Carthage consisted chiefly of articles of native produce, and of those procured by its *land trade* from the interior of the continent. She freighted her ships with the wines of Italy, Sicily, and Sardinia, and carried these articles to Cyrene, the Balearic Islands, and W. Africa. She carried on a large trade in oils and other articles, which she sent to Cærne, the "ultima thule" of her African colonies, and received skins, gold, and ivory in exchange. She procured iron from Elba, alum from the Lipari Islands, and tin from the N. of Spain, the Sicily Islands, and Cornwall. The Baltic supplied her with amber; but whether it was procured by sea, or conveyed overland to the head of the Adriatic, and thence imported into Africa, has not been ascertained. From Tyre, with which she always maintained the most friendly relations, she received not only trinkets, glass, pearls, and other ornaments, and Sidonian cloths, the chief branches of the industry of Tyre itself, but cassia and cinnamon, and the other precious spices, which were imported into Tyre from India. Malta, too, supplied her with articles of woollen manufacture equal if not superior to those of Tyre. Her traffic in slaves, which she procured from the interior of Africa and from

Corica, was most important, and formed a large source of revenue. So abundant were slaves, that during the second Punic war, Asdrubal is said to have purchased 5,000 at a time. The commercial policy of the Carthaginians has been said to be of a peculiarly grasping, jealous, and selfish character; but it is not entitled to any such distinction, and really differed in very few respects from that of most other commercial nations. Her object was, in as far as possible, to monopolise the trade of the world; and in this view she practised most of the favourite schemes and devices of the mercantile system. The privilege of trading was vested exclusively in the citizens (in contradistinction to the slaves or foreigners of Carthage); no commodities were suffered to be exported or imported except in Carthaginian vessels; the trade of her colonies was restricted to the mother city; and the ships of the foreign nations with whom she had entered into commercial treaties were absolutely excluded from her harbours; but this regulation appears to have been dictated more by political than commercial jealousy.

But though Carthage was from the first a trading city, it would be wrong to regard the Carthaginians as a mere nation of merchants. On the contrary, it is sufficiently proved that they found leisure for many other pursuits, among which agriculture held a prominent place. This science, in its widest range, was so well discussed by them in their writings, that the Romans considered them worthy of translation. No where, indeed, was agriculture better understood, or practised with more zeal, than in Carthage; and most families were in the habit of applying the produce of their commerce to the cultivation and improvement of the soil. All accounts concur in assigning a high state of cultivation to the neighbourhood of Carthage. "The territory," says Diodorus Siculus (ii. 41.), "through which Agathocles led his army was covered with gardens and large plantations, every where intersected with canals, by which they were plentifully watered. A continual succession of landed estates was there seen adorned with elegant buildings, which evinced the opulence of their owners. Vineyards, olive-grounds, and meadows spread on every side; and the whole region was thickly studded with the country seats of the wealthy citizens of Carthage and the other towns in its vicinity."

Revenue.—Our information on this subject is, unfortunately, extremely meagre; but there is little doubt that the revenues of Carthage were more considerable than those of any state of antiquity. They were derived from three sources; the *tribute*, levied on the subject and confederate states; the *customs*, and the *mines*. To what extent tribute was levied in time of peace is unknown; but examples are not wanting to prove that, in cases of urgency, the tributary nations were very heavily taxed. It is a curious fact, that the contributions paid by the allied states and the cities along the African coast were in money, and by all the other tributaries in kind. The *customs* were levied with great rigour both in Carthage and in all her colonial ports; and in later times they became so important that they are said to have supplied all the wants of the state without the imposition of any other tax. The *mines* formed an important source of revenue: in working these all the inventions which ingenuity and industry could suggest were rendered available. The most considerable mines were situated in the neighbourhood of Carthage Nova in Spain; they gave employment to 60,000 slaves, and yielded about 50,000 drachms daily. At first they belonged entirely to the state; but we afterwards find them in possession of some of the great families, who worked them on their own account. What use the Carthaginians made of the great quantity of precious metals which they procured from the mines, cannot be ascertained with certainty. The circumstance that no Carthaginian coin has been handed down to us will scarcely warrant the belief of no coined money was ever struck in Carthage; and though it be true that many, and indeed the most important, expenses of the state were not paid in money, it is highly improbable that a city, whose colonies confessedly coined money, should herself be without a coinage.*

These were the ordinary revenues of the state; but in cases of emergency, the Carthaginians resorted to other means of recruiting their exhausted treasuries, either by procuring foreign loans, by legalising piracy, or by the imposition of a property tax, which should press more heavily on the rich than the poor. But with regard to all that concerns the administration of the revenue, we are still in the dark; though it has been said that one of the pentarchies above mentioned, with a magistrate at its head, formed a board for its management.

* A singular circumstance connected with this branch of the history of Carthage is the contrivance which they made use of in their colonies, nearly answering the purpose of our paper-money, or bank notes. It consisted of a small piece of leather, stamped by the state, upon which a fictitious value was bestowed, and which could be exchanged at pleasure for the precious metals.

Naval and Military Forces.—To maintain the sovereignty of the sea, the chief source of her prosperity, and to protect her commercial marine, as well as to extend her conquests and preserve them, rendered the formation and support of vast fleets and armies indispensable. The ordinary number of ships or galleys of war possessed by Carthage, at the period immediately preceding the Punic wars was from 160 to 200. It was increased in the first Punic war, when their naval power appeared to have attained its highest pitch; and in the fatal naval engagement by which Rome opened its way to Africa, the Carthaginian fleet consisted of 350 galleys with (but this is no doubt exaggerated) 150,000 men, exclusive of transports. Their war-ships were manned partly by fighting men and partly by rowers; the latter of whom consisted entirely of slaves bought by the state for this particular purpose, and amounting, even in time of peace, to 80,000. But though the genius and position of Carthage naturally led the citizens to regard the navy as their main bulwark, the wars of conquest in which the republic was perpetually engaged, and the maintenance of its foreign possessions, obliged it to keep large armies continually in the field. These were composed almost entirely of mercenaries, collected from every part of the world, and exhibiting every diversity of blood, complexion, tongue, garb, and weapon: "*Exercitus mistus ex colluvione omnium gentium quibus non lex, non mos, non lingua communis*"; (*Livy*, 28. 12.) Hordes of half-naked Libyans stood side by side with bands of white-robed Iberians; wild Ligurians were arrayed with far-travelled Nazamones and Lotophagi; Carthaginians and Phœnician Africans formed the centre or main army; Balearic slingers formed the advanced guard; and lines of colossal elephants, with their Ethiopian drivers, preceded their march like a front of movable fortresses; but the main strength of their army consisted in its light cavalry, which was provided in abundance by the nomadic tribes which flanked their dominions. All these tribes, including the Masseyri and the Mauriati, the Numidians, the nomadic races of the Syrtis, the Nazamones and Lotophagi, were accustomed to serve in the Carthaginian armies, and receive their pay. The heavy cavalry were formed from Carthaginian, Libyan, Spanish, and in later times Gallic, levies. In cases of emergency the Carthaginians could raise an army of 40,000 from the citizens alone, besides the battalion called "the sacred legion," which consisted entirely of the *élite* of the Carthaginian nobles, and amounted, even in time of peace, to 2,500 men.

Language, Literature, Religion, &c.—The destruction of the Carthaginian realm, which would otherwise have thrown a flood of light, not only on the history of Carthage, but on that of the numerous nations with which she came in contact; must be considered as one of the greatest losses the civilised world has sustained. It has, no doubt, been usual to regard the Carthaginians as wholly immersed in commercial pursuits, and thence to infer that their attainments in literature and the arts must have been very inconsiderable. But there is not so much as the shadow of a foundation for this opinion. So far from commercial pursuits being unfavourable to literature and the fine arts, their effect is distinctly and completely the reverse. The experience of Athens and Corinth in antiquity, of the Italian republics in the middle ages, and of England in modern times, is conclusive as to their humanising influence. Had the literature of the Carthaginians survived the wreck of their empire, we believe it would have been found to be at least as valuable intrinsically as that of Rome, and less exotic. It is worthy of notice that they began their career under the most favourable circumstances. Their descent from the Tyrians, confessedly one of the most civilised nations of antiquity, gave them, as it were, an almost intuitive knowledge of many of the most useful and ornamental arts and sciences, and placed at once within their reach all those means and contrivances which both facilitate the prosecution of commercial undertakings, and extend the boundaries of civilisation. Surely then it may be reasonably inferred, even in the absence of all monuments of genius, that the rich legacy of their ancestors, increased as it must have been by the intercourse they carried on for seven centuries with the most renowned nations of antiquity, and by the researches and inquiries which their wealth afforded the means of prosecuting, must have produced, in the end, a vast accumulation of science and literature. But, like the city itself, nothing remains of all this. The only traces of the language of Carthage are to be found in a comedy of Plautus, from which it is clear that, like the Phœnicians, it formed a branch of the original Asiatic languages, bearing a strong resemblance to the Hebrew, Syriac, and Chaldeic, with a slight admixture of purely Libyan idioms and phraseology. The voyage of Hanno, and a few other fragments, are known to us only through the medium of translations.

Like all colonies, they brought with them the religion of their fathers; but the authentic information respect-

ing it is very limited indeed; and the learned disquisitions of Bochart, Vossius, and Munter, on this subject, have little other foundation than the ingenuity of their authors. It appears, however, that, like the religion of most other Asiatic nations, it was chiefly directed to the worship of the supposed intelligences of the celestial luminaries, and those of the elements. The chief of these were Melcarthus or Baal, the Chronicle of the Greeks, the Saturn of the Romans, and probably, from the sanguinary rites offered to him, the Moloch of Scripture, and Ashtaroth or Astarté, the goddess of the moon, whom the Greeks identified with their Hera or Juno. The Carthaginians endeavoured, in periods of extreme public calamity, to avert the wrath of the offended deities by offering up some of the noblest children of the state in sacrifice to Saturn; but in less urgent circumstances the children of slaves were the usual victims, and even their immolation was of rare occurrence. It does credit to Gelon, tyrant or king of Syracuse, that, having defeated the Carthaginians in a great battle (anno 480 B. C.), he made it a condition of the peace which he granted to them, that they should abolish these sacrifices. But we are not to judge of the civilisation of the Carthaginians by these horrid rites, distinct traces of which may be found in the religious worship of most nations of antiquity. It is rather to be regarded as one of those deplorable exhibitions of superstition and fanaticism which have, under other circumstances, lighted the *auto da fe* of Madrid, and the fires of Smithfield. Of the other Phœnician deities worshipped at Carthage little can be collected. We know, however, that they were by no means bigoted in their attachment to their Phœnician deities; but as their intercourse with other nations extended, frequently introduced the worship of foreign gods.

In conclusion, we may again observe, that the Roman writers, who, while they admit the skill, address, and industry of the Carthaginians, have depreciated all their moral qualities, are authorities on which no reliance can be placed. The lengthened prosperity and great power of Carthage are, in fact, a sufficient refutation of their calumnies. "*Nec tantum Carthago habuisset opus: sexcentis ferè annis, sine consiliis et disciplina*," is the unwilling admission of Cicero. The Romans, it should be remembered, despised that commerce and industry of which their rivals were the successful cultivators, holding them to be employments unworthy of freemen, and fit only for slaves and the very dregs of the populace; and in extenuation of their misrepresentations and anti-Punic prejudices, it may be observed, that they knew only the worst part of Carthage, that is, her seamen and soldiers. These, as already seen, consisted of slaves and recruits from all parts of the world, allured to her standards by the prospect of pay and plunder, and held together only by a severe system of discipline. The fact of their performing so many great actions with such materials sets the abilities of the Carthaginian admirals and generals in a very striking point of view. The campaigns of Hannibal, even had his troops consisted wholly of native citizens, and each had felt that the fate of his country depended on his exertions, would have placed him on a level with the most renowned generals of his age. But, however, he was into account the quality of his troops, and the difficulties he had to contend with in a foreign country, depending mainly on his own resources, and thwarted by faction and jealousy at home, his achievements appear almost miraculous, and place him above all the commanders of antiquity, and perhaps also of modern times.

The last struggle of Carthage was not unworthy of her ancient reputation, and of the great men she had produced. The conduct of the Romans on this occasion was most treacherous and base. They now practised that bad faith (*Pessima fides*) and contempt of engagements of which they had gratuitously accused the Carthaginians, to an extent and with a shamelessness of which history has happily but few examples. But though betrayed on all hands, deceived, without allies, and all but defenceless, Carthage made a brave defence; and all that she had that was brave and really illustrious fell with her fall.

The Romans having glutted their vengeance and quieted their fears by the total destruction of Carthage (A. C. 146), it remained for a while in ruins. But about 30 years after its fall, Cæsar Gracchus, by order of the senate, carried a colony to Carthage, the first that was founded beyond the limits of Italy. Julius Cæsar, on his return from Africa, settled in it some of his troops and a number of colonists collected from the adjoining country. During the early ages of the Christian era it was regarded as the capital of Africa. It fell under the dominion of the Vandals A. D. 419; and under that of the Saracens in 698. Under the latter its destruction was again effected; and so completely that it is now *proprie non agnoscitur vestigia*.

CARTHAGENA, or CARTAGENA (an. *Carthago Nova*), a fortified city and celebrated sea-port of Spain, prov. Murcia, on the Mediterranean, 17 m. W. of Palos, and 33 m. S.E. Murcia; lat. 37° 33' N.

long. 19° 0' 11" W. Pop. 59,550. It occupies the declivity of a hill and a small plain extending to the harbour. It has several pretty good streets and houses, with numerous churches, convents, an arsenal and park of artillery, and a royal hospital of great extent. The W. division of the city is occupied by the naval arsenal, with docks for building men-of-war, and a fine rectangular basin, in which the ships are moored during the time they are being rigged. Adjoining to the arsenal is the *bagne*, or prison for lodging criminals employed on the public works. It has also a founding hospital, a school of mathematics and navigation, an observatory, theatre, circus, &c. The harbour, which is one of the best in the Mediterranean, consists of a circular basin, opening to the S., and having the city at its N. extremity. It has deep water throughout; is protected from every wind by the surrounding heights, and by an islet at its entrance; and is, as well as the city, strongly fortified. The excellence of the harbour gave rise to the common saying among the Mediterranean sailors, that there are but three good ports—the months of June and July, and the harbour of Carthage. This has always been the grand rendezvous of the Spanish fleets in the Mediterranean, and large sums have been expended on its naval establishments; but these are now in a state of decay; many houses in the city are also unoccupied; and it has an impoverished, deserted appearance. The pop. is stated by Mr. Townsend to have amounted, in 1787, to 60,000; whereas, according to Milano's statement, given above, it is now under half that amount. Cables and cordage of the *ceparto* rush, and canvass, used to be largely manufactured here, and large quantities of barilla, with corn, wine, oil, &c. were formerly exported. Its trade, however, has declined quite as much as its naval establishments. A valuable fishery is carried on in the port and the adjoining sea.

This city was founded or occupied by the Carthaginians, who made it the capital of their possessions on the E. coast of Spain. It was taken by the Romans, anno 208 u.c., at which period it is said by Livy to have been next to Rome, one of the richest cities in the world. Its importance in modern times dates from the reign of Philip II. (*Milano*; *Townsend*, iii. 121., &c.)

CARUPANO, a town of Venezuela, pleasantly situated in the immediate neighbourhood of Carliaco; prov. Cumana. Pop. 8,000. It has some trade, especially in horses and mules.

CASALE, an incl. town of N. Italy, king. Sardinia, div. Turin, cap. prov. of the same name, in a fertile plain, on the Po, 37 m. E. by N. Turin. Pop. 16,000. It was formerly considered one of the strongest fortresses in Europe, but its ramparts have been converted into public walks, and it is at present defended only by an old castle, once the residence of the marquises of Montferrat. It has a cathedral, several churches with fine paintings, numerous palaces, and handsome private residences, several convents, hospital, and charitable institutions, a college, public library, theatre, corn magazine, and many silk filatures. It is the residence of the provincial governor, and is the seat of a bishop, and of the prov. court of justice. It originated in the 4th century. (*Rampoldi*, *Corog.*; *Dict. Géographique*.)

CASAL-MAGGIORE, a town of Austrian Italy, deleg. Cremona, cap. distr., on the Po, 22 m. S.E. by E. Cremona, and 21 m. S.W. Mantua. Pop. about 4,300. It has manufactures of glass, earthenware, and cream of tartar; with distilleries, tanneries, and numerous mills. It contains a superior and other schools, an hospital, orphan asylum, almshouse, *monte-di-pietà*, and other charitable establishments, and a theatre. Its origin is uncertain, but it existed in the 6th century. It is very liable to suffer from inundations of the Po; by one of which, in 1705, it was laid under water. (*Rampoldi*; *Oesterl.*, *Nat. Encycl.*)

CASALE-NUOVO, the name of several small towns in Calabria and other provs. of Naples. The largest of these towns is situated in Calabria Ultra I., 12 m. E. Palmi, and has 4,000 inhab. This town, in common with most others in the same district, was almost totally destroyed by the dreadful earthquake of 1773; and to guard against the effects of a similar catastrophe in future, the houses are now all low, and of wood. Swinburne says that the people of this place are noted for their taste for *dog's flesh*; and that any cur that should follow its master into this *knutaphagic* town would have little chance of escape! (*Craven's Calabria*, p. 214.; *Swinburne*, i. 220., &c. ed.)

CASERTA, a town of Naples, cap. prov. Terra-Lavoro, in an agreeable plain, 16 m. N.N.E. Naples. Pop. 5,000? The town is irregularly built, but has several churches, a convent of noble ladies, a *monte-di-pietà*, an hospital, a military school, and superb barracks. But the pride of Caserta consists in its royal palace, begun in 1734, from the design of the architect Vauvill. It is of vast extent; the two principal fronts being each 70 ft. in length, and containing 3 stories of 37 windows each. The portico, which divides the internal

space into 4 courts, is truly magnificent, as is the staircase leading to the apartments. The vast dimensions of the latter; the bold span of their ceilings; the excellence and beauty of the materials employed in building; and the strength of the masonry, claim the admiration of all beholders. The park is of vast extent, as are the gardens, supplied with water, brought from a great distance by a noble aqueduct. A silk manufacture has been established in buildings attached to the palace, which produces very rich and fine stuffs. (*Swinburne's Two Sicilies*, ii. 84.; *Siniani*, p. 436.)

CASHGAR, a city of Persia, prov. Irak, in a stony plain, ill supplied with water, 56 m. N. by W. Isfahan; lat. 33° 58' N., long. 51° 17' E. Pop. 30,000. It is one of the most thriving towns in Persia, and is indebted for its prosperity to its extensive manufactures of silk, carpets, and copper wares. The khg has a hunting-seat and garden about 3 m. from the town, at the foot of the mountains. (*Olivier*, v. 169.)

CASHEL, an incl. city and parl. bor. of Ireland, prov. Munster, co. Tipperary, 86 m. S.W. Dublin. Pop. in 1821, 5,374; in 1836, 6,971. The city was the residence of the kings of Munster, and in 1143 was made an archbishopric. But by the late act for reducing the number of bishoprics in Ireland, Cashel, on the demise of the present prelate, will cease to be an archbishopric, and it has already been united with the bishopric of Waterford. The town is irregularly built, and, with the exception of the main street, and of one or two others, the houses are mean, and exhibit every appearance of poverty. Its supply of water is very scanty. The cathedral and the R. Cath. chapel are modern and spacious edifices. Here is also a convent of nuns and a Methodist meeting-house. The archbishop's late palace (he has gone to reside at Waterford), a large and well-built mansion, has attached to it a small library, and is surrounded by an extensive pleasure-ground. There is also an infirmary, market and court houses, a well-arranged bride-well, and infantry barracks. The place contains many very interesting relics of antiquity. On the rock of Cashel, which rises precipitously over the city, are the ruins of Cormac Mc-Cullinan's chapel, built in the ninth century, and presenting a fine specimen of ancient Saxon architecture; also the ancient cathedral, in the pointed Gothic style, the castle, and a pillar tower, all within an enclosed area, commanding an extensive prospect of the surrounding fertile district. There are some other monastic ruins in the city and its vicinity. The corporation, under a charter of Charles I., in 1639, consists of a mayor, 17 aldermen, 2 bailiffs, and an unlimited number of freemen. It returned 2 mem. to the Irish 11. of C., and sends 1 mem. to the imperial 11. of C. Previously to the Reform Act, the right of election was vested in the mayor, bailiffs, aldermen, and 6 freemen. The boundaries of the present parl. bor. extend over 3,974 acres. Registered electors (1837-38) 289. The corporation estates comprise 3,278 acres. There are no manufactures of any consequence. During the corn season, there is a great traffic on the line through the city, from Thurles to Clonmel. A distillery paid duty, in 1836, for 50,784 gallons of whiskey; duty was also paid on 1,195 bushels of malt. Markets on Wednesdays and Saturdays; fairs on 26th March, 7th August, and the third Tuesday in every month. A branch of the National Bank was opened here in 1835. Post-office revenue in 1830, 683*l.*; in 1836, 843*l.* A mail-car from Dublin to Cork passes through the city, and cars from Clonmel to Roscrea and Thurles; a car plies between the city and Tipperary 6 days in the week, carrying at an average, 2 passengers each trip. (*Railway Rep.*)

CASHGAR or **KASHIGHAR**, a considerable city of Chinese Turkestan or Tartary, of which it was formerly the capital, and the furthest W. place of note in the Chinese empire, on the W. side of a mountain, in which several streams have their sources, on one of which the city is placed, 140 m. N.W. Yarkund, and 2,260 m. W. by S. Pekin; lat. 39° 38' N., long. 73° 58' E. Pop. said to be about 16,000, exclusive of a garrison of 8,000 Chinese troops. It is surrounded by a wall of earth, entered by 4 gates, and is divided into two portions,—the Mohammedan and Chinese city. The Chinese governor and troops occupy a citadel. Cashgar was much more flourishing and populous before a rebellion which broke out here in 1816. (*Burnes's Bokhara*, iii. 192.) Most of the inhab. are Mohammedans, and speak a dialect probably of Turkish origin; but there are some Nestorians. (*Ritter*.) The upper classes are opulent, luxurious, and extravagant; the artisans ingenious in working gold and Jasper, in dyeing, and in producing cotton manufactures. There is a weekly market, especially celebrated for horses. Cashgar has a large trade with Bokhara, to which it sends a great deal of inferior tea, porcelain, Chinese silks, raw silk, rhubarb, &c., and from which it receives Russian and other merchandise, including woven cloth, coral, pearls, cochineal, cloth of gold, velvets, gold and silver wire, ploughshares, mirrors, needles, Russian nankeen,

&c. The whole of this trade amounted before the rebellion to 700 or 800 camel-loads yearly. The intercourse with Koken is conducted by means of horses; but it is very small, owing to hostile feelings between the Chinese and the inhab. of that khanat. The trade with the country to the N.E. and the Russian town of Semipolinsk is brisk, as well as that with Yarkund. Cashgar was a celebrated commercial city before the Christian era. Under the names of Sule, Chage, &c., it is spoken of by Ptolemy, Ebn-Haukal, and many subsequent authors. Its territory is extensive, well watered, fertile in corn, rich fruits, the vine, cotton, flax, and hemp, and contains numerous considerable towns. Under several dynasties it formed an independent kingdom. The Chinese possessed themselves of it about 80 years since. (Ritter, *Asien Erskunde*, vii. 422, 490.; Klaproth, *Mémoires*, &c.; *Calcutta Journal*, iv. 555.; Burnes; *Elphinstone*.)

CASHMERE (an. *Cashpura*), a prov. of N. Hindostan, dom. of the maharajah of the Punjab; consisting of the upper valley of the Jhylum, chiefly between lat. 33° 20' and 34° 30' N., and long. 75° and 76° E., having N.E. the central chain of the Himalaya or Hindoo Koosh, which separates it from Tibet, and on all other sides secondary ranges belonging to that chain, by which it is divided from the rest of Runjeet Singh's territories. Shape, somewhat oval; length, W. N.W. to E. S.E., about 80 m.; breadth of its central plain, varying to 30 m., or, from summit to summit of the opposite mountain chains, 50 to 60 m. Pop. estimated in 1832 at 800,000, but said to be reduced, by war, famine, and disease, to no more than 200,000 in 1836! The Himalaya has here an elevation of from 18,000 to 19,000 ft.; the Pir Panjah, belonging to the opposite chain, is 15,000 ft. above the level of the sea. There are 12 passes into the neighbouring countries; viz., 8 to the Punjab, 1 to the W., and 3 to Tibet; some of these are open the whole year, and two are 13,000 ft. above the sea. Cashmere is copiously watered; a great number of rivulets and mountain torrents from either side unite in the central valley to form the Jhylum, which intersects it in nearly its whole length; many lakes are spread over its surface, the largest of which is nearly 13 m. across. Granite, schist, limestone, gypsum, and slate, are the predominant primitive rocks, and fossil shells have been found in the limestone; good iron is met with in the mountains, and copper and lead are said to exist in Cashmere: the upper soil of the central plain is a rich clay. In some places inflammable gas, which spontaneously ignites, escapes from the ground; and these being reckoned peculiarly holy, temples are built over them. The climate is healthy, except in the rice-grounds in hot weather, and appears to have become milder within a few years, since there are now usually but two or three yards' depth of snow in places where the depth was formerly 10 yards; towards the end of July the thermometer stands at 95° F.; the periodical rains fall only in light showers; but the soil never suffers from drought. The chinar (*Platanus orientalis*) grows to a great size; fir and deciduous forests, walnut-trees, and much jungle, abound on the S. side of the valley; the N. declivities are comparatively bare of trees, but are plentifully covered with grass; European plants in a wild state are common, and fruit-trees numerous, but neither palm, mango, nor orange-trees, are found; roses, lilies, lotus-flowers, and others, are met with in profusion. The elk, and bears of large size, the musk deer, no hares, but plenty of other game, various kinds of serpents, six or seven kinds of fish, and a great variety of insects, are natives of this region. "Nature has done much for Cashmere—art more;" the whole valley is like a nobleman's park; the villages, which are pleasant looking, being surrounded with immense plane, poplar, and fruit-trees, and having between them one sheet of cultivation, "through which the noble river winds itself in elegant sweeps." Different kinds of rice are grown, but they do not arrive at any perfection; wheat, barley, and the other dry grains, are more cultivated, and are said to yield a large return; saffron of excellent quality is planted to a considerable extent, and some of it sent even to Yarkund. In the gardens many kitchen herbs of cold countries are grown; turnips are the only produce yielding two crops a year; the apple, pear, plum, apricot, nut, and an abundance of vines, are raised. The wine of Cashmere resembles Madeira, and acquires with age a superior quality; a spirit is distilled from the grape, which is used freely by all classes. The farm implements in use are of dry inferior; the harrow is used, and the clods are broken with a kind of mallet. Neither indigo nor opium is cultivated; the poppy is grown for the sake of its seeds, which are used as food; 8-10ths of the people eat rape-oil, linseed, or sesamum, instead of ghee or butter. Sheep, which are numerous, are used to carry burdens; the other domestic animals are horses, small, but hardy and sure-footed; and cows, which, though ill-shaped, yield excellent butter and plenty of milk; these are kept on every farm. The principal commercial wealth of Cashmere is derived from its shawl

manufacture, which branch of industry is thought to have originated in this valley. The Cashmere shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth; they are formed of the inner hair of a variety of goat (*Capra hircus*) reared on the cold, dry, table-land of Tibet, from 14,000 to 16,000 ft. above the level of the sea, and which degenerates in any country at a lower elevation. The great mart for the shawl wool is Kilgobet, about 30 days' journey N.E. of Cashmere, whither it is conveyed on the backs of mountain sheep; its colour varies from white to ashy grey; about 3 lbs. are obtained from a single goat yearly; at Kilgobet the best wool fetches about 1 rupee per lb. In Cashmere, after the down has been carefully separated from the hairs, it is repeatedly washed with rice-starch. This process is reckoned important; and it is to the quality of the water of their valley that the Cashmerians attribute the peculiar and inimitable fineness of the fabrics produced there; the thread is always dyed in rice-water. After the shawls are woven, they are softened at a particular spot near the capital, where most of them are washed with *Kritz*, the root of a parasitical plant; soap is used for white shawls only; the border is attached last. The manufacture of a large and rich pair of shawls worth 250*l.* will occupy 15 men for 8 months. Under the rule of the Moguls there is said to have been 40,000 shawl looms; in the time of the Afghan dynasty, when Foster visited Cashmere, this number had been reduced to 16,000; in 1837 there were only about 2,000 looms, and 2 or 3 men employed at each. The manufacture has not, however, degenerated in excellence. Runjeet Singh took a number of shawls in part payment of his revenue from this province, the amount of which varies considerably, according to the caprice of the maharajah; in 1835 he demanded nothing; in 1836 he asked 23 lacs rupees, which the country could not afford to give. Little silk is woven; the chief manufactures, next to shawls, are writing paper, lackered ware, cutlery, and sugar, formerly in much greater quantities than at present.

Cashmere is divided into 36 pergunnahs, and contains 10 towns and 2,300 villages; the chief towns are, Cashmere, the capital; Chupinlan, 3,000 inhab.; Islamabad and Pamur, 2,000 inhab. Each of these has a large emigration, have greatly thinned the population, and rendered many of the villages desert. There are here about 25,000 Brahmins, who are the only Hindoos; they are of a darker colour than the rest of the natives, being descended from a body of colonists from the Deccan. The Cashmerians are a stout, well-formed people, of Hindoo stock, although Mohammedans. Their complexions are what would in France be termed brunette; the women are handsome, prolific, and much sought after by the Mogul nobility of Delhi. The people are brave, active, industrious, lively, and fond of music, literature, and art; but said to be avaricious, cunning, and proverbially false. Their language is a dialect of Sanscrit, but their songs, &c. are in Persian. Independent of its celebrity for romantic beauty, Cashmere has been always regarded as a holy land throughout India, and as such has been continually resorted to by pilgrims. The source of almost every brook is adorned with some Hindoo monument; but nearly all the remaining temples appear to be of Buddhist origin, and by their peculiar shape remind the traveller of those of Ellora. Koran-Pandal, near Islamabad, formerly built of black marble, is one of the finest ruins in India. Abul Fazel enumerates 100 Hindoo kings who reigned in Cashmere previously to the year 742 of the Hegira, subsequently to which the Mohammedans and Tartars successively had possession of it. In 1686 it was conquered by Achar, and Ahmed Shah afterwards annexed it to Caubul. In 1809 the governor asserted his independence; since 1819 Cashmere has belonged to Runjeet Singh. (*Elphinstone's Caubul*, ii. 237-242.; *Hamilton's Hindostan*, and *E. & A. Gaz.*; *Hygel. Vigne, Moorcroft*, &c., in *Journals of Asiatic Soc. of Bengal*.)

CASHMERE, or SERINAGUR, the cap. of the above prov., on the Jhylum, 6,500 ft. above the sea; lat. 33° 23' N., long. 74° 47' E. Pop. (1836) 40,000. It extends for about 3 m. on either side the river, over which there are four or five wooden bridges; in some parts the city is 2 m. in width; streets narrow and exceedingly filthy; houses sometimes three and four stories high, the better sort having fire-places and chimneys, with sloping roofs of wooden frame-work, over which there is a layer of earth, which is found very warm during winter, and in summer is covered with flowers. Except a fortress at its S.E. quarter, formerly the residence of its governor, Cashmere contains no building worthy of remark: covered floating baths are ranged along the bank of the river; on the latter many different kinds of flat-bottomed boats are continually plying, bringing rice, &c. to the city.

The lake of Dal or Cashmere stretches N.E. the city in an oval circuit of 5 or 6 m., and joins the Jhylum by a narrow channel. It has been most celebrated for its

beauties, and contains many small islands, one of which derives its name from the plane-trees, which cover it, besides many floating gardens, in which water-melons and other fruits are cultivated: its banks are adorned with the blue lotus and other flowers in large number. In the plain near the lake, one of the Delhi emperors, probably Shah Jehan, constructed a spacious garden. (*Hamilton's Hindostan*, i. 541, 542; *Hugel and Vigne, in Asiat. Journ.*, Bengal.)

CASOLI, a town of Naples, prov. Abruzzo Citra, cap. cant., on a mountain, 12 m. S. W. of Lanciano. Pop. 5,051. It has several churches, and 2 normal schools.

CASORIA, a town of Naples, cap. distr., 3 m. N.N.E. Naples. Pop. 4,000. It has 4 fine churches; is the residence of a *judge d'instruction*, and the birthplace of Pietro Martino, the celebrated painter.

CASPE, a town of Spain, prov. Aragon, in the angle between and near the confluence of the Guadalupe with the Ebro, 58 m. S.E. Saragosa. Pop. 9,100. It has a castle, a par. church, 5 convents, and 4 hospitals; with manufactures of coarse hats, soap, brandy, and cloth. There are in its vicinity extensive plantations of olive and mulberry trees, that yield abundance of oil and silk; and pastures which feed 30,000 sheep. The town is noted for the congress of the Aragonese, Catalonians, and Valencians, held in it in 1412, to settle the succession to the crown, after the death of Don Martin, king of Aragon, without sons; when Ferdinand, son of John I. king of Castile, was chosen to succeed him. (*Mifano*.)

CASPIAN SEA (the *Mare Hyrcanum* of the ancients) a great salt lake of W. Asia, between 36° 35' and 40° 25' N. lat., and 46° 15' and 56° 10' E. long. It is wholly inclosed, having no outlet whatever to the ocean, and is surrounded by Tartary, Persia, the Caucasian countries, and the Russian governments of Astrakhan and Orenburg. Its direction is from N. by W. to S. by E. to E., but at its N. end it turns due E., terminating in a considerable gulph called Mervul Kultuk, or the Dead Sea. It is here almost 400 m. from E. to W., but in general it is not much more than half that width, and at its narrowest part (about 40° 20' N.) it does not exceed 120 m. across: its greatest length from N. to S. is 700 m., and its area may be estimated at 119,000 or 120,000 sq. m. (*Encyclop. Travels*, i. 344, &c.; *Great Russian Map*, 1800; *Hessel's Gen. View of W. Asia*, pl. 6. 10. 12.; *Arrowsmith's Atlas*.)

The coast of the Caspian is considerably broken, but its gulphs and bays are more remarkable for their number than their size; the most important, after Mervul, is the Balkhan Gulph, or lake, as it is sometimes, though improperly, called, which projects from the main body of the sea, near its S.E. corner, and stretches E. over nearly 20 of long. The others are mostly little more than very large harbours, nearly surrounded by the land; such as Alexander Bay, Karabogaz Lake, Astrabad Gulph, and others on the E. coast; the gulphs of Kazligath, Agrakhan, Kolpich, and others on the W. The S. coast has an almost unbroken line, but the N. is fringed in places, especially towards the W., by a countless number of sandy marshy islands, the shores and positions of which are continually changing. The depth of the Caspian is very variable; on the N. shore there is nowhere more than 12 ft., and usually not more than 5 ft. water; and this extraordinary shallowness continues for more than 90 m. from the land; on the E., W., and S. shores, on the other hand, the depth is sometimes 150 ft.; though here, also, shoal water is far from uncommon. In the middle the bottom has not been reached at a depth of 2,800 ft. From the general result of the soundings it would appear that, in some parts, at least, the bed of the sea descends by terraces; for, on the S.E. coast, the depth lies very regularly between 12 and 15 ft. for some distance from the land, when it suddenly increases to 40 or 50 ft., and then the soundings run in a line, equal in extent, and parallel to, the former one. A similar phenomenon is observed on the N. shore, and in several other parts. (*Geogr. Geog. Phys. and Stat. des Russ.* i. 257—260.; *Gmelin's Reise der N. Russland*, iii. 221. &c.; *Hanway's Travels*, i. 135. 155. 392. &c.)

The basin of this sea is extremely limited on the S., and, at present, on the E. also. On the S. the Elburz mountains press so closely on the water that the fact of their allowing a passage for the wind at one point on the S. W. corner is remarked as a singularity; the roads and passes being generally so impracticable that many lives are annually lost in travelling them, without reckoning those who fall victims to the robber population. (*Hanway*, i. 221—227. &c.) It will be seen that there is good reason to believe the Caspian was formerly much more extended towards the E., but it is now shut in, in that direction, by high cliffs and sand hills close to its shores, beyond which a flat desert, full 90 ft. higher than its present surface, stretches to the shores of Lake Aral. (*Hanway*, i. 123. et seq.; *Pallas's Trav. in S. Russia*, i. 80. &c.) On these sides, therefore, the drainage is insignificant, the Elburz indeed, gives forth a great many streams, but they are all of the nature of mountain for-

rents; and in the dreary desert to the E. scarcely a single rivulet is found between the Attruck, at the S.E. corner, and the Yemba, at the extreme N.E. (*Hanway*, i. 130—138.)

The W. shore presents a singular appearance. As high as 43° of lat. the whole space between this sea and the Euxine is filled by the immense masses of the Caucasus; yet from this region the Caspian receives rivers which have their sources at nearly 300 m. distant from its coast; they flow, however, over high plateaus, and through narrow ravines, apparently cut by their own action, and which are sometimes scarcely wide enough to afford them passage. (*Col. Monteith, Geog. Journ.* iii. 39. et pass.) Col. Monteith believes the narrow bed of the Terek to be the Pils Caspie of the ancients; and it answers exactly, in both description and situation, to the pass which Pliny says (vi. 11—13.) was erroneously so called; but the true Caspian gates were an artificial opening cut through the Elburz mountains on the S. coast. (*See CAUCASUS*.) N. of the Caucasus, the country W. of the Caspian spreads into a wide E.; but, remarkably enough, between the Terek and the Volga there is only one river mouth, that of the Kuma (an *Cambyses* or *Udon*); for the land, though flat and sandy, is elevated suddenly at a little distance from the sea, so that the edge of the latter consists of extremely swampy ground, and all the running water that is not absorbed in the soil flows N. and W. to the Don or the Black Sea. (*Pallas*, i. 78. &c.; *Gmelin*, iii. 226. &c.) On the N.W. and N. the Caspian opens on the great European plain; its mighty rivers run courses varying from 500 to up-narrow ravines, as the Ural, Volga, &c.), and its basin becomes so mingled with those of the Euxine, Baltic, and Arctic oceans, that it is impossible to assign, with any accuracy, the limits of each. (*See BALTIC SEA*.) So closely, indeed, do the several branches of these waters approach each other, that a short canal near Tver, by uniting the little rivers Tvertza and Schilna, has connected the Caspian with the Baltic for upwards of a century; and much of the timber used in the Imperial yard at Petersburg is cut in the woods of Kasan, being conveyed up the Volga to this point of artificial communication. This canal was the work of Peter the Great; and the same prince projected the union of the Caspian and Euxine, by another, between two small streams, affluents respectively of the Volga and Don, which, in the neighbourhood of Tsaritsen, approach each other within 2 m.; the whole distance between the larger rivers being here less than 15 m. (*Algarotti's Letters*, 67.; *Hanway*, i. 98.; *Tooke's Russia*, ii. 144.; *Pallas*, i. 91.) With respect to its basin and drainage, therefore, the Caspian is much more of a European than an Asiatic lake; the former is extensive only on the side of Europe, and the latter carries off at least 1-6th of all the running water belonging to that division of the world. The rivers which descend from the Caucasian mountains, the only ones of consequence which the Caspian receives from Asia, are quite insignificant when compared with such streams as the Volga and Ural; the former of which alone drains 140,000 sq. m. (*Lichenstein's Cosmog.* i. 328.)

There are, of course, no tides in this close lake, nor do there seem to be any regular currents, in the usual acceptation of the word; but, from the freedom with which the wind blows over so large a surface, many considerable and very irregular changes are effected in its motions and character. A strong breeze from the S. drives the waters over the low lands of the N. coast, sometimes to the distance of several miles; vessels, at such times, are said to have been carried so far inland, that, on the retiring of the sea, it was found necessary to break them up where they lay, from the impossibility of transporting them back to the shore. It is observed, however, that these vessels are of peculiar construction, the numerous and extensive shoals preventing the general use of any (on the N. coast) that would require much depth of water. Such a wind, too, by driving the sea into the mouths of the great rivers, causes these to rise in their beds, and, consequently, when the wind subsides, a very violent S. current is produced by the water returning to its usual level. A N. wind produces the same effect on the S. shore; only, from the nature of the coast, the water cannot extend so far over the neighbouring land; but it is frequently raised from 3 to 4 ft. above its natural level, the return to which, therefore, causes a rushing and confused motion of the waters to all points of the compass. Vessels drawing 9 or 10 ft. are, during these changes, exposed to great hazard, and, as the winds are extremely uncertain, the navigation of the Caspian is one of very considerable danger. (*Hanway*, i. 142. 283. &c.; *Georgi*, i. 259.; *Monteith*, G. J. iii. 22.) There is another motion of this sea much more remark-

* The Caspian sea has this property, however, in common with most close waters. It is a familiar observation that there is less danger in a voyage across the Atlantic than in a passage across a Baltic lake.

able, however, than the preceding. It appears to increase and decrease in *actual bath*, in periods, according to native report, of about 20 years each. When navigated by Hanway, its surface was incontestably rising, if the united testimony of the inhabitants upon the coasts be credited; and this testimony received confirmation from the appearance of the coasts themselves. Tops of houses were seen in water several feet in depth; the sea had visibly risen on the walls of fortified towns; and these encroachments were going on equally on all parts of the coast at the same time; so that the natives round the whole circuit were living in a state of great alarm. (l. 185-187, 371, &c.; see also *Algarotti*, 78, &c.) Now Hanway makes his remarks in 1743, when the sea had certainly been rising more than 20 years,—that is, from before the expedition of Peter the Great, in 1723 (l. 185.); and, therefore, if the native tradition were founded on fact, it had nearly reached its greatest height. It is, at least, a remarkable circumstance, that, in 1784, the sea was again (or still) rising, having, by its action, levelled the outer wall of Baku, which was standing in the time of Hanway (*Forster's Travels*, 221.); while, between 1811 and 1828, it had very sensibly decreased (*Col. Monteith's Geog. Journ.* iii. 52, &c.), and, in 1832, it had receded from the S. shore full 300 yards. (*Burnes's Travels to Bokhara*, li. 121.) It is clear that, in the 41 years between the observations of Hanway and Forster, there had been time, upon the native hypothesis, for the sea to reach its greatest depression, and begin again to rise. At all events, the facts, meagre as they are, seem to warrant the conclusion of periodic variations; though what law these follow, the data are at present far too limited to determine. If a conjecture may be hazarded, they probably depend upon meteorological causes, and the general state of the atmosphere. Hanway (though he disbelieves the *periodic* variation) appears to hold an opinion similar to this; for he remarks, that the summers, from the time of Peter the Great to that of his own observations, had been less hot than formerly; that consequently evaporation had been less, while the supply of water had continued the same. (l. 156.) It would be a corroboration of this theory, could it be established that, from 1811 to 1832, when the Caspian was unquestionably and rapidly sinking, the summer heat had been peculiarly great; but on this point nothing certain is known. In the mean time it is worthy of remark, that, between the observations of Hanway and those of Monteith and Burnes, 90 years (a multiple of the asserted period) had elapsed; that the time during which the sea was known to be constantly rising in the one case, and sinking in the other, was the same, namely, 21 years; and that, on the supposition of the trigonometrical alternation of the phenomena, it should have been found sinking, as it was, by the last named travellers. That there is something very peculiar in the atmosphere of this region is evident. Monteith found its extra pressure to be equivalent to a column of 390 ft. in height (*Geog. Journ.* iii. 22.); Burnes, some 4 or 5 years later, to one of 800 ft. (*Travels*, ii. 122.) These results were obtained, not by the barometer, but by the boiling point of water; the difference of pressure would, however, cause a rise of nearly $\frac{1}{4}$ an inch in the former (*Nettelbladt, Phil. Trans.* xxxiii. 308.), and consequently a depression of almost 7 inches in the surface of the Caspian. This co-existence of phenomena is similar to that observed in the Baltic, only much more powerful and longer continued; it is, therefore, at least, probable that in both cases the varying level depends upon the varying pressure, and that, with extended knowledge, the explanations of the Swedish mathematicians may be brought to bear, generally, upon this peculiar feature of physical geography. (See BALTIC SEA.)

But whatever may be the variations in the present surface of this lake, there can be little doubt but that it was formerly much more extensive on three sides,—the N., N.W., and E.; and it is still, most likely, diminishing. The fact that it never increases, in any thing approaching to the ratio of the water poured into it, has been, combined with its want of outlet to discharge that water, a standing wonder for centuries; and the most extravagant hypotheses have been adopted to account for a phenomenon apparently so paradoxical: among others, a filtration through a shell sand into an imaginary abyss; and a subterranean communication with the ocean. The latter is the prevalent opinion among the natives; the former, to the discredit of philosophy, has found abettors among Europeans, who should have known better. (*Hemans, i. 136. Algarotti, 67. Tooke, i. 138. Burnes, i. 138. &c.*) But evaporation is in these regions great, beyond belief; not from the temperature, which is lower than might be expected, but from the extreme dryness of the air. In an experiment made by Dr. Gerard in the E. desert, a bowl full of water disappeared altogether in two days. (*Burnes, i. 169.*) Without pretending to decide the proportion between this exhaustion and the supply

afforded by the rivers, which could not be done without much more extensive data, it is clear that the first, unchecked by the latter, would be sufficient to dry up the Caspian, or a much larger body of water, in the course of a few years; and that the waste is, or, at all events, *has been*, greater than the supply, is shown by the appearance of the plain country in the neighbourhood of this sea. It has been observed that the present bed appears to descend in terraces, and on the E. and N.W. shores the land rises in the same manner. This land presents, also, incontestable proofs of having been formerly covered with sea water; it is uniformly flat, except where it rises in sandy ridges, to form the terraces before mentioned; it is uniform in soil, consisting of sand combined with marine slime, without a trace of terrestrial vegetation except the common desert plants, or the slightest indication of minerals: the substratum is clay, at a considerable depth from the surface; and the surface itself abounds in sea salt, sea-weed marshes, salt pits and lakes, together with innumerable shells exactly resembling those of the Caspian Sea, and which are *not found in any of the rivers*. This uniform and dreary country terminates suddenly towards the N., at a comparatively high tract running from the Wolga, near the 51st, to the 54th parallel; and on the N.W., at a similar tract between the Wolga and Don, a little to the E. of the 46th meridian. The change of soil is here striking and instantaneous; salt, sea-weed, shells, and sand, disappear, and are replaced by black mould, solid turf, and all the usual appearances of vegetable soil upon reasonably old land, though still belonging to a period *geologically* recent, as is demonstrated by its horizontal strata and the continued absence of mineral productions. These high grounds formed, therefore, in all probability, the ancient shores of the Caspian; but that to the N.W. terminates abruptly on the little river Mantash, near the 46th parallel, between which and the Caucasian mts., a low and narrow tract, exactly resembling that on the immediate borders of the Caspian, stretches without interruption to those of the Sea of Azoph, having every appearance of the deserted bed of a strait formerly uniting the two waters. Towards the E. the whole country has the same appearance of a deserted sea-bed; and the conclusion, therefore, appears inevitable, that, at comparatively recent periods, the Sea of Aral, the Caspian, and the Black Sea, formed one body of water, uniting the present anomalous salt lakes of Asia with the ocean. This conclusion is further strengthened by the presence of the same species of fish, seals, &c., in the three seas; a fact which it is impossible to account for on the supposition that they were always separated. (*Pallas, i. 78-87. 279-304. &c.; Gmelin, iii. 231-248. Georgi, i. 259. &c.*)

When it is considered that Russia is extremely flat; that its slope from the Arctic Ocean to the Caspian is uninterrupted; and that this slope is so considerable, that the Wolga, though rising in a flat country, has a rapid current (*Pallas, i. 25.*), it will be evident that the position of the Caspian must be very low. A suspicion having long existed that it was lower than the level of the ocean, Messrs. Englehardt and Parrot, in the beginning of the present century, performed a series of barometric levelling between its shores and those of the Black Sea; the result of which gave a depression of 333 ft. (54 toises) for the surface of the Caspian. (*Reise in die Krym und der Kaukasus*, li. 55.) It is to be remarked, that at this time the sea was *sinking*, and, therefore, if the opinion hazarded on the cause of its variations be correct (see *ante*), the atmospheric pressure on its coasts was greater than it would be in the ordinary state of the air. This seems, also, to be borne out by the observations of Monteith and Burnes, upon the boiling point of water. Results depending upon the height of the barometric column would, under such circumstances, be inevitably excessive; and this was, upon other grounds, suspected by Humboldt, from the very first publication of Messrs. Englehardt's and Parrot's memoir. (*Parrot, Voy. d'Afrique*, li. 192.) To determine the question, the Russian government, in 1836, dispatched an expedition, which after two years' labour completed, in 1838, a splendid series of trigonometrical levelling; from which it appears that the Caspian is 101'3 Prussian ft. (about 116 ft. English) below the Black Sea. (*Geog. Journ.* viii. 135.) The known elevation of the desert steppe E. of the Caspian will, according to this survey, place the Sea of Aral very nearly on a level with, or even something higher than, the Euxine.

Considering its lat., that of S. France and Italy, the temperature of this sea and its neighbourhood is extremely low; the N. part is very frequently frozen, and the ice in the mouth of the Wolga (lat. 46°) does not usually break up till April. (*Hemans, i. 140.; Pallas, i. 69. &c.*) Even the Aral, as low as 45°, is sometimes frozen; and the inhabitants have a tradition that one of its islands was peopled by a colony which crossed the ice, with all their flocks and herds. (*Burnes, i. 189.*) This fact is the more remarkable, from the low level, and S. aspect of the region round the Caspian; but the want of

mountains towards the N. exposes it to the influence of chilling winds from the Arctic Sea, while the intervention of snow-capped ranges on the S. prevents the counterbalancing effects of the hot breezes from the equator. The summer heat is, however, generally great, and is towards the S. attended with a humidity, which renders it very unhealthy; though, from this very cause, the S. and S.W. districts present a luxuriance of vegetation strongly contrasted with the bare salt deserts on the N.W., N., and E. Rice, maize, cotton, fruits of all kinds, and a countless variety of forest rees, are among the productions of these districts; which, with the exception of the Russian colony in the steppe of Astrakhan, are the only parts of the coast possessing a settled population; but such is the deadly nature of the climate, that all who are able leave the towns in the beginning of summer, and retire to the mountains, where the atmosphere is of course more salubrious. The deserts are occupied by the wandering Kaimucks, Kirghis, and Turkomans, who preserve unaltered the roving and predatory habits of their earliest ancestors. (*Pallas*, i. 92. 115. &c.; *Frazer's Trav.* on the S. Bank of Casp. ii. 15. &c.; *Conolly's Narrative*, i. 35—49. 146. &c.; *Burnes*, ii. 100—127. &c.)

The waters of this sea are less salt than those of the ocean, and consequently are so near the mouth of the rivers than at a distance from the shore. The waters of Lake Aral are even drinkable (*Burnes*, ii. 189.); but all have a bitter taste, ascribed by some to the great quantities of naphtha with which the soil abounds, but by others to the presence of glauber salts, among the substances held in solution. The fish are principally salmon, sturgeons, and sterlets; a kind of herring is also found, and there are likewise porpoises and seals. It has been already said, that the same inhabitants are found in the waters of the Caspian. Aral, and Black Seas, the fisheries employ many vessels annually, and the shores abound in aquatic fowl, storks, herons, bitterns, spoonbills, red geese, red ducks, &c. (*Gmelin*, iii. 233—257; *Pallas*, i. pass.; *Tooke*, i. 238. &c.)

It is somewhat remarkable that, though situated on the confines of Europe, this sea should have remained nearly unknown, except by name, till the beginning of the last century. It is scarcely less remarkable that the oldest observer, Herodotus, described it truly, as an ocean by itself, commenting with no other, and of such size that a swift-oared boat would traverse its length in 15 days, its greatest breadth in 8 days. (*Clio*, 203.) These proportions are accurate according to the best modern observations, and at 60 m. per day for the swift boat's progress, would give the actual measurement. After this clear account, it is startling to find the Caspian transformed by Strabo into a gulph of the Northern Ocean, and otherwise distorted, according to a theory which must be regarded as purely fanciful. (*Geog.* xi. 507.) Ptolemy restored the Caspian to its lake-like form: he had some knowledge of the Volga, which he calls Rha; but he gives the greatest length of the sea from E. to W., and makes it a vast deal too large. (v. 2., vi. 9. 13. &c.) It is to be remarked, that Herodotus does not state in what direction lay the greatest length; but it may be very readily deduced, from his descriptions of the surrounding countries, that he meant it to be understood as stretching N. and S. The authority of Ptolemy remained paramount and unquestioned for many centuries; and the first modern account of the Caspian, at all consistent with the truth, is due to Anthony Jenkinson, an Englishman, who, in 1856, traversed its waters, and gave an account of its dimensions and bearings, agreeing in all its main points with the more brief description of Herodotus. (*Hakluyt's Voy.*, i. 326—329.) Jenkinson's voyage did not, however, gain much attention; and in 1719 a regular survey was commenced, by command of Peter the Great. Vanverden's map, the result of that survey, and which was partly constructed by the emperor himself, is still, and justly, held in high estimation. The voyages of Hanway had for their object the establishment of a trade (in English hands) between Russia and Persia. The failure of that object was owing to the ambition of a Mr. Elton, who, attaching himself to the Persian court, gave such offence to that of Russia, that the latter eventually prohibited the English commerce on the Caspian. (*Hanway*, ii. 279. *et pass.*) A mass of valuable information was, however, collected, during these transactions, by Hanway himself, Elton, Woodroffe, and others. The more modern travellers, Gmelin, Georgi, Pallas, Englehardt, Parrot, Forster, Frazer, Conolly, Burnes, Montetsh, Fuss, Sahlber, and Sawitch, have added immeasurably to that information; but much still remains to be done; and as the Russian government seems fully alive to the importance of accurate knowledge on geographical subjects, and as their power or influence is nearly established on all parts of this sea, it may be reasonably hoped that every year will make W. Europe better acquainted with this very remarkable region.

The lastest class of vessels that navigate the Caspian, are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 50 to 100,

and sometimes 180, tons. They are not built on any scientific principle, and are constructed of the worst materials,—that is, of the timber of the banks that bring down the Volga to Astrakhan. There are supposed to be in all about 100 sail of these vessels. A second class of vessels, called *rachivets*, employed on the Caspian, carry from 70 to 140 tons, and sail better than the *schuyts*, and there are great numbers of small craft employed in the rivers, in the fisheries, and as lighters to the *schuyts*. But steam-boats will, no doubt, in the end, supersede most of these vessels; they have already, indeed, been introduced, not only upon the rivers, but upon the Caspian itself. The trade of the sea is entirely in the hands of Russia; and, whatever objections may, on other grounds, be made to her conquests in this quarter, it is certain that, by introducing European arts and sciences, and comparative good order and security, into countries formerly immersed in barbarism, she has materially improved their condition, and accelerated their progress to a more advanced state.

The Caspian Sea, *Κασπία Θάλασσα* (*Herod. Clio*, 203.), is the oldest name of this water. It was derived from the Caspi, a people who inhabited its banks; as the more modern term Myrcansea Sea, *Μυρκαίνια Ίσημια* (*Strabo*, xi. 507.), was similarly derived from the more important Myrcian, a principal branch of the great Persian family. In the present day it is called *Moré Gualcasot*, by the Russians; *Kulsum*, by the Persians; *Bahr Kuvzum*, by the Arabs; *Kulzum Denghis*, by the Turks; and *Akdinghis*, by the Tartars. (*Tooke*, i. 232.)

CASSANO, a town of Naples, prov. Calabria Citra, cap. cant., in the concave recess of a steep mountain, round an insulated rock, on which are the ruins of an ancient castle, 7 m. E. S. E. Castrovillari, and 10 m. from the Gulph of Tarentum. Pop. circa 5,000. It is well built; is the residence of a bishop; has a cathedral, 4 convents, a seminary, and a workhouse. The inhabitants are industrious, and manufacture macaroni, stamped leathers, and table-linen. Cotton and silk are also grown, spun, and woven; and the environs are productive of excellent timber, fruits, and corn. (*Craven's Calabria*, p. 212.)

CASSAY, KATHEE', or MUNNEEPOOR, a country of India beyond the Ganges, between lat. 24° and 26° N., and long. 96° and 98° E., having for its capital the Birman empire. S. hill country, inhabited by independent Khyens (see BIRMAN), Kookies (see CACHAR), &c.; and W. Cachar. Area about 7,000 sq. m. Cassay consists of a central fertile valley, of comparatively small extent, surrounded on every side by a wild and mountainous country. The Naga mountains bound it N., averaging in height 5,000 or 6,000 ft. above the sea; although in some parts they are as much as 8,000 or 9,000 ft. high. Two branches, passing S. from the Naga mountains, inclose the Cassay valley E. and W., and the S. boundary, from the confluence of the Chikowash, or rivulet, to the Barak, is formed by the same range, which run E. and W., bounding Cachar, S., and Tipperah N.E. The W. mountain range is more elevated and extensive than any other, and runs from the banks of the Barak S.S.W. for 80 m., steep and precipitous, towards Cachar; but in some parts almost cleared of forest, and annually cultivated with rice and cotton. This range has nine principal peaks, varying in height from 5,790 to 8,300 ft. above the sea, which, from superstitious motives, are left covered with wood by the inhabitants of the hills, and are often capped with a dense stratum of clouds. The E. hills vary from 4,900 to 6,730 ft. above the sea. The valley thus inclosed is about 36 m. long and 18 m. broad, having an area of 680 sq. m. of rich alluvial soil, 2,500 ft. above the level of the sea.

The chief rivers are the Khongta, or Munneepoor river, Eerli, and Thobal. The first rises in the Naga mountains, in lat. 25° 12' N., long. 94° E.; it completely traverses the central valley N. to S., and falls into the Ningthee or Kyen-dwen river. It is the only outlet for the waters of the Cassay valley; and, as the latter is 2,000 ft. above the Ningthee, it is probable there are several considerable falls in its course through the mts. Almost all the centre of the Cassay valley is a series of jeels and marshes; there is a small lake (Logta) at its S.W. corner: compact sandstone, slate, and limestone are the prevailing geological features of this region.

Iron is the only metal found in Cassay; it is met with under the form of titaniferous oxide, and is detected by thrusting spears into the ground, and, where iron is present, small particles soon adhere to them. (*Pemberton*.) The Cassay valley is rich in salt springs, especially on its E. side; and more than enough salt for home consumption is made. The climate of the valley is lower by many degrees than in Calcutta, but not so low as might have been expected from the elevation. There are more rainy days in the year, but less rain falls, than at Calcutta: from March the showers become continual; the permanent rise of the streams begins in May, and continues till the middle of October, from which time they rapidly de-

crease. From Nov. to Jan. fogs settle during the whole time in the valley, and hoar frosts prevail on the hills; yet the climate of the former region is decidedly salubrious, and peculiarly healthy to European constitutions. The surrounding mts. are, in most instances, covered with the noblest varieties of forest trees, common both to tropical and colder climates; and, according to Capt. Pemberton, there is no part of India where the forests are more varied and magnificent; but, from the small number of streams, and the want of good roads, their utility is entirely local; there being at present no means of conveying the timber to any distance. The valley is perfectly free from forest, though every village is surrounded by a grove of fruit-trees: the soil of the detached hills, and their S. faces especially, are highly adapted to the culture of fruit. Herds of wild elephants are constantly seen in the glens and defiles of the N.: wild bogs and deer of the largest size abound every where; and the chase is a favourite sport with the Cassayers. Tigers are not common, and have retired to the mountain fastnesses: there are no jackals; but wild dogs, greatly resembling that animal, abound on the hills, where they hunt in packs. With the exception of woollen cloth, this country furnishes every article essential to the comfort and prosperity of its inhabitants. All the tribes N., W., and E. of the central valley partake strongly of the Tartar countenance, and are probably the descendants of a Tartar colony who passed hither from the N.W. borders of China, during the sanguinary struggles for supremacy between the Chinese and Tartar dynasties in the 13th and 14th centuries. They have much more affinity, both in person and manners, with the Hindoos, than with the Birmese, to which latter race they bear little similarity. They differ from the Kookies of the S. hills in their superior height, finer complexions, higher foreheads, inharmonious voices, and harsh language. They are highly ingenious, and are good horsemen, on which account they were formerly exclusively employed in the Birmese cavalry service. The upper classes are worshippers of Vishnu, and this country may be regarded as the extreme E. limit of Brahminism: the Cassay tongue is, however, widely different from Sanscrit. There are many other distinct tribes in different parts of Cassay and its neighbourhood. All cultivate tobacco, cotton, ginger, and pepper, and manufacture cloths; which articles they barter for others with the inhab. of the neighbouring plains of Bengal, Assam, and Birmah. In the central valley rice is the chief object of agriculture, and the land there is well irrigated, and highly suited to it: but scarcely $\frac{1}{4}$ part of the land available for it is under culture, owing to a paucity of inhabitants. The whole pop. of the valley in 1855 was barely 30,000. Tobacco, sugar-cane, indigo, mustard, dhal, and opium are also grown, and each house is surrounded by a little garden, in which culinary vegetables are raised in large quantity. Almost all the garden produce of Europe is found here, having been introduced by the British since the Birmese war; and the potato and tomato are found so acceptable, that their culture is nearly universal, and they are constantly exposed for sale in the bazars. The pine-apple attains an excellence in Cassay, not surpassed in any part of the world. Buffaloes are used for ploughing; there are about 2,000 in the central valley, and perhaps an equal number of bullocks, which are superior, both in size and symmetry, to those of Bengal.

The ponies of Munneepoor are much and deservedly esteemed, by both the Cassayers and Birmese, who use them for the *shite* of their cavalry. They average from 12 to 14 hands, and are rarely more than 13 hands in height: they are hardy and vigorous, and have a peculiar blood appearance, but are nearly extinct; and scarcely more than 200 could be found fit for active service. Formerly, every inhab. had two or three; and the Cassayers affirm that, in a military sense, they have lost one of their arms by the decrease of the breed. Sheep were unknown till introduced by the British; they thrive on the slopes of the central valley: goats are bred by the Naga tribes on the hills, but invariably deteriorate if brought into the lowlands: poultry are plentiful in the latter districts, and the mountaineers purchase fowls thence at a very high price. The chief manufactures are coarse white cottons; a very soft and light muslin; a coarser kind, used for turbans and jackets; silks, remarkable for the brilliancy of the colours, and which are much prized at Ava. Iron articles are also made. The chief iron articles made are axes, hoes, ploughshares, spear and arrow heads, for home use; and blades, 1 or 3 ft. in length, which, fixed into wooden or other handles, form the *dao*, the inseparable companion of the Cassayer, Shan, and Singpho. Salt is got from wells, sunk in the valley to about 40 or 60 ft.; all of which are the property of the rajah, who levies a tax of 1-4th upon the water drawn. The quantity of salt obtained by evaporation is about 1-20th the weight of the water, or nearly double the quantity obtained by evaporation from sea water at Mewcaste: the labourers engaged are paid in salt to the value of 3 or 4 rupees a month each, which they barter

for other commodities. Wax, cotton, and elephants teeth, form part of the tribute of the hill tribes: the same articles, with poultry, &c. are bought by the Chinese merchants of Yun-nan; and similar products, with silk, iron, dammer, wood, oil, sandal-wood, camphor, thread, &c., were taken in lieu of money payments by the British, for assistance to the rajah about the middle of the last century.

Government, &c.—Cassay is independent, and, at present, governed by a regency in the name of an infant son of the rajah Gumbheer Sing. The capital is Munneepoor. The military force consists of 3,000 infantry, 100 cavalry, and 100 artillery men, to a train of 4 three-pounders. Instead of pay, the men and officers have grants of land. Their arms and ammunition are supplied by the British gov., and they are occasionally drilled by a British officer. Their discipline is very imperfect; but they are more than a match for an equal number of Birmese, who refuse to face their cavalry. Religious prejudices, and among the Cassayers a sense of ancient wrongs, tend to keep alive the enmity of the two races.

The records of Cassay bear some character for truth, and it is said, reach back to a remote epoch. In 1475, the Kubo valley was annexed to Cassay by conquest; and in 1738, the Cassayers conquered Birmah, and took it then capital, Sakking. Subsequently, Cassay was frequently invaded and devastated by the Birmese; and from 1774 to 1824 was subject to Ava. By the treaty of Yandaboo, 1826, it became independent. In 1835, the valley of Kubo was ceded to the Birmese by British authority. (*Pemberton's Report on the E. Frontier of Calcutta*, 1835.)

CASSEL (anc. *Castellum Cattorum*), a town of W. Germany, prov. Lower Hesse, of which, and of the electorate of Hesse Cassel, it is the cap., and residence of the elector. It is finely situated on both sides the Fulda, 72 m. S. by W. Hanover, and 89 m. N.N.E. Frankfurt on the Mayn; lat. $51^{\circ} 19' 20''$ N., long. $9^{\circ} 35' 18''$ E. Pop. about 31,000. (*Berghaus*.) The town is divided into three separate parts, and has three suburbs. The Old Town and Upper New Town, with the Wilhelmshöhe and Frankfurt suburbs, are built on the left or W. bank; while the Lower New Town and the Leipzig suburb, are on the E. bank of the river. The two divisions are connected by a stone bridge across the Fulda, 278 Germ. feet in length. Cassel is walled, and has numerous gates; it was formerly well fortified, but its ramparts were demolished in 1764. The Old Town, by the river, consists of narrow dirty streets; but the Upper or French New Town, so called because originally built by French refugees, on a height above the former, is one of the best laid out and handsomest towns in Germany. It contains, among others of less dimensions, the largest square in any German city (the Friedrichs Platz), and one street, nearly a mile in length, and proportionally broad. Houses in the New Town are the Wilhelmshöhe suburb, generally well and tastefully built. In this quarter of Cassel are—the elector's palace, a structure nowise remarkable, and surpassed by many bankers' residences in Frankfurt; the museum, the handsomest building in the city, containing a library with 70,000 volumes (*Cannabich*); an observatory; and cabinets of natural history, mineralogy, coins, artificial curiosities, statuary, and antiquities; the latter comprising several interesting Roman relics found in Hesse Cassel; a picture gallery, containing some valuable paintings by Rembrandt, Rubens, Vandyke, &c.; the Bellevue palace, with others belonging to the electoral family; the electoral stables, and riding-school, mint, town-hall, arsenal, old and new barracks, opera-house, &c. In the Old Town are the Katharinenkirche, a large unfinished structure, begun upon the site of the old electoral palace destroyed by fire in 1811; the old town-hall; government offices; and St. Martin's, the principal church in the city, and the burial-place of the sovereigns of Cassel. The Lower New Town contains the castle, an ancient fortress, now used as a state prison; and several other prisons, &c.

Cassel has 8 churches, 7 of which belong to the Lutheran or Reformed faith; and 1 synagogue. It has altogether 20 edifices devoted to military purposes, and 51 other public buildings. Amongst the institutions for public education, are a lyceum, academy, and school of painting and drawing; a teachers' seminary; a military school; a school of mechanical employments (*Bau- und Handwerkschule*), a Jewish theoretical and practical school, &c. There are societies for the promotion of agriculture, trade, and manufactures, and numerous charitable establishments; the latter includes the *Wilhelms Institut*, at which many poor are provided for, and taught different trades; a large general hospital, with several smaller ones, orphan asylums, &c. Notwithstanding the Fulda is navigable, and that Cassel is on all sides surrounded by large commercial towns and districts, its own trade is not very considerable. It possesses manufactures of cottons, silk and woollen fabrics, leather,

hats, carpets, snuff, gold and silver lace, porcelain, earthen and lacquered ware, playing-cards, wax-lights, chemical products, dyes (Cassel yellow and black), soap, starch, hardware, musical instruments, linen, damask, chlorey, and some machinery. It has two fairs annually. S. of the Upper New Town is the *Kerlams*, or *Augarten*, a fine park containing an orangery, a pheasantry, and a marble bath; but the last is overloaded with ornament, and in bad taste. A straight and handsome road, shaded by an avenue of limes, 3 m. in length, conduits from the Wilhelmshöhe gate to Wilhelmshöhe, the summer palace of the elector, a magnificent residence, sometimes called the German Versailles.

During the short period that Jerome Bonaparte was on the throne of Westphalia, Cassel was the cap. of his king, and the place of his residence. (*Reyherus, Allg. Lander und Volker*, iv. 329, 330.; *Cannabich, Lehrbuch der Geogr.* pp. 454, 455.; *Murray, Handbook for N. Germany*, &c.)

CASSEL, a town of France, dép. Nord, cap. cant., on an isolated mount in the middle of an extensive plain, 28 m. N.W. Lille. Pop. 4,455. It is well built, and, notwithstanding its situation, is well supplied with spring water. It has fabrics of lace, thread, hats, oil, earthenware, &c. It is very ancient, having been the capital of the *Morins* when Cassin invaded the country; it was united to France in 1678, by the treaty of Nimwegen. Several battles have been fought in its vicinity. (*Hugo, art. Nord*.)

CASSIS, a sea-port town of France, dép. Bouches-du-Rhône, in a narrow valley on the Mediterranean, 10 m. S.E. Marseilles. Pop. 2,065. It has a tribunal of *prud'hommes*, an office of health, a workhouse, and yards for the building of small vessels. Its port is confined, and admits only vessels of small burden. The figs and grenades of Cassis are held in much estimation; and it has a considerable trade in excellent muscatel wine, produced in the environs. This is the native country of the learned and excellent Abbé Barthelémy, author of the *Voyage d'Anacharsis*, who was born here on the 20th of January, 1716. (*Dict. Géog.*; *Biog. Universelle*.)

CASTEL-A-MARE, a city and sea-port of Naples, prov. Naples, on the Gulph of Naples, 15 m. W. Salerno. Pop. 15,000. It is the seat of a bishopric, and the residence of a sott' intendente; and is well built, partly along the shore, but principally on the site of the mountain, rising immediately from it. It has a royal palace, a cathedral, 5 churches, several convents, a military hospital, fine barracks, a royal dockyard, with hot baths, &c. There are manufactures of linen, silk, and cotton, with tanneries. The port, which is small, is defended by two forts. Being exposed to the N., and elevated, Castel-a-Mare has acquired great celebrity as a summer residence, in consequence of its coolness, the salubrity of its air, and the beauty of its environs. But in autumn it becomes damp, chill, and disagreeable.

Castel-a-Mare is built on the site of the ancient *Stabie*, which, having been destroyed by Sylla during the civil wars, was afterwards principally occupied by villas and pleasure-grounds. It was here, A.C. 79, that the elder Pliny, wishing to approach as near as possible to Vesuvius during the dreadful eruption that overwhelmed Herculaneum and Pompeii, fell a victim to his curiosity and thirst for knowledge. (*Craesen's Calabria*, p. 400.; *Cramer's Ancient Italy*, li. 181.)

CASTEL-A-MARE, a sea-port town of Sicily, prov. Trapani, cap. cant., on a gulph of its own name, 6 m. N.W. Alcamo. lat. 38° 1' 51" N., long. 12° 59' 43" E. Pop. (cant. inc.) 8,102. It is a mean dirty town, with a castle falling fast to decay. The bay is spacious, but it is not safe with northerly winds which throw in a heavy sea. The neighbouring country is well cultivated; and considerable quantities of wine, fruit, grain, manna, and opium, are exported. (*Smyth's Sicily*, p. 67. &c.)

CASTELLON DE LA LLANA (an. *Castalia*), a town of Spain, Valencia, cap. dep., 4 m. from the coast, and 41 m. N.E. city of Valencia, on the high road from thence to Barcelona. Pop. 15,000. (*Mikano*.) It is finely situated in a well-watered, extensive, and fertile plain. It is worthy of remark, that this fertility is entirely the result of industry,—the water which gives life and verdure to the plain being brought by an aqueduct, cut in great part through the solid limestone rock, from the Mijares, which flows about 5 m. S. from the town. This great work has been ascribed to the Romans and Moors; but Mr. Townsend says that it was certainly constructed, about 1246, by James the Conqueror, king of Aragon. (iii. 198.) The town, which is very well built, has 3 churches, 6 convents, 1 hospital, 3 houses of charity, and a public granary. It has, or at least had when it was visited, in 1789, by Mr. Townsend, a good collection of pictures, mostly by Ribalta, a native of the place. The agreeableness of the situation, the mildness of the climate, and the abundance and excellence of the fruits, make this one of

the most desirable residences in the prov. Mr. Swinburne is ungallant enough to say that the ladies of Castellon de la Llana are "very ugly." (*Travels*, i. 181.)

CASTELNAUDARY, a town of France, dép. Aude, cap. arrond., on an elevated fine situation, contiguous to the Canal du Midi, 21 m. W.N.W. Carcassonne; lat. 43° 19' 4" N., long. 10° 59' 26" E. Pop. ex com. 8,656. It is very indifferently built, and there are few edifices worth notice, if we except the church of St. Michael, said to be the finest in the dep. It has a tribunal of primary jurisdiction, a departmental college, and a philotechnic society. The canal has a superb basin contiguous to the town, surrounded by fine quays and warehouses, which, with the vessels by which it is sometimes crowded, give it the appearance of a sea-port. The public promenade commands this basin and a fine view extending as far as the Pyrenees. There are here manufactures of cloth and silk, with establishments for the spinning of cotton, print-fields, and tanneries; and a considerable trade is carried on in the manufactures of the town, and the produce of the adjoining country.

In 1632, in an encounter under the walls of the town, the Duc de Montmorenci, commanding the troops of Gaston, Duc d'Orleans, was wounded and taken prisoner; and being conveyed to Toulouse, was convicted of treason, and executed in the course of the same year. (*Hugo, art. Aude*; *Hemault, Abrégé Chronologique*, anno 1632.)

CASTELO BRANCO, a city of Portugal, prov. Beira, on a hill on the Liria, 51 m. N.E. Abrantes. Pop. 5,720. It is the see of a bishop, and the residence of the captain-general of Lower Beira. Streets narrow and steep, and the houses mean, except some modern ones without the walls; the latter are double, and flanked with 7 towers. The cathedral also is without the city; and there is an old ruined castle on the summit of the hill on which the town stands. It has 3 college, 2 collegiate churches, &c.

CASTEL-SARRASIN, a town of France, dép. Tarn-et-Garonne, cap. arrond., pleasantly situated in a fertile plain on the Sologne, 1 m. from its confluence with the Garonne, 13 m. W. Montauban. Pop. 7,408. It is well built, and the walls and ditches by which it was surrounded have been converted into promenades. It is the seat of a court of primary jurisdiction, of a departmental college, &c.; and has manufactures of serges and other woollen stuffs, hats, and tanneries. (*Hugo, art. Tarn-et-Garonne*.)

CASTELVETRANO, a town of Sicily, prov. Trapani, cap. cant., on a hill, 6 m. from the sea, and 13 m. E. Mazzara. Pop. 12,669. It is well built with stone, the streets being spacious and disposed with some attention to regularity; and there are several churches and convents. It has, however, a decaying appearance, and, in fact, the population has declined above 2,000 since 1798. (*Giornale di Statistica*, i. 94. &c.)

CASTIGLIONE-DELLE-STIVIE, a town of Austria, prov. Mantua, on a hill, 22 m. from that city. Pop. 5,300. It is surrounded by a low wall, and contains several churches, the ruins of a castle, and a conventual seminary; but is chiefly noted for a decisive victory gained here by the French over the Austrians, 5th August, 1796; from which Marshal Augereau derived his title of Duc de Castiglione. (*Oesterr. Nat. Encycl.*, &c.)

CASTILE, the central and largest division of Spain lying between lat. 38° 21' and 42° 30' N., and long. 10° 2' and 6° 37' W.; it has N. and N.E. the territory of Reinoza, Alava, and Navarre; E. Aragon and Valencia; S.E. Murcia; S. Andalusia; W. Extremadura and Leon; length about 306 m. from N. to S., mean breadth about 160 m. Area about 48,600 sq. m. It is divided into 2 parts by a range of high mountains, called, in different parts, Uribians, Carpatasos, Sierra de Guadarama, Gata, Somosierra, and De Estrella. The country to the N. of the ridge, having been the first recovered from the Saracens, is called Old, whilst that to the S. is named New Castile. Old Castile comprises the modern provinces of Burgos, Soria, Segovia, and Ávila, so named after their chief towns. New Castile comprises the provinces of Madrid, Guadalajara, Cuenca, Toledo, and La Mancha; each also so called after the names of their chief towns, except La Mancha, whose cap. is Ciudad Real. Principal towns, exclusive of the capitals, are Oesa, Calahorra, Logroño, Calzada, Haro, Alfaro, Miranda, Briviesca, Almazar, Toledo, Aranjuez, Alcala de Henares, Valverde de la Sierra, Illescas, Zorita, Tembleque, Villanueva, &c. The Ebro, Douro, Tagus, and Guadiana have their sources in this province. The first flows S.E., along the N.E. boundary, to the Mediterranean; the Douro and Tagus, to the Atlantic; and the Guadiana, W.S.W. to the same. There are many other rivers, affluents of the above. The Xucar, flowing E. to the Mediterranean, also rises in this province. Besides the chain of mountains that separates Old and New Castile, there are 3 other important chains that traverse these provinces. First, the Sierra de Toledo, which winds

semicircularly past Daroca, from the Castilian chain, and then runs S.W. nearly parallel to it, to the hills of Santa Cruz, near Merika. Next, the Sierra Morena, or Black Mountains, beginning above Alcares, near the source of the Guadalquivir, and running, like the two former, nearly S.W. to the narrow pass of Montegil. Lastly, the Sierra Nevada, or Snowy Mountains, that commence between the sources of the Xucar, Gaudiana, and Guadalquivir, and extend into Andalusia. These last are here extremely steep and bare, mostly schistose, and often coated with limestone. They have white quartz in considerable veins; and valuable dark green, and a profusion of other marbles. The N.E. part of the Sierra Morena is of considerable height, and rather resembles table-land than a ridge of hills. The seasons are very different on the two sides of this range. In Andalusia, the vines are all in leaf, and the fruit is set, when, on the N. side, hardly a leaf is to be seen, or a bud to be found in the vineyards. There are here a few remains of former forests, which might have existed when Cervantes made these parts the scene of the exploits of his hero; and a variety of flowering shrubs, particularly the rock-rose, or gum cistus, from which manna is procured, and sumach. In this chain are vertical beds of argillaceous schist, and beds of grayish quartz, and hills of pudding stone, and some porphyry, and the finest jasper. It is the richest in minerals of any in the kingdom; and has veins of gold and silver. The quicksilver mines at Almaden have been worked for nearly 3,000 years, and furnished the vermilion sent to ancient Rome. They produce annually 2,000,000 lbs. of quicksilver. (*Bovles, Historia Natural de España*, p. 12; *A Year in Spain, by a young American*, l. 199.) The Castilian mountains are composed of gneiss granite, which often terminates in peaks of great height; schist, limestone, sandstone, breccia, quartz, marble, gypsum, &c. The Guadarama mountains, about 20 m. N.W. Madrid, are bleak, dreary, and barren near their summits, which, in many places, are covered with nearly perpetual snow, indicating that they must be 8,000 or 9,000 ft. above the level of the sea; the limit of perpetual snow in these latitudes being about 9,900 ft. The height of Moncayo, the highest mountain in Castile, is estimated at 9,600 ft. The rock, being partly decomposed, forms a light soil that produces the *juniper europæus*, *Daphne mesereum*, *matricaria sunita*, *genista*, thyme, and a great many other aromatic herbs, and beds of granite at every level on the granite mountains, not covered with snow; pines appear on the summits; the noble oak and the elm near their bases. (*Townsend*, l. 106.) The scenery is often of the wildest description; the mountains full of deep cuts and ravines, mostly the beds of winter torrents; aged and stunted pines hang upon their edges, and are strewn upon the brown acclivities around; and bare rocks frequently project over the passes, and force them to the very edge of undefended precipices. (*Ingils*, l. 535.) The quality of the soil is various; in some parts a blackish or gray siliceous clay, which is extremely fertile; in others, light and stony, and little productive. New Castile is in great part clayey, and covered with ratchil. Besides the minerals mentioned above, the Castiles produce calamine, ochre, bole armeniac, fine emery, rock crystal, salt, many curious stones and fossil shells, hot and cold saline springs; and in the mountains are many remarkable caverns, that contain beautiful stalactites, in a variety of fantastic forms. Near Molina is the hill of La Platilla, which has a remarkable mine of copper, in masses of white quartz. Though the ore is near the surface, the hill is covered with plants. Townsend had no doubt that there is tin near Daroca. (l. 318, 319, 303; l. 106; *Milano, Diccionario Geográfico*, l. 467, *et seq.*; *Dillon's Travels through Spain*, p. 110, 113, 115, 196, 203, 205-207, 227, 229; *Antillon Géographie d'Espagne*, p. 8-14.)

The climate of the Castiles is in general healthy; that of Old Castile is rather cold and moist. In New Castile it is excessively dry; but rendered healthy by the purity of the prevailing winds, and the great elevation of the country; but this altitude sometimes exposes it to strong dry winds, which, not meeting with the thick woods by which they were formerly tempered, are found very unpleasant, and at times, even dangerous, at Madrid, in winter, by producing pulmonary complaints. The height of the plateaus of Castile reduces the mean temperature to 50° Fahr., while on the coasts of Spain it is from 65° to 70°. The ordinary extremes of temperature, in Madrid, are 90° Fahr. in summer, and 32° in winter; but the thermometer often rises to above 100°, and falls below 10°.

Products.—The principal product of the Castiles is corn, some of which they export to Valencia, Andalusia, and Extremadura. Link says that no country has wines so strong, and yet so sweet, though but little exported, or known abroad. (p. 115.) The most celebrated is that of the Val de Peñas, or, "Valley of Stones," in La Mancha. It is a dry, strong, red wine of the Burgundy species, and is said to be so plentiful and cheap that a

bottle may be had in the country for 1*d.* (*Year in Spain*, l. 81.) It is drunk by the better classes all over the Castiles; but in the greatest perfection in its native district, on account of the taint given it by the skins in which it is carried to a distance. (*Ingils*, l. 20.) The Castiles produce also pulse, and some fruit and oil. Hemp, flax, madder and saffron, are partially cultivated. Garden stuffs are not abundant. On the mountains and in the pastures considerable numbers of black cattle, sheep, and mules are raised; but the increase of the latter has almost annihilated the race of good horses in the Castiles. (*Bourgoing*, l. 92.) There are fallow deer, wild boar, wolves, hares, peacocks, and all kinds of poultry, and small game in abundance. The larger game has decreased through the breaking up of the land near the royal seats during the absence of Ferdinand VII. Bears are seen in some parts, and lynxes are not uncommon in the high mountains. (*Link*, p. 101, 113.) Not only the fallow land, but the cultivated fields in New Castile, are full of two species of broom (*genista sphaerocarpa* and *monosperma*), and the *Daphne gnidium*. They grow to nearly six feet in height, and have a great effect on the prospect. These plants, with the *asphodelus ramosus*, and several other bulbous plants that abound in the pasture fields, given peculiar characters to the landscape of Spain. There is a want of trees which is partly attributable to the flat and unsheltered nature of the plains, and the dryness of the climate, but chiefly to a prejudice against them, entertained from time immemorial; the peasantry thinking that they are good for nothing, unless it be to attract and shelter vermin. They dislike them so much that they destroy those planted by government along the high roads. It is believed that the want of trees to attract humidity has promoted that drought which, next to bad government, is the curse of the Castiles. From the Douro to the Tagus there is not a stream ankle deep, except when swollen by floods. (*Year in Spain*, l. 136; *Ingils*, l. 368.) Agriculture is in the most backward state; but with a comparatively thin population, having little interest in the soil, which is monopolised by the clergy and nobility, and there being few great towns, to take of any surplus produce that might be raised,—what else could be expected? Irrigation, which, in such a country is indispensable, is but very little practised, and even manuring is all but neglected; and thus, while the four-fifths of the country remain fallow, the rest produces only poor crops of grain or potatoes. The great distance of the towns, the badness of the roads, and still more the insecurity of life and property, which prevents the farmer from living insulated on his farm, are additional checks to agriculture. Eight or ten miles frequently intervene without a single habitation, and the country looks, what it really is, poor and miserable in the extreme. Nothing can be more gloomy than the appearance of the towns, with old-fashioned towers projecting out of a dismal group of houses plastered over the clay. As the distance of each is a gain for recouping the duties on all articles that pass; and in the centre a square, round which are the buildings occupied by the Ayuntamiento, or municipality, the posada, or inn, and the butcher, baker, tailor, cobbler, and village surgeon, or barber. Most of the towns exhibit every symptom of decline. (*Shidcl*, l. 136; *Ingils*, l. 56.) There is nearly a total want of free communication, all but the main road to France being neglected. The road between Madrid and Toledo is mostly carried over ploughed fields, sometimes with hardly a visible track. The diligences are drawn by seven or eight mules, with two drivers. *Galeras*, or wagons on springs, are also used for travelling. (*Ingils*, l. 363, 56; *Link*, p. 85, 90.) Several canals have been projected and commenced at different periods; but not one of them has been finished.

Manufactures, though formerly considerable, are now at a very low ebb. The cloths of Segovia were once the best in Europe; and there are still some woollen fabrics, among which is the famous vigogne cloth and coarse camlets, serges, and flannels, and some of wrought silks, silk stockings and gloves, galloons, blond lace, coarse linens, hats, caps, soap, saltpetre, gunpowder, the celebrated plate-glass of St. Ildesonso, white earthenware, tanned leather, paper, &c.; but they are all inconsiderable. Castile has little commerce: wool is the staple commodity. The exportation of sheep was always strictly forbidden, till by the treaty of Basle the French were allowed to purchase 5,000 Merino rams and as many ewes; and from this stock, and subsequent exportations from Spain, the quality of the wools of France, England, Germany, and other parts of the world, has been greatly improved.

The following table has been given as a pretty accurate account of the area and population of the two Castiles in 1833. Valladolid and Valencia are sometimes included in the Castiles; but they did not formerly belong to them, and are excluded in this table.

Provinces.	Square Miles.	Inhabitants.	Inhab. per Sq. M.
Burgos, Inc. Logrono & Santander	7,700	541,188	70
Salamanca	4,070	116,619	28
Segovia	3,461	134,854	39
Avila	2,506	137,903	54
Madrid	1,413	330,000	244
Guadalajara	1,934	169,275	82
La Mancha	11,279	334,582	30
Toledo	8,765	252,767	32
La Mancha	7,523	277,785	37
Total	48,526	2,303,500	47

People. — The Castilians have the characters of probity, sobriety, and moderation; they are serious and contemplative, which makes them, at first, seem gloomy and haughty; but, after a time, they are found not deficient in the agreeable qualities. They have to boast of many illustrious men; at the head of whom stand Cervantes, the inimitable author of *Don Quixote*, and Lopez de Vega. They are not what would be called hospitable, but they are, notwithstanding, generous. The middle and upper classes are fond of display and ostentation to an extraordinary degree, while inconsiderateness and carelessness are conspicuous in the characters both of the lower and middle classes. Almost every one lives up to his income; even the *employés*, whose tenure of office is so uncertain, seldom lay by anything, and generally die penniless. But the love of ease and pleasure, and proneness to indolence, is less marked, perhaps, in Castile than in the southern provinces. Their want of industry is the result of the circumstances under which they have been placed, and of their vicious institutions. No man will be industrious, where industry does not bring along with it a corresponding reward; and this it very rarely does in Spain. Had the Castilians the means of improving their condition by labour, their apathy and listlessness would speedily give place to activity and enterprise. In Madrid, and generally in Castile, there is something more of luxury at the table than in the N. provinces, though the Spaniards in general are abstemious, and little addicted to its pleasures. The dining-room is generally the most splendid part of the houses of respectable persons are scrupulously clean, particularly the kitchens and bed-rooms. (*Inglish*, i. 142.) Female education begins to improve; besides embroidery and music, a little history and geography is taught in the schools, though not in the convents, where the higher orders are educated. In the time of the constitution of the Cortes, there were two Lancasterian schools for boys and one for girls at Madrid; but those for the boys were suppressed on the king's return. The influence of the regular clergy is diminished much more than that of the monks, who are still, through the austerities they practise, and the aims they distribute at the convent doors, held in considerable veneration, except in Madrid, where less attention is paid to religious ceremonies and processions than in any other city of Spain. The large towns have a sombre aspect, the women being nearly all in black, without a bonnet or a rihand. Every one has a mantilla or scarf thrown over the shoulders, which varies in quality with the station of the wearer. Besides a waistcoat and jacket of cloth, covered with abundance of silver buttons, the men usually wear a sheepskin jacket with the woolly side outwards; or, instead of this, an ample brown cloak, the right fold of which is thrown over the left shoulder with a Roman air. The head is covered with a pointed cap of black velvet, the ends of which being drawn down over the ears, leave exposed a high forehead and manly features. They have tight breeches, sustained above the hips by a red sash, and fastened the whole way down the outside of the thigh by bell buttons, woollen stockings, stout shoes, and leather gaiters, curiously embroidered, and fastened at top with a garter-coloured string. (*Stidell*, i. 138.) The love of dancing is universal among them; the ladies usually dance well, but in a style quite different from the French; they laugh and talk while they dance, and are strangers to that burlesque silence and gravity that prevail among the quadrillers of France and England. Music is much cultivated; and it is rare to find a female, even in the middle ranks, who is not a good pianist. (*Inglish*, i. 109.) Among their amusements, the bull-fights, to which all classes are passionately addicted, must not be forgotten. These have been prohibited several times; and the cruelties practised at them are, as Mr. Inglish justly observes, sufficient to stamp them with the character of brutality and barbarism. Yet there is nothing of deliberate cruelty in the character of the Spaniards, and they have as little, perhaps, of hard-heartedness as other people. The use of the toledo, or bravo, to revenge private wrongs, is now unknown. Horse-racing was attempted to be introduced by the duke of San Carlos, at Madrid, in 1680, with English horse against a Spanish one; but the English horse was beaten by foul play, and the duke insulted as he left the ground.

The Castilian is the standard dialect of the Spanish

language. During the struggles with the Moors, many dialects of the *Romance*, or mixture of the Latin with the Germanic tongues, grew up in Spain, which finally melted into three — the Galician, Castilian, and Catalan. On the marriage of Isabella, queen of Castile, with Ferdinand of Aragon, the Castilian *Romance* became the language of the court, and has maintained its pre-eminence ever since.

History. — The Castiles anciently formed parts of *Antabria*, and the country of the *Ceñiberris*, *Orelani*, and *Carpetani*; and, like the rest of Spain, were successively over-run by Romans, Goths, and Saracens. After the expulsion of the Saracens, and various vicissitudes, the sovereignty of Castile came by marriage to Sancho III., king of Navarre, whose son Ferdinand was made king of Castile in 1034. He married the sister of Veremond III., king of Leon, but afterwards killed his father-in-law in battle, and was himself crowned king of Leon, in 1037. The crowns of Castile and Leon were afterwards separated and again united several times, till, by the marriage of Isabella, who held both crowns, with Ferdinand, king of Aragon, in 1479, the three kingdoms were, as at present, consolidated into one. Castile, as well as the rest of Spain, had for a lengthened period been exposed to the scourge of a civil war carried on without seal on either side, but with the most detestable perfidy and cruelty.

CASTILLON, a town of France, dép. Gironde, cap. cant., on the Dordogne, 11 m. E.S.E. Libourn. Pop. 2,960. In 1451, an obstinate engagement was fought under the walls of this town between the English and French, when the latter were victorious. In the commune of Castillon are the remains of the *Château de Montaigne*, to which the illustrious essayist of that name retired in 1572, and where he breathed his last on the 13th of September, 1592. (*Ilugo*, art. *Gironde*; *Biog. Universelle*.)

CASTLEBAR, an inh. town of Ireland, prov. Connaught, co. Mayo, at the N. extremity of the lake of the same name, 126 m. W. by N. Dublin. Pop. in 1821, 5,404; in 1831, 6,373; pop. of par. in 1834, 12,727; of whom 1,123 were of the estab. church, 10 Prot. diss. and 11,594 R. It was taken by a French force under the general Humbert, which landed at Killala in 1798, but was shortly after evacuated on the approach of the main army of the British under Lord Cornwallis. It is the assize town of the co., and consists of a square, and a long street with some branches. The par. church and a R. Cath. chapel are new, large, and elegant buildings; there are also a meeting-house for Methodists, a large parochial school, a national school, an infirmary, and two dispensaries. There are barracks for artillery and infantry, fit to accommodate 650 men. The constabulary and the revenue have stations here. By charter of James I. in 1613, the corporation consists of a portreeve, 15 burgesses, and a commonalty, which returned 3 mem. to the Irish H. of C. till the Union, when it was disfranchised. The assizes for the co. are held here; also general sessions in Jan. and Oct., and petty sessions every Saturday. The court-house is an elegant, well-arranged building. The county prison, lately erected on the radiating principle, has 124 cells, and 33 other sleeping-rooms: average number of prisoners, in 1837, 163. Linen and linen yarn is manufactured to some extent, and sold in the linen-hall; there are also tobacco and soap manufactories, a tannery, and a brewery. Duty was paid, in 1836, on 2,597 bushels of malt. There is an extensive trade in grain, and other agricultural produce. Markets on Saturdays; fairs, 11th of May, 9th of July, 16th of Sept., and 18th of November. A branch of the National Bank was opened here in 1836. Post-office revenue, in 1831, 908; in 1836, 897. A mail-coach plies between the town and Bellina; and that from Ballinasloe to Westport passes through it, does a car from Westport to the town. The trade of the town is not sufficient to afford permanent employment to the working classes, who depend chiefly on the temporary work procured from the surrounding farmers, and are therefore often subject to the pressure of want. Turf fuel is abundant. (*Stat. Surv.*; *Railway Rep.*)

CASTLECOMER, an inland town of Ireland, prov. Leinster, co. Kilkenny, on the Deen, an affluent of the Nore, 52 m. S.E. Dublin. Pop. in 1821, 908; in 1831, 2,436. Pop. of par. in 1834, 13,435, of whom 1,439 were of the estab. church, 9 Prot. diss., and 11,997 R. Cath. The town, which suffered much in an unsuccessful attack by the insurgents in 1798, consists of a main street planted on each side, and of some others branching from it, and is remarkable for neatness and good order. The par. church on a neighbouring hill, a large R. Cath. chapel, a convent, a Methodist meeting-house, a court-house, a dispensary, and a barrack, are the principal buildings. Little trade is carried on, the place deriving its support chiefly from the neighbouring collieries, which furnish a copious supply of fuel to the surrounding counties. The quantities raised in 1836, were, 49,554 tons of coal valued at from 10s. to 15s. per ton; and 53,354 tons of

calves, at from 4s. to 5s. per ton: the mineral is of the same kind as that of the sea, and burns without smoke, leaving the glass, glass-works of Wernier. Fairs are held on March 17, May 5, June 21, Aug. 10, Sept. 14, Oct. 28, and Dec. 14. General sessions in June, and petty sessions every Friday; also a manorial court for the manor of Kilkenny. A part of the constabulary is stationed at Kilkenny. Post-office revenue, in 1830, 1862, £ in 1836, 3002. Two coaches from Dublin to Kilkenny pass through the town. A mail-car from it to Carlow flies every day, conveying at the average 5 passengers; and a car to Kilkenny 6 days in the week, with an average of 5 passengers each trip. (*Stat. Surv.*; *Railroad Rep.*)

CASTLEDOUGLAS (formerly *Carlisleburg*, from the name of a lake in its immediate vicinity), an inland burgh or barony of Scotland, co. or stewartry of Kirkcubright, par. Kelton, on the high road from Dumfries to Portpatrick, 18 m. from the former, and 68 from the latter. Pop. 1,500. It is neat and well built, and consists of a main street along the road, with several lesser streets running at right angles or parallel to it. It is quite a modern town, and is wholly indebted for its existence and prosperity to the advancing wealth of the thriving agricultural district by which it is surrounded. Its consequence has been of late years materially increased by the transfer to it of the weekly corn and cattle markets, the most important in the co., originally held at Rhone House, a small village distant 1½ m. The famous horse-fair of Kelton Hill is still held at Rhone House; but it has lost much of its original importance, as horses from Ireland, which formed its staple, are now generally sent direct to the fairs in England by steam. Instead of taking a circuitous land route by Kelton Hill. It has an extensive retail trade, but no manufactures, unless we include a brewery under that designation. The town had till recently a native bank: it has at present two branch banks.

CASTLETON, a par. of England, co. Derby, hund. High Peak. Area, 10,100 acres. Pop. (1831) 1,320. The village is 143 m. N. by W. London. The vale of Castleton is in the heart of the Peak district, about 1,000 ft. below the level of the surrounding hill ranges, and is 6 m. in length, and from 1 to 2 m. in width, with several smaller dales opening to it on the N. and S. It is a fertile tract watered by several rivulets, and approached from the Chapel-le-Frith side, through a long and deep chasm, crossing the mountain range, and called the "Winnetts" or windgates, from the strong gusts and currents of air that usually prevail: the road winds down a considerable declivity, between precipices rising upwards of 1,000 ft. on each side, and opens, by a sudden turn, on the vale, in which there are 3 villages, Hope, Hrough (both in the parish of Hope), and Castleton. The latter is at the base of a steep rock, whose summit is crowned by the ruins of the Castle of the Peak, considered by King (*Monimenta Antiqua*) a genuine specimen of the Saxon period; though the traditions of the neighbourhood ascribe it to Wm. Peverell, a natural son of the Norman Conqueror. The keep is still nearly entire; and some portions of the outer walls, in many places 20 ft. high and 9 ft. thick. The church is small, but considered a very interesting relic of the early pointed style: here are also a Wesleyan chapel, and an endowed charity school, in which 23 scholars are educated. The inhabs. are chiefly employed in the mines of the surrounding district, which produce lead, calamine, and the coloured flint spar called "blue John," much in request for vases and other ornaments. The whole of the calcareous strata in the vicinity are remarkably damaged, and are also characterised by numerous cavernous fissures and the frequent disappearance of streams (though what are termed "wall-holes"), which, after subterranean courses of various lengths, again emerge to the light. The outer chamber of the Great Peak, or Devil's Cavern, has a natural arch of about 130 ft. span; several small cottages have been built in it; the rest of the chambers are only to be explored by torches; they extend about 3,500 ft. from the entrance to the innermost end, where, though there are probably others beyond, the rocks close down so near a subterranean stream as to prevent further access: this stream has to be crossed two or three times in proceeding, and at one part a small boat is kept for the purpose. The average depth from the floors to the upper surface of the mountain is about 600 ft. The strata abound in marine fossil remains. The Eldon hole, 3 m. W. of Castleton, is of a similar character, and also that approached by the level of the Sheafwell mine, near the Winnetts. This mine has been given up; but the Odin mine, in the vicinity, which was worked in the Saxon period, is still productive. Mary Torr, or the Shivering Mountain, rises 1,200 ft. above the vale, and is composed of alternating strata of shale and calcareous grit. There is a small and contemptible ruin on its summit, and a small and insignificant residence are situated in the district, which is one of the most remarkable in the kingdom for its picturesque character, and the abundance of natural objects

and phenomena interesting to science. On the attainder of the grandson of William Peverell of the Peak (for poisoning the earl of Chester), the castle was granted by Hen. II. to his son, afterwards King John; subsequently Edw. III. gave it to John of Gaunt; since which it has formed part of the duchy of Lancaster, and is at present leased by the duke of Devonshire. (*Beauties of England and Wales*; *Lyons's Mag. Brit.*; *Rhodes's Peak Society*; *London Geol. Trans.* vol. vi.; *Antichrologia*; *Peverell's Account of Derbyshire Demesne*.)

CASTRES, a town of France, dep. Tarn, cap. arrond., in an agreeable and fertile valley, on the Aout, 23 m. S.E. E. Alby, lat. 43° 57' 9" N., long. 2° 15' E. Pop., ex com., 13,330. This, though not the capital, is the principal town of the dep., and is thriving and industrious. It is divided into two parts by the river, over which it has two bridges. It is but indifferently built, and the streets are narrow and winding. The principal building is the old episcopal palace, now the *sous-préfecture*; it has also barracks, workhouses, an exchange, a theatre, and a fine promenade. It is the seat of a court of primary jurisdiction; and has a model school, a theosophic seminary, with 113 pupils, a Protestant consistorial church, a class of linear design, a public library with 6,000 volumes, &c. There are here extensive manufactures of cloth and woollen stuff, with establishments for the spinning of cotton, linen fabrics, paper fabrics, dye-works, bleach-fields, tanneries, &c. It has also copper forges and foundries.

Castres espoused, in the 16th century, the Protestant party, and Henry IV. resided in it for a lengthened period. Its ramparts were demolished by Louis XIII., and the bishopric was suppressed at the Revolution. It is the birthplace of Dacier the critic, of Rapin the historian of England, and of the Abbé Sabatier. (*Hugo, art. Tarn, Dict. Géog.*)

CASTRO, a sea-port town of Naples, prov. Terra d'Otranto, on the Adriatic, 28 m. S.E. E. Lecce; lat. 40° 0' 20" N., long. 18° 25' 25" E. Pop. 3,000. It has an old castle and a cathedral, and is the seat of a bishopric. It was sacked by the Turks in the 16th century; and since then has suffered much from the incursions of Barbary cruisers. Its harbour admits only small vessels. The environs are productive of corn, wine, cotton, and fruits.

CASTRO DEL RIO EL LEAL (an. *Castro Julia*), a town of Spain, prov. Cordova, on the Guadajoz, 16 m. S.E. E. Cordova. Pop. 9,700. It has 3 churches, 2 hospitals, a founding hospital, 2 seminaries for the education of boys and girls, and a castle; with manufactures of wool and hemp.

CASTROGIOVANNI (an. *Enna*) a town of Sicily, prov. Catania, cap. cant., almost in the centre of the island, 65 m. E.S.E. Palermo, in a plain about 5 m. in circ., being the summit of a lofty and almost inaccessible mountain, more than 4,000 ft. above the level of the sea. Pop. 12,743. This city, so celebrated in antiquity as the birth-place of Ceres, and the site of her most sacred temple, is now one of the poorest and most decayed towns in the island. It still, however, commands an extensive and delightful prospect, is well supplied with excellent water, and has a clear salubrious atmosphere. The surrounding country, which is very fertile, was, in antiquity, ornamented with innumerable groves, temples, &c., appropriated to the worship of Ceres and Proserpine. Livy has correctly described the city as built in *excellent loco ac prærupto*; and Cleoro has given an eloquent description of the town, temple, and statue of Ceres, carried off by the wholesale plunderer, Verres: "*Simulacrum Cereis Ennae, ex sud sede ac domo, sustulit, quod erat tale, ut homines, quum viderent, aut stuporem viderent, ac Cereis, aut effugium Cereis, non humanum, sed cario demum, et cario demum, et cario demum.*" But all traces of the temple, as well as of the worship of the goddess, have disappeared. The castle in the modern town, which is going fast to ruin, is, according to Sir R. C. Hoare, evidently of Saracen or Norman origin. About 5 m. from the town, at the foot of the mountain, is the famous lake, on the borders of which

"Proserpine gathering flowers,
Herself a fairer flow'ry, by gloomy Dis
Was gathered."

The orators and poets of antiquity have exhausted their powers in describing the beauty and sublimity of this famous lake. (See, among others, *Cicero in Perrem*, iv. 145; *Ovid, Met. lib. v. lin. 363*.) But it no longer wears the livery of perpetual spring; its groves have been cut down, and its temples levelled with the dust! All is desolate and deserted:—

"Pro moit vides, pro purpureo narcisso,
Candore, at vides nigra palloribus, omnia."

Its naked borders are fetid and loathsome, and in the summer months exhale a pestiferous air.

"Tumpeant enim longinquas vales matres venetas."

Enna was the head quarters of the revolted slaves under Eunus during the first servile war in Sicily. Here

they defied for several years the power of Rome, and defeated the Pretorian armies. At last they were entirely defeated under the walls of Medana, by the consul Piso; and Enna was subsequently taken by the consul Rupilius, and the slaves put to the sword or crucified. (Besides the authorities already referred to, see *Sir R. C. Hoare's Classical Tour*, ii. 247, &c.; *Russell's Sicily*, p. 114.; and the *Ancient Universal History*, xli. 416.)

CATALONIA (Span. *Cataluña*), a prov. of Spain, occupying the N.E. portion of the k. between lat. 40° 30' and 42° 51' N., and long. 0° 18' and 3° 21' E. It is of a triangular shape, and has the E. Pyrenees, which separate it from France, on the N.; the Mediterranean on the E.; and Aragon, and a small part of Valencia, on the W. Greatest length and breadth, 190 and 130 m.; area about 12,150 sq. m., including Andorre. Offsets from the Pyrenees spread themselves through the whole prov. from N. to S., forming valleys of larger or smaller extent, like those of Ampurdan, Urgel, Aran, Lerida, &c. Towards the middle of the prov., 29 m. N.W. from Barcelona, is the celebrated Moneñat, 4,500 ft. in height; and farther S., on the Ebro, is the Sierra de la Llena. The Pyrenees are not so rugged on this as on the French side, and descend gradually towards the Mediterranean. They are mostly granitic. The other mountains of Catalonia are in many respects similar. The mountain of Cardona, 17 m. N.W. Moneñat, almost in the centre of the prov., is a solid mass of pure rock-salt, without the least crevice or fissure, between 400 and 500 ft. high, and 3 m. in circ. This prodigious mass of salt is unparalleled in Europe, and perhaps in the world. In almost any other country it would be turned to great account, and be made the means of an extensive trade; but here, owing to the badness of the roads and the difficulty of access, this inexhaustible source of wealth is but little known, and comparatively neglected. (*Dillon's Travels in Spain*, p. 350.) Near Olot, in this prov., about 55 m. N. Barcelona, is a remarkable district of extinct volcanos, that has been visited and described by Mr. Lyell. It contains about 14 distinct cones, with craters. The greatest number of perfect cones are close to Olot; and the level plain on which the town stands has clearly, according to Mr. Lyell, been produced by the flowing down of lava from the adjoining hills. Most of these volcanos are as entire as those near Naples, or on the flanks of Etna. Some of them contain caverns called *bufadores*, from which a current of cold air blows during summer. There is no record of any eruption here; but the town of Olot was nearly destroyed by an earthquake in 1421. (*Principles of Geology*, ii. 38., 3d ed.) The mountains in the S. of the prov., near the coast, are limestones. On the E. of Cervera gypsum only is met with; but more to the W. it gives place to chalk. The coast is mostly bold and rugged. In the N. is Cape Creus, the most E. point of Spain, being the extremity of a rocky peninsula stretching out into the sea, and separating the Gulph of Lyons from that of Rosas, lat. 42° 19' 53" N., long. 3° 20' 16" E. The prov. is well watered. One of the affluents of the Ebro, the Noguera, forms for nearly 60 m. the line of demarcation between it and Aragon. The Ebro itself enters the prov. at Mequinenza, and flowing through its most S. portion by Tortosa and Ampora, falls into the Mediterranean 15 m. E. from the latter. The Segre, with its affluents, unites with the Ebro at Mequinenza. The principal rivers, unconnected with the Ebro, are the Llobregat and Ter, the one flowing S.E., and the other E., to the Mediterranean.

The Pyrenees furnish iron, copper, zinc, and manganese. There are lead mines in various districts. Coal is abundant, but much difficulty has always been encountered in working it, from the want of capital and of improved means of communication. Towns such as that of copper and silver abound in the valley of Aran, and that of coal, silver, and gold, have all been found in the vicinity of Lerida. There is abundance of alum in the valley of Aran; nitre is produced spontaneously in the plains of Urgel, and cathartic salts at Cervera. The mountain of rock-salt at Cardona has been already noticed. There are marbles, jasper, and other stones useful in architecture and sculpture; alabaster, amethysts, topazes, and coloured rock crystal; quartz, barytic spars, fluor spar, limestone, chalk, and gypsum, in all varieties; micaceous, talc, serpentine, chalcidony, &c. There are many mineral waters and hot springs. (*Milano*; *Townsend*, iii. 345.; *Bourgoing*, iii. 344.)

The air is dry and usually bright and clear in the interior; but on the coast it is variable and moist; and in summer pestilential diseases not unfrequently prevail. The mountains are every where covered with snow during the winter, and in the Pyrenees frequently even in June.

Soil and Produce.—About half the surface is susceptible of cultivation, the rest consisting of rocks, naked barren hills, and woodland. The mountain land is stony, and full of fragments of granite; but the valleys are mostly fertile. All sorts of grain are grown; viz. wheat,

rye, maize, barley, oats, and millet. The plains of Ampurdan are suitable for rice; but its cultivation is prohibited, as prejudicial to health. (*Milano*.) Pulse is produced in all parts. Hemp, flax, saffron, spinach, woad, anise, liquorice, and berilla, are also produced. The E. districts yield good strong wines, which are frequently employed to give body to the wines of other provs., and are sometimes exported for that purpose to Ceite, and thence to Bordeaux. Oranges, lemons, and citrons, are found on the coast; figs and almonds are grown in the plain of Tarragona; and apples, peaches, cherries, quinces, medlars, apricots, pears, walnuts, chestnuts, and filberts, in all the plains. Oil, though not of the best quality, is produced in all the warmer parts of the coast district. Silk, honey, and wax, are also produced in considerable quantities. Timber is plentiful, especially the robble-oak, beech, fir, elm, evergreen poplar, cork-tree, &c. Nuts and cork constitute important articles of export from the prov., being in this respect second only to linen and cotton goods and brandy. Bears and wolves are sometimes seen in the Pyrenees. Laborde estimated the produce of wool at 50,000 quahs.

Catalonia is the best cultivated, and the people the most industrious, of any of the Spanish provs. This is owing to a variety of causes, but principally, perhaps, to its exemption from the *alcavala* and other oppressive imposts (*see Spain*), and to the mode in which lands are occupied. Generally, throughout Spain the land is divided into vast estates, held under a system of strict entail, and administered by stewards on account of the proprietors. The disastrous influence of this system is apparent in the low state of agriculture, and the wretchedness of the peasantry, in most parts of the monarchy. But in Catalonia its influence is materially modified by the landlords having power, by what is called the *emphyteutic* contract, to lease a portion of their estates. This they may do for a term of years, either absolute or conditional, for lives or in perpetuity; always reserving a quit-rent, as in the English copyhold, with a relief on every succession, a fine on the alienation of the land, and other seigniorial rights dependent on the custom of the district. The reserved rent is commonly paid in money, but the agreement is often for fine, oil, corn, or poultry. If the tenant quits before the end of his term (which he may do), he loses all claim for improvements, for which he must otherwise be paid. (*Townsend*, iii. 330.) Persons occupying land under this tenure have an obvious interest in its profitable cultivation; and wherever it prevails the country is in a comparatively flourishing state.

Irrigation is the leading feature in the husbandry of the prov., and is carried to a great extent by means of canals and trenches cut from every available source; the maintenance of which, together with the distribution of the water, is committed to the care of a particular junta. Great numbers of farms are also watered by means of the *noria*, a machine introduced by the Saracens for raising water from wells. The toll is in parts so very light that it is ploughed with a couple of oxen, and sometimes with one horse, or even mule; but with the help of the water it is rendered fertile, and produces on the same spot corn, wine, grapes, and olives. According to Mr. Townsend, the common produce of wheat last 10, and in rainy seasons, 15 for 1. (*Year in Spain*, by an American, i. 19. 32. 44. 60.; *Townsend*, i. 92. 103. 179. 196., iii. 304. 316. 328.; *Milano*.)

The silk and woollen manufactures of Catalonia were formerly carried on to a great extent, and are still of considerable value and importance. In the latter part of last century the cotton manufacture was introduced; but it did not succeed; and Missions, in the early part of some years past its progress has been *de mal en peor* from bad to worse. Exclusive of silks, cottons, and woollens, a good deal of linen is made, with paper, hats, cordage, &c. All kinds of weaving are carried on upon the slopes of the Pyrenees, where wages are lowest; the webs being brought to Barcelona to be bleached and printed. Leather is largely manufactured, and shoe-making used to be one of the principal employments. In 1786, the export of shoes from Barcelona only was estimated at 700,000 pairs, mostly for the colonies. Since the emancipation of the latter, this trade has greatly declined. Missions reckons the export of shoes in 1836 at 200,000 pairs; and according to Inglis, the shoe-making business, which formerly employed 2,000 hands in Barcelona, had entirely ceased in that city. Distillation is also extensively carried on; the exports of brandy amounting, according to Missions, to 85,000 pipes a year. Cannon and small arms, soap, glass, sheet-iron, and copper utensils, are also produced. Women, in the agricultural districts, are employed in the making of thread and other laces. The shipbuilding, formerly carried on at Barcelona, Matara, and other places on the coast, where timber was cheap, has nearly ceased. Tarragona is the chief place in the prov. for the export of nuts, al-

monds, wines, brandy, cork wood, and cork bark. (See TARAGONA.)

The pop. of Catania was estimated in 1786 at 814,412. According to the *estimate* of Mifano, it amounted to 1,108,000 in 1826 (II. 32.) ; and later estimates give nearly the same result. The principal towns are Barcellona, Taragona, Gerona, Lerida, Reus, Manresa, Tortosa, &c.

The language of the Catalans is a dialect of the Romance or Provençal, at one time the common language in the S. of France, and in some other parts. But it is now a good deal intermixed with Castilian and other words. Letters were successfully cultivated at the court of Barcellona ; and some of the counts attained to distinction as troubadours.

Catania had for a lengthened period its states, composed of the clergy, nobility, and commons, who shared the legislative power with the sovereign. It had, also, particular and very extensive privileges, and a peculiar form of jurisdiction in the hands of magistrates, called *vigueros*, whose districts were named *vigueries*. The highest court of appeal was the royal council established in Catalonia. Their contributions to the king were not considered as imposts, but as voluntary gifts ; the Catalans were to be tried by the laws of Catalonia only, and by native judges ; and their estates were never to be confiscated, unless for treason. But these privileges were suppressed by Philip V. when he subdued the province ; and the laws of Catalonia were then assimilated to those of Castile. They have always, as already seen, been exempted from the *alcavala*, *cientos*, and *millones*, in lieu of which they paid 10 per cent. on all rents, whether belonging to individuals or communities, and on the supposed gains of merchants and mechanics.

The Catalans are hardy, active, and industrious ; and used to be distinguished by their attachment to their privileges, and their opposition to arbitrary power. But in this respect they seem to have undergone a material change ; being now distinguished by their veneration for the apostolical party in church and state — the consequence probably of their ignorance and subservience to the priesthood. There seems, indeed, to be little or no provision made for education. Philip V. suppressed the universities of Barcellona, Lerida, Gerona, &c. ; and established in their stead only that of Cervera. There are academies in the principal towns ; but the great bulk of the people appear to be without the means of instruction. Their improved condition is not therefore in any degree owing to their superior intelligence, but to the comparatively favourable circumstances under which they have, in other respects, been placed.

The difference between the cottages of Catalonia and those of the other provinces of Spain is very visible. The houses and cottages here have an air of convenience and comfort ; there is glass in the windows, and the inside display the articles of furniture in common use. No beggars, and few ragged people, are seen ; industry is every where active ; stones are removed from the ground and collected in heaps ; fences are more general and more neatly constructed ; nobody is seen basking in the sun ; even the women and girls who attend the cattle do not sit idle, wrapped up in their plaids, but every one has her spindle in her hand. (*Inglio*, II. 304.)

Catania, anciently made a part of the *Hispania Taracomena* of the Romans. The Goths were its next masters, who spread themselves from it over the rest of Spain. On the fall of the Gothic empire, the Catalans submitted to the Moors, but the dominion of the latter was not of long duration. In the 8th and 9th centuries, Catalonia, with the adjoining country of Roussillon, became an independent state, subject to the counts or earls of Barcelona. Under their government, liberal institutions were established in the prov. ; it was distinguished by its naval power, commerce, and proficiency in the arts ; and its fleets and armies frequently interfered with decisive effect in the contests of the time. In 1137, Catalonia was united with Aragon, by the marriage of one of its counts with the heiress of the latter ; but the Catalonians retained their separate legislature, and distinct privileges. In 1640 the prov. revolted against Philip IV., and was not recovered till 1659. In the war of the succession the Catalonians were the most zealous adherents of the Archduke Charles ; and even after England and Austria had withdrawn from the contest, they refused to submit, and defended Barcellona with an obstinacy of which there are but few examples. On its capture, their ancient cortex, and most of their peculiar privileges, were suppressed.

CATANIA, an ancient and celebrated city and seaport of Sicily, cap. prov. same name, on the E. coast of the island, at the foot of Mount Etna, at the extremity of a vast plain, 21 m. N. N. W. Syracuse ; lat. 37° 29' 30" N., long. 15° 19' 19" E. Pop. (1831) 52,423 ; viz. 25,578 males, and 26,845 females. Though it has suffered much from earthquakes, by one of which, in 1693, it was all but totally destroyed, it has always risen from its ruins finer and more magnificent than ever. Captain Smyth says,

"It has a noble appearance from the sea ; and what is rare in an Italian town, the effect is not diminished on landing ; for the streets are regular, spacious, and handsome ; and the numerous churches, convents, palaces, and public establishments, principally constructed of lava, faced with magnesian limestones from Malta and Syracuse, and enriched with marbles from the ruins, are magnificent." Mr. Hughes says that its exterior aspect reminded him of Oxford ; but "that the interior may defy competition. It is nobly situated." Mr. H. continues, "on the roots of Etna, its despolier and its benefactor. Overwhelmed, as it has often been, by torrents of liquid fire, it has risen, like the phoenix, more splendid from its ashes. The very substance which once ravaged its plains has, by its own decomposition, covered them with soil fertile as the fabled garden of the Hesperides ; and on all sides the material of destruction is turned to the purposes of ornament and utility. The streets are paved with lava ; houses, palaces, and churches, are built of lava ; of lava they form ornaments chimney-pieces, tables, and a variety of toys ; whilst a natural mole of lava defends the shipping from the fury of the tempest. Ask a Catanian what is the subject of almost every thing you behold in art or nature, and his reply will be, with a most significant elevation of his hands and eyebrows, *Lava, lava, lava ; tutta tutta lava*. The plan of the city is superb, and no one is permitted to deviate from it." The cathedral, founded in 1094, was rebuilt on a simple and grand scale, after the earthquake of 1693 ; the senate-house, most of the theatres, and most of the municipal establishments, are also fine, appropriate buildings. Near the cathedral is a fine square, ornamented with an antique statue of an elephant bearing on its back an obelisk. It has 49 churches, of which that of St. Maria dell' Ajuto, and several others, are magnificent structures ; it has also 19 convents for men, and 11 for women. The Benedictine convent of San Nicolò d'Asena has long been justly celebrated for its vast extent, superb church, excellent organ, large museum, ancient mosaics, and great riches. Among the charitable establishments, exclusive of the *monte di pietà*, are several hospitals, a workhouse, a founding hospital, a lying-in hospital, a Magdalen asylum, &c. The university, founded in 1445, by Alfonso of Aragon, is an extensive foundation with an annual revenue of above 2,000*l*. It has able professors, and is well attended ; its library and museums are open on holidays to the public. The heirs of Prince Biscari and others have also fine museums. Catania is the seat of a bishopric, of a court of appeal, a criminal court, a civil court, and of the provincial authorities ; and enjoys extensive privileges. The humanity, hospitality, and good-breeding of the inhabitants, have been eulogised by all travellers. On many occasions they have shown a singular unanimity in public affairs ; they had the courage to practise inoculation so early as 1742, and to introduce the potato while an ignorant prejudice existed against it among their neighbours. The principal manufacture is that of silk, which is largely carried on. The working of the yellow amber found on the S. coast of the island affords employment to some thousands of the population. The snow of Mount Etna is also a great source of wealth. The harbour is not equal to the importance of the city ; but it is generally full of small craft that resort thither for corn, macaroni, potatoes, olives, figs, silk, wine, almonds, cheese, oil, soda, manna, cantharides, amber, snow, and lava. The environs are fruitful, and well cultivated.

Catania is very ancient. It is believed to have been founded by the Chalcidians, and had Charondas for its early legislator. Under the Romans, it was the residence of a prefect, and was adorned with many noble buildings. Owing, however, to the repeated occurrence of earthquakes, and the irruption of lava from Etna, its ancient monuments have been mostly destroyed ; but the remains of its amphitheatre, the circumference of which exceeds even that of the colosseum, as well as of its theatre, odeum, hippodrome, temples, aqueducts, baths, &c., attest its former extent and magnificence. (*Giornale Statistica*, No. 1. p. 53 ; *Swinburne*, II. 306. 4to. ed. ; *Smyth*, p. 185 ; *Hughes's Greece and Albania*, I. 110. 8vo. ed.) CATANZARO, a town of Naples, prov. Calabria Ultra II., of which it is the cap., in a healthy and agreeable situation, on a mountain near the Gulph of Squillace, 29 m. S. S. E. Cosenza. Pop. 13,000. It suffered very severely from the dreadful earthquake of 1783, which overthrew several of its principal buildings ; it still, however, has a cathedral, several churches and convents, a seminary, a royal academy of sciences, a lyceum, a founding hospital, a *monte di pietà*, and two hospitals ; and is defended by a castle. It is the seat of a bishopric, of one of the four great civil courts of the kingdom, of a criminal court, and of an ordinary civil court. There are considerable manufactures of silk, velvet, cloth, &c. ; and a good deal of trade is carried on in silk, corn, cattle, wine, and oil. The inhabitants are affable and industrious, and the women are reckoned the handsomest in the three Calabrias. (*Rampoldi*.)

CATEAU-CAMBRESIS, a town of France, *département* du Nord, cap. cant., on the *Salle*, 15 m. E.S.E. Cambray. Pop. 6,015. It was formerly fortified; and has manufactures of starch, soap, and tobacco, with tanneries, and some trade in lace, lawns, &c. It is celebrated in diplomatic history for the treaty concluded in it, in 1559, between France and Spain.

CATHERINE (SANTA), or **NOSSA-SENHORA DO DESTERRO**, a marit. city of Brazil, cap. prov. St. Catherine, on the W. side of the island of same name, on the narrow strait separating it from the mainland, 520 m. S.W. Rio Janeiro; lat. $37^{\circ} 36' S.$, long. $48^{\circ} 40' W.$ Pop. probably from 5,000 to 6,000. From the landing place in the harbour, which is at the bottom of a verdant slope of about 500 yards, "the town has a most beautiful appearance, and the perspective is nobly crowned by its fine cathedral. The green is interspersed with orange trees, and forms an agreeable parade. The houses are well built, have two or three stories with boarded floors, and are provided with neat gardens well stocked with excellent vegetables and flowers." Besides the church of Nossa Senhora do Desterro, which gives name to the place, there were some years ago two chapels, a convent, an hospicio, and good barracks. Notwithstanding its excellent port and convenient situation, the trade of the town is not very considerable; but it is frequently visited by ships passing to and from the Pacific, and by those in the S. Sea whale-fishery, sperm-whales used to be frequent on this coast, and even in the bay of St. Catherine, but they are now comparatively rare. There are some manufactures of coarse cotton and linen stuffs, and earthenware. When it was visited by Mr. Mawe, it was principally occupied by merchants, ship-captains, and others retired from business, attracted thither by the beauty of the situation, the salubrity of the climate, and the cheapness of most necessary articles. He speaks very favourably of the courtesy of the inhabitants. The ladies, he says, "are handsome and lively; their chief employment is making lace, in which they display great ingenuity and taste." (*Mawe's Travels*, p. 58.)

The island of St. Catherine may be entirely circumnavigated, and many good anchorages are found between its W. coast and the continent; but the N. part of the channel is the only one suitable for large vessels. Here they anchor in 5 fathoms on a mud bottom which holds well, and are protected from all winds, except from the N.E., which are rarely dangerous. Opposite to the town the channel narrows, and the depth of water decreases to 2 fathoms. The roadstead is defended by 2 forts. This is one of the very best places at which to refit: excellent water may be had in any quantity for nothing, and provisions of all kinds are cheap and abundant. (*Blount's American Pilot*, p. 587.)

The island of St. Catherine is about 35 m. in length, N. to S., and from 4 to 8 m. in width. Its shores rise abruptly from the sea to such a height, that in fair weather it is visible 45 m. off. Its most N. extremity, Point Rupa, is in lat. $27^{\circ} 21' N.$, long. $42^{\circ} 52' W.$ The surface of the island is singularly varied, presenting granite mountains, fertile plains, swamps fit for the growth of rice, lakes stocked with fish, and several small streams. Mandioc and flax are the chief articles of culture; but wheat, maize, pulse, onions, rice, sugar, cotton, indigo, and an abundance of fruit are also grown. The climate is rather humid, but temperate and salubrious.

CATMANDOU, or **KHATMANDU**, an inland city of N. Hindostan, cap. of the Nepaul dom., built in a mountainous region, 154 m. N.N.W. Patna, and 4,794 ft. above the level of the plains of Bengal. Pop. 20,000. It extends for about 1 m. along the bank of a river; and contains many wooden and brick temples, with the palace of the Nepaul rajah. The houses are mostly mean brick or tile buildings, often 3 or 4 stories high; streets narrow and dirty. (*Hamilton's E. I. Gaz.*)

CATRINE, a manufacturing village of Scotland, co. Ayr, parish Born, on the N. bank of the Ayr, 32 m. S. Glasgow. Pop., in 1827, 2,702. Cotton works were erected here in 1786, and a bleaching-work in 1824. Both works are, generally speaking, carried on by means of water-power, but in case of a deficient supply of water, steam-engines have been constructed to make good the deficiency. The weight of yarn spun in 1836 was 951,973 lbs., and the quantity of goods produced, 172,175 pieces of 25 yards each, or an aggregate of 4,304,393 yards, equal to 2,445 m. The bleaching establishment, in addition to what is manufactured at Catrine, bleaches all the cotton produced at the other mills belonging to the same company, the quantity varying from 15,000 to 25,000 yards per day. Every part of the process is carried on within doors, and without interruption, at all seasons of the year. To have bleached the same quantity in the old way, or by exposure to the sun's rays out of doors, would have required from 150 to 200 acres of land! 913 hands are employed in the works, of whom 315 are males, and 598 females, besides about 80 masons and other labourers. The sum paid as wages by the company in 1836 was 37,668l.

18s., being, at an average, a little less than 30l. a year to each individual. There are 7 schools, 6 of which are supported by the school fees (which average 2d. per week), and one maintained by a fixed salary paid by the company; 4 libraries, one of which is attached to a Sunday-school; and two places of worship, one connected with the established church, the other belonging to a sect of Presbyterian dissenters. (*New Statist. Account of Scotland*, part xvi.)

CATTARO, a town of the Austrian states, cap. circ. of same name, at the S.E. extremity of the Gulph or *Bocca di Cattaro*, 210 m. S.E. Zara; lat. $42^{\circ} 25' 28'' N.$, long. $18^{\circ} 48' 18'' E.$ Pop. about 4000. It is walled, and is farther defended by a fort built on an adjoining eminence. Streets narrow, dark, and gloomy. Notwithstanding its small size, it has a cathedral, a collegiate church, 17 other R. Cath. churches and chapels, a Greek church, 6 convents, and an hospital. It is the seat of the administration of the circle and of a bishop, and has a government high-school. The harbour is one of the best in the Adriatic. At its mouth there are two rocks dividing the entrance into three separate channels, two of which admit the largest ships. Internally the gulph is spacious and secure, though little frequented by shipping. The trade of Cattaro is chiefly with the Turkish distr. of Montenegro. The vicinity is very picturesque; but from being surrounded on three sides by mountains, Cattaro has this disadvantage, — that the sun rises an hour later and is lost an hour earlier than in most other places. The district of Cattaro was the seat of a Roman colony; but the town itself only dates from the 6th century. It has suffered much from earthquakes, especially in 1563 and 1667. It was long the cap. of a small republic, which, falling into debt, placed itself under the government of Venice on the single condition of having its debts paid. Previously to the treaty of Tilsit this town was for some time in the occupation of the Russians. (*Geogr. Nat. Encycl.*; *Malle-Brun*; *Dict. Géographique*, &c.)

CATTAGAT, or **KATTEGAT**, a portion of the N. Sea, or of the Baltic, between Jutland and Sweden. (See *BALTIC*.)

CAUBUL, or **CABUL** (an. *Aria, Arachosia*, &c.), an extensive region of Centr. Asia, formerly the centre of a powerful kingdom reaching from Meshed to Cashmere, and from the Oxus to the ocean, but now comprising only the country between lat. 28° and $37^{\circ} N.$, and long. $69^{\circ} 30'$ and $72^{\circ} E.$; and divided into four chiefships, independent of each other, viz. those of its principal cities, Caubul, Peshawer, Candahar, and Herat. Caubul, in its extended sense, includes the greater portion of Afghanistan, Scistan (an. *Drangiana*), and Sewestan, with parts of Khorasan, Caufristan (the Kohistan), and Lahore: length and breadth each about 600 m.

The pop. was estimated by Mr. Elphinstone, in 1809, at about 14 millions, or —

Afghans	4,300,000	Persians and Tadjiks	1,500,000
Belooches	1,000,000	Hindooes, Juts, &c.	5,700,000
Tartars	1,200,000	Miscellaneous tribes	300,000

But this estimate is believed to have been too high when it was framed; and since that period civil wars and foreign conquests have deprived Caubul of the provs. of Beloochistan, Sinde, Moultan, Damnam; Cashmere, Balkh, &c., and have diminished the pop. to little more than the Afghan portion. At present, besides the cities already named, the chief towns are, Ghiznes, Dooshak, and Furrah.

The N. and E. portion of Caubul is a lofty table-land, its mountains belonging to the Hindoo Koosh (or Indian Caucasus), and two of its offshoots, viz. the Solimaun and Paropamisian ranges. The Koosh mountain, about long. $69^{\circ} E.$, gives its name to the range which extends from it both W. and E., and beyond the Indus is continuous with the Himalaya, running generally S.W. to N.E., and in the Kohistan forming the N. boundary of Caubul. Between long. 70° and $72^{\circ} E.$ it makes a remarkable curve to the S., opposite to which the Bolor-Tagh (or cloudy mountains) unites with or approaches it, from Budukhsan on the N. The highest, as well as the most S. point of this curve, is apparently a mountain, called Coond, or Koomeer, near long. 71° , where the Afghans believe the ark to have rested after the deluge; a tradition current, however, respecting the Tukhtie Solimaun also. The Koosh is covered with perpetual snow; its peaks are visible from Bactria, India, and even Tartary, and one of them, measured by Sir A. Burnes, was found to be 30,493 ft. high. Mr. Elphinstone observed at Peshawer three inferior mountain ranges, progressively decreasing in height beneath the former; the description of which will serve, he says, to give an idea of the rest of the Koosh chain: the lowest range was destitute of snow, and its sides were clothed with forests of pine, oak, and wild olive, European fruits and flowers, fern, and elegant shrubs. The tops of the second range are covered with snow, and the third are so to half their

height. On the high central range Mr. Elphinstone observed that "no diminution in the snow could be perceived in any part in the month of June, when the thermometer in the plain of Peshawar was at 118° Fahr." The Koh-I-Baba range, between Caubul and Barmian, is the continuation of the Koosh; but its peaks are not so lofty, probably not more than 18,000 ft. (Burnes, III. 203.), although "covered with eternal snow for a considerable distance beneath their summits." The passes of Hajeeguk and Kaloo on this range are respectively 12,400 and 13,000 ft. above the sea; the other passes are none more than 9,000 ft. in height, and all, without exception, are free from snow by the end of June. In the defiles the road often winds at the base of a mural precipice, rising to 2,000 or 3,000 ft. perpendicularly, and in one part, called Dura-I-zundan, or the "Valley of the Dungeon," the height is such as to exclude the sun at noonday; at the height of 10,000 ft., however, the ground in some parts is ploughed when the snow disappears, the grain sown in May being reaped in October. The ranges N. of the Koh-I-Baba are much inferior in height, and often free from snow, but rise from the plains of Balkh in a bold and precipitous line, 2,500 ft. high. The valley of the Caubul river separates the Koosh from the Teera mountains, which run in a parallel direction, decreasing in size to the E.; but in their higher parts are covered with perpetual snow, and are certainly as much as 15,000 ft. high. (Burnes, II. 105.) The Solimaun range commences with the Saufed-Koh, S. of the Caubul valley; across which it may be considered as connecting itself with the Koosh, by means of cross ranges, causing many cascades and acclivities in the bed of the river. This range stretches from nearly 34° to 29° N. lat., where it becomes connected with the high table-land of Kelat (Beloochistan). It is not so high as the Koosh; its principal points are the Saufed-Koh, or "White Mountain," and the Tukhteh Solimaun, "Throne of Solomon," the last near lat. 31° 30' N.; the former is always covered with snow, and the latter so for three months in the year. Between these two points this range decreases considerably in height, especially where it is intersected by the Gomul river. The Solimaun chain has several parallel ridges, and gives off many lateral and other ranges, especially a remarkable one to the S.W., including the Khojeh Amram hills; a broad range, though of no great altitude, which appears to join the table-land of the E. On the E. high and broad range, abounding in salt, passes off near the Teera mountains, across the Indus, into the Punjab, with a S.E. direction. The Paropamisian mountains (for which as a whole there is no modern name) occupy a large space of country, extending 350 m. E. to W., and 200 m. N. to S.; W. of the Koosh, and between the Helmund river and Toorkistan. They are a maze of mountains, difficult of access, and little frequented; their E. portion is cold, rugged, and barren, although nowhere covered with perpetual snow. In the W. they contain rather wider valleys, and are somewhat better cultivated. Their greatest declivity is on the N. side, from which they send off several ranges towards Balkh; the slope of the whole tract is towards the W.

The Koosh, collectively called the Caubul Kohistan, or "Land of Mountains," contains, in its higher ranges, a number of narrow valleys; in its lower portions the valleys are of some size; Mr. Elphinstone calling them "plains." Many open laterally into the valley of Caubul, which occupies the space between the Indian Caucasus and the Solimaun and Teera mountains, and which in some places is 25 m. wide. The narrow plain, or valley of the Swaut river, is well watered; yields two harvests of most sorts of grain; and abounds in orchards, mulberry gardens, and plane-trees: others are by no means so wide or productive, and are often bounded by a number of narrow gleans. There are many fertile and well-watered valleys on both sides the Solimaun range.

Besides these of the desert, which extend over the S. and W. parts of Caubul, there are many extensive and productive plains: that of Peshawar, about 85 m. in diam., is well watered; its streams fringed with willows and tamarisks; and has numerous gardens and orchards scattered over it: the latter contain a profusion of apple, plum, peach, pear, quince, and pomegranate trees. The greater part of this plain is highly cultivated and irrigated by canals, &c., and the uncultivated parts covered with a thick elastic sod, scarcely equalled, except in England: its villages are generally large, very clean, and neat, and surrounded with groves of date, peepul, tamarisk, &c. The valley of Caubul encloses some small plains, of which that of Jelalabad is the principal. Most of the cities and large towns are in fertile plains: one of great luxuriance surrounds Herat; and the site of Furrah, and other places in the W., as well as the banks of the Helmund, seem "rich oases in the midst of a waste." The desert in Selistan, Gurmiser, and Sherawk, has an ill-defined boundary, and often encroaches on the habitable country.

The Indus forms, for a short distance, the E. bound-

ary, and excepting it, there is no river which is not fordable throughout its course for the greater part of the year. The principal of the minor rivers are the Caubul, Helmund, Furrah-Rood, and Lora. The only lake of any importance is that of Selistan, or Zarruk (*Aria Palus*), which receives the waters of the Helmund (*Elymandus*).

The Climate varies with the elevation; the temperature is much higher at Peshawar and Candahar than at Caubul and Ghiznee; but, generally speaking, the average heat of the year does not equal that of India, nor the cold that of England. At Caubul the snow lies on the ground for five months, and Burnes found the thermometer stood no higher than 64° Fahr. during the hottest period of the day in the month of May. The prevailing winds throughout Caubul are westerly. The rains brought by the S.W. monsoons are much diminished in power by the time they reach the N.E. part of the country, where the rainy season is limited to a month of cloudy weather, and occasional showers. At Candahar the influence of this monsoon is not felt in the least degree: at Caubul there is no regular wet season; but showers are frequent at all times of the year, as in England. At Peshawar, by the first week in March, peaches and plums begin to blossom, and are in the full bloom; the same is the case with the apple, &c., from July to Sept., the weather is cloudy; the winter lasts from the latter month till Feb. Caubul generally is healthy; the most prevalent diseases are fevers, small-pox, and ophthalmia. Sir A. Burnes found the inhabitants of the Koosh, at 10,000 ft. above the sea, quite free from *gotche*, so common in the lower ranges of the Himalaya.

Geology and Minerals.—A core of granite, and resting on it a deep bed of slate, are the prominent geological features of the Koosh: the slate formation includes gneiss, mica, clay-slate, chert, and a mixture of lime, and quartz, gneiss generally occupying the lower portion. The Solimaun chain is composed of a hard black stone; its accompanying ranges on the E. of an equally hard red stone, and a friable grey sandstone: the hills between Herat and Dooshak consist partly of a mixed reddish and black rock, streaked with ore, and partly of greywacke slate. Iron, lead, copper, antimony, tin, zinc, &c., are found in various parts of the mountain region, and 10 or 12 lead mines near Barmian, and elsewhere, but none of great importance, except by the rivers that come from the Hindoo Koosh: there are extensive deposits of sulphur in Selistan, at Cobut, &c.; coal, naphtha, and petroleum, are met with in the latter district; salt in the E. part of the country, both in springs and beds; and saltpetre is procured from the soil in many places.

Many of the forest trees, and most of the finer fruits of Europe grow wild. The timber in the mountain region consists chiefly of pine, oak, cedar, gigantic cypress, and wild olive: the Hindoo Koosh is destitute of wood, and in many places of verdure. Some of the hills produce the birch, holly, hazel, mastic, &c., the wild vine, berry, blackberry, and many other bushes bearing edible berries; the valleys abound with extensive orchards, particularly of apricot-trees; the other trees most common on the plains are the mulberry, tamarisk, plane, willow, poplar, &c. The *asafoetida* plant grows luxuriantly at an elevation of 7,000 ft.; hemlock, fennel, peppermint, nettles, and other such plants, common in Europe, are equally common in the higher parts of Caubul, with a profusion of roses, poppies, hyacinths, jessamines, &c. The vegetation of the lowlands approximates more to that of India; and, on descending into them, the contrast with the country just passed, is so striking that it is thus adverted to by the Emperor Baber, in his commentaries:—"I saw another world. The grass, the birds, the trees, the animals, and the tribes of men: all was new! I was astonished."

Lions of a small species are said to have been found in the hilly country about Caubul; tigers are met with in most of the wooded tracts; wolves, hyenas, jackals, wild dogs, the elk, and various other kinds of deer, wild sheep and goats, on the E. hills; the wild ass in the desert; foxes, hares, porcupines, ichneumons, ferrets, &c., are also found. Birds are very numerous, and include several kinds of eagles, hawks, and other birds of prey; herons, cranes, wild fowl, and game, in plenty; doves, magpies, thrushes, nightingales, &c.; parrots and birds of rich plumage are found only in the E. Turtles and tortoises are numerous; there are no crocodiles in the river; the snakes are mostly harmless. Large scorpions infest Peshawar; mosquitoes, except in Selistan, are less troublesome than in India; large flights of locusts are rare, but occasionally cause a famine in Khorassan.

Races of Men.—The Affghans, who call themselves Poohtoon, bear a considerable resemblance to the Jews; and, though they consider it a reproach to be called Jews, they claim descent from a son of Saul. Sir W. Jones and Sir A. Burnes contend for their Jewish origin; Mr. Elphinstone discredits it. They are divided into a num-

ber of tribes, often at war with each other, especially those in the E. of Caubul, and each under the authority of a chief, who, however, is usually assisted by a council (*Jeerga*), consisting of the heads of the tribe. Mr. Elphinstone conceives their political condition to bear a strong analogy to that of the Scottish clans, in former times; but the genius of the Afghans is more decidedly republican; they resist every encroachment of their rulers, and have a boldness and elevation of character unknown to most other Asiatic nations. They are Mohammedans of the Soonite sect, but use the Persian alphabet; their literature bears a similarity to that of the Persians; but it has a superior dignity and refinement, and in many respects is not unlike that of Europe. The Afghans are hospitable, and tolerant in religion; but extremely superstitious and addicted to astrology, divination, alchymy, &c. They are plunderers by profession; in the W. they live in tents, in the E. in fixed habitations; only a few of them reside in the large towns. Their chief amusements are the chase, feasting, songs and recitations; they have slaves, but traffic very little in them. (*For further particulars see ARGHANAWATS.*)

The Eimauks and Ilazauzohs, two races of Tartar origin, although using dialects of the Persian tongue, inhabit the Paropamisian mountains. The Eimauks, who are divided into four principal tribes, subdivided into numerous clans, each governed by its chief, occupy the lower parts of the country, between Caubul city and Herat; Mr. Elphinstone estimated their number at about 450,000. In war they are ferocious and cruel; they retain many Mogul customs, mixed with others of Persian origin; they live almost entirely in camps, and use the same kind of food as the Afghans, with the addition of horse-flesh and bread of an oily kind of nut. They cultivate wheat, barley, and millet; keep many sheep, and rear a small but active breed of horses; they are Mohammedans of the Soonite sect. The Ilazauzohs have been estimated at about 350,000; they inhabit a higher region than the Eimauks, a cold and sterile country, where little corn can be grown: their sheep, oxen, horses, and the produce of the chase, furnish them with their principal articles of food; sugar and salt are the foreign commodities most in demand amongst them. They live in villages of thatched houses, and are divided into different clans, constantly at war with each other, and each governed by an absolute chief. The Ilazauzohs have strong Tartar features, and many similarities in customs, dress, &c. with the Uzbecks; the women, who are frequently good-looking, possess an unexampled license and ascendancy over their husbands. These people are passionate, fickle, and capricious: but conversable, hospitable, and very fond of music, recitation, visiting, and other sociable kinds of amusement. Many of them are performers on a guitar, poets, and improvisatori. They belong to the sect of Ali. The Tadjiks, or Tanjiks (see BOKHARA), are probably descendants of the original Persian inhab. of the country, and of the Arabs who conquered it in the first century after the Hegira. They live mostly in and round the larger towns, and every where reside in fixed habitations, having settled employments. They are zealous Soonies, mild, sober, peaceable, and industrious; and assimilate much more with the Afghans than the brothers of Bokhara do with the Uzbecks. The Tadjiks are most numerous towards the W. of Caubul; as the Hindkoos (Hindoos, Juts, Sindians, &c.) are towards the E. The Hindoos are, however, to be met with all over the country, chiefly as money-changers, tradesmen, &c.; they are mostly of the Kahastriya or military caste. The Kuzilbaahes, or Persian Toorks, inhabit the towns; the Belooches are generally almost confined to the S.; there are about 2,000 Arab families, besides Armenians, Abyssinians, European Turks, Jews, Caffres, &c., amongst the population.

Agriculture.—There are five classes of cultivators—1st, proprietors, who cultivate their own land; 2d, tenants, who pay a fixed rent in money, or a proportion of the produce; 3d, *busagurs*, or metayers; 4th, hired labourers; 5th, *villains*, who cultivate their lords' lands without wages. The lands are more equally divided in Caubul than in most countries, and the first class, or that of small proprietors, is very large, as by the Mohammedan law every man's estate is at his death divided equally amongst his sons. The class of tenants is not numerous. Leases are generally from 1 to 5 years, and the rent varies from 1-10th part to half the produce; the landlord generally providing the seed, cattle, and farm implements. Labourers are principally employed by the *busagurs*; they are fed and clothed by their employers, and paid for 9 months' work about 30 rupees. The *villains* are many of them of foreign descent, and always attached to the service of some master; they are subject to taxation, and even death-punishment from their lord, but have the privilege of removing from the service of one master to another; they are most numerous amongst the Eusofzyes and other Afghan tribes in the N.E. There are two harvests in the year; one crop, consisting of rice, millet, *jowarce*, maize, &c., is sown in the

spring, and reaped in autumn; the other, which consists of wheat, barley, legumes, &c., is sown at the end of autumn, and reaped in summer. Rice is grown in most parts of the country, but wheat is the common food of the people: barley is usually given to horses. The vegetables and pot-herbs of Europe and India are cultivated largely, especially turnips and carrots; melons, cucumbers, &c., are abundantly grown in the neighbourhood of the towns; and ginger, turmeric, and the sugarcane in the E.; but the latter plant is confined to rich plains, and most of the sugar, as well as the cotton, used in Caubul is brought from India. The palma Christi, sesamum, mustard, &c., are grown for the sake of their oil; tobacco is cultivated in most parts; madder abounds in the W.; and Caubul furnishes to India its chief supply of that article: lucerne and other artificial grasses are sown for the cattle. Much of the land fit for culture has been brought into that state by irrigations undertaken by individuals singly, or associated for the purpose. Cultivable land in Caubul is generally valued at from 9 to 12 annas per acre. Irrigation is effected by means of canals and subterraneous conduits, beneath the slopes of hills, termed *cawraiz*, which are common in Persia. The plough is heavier and makes deeper furrows than that of India, but still only employs one pair of oxen. All grain is sown broadcast; and drill husbandry is unknown. The place of a harrow is supplied by a plank dragged over the field, on which a man stands. The sickle is the only instrument used for reaping. The flail is unknown; and the corn is trodden out by oxen, or forced out by a frame of wood filled with branches, on which a man sits, and is dragged over the straw by cattle. It is winnowed by being thrown against the wind, and when cleaned, is kept in hampers plastered with mud, unglazed earthen pots, and coarse hair-cloth bags.

For grinding the corn, windmills are used in the W., but these are very different from ours, for the sails are inside, and there is an opening in the erection to admit the wind. Water-mills are not unknown; but handmills are most generally used. The manure employed is composed of dung, straw, ashes, &c., but the dung of camels is carefully avoided. Horses are employed in ploughing only by the Eimauks; in Seistan, camels perform this work. There are no carts. The horses of Herat are very fine, and somewhat similar to the Arabian breed; and there is a strong and useful breed of ponies, especially about Baumeene. Mules preferable to those of India; but asses, camels, and dromedaries mostly are used for carriage. The ox resembles that of India; sheep chiefly of the broad-tailed kind; and the goats, which are numerous, have often long and tortuous horns. The greyhounds and pointers are excellent. A great number of horses are annually sold in the N. and W. of India, under the name of Caubul and Candahar breeds; but no horses are bred in large numbers in Caubul, nor are those of Candahar exported in any quantity.

Trade.—Exports.—The principal foreign trade is with India, Persia, and Toorkistan; the exports to the first-named country are principally horses and ponies; furs, shawls, chintz; madder, assafoetida, tobacco, and fruits: those to Toorkistan are shawls, turbans, chintz, white cloth, indigo, and other Indian produce: to Persia the same articles, with the carpets of Herat. The latter-named article, with woollens, furs, madder, cheese, and some piece-goods, are sent from the W. to the E. provs.; and Bhawpoor and Moollan cloths, silk, cotton, and indigo, are sent back in return. Iron, salt, alum, sulphur, and the other natural produce, are also exported.

Imports.—From India are coarse cotton cloths, worn by the mass of the people; muslins, silks, and brocade; indigo, in great quantities; ivory, chalk, bamboo, wax, tin, sandal-wood, sugar, and spices: from Toorkistan horses, gold, and silver; and from Persia, shawls, cloth, tinseal: cast-iron pots, cutlery, hardware, and other European articles, from Russia, *via* Bokhara. Silks, cottons, embroidery, and Indian chintz, come from Persia; slaves from Arabia and Abyssinia; silks, satins, tea, porcelain, dyes, and the precious metals, from the Chinese dominions; and dates and cocoa-nuts from Beloochistan. The merchants are chiefly Tadjiks, Persians, or Afghans, and Hindkoos in the E.; but no Afghan ever keeps a shop, or exercises any handicraft trade. Caubul is the great mart for the trade with Toorkistan; Peshawar for that with the Punjab; and Candahar and Herat for that with Persia. The dismemberment of the kingdom has had no ill effect upon commerce generally: the produce of the town duties of Caubul city rose 1-4th between 1829 and 1835, without any fresh imports. The demand for British manufactures has increased so much latterly, that Russia, which before 1816 supplied a great many articles, now only sends nankeen and broad chintz, of a description not manufactured in Britain, into the market. The greater part of the trade between India, Caubul, and Bokhara, is conducted by the Lohanees, a pastoral tribe of Afghans, often of considerable wealth. About 1,000 camel-loads of Indian goods are annually consumed in Caubul. The Caubul merchants have latterly

begun to frequent the annual fairs on the borders of the Russian dominions, and most of the Russian trade with Bokhara has fallen into their hands. Sir A. Burnes remarks, that were such fairs to be established on our N.W. frontier, and encouragement given to the Lohanee merchants, who are every way deserving of it, a large export of British manufactures would take place.

Caravans, Roads, &c.—In an inland country, without navigable rivers, not suited to wheeled carriages, traffic must be carried on by means of beasts of burden; camels are the principal of these in Caubul, and constitute great part of the wealth of many individuals, as they are let out to merchants by those who cannot afford to trade themselves. The merchants commonly travel in bodles, called *caravans*, and place themselves generally under the conduct of some chief whom they elect as a *canfika basher*, or an officer with absolute command over all the arrangements of the journey. There are but two great routes through the country: one from Balkh across the mountains at Bauman, through Caubul to Peshawar, and thence into the Punjab; and the other from Herat to Candahar: on this line there are few obstacles to oppose a European army, and the latter city could furnish abundant supplies. From Candahar there are two routes; the former through Ghisnee to Caubul, not difficult for 9 months in the year, but next to impassable in the winter, from the snow and intense cold; the second through the valley of Plahsen and Quetta to Shikarpore in Sindh; a country furnishing supplies of food, but deficient in wood and water. There is another road across the Solimaun range from Candahar to Dera Ghazee Khan, in Deraun; but it is said to be hardly practicable for a European army, and is not travelled by merchants. The Khyber pass from Peshawar to Caubul has, in consequence of enormous exactions on merchandises at the former place, been deserted by traders, and is unsafe. Camels, horses, mules, &c., are cheap enough throughout Caubul; but fuel is very scarce and dear, and water is not generally to be had in abundance: two great drawbacks in travelling. (*Comolly*, ii. 323, &c.)

The Public Revenue. In settled times, amounts, according to Mr. Elphinstone, to nearly 3,000,000; but before the revolution, which dethroned Shah Shoojah, 1-8d part was remitted to different tributary princes, who consented to hold their dominions as grants from the khan of Caubul: of the rest, half was assigned for military services to the chiefs, and the remainder for the maintenance of moolahs, dervises, &c. The chief sources of the revenue under the present khan are, the land, the tribute of certain tribes, the town duties and customs, certain fines and forfeitures, the profits of the mint, &c. The land revenue is collected by the head-men of each village, and paid either through the head of the tribe, or the *hakim* or governor of the province: great peculation is often practised by the *hakim*, as the current expenses are paid before the balance is sent to the treasury.

Government.—Under the monarchy, the crown was hereditary in the family of the Suddozys, who belonged to the tribe of the Dooaraunes, said by Mr. Elphinstone (in 1809) to be the greatest, bravest, and most civilised of all the Afghan tribes. The right of succession was not always vested in the eldest son; but the heir was determined either by the reigning sovereign or a council of the great officers of state.

Justice is administered in the cities by the *cauzy*, (or *cadi*) assisted by muftis and other officers; but where the khan happens to reside, criminal complaints are made to him. The *cauzies* have deputies over the whole country. The police of towns is managed under one head, in three departments; viz., watchmen, inspectors of public morals, and superintendents of weights and measures. The police of the country, where the land belongs are answerable for the police. In cases of robbery and theft, if the chief of the village or of the division of a tribe in whose lands a crime was committed, fail to produce the thief, he pays the value of the property stolen, and levies it on the people under him. The police is very bad, and does not interfere in murders for retaliation, except in towns and their vicinity.

Religious establishment.—Moolahs or priests always fill the duties of inspectors of public morals: under the police established in the country, they have grants of land from the head-men of the tribe, and are similar to tithes, but by no means equivalent to them in amount: in the towns they are maintained by fees on marriages, burials, &c., and the gifts of their congregations. A superintendent priest and a registrar are established in each city; several are connected with the royal household; and at the visit of Mr. Elphinstone, there was a professor and a body of students in theology at the king's palace, each of whom received a daily allowance for his support.

Armed force is chiefly cavalry, 3-4ths of whom are *Kushtabashes*. They are collected in bodles, varying in number from 6 to 800, under their several chiefs, and tolerably mounted. Their dress is a *loogee* or turban, one

end of which is tied under the throat in the field; a *kum-merbund* or garment, which serves for a coverlid at night; a *kooria* or shirt, *etkalig* (low trowsers), and boots to the knees, and over all a *caftan* or cloak: their arms are a sabre, a gun, with a good flint lock, and long bayonet; a powder and ball pouch round the waist, and always a shield: their saddles are high both behind and before, and they all carry a rope with a twisted chain attached, by which they can secure their horses at any place or time. There are about 12,000 infantry, all Afghans, armed with a sword, shield, and match-lock, which carries twice as far as a musket; but being too heavy to be brought up to the shoulder, is furnished with a prong or rest, which is fixed in the ground. These troops are but skirmishers, and fight generally in ambush: there are besides two regiments raised seven years ago in Bombay, one of 800, and the other of 300 men, dressed in European uniform, but ill paid and disciplined; and wretched artillery of about 50 field-pieces of different sizes, only half of which are used.

History.—Caubul was amongst the countries invaded by Alexander, and several spots may be almost confidently identified with those mentioned by the historians of that conqueror. A remarkable rock near Bajour is probably the celebrated Aornus; Jellalabad is supposed to be in the neighbourhood of the spot where Alexander revelled in imitation of Bacchus; many topos or artificial mounds are situated along the skirt of the mountain ridges, and on the banks of the Caubul river, some of which having been opened, have been found to contain Grecian coins, gems, bones, cups, lamps, &c. A. D. 997 Caubul was conquered by the Tartars under Sebuctagh, whose successors extended their empire over great part of India, Khorassan, Balkh, and Budukhan. In 1737 Nadir Shah possessed himself of the country; and in 1747 Ahmed Shah Abdalli, the founder of the Dooaraune dynasty, was crowned at Candahar. His successor Timour Shah died in 1793 without naming an heir, and in consequence of the uncertainty of the succession, a protracted civil war broke out among his three sons. One of them, Schah Shoojah-ul-Moolk, having succeeded in placing himself on the throne, was defeated and deposed, in 1809, by Futeh Khan, chief of the Baurickaye family, who espoused the cause of Mahmoud, brother of Schah Shoojah. But notwithstanding his great services, Futeh Khan was treacherously murdered, in 1818, by Mahmoud. On this event taking place, the brothers of Futeh Khan, who had been made governors of provinces, revolted; and one of them, Dost Mohamed Khan, established himself on the throne of Caubul. Kimjret Singh seized about the same time on Cashmere, Peshawar, &c.; and Herat and its dependencies were the only part of the old monarchy that continued in the possession of the Dooaraune dynasty.

Sir A. Burnes has expressed himself in very favourable terms as to the character and talents of Dost Mohamed.—"The justice of this chief affords a constant theme of praise to all classes: the peasant rejoices at the absence of tyranny; the citizen at the safety of his home, and the strict municipal regulations regarding weights and measures; the merchant at the equity of his decisions, and the protection of his property; and the soldier at the regular manner in which the arrears are discharged" (ii. 263.). The account which Sir A. Burnes has given of Schah Shoojah forms a very disadvantageous contrast to his eulogy on Dost Mohamed; but the former has, notwithstanding, been again placed on the throne. Dost Mohamed having assisted the Persians in their attempts on Herat; and having, it is alleged, on various occasions evinced his hostility to British interests, the Indian government determined upon dethroning him, and on placing Schah Shoojah on the *musnad*. For this purpose a powerful army was sent, and the *cauzy* was as far as Ghisnee without meeting any opposition, other than that arising from the nature of the country, and the deficiency of supplies. Dost Mohamed seems to have reckoned on Ghisnee making some considerable resistance; but, being taken by storm after a short but sharp contest, on the 23d of June, 1839, a panic seized his troops, who immediately dishanded themselves; and Schah Shoojah was shortly after enthroned at Caubul, from which he had been driven 30 years before. It is, however, very doubtful whether he will be able to maintain himself without foreign assistance on the slippery elevation to which he has again attained; and very grave doubts are entertained in the best-informed quarters as to the policy of our interference in his behalf. (See *Elphinstone's Caubul*, *passim*.—one of the best and ablest works ever published on a semi-barbarous country; the art. *AFGHANISTAN* in this Dictionary; *Comolly's Journey to India*; *Burnes's Trav. into Bokhara*, 1835; *Journal of the Asiat. Soc. Bengal*, &c.)

CAUBUL, the ancient cap. of the above country, under the Dooaraune dynasty, situated in the plain, and on both banks the river of some name, 6,800 ft. above the level of the sea; 86 m. N.N.E. Ghisnee, 140 m. W.N.W. Peshawar: lat. 34° 32' N., long. 69° 14' E. Pop. about

60,000. (*Burnes*, 1835.) It is compactly built: on three sides it is enclosed by a semicircle of low hills, along the top of which runs a weak wall with an opening surrounded by a rampart towards the E., by which the principal road enters through a gate, after passing a bridge over the river. The Balla Hisaar, or "palace of the kings," which stands on the part of the hill N. of this entrance, is a kind of citadel, and contains several halls, distinguished with the royal ornament of a gilded cupola: there is an upper citadel, formerly used as a state prison for princes of the blood; but as fortresses both are contemptible. In the centre of the city is an open square, whence issue four bazars, with shops about two stories high; the houses are constructed of sun-dried bricks and wood, but few of them have any pretensions to elegance. Caubul is, however, a bustling place; the chief mart of trade in the country; and its bazars are superior to most in the E.: the great bazar is a handsome roofed arcade 600 ft. long by 20 ft. broad. Each different trade has its separate quarter. Provisions in summer are moderate, but both wood and grain are dear in winter. Its climate, and the scenery around it, are both very fine; the banks of its river are beautifully adorned with poplar, willow, and mulberry; but the most pleasing spot in its vicinity is the tomb of the Emperor Baber, who made Caubul his capital. His grave is marked by two erect slabs of white marble, situated in a small garden at the summit of a hill overlooking the city: outside Caubul also stands the tomb of Timour Shah, an unfinished octagonal brick building 50 ft. high.

In the 7th century of our era, the Arabian writers mention Caubul as the residence of a Hindoo prince; it was, as already stated, the capital of the empire of Baber; and taken by Nadir Shah in 1739. At his death it was taken by Ahmed Shah Abdali, and remained the capital of Afghanistan till the destruction of the monarchy.

The chiefship of Caubul extends N. to the Hindoo Koosh and Baumbian; E. to Neemla half way to Peshawar; S. to Ghiznee, which city it includes; and W. to the country of the Hazareuchs: much of the country is mountainous, and of great natural strength, but small resources; there is plenty of fruit, and forage for cattle, but grain grows scantily. The revenues of Caubul amount to 18 lacs rupees a year: those derived from the city customs are 2 lacs annually, which amount they have reached in consequence of the encouragement given to trade by the lately deposed khans (*Alphinstone's Caubul*; *Burnes's Trav.*; *Hamilton's E. I. Gaz.*).

CAUCASUS, a great mountain-range, extending in a N.W. and S.E. direction, between the Black and Caspian Seas. Its extreme points are those of the main ridge or back bone of the system, which, commencing at Anape, on the Black Sea, in lat. $44^{\circ} 50'$ N., runs first S.E. as far as the parallel of $42^{\circ} 50'$, and meridian of $40^{\circ} 45'$; then almost due E. to the long. of 46° , and finally, again S.E. to Baku, on the Caspian Sea, in lat. $40^{\circ} 20'$, where it terminates. The direct distance between Anape and Baku is 600 m., but, following its windings, the ridge of the Caucasus measures 800 m. The extent of the mountains towards the N. is very well marked by the courses of the rivers Kuban and Terek; the one flowing W., along their bases, to the Black Sea, the other E. to the Caspian. The natural S. limit is the Araxes; so that the breadth of this range, in its widest part, is about 80° , or nearly 350 m.; and in its narrowest, along the shores of the Caspian, not much short of 250 m. The area enclosed by these two seas, and three rivers, taken as the boundaries of the Caucasian system, is not less than 100,000 sq. m., but it must be remarked, that within these limits there is, though not much, some level land; and that the least elevation is found, not in the bed of the Araxes, but in that of the Kur. (*Klaproth's Trav. in Cauc. and Georg.* p. 158. *et seq.*; *Mignan's Winter Journey through Russia*, i. 27. *et seq.*; *Col. Monteth's Geog. Journ.* ii. 21—87.)

The highest peak of the Caucasus attains an altitude of 17,766 ft., which is more than 2,000 ft. higher than Mont Blanc. (*Bontschikoff's Lettres sur le Caucase*, p. 23.) This peak, or rather mountain-knot, is found nearly at the intersection of the 43d parallel with the 42d meridian. Among European geographers it has been called, improperly enough, ELBOURS, ELBURZ, or ELBROUZ; a name which, in the spread of information concerning E. countries, is likely to be productive of no little confusion. It is already applied to a peak of the Caucasus, and a range on the S. of the Caspian Sea, and may, unless care be taken, be multiplied indefinitely, since it is not a proper name, but a common designation for any mountain which reaches the snow-line. (*Klaproth*, p. 170.) From this point, as from a centre, the mountains descend in all directions, but much more rapidly towards the N. and W. than towards the E. and S. (*Klaproth*, p. 276.) The Mquinvair peak, to which the Russians have improperly given the name of Kasbek, is said by Klaproth to attain an elevation of 4,416 metres, or of 14,500 ft. (*Lettres sur le Caucase*, p. 40.) Farther E., the

ridge declines towards the Caspian; and where it approaches that sea, as in the Cape of Absharon, or at the town of Derbend, the eminences do not probably exceed 1,500 or 2,000 ft. The ridge W. from Elbours is very considerably lower, and presents fewer peaks; it appears to descend gradually, till at Anape, on the Black Sea, its elevation is only about 180 feet above the water; but this height rises perpendicularly, and the face of the rock is continued downwards for several hundred fathoms; such being the depth of the sea at this point. The N. ranges run nearly parallel to the main ridge, and extend about 100 m., when they suddenly and abruptly terminate in the low steps of the Don and Wolga.

This frontier, as it may be termed, of the Caucasus, is called the Black Mountains. (*Schörrer's Georg.*) The Bechtag, the highest point, is probably not less than 6,000 ft. in height, and there are several summits which appear to have a nearly equal elevation; extreme ruggedness is, however, a stronger characteristic of these hills than altitude. The Elbours (Osha Mak-hua) appeared to Pallas to rise in the horizon to more than double the height of the Bechtag, when viewed from a station very near the base of the latter. S. of the main chain, the country spreads into table-lands, terraces, and slopes, broken and intersected by transverse ranges and peaks, of which the highest is Ail Gur, in $40^{\circ} 49'$ N., $44^{\circ} 0'$ E., its elevation being about 15,000 ft. About 50 m. S. of this, but on the other side of the Araxes, is Mount Ararat; but it cannot with any propriety be reckoned as part of the Caucasus. Towards the S.E., between the Kur and Araxes, the mountains spread into a level but considerably elevated plain, 24 m. in width, and terminated by a strong defile towards Erivan. The various plains, valleys, and defiles of this part of the mountains seem to vary between 4,000 and 6,000 ft. in height. On the N. the Caucasus is absolutely unconnected with any other mountain-range, and the Chain of the Crimea may be regarded as an exception; but on the S. it mingles with the high land of Azerbaijan; on the S.W. it combines with the mountains of Armenia, and through them with the Taurus; and on the S.E. its offshoots appear to be continued by the mountains of Ghilan and Mazunderan, to the Elbours (Persian), Paropamisian, Hindoo Koosh, and Himalayas. (*Goldendstadt, Reise durch Russland*, i. 433. *et seq.*, ii. 23. *et seq.*; *Gmelin, Reise durch Russland*, iii. 34. *et seq.*; *Annal des Voy.* xli. 5. *et seq.*, 167. *et seq.*; *Pallas*, i. 339. *et seq.*; *Klaproth*, 168. *et seq.*; *Monteth's Geog. Journ.* iii. 31. *et seq.*.)

The above results as to the extent and elevation of the Caucasus are deduced from a very full comparison of the authorities cited, and of others not named. It is right, however, to state that they cannot be wholly depended upon. There is the most extraordinary discrepancy among authorities as to the extent of the mountain-system, its elevation, &c.; but the above results seem to be those on which most reliance may be placed.

The ancients mention two principal passes of the Caucasus, the Caucasian Gates and the Albanian Gates; of which the former is at present the great, indeed almost the only frequented pass. It runs close by the base of the Kasbeck mountain, in lat. $42^{\circ} 0'$ N., long. $44^{\circ} 0'$ E., and is, in fact, a deep ravine, through which the Terek seems to have cut its way in a channel, sometimes scarcely wide enough to allow of its passage. The commencement of this cleft on the S. is 4,000 ft., and it continues to rise, till, at the neck of the pass, it is full 8,000 ft. above the sea. Trecliptous walls of porphyry and schist, 3,000 ft. in height, press upon its sides; and awful abysses open beneath it, sometimes, it is said, to the depth of 10,000 ft. Avalanches are frequent in this pass, carrying with them not only any unfortunate travellers who may be in the defile, but very often the road itself, and even when the snow does not descend in masses, its meltings in the spring and summer cause occasional floods, which carry every thing before them. The direct length of this defile may be about 120 m., from Mondok to Gory; and some idea may be formed of its difficulty from the fact that Strabo (xi. 500.) describes it as occupying four days in the passage. This must be understood also of summer travelling, since in winter the pass was wholly unapproachable. The Russians have, however, made it passable even for carriages; and in January, 1880, it was crossed by the Persian embassy, but this winter transit employed *six days*. (*Mignan*, i. 46.) About midway stands the old castle of Dariel, in the narrowest and highest part of the gorge, where the statement of Pliny (vi. 2.), that an iron gate would be sufficient to close the opening, seems to be any thing but an exaggeration. This cleft is, therefore, in all probability, the fortress which, according to the Roman naturalist, was called, though improperly, the *Pylæ Caspiæ*. (*Klaproth*, p. 311.; *Monteth*, G. J., iii. 39.) The Albanian Gates appear to answer to a pass between Georgia and Daghestan, in lat. $42^{\circ} 0'$ N., long. $47^{\circ} 0'$ E. (*Ptolemy*, v. 9.; *Laple's Map*; *An. Voy.* xli. 1.) This is, however, very little known; it is almost wholly in the possession of the native tribes, and

probably is not passable except for hunters, and in the summer. Ptolemy's E. Sarmatian Gates (*Geog.* v. 9.) appear to be the pass of Derbend, on the Caspian Sea: this is always available; its narrowness makes it a strong military position, and the swampy nature of the shore renders travelling along it often difficult. A similar remark applies still more forcibly to the pass between the W. termination of the Caucasus and the Black Sea. Along this road Prince Goshakov, in the last war, succeeded in marching an army, with incredible difficulty, from Anapa to Sochi (about 180 m.); but here he found it usually impossible to advance or retreat, and was compelled to return by sea. (*Monteith, G. J.*, iii. 37.) The impediments to the coast roads appear, however, to consist only in the number and power of the mountain torrents, which, without bridge or boat, are quite impassable; and as a very wide bank of hard sand stretches along the whole shore, it may be practicable to throw bridges over all the streams; but very considerable height and strength will be necessary to secure them from the effects of sudden floods. These are all the passes over the main ridge, and the transverse ranges do not seem to be better provided; one only appears to exist between Imeritia and Georgia, and that has been rendered available only within modern times, and is still encumbered with great difficulties.

Geology.—The bases of the Caucasus on the N. seem to be covered with sand or a sandy marl, from which the first eminences rise in low but abrupt hills of sandstone, tufa, and iron-stone. These are rapidly succeeded by higher and more mountainous elevations of white calcareous limestone, many of which exhibit unquestionable evidence of decay, the rivers that flow through and round them depositing thick layers of a yellow sand and grey sandy consistence. Occasionally the limestone rises into great rocky peaks and ridges, between which marshy plains of sandy mud are not uncommon, apparently formed by the debris of the mountains themselves. This limestone, of which the Bechtat, the Metshuka, and nearly all the frontier line of the Caucasus is formed, is very ancient, and exhibits scarcely any petrifications; behind this rises a ridge of slate, from the appearance of which the term *Black Mountain* is given to the range. The higher ranges, which rise to the snow line, consist of basalt, schistus, porphyry, granite, and other igneous formations, so that whether its actual material, or the absence of organic remains, be considered, it is probable that the Caucasus is one of the oldest mountain systems in the world. The S. slope exhibits the same succession of formations, as far as regards the three principal strata, but much less rapidly. Sandstone is far less abundant in the S. than in the N., but, on the other hand, calcareous spar, milk-quartz, and other fossils, are frequently met with, indicating a much greater degree of wealth in mineral ores. Lava and other volcanic matter is common enough among the formations; but, though many exist in various parts of the Caucasus, igneous eruptions are unknown; and neither Klaproth nor Pallas could come to any satisfactory conclusion as to their former existence. Monteith is of opinion that the volcanic rocks are rather to be ascribed to the sudden rise of a great extent of country, than to emissions from particular mountains. (*Guidenstadt*, i. 424–441., ii. 23–29.; *Pallas*, i. 337, 347, 358, 366, &c.; *Klaproth*, pp. 386–390.; *Monteith, G. J.*, iii. 49, &c.)

Hydrography.—Like the Caucasus, like the Alps, does not form the dividing line between rivers flowing in opposite directions; other ranges rise immediately on its S., which shut it out from communication with the Persian Gulf and the Mediterranean; while on the N., the great plain of the Wolga and Don, after rising from the beds of those rivers for some distance S., subsides again, leaving a positive, though scarcely perceptible, ridge between the sources of Manteyeh and Sarpa and the bases of the Caucasus, with a positive though very gentle slope towards the latter. In consequence of this formation, every drop of water from the Caucasus falls into the Black or Caspian Sea. The principal streams, besides the Kuban, Terek, and Araxes, already mentioned, are the Kur (an. *Cyrus*), and the Phasis, rising on opposite sides of the transverse range which divides Imeritia from Georgia, and running, the first S.E. to the Araxes, the other W. to the Black Sea. The Shorak or Jorak (an. *Apsarus*) is another tolerably large river, running to the Black Sea, and the Kolu (an. *Cassius*), a still larger, falling into the Caspian. The torrents that run short courses to these seas from the flanks of the mountains in the neighbourhood are quite innumerable, as are the affluents of the principal streams which pour from the mountain sides in every direction, sometimes with respectable length of course, and always in immense volume. It may, indeed, be reasonably concluded that the store of moisture in the Caucasus cannot possibly be exceeded by that of any other country of like extent; and since, from the causes before named, it is prevented from spreading beyond the bounds of the mountains, it follows necessarily that no land can be more abundantly watered. Most of the streams are

flooded by the melting of the winter snows; and their action on the substance of the mountains is at all times very violent, especially on the slate and limestone. The former is brought down in the form of a black glistening sand, the latter, in that of a soft white substance, so fine and so abundant, that it is used by the natives, in its natural state, for whitening their houses. (*Klaproth*, p. 386.; *Pallas*, i. 365.)

There is, perhaps, no other mountain region in the world so destitute of lakes as the Caucasus. The lake of Sevan or Goukcha, between the Kur and Araxes, is the only one of any size in the whole region, and it can hardly be regarded as belonging to the Caucasus. It is a salt lake, of the kind so common in Central Asia, without any outlet, and occupying nearly the whole extent of a small elevated plain about 48 m. long, by 12 m. in width, 5,300 ft. above the sea. (*Pallas*, i. 337, &c.; *Klaproth*, 159, 241–407, &c.; *Monteith, G. J.*, iii. 43, *et seq.*; *Spencer*, *pass.*)

Climata.—This, of course, varies with the elevation; but perhaps still more with the degree of shelter afforded by the neighbouring ranges from the different winds. Some of the N. valleys, notwithstanding their exposure to the bleak gusts from the Snowy Mountains, are so perfectly protected from the N. wind, that their winter is as mild as in the S. parts of the Crimea. (*Pallas*, i. 339.) They are subject, however, to sudden and fierce, though brief, vicissitudes; and the very shelter which they possess, by confining the air, makes them unhealthy. With the sharp ascent of the land, the temperature rapidly decreases, and a few hours serves to convey the traveller from the climate of the temperate zone to that of everlasting winter. The cold in the upper ranges is intense; but observations are wanting on which to found any conclusion as to its average. Mignan, at a comparatively low part of the range, found it, in Jan. 1820, a very cold winter, at 4° Fahr., or 28° below the freezing point. (i. 35.) A better idea may, perhaps, be formed on this point, from the quantity of snow deposited in the defiles: 1,400 men were employed a fortnight in cutting a road for the Persian embassy, which, after all, was scarcely passable. (*Mignan*, i. 40.) Notwithstanding this intensity of cold, the plague is very common on the mountains.

On the S., the countries on the Black Sea and Caspian may be described as warm; those of Imeritia and Georgia as rather cold; but this, again, must be taken with considerable limitation, the N. parts of the two seas being subject to winter frosts. The melting of the ice in them frequently causes chilly summers on their shores, while, on the other hand, some of the higher valleys are among the hottest spots in the Caucasus. The abundance of running water, and the neighbourhood of the two bounding seas, cause a great accumulation of vapour; indeed, so extensive is the exhalation constantly going on, that it may be said every wind, if long continued, brings with it a mist, which nothing can disperse except a storm. These last are, consequently, frequent and terrible. Luckily, however, the cause that produces them gives warning of their approach; the vapours, when grown too heavy for the atmosphere, collect themselves in dense masses round the sides and tops of the mountains; and the Caucasians, warned by this clothing of their Alps, prepare for the explosion, which they know, by long experience, will speedily follow. They wrap themselves in their *tschoukaks* (large cloaks made of wool and goat's hair, and perfectly waterproof), and under a low tent made of felt, expressly for such emergencies, or under the lee of a rock or tree, await, generally in safety, the passing of the tempest. (*Spencer's W. Cauc.* p. 129.) Sometimes, however, the falling of the cliff or tree destroys those who have sought its shelter; but these accidents are of rare occurrence, as it is not often that the natives are compelled, for want of their felt tents, to run such risks; but to strangers unprovided with the means of combating these storms, the effect is sure to be ultimately fatal. One, or, at most, two years' exposure to the varying influence of the Caucasian climate, sends the Russian soldier either to his grave or to the hospital, with a constitution irrecoverably broken. The uncertain temperature and the humidity of the atmosphere appear indeed to make it very unhealthy to strangers, especially on the slopes and flats towards the sea. Intermittent and bilious fevers of a very grave kind are endemic, and exceedingly obstinate; and the plague, as before observed, is also very common.* The varying humidity, or some other cause, seems likewise to impregnate the air with very peculiar qualities; observations of altitude by the barometer, or the boiling point of water, give very inconsistent results at different times (see CASPIAN SEA), and the extent of horizontal vision is frequently quite startling. The Caspian Sea is sometimes seen from the summit of the Bechtat, 164 m. distant; and the Snowy Mountains from Sarepta, on the Wolga, a length of 322 m. (*Pallas*, i. 370.; *Klaproth*,

* For a singular statement connected with the climate of the Caucasus, see Herodotus, *Clio*, p. 103.; *Klaproth*, p. 160.

p. 188.) The distance of the visible horizon, exclusive of refraction, would be in the first case about 84 m., in the second about 164 m.; the amount of refraction is, therefore, equal to more than 1°, and nearly 2° respectively; but, in ordinary states of the atmosphere, the maximum being only 33°, the excess of 97° and 127° indicates a variable density in the medium which is truly surprising. Some of the larger clefts are said, in the traditions of the natives, to have been caused by earthquakes; but there are no authenticated records of these phenomena. (*Guldénstadt*, i. 217—432; *Pallas*, i. 840. 358. 447. *et pass.*; *Gmelin*, iii. *pass.*; *Klaproth*, pp. 163. 165. 305. 333. &c.; *Chardin*, p. 165; *Spencer*, *W. Caucas.*, p. 128. *et seq.* 320. &c.; *Circass.* i. 286. &c.; *Monteilh*, G. J. iii. 31. &c.)

Productions.—1. *Minerals.*—Except in its deficiency of lakes, the Caucasus has many points of resemblance to the Alps; among others, an apparent poverty of mineral treasures. It is true that this, in the case of the Caucasus, may be apparent only. The ancients unquestionably believed these mountains to be rich in the precious metals, but this they also believed of most other districts that were but slightly known to them; and the limited observations of scientific men in modern times tend to the opposite conclusion. A yellow mineral, called cat gold, is indeed found, which may, perhaps, have occasioned the stories as to the gold mines of the Caucasus; but it is a petty whiteness—iron, copper, salt-petre, sulphur, and lead, are found, the last in tolerably large quantities. Salt is almost wholly wanting, and of gems there does not appear to be any vestige. Indications of coal have lately been discovered; and, from the enormous quantity of lime deposits, it is likely that marbles may be found. (*Pallas*, i. 429; *Guldénstadt*, i. 441. 456; *Klaproth*, p. 391; *Spencer*, *W. Caucas.* i. 331.)

2. *Vegetables.*—In amount and variety of vegetation, the Caucasian regions seem to be unrivalled. *Chardin*, writing in 1679, says, "Mount Caucasus, we come to the very top of, is extremely fruitful," and *Spencer*, in 1838, says, "However high the ascent, we see luxuriant vegetation mingling even with the snow of centuries." Nearly every tree, shrub, fruit, grain, and flower, found from the limit of the temperate zone to the pole, is native to or may be raised in the Caucasus. The N. bases consist of arable land of an excellent quality, meadows of the finest grass, and dwarf wood in great abundance. At a very little distance the increase of wood indicates a higher and colder country, but the plants which delight in a warm situation still continue to be very numerous. From the more rapid rise of the ground, bare rocks are more numerous on the N. than on the S., but every shelf, however limited, is marked by a rich vegetation to a height almost inconceivable. The S. slopes and table-lands are still more abundant and varied in their productions than those on the N.; to say nothing of the swampy shores of the Euxine and Caspian, which are, in most cases, nearly impenetrable jungles of the rankest and most varied vegetation. The rising country consists of a succession of small flats, each covered with a most productive earth. The mountain sides and higher plains are clothed with dense forests; and the rivers are frequently unapproachable for a great distance. The forest trees consist of oaks of every species, cedars, cypresses, beeches, savins, junipers, hazels, firs, boxes, pines, alders, and a host of others. Among the standard fruits are found the date palm, the jujube, quince, cherry, olive, wild apricot, and willow-leaved pear. Pomegranates, figs, and mulberries, grow wild in all the warmer valleys; and vines twine round the standard trees to a very great elevation up the mountains. A hard-wood tree, called by the natives *outchella*, is apparently peculiar; it is of a deep rose colour, very closely grained, and susceptible of an extremely high polish. In addition to the vine, the other climbing plants are innumerable, which mixing with the standards, the bramble fruits (raspberries, blackberries, &c.), and other dwarf woods, form a density of vegetation which it is impossible to penetrate, unless a passage be hewn with the hatchet. Rye, barley, oats, wheat, and millet, are abundantly raised, even as high as 7,500 ft. above the sea; and besides these grains, the warmer plains and valleys produce flowers of every scent and dye, cotton, rice, flax, hemp, tobacco, and indigo, with every variety of cucumber and melon. This list is of necessity very imperfect, as will be evident when it is stated that *Guldénstadt* has filled 18 quarto pages with the mere names of the various plants seen by him on the banks of the Terek and in Georgia (i. 188—197. 418—430). It may serve, however, to exhibit the vegetable riches of a region which seems to produce every thing necessary for the existence and, with the exception of salt, even for the luxurious accommodation of man. (*Guldénstadt*, as above, *et pass.*; *Gmelin*, iii. 22—58. *et pass.*; *Pallas*, i. 340. 357. 364. 368. 379. &c.; *Klaproth*, pp. 167. 309. 391. &c.; *Spencer*, *Circassia*, i. 317. 320. *et.* 223. 318. 387. &c.; *W. Caucas.* i. 29. 188—195. 216. &c.; *Monteilh*, G. J., iii. 31—35. &c.)

3. *Animals.*—Animal life in the Caucasus is on a scale of magnitude and variety equal to its vegetation.

Wolves, bears, lynxes, jackals, foxes, wild cats, a peculiar beast of prey called *chase*, together with many varieties of deer, wander in the forests and on the sides of the mountains. The smaller fur-bearing tribes are also common, as weasels, polecats, ermines, and moles of many varieties. Hares and every other species of game abound, with chamois and goats, of which the Caucasian goat (*Capra Caspasia*) seems peculiar. Sheep with peculiarly long wool are numerous; and it is even doubtful if, among the mountains, this creature be not yet living in a state of nature. This also is one of the homes of wild cattle; the largest species (the aurochs) being found in its forests; while of the domesticated kinds the varieties are numerous and serviceable. The horses of the Caucasus have been famous from a very high antiquity, the Bechtig Mountain having formerly been called *Hippicon* (*Issus*), from the number of these animals which were grazed upon its sides. (*Ptolemy*, v. 9.) They are not less numerous in the present day, and are among the very finest varieties of the species. Of birds, there are pheasants, partridges, grouse, and the whole tribe of mountain game, a great variety of the crow kind, nearly every species of birds of prey and passage, and some of the best specimens of the domestic varieties. Among insects, the bee and silkworm claim pre-eminence: they are both numerous, and their productions, particularly honey, formed a considerable branch of trade with Turkey, till the power of Russia sealed the ports of the Black Sea. Other insects are equally numerous, as are also the reptile tribes, among which are some fine species of tortoises and snakes, both harmless and venomous. (*Guldénstadt*, i. 418. *et passim*; *Gmelin*, iii. 58. *et passim*; *Pallas*, i. 241. 410. &c.; *Klaproth*, p. 344. &c.; *Spencer*, *passim*.)

Inhabitants.—There is probably no other part of the world, except Africa, S. of the Sahara, where so many nations and languages are collected within so small a space as in the Caucasus. *Guldénstadt* gives a list of seven different nations, besides Tartars, who speak languages radically different, and who are again subdivided into almost innumerable tribes, among whom the varieties of dialects are nearly infinite. The principal nations he thus enumerates:—1. Georgians; 2. Basians; 3. Abchasiens; 4. Tcherkessiens; 5. Oketiens; 6. Klitiens; 7. Lesghians; 8. Tartars. (*Reise*, i. 458—495.) Of these the most numerous and important are the Georgians and Circassians or Tcherkessiens; but the Abchasiens and Oketiens, called by *Pallas* and *Klaproth* Abasiens and Osetiats, are also powerful tribes. In habits and manners a strong resemblance is observed among them all; they are usually wandering hunters and warriors, for which occupations their country is peculiarly fitted, and only in an inferior degree shepherds or agriculturists. A partial exception must, however, be made to this general character in favour of the Georgians, who reside in towns, and have long possessed a fixed form of government and internal polity; but for the rest, they appear to possess the same indolence, the same indurated and less hospitality, and much of the predatory habits which mark the Arab and other half barbarous people. (*See* *CIRCASSIA*, *GEORGIA*, &c.) It is well known that *Blumenbach* looked here for the origin of his first and most intellectual race of men (the Caucasian); but for this, as already stated (*anté*, 183.), there is not a particle of evidence, historical or philological. The Caucasians, though surrounded by the means of improvement, and occupying a country more favourably situated than that of Switzerland, have made no progress either in arts or arms; and continue to this day the same unlettered barbarians as in the days of Herodotus. (*Clio*, 203.) They have fine physical forms; but their mental endowments are of the most inferior description.

Name.—This has in all ages been the same among neighbouring nations, though, according to *Strabo* (xii. 500.), the range was called by the natives *Kavron deos* (Caspian mountains). The names *Caspian* and *Caucasus* have, in the opinion of *Klaproth* (p. 165.), a similar etymology, namely, *Kot-Chaf* or *Chaf*, a mountain of *Chaf*, so called from the Caspi, a powerful people on its sides. (*See* *CASPIAN SEA*.) *Pliny* (vi. 2.) derives the name, but with no great appearance of probability, from *Graucæus*, which, he says, in the Scythian tongue, means *nive candidus*. At present the term *Caucasus* is but little used by the Asiatics, the name for the mountains among the Tartars being *Jal-bus*; among the Turks, *Chaf-daghi* (Mount *Chaf*); and among the Armenians, *Jalbut-issor*, a modification of the Tartar term; but *Caucasus* is still in use among them.

CAUDEBEC, a sea-port town of France, dep. Seine Inférieure, cap. cant., on the Seine, at the mouth of the Caudebec, 6 m. S. Yvetot. Pop. 2,718. The parish church, built in the 18th century, is remarkable for the boldness and delicacy of its architecture. It has some manufactures of cotton, &c. Previously to the revocation of the edict of Nantes, it was comparatively flourishing; but that disastrous measure gave a blow to its manufactures and commerce, from which it has not recovered,

Its port, though safe, commodious, and advantageously situated between Havre and Rouen, is but little frequented. (*Hugo, Seine Inférieure; Dict. Géog.*)

CAUDETE (an. *Bigerra*), a town of Spain, prov. Murcia, 6 m. N.N.W. Villena, 12 m. N.E. Yecla. Pop. 6,000. It was formerly fortified; and has a church, 2 convents, an hospital, several distilleries, and a palace of the Bishop of Orihuela. On the heights in the vicinity a battle was fought in 1706, the day after the great victory gained by the Duke of Berwick at Almanza, between a detachment of the combined French and Spanish forces and those of the Archduke Charles, which ended in the defeat of the latter.

CAUFRISTAN or **CAFFRISTAN**, a region of Central Asia, occupying a great part of the Hindoo Koosh and a portion of the Bolor Tagh mountains, chiefly between lat. 32° and 36° N., and long. 70° E. and the W. limits of Cashmere; having N. Budukhan, E. Little Tibet, S. the dom. of the Punjab and Caubul, and W. those of Caubul and Koondooz. The hills N. of Bajour and Kooner form its S. limit; its other boundaries have been very imperfectly defined. The whole of this country is a lofty Alpine tract of snow-capped mountains, deep pine forests, interspersed with small but fertile and often populous valleys, and table-lands sometimes 10 or 15 m. across. Torrents and rivers are numerous, and are crossed by stationary wooden bridges or hanging bridges of rope and osier. The soil of the country is fertile, but the valleys afford an abundance of grapes and other fruits, and the hills good pasture for sheep and goats. The Caufirs (Indies) who inhabit this region are an independent nation, said by Baber and Abul Fasel, and believed by themselves, to be descended from the troops of Alexander the Great. They are supposed by some to have been driven thither from the valley of the Oxus, on its being overrun by the Mohammedans; but Sir A. Burnes and Mr. Elphinstone suppose they had emigrated, through a similar cause, from the neighbourhood of Candahar. They are remarkable for the fairness and beauty of their complexions; are liberal, social, and extremely hospitable: they never combine in war against their neighbours, but retaliate invasions fiercely, and fight with great bravery and determination. They indulge an unceasing hatred against Mohammedans, and a Caufir adds an additional ornament to his dress, or another trophy to a high pole before his door, for each Mussulman he has slain.

All wear tight clothes; those of some tribes made of black goat skins, and of others of white cotton: all suffer their hair to hang over their shoulders, and each looks upon every one else a brother who wears ringlets and drinks wine: to the latter they are much addicted, and grape juice is given to children at the breast. They eat the flesh of all kinds of animals, except the dog and jackal, and use both tables and chairs of a rude construction: the women perform the business of tillage, as well as all laborious domestic occupations. Fine rice, wheat, and barley, are the principal grains cultivated; honey, vinegar, cheese, butter, milk, bread and fruit, constitute the rest of their food. Both sexes drink wine to excess. Their dwelling-houses are usually built of wood upon hill-slopes, the roof of one row of houses forming the street to those above it: the only roads in the country are footpaths. Their weapons are spears, scimitars, and bows and arrows. After battle the victors are crowned with chaplets of mulberry-leaves. Both sexes wear ornaments of gold, silver, and other metals; and drinking-cups of the precious metals are often used, and much prized by them. Their language is unintelligible to Hindoos, Usberks, or Afghans; it contains a mixture of words from the Hindoo, Afghan, and Persian tongues; but the major part of their roots are different from either: they have no books, and neither understand reading nor writing. They adore a supreme being, whom they call Doghnan, and to whom they sacrifice both cows and goats; but address themselves to subordinate deities, represented by idols of wood or stone, who, they say, intercede with the chief deity in their behalf: fire is a requisite in every religious ceremony, although no veneration is paid to that element itself. They neither burn nor bury their dead, but expose the corpse in an open coffin, in a forest jungle or on a mountain, and then a certain number of bones of the bones as possible, and deposit them in a cave; these ceremonies are solemnized with triumph, dances, and sacrifices. Music, dancing, which is eagerly practised by all classes, conversation, and carousals, form their chief amusements. They have priests, but they do not possess an extensive influence: they live under different chiefs, but little farther is known respecting their government. The slavery of such as have lost their relations is universal: some of the Caufirs possess many slaves and cattle, and much land. By old writers this region is often named Kuttora: it was invaded by Timour, and in 1780, unsuccessfully, by a confederacy of the surrounding Mohammedan nations. (*Elphinstone's Caubul*, li. 373-377; *Burnes's Trav.* iii. 133-135; *Hamilton's E. J. Gaz.* i.

310-313; *Journal of Asiatic Soc. Bengal*, iii., -vi.; *Wheatson's (H. H.) Notes to Indica of Ctesias*.)

CAUNES (LES), a town of France, dép. Aude, on the Argent-Double, 11 m. N.E. Carcassonne. Pop. 2,298. It has a fine parish church, formerly belonging to the Benedictine abbey suppressed at the Revolution; with distilleries, tanneries, dye-works, marble-works for working the marble found in the neighbouring mountains, &c. (*Dict. Géog.*)

CAUSSADE, a town of France, dép. Tarn-et-Garonne, cap. cant., in a fertile country, near the Caude, 12 m. N.E. Montauban. Pop. 4,540. It is handsome, well built, and has broad and straight streets; has numerous flour-mills, with manufactures of woollen and linen stuffs, and carries on some trade in corn, saffron, and truffes.

CAVA, a town of Naples, prov. Principato Citra, cap. cant., in the middle of the agreeable valley of Fenestrala, 26 m. E.S.E. Naples. Pop. 24,000. It has this includes the pop. of several surrounding villages. It has a cathedral, three other churches, a convent for noble ladies, a charity workhouse, an hospital, and a seminary. Silk, cotton, and woollen stuffs are manufactured in the town and the adjacent villages. The territory is not very fruitful, but the inhabitants have become rich by their industry and commerce. About a mile from the town is the magnificent Benedictine convent of La Trinità, with a fine library. (*Dict. Géog.*; *Swainburne*, li. 114., 4to. ed.)

CAVALABRIO (anc. *Cabellio*), a town of France, dép. Vaucluse, cap. cant., on the Durance, near where it is joined by the Coudon, at the foot of a mountain, 13 m. S.E. Avignon. Pop. 7,041. It is *triste*, ill built, with narrow and dirty streets. The fortifications by which it was formerly surrounded were destroyed during the Revolution; the bishopric of which it was the seat has been also abolished. It has a considerable trade in dried fruits and preserves, shoes, and nuts.

This is a very ancient town. The Romans are believed to have planted a colony in it, and at all events, they embellished it with several magnificent edifices. But having been since repeatedly overrun and pillaged by barbarians, and having suffered much from an earthquake in 1731, comparatively few remains of antiquity are to be found either in the town or in its vicinity. The best preserved, though even that is much dilapidated, is a fragment of a triumphal arch supposed to belong to the age of Augustus. (*Hugo*, art. *Vaucluse*.)

CAVAN, an inl. co. of Ireland, prov. Ulster, having N. Fermanagh, E. Monaghan, S. Longford, Meath, and Westmeath, and W. Leitrim and Longford. Area, 473,749 imperial acres, of which 20,000 are unplanted mountain and bog, and 21,987 water, comprising principally of loughs Shillin, Kamor, and Oughter. The Shannon has its principal source in the N.W. part of this co., and it is traversed by the Erne, Annalee, &c. Surface hilly, and soil generally poor. There are some large estates, but the greater number are of moderate size. About 4-5ths of the land under tillage. Agriculture in the most depressed state; holdings generally small, and the competition for them excessive. Spade cultivation is very general, so much so that in some parishes there is hardly a plough. Oats and potatoes principal crops; but some wheat is raised, and flax. Cottiers have generally pigs and goats; the former being sold to pay the rent, and the latter kept for their milk. Average rent of land 13s. 7d. an acre. Little manufacture widely diffused, having not a linen contributed to the subdivision of the co. It is affirmed that the condition of the peasantry has been materially deteriorated during the last 20 years. Minerals little known. Cavan is divided into 7 baronies and 30 parishes, and sends 2 mems. to the H. of C. for the co. Registered electors, in 1832-33, 2,406. Principal towns, Cavan. The co. had, in 1831, 38,917 inhabited houses, 40,388 families, and 227,933 inhab., of whom 113,174 were males and 114,759 females.

CAVAN, an inland town of Ireland, co. Cavan, prov. Ulster, 60 m. N.W. Dublin. Pop. in 1821, 2,322; in 1831, 2,931. Pop. of par., in 1824, 5,484, of whom 1,680 were of the estab. church, 103 Prot. diss., and 3,741 Rom. Cath. Cavan, though the assize town, is with few exceptions, meanly built, long lines of suburbs being formed of thatched mud cabins. The public buildings are a large parish church and Rom. Cath. chapel; an endowed school of royal foundation, having accommodation for 100 resident students; a fine court-house, a co. prison on the radiating plan, and an infirmary. A garden of Lord Farnham's near the town, has been thrown open as a promenade for the inhabitants. The corporation, under a charter of James I., in 1610, consisted of a sovereign, 2 portreeves, 2 burgesses, and an unlimited commonalty; but having been deprived at the Union of the right of sending mems. to the H. of C., it has fallen into desuetude. The assizes for the co. general sessions at Hilary and midsummer, and quarterly sessions every week, are held here. Trade inconsiderable, and chiefly in oats and butter. Markets are held on Tuesdays; fairs on Feb. 1., April 4., May 14., June 30.

Aug. 14., Sept. 26., and Nov. 12. Branches of the Provincial and Agricultural banks were opened here in 1834 and 1836. Post-office revenue in 1831, 762*l*. In 1896, 817*l*. Mail-coach and a stage-coach from Dublin to Enniskillen pass daily through the town, and a coach from Dublin to Cavan plies 6 days in the week, carrying at an average 9 passengers each trip. (*Stat. Survey; Railroad Rep.*)

CAVERY, a river of S. Hindostan, the most considerable and useful S. of the Krishna; both Mysore and the Carnatic owing much of their agricultural wealth to the water it distributes. It rises in Coorg, bounds Colimbatour N.E., and after a winding course of 450 m., chiefly in an E. direction, falls into the sea by various mouths in the district of Tanjore, where it is industriously made use of for irrigation. It is filled by both monsoons, but is not navigable for large vessels.

CAVERYPALK, a town of Hindostan, prov. Carnatic, 57 m. W.S.W. Madras, in the neighbourhood of which is an immense tank 8 m. long by 3 m. broad, faced with large stones, and supported by a mound of earth 30 ft. high. This is perhaps the finest work constructed for the purpose of irrigation throughout the S. of India. (*Hamilton's E. I. Gaz.* 1.)

CAVITE, a town in Luzon, one of the Philippine Islands, in the Bay of Manila, 3 m. S.W. that city, of which it is the port; lat. 14° 34' N., long. 120° 48' E. Pop. 4,000. It is the naval depot of all the Spanish possessions in the East, and is built on the E. extremity of a low bifurcated peninsula, stretching into the sea for about 3 m., having between its two extremities the outer harbour, while the inner harbour is situated to the S. of the town: neither has more than 4 fathoms water, though very large ships moor in the inner harbour. The houses of Cavite, which are two stories high, are built chiefly of wood, their windows being furnished with a semi-transparent shell instead of glass. It has an arsenal, a marine hospital, some well-built churches, and several convents; but has of late years greatly decreased in size and importance. (*Hamilton's E. I. Gaz.* 1. 377; *White's Voyage*, &c.)

CAWNPORE or CAUNPOOR (*Khanpura*), a district or collectorate of Hindostan, prov. Allahabad, presid. Bengal, composed of cessions from the nabob of Oude, between lat. 26° and 27° N., and long. 79° 30' and 80° 30' E., having N.W. the distrs. of Etawah, Behar, and Furruckabad, N.E. the Oude reserved territories, S.E. the Futehpour and Kalpee distrs., and S.W. Bundelcund. Area 2,650 sq. m. Pop. probably nearly a million. This distr. is bounded N.E. by the Ganges, and intersected in its entire length by the Jumna: it is therefore almost wholly comprised within the Doab. Surface flat; soil highly productive, and upon the whole tolerably well cultivated, though in some parts there are extensive wastes. Malae, barley, and wheat, turnips, cabbages, and other European vegetables, grapes, peaches, &c., are grown, and the sugar cane flourishes in great luxuriance. Agriculture prospers in the neighbourhood of the cap., owing to the presence of a European market, and consequent high prices. The assessment on the land is high; and in fact the prov. was on its first coming into our possession very much over-assessed, and suffered greatly in consequence. In 1814, 1,768,745 bigas, or about 3-5ths of the surface, were reported to be under tillage. The land-tax for the same year was 273,530*l*., being about 1*l*. 10*s*. per biga; nearly all of which sum was realised. In 1825-30 the land revenue amounted to 317,580*l*. There are about 2,000 villages in this distr. which possess lands; but the perpetual settlement is also established. Nearly all the pop. are Hindoos, the heads of the villages being mostly of the Rajpoot caste. Offences are frequent, but yearly diminishing as the efficiency of the police increases; dacoity, or gang-robbery, was frequent in 1823, but was committed only by gangs out of the Oude reserved territory. Thuggee, or murder by professional murderers, has also prevailed greatly in this distr.; and in the above named year, the average was about 10 thugges yearly. The principal towns are Cawnpore, the cap., Rosoulabad, Jaugmow, and Acherpore.

CAWNPORE, the cap. town of the above distr., and chief British military station in the ceded provinces, on the W. bank of the Ganges, 38 m. S.W. Lucknow, and 100 m. N.W. Allahabad; lat. 26° 30' N., long. 80° 13' E. The town extends irregularly for 6 m. along the bank of the river, which is here a mile broad, and lined by the bungalows of European officers. It is built in a very straggling manner, with the exception of a tolerable main street nearly parallel with the military lines, composed of well-built brick houses two or three stories high, with wooden balconies in front. Excepting its size, few circumstances about Cawnpore attract much notice; the European public buildings are of simple architecture, and confined to works of absolute necessity; the chief are the military hospital, gaol, assembly-room, and custom-house. A Protestant church has been erected by public subscription within the last few years: most of the other religious edifices are mosques,

some of which are handsome. Shops large and tolerably well supplied, provisions being about half the price they bring in Calcutta. The European private houses are mostly one story high, with sloping roofs, five gables, and then tiled. The officers' bungalows along the banks of the Ganges are encircled by gardens surrounded by mud walls. At the N.W. extremity of the town are the public magazines protected by a slight entrenchment; and farther on, in the same direction, is the old town of Cawnpore, a place of no consequence, and containing no interesting relics of antiquity. A free-school was established here in 1823, which is attended by Europeans, Mohammedans, and Hindoos, who receive instruction together, and the progress of which is most satisfactory. It is supported partly by a government grant of 4,800 rupees a year. Cawnpore is not a pleasant place of residence for Europeans. Its great heat and the clouds of dust to which it is subject are represented as most distressing. (*Hamilton's E. I. Gaz.* 1. 375, 376; *Mod. Trav.* ix.; *Parl. Reports*, &c.)

CAXAMARCA, a city of Peru, cap. prov. of same name, in a fertile and well-cultivated valley in the Andes, 370 m. N.N.W. Lima; lat. 7° 8' 28" S., long. 78° 36' 15" W. Pop. about 7,000, chiefly Indians and Mestizos. Its name is equivalent to place of frost, and has been probably derived from its being sometimes visited by frosty winds from the E.; but, in general, the climate is excellent. Most of the houses are tiled and whitewashed. The churches, which are numerous and handsome, are built of stone richly cut, and are ornamented with spires and domes. They were formerly celebrated for the quantity of gold and silver decorations they contained. There are also some convents and nunneries. The inhab. are industrious, and considered the best sailor and iron workers in Peru. "I have," says Mr. Stevenson, "seen many very handsome sword-blades and daggers made here; pocket-stones and bridle-bits most curiously wrought, beside several well-finished pistol and gun locks. Literature would prosper here, were it properly cultivated; the natives are fond of instruction, and scholars are not rare; many of the richer inhab. send their children to Truxillo and Lima to be educated." (*Stevenson's Peru*, ii. 122.) The inhab. of the interior resort thither to sell their own produce and manufactures, and to purchase such other things they may require. Hence, a considerable trade is carried on with Lambayeque, and other places on the coast, to which Caxamarca furnishes manufactured goods, such as balzes, coarse cloth, blankets, and fannels; and receives in return European manufactures, soap, sugar, cocoa, brandy, wine, indigo, Paraguay tea, salt-fish, iron, steel, &c. Some of the shops are well stored with European goods. The markets are well supplied with fresh meat, poultry, bread, vegetables, fruit, butter, cheese, &c. at very low prices. About a league E. from the city are some hot and cold springs, which were used by the inhab. for baths, and are still employed for the same purpose.

Caxamarca is a place of considerable celebrity in the history of Peru, and of Spanish atrocity. The Incas had a palace here; and it was here that Friar Vincente Valverde (a fit priest for such a hero as Pizarro) delivered his famous or rather infamous harangue to the Inca Atahualpa, which was immediately followed by the butchery of the Peruvians, and by the imprisonment, accusation, and murder of the Inca. It is a singular fact, that a family claiming a lineal descent from Atahualpa is now living in Caxamarca, in a part of the palace in which their ancestor was murdered. (*Stevenson's Peru*, ii. 129, &c.; *Robertson's America*, book vi.)

CAYENNE, a sea-port town of French Guyana, cap. of that colony, at the N.W. extremity of the ial. of same name, at the mouth of the Ouyaque; lat. 4° 50' 15" N., long. 52° 14' 45" W. Pop. (1837) 5,220, of whom 2,441 were free, and 2,379 slaves. The town covers a surface of about 70 hectares, and contains about 500 houses, mostly of wood. It is divided into the old and new towns: the former, which is ill-built, contains the government house and the ancient Jesuits' college: it is separated from the new town by the Place d'Armes, a large open space planted with orange-trees. The new town is larger than the old, and was laid out at the end of the last century; its streets are wide, straight, mostly paved, and clean; it has a handsome church, with some large warehouses and good private residences. The old town is commanded by a fort, which, with some low batteries, protects the entrance of the harbour. The latter is shallow, but otherwise good, and well adapted for merchant-vessels of moderate size. There are two quays for loading and unloading. The roadstead at the mouth of the Ouyaque, though small, is the best on the coast. Its holding-ground is good, and it has every where from 12 to 13 ft. water; trading vessels lie in it within 1 m. of the land, and 2 m. of the town. Ships drawing more than 15 ft. water anchor about 6 m. from Cayenne, near a rocky islet called "L'Enfant Perdu." Cayenne is the centre of the whole trade of the colony. (*See* GUYANNE, FRANCE.) It is the seat of a royal court, a court of assizes

and of tribunals of the peace and original jurisdiction. It was founded about 1635. (*Hugo*, iii. 313.; *Notices Statist. sur les Colonies Françaises*, 1838.)

CAZANES, *see* GUANA (FANSON).

CAYLUS, a town of France, dép. Tarn-et-Garonne, near the right bank of the Bonnette river, and the high road between Montauban and Rhodes, 24 m. N.E. the former city. Pop. (1836), with commune, 5,424. It has a considerable trade in corn, and 11 fairs annually.

CAZALLA DE LA SIERRA, a town of Spain, prov. Seville, on the crest of the Sierra Morena, 13 m. S.E. Guadalcanal. Pop. 9,457. It has a church, five monasteries, and two hospitals. Its environs have many Roman and Arabic antiquities, and ruins of country residences of more modern date; with mines of silver, iron, sulphur, amianthus, and copper; and quarries of beautifully variegated marbles. The mountains are the resort of wild boars and wolves, which make much havoc among the cattle.

CAZÈRES, a town of France, dép. Haute Garonne, cap. cant., on the Garonne, 31 m. S.W. Toulouse. Pop. 2,620. A handsome promenade separates the town from the suburbs. There are fabrics of hats, with dye-works and tanneries.

CEFAU, a sea-port town of Sicily, prov. Palermo, on the Tyrrhenian Sea, at the foot of a rock, 40 m. E.S.E. Palermo; lat. 38° N., long. 14° 13' 57" E. Pop. 8,793. It is surrounded by a bastioned line wall, but the works are old and weak. The streets are tolerably regular, and there is a good cathedral and some other churches, with a school of navigation. The port is small, and the trade of the place but inconsiderable. On the summit of the hill above the town are the ruins of a Saracenic castle. (*Smyth*, p. 95.)

CEHEJIN (*Segies*), a town of Spain, prov. Murcia, on the river Caravaca, 3 m. E. Caravaca town, and 40 m. W.N.W. Murcia. Pop. 10,000. It is situated in a well cultivated and fertile district. The principal streets are well paved, and the houses good—some of them magnificent—marble being abundant in the neighbourhood. It has a church, a convent, and an ancient castle, with several distilleries, and manufactures of coarse paper, linen, and sandals.

CELANO, a town of Naples, prov. Abruzzo Ultra II., cap. cant., near the lake Fucino or Celano, 20 m. S.S.E. Aquila. Pop. 4,087. It has one collegiate and some other churches, and a number of manufactures. For an account of the Lake of Celano, *see* FUCINO (LAKES).

CELEBES, a large isl. of the E. Archipelago, forming the centre of its 2d division; stretching from lat. 2° N. to nearly 6° S., and from long. 119° to 125° E.; having N. the Sea of Celebes, W. the Straits of Macassar, E. the Molucca and Pitt's Passages, and S. the Flores Sea. Area estimated at 75,000 sq. m. Pop. unknown, but supposed to be between 2,000,000 and 3,000,000. Its shape is singularly irregular; it is deeply indented by three great bays, separated by four peninsulas, diverging N., E., and S.

Celebes, unlike most of the other great islands of this archipelago, abounds in extensive grassy plains, free from forests, which are looked upon as the common property of the tribes who live upon them, by whom they are carefully guarded from the intrusion of aliens. There are only three rivers of any consequence; the Chirrana, which rises near the centre of the island, and running S. through the state of Boni, falls by several mouths into the bay of the same name; a second stream, having a N. direction; and a third, which discharges itself on the W. coast, S. of Macassar. The Chirrana is navigable for ships to some distance; and native boats pass up it considerably farther into a fresh-water lake. Volcanos are said to exist in the N. division of the isl. Gold is found in Celebes; but in a less quantity than in Borneo, and chiefly in the sands of the streams. Timber is not very plentiful; teak-trees are generally few; but a large forest of them exists in one part of the isl., which the natives report to have been raised from imported seed. The vast plains afford abundant pasture and cover for a variety of the best game, deer, wild hogs, &c. The tiger and leopard, though common in the W. parts of the archipelago, are here unknown. The horses of Celebes, though seldom exceeding 13 hands high, are larger built, and unite a greater share of blood and strength, than any other breed of the E. islands; they are regularly trained for hunting, and are noted for fleetness and perseverance. Rice, maize, and cassava, with cotton and tobacco, are the chief articles grown. The S. peninsula being the most healthy, is by far the most extensively peopled, and contains the two principal states of the island, those of Boni and Macassar. The centre of the island is said to be inhabited by Horaforas (*see* E. ARCHIPELAGO), supposed to be aborigines: the brown race consists of a number of tribes, agreeing remarkably in person, but divided into four or five different nations, of which that of the Bugis is by far the most considerable. They are usually squat, robust, and somewhat heavily formed, though not ill built; their medium height

is a little above 5 ft.; faces round; cheek-bones high; nose small, and neither very prominent nor flattened; mouth wide, and teeth fine, when not discoloured by art. They are more distinguished for a revengeful disposition than any of the other natives of this archipelago. Notwithstanding most of the tribes have long passed that stage of society in which the chase is pursued for subsistence, they follow it with great ardour; and no sooner is the rice seed cast into the ground, than the chiefs and their retainers turn with enthusiasm to the sports of the field, in parties of frequently not less than 200 horsemen.

The Wadju, or Tuwadju tribe, inhabiting the body of the island, are distinguished as a commercial and enterprising people. The natives of Celebes and Boni are the most celebrated in the archipelago for their manufactures of cloth, their fabrics ranking before all others for fineness and durability; they are, however, ignorant of the art of printing cloths, or of giving them the brilliant colours of the fabrics of the Asiatic continent. The inhabitants import cotton, birds' nests, trijang, sharks' fins, tortoise-shell, agar-wood, &c.; and, together with gold in small quantities, and hides, re-export these articles to China, by the junks which annually trade to Celebes. The several chiefs have often a monopoly of some article of produce, as brass, betel-nut, opium, salt, &c.

The various independent nations of Celebes have each their peculiar form of government; but these are for the most part limited monarchies, the sovereign being controlled by the subordinate chieftains, and these again frequently by the mass of the people. The federal state of Boni consists of eight petty states, each governed by its own hereditary despot; while the general government is vested in one of the number elected from among the rest, but who can do nothing without the assent of the others.

In the state of the Goa Macassar, the king is chosen by 10 electors, who also choose an officer invested with powers similar to those of the mayors of the palace of France, or the ancient Justiza of Aragon, and who can, of his own authority, remove the king himself or any one of the council, and direct the electors to proceed to a new election.

In the Bugia state of Wadju, 40 chiefs constitute the great council of the nation, which is divided into three chambers, from each of which two members are nominated, who, in their turn, elect the chief of the confederacy. The "Council of Forty" decide on all questions of peace and war. Women or infants of the privileged families in Celebes are commonly eligible to the throne; and women very frequently actually exercise the powers of sovereignty; they are throughout the island associated on terms of equality with the men, taking active concern in all the business of life. They appear in public without scandal, and are often consulted on public affairs. Though the husbands invariably pay a price for his wife, she is never treated with contempt or disdain.

Notwithstanding the symptoms of a considerable advance in civilisation now enumerated, a great deal of rudeness and barbarity exhibit themselves among the inhabitants. Crimes are frequent; thefts and robberies extremely so: a total disregard of human life seems to prevail, and murder and assassination for hire are by no means rare. Mohammedanism is the predominant religion, especially in the S. part of the island: it was introduced by the Malays; but the inhab. generally are by no means strict as to its injunctions. The languages spoken belong to the great Polynesian family, but differ from those common in the W. of the archipelago, in being more soft and vocalic, and having less intermixture of Sanscrit: the two dialects of the Bugis and Macassar are the principal, and amongst the most improved tongues of the archipelago; the Bugis have a literature by no means contemptible. In their costume, the people of Celebes avoid showing the knee; they wear a long coloured cloth, the end of which they throw over the shoulder. They blacken the teeth, and use unctuous cosmetics: their ornaments are flowers, gold trinkets, and diamonds, krisas, betel-boxes, &c. They appear to have no scientific treatises; but are not wholly ignorant of some of the constellations, by the observation of which they navigate their prows.

Celebes was first visited by the Portuguese in 1512, who were expelled by the Dutch in 1660. In 1811 the territories belonging to that nation fell under the British dominion; but in 1816 were restored. The principal Dutch settlement is Macassar, which contains Fort Rotterdam, the residence of the governor. The Dutch have other settlements on the bays of Tolo and Tomlin; and most of the native states are subordinate to them. (*Crawford, Hist. of the Indian Archipelago*, 3 vols.; *Hamilton, E. I. Gazetteer*, i. 377—380.)

CEPHALONIA (an. *Cephalonia*), an isl. in the Mediterranean, and the largest of those composing the Ionian republic, near the W. coast of Greece, opposite the

Gulph of Patras; between lat. $36^{\circ} 3'$ and $36^{\circ} 29' N.$, and long. $20^{\circ} 21'$ and $20^{\circ} 49' E.$; 8 m. N. Zante, 5 m. S. Santa Maura, and 64 m. S.S.E. Corfu. Length, N.N.W. to S.S.E., 32 m.; breadth very unequal. Area 348 sq. m. Pop. (1833) 56,450. Its aspect is generally mountainous and barren, and though some spots are rich and fertile, the soil is, for the most part, only scantily spread over the limestone rock, of which the country consists. The shores are indented by numerous bays, of which that of Argostoli in the S.W. is the principal. It extends for 7 or 8 m. inland, and has, in most parts, deep water and good anchorage. In the interior of the island an elevated range, called the Black Mountain, runs N.W. to S.E., the highest point of which (an. M. *Cénos*), is 5,000 ft. above the level of the sea. Surface generally uneven; the only plain is in the S.W. near Argostoli, which is also the most densely inhabited part of the island. Climate mild; but storms and heavy rains, sudden changes of temperature, and earthquakes are frequent.

In 1833, the island contained 32,934 acres of cultivated, and 189,786 acres of uncultivated land. Wheat, Indian and other corn, pulse, currants, olive oil, wine, cotton, flax, and salt, constitute the chief products. The principal article of export is currants; and next to it, wine and oil. When Dr. Holland visited Cephalonia, the annual produce of currants was estimated at from 5,000,000 to 6,000,000 lbs. The Valonia oak abounds. Tenures of land are mostly annual, on the *metayage* system. Property is much divided; few proprietors having a revenue of 1,000*l.* a year. Cephalonia is divided into 4 districts; sends 7 mem. to the legislative assembly, and 1 to the senate. Argostoli and Lixuri are the chief towns; they are situated on either side the Bay of Argostoli. At the mouth of this inlet there is a lighthouse; and at Lixuri, a mole for the security of trading vessels has been recently constructed. Near Argostoli, a curious undershot water-mill was built by an English merchant in 1835. The roads were formerly very bad, but have been greatly improved since the island has been placed under British protection. Cephalonia had, in 1833, 11 public schools attended by 544 scholars, and supported by the government at an annual expense of 770*l.*: there were besides 78 private schools, with 1,220 students. Most of the pop. belong to the Greek church; the remainder are chiefly Roman Cath. Lixuri is the seat of a Roman Cath. bishop. The inhabitants of this island are active, enterprising, noted for their industry and commercial spirit, "hustling, ingenious, and voracious; and with a temper disposed to litigation and intrigue." (Holland, p. 40.) A great number of them are physicians; and, like many other of their countrymen, emigrate and settle elsewhere. The island was anciently known by several names: Thucydides calls it Tetrapolis, from its four principal cities; Samos, Pall, Krani, and Pronos, remains of which still exist. The site of Samos exhibits very extensive ruins, amongst which many medals, vases, statues, &c. have been found, and Dr. Holland traces the Cyclopean walls of Ceram at the head of the Gulph of Argostoli, in almost their entire extent. Cephalonia belonged successively to the Byzantine empire, Normans, Venetians, Turks, and Venetians again; from whom it was taken by the French in 1799. (*Private MS. Report; Parl. Papers, 1834; Hobhouse and Holland's Trav. in the Ionian Is., &c.*)

CERAM, a considerable island of the E. Archipelago (third division), chiefly between lat. 3° and $4^{\circ} S.$, and long. 128° and $131^{\circ} E.$; length, E. and W., about 185 m. by 30 m. average breadth; area 5,600 sq. m. A mountain chain runs E. and W. through the centre of the island, the highest peak of which is apparently about 7,000 ft. above the level of the sea. Ceram is chiefly distinguished for its large forests of sago-palm, and its fine woods for cabinet-work; in one portion of it great quantities of nutmegs and cloves were formerly produced; but the trees were extirpated by the Dutch about 1657. The shores of Ceram abound with rare and beautiful shells; its interior is peopled by tribes of *Macassar*. (See *Macassar*, BARRAN.) A cluster of small islands, called Ceram Lari, lies off the E. end of Ceram. (*Hamilton's, E. I. Gaz., &c.*)

CERRET, a town of France, dép. Pyrénées Orientales, cap. arrond., near the Tech, 15 m. S.S.W. Perpignan, and 5 m. from the frontiers of Spain. Pop. 3,302. It is the seat of a departmental college and of a court of primary jurisdiction. It was here that the plenipotentiaries met to fix the limits between France and Spain, in 1690.

CERIGNOLA, a town of Naples, prov. Capitanata, cap. cant., 22 m. S.E. Foggia. Pop. 9,000. It is a well-built town, with a good harbour, several convents, and an hospital. In the neighbourhood of this town, in 1503, Gonzalvo de Cordova gained a decisive victory over the French forces commanded by the Duc de Nemours, who was killed in the action.

CERIGO (an. *Cythera*), the most southerly of the 7 principal Ionian islands, situated at a considerable distance from the others, near the S. extremity of the Morea,

between lat. $36^{\circ} 7'$ and $36^{\circ} 23' N.$, and long. $22^{\circ} 52' 30''$ and $23^{\circ} 7' 30'' E.$ Length, N. to S., 20 m.; greatest breadth, 12 m. Area 116 sq. m. Pop. (1833) 8,760. Surface mountainous, rocky, and mostly uncultivated; but some parts of it produce wheat, maize, pulse, cotton, flax, wine, and olive oil; the latter of which is highly esteemed. It has a greater number of horned cattle than any of the other islands. The shores are abrupt; the sea round Cerigo is much disturbed by currents; and gales dangerous to shipping are frequent. The best anchorage is at St. Nicolo, on the E. coast. The principal town is Kapsali, at the S. extremity, with a pop. of about 5,000; houses mostly of wood and ill-built. Though now comparatively insignificant, Cythera was formerly a place of considerable importance, and probably of wealth, if we may judge from the ruins still extant in various parts of the island. It was the birthplace of Helen, and sacred to Venus, in honour of whom a temple, said to have been founded by *Aeneas*, was erected. (*Larcher. Mémoire sur Venus, 144.*) Cythera was originally called *Porphyria*, from the nature of its rocks. It was long a naval station of the Lacedaemonians; and belonged successively to Macedonia, Egypt, Rome, and Venice. The little island of Cerigotto, an. *Ogithia*, 4 m. long, and inhabited by about 30 families, lies midway between Cerigo and Crete, about 20 m. from either. (*MS. Rep.; Parl. Papers, 1834, &c.*)

CERRETO, a town of Naples, prov. Terra-di-Lavoro, cap. cant., on the declivity of Mont Matera, near the Cusano, 10 m. S.E.E. Piedimonte. Pop. 5,100. It is well built, and is one of the most agreeable towns in the province: it has a fine cathedral ornamented with superb pictures, a collegiate church, 3 convents, a seminary, 2 *monts-de-piété*, and considerable manufactures of coarse cloth. In 1656, it was wasted by the plague, and in 1688, an earthquake destroyed great part of the town.

CETIVERA, a city of Spain, prov. Catalonia, on an eminence, 57 m. N.W. Barcelona, 102 m. E. Saragosa. Pop. 6,000. It stands on a considerable eminence, is surrounded by walls, and has an ancient decayed castle. It has a church, five convents, an hospital, and five colleges. Some of its streets are well paved. The church is a Gothic building, with three naves; and the university, established in this city by Philip V., is a large, magnificent structure. The vicinity produces wine, oil, almonds, grain, pulse, cattle, and plenty of game. The prospect from the town is very fine, particularly towards the extensive plain of Urgel on the W.

CERVIA, a town of the Papal States, leg. Forli, near the Adriatic, with which it communicates by a canal, 114 m. S.E. Ravenna; lat. $44^{\circ} 15' 49'' N.$, long. $12^{\circ} 21' 7'' E.$ Pop. 3,500. It is a seat of a bishopric; is regularly built; has a cathedral and several churches and convents. To the W. of the town is a vast marsh, called the *Valle di Cervia*.

CESENA, a town of the Papal States, leg. Forli, on the Sario, at the foot of a mountain, 10 m. S.E. Forli. Pop. 4,000. It is the seat of a bishopric; is well built; has a cathedral, a handsome town-house, an annual fair for men, and 7 for women; a seminary, a society of agriculture, arts, &c., with silk flatures, and a considerable trade in wine and hemp, produced in its territory.

CETTE, a fortified sea-port town of France, dép. Herault, cap. cant., on the narrow tongue of land separating the lagoon of Thau from the sea, and on the declivity and at the foot of a calcareous hill, which advances into the Mediterranean in the form of a peninsula, 15 m. S.W. Montpellier; lat. $43^{\circ} 23' 37'' N.$, long. $8^{\circ} 41' 56'' E.$ Pop. 11,648. The town is well built, but it derives its entire importance from its harbour, and from its being the port, on the Mediterranean side, of the Canal du Midi. The harbour is formed by two lateral moles, with a breakwater across the entrance. There are forts on both these moles, and on the principal is a lighthouse, the lantern being elevated 84 ft. above the level of the sea. The harbour is perfectly safe in all weathers; has from 16 to 19 ft. water; and can accommodate about 400 sail of large and small ships. A broad and deep canal, bordered with quays, establishes a communication between the port and the lagoon of Thau; and, consequently, with the Canal du Midi on the one hand, and with the canals leading to the Rhône on the other. Cette is the centre of a great deal of traffic, particularly of the coasting description; and from about the middle of November to the end of March freights are generally to be met with. The articles of export and import are, of course, those conveyed thither by the canal, or brought thither to be carried away by it. About 36,000 tons of wine, and 4,000 tons of brandy, are annually exported. A good deal of Benicarlo wine, from Spain, for mixing with claret, is imported. It has a court of summary jurisdiction, a school of navigation, an exchange, barracks, theatre, &c. Ships are built here, and there are glass, soap, and tobacco-works, with distilleries, and a manufactory of highly esteemed liquors. The fishery of sardines is successfully carried on along the coast; and the salt-works on the adjoining lagoon are extensive, and

furnish employment to many individuals. Cette is of modern date, having been founded in 1866, to serve as a port for the great canal. (*Hugo, art. Herault; Plan of Cete; and Private Information.*)

CEUTA (an. *Septim or Septe*), a sea-port town of N. Africa, in the possession of Spain, coast of Morocco, directly opposite Gibraltar, and at the S.E. extremity of the straits on a narrow peninsula stretching about 3 m. E.N.E. into the Mediterranean, and having a capacious bay on its S., and a smaller one on its N. side. The E. part of the peninsula is occupied by the mountain of Almuna, on the highest point of which is the Castle of Ceuta, 14 m. S. by E. from Europa Point; lat. $35^{\circ} 54' 4''$ N., long. $5^{\circ} 17' W$. This mountain, which, towards the sea, is fenced round by inaccessible rocks, is the *Abyla Proper* of the ancients, and is famous as one of the pillars of Hercules; the rock of Gibraltar (*Mons Calpe*) being the other. The citadel, a very strong fort, is built across the narrowest and lowest part of the peninsula, at its junction with the mainland. The town, immediately to the E. of the citadel is situated at the foot and on the declivity of the mountain. Pop. (ex garrison) 9,237. (*Milano*.) Ceuta has many points of resemblance with Gibraltar, and, like it, if properly garrisoned, would be all but impregnable. It is well supplied with water; is the seat of a bishopric; has a cathedral, two convents, a hospital, a bank or prison for criminals employed on the public works; with schools, &c. It is also used as a place for the confinement of state prisoners. It is the most important of all the Spanish presidios or settlements in Africa, and is the seat of a military governor, a royal tribunal, and a financial intendant. Most of the provisions and other necessaries required for the supply of the town and garrison are brought from Spain. Ceuta was taken from the Moors by John, king of Portugal, in 1415. Since 1640 it has belonged to Spain. It has been several times besieged by the Africans, especially in 1697. (*Milano; Dict. Geogr.*)

CEVA (an. *Ceba*), an inv. town of N. Italy, k. of Sardinia, prov. Mondovì, cap. mand., at the confluence of the Cevetta with the Tanaro, 10 m. E. by N. Mondovì. Pop. about 4,000. It is built at the foot of a rock, formerly surmounted by a castle, which was used as a state prison previously to its destruction by the French revolutionary forces. The town was formerly surrounded with walls; but these were in great part destroyed by an inundation of the Tanaro, in 1564. It contains a church, and several convents; some forges, and silk factories; and, in both ancient and modern times, has been celebrated for its choicest. (*Rampoldi, &c.*)

CEYLON (an. *Taprobana*), a large island belonging to Great Britain, near the S. extremity of Hindostan, bearing the like relation to the Indian that Sicily does to the Italian peninsula. It lies between lat. $6^{\circ} 56'$ and $9^{\circ} 50' N$., and almost entirely between long. 80° and $82^{\circ} E$.; having N.W. the Gulph of Manaar and Palk's Straits, which separate it from Hindostan; S. and S.W. the Indian Ocean, and E. the Bay of Bengal. It tapers to a point towards the N., and is shaped like the section of a pear cut lengthwise through the middle. Length, N. to S., 270 m.; average breadth nearly 100 m.; area 24,500 sq. m. Pop. (1835) 1,242,000.

The Coasts, on the N. and N.W., are low and flat; those on the S. and E. bold and rocky, and in some places fenced with reefs: in many parts they are deeply indented by the sea, and present some large and many small harbours. Trincomalee harbour, on the N.E. coast, is one of the finest any where met with. Point de Galle, in the S., is the next in importance; the inferior harbours are Batticaloa, Matura, and Calutra, on the S. and R., and Negumbo, Chilaw, Calpenteen, Manaar, and Point Pedro, on the W. coasts. The deep water along the E. shores admits the safe approach of large vessels, but the harbours on the N. and N.W. are full of sands and shallows, whose position varies with the monsoons. Columbo, the marit. cap., has merely a roadstead, which is practicable for large ships only from the beginning of Dec. to the latter end of March. So large a number of inlets causes a corresponding proportion of small islands, promontories, and peninsulas; of the latter the principal are the peninsulas of Jaffnapatam, on the N.W., and that of Calpenteen, on the W. coast. At its N. extremity especially, the shores of Ceylon are studded with numerous small rocky and verdant islets. The ridge of sandbanks called Adam's Bridge, which crosses the Gulph of Manaar from Ceylon to the island of Ramisseram, near the opposite coast of India, is connected by the natives with a variety of curious traditions, and forms a great obstacle to the more speedy communication with the continent, by its slenderness to navigation. It consists of loose sand, resting on firm foundations, but constantly varying in form from the action of the monsoons. There are three principal openings or channels through this ridge; one near the island of Manaar, another 8 m. farther to the W., and a third about 11 m. from the island of Ramisseram; but all of them are impracticable except for small native boats in fine weather, and even then the navigation

is attended with some danger. Near these openings the bank rises above the water for some miles, broken occasionally by smaller channels, but towards the centre it is mostly covered by water, the depth of which does not in any part exceed a few feet. By the last accounts (see *Asiat. Journ.*, April, 1839.) attempts at enlarging the passage between Ramisseram and the continent are now in progress.

Interior.—*Mountains, &c.*—The belt of country along the shore surrounding the interior, or old kingdom of Candy, is, for the most part, flat, varying in width from 8 to 30 m., and, in the N., to nearly 80 m.; its extensive green plains giving to the shores of Ceylon an advantageous appearance when contrasted with the barren and sandy shores of the opposite continent. The interior consists of three distinct natural divisions, the low country, the hills, and the mountains. The centre of the island S. of lat. $8^{\circ} 20' N$, is occupied by an extensive table-land, 67 m. in length, by about 50 m. in width, and estimated at from 2,000 to 3,000 ft. above the sea. The interior of the N. and central divisions consists of ranges of mountains running mostly N.E. and S.W., and varying from 1,000 to 4,000 ft. above the sea, clothed to the summits with magnificent forests, and intersected by numerous ravines, cataracts, and cascades. From these regions various conical-shaped hills rise up at intervals to an additional height of from 2,000 to 3,000 ft. The most conspicuous summit is that which is known by the name of Adam's Peak (the Sannenella of the Singalese), in lat. $7^{\circ} N$, and long. $80^{\circ} 40' E$, 46 m. E.S.E. Columbo, rising to 6,152 ft. above the sea. Namany-Cooli-Kandy, the next in elevation, is about 5,548 ft. above the sea.

The mountains are generally in continuous ranges, and are seldom or never found isolated. This region is skirted by a hilly country, from 10 to 20 m. wide, and varying in elevation from 100 to 500 ft., with occasional summits of more than twice that height. This tract is destitute of the ravines and other bold features of the mountainous country.

Rivers and Lakes.—Ceylon has numerous small rivers and perennial streams; but few of them are navigable, even by a canoe, to many miles from their mouths. The principal is the Mahavili Ganga: it rises near the highest part of the central table-land, about 30 m. S. Candy; and, having received many tributaries, falls into the sea, a little S. of Trincomalee, after a course of about 200 m. It is the only river navigable for any considerable distance. The next most important river is the Kalani-Ganga, which has its source in the country at the foot of Adam's Peak, and empties itself into the ocean by several mouths in the neighbourhood of Columbo: it is made considerable use of for internal traffic.

There are no lakes of any consequence in the interior, the largest being no more than 4 m. across; but along the E. coast, from Batticaloa northward there are several extensive lagoons, which by means of artificial channels, are made serviceable to traffic: other lagoons exist in the neighbourhood of Negumbo and Columbo. (*Davy's Account of the Interior of Ceylon, &c.*, pp. 1—6; *Percival's Account, &c.*, pp. 55—60.)

Geology and Minerals.—The rocks met with in Ceylon are mostly primitive, and consist, with little exception, of granite or gneiss, with large veins of quartz, hornblende, and a snow-white dolomite: limestone occurs only in Jaffnapatam, and the N. districts. A belt of grey or black sandstone, together with coral formations, nearly encompasses the whole island. The upper soil is in general sandy, with but a small mixture of clay, and chiefly derived from the disintegration of primitive rocks: the cinnamon soil near Columbo is perfectly white, and consists of pure quartz. Ceylon is rich in valuable minerals; its metallic products are, however, comparatively unknown: ores of iron, lead, tin, and manganese, are found in the interior, but are made little use of: plumbago is the only article amongst these which has become of any commercial importance. Mines of quicksilver were formerly worked by the Dutch. It has numerous gems; and common salt-beds are found in various places. No volcanoes exist in Ceylon, nor are mineral waters very abundant; but they are met with near Trincomalee.

Climate.—The mountain ranges which separate Ceylon almost completely into two parts, by arresting the course of the monsoons, occasion a radical difference at the same moment in the climate of the E. and W. parts, whole floods of rain deluging the island on one side, while on the other the natives are carefully hoarding all the water left from previous inundations. In the S. and S.W. the climate is moist, temperate, and similar to that of Malabar; in the E. and S.E. it is hot and dry, and more like that prevalent in the Coromandel coast. The S.W. monsoon lasts from April to Sept. the E. from Nov. to Feb.: in the intervening months the winds are variable. The S.W. monsoons are usually accompanied by violent storms of thunder and lightning, and torrents of rain, which sometimes extend themselves to the central table-land, especially in March and April;

but this high region is generally out of the influence of either monsoon, and both its winds and temperature are greatly modified by its own physical character, the directions of its principal ridges, &c. The quantity of rain which falls during the year is about three times as great as in England; the rains being, though not more frequent, far heavier, so much so that a fall of more than 8 inches in 24 hours is not uncommon: 54 inches is the annual estimate in the alpine region, and 100 inches at Colombo. The seasons depend more on the monsoons than on the course of the sun; and the coolest season is during the summer solstice, while the S.W. monsoon prevails. The heat is, however, nearly the same throughout the year, and much less oppressive than on the continent of India. Along the coast the annual mean temperature is about 80° Fahr.; at Candy, 1,467 ft. above the sea, it is 78°; at Colombo the annual variation is from 76° to 86°; at Galle, 70° to 90°; at Trincomalee, 74° to 91°. For a tropical country, Ceylon has a comparatively salubrious climate; but some of the less inhabited parts, and the low wooded hilly country between the mountains and the sea, are highly insalubrious. Near Colombo and Trincomalee, where the jungle has been cleared away, and the land drained, the country has been rendered perfectly healthy. The prevalent diseases are those affecting the liver and intestines, often accompanied by fever: diseases of the lungs, urinary organs, and nervous system, are very rare; gout is unknown. Elephantiasis, *Lichen tropicus*, and other cutaneous complaints, are common. The small-pox was formerly very destructive, but is now guarded against by vaccination, to which the natives raise no objection; measles and hooping-cough both occur in a mild form. The beri-beri (*Hydrops asthmaticus*) is a disease nearly peculiar to Ceylon. (*Hamilton's Hindostan*, &c., vol. ii.; *Davy*, pp. 88—77, 477—496.)

Vegetable products are numerous and valuable. The most important, next to rice and other grain, is the cinnamon (*Laurus Cinnamomum*), called by the Singalese *cocondo*, which here arrives at its greatest perfection, and even, at times, has been a chief article of export; it grows only in Ceylon and Cochin China. It delights in a poor sandy soil, with a moist atmosphere, and is almost exclusively confined to the S.E. part of the island, between Negombo and Matura. In the N., where the climate is dry and sultry, it is totally unknown, and all endeavours to propagate it at Batavia, in the islands of the W. Indies, and on the opposite coast of Tinnevely, have signally failed. In its wild state it grows to the height of 20 or 30 ft., and bears a white blossom in January: while in bloom, the cinnamon forests have a very beautiful appearance; but the aroma of the plant resides wholly in the bark, and the fragrance of the groves is not near so great as strangers have been led to believe. The cocoa-nut tree flourishes with singular vigour, and is of greater importance to the native population than the cinnamon, as almost every part of the tree is converted into articles of food or domestic use: the best trees produce from 50 to 100 nuts annually, and grow so close to the sea, that the roots are even washed by its surge. The Palmyra palm grows principally in the N. of the island, and its produce is scarcely of less importance than that of the cocoa-nut tree; it furnishes toddy, a kind of milk, material for bags, ropes, &c., and its leaves serve for writing-paper. The talipot palm, the leaves of which are large enough to shelter many individuals, grows luxuriantly here, though rare on the continent of India. The bread-fruit-tree attains an immense size; cotton is not equal to that of India; coffee is extensively cultivated; indigo is found wild, but its culture is neglected; the araca and betel-nut, as well as tobacco, which are of excellent quality, grow abundantly; the cardamon seeds are inferior to those of Malabar. Gum-lac and gamboge are also produced in this island. The flora of Ceylon is not so extensive as beautiful and various: the rose, pink, jessamine, &c., are as fragrant as in England, and the jessamine much more so; the *gloriosa superba*, and amaryllis, grow in profusion, and the jamba, or rose-apple, strews the ground with its scarlet blossoms. (*Hamilton's Hindostan*, vol. ii.; *Heber's Narrative*, iii. 143—145, &c.; *Percival*, pp. 219—327.)

Animals.—Ceylon has been from an early period celebrated for its breed of elephants, which, though inferior in size to those of other countries, are more valued from their greater strength and docility. The chase of these animals has always been with the Singalese an object of great importance; but the avidity with which they have been pursued has greatly diminished their numbers, and they are now chiefly confined to the N. and N.E. districts. The royal tiger is not met with, but bears, leopards, the cheta (a small species of leopard), hyenas, jackals, and tigers, are numerous; besides elk, deer, gazelles, buffaloes, wild hogs, monkeys, &c. Near Jaffna a large baboon is very abundant, and fearless: a large variety of the monkey tribe, porcupines, racoons, armadillos, squirrels, and mungoses, are met with. There are no

foxes; but the flying fox, and rats, are very common and troublesome. Pheasants, snipes, red-legged partridges, pigeons, peacocks, and a great variety of birds; with serpents, alligators, and reptiles of all sorts, are abundantly plentiful. The fishing of the pearl oyster is an important branch of industry.

People.—The pop. of Ceylon, exclusive of the various colonists who have at different times possessed themselves of the coasts, may be divided into four classes: 1st, the native Singalese or Ceyloneses, who may be again subdivided into those occupying the Candian territories, and those of the coasts; 2d, the Moors, who are found in all parts of the island, and form the chief population of the district of Pultam; 3d, the Veddahs, a savage race, who are supposed to be the aborigines, and inhabit the mountainous regions and unexplored fastnesses, almost in a state of nature; 4th, the Malabar and other Hindoos, who are chiefly confined to the N. and E. coasts. The Singalese of the coasts, whose complexion, features, language, and manners, closely resemble those of the Maldivians, are about 5 ft. 8 in. in height, of a slim figure and fair complexion, especially the women; they are represented as remarkably mild, bashful, and timid, and rather deficient in intellect. The Candian Ceyloneses are in all respects superior to those of the coasts, and differ from Europeans less in feature than in colour; they are taller, better made, and more robust, than the Singalese; and for Indians are stout, with large chests and broad shoulders. They have small bones, rather short but muscular legs and thighs, and small hands and feet; heads well formed, and, like those of other Asiatics, longer than those of Europeans; features often handsome. The colour of their skin, eyes, and hair, varies from brown to black; they have a profusion of hair, which is allowed to grow to a considerable length. The Candian character differs essentially from that of the Singalese, having none of the effeminacy and timidity which distinguish the latter, and there is a certain haughtiness and independence in their whole bearing and demeanour. They will not generally, however, attack an enemy in the open field; but resort to ambush, in the same manner as the Singalese. Indolence, hypocrisy, and revenge, may be regarded as national vices. Some traits may be recognised as common to the natives of Ceylon with the Bengalese, but they are still more closely allied, both in physical and moral characteristics, as well as language, religion, and traditions, with the Indo-Chinese nations, and especially the Birmeese. The Malabars of Ceylon differ but little in any respect from those of the continent, though varying somewhat in their manners and customs. They retain, in great measure, the religion and language of their co-generators of S. India, and are much less numerous than formerly. The Moors have a tradition that they are the descendants of a tribe of the posterity of Hashem, expelled by Mohammed from Arabia. They retain many customs similar to those of the ancient Jews.

Of the Veddahs little more is known than that they chiefly inhabit the great forests which extend from the S. to the E. and N., and also the most inaccessible parts of the central table-land, having neither clothing nor habitation, subsisting upon wild fruits and animals, and having the branches of large trees for their resting-places. They are conjectured by some to be a portion of the original inhabitants, who, upon the invasion of the island, retreated to the inaccessible haunts in which they are now found. They are divided into two tribes,—the Village and the Forest Veddahs; the former, who are the more civilised, occasionally go down into the lower districts to exchange their game and cattle for rice, cloth, iron, &c. They live in huts, and cultivate the ground; though, in common with their more savage brethren, they seek their chief subsistence in the forests. They are peaceable and inoffensive, never courageous, although easily persuaded to join in any insurrection; and in times of disturbance they have occasionally been employed as mercenaries.

The other inhabitants of the coast consist of Dutch, Portuguese, and English colonists; some Caffres and Javanese; a few Chinese and Parsee traders; and a various pop., sprung from the intermixture of these with each other and with the native races. The burghers, many of whom fill public offices and subordinate situations under government, are the descendants of Europeans and half-castes. The distinctions of caste are recognised, and in some instances scrupulously preserved, by the Ceyloneses; but they respect them only in their civil, rejecting their religious, influences.

Till latterly, the pop. had been diminishing for four or five centuries. But a considerable increase has taken place in the pop. of the maritime provinces during the last few years. Several parts of the interior are, however, very thinly peopled, there being, in some districts, not more than 4, 5, or 6 persons to a square mile; in the central prov. the pop. is dense in certain parts; but, with the exception of the country round Candy, and the districts of Ouva and Mattele, seven eighths of the ground is cu-

vered with wood and jungle, and nearly unpeopled. (*Deasy; Hamilton; Mod. Trav.* vol. x. *Journal of Asian Soc. Calcutta* ii. 237.)

Ceylon is now divided into five provinces, the area and population of which, according to a census taken in 1835, are—

	Area in sq. m.	Whites.	Free coloured Races.	Slaves.	Total Pop.
Western prov.	4,458	9,548	492,605	705	495,858
Southern do.	6,032	1,158	264,590	773	266,521
Eastern do.	4,895	810	49,380	23	50,213
Northern do.	5,053	995	285,151	94,513	380,659
Central	5,016	329	156,362	1,581	158,079
Military	—	—	—	—	9,674
Strangers, aliens, &c.	—	—	—	—	10,825
Total (1835)	24,448	9,121	1,104,482	27,597	1,541,825

Agriculture, &c.—In 1836 it was calculated that about 1,675,000 acres of land were cultivated or in pasture, and 2,518,000 acres left waste: of the former 464,580 acres were sown with paddy, 108,460 acres with fine grains, and 1,070,480 acres were in pasture. In the same year there were nearly 600,000 horned cattle, and less than 100,000 sheep and goats. The tract of country near the Coromandel coast is only in some parts fit for tillage, the ground for many miles exposing only a barren and naked surface. The soil of the central parts is capable of producing luxuriant crops were it properly cultivated. All products requiring a moist soil and climate flourish most in the S.W., and rice is grown chiefly in the level lands there; in the valleys of the hill region, but often also on the slopes, on account of the facilities they present for irrigation. Around the fields, on the level lands intended for its reception, small embankments, about 3 feet in height, are raised, and water let in upon them; they are afterwards trodden over by buffaloes or turned up with a sort of light plough. On the hill slopes the rice-fields are dammed up, and form a succession of terraces, for irrigating which the water is conveyed sometimes for a mile or two along the mountain sides, and let off from one terrace to another, as the state of the grain requires it. There are two harvests during the year: the first crop is sown from July to October, and reaped from January to March; the second is sown from March to May, and reaped from August to October. What is called a plough consists of a piece of crooked timber shod with iron, which tears rather than ploughs up the ground. After the first ploughing, the fields are flooded; then ploughed again, and carefully weeded. Rice is industriously cultivated by the Malabars of the N. and N.E. districts; but the produce is insufficient for the consumption of the island, and large quantities are annually imported from both the Malabar and Coromandel coasts. Hemp is raised in abundance, the sandy soil of the maritime districts being well adapted for it. Cotton of different sorts grows with the greatest facility, the buds ripening within four months after being sown. Each village or hut has its sugar and tobacco plantation: coffee is raised of a very superior quality.

As cinnamon forms a chief article of export and revenue in Ceylon, its cultivation is one of great interest, and is conducted with much care. The neighbourhood of Colombo is particularly favourable for its growth, being well sheltered, and having a high and equable temperature. About 2,000 acres of land, chiefly near that town, are laid out in cinnamon plantations, furnishing employment to 30,000 individuals, and latterly yielding annually about 500,000 lbs. of bark, worth 138,000*l.* sterling. In its wild state, the plant grows to the size of a large apple-tree; but when cultivated, is not allowed to attain to more than 10 or 12 ft. in height, after 7 or 8 years' growth. May and June are the months for stripping the bark from the plant, which is done by two men, the one flaying the bark, the other removing with knives, and the inner rinds stripped off by a peculiarly shaped instrument; by the other method, the outer bark is not artificially removed, but the process of fermentation which the strips undergo when tied together in large quantities spontaneously removes it. The bark, in drying, gradually contracts, and rolls itself into a gull-like form; and, after being subsequently dried in the sun, the smaller are inserted into the larger pieces, and the whole are made up into bundles of about 30 lbs. weight. Layers, shoots, and transplanted stumps, are the best means of extending the growth of the cinnamon plant.

Wages are considerably higher, and provisions proportionally dearer, in Ceylon than in Bengal; the wages of the labouring class vary, in different parts, from 6*d.* per day, in Colombo, to 3*d.*, and 4*d.* per day in the interior; the government having interposed to fix this ratio; but higher wages are demanded from and given by private employers, according to circumstances. Those of the poorer classes, who possess small portions of land, rarely derive their support from it exclusively, but employ

themselves in fisheries, trades, manufactures, and the petty traffic of the country; the wages of mechanics and artisans are proportionally higher than those of the labouring population, but still very moderate. A very minute subdivision of property often exists, and the inheritance of one person will sometimes consist of 9-10ths of a seer of rice-land, 5-12ths of the produce of a cocoa-nut-tree, or 2-3ds of that of a jack-tree. Notwithstanding this, the peasantry of Ceylon are thought by Colonel Colebrooke to be generally in better circumstances than those of the adjoining continent. They are not under either a seminary or ryotwary settlement, and the demands of the government on the land rarely exceed 1-10th part of the produce, and are sometimes less. Under the Candyan government, the tenures of land were of three kinds. Some lands belonged wholly to the sovereign; others were cultivated by individuals at a government rent, of some fixed proportion of the produce; and others, again, were granted as payment for the performance of specific services to the headmen of different districts, chiefs, &c., and revolved again to the crown on the death of such individuals. The latter could neither be mortgaged nor alienated; the second class of lands might be transferred in any way as long as the permanent rent continued to be paid. The lands belonging to the sovereign himself were cultivated on his account, or let out to the highest bidder, and sometimes brought a rent of 1-3*d.* or half the produce. The plan of redeeming the whole rent, above 1-10th part of the produce, has been adopted by the British government with much success, and in those districts where the practice has prevailed the revenue has increased rather than diminished; for more lands having been brought into cultivation, 1-10th part of the crops now yields as much as 1-3*d.* or 1-4th part formerly did. Domestic animals are not numerous. The horse is a degenerate breed, and not aboriginal; oxen, though small, are well tasted, and the chief food of the British troops, though eaten by none else: poultry of all kinds are abundant. (*Reports on the Affairs of the E. I. Comp., Evid. of Sir A. Johnston, Col. Colebrooke, &c.*)

Pearl Fishery.—The pearl fishery in the Bay of Condamine is a government monopoly, but is now free, and forms an annual and profitable employment to many of the inhabitants of the neighbouring coast. The pearl banks are formed by coral ridges from 6 to 10 m. off shore, and of a variable depth, but commonly from 5 to 7 fathoms below the surface. The oysters are attached by fibrous bands to these ridges, from within a short time of their bursting from the egg, to about 6½ years old, when they lose their hold, and drop to the sandy bottom, where they lie in heaps. Soon after attaining the age of 7 years, the animals are said to perish. As many as 60 oysters have been found in one oyster; but such instances are rare, as is, indeed, the presence of pearls generally; and it is said that oysters are cheaper during the season at Arripo than at Feversham, or Colchester. During the November calms, the banks are examined, and samples of the oysters sent to the government, who advertise on what bank, and by how many boats, the next fishery is to be conducted. The season commences in Feb. and finishes in April: six weeks or two months, at the utmost, is the time allowed for its continuance. Each of the boats carries a *findal*, or master, and 23 men, 10 of whom are divers, and relieve each other, 5 divers being constantly at work during the hours of fishing. After they are taken out of the boats, the oysters are left to open spontaneously, die, and rot; the stench of their putrefaction filling the air for many miles round Condamine, till it is swept off by the S.W. monsoons. The Ceylon pearls are whiter than those of Ormuz, or the Arabian coast; and the natives are extremely expert in cutting and drilling them. Upwards of 16,000,000 of pearl oysters were taken in 1835. The usual Ceylonese boats are like the catamaran of Maraca, and other parts of the peninsula. A great number of chank shells are found, and exported to India from the N. shores of Ceylon. (*Rachenberger, Dr. in Martin's Statistics*, p. 400; *Perical*, pp. 86—100; *Sturt, in Philo. Trans.* iii. 2.)

Salt is a government monopoly, and its manufacture, in leeways and pits on the sea shore, is carried on to a great extent in the N. and E., where it is of fine quality, and may be procured in greater abundance than the government requires, or has been able to collect. Col. Colebrooke believes that before the Dutch moult, existed, this coast supplied Bengal with salt; and, indeed, the Ceylon salt may be imported at Calcutta for two thirds the price of the salt produced in India. There are no other manufactures of any extent or importance, if we except that of arrack, which is distilled from the blossoms of the cocoa-nut-tree, as toddy and jaghery are from the juice; while ropes, brushes, baskets, brooms, matting, rafters, thatch for cottages, &c., are obtained from the various parts of the tree, in addition to the valuable oil now in extensive use in England. Two steam-engines have recently been established by a mercantile house at Co-

lumbo, for the expression of the latter. Saltpetre is made from the chippings of rocks, in which nitrate of lime is prevalent, mixed with wood ashes; the mixture washed, and the liquor evaporated to a concentrated solution, and suffered to crystallise. Lime of a most admirable quality, and possessing a power of adhesion much greater than that procured from shells, is made by burning the coral found upon the shores. Gunpowder is made by a rude process: the native pottery is coarse and unglazed. Little progress has been made in weaving; the loom is somewhat similar to the primitive loom of Ireland: all the cloths used are of domestic manufacture; no mualins are woven, nor, indeed, any thing but coarse cottons, and some silks. Rude images and implements of husbandry are made of the native metals, and the Singalese can work with dexterity and taste in gold and silver. They are generally more capable of setting gems than cutting them; and excel in the manufacture of lacquered ware. (*Davy*, pp. 268-269; *Reports on E. I. Affairs*, &c.)

Trade.—During the last few years, since the Dutch monopoly system has been abandoned, both the internal traffic and foreign trade have greatly increased. The value of the imports into the island in 1835 amounted to 352,077l., and that of exports in the same year to 199,268l. The following are the values of some of the principal articles of import and export:—

Imports.	Amount.	Exports.	Amount.
	£.		£.
Cotton goods	116,259	Arrack	7,218
Grain	141,182	Araca-nuts	10,309
Opium	1,915	Pepper	568
Sugar	4,529	Cinnamon	21,654
Waxes	7,203	Cocoa nuts	6,700
Wine	9,514	Cocoa-nut oil	11,954
		Coffee	59,048
		Pearls	40,346
		Tobacco	8,387

It will be seen that the chief import is grain, mostly rice from India. The tobacco of Ceylon is in great demand in the S. of India, especially at Travancore; it is sent also to Cochin and other parts on the Malabar coast and Sumatra: in the latter it is exchanged for araca-nuts and rice; at Cochin for pepper, rice, and specie. Coffee has hitherto been sent mostly to Great Britain and India; the first export to the Mauritius and the W. Indies took place in Nov., 1838. Besides coffee, cinnamon and cocoa-nut oil are the principal exports to Great Britain. Under the government of the Dutch, who were the first to cultivate the cinnamon plant, that spice was strictly monopolised, and severe laws were enacted against those who cut down or peeled trees without the cognisance of government, though on their own property. Under the auspices of the late governor, Sir R. W. Horton, the monopoly was abolished in 1833; but the advantages that would naturally have grown out of this wise measure have been counteracted by laying a duty of no less than 3s. per lb., or 300 per cent., *ad valorem*, on the exported article! This oppressive duty amounts almost to a prohibition of export; hinders a taste from being formed for the article in other countries, and confines its growth and the trade in it to perhaps 1-10th part of what it would otherwise amount to. A great desire is manifested on the part of the government to render salt an important article of trade, and it may be exported free of duty.

There is a canal between Calpentoen and Colombo, by which cargoes are conveyed during the S.W. monsoon. A fine road has been constructed from Colombo to Candy, on which a mail-coach runs; carriage-roads also extend from Colombo N. to Chilaw, and S. to Matura. Many rapid and unfordable streams have had iron and wooden bridges thrown across them, amongst which is that of Paradenia, across the Mahavilly Ganga, which consists of a single arch, with a span of 205 ft., principally composed of satin-wood.

The English weights, measures, and monies, are becoming universal in Ceylon.

The Public Revenue, in 1835, was as follows. (*Ceylon Almanac*, 1837.)

Sea customs (export and import duties, &c.)	114,394	Other sources	24,619
Cinnamon and cinnamon oil (sale of, in Ceylon)	13,029	Total fixed revenue	299,408
Land rents	53,741	Incidental receipts, arrears of preceding yrs., &c.	73,587
Licenses, customs, tolls, &c.	5,355		371,695
Licenses	35,628	Expenditure	323,277
Pearl fishery	40,546		
Salt farms	24,506	Surplus revenue	48,718

But it is necessary to remark that the above is the amount of expenditure incurred in Ceylon only, and that it does not include the expenditure incurred in England on account of Ceylon. This latter item amounted, in 1835, to 113,845l.

Government is vested in the hands of a British governor, assisted by a council of European civil servants, selected either by the governor himself or the secretary

of state for the colonies; but the power of the council is limited, and totally subservient to the authority of the governor. The administration of the governor in the Candyan province is somewhat less absolute than in the rest, as there is a special council for the enactment of its laws, for whose approval he usually submits his measures, which have afterwards to be approved by the Queen in council; the governor has, however, complete control over the financial department in the interior, while in the maritime provinces he is restricted to a certain sum for contingent expenditure, unless authorised in exceeding it by his council, to whom, except on this point, he refers, or not, at pleasure, being empowered to carry into effect any law without their concurrence. All laws, before being acted upon, are published in the official gazette, for the purpose of their general diffusion, with translations into the Singalese and Malabar languages.

The active business of the government is conducted by individuals of three different classes. Offices of the first and second classes are usually filled by Europeans; the subordinate situations by natives; but by recent regulations, any person judged to possess sufficient qualifications may fill the most important offices without reference to nation or faith; a knowledge of the English language being, however, considered indispensable. Each village and caste has its elected headman, who is recognised by the government, which commonly selects native servants from amongst this class of people: the *modairars* of *corres*, or lieuts. of districts, are appointed from this body.

Armed force consists at present of four regiments of infantry, the head-quarters of which are at Colombo, Candy, and Trincomalee; two companies of the royal foot artillery; a mounted body-guard for the governor; and a regiment composed principally of Malay, a fine body of men, near 1,500 strong. The principal fortresses are those of Colombo, Trincomalee, Galle, and Jaffna.

Justice.—A supreme court of justice is established at Colombo, with powers equivalent to those of the Court of Queen's Bench and Court of Chancery. It is presided over by three English judges, aided by two other functionaries, all of whom are appointed from England. Trial by jury was introduced into Ceylon by Sir A. Johnston, and is now established in every district. Excludes of Colombo, the whole island is divided into three circuits, viz. the N., S., and E.; the last of which comprises the old kingdom of Candy, with all the country to the E. of it. The circuits are subdivided into many districts, each of which has its own court, with a judge and three assessors, and with jurisdiction in all cases not punishable with more than a fine of 10l., one year's imprisonment, or 100 lashes. The supreme court in Ceylon is the sole court of appeal. Excepting in the maritime provinces, where arrack drinking is prevalent, atrocious crimes are in general rare; so that the courts are more occupied with petty litigations than serious offences.

The *Religion* of the Singalese is Buddhism; but the upper classes profess Christianity, and many of the 16 Protestant churches in the island, subordinate to the Archdeacon of Colombo, and 32 dissenting places of worship. Roman Catholic chapels are very numerous, and 10 years ago it was believed that half the Ceylonese population were Christians, following the ritual mostly of the Romish and Dutch churches. The Hindoos in the N. are worshippers of Shiva. There is a tradition amongst the natives that Buddh himself visited this island, which, before his advent, had been inhabited by demons. There are numerous temples to that deity in the island, especially in the central parts, where the Buddhist sect is most prevalent; and the British government having succeeded to the temple patronage and other privileges belonging to the old kingdom of Candy, have the appointment of the Buddhist priests. When the palace of Candy was taken by the British, a celebrated relic, believed by the natives to be a genuine tooth of Buddh, was captured; the possession of which is considered to insure its possessors the sovereignty of the whole island! This relic is annually exposed with great state and ceremony, and is worshipped by multitudes flocking from all parts of the country, and bringing offerings of various kinds to the priests, who thereby realise considerable sums: this festival lasts for seven days, and the devotions are accompanied by games, processions, &c. (*Journal of the Asiatic Soc.*, iii. p. 101.)

Public Education.—In 1831 there were 1,055 public and private schools in the island, about 100 of which were supported by government, at a yearly expense of 3,600l.; the others have been established by the Church Missionary and Dissenters' Missionary societies. Free elementary education in the English language, arithmetic, geography, &c., is given in these schools. The government schools are chiefly in the Singalese maritime districts. At Colombo there is a superior academy where the usual branches of a classical and mathematical education are taught.

Civilisation, Habits, Arts, &c.—In civilisation the Singalese appear to be nearly, if not quite, on a par with the Hindoos; in courtesy and polish of manners they are

inferior to none, but in intellectual acquirements, and proficiency in the arts and sciences, they have made little advancement. Many of the male Singalese read and write in their own tongue, but this is no part of female education. They write with a sharp iron style, on talipot leaves, and colour the traces afterwards with lamp-black. They excel more in lacquer painting than in any other art. Their statuary is better than their pictures, though the figures of Buddha have been subject to no innovation of style, and are always in the same posture, of whatever material they may be formed. The Singalese colour the statues of their gods, and give a pupil to the eye, which last ceremony is supposed to confer all the holiness belonging to the figure, and is done with much mystery and solemnity. There seems to be no peculiar national style of architecture: the Buddhic temples are like Tartar structures. The Ceylonese rise at dawn, and retire at 9 or 10 o'clock at night; they sleep either on mats on the floor, or on couches. Their meals are short and unsocial, the men and women not often eating together; there are two principal meals, one taken at noon and the other at 7 or 8 o'clock in the evening. The standing dish consists of rice with curry; some eat eggs and poultry, but buttermilk is never eaten excepting by a low class, who are in consequence held in great abhorrence; milk, ghee, oil, and fruits, are the other important articles of diet. The best of their houses are commonly of mud, with tiled roofs, and a single story in height; built on a low terrace, presenting outwardly dead walls, and having in the interior an open space, into which the rooms open by doors, which, as well as the windows, are very narrow. The floors are composed of clay, plastered with manure, to keep off the insects, and the walls are covered with the same material, or a coat of white clay: lime is used for the walls of temples only. The furniture of the houses consists of 2 or 3 stools, a few mats, and porcelain dishes, a stone hand-mill, a pestle and mortar for rice, a rattan bag for compressing seeds to procure their oil, and a few other indispensable articles. The dress of the men is a handkerchief wrapped like a turban round the head, leaving the top exposed, and a long cloth, called *tupetty*, reaching from the loins to the ankles. That of the women is very similar; they leave the head uncovered, but the end of their dress is thrown across the left shoulder. On occasions of ceremony, both sexes wear a small jacket. Rings, and silver and crystal bangles, and other ornaments, are commonly worn, and certain privileged persons are permitted to wear gold and silver chains and trinkets; but the Ceylonese look with extreme jealousy on every assumption of dress which is not strictly in conformity with the caste of its wearer. Like the Hindoos, they admit of the four chief subdivisions of castes, viz. the religious, and military orders; *Tiassia* cultivators, merchants, &c.; and *Iskoodras*, artisans: the first two ranks have however scarcely any actual existence in Ceylon, and all the honours and hereditary rank in the island are monopolised by the cultivators, at the head of the third class, with whom all Europeans are ranked; while the Moors are classed with the fishermen at the head of the fourth order. The male Singalese marry generally at the age of 18 or 20, the females earlier. Matches are determined on and concluded by the parents of the parties to be affianced: the dowry of the woman generally consists of household goods, or cattle; seldom of land: the husband always pays a price for his wife. The women seldom have more than four or five children; but sometimes suckle them for as many years: the latter are in consequence very backward, and often neither speak nor walk till upwards of two years old. Infidelity is little regarded, provided it be not an intrigue with a person of inferior caste: concubinage and polygamy are indulged in by the men, but plurality of husbands is more common than that of wives; one woman belonging equally to several brothers of the same family. This, as well as other usages, is, however, fast disappearing before new habits, acquired by the extending intercourse with Europeans. The Ceylonese appear to be sincere and warm in their attachments. Dr. Davy disbelieves the report of the practice of exposing female infants, "excepting in the wildest parts of the country, and then never from choice, but necessity, and when the parents are on the brink of starving." The sick and dying, though not openly exposed, are certainly removed to temporary buildings. Every respectable family burns its dead; low castes are not allowed to do so, but bury them with the head towards the west. Immediately after a decease, the relations, with their hair dishevelled, and bogging their breasts, cry and embrace each other, giving utterance to lamentations of a highly poetical nature. (See *Journal of Asiatic Society*, li. 68, 64.) So great a misfortune it is considered to die unmarried in this manner, that a common exhortation is, "When I die, pay me due honour." The common language of the Singalese is a dialect of the Sanscrit; the sacred language, like that of the Birmans, is the Pali. (Davy, pp. 236-239; *Modern Travellers*, x. 304-344.)

Antiquities and History.—The proper name of this island is Singala; but there is considerable uncertainty whence the people originated who gave it that name, and who are those called Singalese. They have a tradition that their ancestors came thither from the eastward nearly 2,400 years ago; some modern authors think, on the other hand, that they were a colony of *Singhs*, or Rajpoots, who arrived here about 500 years a.c. Toljaya (perhaps of the royal house of *Sakya Singh*, of Magadha, the native country of Buddha, but evidently the same as the Sanscrit Vijaya) is the first king of Ceylon mentioned in history, and is said to have found the island uncultivated, and inhabited only by demons; the same circumstance is handed down respecting Buddha. It is very doubtful whether the latter individual ever visited Ceylon; the demons subdued by him, or rather his disciples, were in all likelihood the Veddahs, who were driven to the recesses of the interior. From the ruins of cities, tanks, aqueducts, extensive canals, bridges, temples, &c., at Mantotte, Trincomalee, and elsewhere, on the E. coast, along the course of the Mahavilly Ganga, at Anorajapoorra (the ancient Singalese capital), and other places, Ceylon had evidently been at a remote period a rich, populous, and comparatively civilised country. In the 6th century it was the chief mart for easterly commerce. In 1505 the Portuguese formed settlements on the W. and S. coasts, and received a tribute of cinnamon from the king of Candy, on condition of defending Ceylon against the Arabian pirates. They, as well as the Dutch who expelled them, after a long and sanguinary struggle in the next century, and the English, who superseded the latter, became, soon after the conquest of their first enemies, involved in hostilities with their native allies. In 1818 the Candyans entreated the interference of the British, to drive a fraudulent sovereign from the throne, an object soon effected; and Candy, since, has been a part of the British dominions. A harassing rebellion broke out there in 1817, which was not quelled till 1819, since then uninterrupted tranquillity has prevailed throughout the island. (Davy, pp. 132-239; *Hamilton's E. I. Gaz.* i. 387; *Mod. Trav.* vol. x.)

CHABLIS, a town of France, d'ep. Yonne, cap. cant., on the Serey, 10 m. E. Auxerre. Pop. 2,456. It is principally distinguished by its excellent white wines, which the French epicures take with oysters. According to Julien, they are *spiritueux, sans être trop fuméux; ou du corps, de la finesse, et un parfum très-agréable*. (*Touragraphe de l'ignobles*, p. 101.)

CHALBAR, or KHEIBAR, a town of Arabia, in El-Hedjaz. Lat. 25° N., long. 39° 30' E., 152 m. N.E. Medina. Pop. said to be 50,000. It is the cap. of, and gives name to, an independent sovereignty of *Jews*, the descendants, according to their own assertion, of the Trans-Jordanic Tribes, Reuben, Gad, and Manassah. They have a character for bravery and learning; but the term Beni-Chalbar is so odious among Mohammedans that its application is regarded as an insult. In manner and appearance the Jews of Chalbar do not differ from other Arabs: their state has existed upwards of 1,500 years; and though the town was captured by Mohammed in the 7th Hejra, A. D. 638, it still remains flourishing and powerful.* It was here that Mohammed received from a Jewess a poisoned egg, professing to test his prophetic powers, which laid the seeds of the disorder under which he finally sank, about 4 years afterwards. (*Bcn. Tude*, 42; *Abul-Frd. Descrip. Arab.*, 75; *Vit. Mah.*, 87, 92; *Nicbuhr, Descrip. de l'Arab.*, 326.)

CHALMAÏT, or KHAÏMAR, a city of Arabia, Djebel Yemen, within the territory of HACHID-UB-SERET, but subject to the Imam of Yemen Proper. Lat. 16° 17' N., long. 49° 52' E. Pop. 10,000? It was a city of great and strongly fortified; but the inhab. are rebellious, and it is only by means of strong garrisons and continual care, that the Imam is enabled to maintain his authority. (*Nicbuhr, Descrip. de l'Arab.*, 221.)

CHALICUT, a town of Tigré in Abyssinia, in a fine valley, 100 m. S.E. Axum; lat. 13° 20' N., long. 40° 40' E. Pop. 8,000? It is now the ordinary residence of the sovereign. The palace of the prince, and the church, said to be the finest in Abyssinia, are its principal buildings.

CHALONS-SUR-MARNE, or CHAALONS, a city of France, cap. dep. Marne, on the Marne, in the middle of extensive meadows, 27 m. S.E. Rheims; lat. 48° 57' 11" N., long. 4° 22' E. Pop. ex com., 12,930. The Marne formerly traversed the town, but since 1788 it has skirted it, in a new channel dug for the purpose, and crossed by a magnificent stone bridge. Two small affluents of the Marne run through the town. It is surrounded by old walls in pretty good preservation. With the exception of that which leads from the bridge to the Hôtel de Ville the streets are narrow and crooked; houses

* Burckhardt, who did not visit this district, believes that the Jewish colony has disappeared; but he acknowledges that the common opinion at Mecca and Djidda is opposed to this belief. (*Trav. Arab.* ii. 407.)

generally mean, not a few being of wood. The cathedral, consecrated in 1147, and rebuilt in 1673, is a large fabric, partly of Greek and partly of Gothic architecture. The Hôtel de Ville and the Hôtel de Préfecture are both fine buildings: the Porte St. Croix has a good effect, and there is a splendid promenade, called the *Jard.* It is the seat of a bishopric, and has a court of primary jurisdiction, a commercial tribunal, a departmental college, a primary normal school, a diocesan seminary, a school of practical geometry, design, &c., a botanical garden, a society of agriculture, commerce, &c., and a public library, with 20,000 vols. But the most important establishment belonging to the town is the royal school of arts and trades, at which 450 pupils are maintained, at the expense of government, exclusive of those who pay. It has also a theatre, manège, &c. Different branches of the woolen, linen, and cotton manufactures, are carried on in the town; there are also extensive tanneries, and a good deal of trade is carried on with Paris, &c., in wine, corn, wool, hemp, rape-oil, &c. La Caille, the astronomer, and D'Alancourt, the translator, were natives of Chalons.

This is a very ancient town: it has been repeatedly taken and pillaged, and was once much more considerable than at present. Attila was defeated under its walls in 451. In 1591 and 1592 it bled the bulls of Pope Gregory XIV. and Clement VIII. against Henry IV. In 1814 it was for a while the central point of the operations of Napoleon. (*Hugo, art. Marne.*)

CHALONS-SUR-SAONE, or CHALLON, a town of France, dép. Saône-et-Loire, cap. arrond., in a fertile plain, on the right bank of the Saône, which here forms an island, in which is situated the suburb St. Laurent, 34 m. N. Mâcon; lat. 46° 40' 53" N., long. 4° 51' 8" E. Pop., ex cant., 12,400. It is pretty well built, but the streets are narrow, dirty, and ill paved: it has a fine quay on the Saône, and is connected with its suburb by a stone bridge of five arches. There is a cathedral, and a hôtel de ville; but the objects most worthy of attention are the Hospice St. Laurent, in the suburb of that name, and the Hôpital St. Louis, both large establishments, and exceedingly well managed. The latter is an asylum for indigent old persons and orphans. There are some fine promenades, one of which, at the head of the Canal du Centre, is ornamented with an obelisk, in honour of Napoleon. The bishopric has been suppressed; but it has a court of primary jurisdiction, a tribunal of commerce, a dep. college, a school of design, a public library with 10,000 volumes, a theatre, &c.

Challon is very favourably situated for a commercial entrepôt, communicating with the Mediterranean by the Rhône and Saône, and the canals connected with them, and with the North Sea by the canal of the centre, constructed in 1792. It is also crossed by several great roads.

It is very ancient, and was for some time the capital of the kingdom of Burgundy. It suffered severely during the civil wars of the 16th century, and not a little from the invasion of the althes in 1814. It was formerly very unhealthy; but in this respect it has been materially improved, by the better drainage of the surrounding country, and the greater attention paid to cleanliness in the town, though in both these respects it might still be very considerably improved. The famous Abelard died here in 1142. (*Hugo, art. Saône-et-Loire.*)

CHAMAS (ST.), a town of France, dép. Bouches-du-Rhône, on the N. bank of the lagoon de Berre, 23 m. N.W. Marseilles. Pop. 2,433. It is well built, has a handsome church, and is celebrated for its oils and olives, which it ships from its port on the lagoon. It is divided into two portions by a hill, through which a large tunnel has been cut for a channel of communication. It has an important powder magazine, which supplies Toulon and the fortresses dependent upon it. In the vicinity is a Roman bridge, of a single arch, bearing a triumphal arch at each extremity. (*Hugo, art. Bouches-du-Rhône; Dict. Géog.*)

CHAMBERTIN, a famous vineyard of France, dép. Côte d'Or, a few miles N.E. Beaune. It occupies about 25 hectares, and produces at an average from 130 to 150 pipes of burgundy,—"qui joint à une belle couleur beaucoup de sève et de moelleux, de la finesse, un goût parfait, et le bouquet le plus suave." (*Jullien, p. 106.*) Chamberтин is the favourite wine of Louis XIV. and of Napoleon.

CHAMBERY, a city of Savoy, of which it is the cap., on the left bank of the Arve, in an elevated and fertile valley, 110 m. W. N. W. Turin, and 43 m. S. S. W. Geneva; lat. 45° 34' N., long. 4° 49' E. Pop. 13,000. This city presents little worthy of notice; it has one good street, but most of the others are crooked, dark, and sombre. There are several squares adorned with fountains; and most of the houses are three stories in height. Chief public buildings, the cathedral, the Hôtel Dieu, principal hospital, the barracks constructed by the French, and the manufactory of silk-gauzes, for which Chambery has long been celebrated. The palace is an old castle, in no way remarkable. The churches

exhibit gaudy decorations; in one, however, there is some good painted glass. The city was formerly fortified; but the walls have been removed, and the space they occupied is laid out as public walks.

Chambery is the seat of the superior judicial tribunal, and the military governor of the duchy, of an archbishopric, a royal Jesuits' college, the academy of Savoy, &c. It has societies of agriculture and commerce, a public library, theatre, public baths, and many charitable institutions. Besides gauze, other silk fabrics, lace, hats, leather, soap, &c. are manufactured; and there is some trade in liquors, wines, lead, copper, and various other articles. The environs abound in vineyards, woods, and picturesque scenery. Near Chambery is the country house of Les Charmettes, once the residence of Mad. de Warens and Rousseau. This city is supposed to stand near, though not upon, the site of the ancient *Lemuncum*. It was taken by the French in 1792, who made it the cap. of the dép. of Mont-Blanc, and retained it till the second treaty of Paris, in November, 1815. (*Dict. Géographique; Simond; Bakewell, &c.*)

CHAMBORD, a village and royal castle of France, dép. Loir-et-Cher, on the Cosson, 10 m. E. Blois. The village is inconsiderable, and the place derives its entire importance from its castle, one of the most magnificent and best preserved in France. This noble edifice was commenced by Francis I., after his return from Spain. He is said to have employed 1,800 workmen for 13 years upon it; and here, in 1540, he entertained his illustrious rival Charles V. The building was still further enlarged by Henry II., and finished by Louis XIV., who frequently inhaled it during the early part of his reign. The *Bourgeois Gentilhomme* of Molière was acted, for the first time, at a fête given here by Louis, in October, 1670. Stanislaus Leszczyński, king of Poland, occupied this castle for nine years previously to his being put in possession of the duchy of Lorraine. In 1748 it was assigned by Louis XV. to Marshal Saxe, who spent by it the evening of his days in almost regal splendour. After many vicissitudes, it was given by Napoleon to Marshal Berthier; and having been sold by his widow, in 1820, it was bought by subscription for the Duc de Bordeaux, to whom its possession has since been confirmed by a decision of the courts.

The castle is buried in deep woods, and its situation is rather low and damp. It is of vast extent, in the Gothic style, and has a profusion of towers, turrets, and minarets. Being built of black stone, it has a heavy appearance. The interior is very magnificent. The grand staircase so contrived that persons ascending and descending do not see each other; it has two fine chapels, and many spacious apartments and splendid ceilings. Its gorgeous furniture was sold by auction during the Revolution; and the beautiful tapestry that adorned the apartments of Francis I., Louis XIV., and Marshal Saxe, was burned, as the surest way of getting at the gold and silver with which it was embroidered; but, luckily, the castle itself was not injured. The park is of great extent, comprising above 12,000 arpents. (There is an excellent account of this castle in *Hugo, art. Loir-et-Cher*; see also *Englis's Switzerland, &c. p. 361.*)

CHAMOND (ST.), a town of France, dép. Loire, the capital in a fine valley at the confluence of the Glèze and the Han, 8 m. N.E. St. Etienne. Pop. 9,000. It is a thriving, industrious town, is well built, has a handsome promenade, a departmental college, a fine parish church, and public baths. On a hill above the town are the ruins of the ancient castle, destroyed during the Revolution. The manufacture of ribbons, *laccets* (laces), &c., is very extensively carried on. In 1807 there were only, here and at St. Etienne, 3 frames for making laces; whereas there were, in 1832, 2,200 frames! It has, also considerable cast-iron and nail-works. (*Hugo, art. Loire.*)

CHAMOUNY, or CHAMOUNIX, a celebrated valley of Savoy, prov. Faucigny, immediately N.W. of Mont Blanc, by which, and others of the Pennine Alps, it is bounded on its S. and E. sides, and on the W. and N. by Mont Breven and the *Aiguilles Rouges*. Its length, N.E. to S.W., according to Mr. Bakewell, is about 13 m., and its breadth at the bottom in most parts exceeds a mile; but including the mountain slopes and sides, it is as much as 9 m. in breadth, and may be reckoned 23 m. in length, from its head at the Col-de-Balmé to its outlet at the torrent of the Doira, near Serron. The average height of this valley above the sea is about 2,400 ft.: the Arve rises at its upper end, and intersects it in its entire length, escaping into the valley of Servoz through a ridge of granitic rock. "The pines and larches which clothe the lower parts of the mountains give a sombre appearance to the W. end of the valley; and this effect is increased by the unvaried snows of Mont Blanc, which hang over it. But after passing the priory of Chamounix, the scene changes, and to this dreary magnificence succeeds a series of majestic pyramids, called *Aiguilles*, or needles, of astonishing height, and too steep to admit of the snows resting on them at any season. The valley, which becomes nar-

lower, is richly ornamented with trees; and the Arve, rushing between finely-clothed rocks and precipices, adds life and beauty to the scene. The little village of Argentiere, with its church and glittering spire, and the two *Aiguilles* above it, together with the cheerful appearance of cultivation, form a landscape sublimely picturesque." (*Isaly*, by J. Coudrey.) The average height of the mountain-range on the S. side of Chamounix is about 5,000 ft.; but the principal *Aiguilles* on this side, viz. those of Charmos; the A. Verte, de Drû, d'Argentiere, de la Tour, &c., rise from 11,000 to 13,000 ft. above the level of the sea. Between these *Aiguilles* are situated the numerous glaciers which constitute the chief interest of the valley, to the very bottom of which they descend. "Nowhere else in the Alps are the glaciers of equal magnitude: those in the Bernese Oberland are not to be compared with them." "Could we," says Mr. Bakewell, "suppose a torrent, nearly a mile in breadth and several hundred feet in depth, to be descending down the side of a mountain, rolling waves over each other more than 50 ft. in height, and the whole to be instantly consolidated and split into angular fragments on the surface, we might have a tolerably correct notion of a glacier."

These mountains of ice are formed by the consolidation of the snow lodged in the high Alpine valleys. As the surface of the snow thaws and percolates through the mass, it is again frozen, and acts as a cement; and by a repetition of this process, the whole mass is converted into solid ice; not so compact, however, as that of rivers or lakes; for it is full of air-bubbles, owing to the mode of its formation. Entering the valley from the S.W., the first glaciers met with are those of Tacouay and de Boissons, succeeding which are the more considerable ones of Montanvert, de Bois, d'Argentiere, de la Tour, &c. The glacier de Bois, at the foot of the *Aiguille du Drû*, and about $\frac{1}{2}$ league E. of the village of Chamounix, is the largest of all: it is upwards of 7 m. in length, and in some places more than a mile broad; it is, in fact, the terminus of the Mer de Glace. (See MONT BLANC.) Near its foot, the Arveiron, a tributary of the Arve has its source in an ice-cavern, which varies in size at different periods of the year; but is sometimes as much as 100 ft. in height. On the W. side of the valley, Mont Breven and the *Aiguilles Rouges* (so called from their reddish colour) form an unbroken ridge, but of a much less elevation than that on the opposite side of Chamounix. Mont Breven, however, 8,500 ft. above the level of the sea, "offers the finest view of the whole mass of Mont Blanc, of all the numerous sites whence it can be seen." (*Murray's Hand-book*.) The Col-de-Balmé, at the N. E. end of the valley, and 3,000 ft. above it, affords also a full and magnificent view of the gigantic group. Across this mountain one of the roads from Chamounix into the Valais passes. The climate is rigorous: the winter in the valley of Chamounix lasts from October to May, during which season the snow usually lies to the depth of 3 ft., while at the village of Tour, the highest in the valley, it often attains the depth of 12 or 13 ft. In summer, the thermometer at noon commonly stands no higher than from 57° to 63° ; it rarely reaches 68° Fahr. Barley and other kinds of corn, pulses, hemp, and some fruits, are grown, and a good many cattle are reared. The honey of Chamounix is of a very fine quality. The total pop. of the valley in 1828 was estimated at 2,700. There are several small villages: that of Prieure, or Chamounix, *par excellence*, on the right bank of the Arve, towards the centre of the valley, has a pop. of about 1,700, several good inns, and "displays almost the bustle of an English watering-place in the most retired, heretofore, of the Alpine valleys." (*Murray*.) It originated in a Benedictine convent, founded here at the end of the 11th century by Count Aymon of Geneva. The other chief villages are Onches, Argentiere, Le Boissons, and Tour. (*Edel*, *Mamel du Voyageur*; *Bakewell*; *Calendario Sarav*; *Murray's Hand-book*.)

CHAMPAGNE, a province of France, in the E. part of the E. adjacent to Franche-Comté and the Lorraine, now distributed among the depts. of the Ardennes, Marne, Haute Maine, Aube, Gonne, and Seine-et-Marne. Champagne is also the name of several small towns in different parts of France.

CHAMPLAIN (LAKE OF), a long and narrow lake, principally in the U. States of N. America, between New York and Vermont, and having its N. extremity in Lower Canada. This lake occupies a considerable part of what has been called the Great Glen of N. America; that is, the remarkable hollow or chasm, stretching N. from New York to the St. Lawrence, a distance of about 300 m. The glen is occupied from New York to Glen's Falls, 190 m., by the Hudson; thence for 21 or 22 m. to Lake Champlain, by a table-land which, in its highest part, is only 140 ft. above the level of the tides in the Hudson. The lake extends N. and S. 110 m., with a breadth varying from $\frac{1}{2}$ to 14 m.; but it is, in general, very narrow: the distance, 67 or 70 m. from the lake to the St. Lawrence, is traversed by the river Richelieu, or Chambly, the outlet of the lake, which is partly navigable

by vessels of 150 tons, and throughout by river barges. A canal has been constructed uniting Lake Champlain and the navigable portion of the Hudson; so that there is now a direct inland navigation, which, by a little outlay on the Richelieu, might be made suitable for steamers from New York to the St. Lawrence, between Montreal and Quebec. (*Darby*; *Gordon's Geo. of New York*, &c.)

CHAMPON, or CHOOMPHOON, an incl. town of Lower Siam, on the road between Ligor and Bangkok, on the E. bank of a river about 7 m. W. the Gulph of Siam; lat. $10^{\circ} 51' N.$, long. $99^{\circ} 23' E.$ Pop. 8,000. ? In 1836, it was stockaded, and considered by the Siamese an important military post. Tin, good timber for ship-building, and excellent rattans, are found in its vicinity. (*Crawford's Mission to Siam*, &c., p. 443.)

CHANDA, an incl. town of Hindostan, prov. Gundwanah, cap. dist. of same name, between two small rivers, 62 m. S. Nagpore; lat. $20^{\circ} 4' N.$, long. $79^{\circ} 22' E.$ Its walls are 6 m. in circuit, and from 15 to 20 ft. in height, built of freestone well cemented, and flanked by round towers. Its interior consists of straggling streets, detached houses, gardens, and plantations. In 1803 it contained 5,000 houses; in 1822 only 2,800. In its centre there is a fort called Bala Killa. Chanda was taken by the British in 1818, when it was found to contain a good deal of treasure and valuable property, brought thither for security. (*Hamilton's E. I. Gaz.* 1. 390, 391.)

CHANDERNAGORE, a marit. town of Hindostan, prov. Bengal, belonging to the French, built on the W. bank of the Hooghly river, 16 m. N.W. Calcutta, and in point of situation, in every respect superior to that city; lat. $23^{\circ} 49' N.$, long. $88^{\circ} 28' E.$ In 1814 it had a pop. of 41,000, and its revenue amounted to 32,150 rupees a year. Since that period, however, both have probably diminished considerably; for the author of "Sketches in India," speaking of this place, says, "large lofty houses and warehouses, discoloured, decaying, and half empty, speak of lofty speculations and disappointed hopes. A forsaken monastery completes the picture." The streets are straight and well-paved, but now present nothing but a scene of solitude and desertion; and the trade, formerly so flourishing, has been reduced to a mere nothing. "I saw," says Bishop Heber, "no boats loading or unloading at the quay, no porters with burdens in the streets, no carts, no market-people, and, in fact, only a small native bazaar, and a few dismal-looking European shops." There are some manufactures of cotton cloths; the commerce is chiefly in opium. The territory originally attached to this town extended to 2 m. along the river, and 1 m. incl. about 2 m. below Chandernagore are the ruins of a superb house, the country residence of its former governors. The French, in 1676, obtained permission to establish this settlement, which they subsequently appropriated and fortified. In 1757, it was taken by the British, who destroyed the fortifications. It was restored to the French, in 1816. (*Hamilton's E. I. Gaz.*, 1. 391-2; *Mod. Trav.* ix.)

CHANDORE, a considerable incl. town of Hindostan, prov. Candahar, presid. Bombay, 68 m. W.N.W. Aurungabad, lat. $20^{\circ} 19' N.$, long. $74^{\circ} 19' E.$ It has a most formidable position on a rock, commanding one of the best passes on the range of hills on which it is situated, and is quite inaccessible every where but at the gateway where it is strongly fortified. It however surrendered without much resistance to the British arms, both in 1804 and 1818. (*Hamilton's E. I. Gaz.* 1. 392.)

CHANTIBUN, a large incl. town of Siam, cap. of the rich distr. of the same name, at the foot of the mountain chain separating it from Camboja, on the S. bank of a river 18 m. E. the Gulph of Siam, and 150 m. S.E. Bangkok; lat. $12^{\circ} 45' N.$, long. $102^{\circ} 18' E.$ It is a place of considerable trade; its chief export is pepper, to the amount of 30,000 or 40,000 piculs yearly. Cardamoms, rosewood, dye-woods, ship timber, hides, horns, ivory, lac, and benzoin, are products of the Chantibun distr. Near the town are mines of precious stones. (*Crawford's Mission*, 449.)

CHANTILLY, a neat town of France, dep. Oise, on the Nouette, and on the road from Paris to Amiens, 24 m. N. of the former. Pop. 2,416. It has a fine hospital, endowed by the last prince of Condé. This town is distinguished by its industry and manufactures of cotton and porcelain; but it owes all its celebrity to its having been, since 1632, the seat of the family of Condé, and to the vast sums they expended on the formation and embellishment of its castle, park, gardens, &c. The castle was one of the largest and finest structures of the kind in France; the "grand Condé" here lived in regal magnificence; and the entertainments given by him to Louis XIV. were so splendid as to excite the jealousy of the monarch. But the glories of Chantilly have disappeared, and cotton-mills occupy the sites where Racine, Molière, and Boileau, used to recite their *chefs d'œuvre* amid the applauses of all that was beautiful and chivalrous in France.

The *Grand Chateau*, rebuilt in 1779, was destroyed during the Revolution, and all that now remains is the

Petit Château, the Château D'Enghien, and the stables : the latter constructed between 1719 and 1738, are unequalled in Europe. The remains of the Admiral de Coligny, butchered at the massacre of St. Bartholomew, are interred in the parish church of Chantilly.

The forest of Chantilly occupies a space of about 3,800 hectares. (*Hugo, art. Oise, &c.*)

CHAPEL-EN-LE-FRITH, a market town and par., England, co. Derby, hund. High Peak, on the declivity of a hill rising from an extensive and fertile vale, surrounded by lofty eminences, 11 m. N.W. by W. Derby, 167 m. N.W. by N. London. Pop. (1831) 3,220. The town is not lighted, and only partially paved. There is one cotton mill, employing about 120 hands, and many of the lower classes are employed in weaving for the Manchester houses. At White Hall Mill is a considerable manufactory of paper. There is a brewery in the town, and nails are also made. Here is an establishment for warehousing goods, the place being a medium of communication between Manchester and Sheffield, and having in consequence a large carrying trade. The town is one of the polling places for the election of mems. for the N. div. of the co. Besides the par. church, a neat edifice with a square tower, there is a chapel for Wesleyan Methodists. There is also an endowed school at Chapel-en-le-Frith, and another at Bowden's Edge. A library has been recently established. Lead and coal mines and quarries are worked in the vicinity. The Peak Forest limo-works lie 3 m. E. of this town, and communicate by railway with the Peak Forest canal. The par. includes the townships of Bowden's Edge, Bradshaw's Edge, and Combe's Edge. Market-day, Thurs. Fairs, Feb. 7., Mar. 24. and 29., April 19. and 30., May 31, July 7., Aug. 19., Oct. 13., Nov. 9.

CHARD, a town and bor. of England, co. Somerset, hund. Kingsbury East, in an elevated situation, near the S. border of the co., 11 m. N. Lyme Regis. The old municipal bor., which is a parish of itself, comprised an area of 52 acres, and had in 1831 a pop. of 2,511; but the area of the new municipal bor. has been increased so as to raise its pop. in 1831, to about 3,000, mostly dependent on the manufacture of lace; to the extension of which the increase of the pop. between 1821 and 1831 is ascribed. It has an old town-hall, an extensive market-place, a church with a tower and bells, a well-endowed hospital for the maintenance of old and infirm persons belonging to the parish, and is well supplied with water. Fairs, 1st Wednesday in May, August, and November. Market-day, Monday. Chard was made a bor. by Edward I., and elected mems. to 9 parliaments, when it lost the privilege.

CHARENTE, an inland dep. of France, distr. of W., formed principally out of the ancient prov. of Angoumois; it takes its name from the Charente, by which it is traversed; and has N. the Deux Sèvres and Vienne, E. Haute Vienne, S. Dordogne, and W. the Charente Inférieure. Area 603,250 hectares. Pop. 365,126. Surface diversified by a great number of little hills. Soil various, being mostly thin, *etc. et brûlant*, or clayey and encumbered with moisture; the latter prevails in the arrond. of Confolens, where there are no fewer than 52 shallow lakes, *lacs d'ange*, some of the of considerable extent; there is also in the latter arrond., and in that of Barbezieux, a large extent of heath and waste land. Principal crop crops, wheat, maalin (a mixture of wheat and rye), maize and millet, rye, barley, and oats; but, owing to the inferiority of the soil, the returns are among the poorest in France, and the produce is insufficient for the consumption. The principal wealth of the dep. consists in its vineyards, which cover about 100,000 hectares. Their produce is mostly converted into *cognac*, the superiority of that made at Cognac being universally acknowledged. Hemp, flax, and potatoes, are extensively cultivated. The woods cover above 74,000 hectares; and the produce of chestnuts, in 1835, was reckoned at 158,000 hectolitres. Truffles are abundant, the value of those sold being estimated at about 300,000 fr. a year. There are, comparatively, few horses; but cattle, sheep, and hogs, are abundant; wolves, foxes, otters, &c., are pretty common, but wild boars have become rare. The minerals are anthony, lead, iron, gypsum, &c.; the last two being wrought to a considerable extent. Besides the iron-works, there are very extensive distilleries, with paper-works (*see ANGOULEME*), tanneries, and manufactures of linen, canvas, cordage, cloth, hats, earthenware, &c.; but, according to Hugo, *l'industrie y est complètement stagnante*. The dep. returns 5 mems. to the Chamber of Deputies, and has about 2,600 electors. Public revenue, in 1831, 7,106,389 fr. Principal towns Angoulême, Cognac, Ruffec, Confolens, &c.

CHARENTE INFÉRIEURE, a maritime dep. of France, on the W. coast, deriving, like the foregoing, its name from the Charente, by which it is intersected; having N. Vendée, N.E. Deux Sèvres, E. Charente, S. the Gironde, and W. the Atlantic Ocean. Area, including that of the islands of Oléron, Ré, and Aix,

654,685 hectares. Pop. 449,649. Surface flat, and in part marshy; soil partly light, calcareous, and gravelly, and partly heavy and clayey. Principal crops, wheat, maalin, rye, barley, maize and millet, and oats. The rotation is, 1st year wheat; 2d rye, or some other grain; during the 3d year the ground remains untilled, serving as a kind of pasture for sheep; in the 4th year the old routine recommences. Rent of arable and pasture land varies from 8s. to 36s. an acre. About half the dep. is cultivated by proprietors, who possess from 50 to 100 and 180 acres; the other half is occupied by farmers, whose farms may vary from 300 to 700 acres, and who are said to be prosperous. About 112,000 hectares are occupied by vineyards, whose product, like those of the Charente, is mostly converted into *cognac*. The forests cover above 70,000 hectares. Pastures extensive and excellent, furnishing food for a great number of cattle, excellent horses, and sheep. Minerals not of much importance; but there are in the dep. very extensive salt marshes, particularly in the neighbourhood of Marennes, which furnish large quantities of salt. In summer, the marshes are unhealthy, but otherwise the climate is mild and salubrious. This dep. has great facilities for commerce. It has several deep bays and excellent ports, and, exclusive of the Charente, which has Rochefort near its mouth, it is watered by the navigable rivers Seudre and Sèvre, from the latter of which there is a canal to La Rochelle, and is skirted on the S. by the Gironde. The fishery of sardines, oysters, &c., is extensively carried on, and vessels are also fitted out for the cod fishery. La Rochelle, Rochefort, and the other ports, have also a considerable share of the colonial and coasting trade of France. With the exception of the salt manufacture and distillation, manufacturing industry is not prosecuted on a large scale; but coarse woollen stuffs, soap, fine earthenware, glass, &c., are produced; and there are also tanneries and sugar refineries. The dep. is divided into 6 arrond., returning 6 mems. to the Chamber of Dep.; and has 2,900 electors. Principal towns, La Rochelle, Rochefort, Saintes, and St. Jean d'Angély. (*Official Tables published by French government; Hugo, arts. Charente and Charente Inférieure; Parl. Paper, No. 84., sess. 1836.*)

CHARENTON-LE-PONT, a town of France, dép. Seine, cap. cant., agreeably situated on the Marne, near its confluence with the Seine, 4 m. S.E. Paris. Pop. 2,578. It has several country houses, among which is the one occupied by the famous Gabrielle d'Estrees. The Marne is here crossed by a bridge, the possession of which has always been regarded as of material importance to the defence or attack of Paris; and it has frequently been the scene of obstinate conflicts, the last of which took place in 1814, when it was forced by the allies. It unites the town with the village of Charenton-St.-Maurice. There is here an excellent lunatic asylum, founded in 1741, and capable of accommodating 400 patients. The Protestants had formerly a large church in this village, in which synods were held in 1623, 1631, and 1644; but it was demolished in 1658, after the revocation of the edict of Nantes. (*Hugo, art. Seine, &c.*)

CHATEAU' (LA), a town of France, dép. Nièvre, cap. cant., at the foot of a hill planted with vines, on the right bank of the Loire, over which it has a fine bridge. Pop. 4,947. It was formerly fortified, and much more considerable than at present; it is very indifferently built, but is celebrated for its manufactures of coarse jewellery, buttons, glass, earthenware, woollen stuffs, &c.

CHARKOFF. *See KHARKOFF.*

CHARLEROY, or CHARLEROI, a fortified and important manufacturing town of the prov. of Hainault, in Belgium, on the navigable river Sambre, 33 m. S. of Brussels, lat. 50° 23' N., long. 4° 25' E. It is built on the side of a steep hill, and contains a pop. of nearly 7,000, who are occupied, chiefly in working the extensive coal mines of the district, and in numerous iron foundries and glass works. The town is in the centre of the great coal-basin of Charleroy, and in 1836 it had 73 mines in active operation, producing annually about 900,000 tons of coal, the half being of good quality, a third middling, and the remaining sixth part inferior, called *houille maigre*. At the same period there were 12 furnaces for smelting iron, and 29 new ones in the course of construction; from the whole of which it was estimated that 100,000 tons of iron would be annually produced, and employment be given to 3,000 workmen. During the winter about 4,000 men are employed in manufacturing nails; but these artisans are not all settled inhab. of the town. In summer the greater portion remove to Brussels and elsewhere to make bricks. Adjacent quarries of slate and marble are also important sources of industry and wealth; and the neighbourhood contains numerous mills for sawing marbles. The manufactures of glass comprise all kinds of vessels and sheet glass, of various qualities; and the iron works include the manufacture of fire-arms, cutlery, tools, and utensils. There are, besides these principal establishments, several fac-

tories for spinning wool and weaving woollen cloths; dye-houses, tanneries, snuff mills, rope walks, soap-houses, salt and sugar refineries, breweries, distilleries, brickyards, &c. The communication with Brussels by means of the Charleroy canal, affords great facilities for commerce. Between 200 and 300 capacious barges are constantly employed in exporting from Charleroy to Brussels coal, iron, slates, glass, soap, &c., and importing various native and foreign productions. This canal is further described in the article on *BRUSSELS*. The railroad from Charleroy to Brussels is not yet completed. A large fair for cattle and merchandise is held during 10 days, commencing on the 5th of Aug.

The fortress of Charleroy was built in 1686, by Rodrigo, Spanish gov. of the Netherlands, and named after Charles II. king of Spain. The lower and middle town were added by Louis XIV. in 1676. Charleroy has sustained several memorable sieges; and by various treaties has been transferred from Spain to France, from France to Spain, from Spain to Austria, and from Austria to France. The fortifications were materially improved under the direction of the Duke of Wellington, after the campaign of 1815. The traveller, when at Charleroy, should visit the ruins of the magnificent abbey of Aîne, in a beautifully romantic solitude, about 9 m. from the town. The cloisters of this superb establishment were supported by 300 columns, of coloured marble, and its revenue amounted to 250,000*l.* (*Vander Maeten's Geog. de Haïnaut; Guide Books to Belgium, &c.*)

CHARLESTON, a city and sea-port of the U. States, one of the principal in the S. part of the Union, and the largest town of S. Carolina, on a low point of land at the confluence of the Cooper and Ashley rivers, 6 m. W. by N. the nearest point of the Atlantic, 118 m. N.E. Savannah, and 590 m. S.S.W. Baltimore: lat. 32° 46' N., long. 79° 49' W. Pop. in 1830, including the suburbs, 40,300. Charleston was, till 1787, the seat of the state government. This city was visited, on the 27th of April, 1838, by a most destructive fire, which raged with great fury in its most populous part, destroying several streets and an immense amount of property. Previously to this disaster, the streets, which were rather narrow, crossed each other at right angles, and were often planted with pride-of-India trees (*Melia azadirachta*): the houses, were mostly of brick, and generally furnished with verandahs. It is now, however, being rebuilt on a new and much improved plan. It has, or had, a college, town-hall, exchange, custom-house, guard-house, theatre, circus, orphan asylum, hospital, 2 markets, 2 arsenals, and numerous churches. The college, established in 1783, was reorganised in 1824: it possesses a commodious edifice, with a library and philosophical apparatus. There are two medical schools and various learned and charitable societies. The harbour is large and convenient, but rather difficult of access, in consequence of its entrance being obstructed by a range of sand-banks. Through these there are but two channels suitable for ships of large burden. In the principal or S. channel the depth of water in the shallowest part, 8 m. S.E. from the town, at ebb tide, is only about 12 ft., and at flood tide from 17 to 18 ft. A light-house, 80 ft. high, with a revolving light, has been erected on a small island bearing 24 m. N.W. from the bar, at the entrance to the S. channel. After crossing the bar, there is deep water up to the city, where vessels lie moored alongside wharfs or quays. Charleston is a place of very extensive trade; it being the port whence more than 3-4ths of the whole foreign trade of S. Carolina is carried on. Its exports consist chiefly of cotton and rice; the exports of the former in 1836-37 amounted to very near 200,000 bales, or 1-7th part of the entire crop of cotton raised in the Union that year, of which 166,000 bales were for foreign parts, principally Great Britain, and the rest for the coastwise. Naval stores, hams, bacon, &c. are also exported. Most of the imports are from the N. and middle states, and consist of wheat and flour, fish, shoes, all kinds of coarse manufactured goods, for the use of the slaves, &c. The foreign imports are mostly brought at second hand from New York, and consist of cottons, woollens, linens, hardware, iron, and steel, coffee, sugar, tea, wine, spices, &c. A railway has been already opened connecting Charleston with Hamburg, opposite Augusta, on the Savannah; and one is in progress intended to form a communication with Cincinnati, which, if completed, will be above 500 m. in length. Several newspapers are published in the city, and it has numerous banks and insurance offices. On the 30th of September, 1838, there belonged to Charleston 24,822 tons of shipping, of which 13,817 tons were employed in the coasting trade. Like most other cities in the S. part of the U. States, Charleston has a large slave pop., and the slaves have been, and continue to be, treated with a severity revolting to those who live in countries free from this moral contamination. The yellow fever occasionally commits great ravages here; but it is more fatal to foreigners than to the native pop. The fever is

supposed to be owing, in a considerable degree, to the marshy nature of the soil on which a part of the town has been built; but the swampy ravines by which it was formerly intersected have been gradually filled up and drained, and the city has, in consequence, become much more healthy. The town is badly supplied with water, having mostly to depend on the rain-water collected in cisterns. Charleston was founded in 1680, and was the seat of government till the building of Columbia, in 1787. (*Mull's S. Carolina; American Encycl. and Official Returns.*)

CHARLESTON, a town of the isl. of Nevils, which see.

CHARLEVILLE, an tnl. town of Ireland, prov. Munster, N. extremity co. Cork, 32 m. S. Limerick. Pop., in 1831, 4,766. Pop. of par. in 1834, 6,022, of whom 325 were of the estab. church, and 5,697 R. Cath. The town consists of four main streets crossing each other at right angles. In it are the par. church, a large R. Cath. chapel, a building for public meetings, a national school, and an endowed grammar school. The corporation, under a charter of Charles II. in 1671, consists of a sovereign, two bailiffs, twelve burgesses, and an indefinite commonalty. It returned 2 m.p.s. to the Irish H. of C. till the Union, when it was disfranchised. A mayor court has jurisdiction in pleas to the amount of 200*l.*, and as a civil bill court. Petty sessions are held on alternate Wednesdays. The corn and market-houses are in the same building. Tanning and blanket making are carried on to some extent, and there are two large flour mills. Markets on Saturdays; fairs on 10th Jan., 16th March, 12th May, 18th Aug., 10th Oct., and 12th Nov. The town is a constabulary station. A branch of the National Bank was opened here in 1835. Post office revenue in 1830, 324*l.*, and in 1836 449*l.* The mail coach from Cork to Limerick, and a car from Cork to Rathkeale, pass through the town, and a coach from Cork to it, conveying, at an average 12 passengers each trip, takes 6 days a week. (*Stat. Surv. Railway Rep.*)

CHARLEVILLE, a town of France, dép. Ardennes, on the Meuse, at a short distance from Metz. Pop. 8,478. It is extremely well built; streets straight and broad, intersecting each other at right angles; houses nearly all of the same height, and slated, having a comfortable, gay appearance. In the centre of the town is a fine square, surrounded by arcades, and ornamented with a superb fountain. The river is crossed by a suspension bridge. It is the seat of a court of primary jurisdiction, and of a commercial tribunal; and has a departmental college, a primary normal school, a secondary ecclesiastical school, a course of geometry and mechanics applied to the arts, a public library, with 24,000 vols., a cabinet of natural history and antiquities, and a theatre. The royal manufactory of arms, formerly established here, has been transferred to Tulle and Châtelleraul, but arms are still largely manufactured on account of individuals. The nail-works produce about 5,000,000 kilogr. of nails a year; and there are, besides, copper forndries, where large quantities of copper-wire, plates, &c. are produced, with soap-works, tanneries, &c. It has a commodious port on the Meuse, and a considerable trade in wine, spirits, coal, iron, slates, marble, and manufactured goods. When the canal of Ardennes is finished, it will have an easy communication with Paris.

The foundations of Charleville were laid in 1655, by Charles of Gonzaga, duke of Mantua Nevers, who gave it his name. Having passed from his heirs to the house of Bourbon, the fortifications were raised, in 1686, by order of Louis XIV. (*Hugo, art. Ardennes.*)

CHARLOTTENBURG, a small town of the Prussian States, prov. Brandenburg, on the left bank of the Spree, 5 m. W. Berlin. It is chiefly made up of villas and taverns, the summer residence of the rich, and the resort of the humbler classes from Berlin; is well built, and has handsome straight streets, ornamented with arcades. There is here a magnificent palace, built by Frederick the Great, and furnished with a collection of antiquities. The gardens, which are finely laid out, are always open to the public, and are much visited by Sunday parties and strollers from the capital. Within these gardens is the mausoleum, erected by his present majesty, Frederick William III., over the remains of his late beautiful and unfortunate queen, Louisa of Mecklenburg. It contains the celebrated recumbent marble statue of Louisa, by Rauch, admitted to be not only the masterpiece of that eminent sculptor, but one of the finest modern works of art. (*Russell's Germany; Murray's Handbook.*)

CHAROLLES, a town of France, dép. Saône-et-Loire, cap. arrond., at the confluence of the Semence, and the Reconc, 23 m. W.N.W. Mâcon. Pop. 3,226. It is agreeably situated, neat, and well built; has a communal college, tribunals of primary jurisdiction and commerce, an agricultural society, iron forges, and fabries of stoneware, and crucibles. A hill above the town is crowned with the picturesque ruins of the old castle of the counts of Charolais. One of these, a prince of the blood royal,

who lived during the reign of Louis XV., achieved an infamous notoriety. (*Hugo, art. Solennel-Loire.*)

CHARTRES, a city of France, *dép. Eure-et-Loire*, of which it is the capital, on the Eure, 48 m. S.W. Paris lat. 48° 29' 54" N., long. 1° 29' 20" E. Pop., ex com. 14,431. It is surrounded by walls and ditches, and is situated partly on a hill, and partly on low ground. The Eure, which here divides into two branches, runs through and encircles the lower town. Streets narrow and crooked; those forming the communication between the upper and lower towns being so very steep as to be inaccessible to carriages. The cathedral is reckoned one of the finest Gothic edifices in France. Here are, also, two fine steeples, a monument to General Marceau, barracks, a theatre, and some fine promenades. It is the seat of a bishopric; has a court of assizes, tribunals of primary jurisdiction and commerce, a departmental college, a public library, with 30,000 vols., a school of design, and a botanical garden. The manufactures consist principally of hosiery and hats, but there are also tanneries, dye works, &c. Chartres is the centre of the corn trade of the *dép.*, its corn-measures being among the most important in France, and providing in a great measure for the supply of Paris. It is the native country of Ittemer the poet, of Brisot, and Petion, members of the convention, and of General Marceau.

This is a very ancient city, being reckoned before the Roman conquest, as the capital of Celtic Gaul. It was for a considerable time in the possession of the English. Henry IV. was crowned here in 1594.

CHARTREUSE (LA GRANDE), a famous monastery of France, *dép. Isère*, 14 m. N. Grenoble, among rugged mountains, at an elevation of 3,281 ft. (1,000 metres) above the level of the sea. The access to it is very difficult. This monastery was founded in 1084; but having been several times pillaged and burnt down, the present building has been erected since 1676. It is of vast extent, and has cost an immense sum. During the Revolution, the monks were driven out, and their property, including their valuable library, confiscated and sold. But in 1826, the building, which had escaped the revolutionary tempest, was restored to its original destination. Some of the old monks, accompanied by several neophytes, returned to the building; and the *chartreuse* existed once more, but short of its old lustre, importance, and wealth. (*Hugo, art. Isère.*)

CHARTREUX. See **SCILLA** and **CHARYBDIS**.

CHATEAUBRIANT, a town of France, *dép. Loire Inférieure*, cap. cant., on the Chère, near the pond or lake of Grand Lieu, 26 m. W.N.W. Ancenis. Pop. 3,634. It is old, and meanly built, round the ruins of the old castle, founded in 1015, whence it derives its name. Francis de Poix, so celebrated for her beauty and gallantries with Francis I., died here in 1587, and was buried in the church of the Trinity, with an effigy on her tomb, written by Clement Marot. It has a court of primary jurisdiction, an agricultural society, and manufactures of coarse woollen stuffs, and its pastry and *confitures* are held in high estimation. It has some trade in iron, coal, and wood, and a considerable corn-market. (*Hugo, art. Loire Inférieure.*)

CHATELICHINON, a town of France, *dép. Nièvre*, cap. arrond., near the Yonne, in the middle of mountains at an elevation of 1,968 ft. (600 metres) above the level of the sea, 20 m. W.N.W. Autun. Pop. 2,775. It was formerly surrounded by fortifications, and was defended by a vast castle, of which there exist considerable ruins. It has a court of primary jurisdiction, an agricultural society, and some fabrics of coarse woollens and linens. Having been taken by the royalists in 1591, after an obstinate resistance, the garrison and the greater part of the inhabitants were put to the sword. (*Hugo, art. Nièvre.*)

CHATEAUDUN, a town of France, *dép. Eure-et-Loir*, cap. arrond., near the left bank of the Loire, 26 m. S.W. Chartres. Pop., ex com., 5,985. Having been almost wholly burnt down in 1723, it has been rebuilt on a regular plan, with broad straight streets, and uniform houses. The principal square, the *Hôtel de Ville*, and the buildings of the communal college, are worthy of notice. Besides the college, it has a court of primary jurisdiction, a public library, with 6,000 vols., and some manufactures of woollens, and tanneries. On a rock, commanding the town, are the remains of the old castle of the counts of Dunois, the chapel attached to which has the tomb of the famous general of Charles VII., and some other tombs of less distinguished members of the family.

CHATEAUGONTIER, a town of France, *dép. Mayenne*, cap. arrond., on the Mayenne, 18 m. S. Laval. Pop. 6,226. It is badly laid out, but is pretty well built; has a stone bridge over the river, by which it is united to its principal suburb, a fine Gothic church, a communal college, 3 hospitals, public baths, an agricultural society, &c. and is the seat of a court of original jurisdiction. It has considerable manufactures of fine linen and linen thread, serges, &c., with extensive bleachfields; is

the entrepôt of a great proportion of the wines, slate, coal, and tiths of the *dép.*; and the centre of the trade in fine thread. The town was formerly surrounded by walls, and had a castle, whence it took its name. It suffered a good deal during the wars of Vendée.

CHATEAULIN, a town of France, *dép. Finistère*, cap. arrond., in an agreeable valley, on the Aulne, which here takes the name of Châteaulin, 22 m. S.E. Brest. Pop. 2,968. It is ill built; has a court of primary jurisdiction, and an agricultural society. Vessels of from 60 to 80 tons come up to the town, which has a good deal of trade in slate, procured from quarries in the neighbourhood, cattle, and butter.

CHATEAUNEUF-DE-RANDON, an inconsiderable town of France, *dép. Lozère*, cap. cant., on a mountain, 12 m. N.E. Mende. It was formerly fortified; and an English garrison was besieged in it, in 1380, by a French force under the famous constable Duguesclin; the constable having died during the course of the siege, the English governor laid on his coffin the keys of the town, which he had engaged to deliver up to him if not relieved within 15 days. A monument was erected here in 1820 to the memory of Duguesclin. (*Hugo, art. Lozère.*)

CHATEAUNEUF-SUR-CHARENTE, a town of France, *dép. Charente*, cap. cant., on the Charente, m. W.S.W. Angoulême. Pop. 2,166. It has a considerable trade in wine, brandy, and salt. It was anciently called Berdeville, and was defended by a castle burnt down in 1081. A new castle having been built to replace the former, the town took from it the name of Châteauneuf.

CHATEAUXOUX, a town of France, *dép. Indre*, of which it is the cap., in an extensive plain on the left bank of the Indre; lat. 46° 48' 43" N., long. 1° 41' 29" E. Pop., ex com., 12,342. Though materially improved, Châteauxoux continues to be one of the worst built, dirtiest towns in France. Streets narrow, crooked, and ill-paved; houses small, irregularly built, and gloomy. It has, however, some finely shaded agreeable promenades, and some good buildings. It is the seat of a court of assizes, of tribunals of primary jurisdiction and commerce; and has a theatre, a public library, a public garden, a society of agriculture, science, arts, and an annual exhibition of the products of the industry of the *dép.* The cloth manufacture is very extensively carried on; cotton hosiery and hats are also produced, and there are establishments for the spinning of wool, with tan-works, tile-works, &c.

Châteauxoux was founded in 950; was burned down in 1088, and rebuilt shortly after. Louis XIII. erected it into a duchy; and it was given by Louis XV. to one of his mistresses, Madame de Mailly, better known by the name of the Duchess de Châteauxoux. Its manufactures have been much extended, and itself much improved, of late years. (*Hugo, art. Indre.*)

CHATEAU-THIERRY, a town of France, *dép. Aisne*, cap. arrond., on the Marne, 26 m. S. Soissons. Pop. 4,761. It is built on the declivity of a hill, the summit of which is surmounted by its ancient castle, a vast mass of thick walls, towers, and turrets. It has a considerable suburb on the left bank of the Marne, the communication between them being kept up by a handsome stone bridge of 3 arches. It has a court of primary jurisdiction, a communal college, an establishment for the spinning of cotton, and tanneries. The famous poet La Fontaine, not less original by his character and conduct than by his talent and genius, was born here on the 8th of July, 1661. The house which he inhabited is still preserved; and a marble statue was erected to his memory on the end of the bridge in 1824. Chateau Thierry suffered considerably during the campaign of 1814. (*Hugo, art. Aisne; Biographie Universelle.*)

CHATELERAULT, a town of France, *dép. Vienne*, cap. arrond., on the Vienne, 20 m. N.N.E. Poitiers. Pop., ex com., 8,390. It is situated in a fertile, agreeable country, but is ill built and dirty. It is joined to its suburb on the opposite side of the river by a stone bridge, built by the Duc de Sully. Besides several churches, it has a communal college, a theatre, an exchange, a hospital, and a royal manufacture of arms, the buildings of which are among the finest in the town; and some fine promenades. This town has been long famous for its cutlery; and has fabrics of clocks and watches, lace, &c. It serves as a kind of entrepôt for the towns of the S. and the N. of France; particularly for wines, spirits, salt, staves, iron, corn, hemp, timber, &c. The Scotch Earl of Ararat, ancestor of the duke of Hamilton, was created Duc de Châteaufort in 1548. (*Hugo, art. Vienne; Skene's Pezage.*)

CHATHAM, a par. town, par. bor., naval arsenal, and sea-port of England, co. Kent, lat. 51° 56' N., long. 1° 10' E. by S. London. Pop. 1821, 15,268; 1831, 16,485. It is separated from the city of Rochester by a merely artificial line; and the latter being connected with Stroud by a bridge, the three towns form a continuous street, upwards of 3 m. long (of which Chatham occupies 1 m.), along the

Dover road from London. For about $\frac{1}{2}$ m. below Rochester, the town extends along the bank of the river, which there bends N.N.E. and E. by N. It falls into the estuary of the Thames at Sheerness. Notwithstanding the shortness of its course, the Medway has very deep water. At Chatham, the tide rises 18 ft. at springs, and 12 ft. at neaps; and from Sheerness to Chatham there is water to float the largest ships; and the ground being soft, and the reaches short, it forms an admirable harbour for men-of-war; and it is to its facilities in this respect that Chatham and the contiguous towns are mainly indebted for their rise.

The principal church, a plain brick structure, was rebuilt in 1788; and a more modern one was erected in 1831, by the parliamentary commissioners. It has also four dissenting chapels, a national school, a proprietary classical school, a philosophical and literary institution, to which a museum is attached, and two public subscription libraries. Here is also a chapel, on the site of one attached to a monastery, founded in 1078, the endowment of which supports four brothers, two of them in orders. Sir J. Hawkins' hospital for decayed seamen and shipwrights, chartered in 1594, supports 120 individuals. There are three or four minor charities. Chatham chest, which originated with Sir F. Drake and Sir J. Hawkins, after the Spanish Armada, and at first consisted of voluntary contributions from seamen, soon became compulsory, and was ultimately removed, in 1803, to Greenwich. Down to the 4th Wm. IV. it was supported by deductions from the monthly wages of seamen, but an act of that session made it chargeable on the consolidated fund. The town was considerably improved under an act passed in 1772, but many parts of it still remain inconveniently narrow and irregular. It is in the jurisdiction of the co. magistrats, with the exception of a small part, comprised within the municipal limits of Rochester: the whole parish is in the jurisdiction of a court of requests, in that city, for debts under \mathcal{L} . The Reform Act conferred on it, for the first time, the privilege of returning one member to the H. of C. The limits of the parliamentary bor. include a considerable area S. and E. of the town; and were estimated, in 1831, to contain a pop. of about 19,000. Number of registered electors in 1837-38, 777. Market-day, Saturday; annual fairs, May 15, September 19, each lasting three days: annual races in August.

The town is almost wholly dependent on the great naval and military establishments at Brompton, in its immediate neighbourhood, but separated from it by a line of fortifications. The dockyard, which lies along the E. side of the river, is, including the arsenal, about 1 m. in length; and is defended by Gillingham Fort, Upnor Castle, and several bastions. Fort Pitt, on the S. or land side of the town, was erected in 1803. The dockyard contains between 400 and 500 houses for the artificers employed in the different works, and is abundantly supplied with every means and accommodation required for the building and fitting out of the largest ships. It has five large tide docks, capable of receiving first rate men-of-war, and six building-slips for vessels of the largest dimensions; a mast-bo'-zg, attached to which are saw-mills worked by steam, and two large floating basins, for the reception of the timber for the masts; a smithery, where anchors of the largest size (some upwards of five tons weight) are forged; a rope-house, where cables above 100 fathoms in length, and 25 inches diameter, are twisted by powerful machinery; a sail-house, and numerous warehouses, containing every article required for the building and equipment of ships of war. Here also is a spare set of Brunel's block machinery, in the event of that at Portsmouth getting out of order; dwellings for the civil officers of the establishment, and a handsome chapel. Near the entrance (which is a spacious gateway, flanked by two towers) is a general marine hospital, built in 1828, and capable of receiving 340 patients. Four hulks moored off the dock-yard, one for juvenile, two for adult offenders, and one as a hospital, form the convict establishment, usually containing from 900 to 1,000 individuals, employed in the common drudgery of the arsenal. The ordnance wharf, to the W. of the dock-yard (on the slip of land between the church and river, $\frac{1}{2}$ m. from the high street of Chatham), contains the guns belonging to each vessel respectively, in separate tiers, piles of shot and shells, a well-stocked armoury, &c. and a large building in which lead is rolled, paint ground, &c., by steam machinery. The military establishments, comprised within the lines, consist of large infantry, marine, engineer, and artillery barracks, with a park of artillery. There is also a school, established in 1812, where young engineering officers, and recruits, are trained to a practical acquaintance with their duties. The naval arsenal was first formed a short time previously to the Spanish Armada, on the site of the present ordnance wharf; Upnor Castle was also built about the same time. The dockyard was removed to its present site by James I., and was subsequently enlarged and improved, by the formation of floating docks, by

Charles I., at which period Gillingham Fort was built; but the present establishments were principally formed subsequently to 1758, when an act was passed for their construction. Previously to this, the security of the arsenal depended mainly on the river forts, especially that of Sheerness; and on the guard ships stationed in the river. These, however, were not adequate for its protection. A memorable instance of their insufficiency occurred in 1667, when a powerful Dutch fleet, under De Ruyter, having suddenly appeared in the Thames, took Sheerness; broke a strong chain that had been drawn across the Medway; and up the river as far as Chatham, destroyed several sail of the line and a great quantity of stores. The Dutch accomplished this brilliant and daring achievement without incurring any material loss; but the fortifications were soon after very materially strengthened, and are now such as to render any coup de main of this sort quite out of the question.

To shorten the distance by water, and facilitate the communication between London and Chatham, an open canal and tunnel has been cut from the Thames, opposite Tilbury Fort, to Chatham, a distance of about 9 m., of which about 2 m. are tunnelled. But notwithstanding the obvious importance of this channel of communication as a means of saving distance, the too great height of the rates, or some other circumstance, has prevented it from being much used, and it has proved a very unprofitable undertaking. Cetcham, or the Village of Cottages, is the name of the town in Domesday, and many British and Roman remains have been found in its vicinity; but the greater part of the modern town has been built since the reign of Elizabeth. Chatham gives the title of earl to the Pitt family. (*Hasted's Kent; Boundary Report, &c.*)

CHATELAIN-SUR-LOING, a town of France, dép. Loiret, cap. cant., on the Loing, 14 m. S.S.E. Montargis. Pop. 2,160. This town belonged to the family of Coligny; and in its old castle, on the 18th of February, 1517, was born the famous Admiral de Coligni, the most illustrious victim of the massacre of St. Bartholomew. The married remains of the admiral having been deposited, by the care of some of his servants, in the chapel of the castle of Chatillon, were transferred, in 1786, to Maupertuis, where a monument was erected to his memory. (*Hugo, art. Loiret; Biographie Universelle.*)

CHATELAIN-SUR-SEINE, a town of France, dép. Côte d'Or, cap. arrond., on the Seine, 88 m. N.N.E. Semur-en-Auxois. Pop. 4,430. It is neat, well built, and well laid out; it has a fine castle, a communal college, a small public library, an hospital, a school of design, a society of agriculture, and a *haras royal*. It has also fabrics of coarse cloth, hats, jewellery, iron-plates, glass, beet-root sugar, casks, &c. There was formerly, within the park belonging to Marshal Marmont, a very perfect agricultural establishment, and an establishment for the preparation of iron and hardware articles; but since the disgrace of the marshal, the establishments in question have been dismantled, and the articles of Chatillon was, in 814, the seat of the unsuccessful negotiations between Napoleon and the allies. (*Hugo, art. Côte d'Or.*)

CHATRE (LA), a town of France, dép. Indre, cap. arrond., on the left bank of the Indre, 22 m. S.E. Châteaoux. Pop. 4,471. It is agreeably situated on the side of a hill, and was formerly defended by an immense castle, now in ruins, and of which one of the towers serves for a prison. It has a handsome church, and a fine promenade; with a court of primary jurisdiction, a communal college, very extensive tanneries and leather manufactures, and fabrics of serge and other coarse woollen stuffs. Chestnuts are very plentiful in its vicinity; and it has a considerable trade in them, and in cattle, wool, and hides. (*Hugo, art. Indre.*)

CHATSCK, a town of Russia in Europe, gov. Tambof, cap. distr., on the Chatcha, 95 m. N. Tambof. Pop. 6,000. It was founded in 1553, and peopled with Streletz, Pouchgars, Cossacs, &c.; and was formerly fortified; and has a good deal of trade in corn, cattle, tallow, honey, hemp, iron, &c. (*Schmützler, La Russie, &c., p. 268.*)

CHATSWORTH, a famous seat belonging to the Duke of Devonshire. See *East Ang.*

CHATELON-SUR, a town of Hindostan, prov. Allahabad, about 140 m. W.S.W. that city, formerly a flourishing place, and still possessing extensive manufactures of coarse cotton wrapper, &c.

CHAUDÉS-AIGUES, a town of France, dép. Cantal, cap. cant., in a narrow, deep gorge, on one of the affluents of the Truyère, 14 m. S.S.W. St. Flour. Pop. 2,567. This town is indebted for whatever importance it may possess to its hot springs, which were known to the Romans, by whom they were called *Aque Calentes*, of which its modern name is a translation. Their temperature varies from 80° to 80° Reaumur in winter; the houses are warmed with the hot water conveyed through the streets and into the houses in wooden pipes! It is also successfully employed in the incubation of

various species of eggs. It has some trade in shinglass, and carries on some branches of the woollen manufacture. (*Hugo, art. Cantal.*)

CHAUMONT (formerly *Chaumont-en-Bassigny*), a town of France, dép. Haute Marne, of which it is the cap., on a height between the Marne and the Suise, about 1½ m. from the confluence of these rivers, 18 m. N.N.W. Langres. Pop., ex com., 6,113. It is indifferently well built; streets straight and clean, but some of them are steep and of difficult access. It formerly laboured under a deficiency of water; but now it possesses several fine fountains, supplied by means of a hydraulique machine. It has several good public buildings; and in the upper part of the town are some fine promenades. Louis XII., Francis I., and Henry II., surrounded it with walls and ditches; but these are in a state of disrepair, and in most places, indeed, are thrown down and filled up. It has tribunals of primary jurisdiction and of commerce; a departmental college, a society of agriculture, commerce, and arts; a public library, with 35,000 volumes; a theatre, an hospital, and a house of correction; manufactures of coarse woollens and druggets, with important fabrics of hosiery and gloves; breweries, tanneries, &c.; and a considerable trade in iron and cutlery. The emperors of Austria and Russia, and the king of France, signed here, in 1814, a treaty against Napoleon. (*Hugo, art. Haute Marne.*)

CHAUNY, a town of France, dép. Aisne, cap. cant., at the point where the Oise is joined by the canal of St. Quentin, half the town being built on an island in the river, 18 m. W. Laon. Pop. 4,493. A good deal of cider is made in the town, which has also a good deal of trade, being favourably situated for commerce.

CHAVES, a fortified frontier town of Portugal, prov. Tras os Montes, on the right bank of the Tamega, over which it has a Roman bridge of 18 arches, 40 m. W. Braganza. Pop. 5,224. It has mineral baths, which were anciently much frequented, and was taken by the French, under Marshal Soult, on his entry into Portugal in 1808, but was re-captured by the Spaniards in the following year.

CHAYENPOOR, a town and distr. of Nepal, N. Hindostan; the former is fortified, and is 130 m. E. by S. Catmandoo. The distr. is altogether mountainous; it exports to Thibet rice, wheat, oil, butter, iron, copper, cotton and woollen cloth, planks, spices, indigo, tobacco, sugar, furs, and pearls; and imports thence, salt, gold, silver, musk, deer skins, chowries, blankets, Chinese silks, borax, and medicinal herbs. (*Buchanan, Himalayas, &c.*)

CHEADLE, a market town and par. of England, co. Stafford. S. div., hund. Totmonslow; area of par., 5,730 acres; pop. of ditto, in 1831, 4,119. The town is pleasantly seated in the most fertile part of the Moorland, in a vale surrounded by hills, planted with forest trees, and in a district abounding with coal; 12 m. E. Newcastle-under-Lyne, 15 m. N.N.E. Stafford. It consists of one principal, and four small streets, and is intersected by the roads from Newcastle to Ash-bourn, and from Leek to Uttoxeter. The church is an ancient structure, in the decorated style of English church architecture. The chapel of ease, a neat building, was erected by subscription in 1837. The town is governed by a constable and headborough, nominated annually at the court-leet, held by the lord of the manor. It is also a station for receiving votes at the election of mems of the H. of C. for the N. div. of the co. The living is a rectory, in the archdeaconry of Stafford, and diocese of Lichfield and Coventry. Patron, master and fellows of Trinity college, Cambridge. The chapel is a curacy in the gift of the rector. There are various chapels for dissenters and R. Catholics. It has a free school, endowed in 1668, a national school, and sundry bequests for the poor of the par. In the vicinage are very extensive copper, tin, and brass works, and a considerable tape manufactory. There are also in the town numerous blacksmiths, brasiers, and tin-plate workers; iron merchants, nail-makers, curriers, and tanners; rope-makers, flax-dressers, saddlers, and maltsters. Copper ore has been found in the neighbourhood, but not in sufficient abundance to make its working advantageous. In the vicinity there are also considerable ironworks and collieries, which employed, in 1831, 90 men. The Caldon branch of the Trent and Mersey canal passes within 4 m. of Cheadle. Market-day, Friday; and fairs are held in January, March, Holy Thursday, 16th August, and 4th October, for cattle and horses.

CHEDDER, a par. and village of England, co. Somerset, hund. Winterstoke. Area, 6,650 acres. Pop. (1831) 1,980. The village, 15 m. S. by W. Bristol, at the base of the Cheddar cliff, a part of the Mendip hills, has 3 irregular streets branching from a centre. The church is a spacious structure, with a lofty pinnacled tower; there is a charity school for 35 boys and 13 girls, supported by a portion of a bequest left in 1751, and at present producing about 180*l.* a year, the remainder being appropriated to the apprenticeship of poor children, and

the relief of the poor generally. There are fairs for sheep and cattle, May 4, and Oct. 25. The innab. are chiefly employed in agriculture; but a paper-mill in the immediate vicinity employs several hands; and many females are engaged in knitting stockings. The Cheddar rocks, close to the town, form a huge chasm, or gorge, apparently torn apart by some convulsion of nature, presenting irregular precipices and extensive caverns, characteristic of calcareous strata. The extensive downs comprised within the par. are clothed with fine pasture; and the dairies of the district have long been famous for the production of an excellent species of cheese, known by the name of Cheddar.

CHELDUBA, an island in the Bay of Bengal, about 10 m. S.W. Ramee, Aracan, to which prov. it belongs, constituting one of its chief divisions. It lies between lat. 18° 36' and 19° 46' N., and long. 93° 29' and 93° 44' E.; shape, nearly round; length and breadth, about 30 m. each. Area, 400 sq. m. Pop. (1831) between 5,000 and 6,000. Nearly the whole of its surface consists of a rich productive soil; the interior is much more free from jungle than that of any other isl. upon this coast. The sugar cane, tobacco, hemp, cotton, and rice, grow most luxuriantly, and the cattle are the finest in the whole prov., in which there is not, observes Capt. Pemberton, "a spot more likely to reward the industry of a pop. at all adequate to its area." The amount of public revenues in 1831 was 12,732 rupees. (*Pemberton's Report on the E. Frontier, 1833, pp. 93, 94.*)

CHELMSFORD, a town and par. of England, co. Essex, hund. Chelmsford, at the confluence of the Wild and Cann and Chelmer, 28 m. N.E. by E. Lond. Area of par., 1,750 acres. Pop. of do. (1821), 4,994; (1831) 5,435. The town, which is almost in the centre of the co., consists of one principal street and three others branching from it: houses mostly well built, many of them having gardens extending to the rivers. It is lighted, and well supplied with water from a spring distant 1 m., conveyed to a handsome reservoir in the town. The church, a stately fabric of the early part of the 14th century, has been repaired within the last few years, but the original pointed style has been carefully preserved. It has a chapel of ease, 4 dissenting chapels, 4 sets of almshouses (the oldest founded in 1625); a public dispensary, and many minor charities and benevolent societies; a grammar-school, founded by Edw. VI., which participates alternately with those of Malton and Brentwood in an exhibition to Calus College, Cambridge; 2 charity schools (one founded in 1713, one in 1714), which respectively clothe and educate 80 boys and 60 girls; a national, a Lancastrian, and an infant school; a neat theatre; public baths, with a reading-room attached; and a handsome hall, in which the courts of assize and of quarter sessions for the county are held, and which also contains a spacious assembly-room. The present co. gaol, on a hill about 1 m. from Chelmsford, in the par. of Springfield, where it occupies an area of 8 or 9 acres, was built in 1828 on the radiating plan. The former gaol, in the same par., is now only used for prisoners previously to conviction, and debtors: attached to it is a house of correction for females. During the last war, two sets of barracks, capable of containing 4,000 men, were erected near the town, but they have since been taken down. A line of embankments defended by star batteries may still be traced, erected during the threatened invasion in 1805, to protect the approaches to the metropolis from the E. coast. Market, Friday: the supply is good, especially of poultry, much of which is usually purchased for the London markets. Fairs, May 12, Nov. 12, for horses and cattle. The Chelmer is crossed by a handsome iron bridge. Below the town, the river has been formed into a navigable canal, 12 m. in length, for barges, by means of locks and artificial cuts, near Maldon, at the head of the estuary of the Blackwater. A handsome stone bridge of one arch has been thrown over the Cann, to replace an older bridge of three arches built in the reign of Henry I. Chelmsford has long been the great thoroughfare to the E. parts of Essex, and to those of Norfolk and Suffolk. This and the general co. business of assizes, sessions, &c., and the nomination and return of the co. members, are the chief support of the place, for there is no manufacture, and the principal part of the labouring pop. are employed in agriculture, or as carriers and drovers to the metropolis. There are well-frequented annual races in July, held on Galle Common, 2 m. from the town. Chelmsford is near the *Cæsarea* of the Roman period.

CHELSEA, a town and par., forming part of the W. suburbs of the metropolis of England, co. Middlesex, hund. Ossulton, Kensington div. Pop., in 1831, 26,860; 1831, 32,371. It is situated on the N. bank of the Thames, along the widest of its reaches above London bridge, and is connected with Battersea on the opposite bank by a wooden bridge; the lower, or old town, is irregularly built, and on the whole of mean appearance: its best houses are those of Cheyne Walk, along the side of the river above the hospital, anciently

several other pars., who, on leaving, have an apprentice fee—the present amount received is 8071.; a national school, established in 1817, has between 500 and 600 children daily, and 800 on Sundays; a female orphan asylum, founded in 1806 by Queen Charlotte, maintains and educates about 27 children, from the age of 8 to 15; 3 infant schools, one having between 300 and 400 children, and a branch at the village of Alstone, and a smaller school, established in 1834, the Protestant union school, chiefly for children of the Calvinistic persuasion; and several large Sunday schools. The principal charitable institutions are, the general hospital, a recent structure, accommodating 100 patients from all parts; the dispensary and casualty hospital, established 1813; the benevolent and anti-mendicity society, established in 1827, and affording relief in kind, by means of tickets; the Cobourg (for women in child-birth), Dorcas, and numerous others; almshouses, founded 1574, for 6 old people; and several minor charities. There are public libraries and reading-rooms at each of the spas, and 5 or 6 others in the town; a literary and philosophical institution, established 1833, at which lectures are frequently given, with a good library and museum; and zoological gardens. The General Association for Scientific and Literary Instruction has weekly meetings and courses of lectures—it is on the plan of a Mechanics' Institute. There are 4 weekly newspapers published exclusively in the town, and one connected with Bath, and printed there; a small weekly tract, called *The Looker On*, has been published many years at the Montpellier rooms; and more recently, in the town, a yearly work, called *The Cheltenham Annuaire*. There is a neat theatre, usually open in summer, but enjoying no great share of patronage; an excellent music-room, in Regent Street, at which concerts are frequently given; many good billiard-rooms, especially those between Regent Street and the Colonnade; a cricket-ground, on the old Bath Road, belonging to a club which meets thrice a week during the summer; annual races take place in July, and are numerously attended: within a recent period, a spring meeting in April has also been established, and promises to succeed. A subscription pack of stag-hounds is supported by the town, and hunt 4 days a week from Sept. to April. Lord Segrave's fox-hounds also hunt during the season; and W. E. Lawrence's, Esq., harriers hunt 3 times a week. The market-place is an extensive structure, built in 1823, with an entrance, through an arcade, from the High Street. Market, Thurs. and Sat.; there is usually an abundant supply, at moderate prices. Annual fairs for cattle and cheese are held the 2d Thursday in April, August 5., 2d Tuesday in Sept. and 3d Thursday in Dec.: there are also 2 statute fairs, on Thursday before and after Old Michaelmas Day. Malt-ing is carried on to some extent, but the chief trade of the place is caused by the great influx of visitors to the spas, and by its being a considerable thoroughfare. The hotels and numerous lodging-houses are of the first-rate description: there is also a club-house, on a same plan as those of the metropolis, the members of any of which are admissible to it), and a savings' and 4 other banks. Coaches and waggon start daily for various parts of the kingdom; and vans to London, Bath, Worcester, and Birmingham. Hackney carriages and cabs are obtainable from various stands; and there is a regular penny post delivery through the town and adjoining villages. Coals, and other articles of general consumption are brought, by a railway, from the Gloucester and Berkeley Ship Canal to the W. side of the town (9 m.), where there are convenient wharfs and warehouses. Water, for domestic use, is conducted from sources in the Cotswold Hills to a large reservoir, and thence, by pipes, to the upper stories of most of the houses: this, and the gas (with which the whole of the town and suburbs are well lighted), are supplied by private companies. The paving, sewerage, &c. regulation of the hackney carriages, and the police force (on the metropolitan plan, and wearing a similar uniform), are all under the control of commissioners, appointed under an improvement act in 3d Geo. IV., who meet regularly. Petty sessions for the hundred are held twice a week. There is also a material court, i.e. the lands subject to which, by an ancient custom, confirmed by the legislature, descend to the eldest *femal*, instead of the eldest heir male. The Reform Act conferred on Cheltenham, for the first time, the privilege of returning 1 mem. to the H. of C. The limits of the parl. bor. coincide with those of the par. Registered electors, in 1837-38, 1,573. It is a polling town for the E. division of the co. The government of the town is vested in commissioners. The scenery in every direction is very beautiful, and nightingales abound in the vicinity. Bessall's Wood, about 1 m. from the town, has been named, from the number that frequent it, Nightingale Grove. From some of the neighbouring summits extensive prospects are commanded, especially from Cleeve Cloud, Birdlip, Charlis, Deer Park, and "the Castles," so named from the remains of some ancient encampments. Sudeley Castle, a splendid old ruin; Southam, a curious specimen of domestic architecture of the Tudor period; Wit-

combe, where the remains of a Roman villa were discovered in 1818 (*Archæolog.* vol. II.), and Toddington, a splendid modern seat, are in the vicinity. (*Cheltenham Guide*; *Cheltenham Annuaire*, 8vo. 1836; *Geological Trans.*; *Natal's Views*; *Parl. Papers*, &c.)

CHELVA, a town of Spain, prov. Valencia, on a river of the same name, 39 m. N.W. Valencia. Pop. 1,622. There are vestiges of an ancient Roman aqueduct, on the N.E. of this town, that served to convey water to Liria. The neighbourhood is planted with mulberries and vines, and produces wheat, barley, rye, oats, maize, wine, and oil.

CHEMNITZ, a town of the k. of Saxony, circ. Zwickau, cap. distr. of same name, on the Chemnitz river, 20 m. L.N.E. Zwickau, and 37 m. W.S.W. Dresden. Pop., with its suburbs (1837), 22,265. It was formerly walled, but its fortifications have been levelled, and their site is now laid out in public walks. It has some good streets and squares, a castle, 6 churches, 4 hospitals, a town hall, cloth hall, lyceum, school of design, &c.; and has handsome and thriving suburbs. Chemnitz is the principal manufacturing town of the kingdom. It has extensive cotton manufactures; and that of cotton hosiery, mits, &c., to which it is mainly indebted for its rapid growth, is said to employ from 15,000 to 20,000 looms in Chemnitz and the neighbouring villages. The stockings, mits, &c., manufactured here, are now very widely diffused over the states comprised within the German Customs League; and considerable quantities have also been shipped for the U. States.* The machinery employed, though a good deal improved, is still very imperfect; and the real advantage on the side of the Saxon manufacturers consists in the low rate of wages resulting from the depressed mode of living of the work-people, who subsist chiefly on rye-bread, with a very small supply of butchers' meat. We are not, however, of the number of those who think that we have much to fear from Saxon competition. We have indeed been, and most probably will be, undersold in those descriptions of fabrics principally produced by manual labour; but the advantages of our situation, and our superiority in all that respects the employment of machinery on a great scale, is so very decided, that it is most unlikely it should be shaken by the competition of any state so unfavourably situated as Saxony. There were, according to Cannabich, in and round the town, in 1833, 40 steam, water, and other spinning mills. The entire value of its cotton manufactures was estimated, at the same epoch, at 2,000,000 rix dollars a year, and they have increased materially in the interim. Chemnitz has also a manufacture of spinning machinery, with which it supplies a considerable part of the Continent; and it has besides manufactures of linens, &c.; and dyeing and bleaching establishments. The district of Chemnitz contains 14 villages, and had, in 1837, a pop. of 44,600, most of whom were employed in the above branches of industry. Chemnitz was for 400 years a free imperial city. It was the birthplace of Puffendorf. (*Bepraph.*; *Allg. Lander und Volkerk.*; *Cannabich*; *Lehrbuch*.)

CHENONCEAUX (CASTLE OF). See BLERD.

CHEPSTOW, a sea-port town and par. of England, co. Monmouth, hund. Caldecot; on the Wye, 24 m. from its embouchure in the Severn, 110 m. W. Lond., and 14 m. N.N.W. Bristol. Pop. (1821) 8,008; (1831) 3,524. It stands on a gradual slope betwixt bold cliffs rising from the W. bank of the river, and is surrounded by some of the finest scenery in England. Streets broad, well paved, and lighted with gas, but badly supplied with water. There are many good houses, and the town looks neat and cheerful. The church has a fine Norman entrance, and many curious specimens of the early pointed style. It has also a Cath., and 3 diss. chapels; an endowed charity school for 13 children; a national school; 2 ancient hospitals, in which 25 aged persons are supported; and several minor charities. Market, Wed. and Sat. Fairs, Frid. and Sat. in Whitsun-week; Sat. before June 20., Aug. 1., and Frid. before Oct. 29. It has no manufactures; but a considerable trade, being the chief port of most of the places on the Wye and Lag, including Herefordshire and the E. part of Monmouth. Ship-building is carried on to some extent; and about 70 vessels, of the aggregate tonnage of 4,600 tons, belong to the port. The tide runs with great rapidity in the river, making its navigation a little dangerous; and it rises at ordinary springs between 40 and 50 ft., and at high springs it sometimes reaches between 50 and 60 ft.; hence very large ships may come up to the town, and barges of 30 tons burden ascend the river to Hereford. A handsome iron bridge was thrown over the river in 1816 at the joint expense of the two cos., separated by the Wye. The castle, on a steep cliff over-

* During the year ended the 30th of September, 1838, the total value of the hosiery imported into the U. States amounted to 767,536 dollars, of which articles of the value of 412,410 dollars were shipped from the same source; but we have no means of ascertaining what proportion of these were supplied by Saxony, and what by Hesse Prussia, though we believe that the former was much the greater.

hanging the Wye, dates from the 11th century, though most of the existing remains, which occupy a considerable space, appear to be of more recent origin: it was alternately in the hands of both parties during the last civil war; and after the restoration, Henry Martyn, the regicide, was imprisoned for life in one of its towers, where he died after 30 years' confinement. The co. magistrates hold petty sessions in the town, and a small theatre is occasionally opened.

CHER, an inf. dep. of France, reg. Centre, formed of part of Berri and Bourbonnais, having N. the dep. Loiret, E. Nièvre, S. Allier and Creuse, and W. Indre and Loir-et-Cher. Area, 730,580 hectares. Pop. 276,883. It derives its name from the Cher, by which it is intersected, and is included in the basin of the Loire, which, with the Allier, forms its E. boundary. Surface generally flat. Soil various: in the E., and along the Loire, it is very fertile; S. it is of a medium quality, while in the N. it is sandy, and covered in great part with heath. Agriculture backward. Principal crops, wheat, maalin, rye, barley, and oats. Hemp is largely cultivated, the crop being estimated at about 750,000 kilog. a year. The natural meadows, which are extensive and valuable, are principally depastured by sheep and cattle. The stock of sheep is estimated at about 500,000 head, producing annually 570,000 kilog. of wool; in 1833 the dep. furnished 16,749 sheep for the markets of Paris. The stock of black cattle is estimated at 85,000 head. In the reign of Henry IV., the horses of Berri enjoyed a high reputation; but the breed is now *complètement dégradée*. Hogs and goats numerous. The forests occupy about 120,000 hectares; and furnish timber for the navy, carpenters' work, &c. The vineyards cover nearly 13,000 hectares; those in the arrond. of Sancerre furnish the best wines. Iron is abundant, and is pretty extensively wrought. In 1833 the different works supplied 2,260,000 kilogs. pig, and 2,350,000 kilogs. bar and rod iron. The cloth manufacture, once the staple of the dep., has greatly fallen off; and the glass works that were formerly to be met with have ceased to exist. The cutlery of Bourges is much esteemed; and there are fabrics of coarse cloth, linen, &c., with earthenware manufactures, breweries, tanneries, &c.

The dep. sends 4 mem. to the Chamber of Dep., and had in 1838-39, 1,340 electors. Public rev., in 1831, 3,309,013 fr. Principal towns, Bourges, St. Amand, Vierzon, and Sancerre. (*French Official Tables; Hugo, art. Cher.*)

CHERASCO, an inf. town of N. Italy, k. Sardinia, prov. Mondovì, cap. mand., advantageously situated on a point of land between the Stura and Tanaro, near their confluence, 31 m. S.S.E. Turin. Pop. 8,000. It was formerly an important military post, and is still surrounded with walls; but its citadel was dismantled in 1796. It is well built and laid out, and supplied with water by a canal cut from the Stura, which also turns several silk mills. Trade chiefly in wine and silk. (*Rampollati, &c.*)

CHERBOURG, a principal sea-port and fortified town of France, dep. Manche, on its N. shore, nearly opposite the W. extremity of the Isle of Wight, at the bottom of a bay formed by Cape Lévi on the E., and Cape La Hague on its extreme W., at the mouth of the Divette, 41 m. N.W. St. Lo, and 185 m. W.N.W. Paris. Lat. 49° 38' 31" N., long. 1° 41' 58" W. Pop., 1836, 19,315. It is open, but defended by an entrenched camp. Streets narrow and dirty, notwithstanding there are many public fountains. Houses mostly of stone and slated. Chief public buildings: the military and marine arsenals, a spacious marine, and several other hospitals; the parish church, a singular edifice; the town hall and prison; new and handsome buildings; a theatre; public baths and barracks. From its advanced position in the English Channel, it has long been a favourite object with the French government to render Cherbourg a great naval arsenal, and a secure asylum for ships of war; and to accomplish this, vast sums have been expended upon it. The harbours for merchantmen and ships of war are quite distinct from each other. The last, which was constructed by Napoleon, is a magnificent work. It is mostly excavated out of the solid rock, is 326 yds. long, by 265 wide, and is capable of accommodating 50 ships of the line, which may enter it at all times, there being 25 ft. water at low ebb. It has 4 fine covered granite docks, 85 ft. deep, for the building of ships, and a basin for those undergoing repair. Near the naval port is the dockyard of Chantierne for the building of frigates, containing a large timber yard, a rope walk 546 yds. in length, &c. The commercial port, formed by the mouth of the Divette, and easy of access, consists of an outer harbour and a basin, the former, 263 yds. long, by 218 wide; the latter, 146 yds. long, by 138 wide. Between the two divisions is a sluice: the outer harbour communicates with the sea by a canal 656 yds. long and 84 wide, bordered in its whole length by a granite jetty, within which a depth of 19 ft. water is always retained. The roadstead of Cherbourg is one of the best in the Channel,

and capable of containing 400 sail. It is defended on all sides by batteries, and is protected from the northerly winds, which would otherwise throw in a heavy sea, and in a great measure also from the Channel currents, by a vast artificial dique, or breakwater, similar to that in Plymouth Sound, constructed in the centre of the bay, opposite to, and about 2½ m. from, the mouth of the river. This great work, formed for the most part of granite and sandstone, was commenced under Louis XVI., in 1784, and continued till 1791; it was recommenced by Napoleon in 1802, again discontinued in 1813, and is not yet quite complete. Its foundation was laid by sinking many massive wooden frames, which were afterwards filled with blocks of stone, 800,000 cubic fathoms of which have been already employed in its construction. The length of the dique is 2,768 metres (4,120 yards); breadth at its base, 262 ft., at its summit, 101 ft. On its central part, which is 94 ft. above the water at the highest spring tides, a battery has been erected. The E. channel between it and the shore is 1,060 yards in width, that on the W. side 2,550 yards.

Cherbourg is the seat of a tribunal of original jurisdiction, of a marit. tribunal and prefecture, and is the cap. of the 1st naval arrondissement. It has a departmental college, a royal academical society, a public library with 5,300 vols., a naval library, and a museum. Cherbourg, which is very ancient, was in the 10th century called *Carubur*. It was long in the possession of the English, and was the last place they retained in Normandy. (*Hugo, art. Manche; Official Reports; Dict. Géographique, &c.*)

CHERIBON, a sea-port town of Java, cap. div. and prov., at the head of a wide bay on the N. coast of the isl., 128 m. S.E. by E. Batavia; lat. 6° 48' S., long. 108° 37' E. In the early part of the present century it suffered from a pestilence, which destroyed more than a third of its inhab.; and from this and other causes, it is said to have declined of late; but it still continues to be the residence of a Dutch governor, and enjoys considerable trade. The town and harbour are protected by a fort. The district of Cheribon is remarkable for its fertility, and the excellence of its coffee, indigo, teak timber, &c. (*Hamilton's E. I. Gaz. II. 535.*)

CHERISO and OSERO (an. *Crepas* and *Absorus*, together called *Absyrtides*), two contiguous long and narrow isls. of the Adriatic, belonging to Illyria, gov. Trieste, between lat. 44° 40' and 45° 20' N., and long. 14° 18' and 14° 30' E., separated from Istria by the Gulf of Quarnero; united length nearly 50 m., breadth varying from 1 to 8 m. Area, 95 sq. m. Pop. 14,000. Surface generally mountainous, stony, and barren; but in some parts the olive, vine, fig, and various other fruits, and a little corn, are grown, and in several parts there are good pasture lands for sheep. Oil is the most valuable product of Cherso, wine of Osero. In the N. part of the former island there are some fine woods; and shrubs and plants for dyeing are very abundant. The breed of sheep is very indifferent, and the wool bad. Other domestic animals are few. Many of the pop. subsist by the tunny, anchovy, &c. fisheries. There are a few manufactures, chiefly of coarse woollen cloth, and liquors; and vessels are built at the principal towns:—these are Cherso, Osero, Lossin Grande, and Lossin Piccolo. Cherso, the cap., on the W. side of the island of same name, has a good though small harbour, and 3,000 inhab. It contains a cathedral and numerous other churches; its streets are narrow and dirty; but its inhab. clean and industrious. Osero, also on the W. side of the island of Cherso, in an unhealthy situation, has only 1,500 inhab.; but it has a cathedral with a fine steeple, and was formerly the seat of a bishopric. It was sacked by the Saracens in 840. Its inhab. have some trade in timber. Lossin Grande and Piccolo are two insignificant towns on the island of Osero. The two islands are connected by a bridge. (*Oesterr. Nat. Encycl.; Fortis; Trav in Dalmatia.*)

CHERSON. See KHRASON.

CHERTSEY, a town and par. of England, co. Surrey, hund. Godley. Area of par., 10,020 acres. Pop. of do. (1821), 4,279; (1831), 4,795. The town, situated on the S. bank of the Thames, is neatly built of brick, partially paved, and well supplied with spring water, but not lighted. It is connected with the Middlesex side of the river by a handsome stone bridge of 7 arches, built in 1785, at the joint expense of the two counties. The church, a handsome structure, erected in 1808, in the later pointed style, contains a tablet to the memory of the celebrated statesman C. J. Fox, who resided for a lengthened period at St. Ann's Hill, near the town. There are also 3 dissenting chapels, almshouses, several minor charities, and a school founded in 1726, for 80 children of this and three adjoining parishes; its present revenue is nearly 400*l.* a year, and it has been arranged on Bell's plan, and now educates 200 boys and 150 girls, of whom 80 of either sex belonging to Chertsey are clothed. Market-day, Wednesday. Fairs, first Monday and Tuesday in Lent, for cattle; May 14, for sheep; Aug. 6 and Sept. 28, for pleasure and pedlery. The stallage

and tolls of these and the markets were granted to the poor of the town by Queen Elizabeth. The chief business of Chertsey consists in the manufacture of malt, flour, iron hoops, and brooms: great quantities of bricks are also made in the neighbourhood; and vegetables are largely cultivated for the London markets: these are mostly conveyed by the Guildford and Petworth Canal, which approaches to within 2 m. of the town. It is governed by a bailiff, appointed for life by letters patent of the exchequer, and is exempted from the jurisdiction of the co. sheriff, but is within that of the co. magistrates, who hold a session for the division every fortnight. Caesar is supposed to have crossed the Thames near this place to attack Cassibelanus; the stakes then driven into the bed of the river by the Britons to obstruct the passage of the Romans are noticed by Bede as remaining in the 8th century; and vestiges of them are still traceable $\frac{1}{2}$ m. below the bridge. During the Heptarchy, Chertsey was the residence of the S. Saxon kings: at Hardwick Court, in the par. (now a farm), Henry VI. resided when a child; and in an ancient monastery (founded by Edgar, and existing till Henry VIII.) he was privately interred, though his remains were subsequently removed to Windsor. Cowley the poet died id this town, where his study is still preserved.

CHESAPEAKE BAY, a noble bay on the Atlantic side of the U. S. of N. America, having its embouchure on the coast of Virginia, between Cape Charles, lat. $37^{\circ} 7' N.$, long. $76^{\circ} 2' W.$, and Cape Henry, lat. $36^{\circ} 56' N.$, long. $76^{\circ} 4' W.$, about 13 m. apart. It stretches nearly due N. from Cape Henry to the mouth of the Susquehanna river, in $39^{\circ} 35' N.$, a distance in a direct line of above 140 m. Its average breadth N. of the Potomac river, in lat. 39° , is about 10 m.; but S. of that point it is about 25 m. Its coast line is very irregular, inasmuch as it branches out on both sides, and its numerous islands, bays; but including these, and its numerous islands, its area is estimated at 3,600 sq. m. (*Darby*). It is wholly within the states of Virginia and Maryland. Chesapeake Bay differs from the other sounds on the Atlantic slope of the U. States in having only one outlet, as well as in its greater depth of water, which is generally about nine fathoms, affording many commodious harbours, and a safe and easy navigation for ships of the largest burden. At its head it receives the Susquehanna; and on its W. side the Potomac, Rappahannock, York, and James rivers. On the same side are Baltimore, Annapolis, Norfolk, Hampton, &c.; and on its E. shore, Chester and Cambridge. Dismal Swamp canal connects Chesapeake Bay with Albemarle Sound; the Chesapeake and Ohio canal, from the tide water of the Potomac to Pittsburgh, was commenced in 1828. (*See MARYLAND, VIRGINIA, &c.; Darby; American Encycl.; Mitchell's U. States.*)

CHESHAM, a town and par. of England, co. Bucks, hund. Burnham. In a fertile vale, through which a small brook flows to join the Coln. Area of par., 11,880 acres. Pop. of co. (1821) 5,032; (1831) 5,388. The town, 26 m. N.W. London, consists of 3 streets. The church, an ancient cruciform structure, has an embattled tower and spire; there are also 4 dissenting chapels, an almshouse for 4 old people, and a national school. Market on Wednesday, for corn, Saturday for general provisions. Fairs April 21. and July 22. for cattle; a statute fair Sept. 28. Chesham was formerly noted for the manufacture of wooden turneryware, which, though still carried on, has greatly declined. The lace manufacture is wholly discontinued. Shoemaking, for the supply of the metropolis, is the chief business; but the making of straw plait employs many females: there are also several paper-mills, and a small silk-mill in the vicinity.

CHESHIRE, a marit. co. of England, having N. the Irish Sea, the estuary of the Mersey, Lancashire, and a small part of Yorkshire; E. the co. of Derby and Stafford; S. Salop, and a portion of Flint; and W. Denbigh, Flint, and the estuary of the Dee. Area, 673,280 acres, of which about 600,000 are supposed to be arable, meadow, and pasture. Surface generally low and flat, with some considerable hills along its E. border, and a broken ridge on its W. side extending from Malpas to Frodsham; in this ridge, near Tarporley, is the isolated rock of Buxton. It is watered by the Dee, Weaver, and other streams, and the Mersey forms the line of demarcation between it and Lancashire: it is also intersected by several canals. It has mines of coal, copper, lead, and cobalt; but its most valuable mineral consists of an inexhaustible supply of rock-salt, vast quantities of which are annually dug up, and used partly for home consumption and partly for exportation; a great quantity of salt is also procured from the brine springs contiguous to Northwich, Middlewich, &c. The soil consists, for the most part, of a red rich sandy or clayey loam, much improved by marling, and generally very fertile. The climate is mild and humid; and the country being low and well sheltered, and divided by hedges and hedgerow trees, is remarkable for its verdure and the luxuriance of its pastures. Hence Cheshire is one of the finest grazing districts in England, and has been long celebrated for its

dairies. Cheese is the principal product; and is not only highly esteemed throughout England, where it is consumed in immense quantities, but also in many parts of the Continent and of America. Arable husbandry is a secondary object, and is less suited to the climate; but potatoes are grown in large quantities. Estates for the most part large, and this is one of the co. in which the least change has taken place, for a lengthened period, in the ownership of land: farms mostly small, a great many under 10 acres; but excluding these, the average is probably about 70 acres. Average rent of land in 1810, 20s. 13d. an acre. Though there are but few extensive woods, Cheshire has, owing to the prevalence of hedgerow trees, a very woody appearance, and a large supply of available timber. Manufactures of cotton, silk, &c. are carried on with great spirit and success at Macclesfield, Congleton, Stockport, and other places. Cheshire has 7 hund. and 90 par., exclusive of the city of Chester. It sends 10 mem. to the H. of C., viz. 4 for the co., and 2 each for the city of Chester, and the bors. of Macclesfield and Stockport. Registered electors for the co. in 1837-38, 12,811; viz. for the S. div. 6,972, N. div. 5,839. In 1831 Cheshire had 60,748 inhab. houses; 64,958 families; and 334,801 inhab., of whom 164,133 were males, and 170,268 females. Sum paid for the relief of the poor in 1838, 70,688*l.* Annual value of real property in 1815, 1,114,977*l.*; profits of trade and professions &c. 380,000*l.*

Cheshire is called a co. palatine, from the sovereign power in it being formerly exercised by the Earl of Chester as fully as by the king in his palace. But it has been long held by the crown. It had, however, separate courts and law officers till the passing of the Welsh Jurisdiction Act of Geo. IV., when they were abolished, and its courts assimilated to those of the rest of the kingdom.

CHESTER, a city, co. parl. bor., and sea-port of England, locally in the co. of Chester, hund. Broxton, on a rocky elevation on the N. bank of the Dee, by which it is half encircled, on the S. border of the co. about 6 m. above the confluence of the Dee with its estuary, $53^{\circ} 27' N.$, long. $2^{\circ} 52' 30' W.$ Pop. (1821) 19,949; (1831) 21,363. The city is enclosed within an oblong quadrangle by walls of great antiquity, and which are most probably built on the site of those constructed by the Romans. They make in all a circuit of 2670 yards, and are of great thickness, and kept in a complete state of repair. The ancient gateways having been removed and replaced by modern arches, a continuous walk on the top of the walls, 6 ft. wide, defended on one side by a parapet, and on the other by a railing, extends all round the city, and affords a great variety of fine prospects. "The form of the city," says Mr. Pennant, "evinces its Roman origin, being in the figure of their camps; with 4 gates, 4 principal streets, and a variety of lesser, crossing the other at right angles, so as to divide the whole into lesser squares. The structure of the 4 principal streets is without parallel; they run direct from E. to W. and N. to S.; and have been excavated out of the earth, and sunk several feet below the surface. The carriages drive far below the level of the kitchens, on a line with ranges of shops; over which, on each side of the streets, passengers walk from end to end, secure from wet or heat, in galleries (or *rows*, as they are called) purloined from the floor of each house, open in front, and balustraded. The back courts of all these houses are level with the rows; but to go into any one of these 4 streets it is necessary to descend a flight of several steps." (*Tour in Wales*, l. 147. 8vo. ed.) The city has of late years been much modernised and improved, and a handsome new street has been formed from near the centre of the town to Grosvenor Bridge, — a noble specimen of structure of a single arch, 200 ft. in span, with a roadway 33 ft. in width. Previously to the erection of this bridge, the communication across the river was by an old, narrow, and inconvenient bridge of 7 arches: the suburbs have also been considerably extended. The whole is paved, lighted by gas, and supplied with water, raised by a steam-engine, from the Dee, and conducted by pipes to a large reservoir. The cathedral is a large Gothic pile, with a low massive tower; the interior is fine, with several lateral chapels in the earlier, and a clerestory in the later pointed style: the bishop's throne, and several ancient monuments, are highly interesting. Contiguous to the cathedral are the remains of St. Werburgh's Abbey, which for nearly seven centuries was one of the wealthiest in the kingdom. The bishop's palace (rebuilt 1752), the prebendal, and other good modern houses (forming the Abbey Square), occupy the rest of the precinct. At an average of the 3 years, ending with 1831, the net revenue of the bishopric of Chester amounted to 2,261*l.* a year. There are 9 par. churches, and 2 others not parochial. St. John's church is a magnificent specimen of Saxon architecture; in Trinity Church are monuments to Farnell, the poet, and Matthew Henry, the celebrated commentator, interred within its walls. It has also a Catholic, and several dissenting chapels; a grammar-school founded in

26 Hen. VIII. for 24 boys, from whom the cathedral choristers are selected; its annual revenue is 102*l.*, and it has one exhibition to either university; two charity schools founded in 1717, on the site of the ancient hospital of St. John, one for 38 boys, of whom 28 are also maintained; the other for a like number of girls; the Marquis of Westminster's school, established in 1811, and wholly supported by him, educating between 400 and 500 children; a diocesan school, on Bell's plan, for 180 boys; 3 infant schools; and several large dissenting and Sunday schools. The co. infirmary, and the co. lunatic asylum, each have accommodation for 100 patients; and it has a lying-in hospital, a house of industry, several sets of almshouses, and various charitable bequests,—the chief of which (called Jones's) produces about 400*l.* a year, which is shared by the members of the ancient city guilds. The old Norman castle (with the exception of one tower) was removed in 1790, and a magnificent co. hall and gaol, together with government barracks, and an armoury, subsequently built on the site. These structures are in the Grecian style, and have great architectural merit; they form 3 sides of a large quadrangle, the entrance to the area being by a splendid Doric portico. The city courts of justice are held, and corporation business transacted in the Exchange, a plain brick edifice on pillars. There are 3 commercial halls; one built by the Irish Linen Company, in 1780, for their trade, but at present used for the cheese fairs;—that of linen, once so considerable, having wholly ceased; a second hall, built in 1809 by the Manchester manufacturers for their business; and a third, in 1815, for general purposes, as a private speculation: they are all on the same plan, forming a quadrangle, round which are pillared arcades and shops. There are also commercial rooms, comprising a good public library, news-room, &c.; a small theatre, and a good modern market-place. Markets Wednesday and Saturday. Fairs, last Thursday in Feb. for horses and cattle; July 10. and Oct. 10. for general merchandise: these last are of great antiquity, and continue several days: there are also 6 annual cheese fairs of recent origin; and the city being situated in the principal cheese-making district of the empire, these fairs have become of considerable importance. Annual races are held in the first clear week of May on "the Rood-Dee," a level pasture tract of about 80 acres at the base of the city walls. Manufactures inconsiderable: skins and gloves once formed the staples, but these have greatly diminished: there are a few small fabrics of tobacco-pipes, large flour-mills by the old bridge, and a shot-tower beside the canal, on the N. side of the city, where also are several wharfs and ware houses, chiefly for the convenience of the traffic between the city and Liverpool; articles of general consumption being now chiefly supplied from the latter.

At the era of the Conquest, and for long after, Chester was a place of very considerable importance as a commercial and shipping port: but the gradual filling up of the channel of the river, and latterly the superior facilities enjoyed by Liverpool, have proved destructive to its trade. In 1787, in order to obviate the difficulties of the river navigation, an artificial channel was excavated, on a plan suggested long previously by the celebrated Andrew Yarranton, from Chester to the sea. It has since been improved, and vessels of 300 tons may now ascend to the city; but it has not recovered any portion of its former importance as a maritime town. It has still, however, a considerable trade in the supply of many of the shopkeepers in N. Wales, with London, Manchester, and Birmingham goods.

Chester is a bor. by prescription; its three earliest charters are without date, but were probably granted in the early part of the 13th century. There are many others, the latest of which dates in 44 Geo. III., the governing charter (previously to the Municipal Reform Act), in 21 Hen. VII., considerably extended the former privileges, and made Chester a distinct co.; under it were a mayor, deputy mayor, 24 aldermen, 40 common councillors, and (in 1825), about 1,500 freeholders. The governing body were self-elected, despite the provisions of the charter, and of much litigation, which, in the 20 years preceding 1832, cost upwards of 20,000*l.* Chester has returned 2 mem. to the H. of C. since 1831. Previously to the Reform Act, the elective franchise vested in the governing body and in the resident freemen; "the freedom of the city being inherited by all the sons of freemen, or acquired by servitude." (*Boundary Report*.) The Boundary Act extended the limits of the parli. bor. so as to include the greater part of the township of Boughton, and some other patches, making the pop. of the whole, in 1831, 25,088. Registered electors, in 1837-38, 3,238. The limits of the municipal have since been made to coincide with those of the parli. bor.; and it is now divided into 8 wards, and governed by a mayor, 10 aldermen, and 20 councillors. Average annual revenue of the corporation about 8,500*l.*, derived from rents of lands and houses, tolls of markets, bridges, roads, &c. There are 24 ancient guilds or trades still subsist-

ing, though at present possessing scarcely any property or importance, except that of the goldsmiths, who have an assay master and office, and claim the examination of all plate manufactured for sale in Cheshire, Chester, Lancashire, and N. Wales. The crown mote is the criminal court, with jurisdiction over the highest offences; the portmote is the chief civil court where actions to any amount are tried; the penitence and passage courts are subordinate to the latter, the sheriff presiding in them. There are 3 general sessions a year, held in the superior courts, attended by barristers, and presided over by the recorder and mayor; petty sessions for the city are held twice a week. The general sessions and assizes for the co. are also held at Chester: the total number committed to the co. and the city gaols, in 1837, was 616; of whom 139 were acquitted, 94 transported, and the rest imprisoned for various terms. The execution of co. criminals, as well as those of the city, is a charge devolving on the sheriffs of the latter, but by an act passed in 1835, judges are empowered to relieve them from it.

The society of Chester is particularly good; and it is as large as a sort of provincial metropolis to many of the lesser gentry of the surrounding country. The city is most probably of Roman origin. Originally it had the name of *Dova*, from its situation on the Dee, and subsequently of *Cæstria*, from its being a *castrum*, or camp. It was the head-quarters of the 20th legion, which came into Britain previously to A.D. 61; and not only does the figure and construction of the town attest its Roman origin, but fragments of Roman arches and other buildings existed down to a recent period, and probably some still remain; and pavements, many coins, an altar dedicated to Jupiter Tanarus by the *præmiphus* (principal centurion of the 20th legion, &c. &c.), have been dug up. Wm. the Conq. bestowed the title of Earl of Chester, with sovereign power over the whole of Cheshire, on his nephew Hugh d'Avranches, or Lupus; and his successors to the reign of Henry III. continued in the exercise of like authority. In the last civil war Chester sustained a memorable siege under Lord Byron, by whom it was ultimately surrendered on honourable terms. In 1745 it was garrisoned against the Pretender, which is the last event of any importance in its history.

Eaton Hall, the magnificent seat of the Marquis of Westminster, is about 3 m. S. of Chester; its chief approach being by a triple avenue of limes extending from the end of the new Grosvenor Bridge (where there is a Gothic lodge) to the principal front, through a park abounding in fine forest trees. The structure is an adaptation of the pointed ecclesiastical style to modern domestic purposes; that of Edward III., as seen in York Minster, is chiefly followed, and emblazoned shields are profusely dispersed; in the compartments of some of the windows are several fine portraits executed from cartoons by Singleton; amongst others those of the six first earls of Chester, who held sovereign power previously to the title being bestowed by Henry III. on his eldest son; since which period it has uniformly been conferred on the eldest sons of his successors. *P. want's Tour in Wales*, 1. 147-269; *Chester Guide*; *Parl. Reports*, &c. No fewer than 247 vols. of the Harleian Collection in the British Museum relate to Chester: they were collected by the Holme family, belonging to the city.)

CHESTER-LE-STREET, a vil. of England, co. Durham, near the Wear, 5 m. N. Durham. Pop. (1831) 1,910. It stands in a valley, on the line of the Roman way called *Eboracæ-street*, leading to Newcastle. The Saxons called it *Eboracæstre*, or Eboracaster, and under that name it was the seat of the episcopal see of Durham for 112 years, till its removal to Durham in 995. The town is nearly 1 m. in length, and has a bridge over the Wear, opened in 1821. The church, formerly collegiate, and dedicated to St. Mary and St. Cuthbert, has a tower surmounted by a very fine spire 160 ft. high, and contains monuments with effigies of members of the Lumley family from the Conquest to the time of Elizabeth. The Independents and Primitive and Wesleyan Methodists have places of worship. An endowed school educates 12 children. A mechanics' institute, formed in 1825, is held in a handsome building erected for the purpose. Copy courts are held in April and Nov. in which debts under 40*l.* are recoverable; and petty sessions are held on alternate Thursdays. The place is a station for receiving votes at elections for the S. div. of the co. The manufacture of nails, ropes, and tiles, is carried on here; but the inhab. are mostly employed in the surrounding collieries and other works, and in furnishing provisions and groceries to the adjacent district. A weekly market formerly held here has fallen into disuse.

CHESTERFIELD, a bor. and market town of England, co. Derby, hund. Scarsdale, 20 m. N. Derby, 131 m. N.W. W. London. Pop. (1831) 5,775; but the Municipal Reform Act extended the boundaries of the town, so that the present bor. had, in 1831, a pop. of 6,777. The town, which is irregularly built, covers a considerable extent of ground, and is pleasantly situated between the

rivers Rother and Hyper, in the vale of Scarsdale. The church, a beautiful and spacious edifice of the 13th century, is remarkable for its crooked spire, 230 ft. high: an elegant assembly-room was built here a few years ago, and near the town is a race course, on which races are annually run in the autumn. "The town seems, however, to be in a depressed state, and the inhab. are supposed to be far from wealthy; there are nearly 100 uninhabited houses in it. There are two or three manufactories of silk and cotton, but they are not considerable. Just out of the bor. there are some large iron-works, but they are not at work at present; there is also a bleaching mill near the iron-works. The chief source of support for the town is the weekly market for agricultural produce, which is well attended." (*Municipal Report.*) It is governed by 4 aldermen and 12 councillors, but is not divided into wards. The lord of the manor holds a court leet in Oct., when a constable is chosen; and a court of record for the recovery of debts not exceeding 30*l*. The petty sessions for the division are held here in the town-hall, on the ground-floor of which there is a prison for debtors. Chesterfield is one of the polling places at the election of M.P. for the N. division of the co. The town is lighted under an act passed in 1825, and has a nightly watch, paid by subscription. There are various places of worship for dissenters, a free grammar-school, founded 2 Ellis., and formerly well attended, was closed in 1832. It has still, however, infant, Sunday, and national schools; several well-endowed almshouses, a dispensary, a savings' bank, a mechanics' institute, and a literary and philosophical institution. The N. Midland railway between Derby and Leeds passes by Chesterfield. It gives the title of Earl to a branch of the Stanhope family. Market-day, Saturday. Fairs, Jan. 27., Feb. 26., first Sat. in April, May 4., July 4., Sept. 25., Nov. 28., The par. of Chesterfield includes an area of 13,160 acres; and had, in 1831, a pop. of 10,688.

CHEVIOT HILLS, a ridge of hills in Great Britain, on the confines of England and Scotland, partly in Northumberland and partly in Roxburghshire. They extend from Kirknewton, in Scotland, to Carters Fell on the S., where they unite with the hills that stretch across Dumfriesshire and Galloway. The hill to which the name Cheviot is especially given, is in Northumberland, on the borders of Roxburghshire, 8 m. S.S.W. Wooler, and is 2,658 ft. in height. The Cheviot hills are mostly pointed, the sides smooth and rapidly sloping, and their bases separated by deep narrow glens. They are mostly covered with a close green sward; but in a few instances, as in that of the Cheviot itself, there are considerable tracts of heath. These hills are depastured by the valuable and peculiar breed of sheep called the Cheviots, now widely found in England and Scotland.

CHIAPA DOS INDIOS, a considerable ind. town of Mexico, state of Chiapas, advantageously placed in a valley near the Tabasco, 30 m. W.N.W. Ciudad de Las Casas. It is chiefly inhabited by Indians, whence its name, of whom there are said to be as many as 4,000 families. It is the largest town in the state, the chief trade of which it engrosses. Its principal export is logwood, which is sent down the river to Tabasco, on the Gulf of Mexico; but a good deal of sugar is also grown in its neighbourhood. Its inhab. are said to be rich. Chiapa enjoys many privileges: it was founded in 1827. (*Humboldt's*; *Thompson's Narrative*, &c.)

CHIARAMONTE, a town of Sicily, prov. Syracuse, cap. cant., on a hill, 11½ m. N.N.W. Modica. Pop. 8,112. It is regularly built, with broad and straight streets. From the Capuchin convent there is one of the finest and most extensive views in Sicily. The environs produce good wine, and the town is thriving.

CHIARI, a town of Austrian Italy, dep. Brescia, cap. distr., near the left bank of the Oglio, 15 m. W. by S. Brescia. Pop. 6,000, chiefly occupied in spinning silk, and tanning leather. The town preserves some remains of its ancient fortifications; and has handsome collegiate, and many other churches, an hospital, and a public library.

CHIARAMONTE, a town of Naples, prov. Basilicata, cap. cant., on a high mountain. Pop. 2,250. It has two parish churches, a convent, and a seminary. Its environs produce wine and silk, and there is a fine chateaux about 3 m. off.

CHIAVARI, a marit. town of N. Italy, k. Sardinia, div. Genoa, cap. prov., at the head of the Bay of Kapallo, 22 m. E.S.E. Genoa. Pop. circ. 8,000. It is "a handsome and flourishing place, surrounded by hills, the rich produce of which supplies a profitable commerce. The Genoese, from the earliest times, appreciating its natural advantages, surrounded it with a strong wall, and gave it many privileges to encourage the resort of merchants. The town, its handsome church, the bay, and the beautiful villas in the neighbourhood, deserve attention; and, as it is accustomed to the influx of strangers, the accommodations are good." (*Italy, in Mod. Trav.*) It has an hospital and many fine edifices, an agricultural society, and several lace and silk twist factories. Marble and

slate are quarried in its neighbourhood, and it has a productive anchovy fishery. (*Rampoldi, Corografia*, &c.)

CHICHESTER, a city, co. and parl. bor. of England, co. Sussex, 56 m. S.W. by S. London, 14 m. E. by N. Portsmouth, and about 1½ m. E. from the extreme N.E. angle of the bay or arm of the sea called Chichester Harbour. Pop. of city and suburbs in 1821, 7,262; 1831, 8,270. It is situated on a gentle eminence, sloping in every direction, amidst the widest part of the plain named from it. The Lavant (a small rivulet usually dry in summer) bounds it on the E. and S. Its walls, forming a circuit of about 1½ m., are still in tolerable preservation, within which a mound extends all round in the Roman fashion, planted in parts with fine elms. "Chichester is well built, lighted, watered, and drained. The principal streets are spacious, and contain many very large houses; and the whole seems active and prosperous." (*Boundary Report.*) It consists chiefly of four principal streets, diverging at right angles from a common centre, occupied by an octagonal cross, erected towards the close of the 15th century, and said to be the most beautiful of this class of structures in the kingdom. The present cathedral was built in the 13th century, on the site of an older one, founded in 1108. It is an inferior building of its class, partly in the Norman, and partly in the earlier pointed style; the tower and spire (300 ft. high) are of the 14th century, and finely proportioned. There is also a detached bell-tower, of very massive structure. It contains many ancient, and several well-executed modern monuments by Kyan; among the latter is one to the memory of the poet Collins, a native of the town. The collegiate establishment was, from the first, for secular canons, and so left unaltered at the Reformation: it consists of a dean, 30 prebends, and other ecclesiastical officers. The see comprises the entire co. of Sussex, with the exception of 22 parishes, which are peculiar: the episcopal palace is within the city walls, and has five gardens attached to it. The revenue of the see amounted, at an average of the three years ending with 1831, to 4,225*l*. a year. Except that of St. Paul, which is a handsome modern structure in the pointed style, the other churches are small mean buildings. There is a grammar school, founded in 1427; a blue-coat school, founded in 1702, in which 24 boys are boarded, clothed, and educated. The revenue in 1835 was 1,300*l*. a year, and said to be increasing; it is limited to children of members of the established church. There are also national and Lancastrian schools for boys and girls; and an infant school. There are several charitable institutions, the most ancient of which is that of St. Mary's Hospital, with a chapel attached to it. The infirmary, opened in 1827, is a handsome modern building, on the N. slope just without the city. The other public buildings are the guildhall, town-hall, market-house, and corn exchange; the buildings of the Mechanics' Institute, established in 1829, and of the Literary and Philosophical Society in 1831 (both of which are flourishing), and a small theatre.

There are no manufactures, the town principally depending on the surrounding agricultural district. Market-days Wednesday and Saturday; the former for corn, the latter for general provisions: an important cattle-market is held every second Wednesday; and a large cattle and horse fair, May 4., Whit. Monday, Oct. 10, and 20. The transit of corn through the town to the metropolis and to the W. of England is also considerable. The harbour is rather difficult of access; but at spring-tides vessels of 170 or 180 tons reach the quay, about 1½ m. below the town; but its communication with the sea is kept up by the Arundel and Portsmouth Canal, a branch from which is carried to the city. It is divided into two wards, and governed by a mayor, 6 aldermen, and 18 councillors. Chichester has returned 2 mem. to the H. of C. from the 23d of Edw. I. Previously to the Reform Act franchise was vested in the corporation and freemen and electors within the bor. The Boundary Act extended the limits of the parl. bor., which is identical with the municipal bor., so as to embrace the suburbs. Number of 10*l*. houses, in 1831, 680. Registered electors, in 1837-38, 884. Average expenditure on account of the poor, about 2,800*l*. a year. Annual value of real property, in 1815, 22,015*l*. Chichester is supposed to occupy the site of the *Regnum* of the Roman period. It was destroyed by Elia in the 6th century, and restored by his son Cissa, whence the name. Some additional importance was given to it by the removal of the see from Selwyl thither, after the Conquest. It gave the title of Earl to the Pelham family. There are annual races at Goodwood Park, the Duke of Richmond's seat, in the immediate vicinity. (*Past and Present State of Chichester*, &c. 8vo.; *Reports of Municipal and Boundary Commissioners*, &c.)

CHICACOLE or **CICACOLE**, an ind. town of Hindostan, formerly the cap. of the N. Circar of same name, on the high N. bank of the river Chicacole, 4 m. N.W. the bay of Bengal, and 50 m. N.E. Visagapatam. It is of considerable size, but irregularly built, being a collection of all sorts of houses and huts. It contains some neat

European barracks, several large bazars, and numerous mosques and other Mohammedan buildings.

CHICLANA, a town of Spain, Andalusia, 12 m. S.E. Cadix. Pop. 7,000. It is situated between two hills on one of which are the ruins of an ancient Moorish castle; has 3 churches, 3 convents, an hospital, a workhouse belonging to Cadix, a theatre, and some good private houses. It is much resorted to by the wealthy classes of Cadix, who have here country residences and pleasure grounds. The adjoining heights command a fine view of Cadix and its bay, the tale of Leon, &c. on one side; and, on the other, the ancient city of Medina Sidonia, and the plains of Andalusia, towards Algeiras and Gibraltar. The battle of Barossa, in which, after an obstinate engagement, the Anglo-Spanish army under Sir Thomas Graham (Lord Lynedoch) defeated a French force under Marshal Victor, was fought, a few m. S. from Chiclana, on the 5th of March, 1811.

CHIERI (an. *Correa Potentia*), an Inl. town of N. Italy, k. Sardinia, div. Turin, cap. mand., on the declivity of a vine-clad hill, 8 m. S.E. Turin. Pop. 10,000. It is well built, has four handsome squares, and a collegiate church said to have been originally a temple of Minerva. Its fortress, La Rochetta, was destroyed in the 16th century. It has some cotton and linen thread and woollen-cloth factories.

CHIETI, a city of Naples, prov. Abruzzo Citra, of which it is the cap., on the narrow crest of a range of hills, on the right bank of the Pescara, about 10 m. from the Adriatic, lat. $42^{\circ} 19' N.$, long. $14^{\circ} 13' E.$ Pop. 13,703. Streets generally narrow and crooked, and in many parts dark and dirty; but the houses and shops are good, and approach nearer to the standard of the metropolis than those of most provincial towns. It has a large cathedral, and 4 other churches; a lyceum, or college; a large seminary; numerous convents; a society of agriculture, arts, and commerce; an hospital; a workhouse; a *mont-de-piété*, and a handsome theatre. It is the seat of an archbishopric, of the civil and criminal tribunals of the prov.; and has manufactures of woollens, silks, &c. The surrounding country is well cultivated and fertile, and the population have an appearance of ease, cheerfulness, and activity. The Abbe Gallani was a native of Chieti, having been born here in 1728. Perhaps no foreigner ever obtained a more perfect mastery over the French language. Voltaire said of his famous *Dialogues sur le Commerce des Rûs*, published in 1770,—"Il semble que Platon et Molière se soient réunis pour composer cet ouvrage."

Chieti is very ancient, being built on the site of *Teate*, the capital of the small but not unimportant tribe of the *Marcucini*. All accounts agree in describing Teate as large, populous, and worthy of being ranked among the distinguished cities of Italy. Silius Italicus calls it *Magnam et Clarum*. And the remains of a theatre of considerable dimensions, a large public edifice, two temples, a gateway and Mosaic pavement, with numerous coins and inscriptions, evince its ancient magnitude and importance. (*Del Re Due Sicilie*, li. 333.; *Cramer's Abruzzi*, li. 5.; *Cramer's Ancient Italy*, li. 340.)

CHIHUAHUA, a city of Mexico, state of Chihuahua, of which it is the cap.; 740 m. N.N.W. Mexico, 490 m. E. Guaymas, and 500 m. from the mouth of the Rio Grande del Norte; lat. $28^{\circ} 47' N.$, long. $107^{\circ} 30' W.$ It is situated in an arid plain, on a rivulet which falls into an affluent of the Rio Grande. Pop. at one period said to have been 70,000; in 1803, 11,600; in 1835, 12,000. Streets regular; houses well built and well supplied with water, conveyed to it by an aqueduct 3 m. long. The cathedral, a very large and highly ornamented structure, was erected at an expense of 1,000,000 doll., raised by a duty on the produce of the adjoining mines. (*Pike*.) The state congress meets here in a neat building. Each deputy receives an annual salary of 2,500 doll. The town is chiefly maintained by supplying necessaries to the surrounding mining districts; and latterly from being a depot for goods to and from Guaymas. Charcoal is conveyed thither for the mines and domestic purposes from a distance of 30 leagues. There are several large monasteries in the town; but they are much diminished in their income and in the splendour of their buildings and establishments since the revolution. The country surrounding the city is occupied by extensive haciendas, or farms, in which large herds of mules, horned cattle, and sheep, are pastured. But, notwithstanding the great capabilities of the soil, agriculture is in a very depressed state, the mines being the great objects of attention. Of these the most celebrated for the quantity of the precious metals drawn from it, is El Parral, in the S.E. part of the state; but it is now in so dilapidated a condition, that the amount of capital required to re-establish it is too great to justify a well-grounded expectation of its returns being sufficient to repay the outlay. Batopilas, 80 leagues W. of Parral, was one of the most productive of the Mexican mines—a single mass of pure silver weighing 425 lbs. having been found in it—it is but feebly-worked. One of its

veins was discovered by an Indian, who, on swimming across a branch of the Rio del Fuerte after a flood, perceived the crest of a rich lode laid bare by the force of the current, the greatest part pure silver, sparkling in the sun. Santa Eulalia in the E. has long been abandoned. The mine of Mordos, near Batopilas, was discovered in 1826 by two Indians, brothers, to one of whom a little make to make tortillas had been refused on credit the evening before. In two months they extracted from it ore of the value of 370,000 doll. The mine of Jesus Maria was discovered in 1822, and nearly abandoned shortly after, on account of the difficulty of procuring provisions and other requisites. It is situated near the summit of a mountain, and is consequently extremely cold in winter, the surrounding ridges being covered with snow; the village is in a temperate valley, highly capable of agricultural improvement. All the lodes near the surface contain a considerable quantity of gold, which diminishes according to the depth, while that of silver increases proportionally. The immediate vicinity abounds with veins forming a circle, of which the village is the centre. The pop. of the plain country is almost wholly of European descent, the natives having retired before them into the mountainous recesses of the Dolos de Mapimi. Their principal tribes are the Apaches, Comanches, and Chichimeques. Major Pike says, that the corruption of morals is universal; which is only what might have been expected from the gambling nature of the pursuits in which most part of the people is engaged; the great fortunes suddenly made by some, and the poverty of the great mass of the population; the ignorance of all classes; and the debasing influence of the established religion. The other more remarkable towns in the state are San Bartolomeo, a great mart for the inland trade with the surrounding districts; El Parral, near the mine of the same name, formerly very populous, but now containing but 7,000 inhab.; and Parícuti, a small town surrounded with vineyards, near a lake of the same name. (*Humboldt's Wards Mexico in 1827*; *Pike's Exploratory Travels*; *Hard's Travels in Mexico*.)

CHILI, or 'CHILE, an indep. state of S. America, in the S.W. part of that continent, consisting of a long and comparatively narrow strip of country between the Andes and the ocean, extending from lat. $25^{\circ} 20' N.$ to $42^{\circ} S.$, and between long. 70° and $74^{\circ} W.$; having N. the southern extremity of Bolivia, E. the territ. of La Plata, S.E. and S. Patagonia and the Gulph of Ancond, and Strait of Chucuno (which separates it from the Archipelago of Chiloe), and W. the Pacific. Length N. to S. 1,150 m.; average breadth between 110 and 120 m. Area, with Chiloe, perhaps nearly 130,000 sq. m. Pop. has at different times been variously estimated from about 600,000, (*Miers, &c.*), to 1,500,000 (*American Abnanc*, 1840), but 1,200,000 is probably not far from the mark. This extent of territory, however, includes the country of the Araucanians, extending between lat. 37° and $39^{\circ} 50' S.$, and inhabited by a race of people never subdued by Europeans, for which a deduction of 20,000 sq. m. from the above area must be made. The provs. under the Chilean government, their extent, pop., &c., may be thus estimated—in the absence of any recent official statements—on the authority of Poeppig, the Weimar and American Almanacks, the *Geog. Journ.*, &c.

Provinces.	Area in sq. m.	Pop.	Ch. Towns and Pop. (Amer. Alms.)
Coquimbo	38,000	-	Coquimbo 10,000 inhab.
Aconcagua	8,900	-	San Felipe 5,000
Santiago	8,500	-	Santiago 65,000 (1820)
Colchagua	8,600	-	Valparaiso 20,000
Maule	8,700	*101,150	Concepcion 2,000
Concepcion	10,000	*102,000	Concepcion 10,500
Valdivia	14,000	86,700	Valdivia 7,000
Chiloe	5,000	44,000 (1832)	San Carlos 2,000
Indep. Araucania	28,000	(uncertain)	
Total	119,700	1,300,000	

Besides these territories, the islands of Juan-Fernandez, Mocha, and some others in the Pacific belong to Chile. *Topography*.—The country rises successively from the coast to the Great Cordillera of the Andes; but not by a number of successive terraces running parallel to each other and to the sea, except in the N. "Elsewhere, the surface," as Mr. Miers says, "is not formed by a series of table heights, reaching from the sea to the foot of the Cordillera; but it is a broad expansion of the mountainous Andes, which spreads forth its ramifications from the central longitudinal ridge towards the sea, diminishing continually, but irregularly, till they reach the ocean. . . . These mountain branches are of considerable height, being seldom less than 1,000 ft., and more generally 2,000 ft. above the bottom of the valleys which intersect them: it may, therefore, be readily conceived that there is but little level country be-

* The amounts marked thus, are the pop. of the S. provs. in 1827, according to Poeppig.

then the smaller branches of these chains; the more valuable portions were formed by the beds of the rivers now comparatively small, although there is evidence of their having been once the courses of greater streams. Some of those valleys present broad expansions of surface, such, by way of illustration, as that portion of the country called the Valley of Aconcagua. These are the patches which constitute the finest and best portions of the middle portion of Chile." (*Miers's Trav. in Chile*, &c., i. 378, 379.)

The Great Cordillera of the Andes has in S. Chile a mean elevation of 18,000 or 14,000 ft. above the level of the ocean; but it presents many peaks which rise to a considerably greater height. These peaks, most of which are volcanic, begin to be numerous beyond lat. 30°, and increase in number as we proceed farther S. The principal one is that of Aconcagua, about lat. 32° 10', which has been proved to be at least 23,300 ft. in height (*Capt. Fitzroy's Paper in Geog. Journ.*, vii. 143.), and therefore ranks third among the mountains of S. America. At intervals it is an active volcano. W. of 33° 30' the Cordillera is divided into two separate ranges, enclosing the immense valley of Uspallata, so celebrated for its mineral riches, and other valleys. The principal road across the Andes—from Santiago and the Vale of Aconcagua to Mendoza—crosses Uspallata; several other passes from Chili into the La Plata territories exist farther S. (See Andes.) Between the ramifications of the mountain chains and the sea some small plains line the coast. The shores are mostly high, steep, and rocky, as is general along the whole of the W. coast of S. America. They have almost everywhere, however, deep water near them, and there are many tolerable harbours, the best being those of Valdivia, Concepcion, Valparaiso, and Coquimbo, though some are safe only during certain seasons of the year. The rivers of the middle and S. provs. are sufficiently numerous, but they are all small. The N. part of the country is scarcely watered by any; and "from Mayo to Atacama, a distance of 1,000 *geog. m.*, all the rivers and streams together would not form so considerable a body of water as that with which the Rhone enters the Lake of Geneva, or as that of the Thames at Staines." (*Schmidtmeier's Trav.*, p. 28.) The rivers retain pretty much the same quantity of water throughout the year; they are not augmented much at any particular season by the melting of the snows, since, while in the summer the snow on the upper mountain ranges melts, that on the lower heights liquefies even in the winter. They are generally unfit for the purposes of trade. In the N. there is no stream navigable for laden boats for more than 6 m. inland: In the middle provs. the Maule is the only one which brings of 150 tons burden can enter at high tide, and these cannot ascend far; and in the S. the Callacala, or river of Valdivia, is the only one capable of being entered with safety by ships carrying 60 guns. Some lakes, or rather lagoons, are scattered over the country; they are most numerous in the S., and in the prov. of Valdivia and in Araucania are of some size. A few are 60 or 70 m. in circumference.

Climate is equable and healthy: epidemic diseases are rare. The interior is hotter than the coast: in the former, during Jan. and Feb., the thermometer often rises to 90° and 95° Fahr. in the shade; on the latter, at the same season, it rises to about 85° in the day, and sinks to 70° or 75° in the night. At Santiago the mean summer heat from December to March at mid-day is about 84°, and at night 58°. A cool and pleasant breeze arises at sunset. Winter begins in June. No snow falls on the coast, and frost is rare; on the Andes the snows remain from June to November. About April the rains set in, and fall at intervals till Aug.; but this is only in the S. provs. N. of Santiago the rainy season is limited to a few occasional showers, and in the arid prov. of Coquimbo no rain whatever falls, the want of it being occasionally supplied by heavy night dews. The N. provs. being at a distance from the volcanoes of the Cordillera, were apparently not so subject to earthquakes, especially to earthquake shocks. Shocks are felt in some parts almost daily; and the country is continually desolated by them. In 1819 the town of Copiapo was totally destroyed; and in 1835 Concepcion, and other towns on the coast in the middle provs., were nearly ruined by an earthquake. (*Miers*, i. 378—399; *Schmidtmeier*, p. 23, &c.; *Campbell's Geog. Journ.* vi. 1; *Molina*; *Voyage of the Adventure and Beagle*, &c.)

Geology, Minerals, Soil, &c.—According to Schmidtmeier, the high chain of the Andes is chiefly composed of argillaceous schist, while the lower chains and mountain groups are principally granite. Silicite, basaltic, and felspar porphyries, serpentines of various colours, quartz, hornblende, and other sates, pudding-stones, gypsum, abound in the Cordillera, and fine statuary marble is said to abound in the department of Copiapo. Chili is extremely rich in metals: silver is found there at a greater elevation than any other metal; it is also met with in the valleys or bowls in the lower ranges, but, ge-

nerally speaking, its quantity decreases in proportion to its distance from the Andes. Gold is most frequently situated at a much less elevation than silver; it is found chiefly in the "bowls," and perhaps few of the lower mountain ranges throughout Chili are without it. Most, or perhaps all the rivers, wash down gold. The copper mines are one of the chief sources of national wealth. Lead and iron are found in abundance, but neither is much sought after. Zinc, antimony, manganese, arsenic, tin, sulphur so pure as not to require refining, alum, salt, and nitre, are plentiful. Coal mines have been opened near Concepcion: the coal improves with the depth of the mine, and has already become a considerable article of trade and consumption at Valparaiso. The soil of the N. provs. is sandy and saline; and in the opinion of Mr. Miers, not 1-50th part of the N. half of Chili can ever be cultivated. Some of the valleys in the central provs., as that of Aconcagua, present broad and fertile expansions of surface, and others, being considerably inclined, admit of irrigation being water can be procured; but the hilly parts, and the steep and parched during the greater part of the year, are incapable of culture. S. of the river Maule, however, the proportion of cultivable land is larger, the soil becoming progressively more stiff and loamy. (*Miers*; *Schmidtmeier*.)

Vegetable Products.—Fertility increases in proportion as we proceed S. *Capt. Basil Hall* observes: "At Concepcion, in the S. of Chili, the eye is delighted with the richest and most luxuriant foliage: at Valparaiso, which lies between 100 and 300 m. farther N., the hills are poorly clad with a stunted brushwood, and a faint attempt at grass, the ground looking everywhere starved and naked; at Coquimbo even this brushwood is gone, and nothing is left to supply its place but a wretched sort of prickly pear bush, and a scanty sprinkling of wiry grasses. At Guasco, there is not a trace of vegetation to be seen, all the hills and plains being covered with bare sand, excepting where the little solitary stream of water, caused by the melting of the snow amongst the Andes, gives animation to the channel which conducts it to the sea. The respective latitudes of these places are 37°, 33°, 30°, and 28°." (*Hall's Extracts from a Journal, in Constant's Misc.* iii. 9, 10.) Extensive forests cover Araucania and the S. provs. The flanks of the Andes also exhibit a profuse vegetation. The *Mimosa farinosa* flourishes over most of the country, and the algarob is nearly as common. The *quillat*, the bark of which produces a natural soap, is brought to the towns as an article of trade; laurels, myrtles, cypresses, and other evergreens, grow to such a size as to be highly useful for their timber. Most European fruits flourish, but tropical plants are few. *Schmidtmeier* observes, that the numerous groves of palm and cinnamon trees, spoken of by Molina, have disappeared since his time. Chili produces many hard woods, which, in a great measure, supersede the use of iron in the country, and Mr. Miers says that "the herbaceous plants and flowers are so rich, various, beautiful, and novel, that to a botanist no treat can be greater than a journey through the Cordillera."

Animals.—The cougar or puma, the jaguar, llama, guanaco, numerous monkeys, and other wild animals common to this continent, inhabit Chili. A kind of beaver (*Castor hudsonicus*) frequents the rivers, and the *chinchilla* abounds in the desert country of the N.; both are hunted for their fur, which is much prized. The great condor, several vultures, pelicans, and many other water fowl, flocks of parrots, paroquets, &c., are among the birds; whales, dolphins, cod, pilchards, &c., are caught around the coasts. The skunk, which, when pursued, emits an intolerable odour, is a native of Chili; but in other respects this country enjoys a singular freedom from annoying or venomous quadrupeds, noxious insects, reptiles, &c. (*Miers*, vol. i.; *Schmidtmeier*; *Malte-Brun*; *Dict. Glog.*)

Agriculture and Cattle breeding.—The climate and soil of the S. and central parts of Chili are highly suitable for the culture of European grains. S. of lat. 30°, the limit at which they cease to attain perfection, varies from 2,700 to 5,300 ft. above the ocean (*Poey*); but at the height of 3,000 ft. the harvests are extremely good. Only the middle provs., however, produce sufficient corn for exportation, after supplying the wants of their inhab. Aconcagua is by far the best cultivated prov., and that which exports most corn. Its produce goes chiefly to the market of Valparaiso. Wheat is the staple, and in the N. almost the only grain cultivated. Barley is grown in the S.; maize, buckwheat, and oats are but little raised, and rye is unknown. Kidney beans are exported to Peru, and occasionally to Brazil; all kinds of pulses are common; and potatoes are extensively cultivated, though they fall in flavour. Culinary vegetables are raised, especially near the towns. Water melons are very fine, and gourds of a good flavour are produced in great abundance; the latter are appendages to every Chilian dish of boiled meat. Hemp of good quality is grown chiefly in Aconcagua. The sugarcane has been tried, but does not succeed. Rice and

cane are imported. At Quillota there are some good gardens: in Aconcagua prov. the vineyards and olive grounds yield an abundance of good fruit; and in that of Concepcion, which was once celebrated for its wine, the vineyards are still extensive, and the grapes fine-flavoured. Elsewhere, according to Poeppig (*Reise in Chili*, i. 125-127.), both orchard and garden cultivation is in the back-ground. The olive crops are good, but the oil is ruined by a bad mode of treatment, and rendered unfit for European markets. Little care is taken in the culture of the corn. The art of agriculture is greatly in arrear. The plough, which is everywhere alike throughout the country, consists of only a part of the trunk of a tree, with a crooked branch which serves as a handle, the forepart of the trunk being wedge-shaped, and having nailed to it "a somewhat pointed flat plate of iron, which performs the necessary operation of coultter and share, neither of which were ever heard of by the natives." (*Miers*.) The yoke is fastened not to the shoulders, but to the horns, of the oxen, according to the approved ancient Spanish method. The substitute for a harrow is a heap of bushes weighted down with stones; the turning up of the soil by spade digging, and the use of the English hoe are unknown; and what little weeding is practised is performed by the hand or the blade-bone of a sheep. And these miserable expedients are resorted to while iron exists in profusion in the country, and furnaces are constantly at work! Lands are cultivated until worn out, with the interval of a fallow every 4 or 5 years; no manure is used. The productiveness of the soil in Chili appears to have been formerly much overrated. Mr. Miers observes, that a piece of ground recently cleared "may produce to the extent of 100 or even 200 fold during the first year; but such lands are now scarce in the cultivated parts of Chili;" and the average of the wheat fields may be from 8 to 12, or of the best crops, from 12 to 20 fold. (*Miers*, i. 371.) Reaping is performed by means of a rough sickle; and the corn, in quantities of about 100 or 150 quarters at a time, thrashed out in a hard dry spot of ground, by being galloped over by horses. It is then generally left in the open air for some months, not being housed till the rainy season begins.

Few farms are wholly arable, and such as are to be so are small and situated in narrow valleys. Cattle breeding is the most important branch of rural industry. In the middle provs. the *haciendas*, or farms, feed often from 10,000 to 15,000 head of cattle, in some cases as many as 20,000; and on the smallest grazing farms from 4,000 to 5,000 head are reared. The black cattle in some parts are strong and bony, but in the N. small: they are dull, and neither the beef nor milk they yield is very good. The horses of Santiago are said to be excellent, well broken, and more docile than those of Buenos Ayres. Those of the country generally are well made, and gallop, though they do not trot, well. Schmidtmeyer says (*Trav.* p. 98.) that they are "so strong and hardy as to be able to carry their riders above 80 m. a day at a gallop, with very little rest, and no other food than lucerne grass!" The mules and asses are of a good size, hardy and strong; the former are the general beasts of burden, and are especially used in travelling across the Cordillera. Goats are plentiful, being more fitted than sheep for the pastures of Chili. The sheep are said to be very inferior, and both the mutton and wool bad. Hogs are not very good, and very little of their flesh is consumed. In the dry season the cattle are often reduced to great straits for want of food. (*Poeppig*, i. 121-129.)

After its conquest by the Spaniards, Chili was divided into 360 portions, which were given to as many individuals; and though by the Spanish law of succession these portions have been, and continue to be, subdivided frequently, most estates still remain very large. The proprietors of these large grazing estates usually reside with their families in the towns, and keep on their farms a *major-domo* or steward, under whom are a head and a few subordinate herdsmen, and these are assisted sometimes by a few tenants who hold their dwellings under the proprietor by a kind of feudal tenure, being obliged to give their services in any kind of labour that is required of them, without pay, or for a very small remuneration. Land is never leased out to the agricultural tenants, but from year to year; the latter have neither oxen for ploughing, mares for thrashing, nor capital to get in their crops; and all these, and all other kinds of assistance, come from the proprietor, who is repaid out of the produce of the land, which he besides generally buys up at two-thirds or half what the former might sell it for, could he command the necessary funds to harvest it. The cultivator, in short, is rather worse off than the day-labourer, and is even in the habit of hiring himself out as such at times to recruit his means. He is destitute of most comforts, can seldom read or write, nor has any means within his reach of educating his children. The moment his harvest or the produce of his garden is reaped, the landlord greedily enforces his right to the stubble and pasture for the benefit of his cattle, and large

droves are even frequently turned in before the produce is cut, either utterly destroying the crops, or obliging them to be gathered half ripe. The tenant is scarcely ever allowed to build his hut on cultivated grounds, to enclose his rented land with fences, or to possess any cattle; and a multitude of other arbitrary practices tend to keep the peon in that state of servitude in which it is the object of the proprietor to retain him. (See especially *Miers*, i. 341-356.)

Fisheries.—The coasts present good fishing ground, and with good boats, good nets, and good government regulations, the Chilians might be made tolerable fishermen; but, owing in part to some ill-advised measures adopted by the government, Mr. Miers affirms that in his time the fishers were the most abandoned, lazy, and worthless class in the country. They seldom fish more than a mile from shore, using only canoes of the rudest possible construction, or rafts supported on large seal-skin air-bags, both urged onward by means of a double-bladed paddle, used first on one side and then on the other.

There are mostly in the prov. of Coquimbo, dep. Copiapó, which, in 1830, contained 163 mines; of them, 75 were of copper, 24 of silver, and 3 of gold. The quantity of gold produced throughout Chili in that year was 410 marcs. The average annual produce of silver at the same period, in the dep. above named, is stated by Meyen (*Reise um die Erde*) to have been about 600 marcs, and that of copper 10,000 quintals, 6,000 of which came from the mines of Checo, which were worked by an English company. A great increase in the produce of the mines, within the short space of 4 years, is apparent from the following table:—

Account of the quantity of the precious metals derived from the mines of Chili in 1834 (*Cons. Returns*):—

Metal.	Coincd.		Exported.		Total.	
	marcs.	oz.	marcs.	oz.	marcs.	zoll.
Gold	3,940	2	11	7	3,952	1 worth 525,251
Silver	5,405	0	159,550	1	164,955	1 = 1,464,416
Copper	quint.	lbs.	quint.	lbs.	quint.	lbs.
Copper ore	-	-	77,365	2	77,365	2 = 1,081,710
	-	-	36,350	34	36,350	34 = 66,791
Total value					5,118,149	

It is a common saying in Chili, that "a diligent man who works a copper mine is sure to gain; that he who opens one of silver may either gain or lose; but that if the mine be of gold, he will certainly be ruined." This is probably owing in great part to the circumstance of many mines having been opened or wrought by persons without capital, who are very soon obliged to suspend their operations; land carriage being difficult and laborious, and fuel, water, and fodder very scarce in those districts, which are the richest in ore. The mines are mostly wrought by two parties, one the proprietor of the mine, who supplies the labour, the other the *habilitador*, who advances the capital. The proprietor, who usually resides on the spot and superintends the works, is seldom wealthy enough to conduct them on his own resources, and it is generally the *habilitador*, or moneyed individual, who resides at the port where the metal is shipped, who alone derives any ultimate benefit from the mine. (*Meyen*; *Hall*; *Schmidtmeyer*; *Geog. Journal*; *Miers*, &c.)

Manufactures, Trade, &c.—The Chilians are good potters, and make light and strong earthenware jars, which ring like metal. Hempen cloths, indifferent hempen cordage, soap, copper wares made in a very rough manner, leather, brandy, tallow, and charcoal, are amongst the chief articles manufactured. The rest are mostly domestic, and conducted by women.

Chili is supposed to be the only American state, formerly subject to Spain, whose commerce has increased since the separation from the mother country. This increase has been very rapid of late years. According to an official report, in the year 1833 from 19,000 to 20,000 packages of foreign goods were deposited in the free bonding warehouses; the number in 1834 had augmented to from 70,000 to 80,000. The customs collected from 1835 to 1839, were, at an average, 888,670 dollars a year; and in 1834 they amounted to 1,841,080 dollars. Several new public warehouses have been built at Valparaiso. Most of the foreign trade is with Great Britain, the imports from which, consisting chiefly of cotton and woollen goods, hardware, iron, &c., amounted, in 1835, to 608,176*l.*; 1836, 861,903*l.*; 1837, 625,544*l.*; and 1838, 413,647*l.* A considerable share of the goods imported from Britain is subsequently sent to other parts of America. Linens, &c. are imported from Germany; silks, paper, perfumery, leather, wines, and brandy, from France, to the value of 1,000,000 dollars; silks, nankeens, tea, sugar, &c., from China and the E. Indies; tobacco, sugar, molasses, oil, sugar, and manufactured goods, from the U. States, to about 2,500,000 dollars; dyes, coffee, sugar, cacao, tobacco, cotton, rice, salt, and spirits, from

Peru and Central America; cotton, Paraguay tea, and European goods, from La Plata and Brazil, &c. The exports are chiefly bullion—copper, hides, tallow, pulse, wheat, fruits, drugs, and European goods re-exported to Peru, Bolivia, and Central America. Valparaiso is the chief port, and centre of the foreign trade; in 1835, 436 trading vessels, of the burden of 85,490 tons, entered its harbour; of these, 93 were British, 73 American (U. S.), 44 French, and 150 Chilian; the burden of the last amounted to 18,490 tons.

Few accommodation exists for internal commerce. The only towns of any importance, except the cap. Santiago, viz. Valparaiso, Coquimbo, Concepcion, and Valdivia, are near the sea, and at a great distance from each other; and, except between Valparaiso and Santiago, the latter city and Talca, there were no roads passable by carts in Miers's time. Poeppig says that there are but three or four bridges of any size in all Chili, and these have been mostly ruined during the war. The mountain torrents and ravines are crossed in some places by Indian hanging bridges made of osiers and thongs of raw hide, which sometimes sway from side to side, with the weight of the person crossing them, in a terrific manner.

The attention of the government is, however, turned towards public works. Canals are projected in the S. provs., and new roads in the N., as well as new ports to facilitate the exportation of the produce of the interior districts.

The coins, weights, and measures in use, are similar to those of Spain. (*Poeppig*; *Miers*; *Parliam. Tables*, 1836; *Hall*; *Commerc. Dict.*, &c.)

Public Finances.—The public revenue, which, in 1831, amounted to 1,517,587 dollars, has since been progressively increasing in amount, and in 1836 amounted to 2,175,000 dollars. The state expenditure in the same year amounted to 1,840,304 dollars, leaving a surplus of upwards of 330,000 dollars. According to subsequent accounts, the produce of the revenue in 1838 was, in round numbers, 2,375,000 dollars, and the expenditure, 1,150,000 dollars. Ever since 1835 there has been a surplus of the revenue over the expenditure.

Government, &c.—Chili is a republic under a president, elected for a term of years. It has a congress of 56 members elected by the different provs. The executive power is in the hands of the president, and a council of 4 ministers.

The national religion is the Roman Catholic. The clergy are not numerous; they are subordinate to the bishop of Santiago. Other religions are tolerated; but the exercise of their public worship is not allowed.

People—are mostly of Spanish and Indian descent, but there are some negroes and mulattoes. "The Chilians," says Mr. Miers, "though they may be said to possess in no degree a single virtue, have the credit of possessing fewer vices than other creoles; there is a passiveness, an evenness about them approaching to the Chinese, whom they strongly resemble in many respects: even in their physiognomy, they have the broad low forehead, and contracted eyes; they have the same cunning, the same egotism, and the same disposition to petty theft." (*Travels*, ii. 228, 229.) They are moderate in their food, but frequently very dissipated and profligate in their habits, and in the towns very fond of dress and display. Highway robbery is rare, and so are murders in the country, but not in the towns. Education, or any taste for the fine arts, have hitherto made but little progress. (*Miers*; *Schmidmeyer*, &c.)

History.—Previously to the Spanish conquest, Chili belonged to the Incas of Peru. In 1535 Pizarro sent Almagro to invade the country, and in 1540, Valdivia; the latter of whom conquered most of the country excepting Araucania. The revolution which separated the colony from Spain, broke out in 1810; from 1810 to 1817 it was kept under by the royalist forces; but in the latter year the victory of Maypú, gained by San Martín, permanently secured the independence of Chili, and opened for it a career, which promises a high state of national prosperity, unless prevented by internal dissensions. (*American Encycl.*; *Dict. Geog. Univ.*, &c.)

CHILKEAH, an inn, town of Hindostan, prov. Delhi, on the borders of the Kumaon distr., 110 m. N.E. Delhi, lat. 29° 24' N., long. 79° 5' E. It is a chief mart of trade for the W. provinces, with Kumaon, Tibet, Tartary, &c., but is abandoned on the approach of the unhealthy season, when dangerous malaria prevails.

CHILLAMBARAM, a marit. town of S. Hindostan, prov. Carnatic, 34 m. S. Pondicherry, and a short distance N. the mouth of the Coeleroon river, lat. 11° 28' N., long. 79° 47' E. In its vicinity there are some celebrated Hindoo temples, of considerable antiquity. Some years since an extensive indigo manufactory was carried on at Chillambaram. (*Hamilton's E. I. Gaz.*, i. 389.)

CHILMARRY (*Chalamarti*), a town of Hindostan, prov. Bengal, distr. Rungpore, on the Brahmaputra, 35 m. S.E. Rungpore. A festival is annually held here, which is usually attended by 50,000, and sometimes by 100,000 Hindoo pilgrims and others.

CHILOE (ISLAND AND ARCHIELAGO), a large island in the S. Pacific, near the S. coast of Chili and the N.W. coast of Patagonia, between lat. 40° 48' and 49° 50' S., and having on its E. side 68 small islands, 86 of which are inhabited; the whole, including the town of Maulin on the main land of the continent, forms the most S. prov. of Chili. Shape of Chiloe, oblong; length, N. to S., 120 m.; average breadth, 40 m. Area, 4,800 sq. m. Pop. (1832), with its accompanying islands, 43,830. It is mountainous, and covered with wood, chiefly a bastard cedar, very durable, and exported in great quantities to Peru and Chili. There are several good harbours, in all of which vessels of any size may anchor with the greatest safety; and in those of St. Carlos (the cap. in the N.E. part of the island), and Castro, ships ride quite land-locked close to the shore in good holding ground. Climate healthy, but damp; at an average, ten months of the year may be called rainy. Cold, however, is not severe; water seldom freezes, and a fall of snow is unknown. Little ground is cleared; the soil is rich, though never manured; it consists of dark mould and fine loam upon chalk, and produces good crops of wheat, potatoes, fruit trees, especially apples, which yield a large quantity of cider, &c. Wine is prohibited, and spirits are rarely seen. Tobacco, being a government monopoly, is very dear; and Captain Blankley, in 1834, purchased for one pound of it, "13 fowls, 3 bags of potatoes, 4 dozen eggs, and half a boat-load of oysters." Domestic animals are largely reared. In 1833, there were 100,000 sheep and lambs, 6,000 goats, 8,800 black cattle, and 6,500 horses. The sheep are bred solely for their wool, and are never eaten. The island swarms with hogs, and the hams of Chiloe are celebrated in S. America. Poultry and fish are very abundant. Principal exports—planks about 360,900, and hams 7,800 annually; brooms, hides, woollen cloths, &c., to the value of about 25,000 dollars a year. Between 1827 and 1834, 98 Chilian trading vessels, burden 12,693 tons, and 3 foreign vessels, burden 7,781 tons entered the port of St. Carlos; the archipelago possesses about 1,500 coasting vessels. Money is here nearly unknown, and traffic is conducted by barter, or payment in indigo, tea, salt, or Cayenne pepper. All these articles are much valued, especially the first for dyeing woollens, for the weaving of which there is a loom in every house.

The archipelago sends 1 mem. to the Chilian congress. The whole cost of the government, including expenses of fortresses, &c., is no more than from 30,000 to 40,000 dollars a year. The public revenue is chiefly derived from a tithe on all produce, paid in kind. There are numerous churches and chapels, but few priests. In 1832, there were 31 government schools in the island, with 1,270 pupils. The chief towns are San Carlos, which is fortified and has about 2,000 inhab., Castro, and Maulin. A good road, 54 m. long, runs between the two former towns. According to Captain Blankley, the golden age would seem to be revived in this part of the world. "Murders," says he, "robbery, or persons being in debt, are never heard of; drunkenness is only known or seen when European vessels are in port: not a private doorman in the towns of the country has a lock on the doors, and the prison is in disuse. The inhabitants are passionately fond of music and dancing. Chiloe was the last possession held by Spain in the Pacific: it has belonged to Chili only recently. (*Blankley*, in *Geogr. Journal*, iv. 344–361; *Voyage of the Adventurer and Beagle*; *Poeppig*, &c.)

CHILTERN HILLS, a ridge of chalk hills in England, traversing the co. of Bucks, and reaching from Tring, in the co. of Hereford, to Goring, on the Thames in Oxford. Wendover Hill, in Bucks, the highest part of the range, is 906 ft. above the level of the sea. Camden says that these hills were once the seat of a Druidical temple, which were a receptacle for thieves till they were cleared by the abbot of St. Alban's. (*Gibson's Camden*, i. 337.) An office, called the stewardship of the Chiltern-hundreds, was established at a remote period. Whatever were formerly its duties, they have long since ceased; and it is now nominal only, being kept up to afford means of the H. of C. an opportunity, by accepting it, of vacating their seats.

CHIMBORAZO, one of the highest summits of the Andes, which see.

CHINA (EMPIRE OF), a vast country of S.E. Asia, between lat. 20° and 56° N., and long. 70° and 140° E. in form nearly square, being bounded on the E. and S.E. by those arms of the Pacific Ocean known as the Gulph of Tartary, the Sea of Japan, the Yellow Sea, the Strait of Formosa, the Chinese Sea, and the Gulph of Tonquin; on the land sides by Tonquin, Laos, and Birman; S.W. and W. by independent Tartary; and N. for the immense extent of 3,800 m. by Asiatic Russia. Its extent from the borders of Kokhan and Budukhan to the sea of Okhotsk is 2,350 m., and its greatest width from the frontiers of Dauria N. to Tonquin S. is 2,100 m., including altogether a space of about 5,800,000 sq. m. Thus, the Chinese empire includes all the table land

of Eastern Asia—about a third part of the whole continent—or a little less than a tenth part of the habitable globe; and contains within its enormous area, the largest amount of population and of wealth united under one government in the world. The coast line has an extent of above 3,350 m., and the total circumference of the empire is about 12,580 m.; but more detailed particulars of the surrounding possessions of China must be sought in the articles ASIA, TIBET, MONGOLIA, MANCHOURIA, Islands of HAINAN, FORMOSA, TAIWAN, &c.; our business in this place being entirely with China Proper.

CHINA. 9.—The area of China Proper does not exceed a fourth part of the whole empire. It is true that its dimensions have not been satisfactorily determined, and it will be seen that our estimate of the extent of the empire, as well as of China Proper, differs from the calculations of preceding geographers; which, indeed, widely disagree with each other, except where the mistakes of one writer have been copied by another. To determine its extent 17 linear measurements have been made; two upon native maps, which have been carefully compared with European maps, and the result in reference to China Proper stands thus:—for its length, from N. to S., 1,474 m.; breadth, from W. to E., 1,355 m. But these are not the longest straight lines that may be made to intersect its surface; since, from the N.E. corner to the frontiers of Birmah, the distance is 1,669 m., and from the N.W. extremity to the Isle of Amoy, it is 1,587 m. The entire area contains 1,348,870 sq. m.† The coast is upwards of 2,500 m. in length, while the land frontier occupies a space of 4,400 m. Thus, China Proper is about 8 times the size of France, and 11 times that of Great Britain (*Stannan*). (*Nat. Geog. Chin. Native*; *Ogilby*, i. 7, and *Map*; *Du Halde's General and Particular Maps*; *Lord Macartney's Do.*; *Arrowsmith's Atlas*, pl. 27. 29. 32. 33.; *Gutsclaf's China Opened*, i. 21.—57.)

General Aspect.—Great Plain.—The first object that invites attention in the general aspect of China is its *Great Plain*, which, occupying the N.E. part of the country, is above 700 m. in length, and varies in width from 150 to near 500 m. The entire area incloses no less than 6 provinces, and a space of 210,000 sq. m., being 7 times greater than the plain of Lombardy. It is extremely populous; and if we might depend upon the census of 1813, no fewer than 170,900,000 "mouths"—the Chinese expression for souls—are fed upon its surface! The N. portion, bounded by the great wall, is dry and sandy, and is E. portion, bordering on the sea, and between the two great rivers the Hoang-ho and the Yang-tse-Kiang, by which it is intersected, is low, swampy, and studded with lakes. But notwithstanding these deductions, it may be said to be, on the whole, extremely fertile. It has few trees, but is every where well watered; it is cultivated with the utmost care, and produces vast quantities of rice, with cotton, wheat, &c.

Mountains and Hills.—The mountainous and hilly districts of China comprise about half its area. A portion of the great mountain system of E. Asia entering this country at its N.W. and S.W. frontiers, subdivides previously to its termination near the sea-coast into low hills; so that, tracing their course backwards from E. to W., they gradually ascend in terraces or slopes, and give to the S. and W. districts a mountainous, and to the E. divisions a hilly character. N.W., at about 34° N. lat., and 102° E. long., the great Pe-ling range, which has already traversed a portion of Tibet from W. to E., is joined by the Yun-ling chain, which entering China at about 31° N. lat., and 101° E. long., descends southward nearly to the prov. of Yun-nan. These mountains form the easternmost edge of the high table-lands of E. Asia, are snow-capped, and inaccessible to the natives; being actually lost blank in the Chinese maps. (*Davis*, i. 131.) Another ridge, joining the Pe-ling at the same point, takes an opposite or N.N.E. direction, and entering the empire in the prov. of Shen-se, reaches nearly to 110° of E. long. Another arm of the Pe-ling—the Ta-pa-ling chain—intersects the country from W. to E. to about 115° E. long.; the Pe-ling itself continuing in its former

course, gives out various branches which traverse the central provinces. The other mountain chains join the stupendous Himalaya ridges, and enter the country at its S.W. extremity in the province of Yun-nan, from whose high table lands the most extensive Chinese ranges rise. The Yun-ling, the most southerly of these chains, runs nearly E. into the prov. of Quang-tung. But by far the most important mountain range is the Nan-ling which branching off from the northern edge of the Yun-nan highlands, runs eastward to within 180 m. of Canton; it then inclines to the N.E. to its termination near the harbour of Ning-po; having given out many branches, some of the mountains belonging to which rise above the snow-line. (*Macartney's Embassy*, pp. 207. 246. 259.; *Barrow*, ii. 241., iii. 29. 132.; *Malte-Brun*, ii. 554. 555.; *Davis*, p. 130. 131.) Most of the mountains here enumerated end in low hills in the eastern provinces, which consequently comprise the *hilly districts*. These are the most picturesque portions of China; and being covered with noble forests, crowned with pagodas, and with cities along their sides, give to the country a magnificent aspect, without interrupting its culture.

Rivers and Lakes.—It is to the mountain rivers that China is chiefly indebted for that fertility which is at once the source of her riches, and of her vast population. The Hoang-ho, or yellow river, and the Yang-tse-Kiang, or "son of the ocean," rank in the first class of rivers. "These two great streams, similar both in rise and destination, descend with rapidity from the great table lands of central Asia, and each of them meets a branch of mountains which forces it to describe an immense circuit, the Hoang-ho to the N., and the Yang-tse-Kiang to the S. Separated by an interval of 1,100 m., the one seems inclined to direct itself to the tropical seas, while the other wanders off among the icy deserts of Mongolia. Suddenly recalled as if by a recollection of their early brotherhood, they approach one another like the Euphrates and Tigris, in ancient Mesopotamia; where, being almost conjoined by lakes and canals, they terminate, within a mutual distance of 110 m., their majestic and immense course." (*Malte-Brun*, ii. 556.) The waters of the Hoang-ho bring down from its sources large quantities of yellow clay, which not only tinge them with that colour; but supply the banks with alluvial soil. Large deposits of this clay are constantly being made at the mouth of the Hoang-ho; so that the depth of the Yellow Sea has sensibly diminished. The Yang-tse-Kiang, is, however, the pride of China. It is the chief artery of the country, and undoubtedly one of the largest rivers of Asia. This stream is also heavily charged with alluvium, for at its exit into the sea—near which it is from 15 to 20 m. broad—continued deposits have formed the l. of Tsung-ming, besides numerous banks. The tributaries received into this river during its course, which is about 2,300 m., are innumerable: and, with the canals, connect it with the whole empire. Both the rivers, especially the Hoang-ho, which has a very rapid course, occasionally overflow their banks, and in spite of many strong artificial mounds, cause the most destructive inundations. The river next in importance is the Hu-ho, or Yun-ling river, which flows E. till it joins the Pe-ho, or Pekin river; the latter rises in the mountains N.W. of Pekin, near which city it becomes navigable for boats; and is, during the rest of its course, the most populous stream of a country where a large proportion of natives live upon the water in junks: their united waters flow into the sea in the most W. angle of the Pche-lee gulph. The Ta-si-Kiang, Choo-Kiang, or Canton river, rising in the prov. of Yun-nan, takes an E. course to the plains of Canton, and having received the Fe-ki-ang, the Ta-ho, and other smaller streams, forms an estuary known as the Bocca Tigris, by which it is finally discharged into the China Sea, after a course of 600 m. There are a vast number of other rivers, some of which fall into the sea, and others into the great lakes. The Brahmaputra, Iravaddy, Taluen, Menam, &c., have their sources in the S.W. parts of China. (*Journal Royal Geogr. Soc.*, iii. 305.; *Lindsay's Voyage in the Lord Amherst*, passim; *Gutsclaf's Voyage*, passim; *China Opened*, i. 29. and 61.—168.; *Malte-Brun*, ii. 555.—557.)

The principal lake in China is the Tunting-hoo, 220 m. in circ. It receives the waters of many considerable rivers, and furnishes an important affluent to the Yang-tse-Kiang, which passes near its N. extremity. After a further course of between 500 and 300 m., this great river receives the surplus waters of the Po-Yang-hoo lake, which also is of great dimensions, and is the recipient of many considerable streams. This lake is surrounded by picturesque and finely-wooded hills. Indeed, its scenery is so much admired, that its shores are the favourite spot where Chinese poets muse and write their versified prose. It is, however, subject to sudden tempests, which render its navigation dangerous. The environs of the Tai-hoo lake, near the E. coast, lat. 31° N., long. 120° E., are even more picturesque than those of the Pche-lee, having gained the name of the "Chinese Arcadia." The

* We have borrowed this name from the Malays, who call China *Tidias*. Generally speaking, the Chinese call their empire after the name of the reigning dynasty, so that it has differed at different periods. Since its present government by the Manchoo dynasty, who entered it in 1644, the Chinese call themselves *Manchoo* or *Shen-se*, men of Shantung. (See *Kieppich, Nouvelle Relation* & *Petit*, iii. 309.—310.)

† Though these are offered as the dimensions of China, with some confidence as to their correctness, it is right to quote the statements of former writers. Lord Macartney (1797) gives the area of China Proper at 1,297,349 sq. m., which has been copied by Fluhertzen and Murray; *Monthly Journal* (1811) gives it as 1,348,870 sq. m. The *Quarterly Review* (July 1838) states, at p. 490, that the surface "by the most correct maps may be taken at 1,080,000 sq. m. or 1,075,200,000 acres." *Gutsclaf* (1838), evidently misled by a misprint in the English translation of *W. de Groot*, sets down the area at 837,000 sq. m. (*China Opened*, i. p. 31.), while at p. 57. of the same work the number of sq. m. allotted to each province, when added up, amounts to 1,267,294; Lord Macartney's estimate.

Hong-tse-hoo, being situated near the junction of the Grand Canal with the Yellow River, is much frequented on account of its advantageous position. All the lakes, in fact, furnish intermedia of communication, and are abundantly stocked with fish. China contains several smaller lakes, but the whole does not occupy any great proportion of her vast surface. (*China Opened*, l. 31.; *Barrow*, II. 387, 391., ill. 12.)

Coast.—The coast of China has yet to be described. If our statement be correct, that the sea-coast extends for 3,500 m., there is only one mile of coast to every 339 m. of territory; but internal navigation is carried on so extensively that this deficiency has no ill effect upon Chinese commerce. Commencing at the N.E., the coast opposite Corea is bold and rocky, but, on approaching the gulf of Pe-che-lee, presents a low and sandy shore, scarcely perceptible from the sea. The bar formed in this bay, at the mouth of the Pe-lo, makes its bed inconveniently narrow, and, when the S. winds blow, the whole adjacent country is overflowed to a great extent. The coast of the Shan-tung peninsula is bold and rocky, so indented as to afford excellent harbours; but, once rounded, the low sandy character of coast is again presented as far as the Tchusan islands. Meantime, the two great rivers have brought down their immense deposits from the interior, which give its name to the Yellow Sea. The mud is so thick as to retard the head way, and affect the steering of ships; and this great gulph will, in process of time, become a vast alluvial district, like Bengal and Egypt. "The present inclination of the bottom is about a foot in a geographical mile, or somewhat less than 1 in 6,000; and it is probable that the bottom of the Yellow Sea, as it rises, will likewise gradually approximate to a horizontal plain." (*Hall's Voyages*, l. 37.) This sea is nearly surrounded with islands. The coast down to the strait of Formosa continues low, and, except where it faces the Tchusan islands, and in the prov. of Fokien, is but little indented. The strait itself abounds with headlands, and is also so thickly studded with islands which are but imperfectly notified even in the best charts, that navigation is, by Captain Hall's account, "exceedingly trying to the nerves." The Quang-tong shore is bold and high, except in the recesses of the numerous bays and harbours. A narrow peninsula is thrust out far into the sea at the W. extremity of Quang-tong, and forms, with the island of Hainan, a narrow channel, which is shoal, full of sand banks and rocks, so that even the native flat-bottomed junks are exposed to great dangers. The rest of the shore is washed by the Tonquin gulph, which is studded with small islands. (*Hall's Voyages*, 12mo. edit. l. 29—46.; *Gutzlaff's Voyage*, passim; *Lindsay's Voyage*; *Journal Grog. Soc.* ill. 257—310.)

Public Works—Aspect of Cities and Towns.—An amount of human labour, probably unmatched by any other nation in the world, except ancient Egypt, has been expended on the *public works* of China, by which the natural aspect of the country has been materially varied. The first and most stupendous of these is the great wall, built several hundred years before the Christian era, to protect China from Tartar incursions. It extends along the whole N. frontier, from the gulph of Leatong, in 120° to the N.W. extremity of the empire, in about 99° E. long., and 40° N. lat., being, including its windings, about 1,250 m. in length: it is carried over the tops of the highest mountains, through the deepest valleys, and continued by bridges over rivers. Its height varies from 15 to 30 ft. It is 15 ft. across at the top; and, at short intervals, square towers are erected, some of them 37 ft. high. The wall is composed of earth faced with masonry, the top or platform being paved with square tiles. It is now in a state of decay, being no longer required, since the union of the Tartar with the Chinese territory, for its original purpose. (*Davis*, l. 136.; *Bell's Travels*, li. 88.)

The Great Canal commences at Hang-tchou, near the mouth of the Tching-tang-chiang river, in about 30° 22' N. lat., and 115° 45' E. long., and, extending N., unites first with the Yang-tse-kiang, and then with the Hoang-ho, terminating at Lin-tsing, on the Eu-ho river, in about 37° N. lat., and 116° E. long. The direct distance between the extreme limits of the canal is about 513 m., but, including its bends, it is above 650 m. in length; and as the Eu-ho, which is a navigable river, unites with the Pe-lo, also navigable, an internal water communication is thus established between Hang-tchou and Peking, across 10° of lat. And by the junction of smaller canals and numerous rivers, the Great Canal not only assists in the irrigation of immense tracts of land, but affords a ready means for conveying its produce to all parts of the empire. But, apart from its utility, the Great Canal does not rank high as a work of art. A vast amount of labour has, however, been expended upon it; for though it mostly passes through a flat country, and winds about to preserve its level, its bed is in parts cut down to a considerable depth, while in other parts it is carried over extensive hollows, lakes, &c., on vast mounds

of earth and stone. (*Barrow*, MI.) The sluices, which keep its waters at the necessary level, are all of very simple construction. In the public roads, and where rugged steeps are only accessible by means of laboriously formed passes, Chinese industry is fully apparent. Three mountain paths traverse the Nam-ling; one, N. of Canton, is estimated by Sir G. Staunton to rise 5,000 ft. above the sea; yet vast quantities of goods are conveyed over this pass from Canton to the interior by coolies or porters. The obstacles to communication presented by the Pe-ling and Ta-pa-ling ranges are greatly diminished by an artificial road sometimes conducted over yawning clefts by arches, in other places deeply cut through high mountains, and extending altogether for 150 m. In short, wherever intercourse is expedient between any two parts of China, no natural impediments are too gigantic, no labour or expense too great, to overcome them.

The following summary of the general appearance of the cities and towns of China is supplied by Gutzlaff:—"The districts on the sea-coast are generally the most inhabited and the richest; the tracts along the Yang-tse-kiang the most fertile. Large and flourishing cities are found only where a ready water communication with other parts of the empire can be carried on. The greatest sameness exists in all the cities. In the larger ones are a few well paved streets, lined with shops; but the greater part of the streets are very narrow, extremely filthy, and planted with mere hovels. The suburbs of many cities are much larger than the cities themselves; and it is by no means extraordinary to see an immense walled space without any houses, where formerly a city stood. Villages and hamlets have a beautiful appearance at a distance, but on entering them one sees nothing but a heap of houses irregularly thrown together, the outside fair to behold, but the inside without furniture or comforts, and more filthy even than a stable. This does not apply to one district only, but it is common to most. Although the fields and gardens are beautifully laid out, there yet appears in them little attention either to elegance or pleasure. The gardens are very few; and a Chinese grandee delights more in artificial landscapes laid out in a small compass, than in an extensive park or a flower-garden. Utility is studied in preference to pleasure. The grandeur of natural scenery is in many parts of China as striking as in many parts of the world. Mountains, crags, rivulets, and valleys, both picturesque and romantic, are found in most provinces. Commanding situations are chosen for temples, the haunts of superstition and idolatry. These serve likewise for taverns, stages, public halls, and gambling-houses. The building of houses is regulated by law; none is allowed to exceed a certain dimension. Public halls have little to recommend them; the Chinese were never great architects; they understood the building of dwelling-houses, but not of palaces." (*China Opened*, l. 37, 38.)

Climate.—Connected with the subject, there are some singular circumstances. Situated between the 30th and 42nd degrees of N. lat., and the most E. long. of any part of the Old World, the temperature of China is very low for its geographical position. Its climate may also be said to be one of extremes; and while at Peking, which is nearly 1° farther S. than Naples, the mean temperature is that of Britany, the scorching heats of summer are greater than at Calro, and the winters as rigorous as at Upsal! But in so extensive a territory there are necessarily many variations. The W. districts are much influenced by the colds diffused by the mountains, while the climate of the maritime provinces is modified by the sea. At Canton, which is under the tropic, the heat during July, August, and September, is excessive,—then occur those frightful tornadoes, called typhoons, spreading devastation in their course, which, however, do not extend far beyond Canton. At the breaking up of these hurricanes, the transitions from the heat of day to cold and foggy nights are more violent and sudden than in any other part of the globe. The N. winds set in about November, and bring with them cold as intense as the preceding heats. The mean temperature of Canton is 76° Fahr. The climate of the interior is not however, with few exceptions, so extreme, particularly towards the N. frontier, where the summers are genial; and though the winter be cold, it is dry, and does not check the growth of fruit; but the N. winds bring clouds of white sand, which afflict the natives with ophthalmia. The W. frontier districts of Yuen-nan and Sze-chuen are said to be unhealthy, and are selected as places of banishment for Chinese convicts. The central provinces present a striking contrast to those already named. There the climate exhibits a happy medium between the rigour of the N. regions and the overbearing heats and sudden colds of the S. The Kiang-se—the most favoured in this respect. The fall of rain in China varies considerably in different years. Humboldt states—without naming on what authority—that the average quantity per an. is 70 in.; though it has been known to exceed

90. Many violent earthquakes have been felt in China. (*Malte-Brun*, art. *China*; *China Opened*, i. 31. 60. 90. 102, 103. 105.; *The Fan-qui in China*, by C. T. Downing, *Eng. i.* 191, 192.; *Lyell's Geology*, ii. 50. &c.)

Population.—China has long been very generally believed to be the most densely peopled country, of any considerable extent, in the world. The Jesuit Sennedo, writing in 1648, remarks, that, after living in the country 22 years, he was no less surprised on leaving than on his first arrival, at the immense number of persons he met with, not only in the towns and cities, but on the highways, "where," says he, "there is at all times as large a crowd as is usually to be met with on some great festival or public occasion." The Jesuit Amlot, founding on official documents, estimated the pop. in 1743 at about 148,000,000, which, adding for some classes that he had omitted, may be carried to about 150,000,000; and in 1792, Lord Macartney was informed, by a mandarin, "a plain, unaffected, honest man," whose statement is said to have been made on the authority of official documents, that the pop. was 333,000,000, and later accounts carry it up to above 350,000,000!

We confess, however, that, with the exception of that of Amlot, these statements appear to us to be altogether incredible, and that, in point of fact, we have no certain information as to the pop. of China. According to the statements in Chinese official works, the pop. of the empire amounted, in 1693, to 60,545,000; and in 1578 to 60,692,000. It is supposed to have continued at or about this amount till the Tartar conquest in 1644, a year before the publication of Sennedo's work. But it appears from an imperial proclamation quoted in the *Chinese Repository*, issued in 1779, and said to be founded on official data, that the pop. had been reduced in 1711 to 28,605,716 (vol. i. p. 356; *Canton*, 1833.). This extraordinary diminution is attempted to be explained in the work now referred to, by the mortality occasioned by the long and bloody wars that accompanied the establishment of the Manchoo dynasty, by the fact of some of the provs. in the S. not having been fully subdued when this census was taken; and by the circumstance of a poll-tax being then imposed, which made it for the interest of individuals to escape being enrolled in the census. Now, admitting the force of some of these statements, though we believe them to be greatly overstated, and allowing that but for the wars occasioned by the Tartar conquest, and the imperfectly subdued state of parts of the country, a correct census taken in 1711 would have given a pop. of 60 or 70 millions; still, we ask, can it be credited that the pop. should have increased from even that amount, in 1711, to above 300,000,000 in 1792? Had China been a new country, or had the Tartars, by whom she was overrun in the 17th century, been distinguished by their superior intelligence and industry, an increase of this sort might have been possible. But the reverse of all this is the fact, China has been settled and civilised for many centuries; the great works undertaken and completed by her inhabit. at a very remote period, show that she had then been pretty thickly peopled; and it is admitted, on all hands, that in China the arts have been for ages in a nearly stationary state. The Tartars imparted to her little that was new. They were, in truth, mere roving herdsmen; and though they might have given the Chinese some instruction in predatory warfare, they could communicate to them no useful art, science, or invention. Under these circumstances, we contend either that the former official accounts of the pop. must have been grossly underrated, or that the later ones must be grossly exaggerated. But supposing that the pop. really amounted to 150,000,000 about 1750, is it credible that it should have exceeded 330,000,000 in 1792, and 353,447,000 in 1813? It would require the best possible evidence to make any reasonable person believe what is so directly at variance with all the best established principles; and no such evidence has been, or we believe, can be given with respect to the alleged increase of pop. in China. Whether the empire could support the pop. that has been ascribed to it, is a question on which it is needless now to enter. We believe, however, with M. De Guignes, that the fertility of the country has been greatly overrated; but whether that be so or not, we submit that the rate of increase exhibited by the censuses is such as could have been realised only in an unoccupied and very fertile country, colonised by a people far advanced in the arts; and that it is all but absurd to suppose that it should be realised in an old settled country, with stationary arts like China. (For a further discussion of this subject, see the excellent work of De Guignes, *Voyages à Péking*, &c. iii. 58.—85.)

We subjoin an account of the area of the different provs. as given by Lord Macartney, and their pop. as

given by Amlot in 1743, by Lord Macartney in 1792, and by the official returns in 1813.

Provinces.	Area in sq. ms.	Pop. 1743 (Amlot.)	Pop. 1792 (Macartney.)	Pop. 1813 Official.
Northern.				
Pe-che-le (W. of min.)	58,949	16,702,768	28,000,000	27,990,871
Shan-se (W. of Fusu.)	55,368	9,768,189	27,000,000	14,004,210
Shen-se (W. of Fusu.)	154,008	14,804,038	18,000,000	10,207,256
Kan-suh	65,104	12,637,390	12,000,000	15,128,125
Ho-nan	72,176	6,681,250	19,000,000	23,046,999
Kiang-se	144,770	4,254,850	14,000,000	27,970,098
Hoo-ph	64,534	5,402,722	15,000,000	18,535,307
Hoo-nan	65,104	12,159,680	24,000,000	6,338,919
Shan-tung	92,961	26,706,568	23,000,000	29,558,764
Kiang-se	29,150	15,323,390	21,000,000	26,226,784
Chi-Kiang	53,480	7,642,035	15,000,000	14,777,410
Ho-Kien	79,456	6,006,900	21,000,000	19,174,030
Kuan-tong	76,930	1,145,430	10,000,000	7,313,895
Kwang-se	107,969	1,189,325	6,000,000	6,561,330
Yan-nan	166,800	15,181,710	27,000,000	21,435,678
Sze-chuen		335,690		
Leao-tong				
Total	1,297,999	150,265,476	333,000,000	360,279,897

But the census for 1813 adds an additional sum of 1,413,982 mouths for the pop. of Shing-king, Keih-lin, Turfan, Lobnor, and Formosa; and 188,296 families for those engaged in the service of the emperor; and supposing the latter to consist of 4 months each, the total pop. according to the census of that year, will be 362,447,182.

A glance at the above table must satisfy every body that the account of the pop. furnished to Lord Macartney, in 1792, and the census of 1813, cannot both be accurate. The list shows an excess over the former of 294 millions in the aggregate; but it would appear that in the majority of the provinces there has been no increase; but, on the contrary, a diminution, in some instances, of nearly a half! It may, however, be confidently affirmed, that no such estimation has taken place; and consequently that the statement of Lord Macartney's "honest" informant is completely erroneous; or, which is most probable, that both it and the census are in this predicament.

Local Divisions.—Though the geography of the world be not much studied in the "Celestial Empire," the more minute details of local topography are no where better understood. The survey of the Jesuits, made by order of the emperor Kang-he, is said to be very correct; and every district of any importance has since found a geographer, who describes it, if not so scientifically as the Catholic missionaries, with the utmost minuteness, so that, with little difficulty, a library of 3,000 vols. might be collected treating exclusively of Chinese geography. Nothing can be more systematic than the manner in which the whole empire is divided. Each prov. is portioned off into provincial districts; while the towns and cities are divided into the 1st class (*foo*), 2d class (*shoo*), and 3d class (*shen*). Formerly China Proper consisted of 15 provs.; but in Keen-Lung's time the largest were bisected, and there are now 18.

Northern Provinces.—1. Pe-che-le (the independent) is subdivided into 16 districts, the most W. of which are very flat; the central ones somewhat hilly; while those on the sea-coast along the Pe-che-lee gulph, are low and marshy. Pekin, the metropolis of Northern China and residence of the court, is situated in this prov., about 60 m. from the great wall, and 100 m. from the sea. The Pei-ho flows through Pe-che-lee, disembodying at the small sea port of Takoo. The chief ports are Tong-choo and Tein-sing. It is a curious fact, and one which does not square well with the popular notions of absenteeism, that despite the residence of the court, the bulk of the population are probably more depressed in this than in any other prov. (Barrow, &c.) 2. Shan-se, or Chan-se (west of the mountains) is divided from Mongolia by a great wall, a branch of which (the inner great wall) separates it E. limit from Pe-che-lee. It is said to have been the most early occupied part of China. Its mountainous portions are not, however, habitable, and many other localities afford but a scanty subsistence. Hence it has no large or remarkable cities. 3. Shen-se, or Chen-se (west of the pass) is also separated from the Mongolian borders by the great wall, which in this place is kept in good repair. The mountains in this prov., which are more rugged than high, contain gold mines, but there are not allowed to be worked, lest the attention of the people should be withdrawn from agriculture. The valleys through which the Hei-ho and the Han-Kiang run are fertile in millet, wheat, and pulse, but are too dry to produce much rice. Swarms of locusts frequently appear in Shen-se, destroying the harvest, and converting smiling valleys into wastes. The chief town is Se-gan-foo, one of the largest in the empire. 4. Kan-suh (volume 7, aue) and Shen-se, formerly united, made one large prov., extending over a space of 184,008 sq. m. Kan-suh

* Sennedo himself gives some statements whence it is inferred that the pop. about 1640 amounted to about 330,000,000! But this is contradicted by all the official returns, and is, obviously, unworthy of notice.

consists principally of a narrow neck of land thrust out upon the edge of the great Gobi desert; hence the soil is cold and barren. Kan-suh forms the N.W. limit of China, the great wall ending at Shwang-lan.

Central Provinces.—5. Ho-nan (south of the river) is one of the most fertile provinces of the great plain, and is called the garden of China. Shen-se, Pe-che-le, and a part of Shan-tung join its N. boundary, while branches of the Pe-ling enclose it to the W. The Hoang-ho, or Yellow River, runs nearly parallel with the N. boundary, and intersects the finest parts of the prov. 6. Kiang-se (west of the river) has its boundaries well defined by the Nan-ling range and its branches, which surround it on three sides, the W., S., and E. Its N. part contains the great Po-tung Yang lake, and its contiguous marshes, said by Mr. Barrow to be the sink of China. It has, however, many well cultivated valleys, in which rice, cotton, indigo, and sugar, are produced. It has also extensive manufactures, amongst which must not be forgotten the China-ware, so highly esteemed all over the world, till European imitations exceeded the original manufacture in beauty and cheapness. Still, however, no fewer than a million persons are said to be exclusively employed in this manufacture, which is chiefly carried on at the capital Kiang-le-chin. Here 500 furnaces are constantly burning. 7. Hoo-ph (north of the river), and, 8. Hoo-nan (south of the river), form the ancient prov. of Hoo-Kwang, divided into two parts by the Yang-tse-Kiang. The former is divided into 11 and the latter into 13 districts; the whole covering an area of 144,770 sq. m. Both provs. are extremely fertile, and the capital of Hoo-ph yields to few cities of the empire in extent and prosperity. The tea grown in its neighbourhood is of superior quality, and the bamboo-paper manufactured within its walls is extensively exported. This city is called Woo-chang-foo. Hoo-nan bears a great resemblance to the Ho-nan prov., but is richer in minerals. A very active trade is carried on, on both banks of the Yang-tse-Kiang. Hoo-ph and Hoo-nan are both within the great plain. 9. Kwi-chow has been designated the Switzerland of China, being traversed by the highest portion of the Nan-ling range. To the S. it is peopled by wild and intractable highlanders (*Meau-tse*), who, though in the centre of the empire, preserve their independence, and frequently make predatory descents on the adjoining provinces. Kwi-chow has no large towns, but several fortresses.

Maritime and Southern Provinces.—10. Shan-tung (east of the mountains) is partly in the great plain and partly consists of a promontory jutting into the Yellow Sea; S. of Pe-che-le, and N.E. of Ho-nan. Its W. part is traversed by the Great Canal, but the country is poor, and the climate, though bracing, bleak. There are, however, some valuable coal mines, which supply the whole empire with that article. The coast is bold, and affords good shelter. The principal port is Tong-cheou-foo. 11 & 12. The Kiang-soo (river Soo) and Gan-hway (fixed excellence) prov. were once united under the name of Kiang-nang. The two great rivers, the Hoang-ho and Yang-tse-Kiang, cross both districts, and fall into the sea 2° apart, forming the Chinese delta. Gan-hway has 13 districts, and the Kiang-soo 11; their united extent being 92,961 sq. m. "If we consider," remarks Gutzlaff, "their agricultural resources, their great manufactures, their various productions, their excellent situation on the banks of the two largest rivers in China, their many canals, and amongst them the Great Canal, and tributary rivers, they are doubtless the best territory of China." Enjoying these blessings, chiefly conferred by their two great rivers, these provinces are also the most liable to the evils they produce, namely, frequent and destructive inundations. The staple products are grain, cotton, green teas, and silk. Rice suits admirably with the black marshy loam of which most of the soil consists. Nanking (capital of the S.) is situated on the S. bank of the Yang-tse-Kiang, but at the distance of a league from the stream (Nankin). The Kiang-soo prov. only faces the ocean. The scene which appeared at the junction of the Yang-tse-Kiang and Great Canal, is thus described by Barrow:—"The multitude of ships of war, of burden, and of pleasure; some gliding down the stream, others sailing against it; some moving by oars, and others lying at anchor; the banks on either side covered with towns and houses as far as the eye could reach; presented a prospect more varied and cheerful than any that had hitherto occurred. Nor was the canal on the opposite side less lively. For two whole days we were continually passing among fleets of ships of different construction and dimensions. Cities, towns, and villages were continued along the banks without intermission. The face of the country was beautifully diversified with hill and dale, and every part in a high state of cultivation." (516.) 13. The Che-Kiang (river Che), or Tche-Kiang, is the smallest Chinese prov. It occupies the S.E. corner of the great plain. The Yun-ling chain ends here in innumerable low hills, the most barren of which produce abundance of tea. In fact the whole

district is most assiduously laid under contribution by the inhab.; every inch of ground being tenanted. At the port of Cha-poo, a large trade is carried on with Japan. 14. Fo-Kien (happy estate), which forms the W. shore of the Formosa channel, is mountainous. Barren hills and sandy plains are, in truth, the natural characteristics of Fo-Kien, but Chinese industry has made the land fruitful. The tea-plant thrives in perfection, and the "China orange" is chiefly derived from this prov. The maritime commerce of Fo-Kien is extensive, its merchants monopolising most of the Chinese shipping trade. Emigration, though discouraged by the government, is here very prevalent. 15. Quan-tong (eastern breadth) joins Fo-Kien to the E., its shores stretch along the whole S. coast of China, to the borders of Cochin China, the N. boundary being formed by the Nan-ling mountains. Quan-tong has 13 districts, and an equal number of trading emporiums, and to this prov. alone are Europeans allowed to trade. It has many wide valleys, particularly the plain around Canton, which is of great extent, and many valuable products; but, though it be the great entrepôt for tea, that article is not of the number. The capital, Kwang-choo-foo (Canton), is the greatest emporium of the E. 16. Kwang-se (western breadth) joins the W. limits of Quan-tong, the Nan-ling range divides it from Hoo-nan on the N., while its S. border unites it with the Cochin Chinese prov. of Tonkin. The mountainous portions of the prov., by far the greatest part of it, are said to contain gold and other metals; the lowlands and valleys produce rice, silk, and timber. Both the language and manners of the inhab. differ from those of their countrymen. 17. Yun-nan (south of the clouds), the most W. of the S. provs.; is continuous on the S. with Cochin China and the Birman empire; and towards the W. with Tibet. Its mountains, which are remarkably high and bold, furnish the copper that supplies the currency of China. It is in Yun-nan that the Yang-tse-Kiang enters China; and by the aid of a high-road, which has been made parallel to its banks for a great distance, communication between it and the rest of the empire is rendered constant and easy. The same road branching off to the S., extends into the heart of the Birman empire.

The western province, Sze-chuen (five rivers), is the largest in China. Plains, mountains (the Yun-ling), and extensive deserts are its principal components. The Yang-tse-Kiang having taken a N. bend at the Yun-nan frontier, traverses its whole extent; and, during this part of its course, receives several tributaries. The capital, Ching-too, was once the metropolis of an independent state, which then surrounded it; and its inhab. still boast of greater independence of character than their neighbours; which they evince by frequent rebellions. (*China Opened*, i. 155-168.)

Natural Productions of China.—The climate of China, exhibiting occasionally such severe cold, forbids the presence of some members of the animal kingdom met with in the similar latitudes of India. The universal cultivation of China Proper, and the thickness of its population, have long expelled most of the wild animals which still abound in the surrounding regions. There are also fewer domestic ones than inhabit most European countries. Beasts of burden are in a great degree superseded by the means of transit so copiously afforded by canals and water-courses, and by that fine race of men the *Coolies* or porters; while the canal boats are dragged along by trackers. Add to this, that animal food is considerably less in use among the Chinese than vegetable diet. There are no meadows for feeding cattle; and even if there were, the natives have a singular aversion to butter and milk. Tigers, though they have been seen in the forests of Yun-nan, are scarcely known; and the lion is almost deemed fabulous in China. There are wild cats, which are caught, confined, and fed in cages, and considered a dainty for the table. Monkeys are found in the southern districts. The Chinese horse and ass are small and spiritless, and so is the buffalo, which is sometimes employed in ploughing. Dromedaries are much used between Peking and Tartary. Pigs are reared with great care; sheep are smaller than those of England, and goats, of various colours, have uniformly straight horns. The dog of China is about the size of a spaniel, and is uniformly met with of the same variety. Rats emigrate occasionally from one place to another in large troops, when they devour crops and harvests; they are very large, and are used by the common people as an article of food. There is a genus of rat peculiar to China, which bears some resemblance to the Bamboo Rat of Sumatra. The *ornithology* of China presents, in the first place, the eagle, which frequents the mountainous districts; the *hæstina*, a kind of falcon, abounding in the province of Che-keang, is considered imperial property, while the magpie, which is so numerous as to be the farmer's worst nuisance, is considered sacred by the reigning family. Crows and sparrows are also abundant in China. Among others of their manifold stratagems for catching fish, the Chinese have trained the fishing cor-

morant; but that the bird may not help itself too bountifully, the owner puts an iron ring round its neck, which obliges it to deliver up a portion of its prey. Curlews and quails are found in great quantities in the N.: the latter are esteemed chiefly for their fighting qualities, as cocks used to be in England; and, when tamed, good fighting quails sell at enormous prices. Larks are numerous, and sing admirably. But the greatest boast of Chinese ornithology is its splendid varieties of pheasants. One, the *medallion* pheasant, takes its name from a membrane of brilliantly coloured feathers, which are displayed or contracted at the will of the bird. The gold and silver pheasants have also a most brilliant appearance, and are so plentiful as, in some districts, to furnish the tables of the poor with an excellent dish. Pigeons of different sorts are not rare, but the natives seldom domesticate them. Aquatic birds are naturally invited to a country which has so many lakes and rivers. The most celebrated of these is the mandarin duck, a species of teal, so celebrated for the strong mutual affection between the male and female that it is used by the Chinese as an emblem of conjugal fidelity: their plumage is beautiful. The snow-white *rice-bird* of Siam is of great use in China in extirpating vermin from the marshy rice-fields; which it is enabled to accomplish by means of its long legs and long beak.

From the *fishes* peculiar to China, we derive the gold and silver fish, which are kept there, as in Europe, for ornament in glass globes. The edible fish peculiar to China are, first, one of a yellowish colour, caught in the Yang-tse-Kiang, which, while fresh, is insipid; but is considered a great delicacy after having been kept for a time in ice. The *shang-tung*, sea-cel, and a sort of rock cod, called *shang-yu*, are also much esteemed, and so are sturgeon, mullet, carp, perch, sea-bream, &c. Crab fish of various kinds are plentiful. On parts of the rocky coast, oysters are successfully preserved and fattened in oyster-beds.

Though the larger species of *reptiles* are unknown in China, the smaller lizard tribes are numerous in the hot months; several fresh-water tortoises have been discovered, and also two new species of frogs. Venomous serpents are but little known. The insect tribes of China furnish its greatest plague and its greatest blessing. The plague of locust-swarms is terribly inflicted upon the N. and W. prov. Nothing can exceed their voracity; and it is not uncommon for them to occasion so much destruction, as to reduce thousands of human beings to starvation; while another insect, the silk-worm, furnishes employment and riches to an immense part of the pop. In rearing these profitable worms, the Chinese excel all other nations. Scorpions and centipedes are plentiful. A spider, peculiar to China, which inhabits trees, devours small birds, after entangling them in its enormous web. Butterflies of gigantic size, and brilliant colours, abound E. of Canton. Multitudes of white ants are very destructive in the S.; and the musquito is found in most parts of the country during the summer months. There is a singular sort of bee, called the white-wax insect, which furnishes the whole nation with that article, which it deposits upon a particular sort of tree, furnished by the natives with nests to attract the insects.

The *vegetable kingdom* of China is remarkable for not containing any very large trees, and timber is consequently scarce. The oak is seldom seen, fir trees chiefly supplying its place, every ridge of mountain where it is likely to grow being planted with the fir. Palma, laurel, cassia, and caper trees are often met with, especially in the S. provinces, and the cultivator grows together the banana, guava, orange, papaw, cocoa, litchi, peach, apricot, vine, pomegranate, and chestnut. There is also a singular production called the tallow-tree, which resembles the birch, but the bark is white, and the branches slender: the fruit, growing in bunches, is enclosed in a brown capsule, which encloses three kernels, all coated with tallow, themselves containing an oil much used for the lamp, while the tallow is converted into candles. There is also the *lac*, or varnish tree, resembling the ash, which affords a valuable essential oil, but produces a cutaneous disease if dropped upon the skin. It is the white blossoms of the *le-pik* which attract the wax-fly. The camphor-laurel is extremely productive of that drug in China. The *kuan-lan* contains a pith which, when ground to powder, answers all the purposes of flour. A species of sycamore, the *liu-choo*, supplies paper to the Chinese from the rind; and riband-like strips are peeled and made into paper.

Mulberry trees, as food for silk-worms, have much pains bestowed on their culture. We come now to the shrub which has brought China into nearer contact with foreigners than her sagas, ever desired, or her government seem willing to render closer. The tea-plant, called by the natives *cha*, rises from four to five feet in height, and bears a strong resemblance to the myrtle, but the flower is not unlike small white hedge roses. Although European botanists have only

discovered two varieties, black tea and green tea, native writers enumerate as many hundreds; an obvious exaggeration. Though this plant will grow in the most sterile ground, the quality of the leaves depends upon the soil which nourishes them, and the age of the tree. The best are taken from three-year-old shrubs. There are three in-gatherings of the leaves; the first in early spring, the second at the commencement, and the third at the end of the summer. They are carefully manipulated, dried in various ways, and then packed. The coarsest leaves are beaten into cakes and exported, principally into Tartary, under the name of *kai-el-cha*, or brick tea. But the finer descriptions of tea require a vast deal of labour in their preparation; and could only be produced in a country where the inhabitants are universally industrious, and wages low. That giant of the grass tribe, the bamboo, is most extensively used; besides being an important instrument for enforcing the laws, the Chinese build cottages and fashion all sorts of furniture with it. The tender shoots make an excellent food, and supply the material for a coarse sort of paper. Tobacco, the cotton plant, and sugar-canes, are also profitably cultivated. The growth of garden flowers is not much encouraged, every available inch of ground being used for the production of edible plants. Even the more opulent natives are content with a few flower-pots, with some pretty flower for the sake of ornament. The water-lily not only produces a beautiful flower, but its fruit provides an excellent meal, not unlike gruel, in much request among the Chinese. They have almost unlimited varieties of the camellia. A plant, the name of which has not yet reached this country, furnishes that delicate material for drawing upon, and making into artificial flowers, falsely called rice-paper.

The great pop. of China, and the fondness of the people for vegetables, cause a great number of table-plants to be reared. Turnips, carrots, sweet potatoes, and pot-herbs of every kind, are produced in abundance. A white cabbage, called *pih-tsai*, and not unlike the Roman lettuce, constitutes the principal food of every class, and is really delicious. Of *grains*, the plenitude of water in China causes rice to be so successfully cultivated, that it is brought to greater perfection there than in any other part of the globe. Indeed, there is scarcely any sort of grain but may be found in some part of the country or other. No medical root is in such high favour as the *gin-seng*, which is administered as a sort of universal panacea, and is a good tonic. It was formerly found only in Shan-tung, Leo-tung, and Tartary; and brought a very high price. But it has been discovered in different parts of America; and is now extensively imported into Canton by the American traders. The *ti-wang*, a plant very similar to liquorice, is also much used as a restorative. The other roots are *Radis China* (a sort of truffe), galangal, rubarb, ginger (often exported as a sweetest), and poppy, whose juice is made a substitute for opium, and is extensively cultivated in spite of the strictest government regulations to the contrary.

But scanty information is to be obtained of the *mineral kingdom* of China; but the portion of the mountain districts that has been explored is found to possess great mineral riches. The gold mines are worked exclusively by government, but their situation is kept a secret, though that metal is supposed to be derived from the Kwei-choo and Yun-nan mountains. Gold-dust is found in the Yang-tse-Kiang during its course through Sze-chuen. Iron is produced throughout the empire. Several sorts of copper are found in abundance, the most famous of which is the *pe-king*, or white copper, dug up in Yun-nan. Mercury is also very common, as are arsenic, cobalt, and orpiment. There are coal mines in various parts of China. The beautiful *lapis lazuli* is met with in the W. provinces. Salt, produced from the earth, and by the evaporation of sea-water, is an article of great traffic: it is collected in immense mounds, chiefly on the banks of the Pei-ho. China also furnishes the crystal, ruby, amethyst, sapphire, topaz; but diamonds are little valued. There are stones resembling basalt, which, when struck, give out a sound. Marble, porphyry, and Jasper, are produced from the quarries of S. China, beside excellent granite and quartz. (*Dr. Abel's Narrative of a Journey into the Interior of China*, passim; *Doering's Fa-na-qui in China*, ii. 140-162; *China Opened*, i. 33-54; *Mallet-Bruin*, art. *China*, &c. &c.)

Productive Industry and Trade.—The Chinese are famous for their industry. Of the immense territory they inhabit, there is scarcely a wood of arable ground that is not assiduously cultivated; and such importance do they attach to agriculture, that once a year the sovereign of the Celestial Empire—so seldom seen in public—exhibits himself holding a plough. But it is the misfortune of the Chinese that their patient enduring industry is allowed to usurp the place of ingenuity and science. Their farming instruments are of the most primitive kind, their ploughs being inferior to the very worst of ours. Owing to the smallness of the farms, there is no

room for the subdivision of employments; and agriculture, as a science, is but little advanced in China. But they accomplish all that can be effected by the most persevering industry. They spare no pains in the collection and preparation of manure, and they are superior to every other people in the irrigating of land. By the aid of chain-pumps, they draw water from the numerous canals and rivers, while the highest mountains are cut into terraces so constructed as to retain the requisite quantity of water, and to allow what is superfluous to pass off; by these means, and a good system of manuring, they are able, in many parts, to produce two crops a year, without intermission.

But notwithstanding their remarkable industry and economy, the bulk of the population have usually so little to spare, and are so completely without the ability to retrench in periods of distress, or to resort to a less expensive species of food, that the failure of a crop never fails to involve them in the extremity of want; and, despite the supplies brought from other parts of the country, it frequently occasions the death of vast numbers, and the committal of all sorts of outrages. There can, in fact, be no real security for a country at all approaching to the condition of China, unless the food of the people in ordinary circumstances be such as to permit of their retrenching in adverse seasons, and countervailing the deficiency of the crops by increased economy.

As a manufacturing people, the Chinese are highly distinguished: the fabric of porcelain originated entirely with them; and though the forms of their articles will not bear a comparison with those of the classic ages of antiquity again brought into use in modern Europe, the fabric is excellent, and the colours imitable. The art of spinning silk was also given to the W. world by the Chinese; and that light cotton stuff we call nankeen derives its name from the ancient capital of China. The lacquered ware, though eclipsed by that of Japan, is very beautiful; but it is in the minute arts of carving and inlaying that the Chinese excel. The articles brought here in mother-of-pearl and ivory are too well known to need description. Gunpowder, though a Chinese invention, is manufactured only on a small scale, and is exceedingly bad; which, indeed, could hardly be otherwise, as it is a part of the soldier's employment to make his own gunpowder. (*Barrow*, 300.) Paper is also a Chinese invention, and seems to have been first manufactured A. D. 95. The materials used in making it are very various. It is thin, silky, and very absorbent of ink. Chinese books are printed on one side of the leaf. The government is jealous of every thing new; but the people discover no lack of genius to conceive, or of dexterity to execute. Their talent for imitation is well known. During the course of the present century, a Chinese sailor, who came to England in an Indianman, frequented a manufactory in Southwark where Prussian blue was prepared; and having made himself master of the process, without exciting the suspicion, or attracting the notice of any one, he established, on his return home, a similar work; and so well has it succeeded, that the whole empire is now supplied with native Prussian blue, whereas it was formerly wholly imported.

Money in China consists of the *cash*, about the size of an English farthing, made of copper; from 720 to 1,100 of them being, according to their quality, equal to a dollar. Silver is employed rather as an article of traffic than as a circulating medium; that used as money is cast into the shape of a horse's hoof, and called *tael*, being equal to a little over 6s. of English money. Gold is also seldom used as currency; but when it is, comes into the market beaten into thin leaves. Credit is little known, except at Canton; consequently paper money has not a very extensive circulation. There are, however, banks in the large commercial towns, which issue paper. The Chinese trade has the peculiarity of being for the most part internal, the country supplying most articles necessary for the subsistence or luxury of its inhabitants, and is carried on by means of canal and river boats. The primitive expedient of barter is still resorted to on account, perhaps, of the inconvenience of the circulating medium. Salt may be almost designated the standard commodity, as being an article of the most extensive commerce. The British embassy found at Peking piles of it which were estimated to contain 600,000,000 lbs. The foreign trade of China is carried on under troublesome restrictions, and is chiefly in the hands of the English and Americans. (*See CANTON*.) The great articles of export are tea and silk, with the former of which China supplies the whole world. The average annual quantities of tea exported to various parts of the globe may be as follows:—

Great Britain	- - -	36,000,000 lbs.
America	- - -	10,000,000
France	- - -	350,000
Holland	- - -	2,800,000
Russia, by way of Kiachta	- - -	6,500,000
Cape of Good Hope	- - -	200,000
British colonies in N. America	- - -	1,200,000

New South Wales	- - -	500,000 lbs.
Indian Presidencies	- - -	3,000,000

The silks of China, though unequalled for richness, are considered too heavy. In 1838, 7,031 piculs (each picul is 133½ lbs.) raw silk, worth 1,666,528 dolrs, were shipped from Canton in English bottoms. Other articles of export we can only enumerate: they consist of sugar, stuffs, nankeens (now almost exclusively sent to India), lacquered ware, articles of ivory, mother-of-pearl, and tortoise-shell; the precious metals, &c. The gross amount of trade between England alone and China, from 1st July, 1837, to 30th June, 1838, is stated by the Canton Chamber of Commerce to have employed 11,700,040s. sterling of British capital.

The chief articles of import are betel-nuts, edible birds' nests, lignum vite, ivory, pepper, steel, tin, and wax. Manufactured cloths, calicoes, and chintzes, are also imported; but opium has recently become by far the most important and valuable of all the foreign articles imported into China. Its importation is contraband; and the late efforts of the Chinese government for the suppression of the trade have brought the whole of our commercial intercourse with the Celestial Empire into peril. We believe, however, that the taste for the drug is too firmly rooted to admit of its importation being prevented; and even if it were, we have little doubt that other articles would be found suitable for the Chinese market, with which to balance the import of tea, without involving the necessity of very great shipments of treasure. (*Dictionary of Commerce*, art. *Canton*; *Morrison's Chinese Repository*, *passim*; *China Opened*, II. 1—140, &c.)

History, Government, and Laws.—It may be almost said that China has no history, for she has so few revolutions or political changes, to record, that her annals rise, but in a small degree, above the limits of chronology. The antiquity which the Chinese have claimed for their origin is now, even by the enlightened among themselves, considered fabulous. Almost the first names mentioned in their annals are Shing-nong, "the divine husbandman," who taught their ancestors the arts of agriculture; and Hoang-ty, who partitioned their lands, and contrived a cycle of 60 years, to enable them to register events, and to mark the progress of the seasons. Then comes the period of the "five kings," the last two of whom, Yaou and Shun, are held up as patterns for future sovereigns, being the exemplars of royalty down to the present reign. Yu, the successor of Shun, made himself conspicuous by his transcendent merit in draining the country that had suffered from a great deluge. The Chinese have no existing record older than the compilations of Confucius (born 550 B. C.), which must have been made from tradition. From that period the annals of the empire have been carefully noted and preserved, and descend in an unbroken line down to the present day. These, "the successive labours of 21 historians," consist of 500 vols. Formed into a prosperous and comparatively civilised community, under the Tsin dynasty, the Chinese became objects of envy to their neighbours, of whom the Tartars were the most troublesome; and to guard against their incursions, the great wall was built. A.D. 164 was the era of the "three states," in which the empire was divided; but in 168 it was again united under one ruler. The 9th and 10th centuries were much occupied in civil wars, caused by the contending claims of several aspirants to the throne; but these were finally adjusted A. D. 950, by the consolidation of the Soong dynasty, under Tse-tsoo. This was the first great literary age of Chinese history; and printing having been invented 500 years before it was known to Europeans, authors and books were much multiplied. Under this dynasty the Chinese, unable to resist the Tartars, called in the aid of the Mongols; and they, by a policy of which history affords numerous examples, soon exchanged the character of allies for that of conquerors; and, under the famous Kublai-Khan, founded the Mongol dynasty. This able sovereign established the seat of his government at Peking, or Kambalu, as it is called by Marco Polo, and constructed the great canal. But his successors rapidly degenerated; and the ninth Mongol monarch surrendered the throne to a Chinese, A.D. 1366. Twelve emperors of this native dynasty of Ming reigned in comparative peace till, in 1618, during the sway of Wan-lic, the 18th in succession, the Manchoots, a race sprung from the expelled Mongols and the Kin or E. Tartars, after a war of 27 years, established themselves firmly in the empire. The sixth in descent from Shunchy, the first of the Ta-shing dynasty of Tartars, occupies the throne of China at this day. (*Davis*, I. 187, 188.)

The most conflicting statements have been made with respect to the government of China: while some writers have represented the whole empire as trembling under the yoke of a capricious despot, others have represented the government as administered according to the inflexible rules of justice, and with the greatest moderation and humanity! Both these representations seem to be

alike inconsistent with the facts. According to the theory of the constitution, if we may so speak, the emperor is absolute; his will is law; and he is not responsible to any earthly tribunal for any of his actions. In China, as in ancient Rome, fathers have full power over their families, and, on the same principle, the emperor is held to be the father of the entire Chinese people; and to have the same unlimited power over them that each individual has over his own children. Practically, however, his power is comparatively circumscribed. In China every thing is determined by custom, or by immemorial practice, from which it would be highly dangerous for even the emperor to depart. The Chinese is emphatically a government of precedent; and his celestial majesty is, in reality, the creature of custom and etiquette. All employments are bestowed, according to fixed rules, on those who have obtained certificates of proficiency after passing their examinations. The penal laws of the empire are printed in a cheap form, and widely diffused; and one of the 16 discourses annually read to the public, inculcates the propriety of every man making himself acquainted with them, and with the penalties consequent on their infraction. Though these checks on the government of China be despotic in its form, and every device be employed to give to the emperor not merely a paternal, but a sacred character, he in fact governs according to long established rules; and with probably as little admixture of despotism as is to be found in most governments.

The great defect of the Chinese, as of all similarly constituted governments, is the want of any effectual control over the inferior agents. The emperor is not omniscient; and notwithstanding the various devices put in motion to learn the real conduct of the subordinate authorities, and their liability to punishment if they abuse their power, it would seem that these checks are, in many instances, of comparatively little avail; and that much injustice and oppression on the part of persons in power, escape detection and punishment.

M. De Guignes says, "J'ai vu longtemps à la Chine; j'ai traversé ce vaste empire dans toute sa longueur; j'ai vu partout le fort opprimer le faible; et tout homme ayant en partage une portion d'autorité, s'en servir pour vexer, molester, et écraser le peuple." (ii. 438.)

But notwithstanding the deference due to M. De Guignes, it is evident that this must be an exceedingly exaggerated statement. If the people were oppressed and maltreated in the way here stated, would they be so industrious? All experience affirms that they would not; and it is quite certain that "the most cheerfully industrious and orderly, and the most wealthy nation of Asia" (Davis, i. 194.) cannot be greatly misgoverned. Oppression may, and no doubt does, exist; but it is clear it cannot be very widely diffused. The taxation to which the Chinese are subject is trifling compared with that which we impose on the Hindoos; and the unceasing industry of the Chinese, and their desire to save and accumulate, prove beyond dispute, that, generally speaking, property is secure.

The emperor is called "the son of heaven" (T'ien-tsyé), and the mandarins and other natives not only prostrate themselves when in his presence, but also bend a table with the inscription "the lord of a myriad years" (Wan-suy-yai). In his character of patriarch, his imperial majesty is not only looked upon as the father of that multitudinous family, the pop. of his empire, but is also considered the sole dispenser of the blessings of heaven; for the prime canon of belief is, that "the duty of affording to the people sustenance and instruction is imposed on *The One Man*;" while, on occasions of national calamity, he publicly confesses his errors, and acknowledges his misconduct to be the cause of the divine displeasure. (*Quarterly Review*, xxv. 416.) The parallel between the relations in which every person stands to his own parents and to the emperor is carried out from the most important functions of the legislature, down to the minutest observances of ceremony, all of which are regularly prescribed by law. (Davis, i. 201.) The union of the avenger with the father, in the emperor, is well illustrated by Davis. A man and his wife had severely ill used the mother of the former, which circumstance was reported to the emperor. The very place where the crime was committed was made accused. The principal offenders were put to death; the mother of the wife was bamboozed, branded, and exiled, for the daughter's crime; the scholars of the district were not permitted to attend the public examinations for 3 years; and their promotion was thereby stopped. The magistrates were deprived of their office, and banished. "For," says the edict published on the occasion, "I intend to render the empire filial." Every device is employed to create the impression of awe. Dressed in a robe of yellow, the colour worn, say the Chinese, by the sun, the emperor is surrounded by all the pageantry of the highest dignity in the world. All ranks must bow the head to a yellow screen of silk; in the great man's presence no one dares speak but in a whisper, though his

person is too sacred to be often exhibited in public, and an imperial dispatch is received by the burning of incense and prostration. But with all this he is not allowed to lean back in public; to smoke, to change his dress, or, in fact, to indulge in the least relaxation from the fatiguing support of his dignity. (*Chinese Hist.*; Davis; *Quarterly Review*, lvi. 499.; *Ellis's Account of Lord Amherst's Embassy*, p. 307.)

Next, after the emperor, the court is composed of four principal ministers, two Tartars and two Chinese, who form the great council of state, assisted by certain assessors from the Han-lin or Great College, who have studied the sacred books of Confucius, which form the basis of Chinese law. These may be considered as the cabinet; but the real business of the empire is executed by the Le-poo, or Six Boards. No. 1. Le-poo is the Board of Official Appointments, which has cognisance of the conduct of all civil officers; 2. Hoo-poo, the Board of Revenue, which regulates all fiscal matters; 3. Le-poo, Board of Rites and Ceremonies, which enforces the customs to be observed by the people; 4. Ping-poo, Military Board; 5. Hing-poo, or Supreme Council of Criminal Jurisdiction; 6. Kung-poo, Board of Public Works. There is also a colonial office, composed of Manchos and Monguls, so that the respective tributary princes may have confidence in referring whatever concerns their interests to their own countrymen. To each of the provs. a viceroy is appointed by the chief, or Le-poo Board; and every town is presided over by a magistrate, who takes rank according as he is at the head of a *foo*, *tchoo*, or *keén*. Subordinate officers superintend the lesser divisions. All these functionaries are removed every three years; and that no ties of kindred may interfere with the strict discharge of their duties, the viceroys and magistrates are forbidden to form any matrimonial connection with a family within the limits of their rule. It is honourable to the Chinese that, for these and other state offices, merit alone is the qualification; the son of the poorest peasant or artificer may offer himself as a candidate, and, by talent and application, rise to the highest employments. A singular expedient is adopted to ascertain with what fidelity the viceroys and magistrates perform their duties. There is a board, headed by a Tartar and a Chinese, on whom it formerly devolved to watch over the words and actions of the emperor, and freely censure him for any misdemeanour! The duties for which this office was originally established have, for reasons easily understood, long fallen into disuse; and the members are now employed as censors for the emperor, being sent as inspectors into the provs. to see how the viceroys and magistrates do their duty, and to report their delinquencies. But these functionaries are less formidable than might be supposed. If they did their duty honestly, they would, no doubt, be of singular advantage; but in China, as elsewhere, it is usually found that inspectors look with an indulgent eye on the faults of those in authority; and it has been doubted whether their visits be not as often the means of stifling the complaints of the public, and of preventing and delaying justice, as of facilitating its course. Nothing can be more lucid and methodical than the code of laws promulgated for the guidance of the boards and their subordinate officers. Each district has a separate code, adapted to the habits and disposition of those for whom it is framed; and offences, with their punishments, are classed under six different heads, corresponding with the six boards, so that each case is referred to the tribunal against whose authority the offence may have been committed, unless it be one admitting of summary punishment.

The Thing Lei Lee, being the fundamental laws, and a selection from the supplemental statutes of the Penal Code of China, has been ably translated by Sir George Staunton. The most remarkable thing in this code is its great reasonableness, clearness, and consistency; the business-like brevity and directness of the various provisions, and the plainness and moderation of the language in which they are expressed. There is nothing here of the monstrous verbiage of most other Asiatic productions; none of the superstitious delirium, the miserable incoherence, the tremendous *non-sequiturs*, and eternal repetitions of those oracular performances; nothing even of the turgid adulation, the accumulated epithets, and fatiguing self-praise of other eastern despotisms; but a clear, concise, and distinct series of enactments, savouring throughout of practical judgment and European good sense; and if not always conformable to our improved notions of expediency in this country, in general approaching to them more nearly than the codes of most other nations. (*Edm. Rev.*, xvi.) This is high, but not undeserved praise. At the same time, however, the Chinese code is not without very serious defects. There is an elaborate attention to trifles; and a perpetual interference on the part of the legislator to enforce duties and observances of no importance, or that had better be left to the discretion of individuals. But its greatest defect is the vagueness of some of its clauses:

so that a person may be punished if his conduct be "contrary to the spirit of the law!" The frequency of corporal punishment seems extraordinary to Europeans. It is, in fact, the universal penalty: offences the most trivial and the gravest, whether committed by persons in the highest or the lowest walks of life, being visited by so many strokes of the bamboo! These, however, are not always inflicted. Persons under 15 or above 70, or maimed, may redeem themselves from all but capital punishments, by a small fine; in other cases the punishment may be commuted by paying a sum of money proportioned to the number of blows. But there are crimes for which even those who are rich enough to escape whipping for ordinary offences are not sufficient to make a pecuniary compromise. Indeed the bamboo seems in universal requisition, from the emperor down to the meanest of his subjects; and not only the number of blows, but the length and thickness of the instrument to be used for each offence, are minutely prescribed. The prerogative of mercy is not unfrequently extended, with, however, one exception. In a country which has preserved its institutions unchanged, and its laws unaltered, for 2,000 years, it is not surprising that seditious offences should be severely dealt with. The crime of treason is visited with remorseless severity. In 1803, Mr. Davis states, a single assassin attempted the life of the emperor. He was condemned to a lingering death; and the criminal's sons, being of tender age, were "mercifully" strangled; for it seems to be the peculiar barbarity of the Chinese criminal code, that it involves the innocent family of an offender in the retribution for his crime. There is much in use a sort of pillory, called the *congus*; and torture is employed to extort confession. The police of China is said to be vigilant and efficient; but, as a safeguard against oppression, the name of every person in any way connected with the government is published in a sort of Red Book, of which a corrected edition appears four times a year.

Another type of the patriarchal form of the Chinese government is to be found in the mode in which the state revenue is produced; it consists principally of tithes; not paid in the nature of taxation, but as rent, the emperor uniting the character of universal landlord with that of king and father: but though the whole population is said to be diligent in seldom reported to; and it is his own fault if Chinese be ever deprived of his lands. There are here no great estates; but if any one happen to hold more land than he can conveniently cultivate, he lets it to another, on the *metayer* principle, or on condition of his receiving half the produce, out of which he pays the whole taxes. A great part of the poorer peasantry hold lands in this way. (*Barrow*, 398; *De Guignes*, lib. 341.) The revenue is paid partly in money and partly in kind. The greatest possible discrepancy exists amongst the estimates that have been given of its amount. It is believed, however, that the ordinary revenue remitted to the Imperial treasury may amount to about 12,000,000. sterling, that is 10,000,000. in money, and 2,000,000. in produce. But it is essential to bear in mind that this is not the whole amount of Chinese taxation, inasmuch as the expenses of a collection, and many local and provincial charges, are deducted before any remittance be made to the Imperial treasury.

The military service of China is nominally composed of 1,000,000 soldiers, besides the militia and numerous standards of Mongul cavalry; but from this vast number many names must be deducted which are merely entered in the books, and perhaps the whole force does not exceed 700,000. The soldiers are enrolled in the corps quartered in the provinces in which they are born, and which are never quartered anywhere else; the Chinese government being impressed with the plausible, but most erroneous opinion, that soldiers living with their families, and being, in fact, more than half citizens, will exhibit greater bravery in the defence of their country, should any occasion arise for their services, than if they were cooped up in barracks or fortresses, and subjected at all times to strict discipline and martial law. The troops are only embodied at certain seasons, being at other periods their own masters. The Tartar troops, inasmuch as they belong to a standing army at a distance from home, receive higher pay, and are more efficient soldiers than the native Chinese; though they also seem to be enervated by their long residence in this tranquil region. The whole army is divided into standards, distinguished by their different borders and colours. These corps—not unlike our brigades—are subdivided into camps and wings; the right, left, and middle. The officers are all raised from the ranks, and are looked upon by the civilians as little better than police agents; but, like the latter, are obliged to take their regular degrees to obtain promotion, which is rapid. Their grades are precisely similar to ours, from the *Le-tuh*, commander-in-chief of the army, down to the *Wae-wel*, or serjeant. The principal weapons are bows and arrows; but they also use clumsy match-locks and iron guns, without carriages. The theory of tactics is well understood; but the prac-

tice is very deficient. In so peaceful a country there is but little occasion for military skill; and without intelligent officers, of improved weapons, it is not to be supposed that they should make any effectual opposition to European troops.

The Chinese Navy is extensive, but inefficient; it includes, perhaps, 1,000 sail; but the men-of-war are mere junks, which mount a few guns; and there are few large vessels. This Imperial navy is commanded by three high admirals and their inferior officers, all of whom are so profoundly ignorant of their business, that the merchant junks are better managed than the Imperial cruisers. Gutslaff draws a deplorable picture of the condition and discipline of the mercantile navy. Few sailors are regularly bred to the service, but are chiefly wretches who have been obliged to flee from their homes. Though there be a nominal commander in every junk, his authority is uniformly disregarded. Every one having the liberty of putting a certain quantity of goods on board, is a sort of shareholder, and does nearly what he pleases. The Chinese make use of a compass, invented by themselves, divided into 24 parts, beginning at the S., the needle moving freely in a box placed upon a bed of sand. Their pilots having been accustomed to the sea from their youth, and always performing the same voyage, have a perfect knowledge of the various localities. In the construction of river craft, the Chinese are more skillful; many of these vessels are indeed floating habitations, and thousands of families live in them during their whole lives. (*Sketch of Chinese Hist. by Gutslaff*, i. Introd. 1.—40.; *Sir G. Staunton's Trans. of the Leu-lee, or Criminal Code*; *Davis's Chinese*, i. 204. et seq.; *Quarterly Review*, No. vi. &c. &c.)

The Chinese their Social Condition, &c. The Chinese are said by Mr. Davis to be a nation of "incurable conservatives." Their rule is to adhere to all that is established, and to reject all that is new. They are the very transcript of the ancient world living in the present day; they wear the same costume, are subject to the same laws, which are administered precisely in the same way, and they exist to all intents and purposes in the same social and intellectual condition as their forefathers did 2,000 years ago. This uniformity may be almost said to have been ordained by nature, for it is a remarkable fact that the Chinese are so much like each other in personal appearance, that it is difficult for a European to distinguish between them. We find no diversity in the colour of their hair, no variety of eye, no prominent and striking feature which indicates the place of their birth. (*China Opened*, i. 290.) They have black stiff and strong hair, shaved so as to leave a much cherished tail depending from the crown; a depressed face, wherein the distinguishing features are not strongly marked, a flat nose, small angular eyes, round and prominent cheeks, a pointed chin, thin eyelids, small beards, middle stature, and strong, muscular arms and plumpness run through the beautiful ideal of beauty; consequently, to attain the latter they exercise but little agility. (*Id.* p. 293.) The aristocracy of rank and wealth are unknown in China. Distinction is solely to be obtained by learning; and dignity is only conferred by office. Even the sons of the emperor and their families merge into the common mass, should they not study, so as to become qualified for some official employment. The mandarins, or literary aristocrats, do not obtain their rank except by passing repeated examinations, as to the fairness of which no doubt has ever been surmised, and establishing their superiority over their competitors to the satisfaction of the Board of Examination. There are nine degrees of mandarin, the highest being viceroys, or governors, and the lowest, collectors of the revenue, &c.: promotion can only be obtained by superior proficiency in the study of the law. The different functionaries are distinguished by the number of buttons in their caps, and other variations of costume. As the pay of all persons in office is unreasonably small, they often resort to extortion to make up this deficiency, and there is scarcely a number of the *Pekin Gazette*, that does not record some instance of a public officer being degraded for this crime. The natural characteristics of the Chinese are summed up by Davis in these words:—"The advantageous features of their characters, as mildness, docility, industry, peaceableness, subordination, and respect for the aged, are accompanied by the vices of specious insincerity, falsehood, mutual distrust and jealousy." The lower orders are passionately addicted to gambling, for which they have their peculiar cards and dice. That honesty is more valued than practised has been inferred from the notification to be frequently seen in shop windows, that "there is no cheating here," and from a caution placarded in most public conveyances for travellers, to "take care of their purses;" but we doubt whether such notices really go for much. The insincerity and falsehood laid to their charge, in so far as they really exist, are the natural consequences of the restraints, under which they are laid from infancy, of the interference of the law with all their actions, and of their being obliged to suppress and conceal those feelings

and emotions to which, in other countries, full vent would be given. Their attention to etiquette is a consequence of the same principle. Even when peasants visit each other, complimentary cards—the size of which determines the rank of the sender—and polite answers are exchanged.

On the arrival of the guest, considerable difficulty is found in arranging who shall make the lowest bow, or first enter the door, or take the highest seat, or assume precedence at table, though the host contrives to place his guest in the most elevated position. When conversation commences, the mutual assent to every proposition, the scrupulous avoidance of all contradiction, and the entire absence of every offensive expression or melancholy allusion, show what a sense these people entertain of politeness." (*Medhurst's China, its State, Prospects, &c.*, 1838.) The condition of the poor is wretched in the extreme; they are frequently destitute of food, and many are said to perish in the winter season from cold, for want of fuel. (*Gustaf's Voyages*, p. 67.) Begging is common in the large cities, but not more so than in Europe. It is a curious fact, that though the Chinese be remarkable for assisting each other, particularly their own relations, with money or food, they will on no account step out of their way, in case of accident, to save a fellow-creature's life; but this arises from their laws making the person last seen near a corpse answerable for the death. Robbery is not uncommon, but is very seldom accompanied with murder. The people, generally so quiet and submissive, when once roused by the oppression of an intolerant magistrate, will rise en masse against him, and subject him to Lynch law: in such cases the government of Peking generally concludes that the magistrate has been in fault; and the outrage is allowed quietly to fall into oblivion! The drowning of infants, particularly of females, has been said to be customary in China; but this is a most unfounded statement. That an enormity of this sort is sometimes committed is certainly true; but we believe that it is of exceedingly rare occurrence. Mr. Davis says, that "the Chinese in general are exceedingly fond of their children, and the attachment seems to be mutual." (1. 246.) M. de Guignes concludes a very able discussion of this question as follows:—"Je ne nierai pas absolument que l'exposition au feu de la Chine; mais je considère qu'elle n'y est pas plus commune que dans les autres parties du globe. On n'en a des exemples que dans des cas particuliers et heureusement rares." (II. 298.)

The whole of the Chinese nation is divided into families, each of which bear the same surname, and consider each other cousins. These clans are bound to assist each other in any way that may be required; and the most powerful of them act as a salutary check upon local despotism. The women of China occupy a lower scale in the estimation of their countrymen than those of other nations. A broad face, diminutive waist, pale features, and feet small to deformity, constitute female beauty in the eyes of a Chinese. In infancy their feet are confined from tender age in shoes calculated to stop their growth, so that the feet of some ladies only measure 3 in. from toe to heel. Females are universally objects of traffic. When young they are purchased by dealers for the harems of the great, where they remain in splendid seclusion. Marriages depend entirely upon the will of the parents, who sell their daughters at from 5,000 to 6,000 dollars a piece, according to the beauty or rank of the female. Early marriages are universal; no man who can afford the expenses of the ceremony deferring it after the age of 50, and parents get rid of their daughters as soon as they can; even at the early age of 14. The Chinese may be said to be an omnivorous people. The principal part of their food consists of rice, which is generally eaten dry; but in the S. provinces it is mixed with the sweet potato in a sort of soup. Vegetables are the chief provision of all ranks, who do not consume a fifth part of the animal food that Europeans do. Pork is the favourite dish, and the head of the ass is esteemed a great delicacy. To eat every thing which can possibly give nourishment is the comprehensive principle upon which Chinese diet is regulated; so that dogs, cats, and even rats and mice, are not rejected by them. They are the most expert fishermen in the world; no aquatic creature escapes their vigilance, whether it inhabit the sea, lake, canal, or river; even pools and the ridges of fields are searched for fish. Every kind of meat is minced into small pieces, and is eaten with chop-sticks. The Chinese epicure delights in soups made of edible birds nests of the swallow species (*Hirundo eculeata*), and imported in great quantities from the E. islands. It appears that the birds make use of great quantities of a peculiar sea-weed (*Sphaerococcus carolinensis*), and when it is sufficiently softened in their stomachs, it is returned and used as a plaster to cement the dirt and feathers of the nest. These nests, after having been purified in immense manufactories, are eaten with great greed by the Chinese. The favourite beverage is tea, drunk out of small cups, which are seldom washed, for that process is thought to diminish the flavour. In

this article the Chinese are as great connoisseurs as Europeans are in wines. Distilled liquors are chiefly made from rice: rum is much used, but grape wine has not been met with. Drunkenness prevails, especially in the N. provinces; but the worst species of debauchery is opium smoking, which, when carried to excess, deprives the victim of strength; he becomes a walking shadow; his eyes are vacant and staring; his whole frame is deranged, and he soon sinks into a premature grave. But it should be observed that these are the consequences of the abuse of the practice; when used in moderation, it is said to be comparatively innocuous. The fumes of the drug are inhaled through a peculiar pipe, in a recumbent position, and the smoker soon sleeps. When he awakes, he drinks a cup of tea, and smokes again. The Chinese delight in the drama: they will attend a play for a whole night without being wearied, and recount with ecstasy what they have seen. In their pastimes the women are never associated. (*Davis's China; Gustaf's Medhurst's China, its State, Prospects, &c.*)

The accounts of Chinese architecture are very satisfactory, a consequence of its being necessary to employ terms in its description that convey to foreigners impressions very different from the reality. According to Mr. Barrow, it is "as unsightly as unsolid; without elegance or convenience of design, and without any settled proportion; mean in its appearance, and clumsy in the workmanship." (p. 230.) Perhaps, however, this opinion is founded too much on preconceived notions of the absolute superiority of the European standard. But without entering on this, it is sufficient to observe that the walls of the houses are of brick, stone, or wood, but principally of the first. The roofs are always supported on columns, that is, on upright pieces of timber, without either capital or base. In the country they are rarely more than one story in height, but in the great towns they are frequently two. Their roofs, which are curved, are usually covered with tiles. Their pagodas are polygonal buildings, of 5, 7, or 9 stories or roofs. Mr. Barrow says, that the pagoda erected by George III. in Kew gardens is "not inferior to the very best" he met with in China—a statement which certainly does not tend to exalt our opinions of this species of buildings.

Religion.—There is no religion in China actually supported by the state, and yet the doctrine of Confucius is the only one countenanced by it. But there are two other sects; Fo, or Buddhism, and Taoism, or that of the "rationalists." The first acknowledges a Supreme Being, and believes the emperor his sole viceroy on earth. Heaven, earth, the elements, Confucius, gods of various attributes, saints, the emperor, &c., are objects of worship; the rites in performing which are watched over with the most jealous care by the *Le-poo*, or Board of Rites. The doctrine of Confucius fills the world with genii, demons, and the spirits of deceased worthies, who are supposed to have each their separate duties, and influence assigned to them. No worship is so strictly observed as that of ancestry, so that filial piety is carried to an excess, even beyond the grave. The religious edifices of the Ys sect are said to be very splendid. They chiefly consist of one large hall approached by steps, with the idol placed upon an altar, or table; the walls are adorned with pictures, and the ceiling with gilded griffins and dragons. An apparatus for sacrificing various animals is also provided. There is no congregational worship. Buddhism is a despised creed in China, and is entirely supported by the mendicancy of its priests. The latter practise celibacy, dress in a similar manner to monks, and the devotees use holy water, and a rosary to keep account of their prayers. Mr. Malcom, the missionary, has given a very favourable view of Buddhism. "It has no mythology of obscene and ferocious deities; no sanguinary or impure observances; no self-inflicted tortures; no tyrannising priesthood; no confounding of right and wrong, by making certain iniquities laudable in worship. In its moral code, its descriptions of the purity and peace of the first ages, of the shortness of man's life because of his sins, &c., it seems to have followed genuine traditions. It almost every respect it seems to be the best religion man ever invented." (*Travels*, i. 322.) The professors of Taoism pretend to magic, alchemy, and to be possessed of the elixir of long life; practise glaring impositions, and inculcate the most puerile superstitions. They encourage a belief in ghosts and evil spirits; make use of spells and talismans, lucky and unlucky birds, and a system of tricks called *fung-shuey*, by which they pretend to choose lucky situations for building houses and tombs, and a hundred other fallacies, by which these impostors contrive to fill their purses. Religion, of whatever kind, has always, we believe, been reckoned a matter of secondary importance in China. But this is a subject as to which our information is comparatively little, so we are to be relied on. The ancient and modern missionaries, however, soever they may have admired many parts of the Chinese character and institutions, have generally represented

their morals and religion in the most unfavourable point of view. That there is much about them that is objectionable is certainly true; but it is so obviously the interest of the missionaries, by depreciating the moral and religious character of those they are labouring amongst, to exalt their own utility and importance, and justify their claims to the patronage and support of the Christian public, that their statements can hardly be supposed to be free from bias. Many endeavours have been made to introduce Christianity into China, but with less success than has attended similar efforts in other nations. It was first introduced by the Nestorians in the 17th century. These were followed by the Jesuits, whose missionaries were more successful than those of any other sect; for at the Tartar invasion there were no fewer than thirty Catholic churches in the province of *Keang-nan* alone; the first of the Tartar princes openly espoused the cause of the missionaries, by taking a German Jesuit, Adam Schaal, for his instructor. The abolition of that order, and the continual wars in Europe, reducing their funds, the Catholic missions declined; and but few native converts at present remain. The late Dr. Morrison was the first Protestant missionary who landed in China; he compiled a dictionary (having been preceded in that arduous task by De Guignes) and grammar; translated the Scriptures into the Chinese language, and established printing-presses at Canton, from which a judicious selection of tracts has issued. These pious efforts have been ably seconded by Mr. Milne and the Rev. Charles Gutzlaff, the latter of whom has published several valuable works on China, of which we have made considerable use. The Mohammedan, Jewish, and many other religions are to be found in China, but in a very languishing condition. (*Chinese Repository*, vol. iii.; *China Opened*, li. 183-247; *Davis's Chinese*, i. 301, &c.; *Essay on the Religion, &c. of China*, by Rev. W. Ellis, prefixed to *Gutzlaff's Voyages*, lxxi.-xcii.; *Quarterly Review*, lvi. 603, 604, &c. &c.)

Language, Education, and Literature.—Distinct as the Chinese are from the rest of mankind in habits, manners, and religion, their total dissimilarity is rendered complete by their language; which, arrested between the hieroglyphic and alphabetic systems, presents a singular phenomenon. The most obvious expedient for expressing substantive ideas otherwise than by speech, would be to figure a representation of the object intended to be expressed; and this was unquestionably the plan first adopted by man to communicate and record what he thought through the medium of the eye instead of the ear. As civilisation and knowledge advanced, and the necessity for communicating it increased, more concise forms or conventional letters were substituted; but in the case of the Chinese, the primitive mode is still the principle upon which their characters are constructed; so that their system may be called the perfection of the hieroglyphic method of written language. Having pictorial representations of natural objects for their basis, the elementary signs of the Chinese language are few and simple. A horizontal, a perpendicular, two oblique lines drawn in different directions, and an acute angle and dot, are the elements of which the Chinese characters consist. These marks are so combined in the first instance as to form 214 keys or generic characters. Thus, the symbol for "man" is always present in a word which has direct or indirect reference to him; this character, for example, combined with the symbol for field, signifies a farmer. The Chinese notion of government is well expressed in another example: the verb "to govern" is represented by the two characters that stand for "bamboo" and "stroke." The keys are divided into 17 classes, and the number of words thus formed, upon a system more complete than that of any of the W. languages, to be found in the most copious Chinese dictionaries, amounts to 40,000, each of which stands as arbitrarily for the thing or idea intended to be conveyed as a figure does in a painting for the object it is meant to represent. Thus the character presents an object to the eye, which enters the mind with a striking and vivid certainty; it forms a feature which really is, or by early association is considered, beautiful and impressive. Chinese writing is also more permanent than the alphabetic system, which is ever varying its spelling with the continually changing pronunciation of the living voice. Perhaps the Chinese written language has contributed in some degree to the unity of the Chinese nation. (*Dr. Marsham's Clavis Sinica*; *Elements of Chinese Grammar*, Introduction, p. xi.; *De Guignes, Dictionnaire Chinois*, Introduction; *Quarterly Review*, lvi. 606; *China Opened*, i. 391.) The causes, however, which operate to make the written language in China the most complete and beautiful in the world; render oral communication

the most difficult and confined. That systematic regularity which so continually requires the presence of the keys, as parts of words bearing different meanings, and thus precludes a necessary variety of sounds, leaves the spoken language as meagre and defective as, when written, it is rich and complete. The sound corresponding with our *e* has at least 2,000 significations, and "one might write a perfectly intelligible treatise in which only the sound of *e* was employed." (*China Opened*, i. 388.) Thus, a conversation between even two of the best educated Chinese, constant misapprehensions occur. "They understand each other," says Mr. Davis, "perfectly on paper, but are mutually unintelligible in speech." And in the most common-place colloquy it is not unfrequent for the speakers to resort to pen, or rather brush, ink, and paper, to make themselves understood; in the absence of these materials, they draw the figure of the root or key in the air with their fingers. So that oratory is entirely unknown in China; and all affairs of importance, such as lawsuits, civil or criminal, are carried on in writing. The deficiencies of the oral language are in a small degree supplied by the different tones in which the same words and their various significations are uttered. But these inflections are so nice as to be only distinguishable by a native ear. The difficulty of free intellectual intercourse must have had a very considerable effect in preventing the Chinese from advancing a step further in civilisation than they had attained so many hundred years ago.

Education in China is more encouraged and favoured even than in Prussia; and such is the estimation in which it is held, that all state employments are given by competition, as school and college prizes to the best scholars. Schools for youth are abundant in every part of the empire; and education is so general, and its cost so reasonable, that reading and writing may be almost said to be universal. Language is taught to very young pupils by means of rude pictures which represent the names of the chief objects in nature and art. Then follows the *San-tee-king*, or summary of infant erudition, conveyed in rhyming lines of three words or feet. They soon after proceed to the "Four Books," which contain the doctrines of Confucius, and which, with the "Five Classics," subsequently added, are, in fact, the Chinese Scriptures. Writing is taught by tracing the characters with a hair-pencil, on transparent paper placed over the copy. This is a most important article in Chinese education, for no man who does not write a good hand can lay claim to literary distinction. The emperor himself, when bestowing a great reward, writes a few characters on a piece of paper and sends it to his favourite, and this is more valuable than conferring an order. (*Davis*, i. 390; *China Opened*, i. 390.) Females of the higher class are allowed to acquire a little reading and writing, and have been known to write poetry; but the great object of their education is to inculcate obedience. The schools established all over the empire are superintended by various officers appointed by government. In every district there is a sort of literary chancellor; but early aspirants are examined by superintendents, who make the circuit of their district twice a year for that purpose. The pupils they approve of repair to the chief, and should they pass that ordeal, and thus obtain the approbation of the officers of their native district, they are eligible for the lowest literary honour of the state. This is called *Tew-tae* (flowery talent). For this degree the examinations take place twice in every three years in *foos* of every province; the scholars having each a theme given them from the "Five Classics," in a large hall, are confined in separate boxes to prevent their receiving assistance from others; and every avenue is strictly guarded by soldiers. The *Tew-tae* degree having been obtained, the aspirant has to acquire two other honours in the metropolis of his province, and he is placed on the books as eligible for employment corresponding with his advancement. To procure the highest state office, an examination before the national college, or *Han-kin*, is necessary; but the very pinnacle of fame is only arrived at by being examined by the emperor himself. Every literary honour confers the title of mandarin, and each degree is distinguished by a difference of the dress, which is, in some instances, splendid. Genius and originality amongst a people so blindly enthusiastic in their admiration of the ancients, are considered rather a blot upon, than as an ornament to, the character of a student. Memory is the chief object of admiration—memory to repeat the greatest number of the wise sayings of the ancient sages.

From what has been already stated, it will be readily conceived that the literature of the Chinese is most extensive. "Books," says Mr. Medhurst, "are multiplied at a cheap rate, and to almost an indefinite extent, and every peasant and pedlar has the common repositories of knowledge within his reach. It would not be hazardous too much to say, that in China there are more books and more people to read them than in any other country in the world. Amongst the 360 millions of Chinamen, at

* M. De Guignes entertained the singular opinion that the Chinese characters were monograms of the alphabetical letters of the Phoenicians! The fallacy of this notion has been forcibly pointed out by Klaproth. (*Mémoires Asiatiques*, &c. p. 59.)

least 2 millions are literati." (*China Opened*, l. 417.) Yet it may appear strange that there is hardly one original writer among them: it is generally believed in China, that whatever is to be known has already been discovered and communicated by the ancient sages; and should an author be bold enough to start any thing new, if that should happen to vary in the smallest particular from the orthodox writers, he would be severely punished. - It is this which keeps the knowledge and civilisation of China at a standstill. The historical writings are nothing more than elaborate chronologies; and, where real dates have been wanting, the writers are suspected of having supplied them from their own imaginations. The scientific and philosophical works of the Chinese are by the "ten philosophers," or Confucius and his disciples and commentators. Chinese literature, has, however, been in several respects unjustly depreciated. It has been said, for example, that they are so ignorant and ostentatious as to suppose that China occupies the centre of the world, and that it is surrounded with a few insignificant and petty territories, all its tributaries. But the accounts that have been translated from Chinese writers of several foreign countries, how defective soever in many respects, are sufficient to show that this is a most unfounded statement. "Je n'ai pas besoin de réfuter ici l'idée absurde de ceux qui prétendent que les Chinois croient que leur pays est situé au milieu du monde. Un méléot, ou un couli du Canton prut, à la vérité, donner une paille exagération, mais c'est à l'intelligence de celui qui questionne de l'adopter ou de la rejeter." (*Klaproth, Mémoires*, III. 267.) "L'histoire littéraire, la critique des textes, et la biographie, sont le sujet d'une foule d'ouvrages remarquables par l'ordre et la régularité qui y sont observés. On possède beaucoup des traductions des livres Sanscrits sur la religion et la métaphysique. Les lettrés cultivent la poésie, qui est assués chez eux au double joug de la mesure et de la rime; ils ont des poèmes lyriques et narratifs, et surtout des poèmes descriptifs, des pièces de théâtre, des romans des mœurs, des romans où le merveilleux est mis en usage. On a composé en outre un très-grand nombre des recueils de spectacles et généraux, des bibliothèques et des encyclopédies, et dans le dernier siècle on avoit commencé l'impression d'une collection des ouvrages choisis en 180,000 volumes! Les Chinois ont d'excellens dictionnaires où tous les signes de leur écriture et tous les mots de leur langue sont expliqués avec le plus grand soin et dans un ordre très-régulier. Enfin il n'y a pas, même en Europe, de nation chez laquelle on trouve tant des livres, ni des livres si bien faits, si commodés à consulter, et si à bas prix." (*Abel Rémusat*, quoted by Balbi.) Mathematical science is at a low ebb; as is evinced by an imperial edict published in the Peking Gazette, May, 1800: it announced the intended marriage of a princess, and ordered the *Tribunal of Mathematicians* to select a fortunate day for the celebration of the nuptials. (*Quarterly Review*, xlii. 61.)

CHINACHIN, a large town of Nepal, N. Hindostan, 2850 m. W. N.W. Catmandoo. Its houses are of brick and stone, with flat roofs: it has 2 Hindoo temples, and an export trade in horses, cow talls, sheep, salt, musk, drugs, and woollen cloth; and imports metals, spices, cloth, &c. from other parts of Hindostan.

CHINAUE (an *Acricine*), the largest river of the Punjab, rising in the Himalaya. In lat. $32^{\circ} 10'$ N., long. $87^{\circ} 50'$ E.; running at first with a N.W. but afterwards with a S.W. course between the Ravoe (*Hydrates*), and Ithlum (*Hydaspes*). It unites with the latter river below Ilung with considerable noise and violence, as remarked by the historians both of Alexander and Timour, and with the Sutlege (*Hephasis*) near Ooch; after which it joins the Indus, in lat. 29° , long. $70^{\circ} 36'$. About 80 m. N. Lahore, it has been found to measure 14 m. across in the month of July; but in the dry season, it is there only 800 yards wide. It is no where fordable S. of the hills, though in many places easily crossed. Kishtwar, Jhelum, and Ilung are on its banks. (*Hamilton's E. I. Gaz.*, i. 305.)

CHINCHILLA, a city of Spain, prov. Murcia, cap. dist., in an elevated situation, on the high road from Valencia to Madrid, 146 m. S.E. Madrid, 72 m. N.N.W. Murcia. Pop. 10,533. (*Alfama*.) It has a church, convent, an hospital, barracks, and an ancient ruined castle, which was partly restored during the war of independence. There are mines of silver in the neighbourhood; and it produces earthenware and some coarse linen and woollen cloths.

CHINCHOO, an incl. town of Hindostan; prov. Aungmyethar, pres. Bombay, on the road between that city and Poona, 10 m. N.N.W. the latter. Pop. 6,800, including 300 Brahmin families. It is chiefly remarkable as the residence of the Chintaman or Narrain Deo, an individual whose honours are hereditary, and who is believed by a large proportion of the Mahratta nation to be an incarnation of their favourite deity Goomputy. (*Hamilton's E. I. Gaz.*, i. 359.)

CHINGLEPUT, or "the Jaghire," a distr. of Hin-

dostan; prov. Carnatic; pres. Madras; between 12° and 14° N., and intersected by long. 80° E.; having N. the distr. Nellore; W. S. Alcot; and E. the Bay of Bengal. Area, 2,353 sq. m. Pop. (1837) 336,230, or 109 to the sq. m. Surface generally low, but with hills interspersed; there are several rivers, the principal of which is the Palar, which rises among the Nunddyroog hills in Mysore, after a winding course of 210 m., chiefly E., past Vellore, Arcot, Conjevaram, and Chingleput, falls into the sea, near Sadras. There are some lakes and lagoons, or inlets of the sea, the chief of which is that of Pulicat. Granite is the most abundant of the primitive formations, and often projects in detached masses from the surface. Soil sandy and indifferent, and the country often barren, or overrun with low prickly bushes. Owing partly to the scarcity of water, but quite as much to the oppressiveness of the assessment, a large portion of the land does not repay the cost of cultivation; but the rest supplies the Madras market with grain, betel, fruit, oil, vegetables, &c.: the palmyra (*borassus flabelliformis*) thrives without trouble, and is both cheap and abundant. The land-tax is raised under a modified ryotwar, or rather a metayer system; government taking *half* the actual crops, and selling them to the best advantage. In 1835-36, the land revenue amounted to 875,352 rup., and the total revenue to 1,592,582 rup. There are no manufactures, excepting some of cloth. The great mass of the people are Hindoos. Chief towns, Chingleput and Conjevaram. This distr. was obtained by the E. I. Comp. in 1763, from the Nabob of the Carnatic, who rented it till 1780, when the Madras pres. assumed the entire control over it. It was twice invaded by Hyder Ali, and was afterwards nearly depopulated by famine and emigration. During the present century it has been gradually recovering. (*Madras Almanac*, 1838; *Reports on E. I. Affairs*.)

CHINGLEPUT (*Singhalapetta*), an incl. town of Hindostan; presid. Madras, cap. of the above distr.; in a small valley, in great part covered by a beautiful artificial lake; 20 m. N. the Bay of Bengal, and 38 m. S. S.W. Madras; lat. $22^{\circ} 46'$ N., long. 80° E. Though much reduced in extent, it has a fort of great strength, and in a respectable state of defence: the latter incloses an inner fort, in which the public functionaries hold their several courts and offices. (*Hamilton*, i. 401.; *Mod. Trav.*, x. 325.)

CHINON, a town of France, dép. Indre-et-Loire, cap. arrond., on the Vienne, 26 m. S.W. Tours. Pop. 6,911. It was formerly fortified; and the ruins of its walls, and those of its castle (the latter of vast extent, and in parts pretty entire), are its most important and interesting objects. It has a court of primary jurisdiction, a commercial college, and some manufactures of linen and woollen stuffs. The celebrated and enigmatical Rabelais was born within a short distance of Chinon, in 1483. (*Hugo*, art. *Indre-et-Loire*.)

CHINSURAH, an incl. town of Hindostan, prov. Bengal, formerly a Dutch settlement, but latterly transferred to the British government, on the W. side of the Hooghly river, 18 m. N. Calcutta, and about 2 m. N.N.E. Chander-nagore; lat. $22^{\circ} 52'$ N., long. $88^{\circ} 28'$ E. In appearance it has quite a Dutch character: "Many small neat houses, with green doors and windows; a pretty little square, with grass-plot and promenades, shaded by trees; a fortified factory; and a gloomy old-fashioned government-house, are the more remarkable features." In 1814, some elementary native schools were established here; and in 1818, their number amounted to 30, with 8,000 scholars. From 1816 to 1824, the Bengal government had disbursed 84,000 rupees in aid of these schools; in 1829, there were 1,540 scholars on the books. (*Hamilton's E. I. Gaz.*, i. 401.; *Mod. Trav.*, ix.; *Reports*, &c.)

CHIO. See SCIO.

CHIOGGIA or **CHIOZZA** (perhaps the *Portus Edro* of the ancients), a sea-port town of Austrian Italy, deleg. of Venice, cap. distr., on an island of the same name, at the S. extremity of the lagoon of Venice. Lat. $45^{\circ} 19'$ N., long. $12^{\circ} 18'$ E. Pop. 30,600. It is about 3 m. in circuit; well built; contains a wide and handsome street lined with porticos, a cathedral, hospital, orphan asylum, workhouse, theatre, &c.; and is connected with the mainland by a stone bridge of 43 arches. It has a harbour with 17 ft. water, protected by two forts: there are other batteries, and Chioggia is deemed one of the most strongly defended points of the Venetian lagoon. It is a bishopric, and has an episcopal palace, a gymnasium, a high seminary, conventual female school, and an evening rudimentary school attended by nearly 300 poor children. In its vicinity are some important salt-works, which, together with the manufacture of cordage, the building of vessels, for which there are 36 slips, navigation, and fishing, occupy many of the inhab. Trade active in Italian and German produce, and facilitated by canals communicating with the Brenta, Adige, and Po. (*Rampoldi*, *Corog.*; *Oesterr. Nat. Encyc.*)

CHIPPENHAM, a pari., bor., town, and par. of England, co. Wilts, hund. Chippenham, 87 m. W. London,

CHIPPING NORTON.

30 m. E. Bristol. Area of par., 9,100 acres. Pop. of do. (1831), 3,506; (1881), 4,332. Pop. of old bor., 1,690; but according to the provisions of the Boundary Act, the limits of the par. bor. were extended so as to include the entire par. of Chippingham, with the adjoining parishes of Langley Burrell, Harden Hulke, and a small extra-parochial tract, the whole having, in 1831, a pop. of 5,970. The town is situated on the Avon, which is here crossed by a bridge of 23 arches. It is well built, paved, lighted with gas, and amply supplied with water. "It is of considerable extent, contains many good houses, and may be said to be in a prosperous condition and increasing." (*Boundary Report*.) From its situation at the intersection of two great roads (the Malmesbury and the London and Bath lines), many daily coaches pass it, and it has usually a bustling appearance. It is also on the line of the Great Western Railway, and a branch of the Berks and Wilts Canal terminates in the town. The church is a spacious structure of various dates, some portion being as old as the 12th century; there are also several dissenting chapels, a free school for 12 children, and other charitable and benevolent institutions. At the commencement of this century there were several large woollen manufactories in the town: at present, notwithstanding its increase, the only factories in work are 1 for cloth, 1 for silk, with a large flour-mill. The market, which was formerly very extensive, was, until within these few years, held on Saturday, but it is now held on Friday, in a commodious building erected for the purpose by Joseph Neeld, Esq., at present (1839) one of the mems. for the bor.: there are large cattle-fairs, May 17., June 22., Oct. 29., and Dec. 11.

Though one of the oldest towns in the kingdom, Chippingham received no charter till 1554. Under the Municipal Reform Act it is governed by 4 aldermen and 12 councillors, and the limits of the bor. have been extended for municipal purposes, so as to include the whole town and a pop. of about 3,800. The corporation revenue amounts to about 280*l.* a year, derived principally from an estate left for the maintenance of the bridge and of a road to Derryhill in the vicinity. A court of requests for debts under 40*l.* sits successively here and at Calne and Corsham.

Chippingham has sent 2 mems. to the H. of C. from the reign of Edw. I. Previously to the Reform Act, the right of voting was restricted to the occupiers of 129 burgage tenements within the ancient bor. The extension of the limits of the par. bor. by the Boundary Act has been noticed above. Registered electors (1837-38), 240. (See *Parl. and Municipal Boundary Reports*, &c.)

CHIPPING NORTON, a town and par. of England, co. Oxford, hund. Chadlington. Area of par., 4,780 acres. Pop. of do. in 1831, 2,537. The town, 17 m. N.W. Oxford, is built partly on low, and partly on high grounds. It has a large Gothic church, with a low tower; a free school, founded by Edward VI.; a subscription school for educating and clothing 40 girls; and almshouses founded in 1640. It returned 2 mems. to the H. of C. in the 30th of Edward I., and the 32d and 33d of Edward III. Its bailiffs were empowered by a charter of James I. to decide actions under 40*l.*

About 3 m. from Chipping Norton is the Rowldrich monument, formed of upright stones, arranged in a nearly circular form. This monument is ascribed by Dr. Stukeley, though probably without any good foundation, to the Druids. (See *AVEBURY*.)

CHISWICK, a par. and village of England, co. Middlesex, Kensington div. of Ossulton hund., on the N. bank of the Thames, 4½ m. from Hyde Park Corner. Area of par., 1,120 acres. Pop. (1831) 4,594. The church, which has been frequently repaired and altered, has several interesting monuments; and in the church-yard is the tomb of Hogarth. There are here many fine villas; but the great ornament of the place is Chiswick House, belonging to the Duke of Devonshire. It was built after the model of a villa by Palladio, by the famous Earl of Burlington; and has a choice collection of paintings. The illustrious statesmen, C. J. Fox and George Canning, breathed their last in this villa.

CHITORE, a city and strong fortress of Hindoostan, prov. Rajpootana, and formerly the cap. of the rajahship of Oudeypoor, 64 m. E.N.E. of the city. The fortress, situated upon a rock, scarped by nature and art to the height of from 80 to 190 ft., is surrounded by a rude wall with semicircular bastions, the circuit of which is said to be 12 m.; but which encloses only a narrow, irregular, and disproportionately small area. Its outworks are massive and striking, and its appearance picturesque: its interior contains numerous temples, several palaces, some minarets, one of which is a square tower of white marble, 9 stories high, and surmounted by a cupola; and many wells, fountains, cisterns, &c. All the public buildings are of Hindoo origin, excepting one erected by a son of Aurangzebe. The town, seated below the fortress, is chiefly inhabited by weavers and dealers in grain. Chitore has been several times captured by the Mohomedans and others. *Hamilton's E. I. Gaz.*, vol. ii.; *Heber's Mod. Trav.* vol. x.)

CHITTELDRÖG.

CO7

CHITTAGONG (*Chattogram*), a distr. of India beyond the Ganges and Brahmaputra, but included in the prov. of Bengal, of which it forms the S.E. extremity, lying chiefly between lat. 21° and 23° N., and long. 91° 30' and 93° E., having N. Tipperah, E. the country of the indep. Khyens, S. Arracan, and W. the Bay of Bengal. Length N. to S. about 165 m.; breadth uncertain. Pop. estimated at 790,000. The islands of Hattia, Sundep, and Bameeny, with Mascal and others contiguous to its shores, are under its jurisdiction. Its coast, S. of the mouth of the Karnaphuli or Chittagong river, abounds with openings and harbours; but unfortunately none of them are available for ships of any size, their mouths being choked up with sandbanks and shoals. Surface along the coast, low and flat; the interior is hilly; and the E. frontier is formed by the same extensive mountain chain which bounds Sylhet, Tipperah, and Arracan, to the E., and which in this portion of its extent varies from 2,000 to 5,600 ft. in height. In this region many streams arise which disembrace on the Chittagong coast. Climate in many respects similar to that of Bengal; but the rains set in earlier, and last longer: in the hill region the crops often suffer from the inundations of the mountain torrents, as they do on the coast from invasions of the sea. Chittagong is in many parts particularly healthy, and is, therefore, often frequented by Europeans from Bengal. Many of the valleys and plains possess so fertile a soil that very little labour insures redundant crops. Much of the country is overgrown with jungle, and the whole of the mountain chain is covered with lofty forests. The hilly region, when cleared, is believed to be well adapted for the culture of coffee, pepper, spices, &c.: the low hills are interspersed with many hamlets inhabited by Mughis, who emigrated thither after the conquest of Arracan by the Britons in 1783, in the neighbourhood of which, on small plots of cleared land, they raise plantains, ginger, betel-leaf, the sugar-cane, cotton, indigo, tobacco, and capsicum. The hills in the N. are inhabited by Tripurah, Joomca, and other tribes, apparently without any dependence on particular chiefs; who cultivate cotton and rice, and rear hogs, goats, and poultry, which they exchange with the Bengalees for salt, iron, earthenware, and fish.

Notwithstanding the fertility of its soil, Chittagong is, upon the whole, but thinly inhabited: towards the end of last century it was estimated that there was twice as much unproductive hilly country as cultivated arable land. Landed property is mostly divided into very small portions, among numerous proprietors. The waste lands, when cleared, become liable to assessment under the decennial land-settlement. Except on the sea coast, towns and villages are very scarce. The Mughis or Arracanees inhabit either temporary hamlets, which they change together with the spots they cultivate, or else permanent dwellings about 40 ft. long by 30 broad, elevated on posts several feet from the ground, after the fashion of some ultra-Gangetic nations, ascended by a ladder or notched stick, and much more comfortable in their interior than the huts of the Bengalees peasants. The male Mugh pop. have adopted the dress and habits of Bengal, while the females retain those of Arracan and Ava: all are Buddhists. The Mohammedans in this distr. are to the Hindoos as 3 to 2; but are extremely tolerant, and have adopted many Hindoo habits and customs. The chief exports of Chittagong are, timber, planks, canvass, coarse cloths, stockings, umbrellas, &c.; on the sea coast salt, which is a government monopoly, is extensively manufactured. Coal is believed to exist, but no mines have yet been worked. The elephants of Chittagong have been celebrated both for size and excellence. They are admirably adapted for the camp and the chase, and hunting them still forms a chief occupation of some of the forest inhab. Many were formerly caught and exported, yielding a considerable profit to the sovereign; the trade in them is now farmed by the government to a contractor.

Chittagong probably once formed part of the extensive kingdom of Tripurah; in the 16th century it was successively possessed by the Afghan kings of Bengal and the Arracan rajahs; in 1760 it was finally ceded by its nabob to the British. (*Hamilton's E. I. Gaz.* i. 403-406; *Presbotten's Rep.* on the E. Frontier; *Parl. Rep.* on the Affairs of the E. I. Company.)

CHITTELDRÖG (*Sitala durga*, the spotted castle), an incl. town and fortress of Hindostan, prov. and dom. of Mysore, but occupied by a British garrison; cap. of a distr., on a cluster of rocks at the extremity of a ridge of hills, 110 m. N.N.E. Seringapatam, 380 m. W. N.W. Madras; lat. 14° 4' N., long. 76° 30' E. The town, which stretches along the base of the droog or fortress at the N.E., is surrounded by dilapidated ramparts of granite with round towers at intervals, a spacious ditch excavated from the rock, and a wide spread glacis: it is neither very large nor populous, but its principal street is remarkably spacious. The fort, enclosed by a de-

fenced rock to be found in S. India; an endless labyrinth of walls of solid masonry winds irregularly up to the summit, guarding every accessible point, and forming enclosures within enclosure; the more exposed points are crowned with batteries, and the ascent is partly by steps, and partly by superficial notches cut in the rock, and scaled with great difficulty. Such is the intricacy of the works, that an enemy might be master of the outer wall, and yet not materially advanced towards the reduction of the fort: the lower enclosure contains the former pillar's palace, now occupied by the British commandant, other ancient structures, the officers' bungalows, and a reservoir of good water which supplies all the town; in the other enclosures there are two other tanks, various Hindoo temples, &c., a deep magazine sunk in the rock, and a depot for ghee. At a short distance W. of Chiteldroog is a curious suite of subterraneous chambers, apparently the former habitations of devotee worshippers of Shiva. This station is noted above all others in India for the great variety and excellence of its fruits. (*Hamilton's E. I. Gaz.*, i. 407.)

CHIUSA, an incl. town of N. Italy, k. Sardinia, prov. Coni, cap. mand., on the Pesio, 7 m. S.E. Coni. Pop. nearly 5,000; chiefly occupied in the manufacture of silk goods and mirrors, and vine cultivation. The town is well built. A continuation of the ancient Emilian way passes through its vicinity.

CHIVASSO, an incl. town of N. Italy, k. Sardinia, div. Turin, cap. mand., on the Po, in a fertile plain, 13 m. N.E. Turin. Pop. 4,000. It was formerly one of the strongest places in Piedmont, but is now surrounded by only a simple wall with two gates leading to two suburbs. It has a square, a church, and several convents, and some trade in corn and cattle.

CHOLET, or CHOLLET, a town of France, dép. Maine-et-Loire, cap. cant., on the Maine, 13 m. S.E.E. Beaupreux. Pop. 8,897. It is finely situated; and had formerly several feligious houses, and a superb castle, destroyed during the Revolution. Extensive manufactures of cottons, dannels, &c., were established here and in the neighbouring communes during the last century; but the town having been the theatre of a battle, in 1793, between the Vendéans and the republicans, the manufactures were all but destroyed, and the workmen either put to death or dispersed. In 1795, however, after the first pacification of Vendée, the expatriated manufacturers returned to Cholet; and, instead of being dispirited by their disasters, entered with fresh vigour on a new career of industry, and have succeeded in carrying the manufactures of the town and its vicinity to a higher pitch of prosperity than ever. From 60,000 to 70,000 individuals of both sexes were employed, in 1834, in the fabrics, of which Cholet is the centre. At present, it has establishments for the spinning of cotton and wool, with extensive bleach-works and dye-works. A great variety of cotton, linen, and other goods are produced in the town; the total annual value of its different fabrics being estimated at 20,000,000 fr. (800,000*l.*) (*Hugo*, ii. 308.)

CHOLULA, an incl. town of Mexico, state of La Puebla, in a fertile plain S. of the Cordillera of the Malinche, 2 m. W. N.W. Puebla, and 64 m. S.E. Mexico; lat. 19° 2' 0" N., long. 98° 13' 18" W. Pop., when visited by Humboldt, 18,000; but it has fallen off in the interval. It was compared by Cortes, in the early part of the 16th century, with the most populous cities of Spain; but it declined with the rise of Puebla. It still, however, covers a large space of ground, and the size of its great square indicates its past importance. It contains many churches, and regular and broad streets; the houses are mostly of ong story, and flat roofed. There are some manufactures of cotton cloth. The principal extant relic of its ancient grandeur, is a huge pyramid, or *teocalli*, to the E. of the town, now covered with prickly-pear, cypress, and other evergreen shrubs, and looking at a distance like a natural conical-shaped hill. As it is approached, however, it is seen to consist of four distinct pyramidal stories, the whole built with alternate layers of clay and sun-dried bricks, and crowned with a small church. According to Humboldt, each side of its base measures 489 metres (1,440 ft.), being almost double the base of the great pyramid of Cheops (which stands on an area equal to that of Lincoln's Inn Fields); its height, however, is only 50 metres (164 ft.). It appears to have been constructed exactly in the directions of the four cardinal points. The ascent to the platform on the summit is by a flight of 130 steps. This elevated area comprises 4,980 sq. metres (5,023 sq. yds.). The chapel erected on it is in the shape of a cross, about 90 ft. in length, with two towers and a dome. It was dedicated to the Virgin by the Spaniards, and has succeeded to a temple of Quetzacoatl, the god of the air. This pyramidal pile is, however, conjectured to have served for a cemetery, as well as for the purposes of religion; and Humboldt and other authorities regard it as bearing a remarkable analogy to the temple of Belus, and other ancient structures of the Oriental world. The Indians believe it to

be hollow, and have a tradition that during the abode of Cortes at Cholula a number of armed warriors were concealed within it, who were to have fallen suddenly upon the Spanish army. At all events, it is certain that Cortes, having some suspicion or information of such a plot, unexpectedly assailed the citizens of Cholula, 6,000 of whom were killed. In making the present road from Puebla to Mexico, the first story of this pyramid was cut through, and a square stone chamber discovered, destitute of an outlet, supported by beams of cypress, and built in a remarkable way, every succeeding course of bricks passing beyond the lower, in a manner similar to some rude substitutes for the arch met with in certain Egyptian edifices. In this chamber, two skeletons, some idols in basalt, and some curiously varnished and painted vases, were found. There are some other detached masses of clay and unburnt brick in the immediate vicinity, in one of which, apparently an ancient fortress, many human bones, earthenware, and weapons of the ancient Mexicans, have been found. The view from the great pyramid, embracing the Cordillera, the volcanoes of La Puebla, and the cultivated plain beneath, is both extensive and magnificent. Cholula is surrounded by corn fields, also plantations, and neatly cultivated gardens. (*Humboldt, Researches*, i. 88; *Eng. Trans.*; *Bullock*; *Six Months in Mexico*, pp. 114–116; *Ward, Antig. of Mexico*.)

CHOOROO, an incl. town of Hindoostan, prov. Rajpootana, the second town in the dom. of the Bikanere rajah, and his frontier place towards the Shehwattee territory, in a naked tract of sand hills, 100 m. E.N.E. Bikanere; lat. 26° 19' N., long. 74° 25' E. It is 14 m. in circ., exclusive of its suburbs, and has a very handsome external appearance. The houses are all terraced, and, as well as the walls of the town, are built of a kind of limestone found in vast quantities in this part of the prov., of a very pure white, but soft, and apt to crumble. In 1817 Chooroo was plundered by one of Meer Khan's sirdars; in 1818 it was visited by a British detachment, and afterwards transferred to the rajah of Bikanere; its chief, however, is rather a dependant than a subject of that prince. (*Elphinstone's Journey*, &c. i. 6; *Hamilton's E. I. Gaz.*, i. 409.)

CHORLEY, a par. and market to. of England, co. Lancashire, hund. Leyland, on the Chor, 20 m. N.W. Manchester, and 8 m. N. Wigan. Area of par. 8,110 acres. Pop. in 1801, 4,516; 1811, 5,182; 1821, 7,315; 1831, 9,282. This thriving town, which takes its name from the stream near the source of which it is situated, stands on a rising ground, about a mile above the confluence of the Chor and Yarrow. It is well built; streets broad, lighted with gas, and abundantly supplied with water from a reservoir, into which the stream is thrown up by steam machinery. The par. church of St. Laurence is an ancient structure in the Norman style; that of St. George, a handsome edifice, was built by the parl. commissioners in 1835, at an expense of 18,000*l.* The Independents, Unitarians, Methodists, and B. Catholics, have places of worship, some of which Sunday-schools are attached. A free grammar-school was founded in 1634, and a national school in 1824. The town is governed by a constable chosen annually at a court leet. Petty sessions are held in the town-hall, erected in 1802, by the late John Hollinshed, Esq.; and adjoining it is a lock-up house for the temporary confinement of prisoners prior to their removal to the co. gaol. The increase of population is a consequence of the still more rapid increase of the cotton trade. In 1790, spinning-mills began to be erected in the town; and in 1833, it had 11 of these establishments, employing 1,800 hands, besides power-loom factories, &c. Exclusive of yarn, the fabrics principally produced are muilins, jaconets, and fancy goods. Bleach-works and print-works are established on the banks of the neighbouring streams. The coal mines in the neighbourhood have contributed greatly to the improvement of the town; there are also valuable quarries of slate, and gritstone for mills, with lead and iron mines, &c. The Liverpool and Leeds Canal, which passes within 4 m. of the town, and is joined by that from Lancaster and Preston at a short distance from it, affords great facilities for conveying the produce of the factories and mines throughout the Lancashire counties. Markets are held on Tuesday, fair on 26th March and 6th May for horned cattle; 21st October for horses; and 4th, 6th, and 8th Sept. for wools and general purposes. (*Baines's Lancashire; Returns as to Factories*, &c.)

CHOWBENT, or CATHERTON, a village of England, co. Lancashire, hund. W. Derby, par. Leigh, 10 m. W. N.W. Manchester, and 6 m. E.S.E. Wigan. Pop. in 1831, 4,145; in 1831, 4,181. It has an Episcopal chapel and a Unitarian place of worship. Previously to the American war, the making of nails was extensively carried on here; and, though the manufacture has declined, considerable quantities are still made for exportation. It is also remarkable for several inventions and improvements in cotton machinery; and it is said that the value of the application of heat in the production of some kinds of cotton fabric was discovered here. The Bolton and

Leigh railway passes within a short distance of the village. Fairs, at which premiums for the best cattle are given, take place on the first Saturday in May, and the last Saturday in October.

CHRISTCHURCH, a par. bor., and par. of England, co. Hants, New Forest, W. div., hund. Christchurch. Area of par, 24,640 acres. Pop. of do. (1821), 4,644; (1831) 5,344; of which the bor. had 1,599. The latter is situated at the confluence of the Avon and Stour, about 1 m. from where their united streams fall into Christchurch Bay, 90 m. S.W. London. "The town presents no symptoms of activity or industry. No trade nor manufacture is carried on. The houses are of a middle description. The appearance of the inhab., who are thinly scattered, give no indications of prosperity." (*Boundary Report*.) The church was the collegiate one of the ancient priory, and is a large, fine structure; the older part in the Norman, the rest in the earlier and later pointed styles: the fine tower is of the 15th century. It has a very ancient and curiously carved altar, and many beautiful chapels. There are also 2 episcopal chapels (one of them built by parliamentary grant, in 1828, with 468 free sittings), a Rom. Catholic chapel, a dissenting ditto, a free-school of uncertain foundation, educating 10 boys, a national, and a Lancastrian school, and several small charities. Market on Mondays: fairs, Trinity Thursday, and Oct. 17., for horses and cattle. It returned 2 mem. to the H. of C. in 35 Edw. I., and in the 2d Edw. II. No other return appears till the 13th of Eliz.; since which period it regularly returned 2 mem., till the Reform Act deprived it of one of them. The franchise, previously to this act, was vested in the corporation, which consisted of a mayor and an unlimited number of burgesses. The Boundary Act very materially extended the limits of the par. bor., which had in 1831 a pop. of 6,087. Registered electors in 1837-38, 239. The harbour has a shifting bar, with not more than 5 or 6 ft. water over it, so that it is accessible only at spring tides for the smaller class of coasters. There are 2 breweries in the town; and the manufacture of watch springs employs a few hands. The name is derived from its ancient priory, of very remote origin. There are traces of many ancient camps and barrows, &c., in its vicinity.

CHRISTIANIA, a sea-port town of Norway, of which it is the cap., on the Agger, at the bottom of a very deep gulph or fiord, to which it gives name: 126 m. E.S.E. Bergen, 242 m. S. by E. Drontheim, and 255 m. W. by N. Stockholm; lat. 59° 58' 20" N., long. 10° 48' 45" E. Pop. (1835) 23,121. It is surrounded by an amphitheatre of hills, and its situation is extremely picturesque. It is well laid out; streets spacious and regular, and some of them even handsome. Houses in the town, all brick or stone; those of wood having been prohibited, on account of the former frequent fires. They are airy and well built, though seldom more than 2 stories high. In the best quarters, they are built round an open square court, and are generally occupied by several families. It is the residence of the viceroy, and the seat of the diet; has a cathedral, and 3 other churches; a military and a lunatic hospital; 3 orphan asylums, a house of correction, a new town hall and exchange, 2 theatres, a bank, &c.; but none of the public buildings is in any wise remarkable. Four suburbs part from the town as a centre, one of which is the old town of Opelo, from which Christiania originated. In these, wooden houses are not prohibited; and, as the suburbs are mostly inhabited by the lower classes, the dwellings are chiefly of wood. A short distance beyond the walls a royal palace, a plain brick building, has been recently erected. The whole vicinity of the town is sprinkled with the country houses of citizens. The gulph of Christiania unites with the farthest N. point of the Skagerrac: though in parts narrow, and difficult of navigation, it has deep water throughout, there being 6 or 8 fathoms close to the quay. Mr. Inglis says that, as a town, Christiania is inferior to Drontheim; that it is dull, not particularly clean, nor, to judge from the looks of its inhabitants, very healthy. It is the seat of the higher courts of law, and a university. The latter, founded in 1811, has yet no separate edifice, and the professors lecture in detached rooms. It is attended by about 600 students, and has attached to it a public library, with 115,000 volumes, collections of natural history and mineralogy, a museum of northern antiquities, an observatory, and a botanic garden. Here is a military school, with schools of commerce and design, elementary schools, and several learned and philanthropic societies. Manufactures not very extensive; the chief are those of woollens, tobacco, glass, hardware, soap, leather, cordage, &c. Principal exports, timber, deals, glass, iron and nails, smalt, bones, oak-bark, and salted and pickled fish, a staple mostly sent to Bergen. The deals of Christiania have always been held in the highest estimation, in consequence of the sap being carefully cut away. The trade with Great Britain has been materially injured by the high discriminating duty imposed in this country on timber from the N. of Europe; and is not now nearly so great as formerly.

Christiania was built by Christian IV. King of Denmark, in 1624. (*Living's Towns in Norway and Sweden; Inglis's Journey through Norway*.)

CHRISTIANSAAND, a sea-port and fortified town of Norway, near its S. extremity, cap. diocese of same name, distr. Mandahl, on the Skagerac, at the head of a deep fiord, 160 m. S.W. Christiania, lat: 68° 8' 4" N., long. 8° 4' 9" E. Pop. (1835) 7,665. It is regularly laid out; streets long and wide, houses generally built of wood, and separated by gardens. Chief public building the cathedral, a Gothic structure, and, next to that of Drontheim, the finest ecclesiastical edifice in Norway. Here is an asylum for the poor, a sail-cloth manufactory, and docks for the construction of vessels; ship-building being the principal branch of industry. The harbour is very secure, and sheltered on nearly every side by lofty and rocky heights. It is well supplied with fish; and lobster are taken in great numbers, and exported to the London markets. Timber is another principal article of export. Christiansand ranks as the fourth town in Norway; it is a bishopric, and the residence of a governor. It was founded in 1641 by Christian IV. King of Denmark, who intended to make it the principal naval port of his dominions. (*Dict. Geog. and Hist.*)

CHRISTOPHER'S (ST.), or **ST. K. T. T'S**, one of the W. India Islands belonging to Great Britain, lying about lat. 17° 20' N., and long. 62° 40' W., and about 50 m. W. by N. Antigua, of the government of which island it constitutes a part. Length, N.W. to S.E., about 15 m.; breadth in general about 4 m., but no more than 3 m. towards its S.E. extremity, where it is divided by only a narrow channel from the island of Nevis. Pop. (1837) 23,492. It contains many rugged precipices and barren mountains, the principal of which, Mount Misery, an extinct volcano, rises to 3,711 ft. above the sea. The climate is healthy, but violent hurricanes sometimes occur. Of 43,720 acres of land, the extent of the surface of this island, it is estimated that nearly half is unfit for culture. The soil of the plains, however, which is of a volcanic origin, intermixed with a fine loam, makes amends by its fertility for the barrenness of the mountains. Sugar is the great article of cultivation, the only articles raised in addition to it being a little cotton, coffee, arrow-root, &c. The quantities of the principal articles of produce imported into the U. Kingdom from St. Christopher's, in 1837 and 1838, were as follows:—

Years.	Sugar (unrefined).	Rum.	Molasses.	Coffee.	Arrow-root.
1837	Cwt. 73,270	Gal. 87,380	Cwt. 14,895	Lbs. 615	Lbs. 5,280
1838	91,765	65,677	16,498	80,839	16,568

The total value of the exports from the island in 1836 amounted to 148,703*l.*, and that of the imports into it during the same year to 98,244*l.* According to the last slave registration, the number of slaves amounted to 20,660, for whose manumission a sum of 331,630*l.* was awarded as compensation to their proprietors. This island is divided into 9 parishes, and contains 4 towns, Basseterre, Sandy Point, Old Road, and Deep Bay. The first two are ports of entry established by law. Basseterre, in the S.W., is the cap. It contains about 800 houses, and, as well as Sandy Point and some other parts of the island, is defended by several batteries. St. Christopher's was discovered, in 1493, by Columbus, who gave it the name it bears; but it was not settled till 1623, when a party of English took possession of it. After many disputes for its occupation with the French, Spaniards, &c., it was finally ceded to Great Britain at the peace of Utrecht in 1713. (*Parl. Papers; Edwards's W. Indies, &c.*)

CHUDELEIGH, a town and par. of England, co. Devon, hund. Exminster. Area of par, 6,230 acres. Pop. of ditto, in 1821, 2,063; 1831, 2,478. The town, on an acclivity near the Teign, 8 m. S. by W. Exeter, consists chiefly of one wide street of well-built houses, being part of the main line of road from Exeter to Plymouth. The church is an old structure amidst fine trees; the vicarage in the patronage of such of the parishioners as have freeholds to the amount of 5*l.* a year and upwards. There are 2 dissenting chapels, a grammar-school, founded 1666, with a residence for the master and 3 exhibitions to the university of Cambridge, a national school, and several charities. Market on Saturdays. Fairs, Easter Tuesday, third Tuesday and Wednesday in June, and Oct. 3., for cattle and sheep. The serge manufactory was formerly carried on to some extent, but at present (1839) there is no manufacture of any kind, and the labouring part of the pop. are chiefly engaged in agriculture. Ugbrook Park, in the immediate neighbourhood (the seat of Lord de Clifford), is considered one of the finest in the kingdom.

CHUMBUL (supposed to be the *Sambus* of Arrian), a river of Hindostan, which rises in Malwah prov., and falls into the Jumna river, about 25 m. below Etawah, after a course of about 800 miles, generally in a N.E. direction.

CHUMPANEER, a town and large district of Hindoostan, prov. Gujrat: the former, called also Fowandhur, stands on a scarp of rock 25 m. N.E. Baroda, and is supposed to have been the cap. of a Hindoo principality, before the Mohammedan rule in India. The remains of an ancient city stretch for several miles on either side of it. This town was taken by Humayoun in 1584, and by the British in 1803. (*Hamilton's E. I. Gaz.*, i. 412.)

CHUPRAH, a town of Hindoostan, prov. Bahar, distr. Sarun, of which it is the cap., on the N. side of the Ganges, along which it extends for nearly a mile; 33 m. W. by N. Patna. Pop. about 30,000. It has some trade in cotton, sugar, &c. (*Hamilton, Bacon, &c.*)

CHUQUISACA, formerly *La Plata*, or *Characas*, an inland city of S. America, cap. Bolivia, in a small plain surrounded by heights, on the N. bank of the Cachimayo, and on the high-road between Potosi and Santa Cruz de la Sierra, 55 m. E.N.E. the former, and 220 m. S.W. the latter; lat. 19° 29' S., long. 66° 40' W. Pop. 12,000. ? pretty equally divided amongst Spaniards, Indians, and mixed races. It contains a large and handsome cathedral, with some good paintings and decorations, several monastic establishments with splendid churches, a conventual hospital, three nunneries, and a university. The best houses are but one story in height, but roomy, and have pleasant gardens: it is supplied with water from several public fountains. The climate is mild; but the rains are of long continuance, and during the winter violent tempests are not unfrequent. Chuquisaca was founded in 1539, made a bishopric in 1551, the seat of a royal *audiencia* in 1559, and an archbishopric in 1608.

CIEZA, or **ZIEZA** (an. *Cotina*, or *Carlela*), a town of Spain, prov. Murcia, on the Segura, in a rich well-cultivated plain, 24 m. N.W. cap. Pop. 6,856. It has convents for both sexes, a workhouse, public granary, &c.; with manufactures of coarse linens. On the opposite side of the river are ruins supposed by some to be those of the ancient *Cerlekia*.

CINCINNATI, a city of the U.S. of America, Ohio, cap. co. Hamilton, and, next to New Orleans, the largest and most flourishing commercial town in the W. part of the Union, on the N. bank of the Ohio, 96 m. S.W. Columbus, and about 410 m. W. by N. Washington. Pop. (1830) 24,831; (1838) probably 40,000. It is built on two inclined plateaux rising from the river, one about 50 ft. higher than the other, and both running parallel to the Ohio. It is regularly laid out; streets wide and clean, and intersecting each other mostly at right angles. They are generally lined with trees on either side, and most of the houses have a small inclosure in front filled with flowering shrubs. Houses mostly of red and party-coloured brick; but many are stuccoed, and a few are of stone. A square in the centre of the city is appropriated to public buildings. Here, and in other parts of the town, are numerous churches; the city has also the Cincinnati college, 3 theatres, 4 market-houses, one 500 ft. in length, a court-house, medical college, mechanics' institute, Catholic atheneum, 2 museums, a lunatic asylum, with hospitals, numerous schools, &c. At an average, 450 substantial buildings were added to the town during each of the three years ending with 1835. Manufactures extensive and increasing: the principal are those of iron; next in importance are cabinet-work, steam-boat building, and hat-making; the manufacture of cotton and woollen stuffs has been established; and there are very extensive distilleries and flour-mills. A great deal of the machinery is propelled by steam. Cincinnati is the largest pork-market in the Union. Two-thirds of all the hogs fed in the forests of Ohio, Kentucky, and W. Virginia, are driven here for slaughter and exportation. In the winter of 1833-34, 123,000 hogs were slaughtered; in 1834-35, about 160,000; in 1836-37, 108,000; but including those slaughtered elsewhere, and brought to Cincinnati, the total number exported in the last-mentioned year was estimated at 180,000. The buildings for this branch of trade are very extensive, and occupy several acres. The average value of this and other articles exported from Cincinnati has been estimated at,—Pork, 3,000,000 doll.; flour, 600,000 doll.; whiskey, 780,000 doll.; manufactures of iron, 2,000,000 doll.; other articles, chiefly hats, clothing, books, beer, furniture, ship-carpentry, &c., 1,350,000 doll.; miscellaneous articles 600,000 doll.; making a total of 8,100,000 dollars. The Ohio is 600 yards wide at Cincinnati, and navigable for small steam vessels as far as Pittsburg, 454 m. higher. The total burden of the vessels belonging to the district in the year ending Sept. 30, 1838, was 10,376 tons. The medical college, founded in 1818, and re-organised in 1824-25, had, in 1838, 178 students. The medical department of Cincinnati college had in the same year 85 students. Lane seminary, founded in 1829, chiefly for theology, and situated about 2 m. from the city, has 2 commodious edifices, and contains 100 rooms for students. It possesses a library of 10,000 volumes, and in 1836 had 43 students; a law school was established in 1833; in 1836 it had 25 students. One of the museums contains a number of enormous organic remains, antique

vases, &c., excavated from some of the ancient mounds in Ohio. There are a great many religious and benevolent associations, several academies, a public library, and some excellent hotels. The building erected for a bazar by Mrs. Trollope is now used for a dancing academy and assembly-room. The pop. is composed of emigrants from all the states of America and most of the countries in Europe. There are said to be 10,000 Dutch and German settlers.

The advance made by Cincinnati has been wonderfully rapid. It was founded in 1789, and in 1800 the population was only 500; in 1810, it was 2,500; in 1815, about 6,500; in 1820, 9,000; and in 1830 it amounted, as already been, to near 25,000. Its picturesque situation, and the beauty of its environs and of the surrounding scenery, have gained for it the title of "Queen of the West"; while its central position and rapid increase in population and commerce, make it probable that it will speedily rival in wealth and importance the principal cities of the N.E. states. (*Capt. Marryat's Diary*, 1839, ii. 147—151.; *A Winter in the Far West*, by C. F. Hoffman, ii. 125—136.; *Stuart's Three Years in America*, ii. 439, &c.; *American Almanack*, 1834-39.)

CINTRA (*Mont Cynthia*), a town of Portugal, 12 m. W. N.W. Lisbon. Pop. 4,500. This Richmond of the Portuguese capital is situated at the foot of the rich and beautiful valley of the Collaria, and at the foot of a rugged rock or mountain: the latter "is in part covered with scanty herbage; in parts it rises into conical hills, formed of such immense stones, and piled so strangely, that all the machinery of deluges and volcanoes must fail to satisfy the inquirer for their origin. On one of the mountain eminences stands the Penha convent, visible from the hills near Lisbon; on another are the ruins of a Moorish castle. From this elevation the eye stretches over a bare and melancholy country, to Lisbon on the one side, and on the other to the distant city of Mafra, the Atlantic bounding the greater part of the prospect." (*Southey's Letters*, ii. 202.) In summer, the citizens of Lisbon resort on the Saturday nights to Cintra, where they spend the Sundays, returning home on Monday. Many of the nobility, the *corps diplomatique*, the wealthier merchants, especially the English, &c., have villas in the vicinity of the town, which is as much celebrated for its fine air as for the beauty of its situation. It has also a palace, occasionally occupied by the court: in one of its apartments are painted the armorial bearings of all the noble families of Portugal.

Cintra is memorable in the history of the war with Napoleon for the convention signed here, August 22, 1808, after the battle of Vimera, by which Marshal Junot, and the French forces under his command, were conveyed to France with their arms, artillery, and property. This convention was exceedingly unpopular in England, though, perhaps, without any really good grounds.

CIOTAT (LA), a sea-port town of France, dep. Bouches du Rhone, cap. cant., on the W. side of the Bay of Leques, 15 m. S.E. Marseilles. Pop. 5,382. It is surrounded by an ancient rampart of considerable extent, and in a tolerably perfect condition. Streets regular, and well paved; houses well built. It possesses some good quays, a large par. church built in the 16th century, and a fine public promenade, but is ill supplied with water. Its port, sheltered by a mole and defended by a fort, is commodious, secure, and accessible to vessels of 300 tons burden. A lighthouse, in the fort, has the lantern elevated 82 ft. above the level of the sea. Ships are built, and oil is manufactured here; and it has a considerable trade in wines and dried fruits, the vicinity being interspersed with vineyards, olive grounds, and plantations of oranges, figs, &c. La Ciotat is said to occupy the site of the ancient *Citharista*; the modern town was, however, founded in the 13th century, and did not acquire municipal rights till 1429. (*Hugo*, art. *B du Rhone*.)

CIRCARS (NORTHERN), a large mark. prov. of Hin dostan, extending along its E. coast for 470 m., between lat. 16° and 20° N., and long. 79° and 86° E.; having N. and W. Orissa, Gundwardan, and Hyderabad, and S. and E. the Carnatic and the Bay of Bengal. It comprises portions of the ancient territories of Orissa and Telingana, and, previously to the British rule, consisted of five divisions or "circars," viz. Guntoor, Condapilly, Elloré, Rajamundry, and Cicacole. At present it is wholly included within the territories of the Madras presidency. Its divisions, with their area, pop., &c. being as follows:

Districts.	Area, sq. m. (Eng.)	Pop. (1856-7.)	Land revenue. (1856-7.)	Total rev. (1856-7.)
Ganjam	2,700	588,079	328,967	1,268,238
Vissaputnam	2,600	1,167,582	578,529	1,544,100
Rajamundry	4,690	578,529	1,769,137	2,347,729
Masulipatnam	4,840	532,089	944,977	1,277,025
Guntoor	4,960	19,518	1,378,056	1,749,557
Total	23,750	2,565,279	6,232,145	8,305,077

It is bounded W. by a chain of mountains continuous with the E. Ghauts, but no where of any great height. Vizagapatam, between lat. 17° and 19° N., is the most mountainous district, and contains a considerable range of hills, running parallel to the former and to the coast, often closely approaching the latter, and enclosing an extensive and fertile valley, together with the principal range. From Ganjam to Coringa, the coast generally appears mountainous, but thence is low, flat, and sandy, with numerous small coast streams. Chief rivers, the Godavary and Krishna; the first has an extensive and fertile delta at its mouth below Rajamundry. The Chilka lake constitutes the N. limit of the prov.; the only other lake of note is that of Colair in the Masulipatam distr.; but several lagoons of some size are met with on the shores. A black soil prevails in the S. parts of the prov. highly suitable to the cultivation of cotton. S. of the Godavary the climate is extremely hot, and for a month preceding the rains, the thermometer in the country round the mouth of the Krishna sometimes stands for a whole week at 110° Fahr.; in other parts it has been known to stand at 115° at 8 o'clock in the evening, and at midnight as high as 104°. At such times, wood of all kinds readily warps, and glass cracks and flies in pieces; in all the hilly regions and round Masulipatam, a very noxious state of the air prevails throughout the different seasons of vegetation.

The circars are extremely productive of grain, and have long been the granary of Madras during the N.E. monsoon, though at present the distr. of Masulipatam annually imports large quantities of rice from Calcutta and Aracan for home consumption. Large crops of paddy and dry grains, cotton, and tobacco of excellent quality, the sugar-cane, and esculent vegetables are produced in the S.; the same articles, with ginger, yams, turmeric, chillies, &c., in the central parts; a great deal of sugar in the delta of the Godavary; and wheat, maize, the sugar-cane, and an abundance of rice and other grains in the N.

Agriculture is least advanced in Vizagapatam, owing chiefly to an oppressive revenue assessment: many of its hills are wild and destitute of vegetation. In Masulipatam distr. there are extensive tracts of grass. The total number of black cattle in the circars is about 1,380,000, of sheep 509,000. The Ganjam distr. is interspersed with numerous bamboo jungles. The forests of Rajamundry abound with teak, which tree is found nowhere else on the E. side of Hindostan. The chief manufactures are chintzes, carpets, and cotton stuffs, in the central; and indigo, punjum cloths, muslins and silks, in the N. distr.; the piece goods of the circars, which were formerly their staple, are now rather objects of curiosity than made in any considerable quantity. Rum was formerly distilled in the N.; the sugar of Ganjam is in much request, and exported in large quantities: the other exports are wax, salt, pepper, horns, ivory, indigo, tobacco, and other agricultural produce. The external trade is chiefly with Madras, Calcutta, Hyderabad, and the central Deccan. The exports to Europe are chiefly fine cotton goods: all the raw silk used is imported.

The natives are mostly Hindoos; Mohammedans are few. The Orissa and Telinga races have become much intermixed, though they retain distinct dialects and have distinct traits and customs. The villages consist of mud huts and houses; but the peasantry are not on the whole incommodiously lodged. The rouls are amongst the worst in India, and unfit for wheeled carriages; there are but few tanks, bridges, or ferry-boats. The lands appear for a long period past to have belonged either to the government or to zemindars; for no instance has occurred since the British have come into possession of the prov. of any ryot claiming those cultivated by him. The chief towns of the circars are—Chittore, Elloor, Coringa, &c., besides those which bear the names of the several districts. Religious temples are not numerous; but in Ganjam, where Juggernaut is the favourite object of worship, their architecture is peculiar; they consist of groups of low buildings, each with a graduated pyramidal roof, terminating in an ornamented conical cupola. In 1571, the rajah of Hyderabad conquered this prov., which, together with Hyderabad, fell under the dom. of Adrungsbe, in 1687; it however became again independent of the Mogul empire in 1724. The English obtained the four most N. circars in 1755; the French had become possessed of Guntoor in 1752; but it also came into our possession in 1788. (*Hamilton's E. I. Gaz.; Madras Almanack.*)

CIRCASSIA, more properly TCHERKESSIA or TCHERKESKAIJA, the largest and most important country in the Caucasus, of which mountain-range it occupies nearly the whole N. slope; extending from 42° 30' to 46° 40' N. lat., and from 37° to 45° 48' E. long. At its N.W. corner it reaches the Black Sea, but with this exception, it is bounded on the S. and W. by the main ridge of the mountains which divide it from Georgia, Mingrelia, Imetia, and Great Abchasia. The N. limit is formed by the rivers Kuban and Terek, which separate it from the

lowlands of the Cossacks, Turkmans, Nogay Tartars, and the Russian colonies in the Caucasian steppe; towards the E. it terminates at the junction of the little river Sunsha with the Terek, at which point a host of small streams divide it from the country of the Tchebchenches. In extreme length, from N.W. to S.E., Circassia is about 470 m.; in its greatest width, about 100 m.; in its least, about 40 m., and, at an average, about 70 m. Its area may therefore be calculated at about 33,000 sq. m. (*Guldenstadt, Reise durch Russland*, i. 466–469.; *Pallas's Trav. in S. Russia*, i. 298. 360–362. 395. 422. &c.; *Klaproth's Trav. in Caucasus and Georgia*, pp. 252. 311., &c.; *Lapé, Annales des Voy.*, xii. 36.)

Political Divisions.—The Circassians are divided into a great number of tribes, who lead a partially wandering life, so that no very precise arrangement can be made with regard to the districts of their country. The E. portion, or that enclosed by the Terek, is divided by Russian geographers into two provinces—*Great Kabardah*, to the S.W., and *Little Kabardah*, to the E. These divisions are not, however, recognised by the Circassians, who know but of one Kabardah, and that in the S.W. portion, called by the Russians *Great*. (*Klaproth*, 354.) Between the sources of the Kuban and Terek, and along the courses of those rivers, as far as they run N., the land is wholly occupied by a tribe called the *Abbasines* or *Abzne*; and forms the *Little Abasa* of Pallas, the *Altirkak Abchasia* of Guldenstadt. The *Great Abasa* of Pallas, *Basiana* of Guldenstadt, occupies likewise a very considerable part of the Kubanian Circassia; among the rest, the Nottchah district, mentioned by Spencer. It appears, indeed, that the Abzne are the lawful proprietors of all Kubanian Circassia, and that the Circassians have only the right of conquest to the W. portion of their country; that right is, however, very fully established, not only on the N. slopes of the mountains, but even to a very great degree on the W. side, along the shores of the Black Sea (the *Great Abchasia* of Guldenstadt). Spencer makes but little distinction between the Abzne and Circassians, and frequently speaks of them as one people; this must, however, be an error, since the former display a very peculiar physical conformation, and their language, with the exception of a few Circassian words, is totally unlike that of their conquerors, and of every other known people, European or Asiatic. The Circassian princes are cruel and oppressive tyrants to their Abasian subjects, so much so, that the latter have in many instances sought the protection of the Russian government; but it does not appear that they are in any moral attribute superior to their taskmasters, since in every age they have been infamous for their robberies by land, their piracies by sea, and their cruellest cruelties every where. (*Guldenstadt*, i. 460. 463. 466. 469. *Pallas*, i. 282–291.; *Klaproth*, pp. 247–253. 293. 311. *Spencer's Circassia*, ii. 412. &c.; *W. Caucasus*, i. 20. 200. 212. 247. &c.)

Physical Features.—These have been generally described in the article CAUCASUS (which see), and what is peculiar to Circassia is only the consequence of that country's occupying the N. slope of the mountains. With the exception of the lowlands on the banks of the Kuban and Terek, the whole territory is broken into precipitous mountainous small table-lands, and valleys of most picturesque and romantic description. Its hydrography belongs to two systems, the waters of Kabardah being all conveyed by the Terek to the Caspian, and those of W. Circassia by the Kuban to the Black Sea. The former river rises near the Kazibek, and forcing its way through the pass of Dariel (an Caucasian Gate), receives, directly or indirectly, 35 streams before it quits the Circassian country. Of these, the Malk, which joins it at its E. end, is scarcely inferior in size to the principal river; it rises near the E. base of the Elbour (Osha Makhua), and is itself the recipient of a considerable number of tributaries. The Kuban rises on the N. base of the Elbour, not far from the sources of the Malk, and receives the water of more than 50 rivers, 30 of which fall directly into its bed. It has every reason to be considered, exclusively, a Circassian river; for though no part of its N. bank is inhabited by Circassians, it does not receive a single drop of water, in its whole course, that does not rise within their territory. A similar remark will apply, in a modified sense, to the Terek, which, like the Kuban, does not receive a single stream from the N., and only one of consequence enters the Tartar country E. of Little Kabardah. The country between the sources of the Malk and Kuban is watered by various streams; and when it is recollected that, in addition to these, innumerable torrents pour from the upper ranges of the mountains, it will be evident that no land can be better irrigated. The water is in general clear and good, but occasionally impregnated with mineral and other extraneous matters. The tributary streams become flooded in winter, and extremely shallow during the heats of summer; the currents of all are extremely rapid, as are those also of the Terek and Kuban, except where the

latter forms morasses, which it does in some parts of the flat country, when its course becomes sluggish, and its water thick and muddy. (*Guldenstadt*, i. 469. and Map; *Klaproth*, 242-247. 255. 259. 261. 351. &c.; *Pallas*, i. 385-389. 413-417.; *Spencer's W. Caucasus*, i. 106.; *Circassia*, ii. 412. *et passim*.)

Climate, Soil, and Natural Productions.—These are also the same with those of the Caucasus generally (see CAUCASUS), but the temperature is rather lower than on the S. slopes, except on the banks of the Kuban, where the greater depression more than compensates for the difference of aspect, and where the extensive marshes and the exuberant vegetation create miasma, which render it more pestilential than any other district in the whole region. (*Spencer's W. Caucasus*, i. 106.; *Circassia*, ii. 304.) There is a greater proportion of bare rock in Circassia than in Georgia and the other countries S. of the main ridge, but on every shelf and in every rift, trees, grain, vegetables, and fruit of almost every kind, are produced from most fertile soil. The animals, also, are on the same scale of abundance and variety, whether the wild or domesticated tribes be considered; the quadrupeds, birds, fishes, insects, or reptiles. (*See CAUCASUS*.) The Circassian horses are nearly as famous, and quite as good, as those of Arabia. Cattle of all kinds are abundant in the extreme, and in addition to the herds forming the numerous stocks of the pastoral population, the aurochs and argal (wild ox and sheep) will wander among the mountains, with the ibex, and another beautiful variety of the goat. Game of all kinds, winged, hoofed, or clawed, are found in equal abundance, but differing in kind, in the mountains and plains; nor are beasts of prey, as jackals, wolves, bears, lynxes, and tiger cats, &c., much less numerous, though they do not seem to be much regarded by the natives. Wild boars are found, especially among the swamps of the Kuban, and it is affirmed that the tiger is not wholly unknown. The reptile and insect tribes are equally numerous. In one of the late campaigns of the Russians, besides the thousands who fell victims to the bad air, numbers died from mortified bites of mosquitoes. (*Spencer's Circassia*, ii. 317.) Both natives and Russians believe that the mountains abound in gold and silver, but apparently on no good grounds. (*See CAUCASUS*.) Iron, however, lead, and copper, are found; and saltpetre is very abundant. Salt is nowhere found within the limits of Circassia; and since Russia has excluded the natives from the brine-pits in the Caucasian steppe, and sealed their ports against the trade of Turkey and Persia, they have been almost totally deprived of that necessary. (*Guldenstadt*, i. 188. 441. &c.; *Pallas*, i. 329-330. &c.; *Klaproth*, pp. 309. 324. 356. *et passim*; *Spencer's Circassia*, ii. 220. 233. 242. 250. 305. 317. &c.; *W. Caucasus*, i. 330-341. &c.)

Inhabitants. The Circassians have long been proverbial for their beauty of form and figure, especially the women, and though it seems they have in this respect been confounded with the Georgians, who are a totally distinct nation, yet all the statements of the modern, and most accurate travellers, concur in describing them as an extremely handsome people, tall, finely formed, slender in the limbs, small in the foot and hand, elegantly featured, with fresh complexions, and extremely intelligent countenances. (*Pallas*, i. 398.; *Spencer, passim*, &c.) It would be well did their moral and intellectual attainments correspond with their physical appearance; but it is obvious, even from the statements of their eulogists, that they are mere semi-barbarians, whose darling occupation is robbery and plunder, and who seem to be radically deficient in most of the requisites necessary to form a civilised and flourishing community. They have many points in common with the Arabs; and like the sons of Ishmael, are quite as barbarous at the present day as in antiquity.

The Circassians are divided into five classes. 1. *Pachi*, or *pachek* (princes); 2. *Uork* (ancient nobles); 3. the freedmen of these princes and ancient nobles, who, by their transmission, become themselves noble, and are called *work* of *uork*; 4. the freedmen of these new nobles, called *begualia*; and 5. the vassals or *tcho'koti*. Between the ancient and recent nobility there is no real distinction, except, that in military service, the latter are still under the command of their former masters; nor is there any great practical difference between the *begualia*, and the *tcho'koti* or vassals. The latter are, of course, the labourers; and are subdivided into such as are engaged in agriculture, and such as serve the superior classes in the capacity of menial servants. Of the former, many are wealthy, nor is the state of any one of great degradation, since there are very few, if any offices of labour, which prince or noble would consider as derogatory to himself. To every princely house belongs a certain number of *work*, or *uork*, as they are called by the Russians; and the latter are the direct proprietors of the vassals. Of these last, though all are unquestionably slaves, those engaged in agriculture cannot be sold singly; and the

sale of any is so rare as almost to be prohibited by custom. On the other hand, it appears the vassal may transfer his duty to another *uork*; which is, of course, a great protection from ill usage. The vassals pay no money tax, and though they are compelled to supply their lord with all he wants, yet this, from the check upon the noble's power just alluded to, extends no farther, usually, than to bare necessities; since, should the latter carry his demands too far, he runs the risk of losing his vassal altogether. The relation between prince and *uork* is precisely the same as that between prince and vassal; the noble must supply the necessities of his sovereign; but should the exactions of the latter become excessive, the former may transfer his allegiance to another prince. The *uork* must pay the debts of their prince, and the vassals those of their *uork*; and in each case, the inferior must make good all losses sustained by his superior, whether from robbery or accident; by which arrangement it is evident that all losses or expenses are defrayed, ultimately, by the vassal. The head of the princely house is the leader in war; and his *uork* are bound to attend him with all their retainers, or as many as may be required. There is no people, not even the Arabs, among whom pride of birth is carried to a greater height than among the Circassians, especially those of Kabardah. In this district, if an *uork* were to marry or seduce a princess, he would forfeit his life without mercy; and the same result would attend the attempt of a *begualia* or vassal to ally himself to a noble house; an Abassian prince is, in this respect, considered equal only to a Circassian *uork*, and can obtain a Circassian wife only from that class. The rigorous enforcement of this custom has preserved the different ranks very distinct, though Pallas has observed, even in the Kabardahs, some traces which indicate a descent from Tartar mothers (i. 399.). It must be observed, however, that there does not appear to be any restriction upon a man's taking a wife or concubine from an inferior class; and the issue of such connexions take rank from the father, but are not accounted equal to the descendants of a pure stock from both parents. Thus, there are princes of the 1st, 2d, and 3d class, &c., according to the greater or less degree of inferior blood which they inherit from their maternal ancestors. This state of society, closely resembling the feudal institutions of the Gothic ages, seems to imply the division of the Circassians into two distinct people, a conquering and a conquered race; but when or how the present relations were established is involved in the most impenetrable obscurity. (*Klaproth*, p. 314. *et seq.*; *Pallas*, i. 395. 402. &c.; *Spencer, passim*.)

Customs, Habits, and Manners of the Circassians.—The whole of the Circassian and Abchasian tribes live in small villages scattered here and there, without the slightest approach to any thing resembling a city or walled town; and prized the most for their invulnerable, conquerable version to any castle or place of artificial strength, which he regards as only fitted to restrain his state of wild freedom. He lives, therefore, in the centre of his village, which usually consists of 40 or 50 houses, or rather huts, formed of plaited osiers, plastered within and without, covered with straw or grass, and arranged in a circle, within the area of which the cattle are secured at night. These primitive dwellings, which strongly resemble, in form and appearance, the humbler residences in Arabian towns, have, however, the peculiar recommendation of being unexceptionably clean, which is also the case with the persons, dress, and cookery, of the inmates. From the slender nature of the buildings, they are evidently not formed for long endurance, and a Circassian village is, in fact, by no means a fixture. The accumulation of dirt in their neighbourhood, the insecurity of the position, and frequently even the caprice of the inhabitants, cause them to be from time to time abandoned. On such occasions the dwellings are destroyed, the household utensils packed up, and the whole colony migrate in search of a new abode. While stationary, however, there is much comfort in a Circassian's home, for those who can dispense with superfluities; but, as may be supposed, their domestic arrangements are of the most simple kind. The usual occupations of the higher classes are the chase and war, on which expeditions, or on those of a predatory kind, they depart with no other provision than a little millet or wheat, and that without the slightest fear of suffering from want, since every man who possesses and can use a rifle is sure of finding provisions on every hedge. In these expeditions the Circassians carry with them tent covers of felt, but chiefly for the purpose of protecting themselves from sudden storms. (*See CAUCASUS*), as, in fine weather, the hardy mountaineer throws himself on the ground, and sleeps with no other covering than the heavens. While in his hut, the Circassian of whatever rank is his own carpenter, weaver, cobbler, and shepherd. It does not appear, however, that the higher classes often take part in agricultural pursuits, not so much because it is considered derogatory, as from that

species of indolence (quite consistent with great occasional exertion) which recedes from regular and continuous labour. The occupations of the women consist in spinning and needle-work. They make the clothes of their household, down to the very shoes, and also saddle-cushions, housings, and horse trappings, and sheaths for the warriors' swords and poniards. They frequently excel in embroidery, are skilful dairy women, and sometimes even noblemen may be seen taking a part in field labour. As in other half-barbarous societies, the greater portion of labour falls upon the females; but their condition is far superior in Circassia to what it is in most other Eastern countries. As Mohammedanism is little more than a profession among these people, their habits, with the exception of some formal observances with regard to food, have undergone but little change by its introduction. The sexes mix freely together while unmarried, and, under the restriction of caste, love matches are probably as numerous here as in other parts of the world. The husband has, however, to purchase his bride of her father, and neither husband nor wife, from the moment of their union, is permitted to appear in the presence of the parents for a year, or till the birth of the first child. It is a still more remarkable custom, that the husband must never be seen in company with his wife; and though the latter is permitted to receive without restraint the visits of strangers, yet the former is never present on such occasions, and the matrimonial correspondence is always carried on by stealth, and in the utmost secrecy.

The greatest insult that can be offered to a prince, or usden, is to inquire after the health of his wife or family. The son of a prince is committed, at the age of three days, to the care of an usden, by whom he is brought up, and never again seen by his father till he is married; the son of an usden remains in the paternal household till he is three or four years old, when he, in like manner, is assigned to the care of a stranger. The foster father stands in every respect in the place of the natural parent. He receives no payment for his trouble, but claims all the duty and service of his ward. The cause of this very remarkable custom is said to be the wish to prevent the effect of indulgence consequent on a home education, in generating the character; but though it destroys the usual affection subsisting between father and son, it establishes another not less strong between the guardian and his ward, which is usually as intense as any exhibited in the social connections of other countries. The daughters are brought up at home, and at the age of ten or twelve years have their waists enclosed by tight-fitting stays, or a broad band of untanned leather, which is never removed nor loosened till they are married. On the wedding night the bridegroom cuts this bodice open with his dagger, an operation which is frequently attended with danger. As a fine waist is considered the great beauty of a Circassian, men are also subjected to a very heavy compression on that part, but nothing to that which the females endure. The girdle remains on the latter for a period varying from two to six years, (a girl unmarried at seventeen rarely obtains a husband,) during which the victim is growing, and, in addition to this, they are still farther to improve the form, so sparingly fed, that the young unmarried females have generally a look of ill health. The finest looking women are the young wives.

The dress of both sexes is rather long, that of the men consisting of shirt, tunic, and cloak, much resembling those of the Kalmuck Tartars, but formed of better materials, and in general richer; the female costume is not very different, except in being longer. According to the plate (18. p. 396.) in Pallas's first vol., the outer robe reaches to the instep, and is furnished with hanging sleeves. The men shave or crop the head, leaving only a single lock of hair hanging from the crown; they wear thick mustachios; and the learned classes (priests and physicians) suffer the whole beard to grow. The women's heads have luxuriant tresses, but both sexes eradicate every appearance of hair on all other parts of their bodies, by means of a caustic ointment of unslaked lime and opium. The princes and usden rarely go out unarmed, and in his coat of mail, helmet, musket, pistols, bow, quiver, and shield, the Circassian chief forms a most imposing and picturesque object. In this dress they pay their visits of state, and in this also they ride out on their warlike or predatory expeditions. The Circassian, like the Arab, is a strange mixture of ferocity and hospitality; the unfortunate traveler who approaches his country without securing the protection of some chief, is seized as a slave by the first native who meets him; but, on the other hand, should this protection be extended, the whole power of the host, or *komak*, as he is called, is strained to procure not only the safety, but accommodation of the guest. The form of granting protection is remarkable. The wife of the *komak* gives the stranger her breast to suck, after which ceremony, he is regarded as her son, and the whole

tribe as his adopted brethren. Robbery and plunder are honourable occupations; but the charge of thieving is accounted an insult, because it implies detection. The custom of blood revenge is precisely similar, in all its details, to the same custom in Arabia (see ARABIA), and is known by a name (*thil-usa*, which is said to be similar in etymology to the *thar* of that country). The ransom by fine is, according to Pallas (i. 408.), never taken; but Spencer (Circassia, ii. 362.), on the contrary, affirms, that it is almost always preferred. The exclusive nature of Circassian marriages has been already noticed. It is, however, a little inconsistent, that while a Circassian prince would unhesitatingly slaughter an usden of his own tribe, or Abchasian, who should presume to wed his daughter, he will unhesitatingly sell her to Turk, Persian, Turcoman, Nogay Tartar, or Kalmuck! Spencer, who professes to admire every institution of these people, has ingeniously discovered (Circassia, ii. 373.) that this practice has tended to refine and civilize the inhabitants of the Caucasus! He admits, indeed, that it has occasioned wars and feuds innumerable among the petty tribes, from the rapacity with which they have overrun each other's territory in search of beauty for the foreign market. The greater portion of the females thus sold have, however, always been Ime-ritians, Georgians, and Mingrelians; the Circassian slave trade having been chiefly confined to the male sex, from which they supplied the Mamelukes and other slave troops of Egypt and Turkey. The fact is, that the suppression of this infamous traffic by the Russians has been one of the main causes of the resistance made to their government by the Circassian chiefs. (Pallas, i. 396—408.; *Interiano, la Vita de Zichi*, &c.; pp. 1—10.; *Klaproth*, pp. 315—320. 322—325, &c.; *Spencer's Circassia*, ii. 223. 233. 242. 246. 325. 375. 384, &c.)

Laws.—These might have been included in the last article, since they rest only on long-established custom. They are administered in a council of elders, but not always by the reigning prince of the tribe, if any other of his rank possess the requisite qualities in a higher degree. The council consists not of princes and usden only, but also of the wealthier and more aged vassals, who, in the judgment-seat, are regarded as on an equality with the highest classes. They allow themselves to be guided upon the principle of retaliation, and the business of the court seems to consist of little else than the assessment of damages. Robbery of a prince is punished by the restitution of nine times the property stolen; of an usden by simple restitution, and a fine of 30 oxen. The prince or usden can scarcely commit a robbery on a vassal, since his abstract right to all the property of the latter is tacitly acknowledged, and the punishment of robbery by one vassal of another appears to vary with the circumstances of the case. Fine, as among the Arabs, seems almost the universal punishment, except in cases of murder and adultery; in both which cases the punishment is left in the hands of the injured party. The offending wife has her head shaved, her ears slit, the sleeves of her garment cut off, and in this trim is sent back, on horseback, to her father; who, if he cannot sell, generally kills her. The paramour is certain of death, being a marked man by all the husband's tribe. Polygamy is allowed, but very rarely practiced. The Circassians are very attentive to their breeds of horses, and have distinct marks to show the noble races from which they have descended. The stamping a false mark upon a filly is a forgery, for which nothing but life can atone. (*Klaproth*, p. 319.; *Pallas*, i. 411.; *Spencer's Circassia*, ii. 362, &c.)

Learning is a complete blank. The people, from whom Blumenbach took it into his head to suppose that the Europeans are mostly at descended, have not even an alphabet, and consequently neither book nor manuscript, in their own language. The few who read, and they are very few, use the Tartar or Arabic tongues, both of which the vulgar understand, except in cases of difficulty. The Circassian language is itself totally different from any other at present known, and what is singular, considering the total absence of letters, there is a secret dialect, apparently an old barbarous gibberish, peculiar to the princes and usden, and used by them chiefly on their predatory excursions. (*Klaproth*, p. 321.; *Pallas*, i. 408, &c.)

Arts, Manufactures, Commerce.—These also are at the lowest ebb; the doctors are simply conjurers or sorcerers, who profess to cure disease by charms and the roughest applications of actual cautery. Their arts may be surmised from the fact, that notwithstanding the length and inveteracy of the war with the Russians, scarcely a single instance of a maimed Circassian warrior is to be met with: to be wounded among these people is to die. Of artificers and skilled mechanics, there are only cutlers, armourers, and goldsmiths; who, however, exhibit great ingenuity in the construction and decoration of the warriors' arms. The art of preparing gunpowder has been known for ages in the Caucasus, and the abundance of saltpetre renders the inhabitants inde-

pendent of other countries for this important element of warfare; their mode of manufacture is, however, very primitive. It has already been stated that the women are the great manufacturers of clothes, which may be said to be the only manufacture which these people possess. They formerly traded with Persia and Turkey for their chain and other armour, and with Tartar tribes northward for salt; the equivalents on their parts being their children and cattle. The Russians have annihilated both trades; and this, as already stated, is one great cause of the hatred entertained against them by the Circassians. (*Klaproth*, p. 323; *Pallas*, i. 400. &c.; *Spencer*, ii. 246. &c.)

Name, History.—The word *Tcherkessia* is Tartar, and literally means *cut the road*; that is, highwayman or robber, one who makes communication unsafe. The general name for these people, in the Caucasus, is *Kasack*, whence it has been inferred that they are of the same race with the Cossacks of the Don and the Wolga; but etymology has indeed run mad upon this point; for this term, like the former, has a general, not a national, signification, and means a man who leads a wandering and martial life. The Circassians themselves recognise neither term; they style themselves *Adige*, which has been derived by some authorities from the Turco-Tartar *adakh* (island), whence it has been inferred that these people came originally from the Crimea. This may be the case, but it acquires no strength from the etymological proof, since the Circassians have no word for island (how should they, being necessarily ignorant of the thing?) and their language, as before observed, has no connection with either Turkish or Tartar. From a resemblance in sound between the Tartar name (*Tcherkess*), they have been pretty generally supposed to be identical with the *Zyges* (*Luyai*) of Strabo (ii. 129., xi. 492.). Stephen of Byzantium (art. *Zuyai*), and Procopius (*De Bel. Got.* iv. 4.) This, again, is not improbable, but the premises are far too weak and uncertain to found a conclusion upon. The Kabardines have a tradition that they are Arab (*Pallas*, i. 392.); but in the mountains they say that before their arrival here the land was inhabited by men so small, that they rode hares instead of horses (*Spencer's Circass.* ii.); and, as to the time when this settlement took place, they are profoundly ignorant. Among all this confusion, naturally to be expected in speaking of a barbarous and but little known people, all that can be inferred with certainty is, that the Circassians have inhabited their mountains for many centuries, and that they have always been the same hardy, reckless, daring robber warriors, that we find them at this hour. Christianity is supposed to have found its way among them in the very early part of the Christian era; but, in the palmy days of Turkish power, they nominally embraced Mohammedanism, preserving, however, many Christian ceremonies, and acknowledged a kind of doubtful dependence on the Porte. Their first connection with Russia took place in 1555, when the princes of the Bech Tag submitted to the Czar Ivan Vassilievitch. From that time the Russian power has been constantly increasing in the Caucasus; and by the treaty of Adrianople (1830), Turkey made over to it the whole Circassian country. Denying the right to be thus disposed of, and knowing that, under the vigorous government of Russia, their robberies would be repressed, as well as their traffic in slaves, they flew to arms, and for the last nine years have maintained a brave but unequal struggle. Sympathy is naturally excited by the spectacle of a handful of mountaineers contending against one of the most powerful empires in the world; but no one who calmly considers the subject in its different bearings can doubt that their subjugation by a civilised government will be a material service to the cause of humanity, and, eventually, even to themselves.

The population of Circassia is estimated at between 3,000,000, and 4,000,000. (*Klaproth*, pp. 173—223, 310—314.; *Pallas*, i. 390—396, 403, 407. &c.; *Spencer's Circass.* and *W. Caucas.* pass.)

CIRENCESTER (usually called *Cireeter*), a parl. bor. and par. of England, co. Gloucester, hund. Crowthorne, on the Churn, 82 m. W. by N. London. Area of par., 5,900 acres. Pop., 1831, 4,987; 1831, 5,420; but the limits of the parl. bor. are not identical with those of the par., and it had, in 1831, a pop. of 5,162. The town is on the line of road from Oxford to Bath, and consists of 4 principal, and several smaller streets, paved and lighted: houses mostly of stone, and well built; many of the more respectable are detached, and have shrubberies round them. "It is not a place of any trade; but it is a very respectable country town in good condition, rather increasing in buildings, and has the appearance of being inhabited by persons in easy circumstances." (*Boundary Report*.) Portions of its ancient walls (3 m. in circuit) are still traceable, showing that the modern town occupies only a portion of the ancient site, a large part of the enclosed area, on the S. E., being occupied by gardens and meadows. The church is in the decorated style of the 15th century, with a lofty tower, and

several lateral chapels and ancient monuments of great interest; both within and without, it is elaborately ornamented, and is one of the finest par. churches in England. There are 4 discenting chapels; a free grammar-school, founded in the reign of Hen. VII., which had Dr. Jenner for a pupil; blue-coat and yellow-coat schools with small endowments, clothing and educating about 40 children; 3 ancient hospitals, or alms houses, supporting in all 13 aged persons; and several other charitable institutions. Markets, Monday and Friday: fairs, Easter Thursday, July 18., Nov. 8.; there are also statute fairs on the Mondays before and after Oct. 10. There is here a large woollen-cloth and a carpet manufactory; curriers' knives, of a superior quality, are also made in the town, and there are two breweries; a branch of the Thames and Severn Canal extends to it, and races are annually held in its vicinity. It is not incorporated, and is governed by 3 high constables and 14 wardmen, chosen annually at the court leet and baron of the manor. Petty sessions for the 7 hundreds of Cirencester (comprising nearly one fourth part of the co.) are held here; and a court of requests for debts under 40s. for the same district. It is a polling place for the E. div. of the co.; and has itself returned 2 mem. to the H. of C. from the 13th of Eliz., the franchise previously to the Reform Act having been vested in the inhab. householders being parishioners. Registered electors, in 1837-38, 686.

Cirencester was the *Corinium* of the Romans; and was a place of considerable importance, from its being situated at the intersection of three military roads. Numerous Roman remains have been discovered; and near it is an amphitheatre (now called the Bull-ring), being an ellipse of 63 by 43 yards, enclosed by a mound 20 ft. high, on the inner slope of which were turf seats, which are still partially traceable. In the last civil war hostilities are supposed to have commenced in this town by an attack on Lord Chandos; it was several times taken and retaken during its progress. A magnificent abbey of Black Canons was founded here by Henry I., who also was buried, and had a seat in parl. Its whole revenue at the general dissolution was 1,051l.; some slight remains of it still exist. Oakley Park, the seat of Earl Bathurst, is in the immediate vicinity. The ancient annalist, Richard of Cirencester, was a native of the town. (*Rudder's Hist. of Cirencester*; *Athy's Hist. Gloucestershire*; *Parl. Papers and Reports*.)

CIUDAD DE LAS CASAS (formerly *Ciudad Real*), an Inl. city of Mexico, cap. of the state of Chlapas, in a fertile plain near the border of Guatemala, 480 m. S.E. Mexico. Pop. about 4,000, one eighth of whom are Indians. It has a cathedral, another church, several chapels, four convents, a nursery, and a R. Cath. ecclesiastical college. It was founded in 1528, and made a city by the emperor Charles V., in 1536. It was the see of the celebrated bishop Las Casas, the protector of the Indians, to whose memory a monument is here erected.

CIUDAD REAL, a city of Spain, prov. La Mancha, of which it is the cap., in a plain about 5 m. S. and E. from the Guadiana, 102 m. S. Madrid, 162 m. N.E. Seville. Pop. 10,758. It was built after the expulsion of the Moors from La Mancha, to serve as a check upon those who still maintained themselves in the Sierra Morena. Extensive remains of its ancient walls and towers still exist. Streets long and straight, but narrow. The grand square is surrounded by two rows of boxes for viewing the bull-fights and public festivals. It has 5 churches, 8 convents, 3 hospitals, barracks for troops, a magnificent work-house, including a school for the instruction of poor children in useful occupations, founded by Cardinal Lorenzana, Archbishop of Toledo, and seminaries for the study of classical learning. The woollen manufactures and tanneries, for which this city was formerly distinguished, are now much decayed. It was the head-quarters of the famous *Santa Hermandad*, or Holy Brotherhood, an order founded in 1249, for the extirpation of highway robbery. (*Hifano*, ii. 190.; *Bowring*, &c.)

CIUDAD RODRIGO, a city of Spain, prov. Salamanca, on an eminence on the right bank of the Agueda, which is here crossed by a bridge of 7 arches, 55 m. S.W. Salamanca, 146 m. W. Madrid, and 16 m. from the frontiers of Portugal. Pop. 6,097. It has a castle, and is strongly fortified. It is tolerably well built, and has some good public buildings, including a cathedral, founded in 1170, with numerous churches and convents, an episcopal seminary, and an hospital. In the great square are 3 Roman columns, with inscriptions. The town has two suburbs, and its environs are fertile. Ciudad Rodrigo was taken by the French, under Marshal Massena, in 1810. The Duke of (then Lord) Wellington, having come upon it by surprise, with the allied English and Portuguese forces, on Jan. 8, 1812, after a vigorous siege, took it by assault on the 20th of the same month. A large battering train, and immense quantities of ammunition, were found in the town. The allies lost about 1,200 men, and 90 officers, in the siege and assault. This important achievement procured for the successful

general the title of Duke of Ciudad Rodrigo from the Spanish gov., and of Marquis of Torres Vedras from the Portuguese. (*Napier's Penin. War*, iv. 387.; *Milano*, &c.)

CIUADADELA, a city of the island of Minorca, of which it was formerly the cap., at the head of a deep and narrow bay on the W. coast of the island; lat. $39^{\circ} 59' N.$, long. $8^{\circ} 54' E.$ Pop. 7,800. It has walls, partly of Moorish construction and partly modern, with stone bastions. In the centre of the town is a large fine Gothic church. The streets are narrow, but it has a considerable number of good houses, inhabited by many of the nobles of the adjacent country. It was formerly a much richer and more important place than at present: it is now dependent on Mahon for all its imports of foreign articles. (*Milano*.)

CIVITA VECCHIA (an. *Centum Cellæ*), a fortified sea-port town of the Papal States, cap. deleg. of same name, on the Mediterranean, 36 m. W.N.W. Rome, of which it is the port; lat. $42^{\circ} 4' 38' N.$, long. $12^{\circ} 44' 52' E.$ Pop. about 7,000, exclusive of prisoners, that is, of felons employed in the public works, a *bagne* being established here. Though the streets are narrow, the town is tolerably well-built and laid out; it contains several convents, a lazaretto, a theatre, an arsenal, building-docks, warehouses, &c., and engrosses almost the whole of the import and export trade of the W. side of the Papal dominions. Its harbour, which was constructed by the emperor Trajan, is formed of three large moles,—two projecting from the mainland, and inclined the one a little to the N., and the other to the S.; and a third constructed opposite to the gap between the others, and serving to protect the shipping from the heavy sea that would otherwise be thrown in during W. gales. The latter mole clearly appears from a passage in Pliny's letters (lib. 6. *epist.* 31.) to have been formed in a precisely similar manner to the breakwater at Plymouth, by sinking immense blocks of stone, which became fixed and consolidated by their own weight, till the structure was raised above the waves. Its extremities are about 90 fathoms distant from those of the lateral moles, and at its S. end there is a lighthouse, with a lantern elevated 74 ft. above the level of the sea. The S. entrance to the harbour is the deepest, having from 8 to 4 fathoms water. Ships may anchor within the port, in from 10 to 18 ft. water, or between it and the outer mole, where the depth is greater. Civita Vecchia is a free port,—that is, a port into which produce may be imported, and either made use of or re-exported free of duty; but quarantine regulations are very strictly enforced. Its imports consist chiefly of cotton, woollen, silk, and linen stuffs; coffee, sugar, cocoa, and other colonial products; salt and salted fish, wines, jewellery, glass, earthenware, &c. to the total value of about 680,000*l.* or 700,000*l.* annually; the exports are principally staves and timber, corn, wood, &c. potash, pumice stone, alum, &c., probably to an amount not much less. Marcellus and Cæna have the largest share of the foreign trade; and next to them, England. Fully 3-4ths of the ships entering the Papal ports arrive at that of Civita Vecchia.

This city was originally called *Trajanæ Portus*, and it is to be regretted that it did not continue to bear the name of its illustrious founder. (*Rampoldi*; *Com. Dict.*)

CLACKMANNAN, a co. of Scotland, and the smallest in that kingdom, on the N. side of the Forth, being, except for a short distance on the E., where it adjoins Fife, every where surrounded by the co. of Perth and Stirling. Area, 30,720 acres. It is traversed by the Forth, an affluent of the Forth. The range of the Ochil hills crosses and mostly occupies the part of the co. to the N. of the Devon; but the other and far largest portion consists, for the most part, of clay and carse land, and is remarkably fertile and well cultivated, producing excellent crops of wheat and beans. Estates middle-sized; farms large; farm buildings excellent; average rent of land, in 1810, 10*l.* 10*s.* an acre. There are valuable mines of coal, large quantities of which are shipped at Alloa; ironstone is also abundant. There are some large distilleries and breweries; but little other manufacture is carried on. Alloa is the chief town; Clackmannan is the co. town. Clackmannan is divided into 5 parishes, and had, in 1831, 2,391 inhab. houses, 3,322 families, and 14,729 inhab., of whom 7,095 were males, and 7,634 females. It is united with Kinross in returning 1 mem. to the H. of C. Registered electors in 1838-39, 312. Valued rent, 26,482*l.* Scotch; annual value of real property in 1815, 37,978*l.*

CLACKMANNAN, a town of Scotland, cap. of the above co., on an eminence 190 ft. high, on the left bank of the Forth of Forth. Pop. about 2,000. It consists principally of one long unpaired street, and is a very unimportant place. On the W. of the town is Clackmannan Tower, the palace of King Robert Bruce, long the residence of a branch of the Bruce family, and now the property of the earl of Zetland. The par. church is a modern Gothic building. Debtors and criminals are sent to Stirling, the jail of which is partly maintained by the co. of Clackmannan.

CLAGENFURTH (Germ. *Klagenfurt*), a town of Illyria, gov. Laybach, cap. duchy of Carinthia, on the Glan, an affluent of the Drave, in an extensive plain, 21 m. E. Villach, and 40 m. N.N.W. Laybach. Pop. 12,480. It was formerly fortified, but its works were destroyed by the French in 1809. It has 4 suburbs, is well-built, with broad and regular streets. There are 6 squares, one of which has a leaden statue of the Empress Maria Theresa, and a group (indifferently executed) representing Hercules destroying the Hydra. Another square contains the residence of the Prince-Bishop of Gurk, with its galleries of paintings, statuary, &c., a rich cabinet of minerals, and an obelisk erected in honour of Francis I. There are 7 churches, 2 hospitals, several infirmaries, a lying-in hospital, workhouse, house of correction, lyceum with a public library, college, normal high school, Ursuline school for girls, an agricultural society, and a theatre. This town is the seat of the court of appeal for the gov. of Laybach, and of municipal, provincial, and other courts of justice. It has a few manufactures of fine woollen and silk fabrics, and which Clagenfurth is supposed to derive its name from the Emperor Claudius, and in its vicinity there are some ruins believed to be those of the ancient *Tiburnia*. It has several times been partially destroyed by fire. (*Oriental. Nat. Encycl.* &c.)

CLAMECY, a town of France, dép. Nièvre, in which it holds the second rank, at the foot and on the declivity of a hill on the left bank of the Yonne, where it is joined by the Beaurvon, by both of which it is intersected, 36 m. N.E. Nevers. Pop. (*ex com.*) 5,600. Little remains of its ancient castle, and the massive walls by which it was formerly surrounded. It, however, contains several old Gothic churches, and a handsome modern castle surrounded by fine gardens, which stands in the *Place de l'Université*. Clamecy has manufactures of common woollen cloths, fulling mills, dyeing houses, tanneries, &c., and a considerable trade in wood and charcoal, most of which are sent down the Yonne to Paris. (*Hugo*, art. *Nièvre*, &c.)

CLARE, a marit. co. of Ireland, gov. Munster. It is in a great measure insulated, having Galway Bay on the N.; the Atlantic on the W.; the Shannon, by which it is separated from Kerry, Limerick, and Tipperary, on the S. and S.E.; and Galway on the N.E. Area, 802,332 acres, of which 259,584 are unimproved mountain and bog, and 18,665 water. Surface in parts almost mountainous; but it has a large extent of low level land. The low grounds, known by the name of the *Corcasses*, on the banks of the Shannon and Fergus, are almost equal to the very best grazing lands in Lincolnshire. The arable lands are mostly light, but fertile. Estates large; tillage farms very small, many being below 5, and very few above 60 or 70 acres. Agriculture extremely bad, but improving; it is still common in many parts to take a succession of corn crops till the land is completely exhausted. Principal crops, oats and potatoes; but wheat and barley are now rather extensively cultivated. Sea-weed and sea-sand are a good deal used as manure; and in the hilly parts the *loy*, or spade, is much employed in cultivation. Cottages mostly of stone, but without lime or other cement. Condition of the occupiers of small tillage farms and cottiers quite as bad as in most other parts of Ireland. Lime is the most important mineral. Manufactures have hardly any footing. Average rent of land, 11*s.* 3*d.* an acre. Exclusive of the Shannon, the Fergus is the principal river. Clare has 9 baronies and 79 parishes, and sends 3 mem. to the H. of C., viz. 2 for the co., and 1 for the bor. of Ennis, the principal town in the co. Registered electors for the co., in 1838-39, 2,730. In 1831 Clare had 40,358 inhab. houses, 43,374 families, and 258,322 individuals, of whom 128,446 were males, and 129,876 females.

CLAUSTHAL or **KLAUSTHAL**, a town of the k. of Hanover, cap. of the mining captaincy (*Bergbaupf. mannschaft*) of the same name, and the principal mining town of the Hartz; in a bare and bleak region on the top and slopes of a hill 1,740 ft. above the sea, 26 m. N.W. Göttingen, and 56 m. S.W. by S. Hanover. Pop. 9,076, or together with the adjacent town of Zellerfeld, about 13,250, mostly miners or persons connected with the mines and smelting houses. It has a desolate appearance; its houses are chiefly of wood, and even its principal church is of the same material. It contains a mining-school, supported by the king, and possessing an extensive collection of models of mines mining buildings, machinery, &c., and a cabinet of the Hartz minerals. There is also a mint, at which about 14,000 silver dollars are coined weekly, and from 500 to 800 gold ducats yearly; a gymnasium, &c. The chief lead and silver mines in the Hartz are in the neighbourhood, next to which are the Silberbüchel. The shaft of one of these mines reaches to 2,000 ft. below the level of the Baltic. The mines are drained by a tunnel, cut through the mountain to the small town of Grund, a distance of 6 m. The total length of this tunnel, however, with its branches, is nearly double this distance: it was commenced in 1777, and finished in 1799. All the machinery

used in the mines being set in motion by water-power, every little stream around Clautchal is carefully made use of to form a reservoir; and the canals conducting the water thence to the different mills, machines, &c., are said to have an aggregate length of 125 m. There are numerous forges; besides which, canlets, and a few other articles are manufactured. (*Heden, Das Königreich Hannover*, i. 308, &c.; *Cassell's History's Handbook*.)

CLERMONT-DÉ-LODEVE (see LODEVE). There are many other small towns in France named Clermont; but none of any importance.

CLERMONT-FERRAND (an. *Augustonemetum*), a city of France, dep. Puy-de-Dôme, of which it is the cap., on an affluent of the Allier, 82 m. W. Lyons, and 208 m. S. by E. Paris. Lat. 45° 46' 44" N., long. 3° 5' 17" E. Pop. (1836), suburbs included, 32,427. It is finely situated on an eminence, surrounded on the S. and W. by an amphitheatre of mountains, of which the Puy-de-Dôme is the culminating point, and overlooking on the N. and E. the picturesque and rich plain of the Limagne. The city itself is about 1½ m. in circuit, being separated by a boulevard, partially planted with trees, from several considerable suburbs. Though it has some fine structures, it is in general badly laid out; streets crooked, narrow, and dirty; houses lofty, mostly old, and gloomy looking from being built of the lava found in the neighbourhood, with which also the streets are paved. The more modern buildings, however, which are rapidly increasing in Clermont and its suburbs, have a more cheerful and agreeable aspect. It has several squares ornamented with handsome fountains, and is exceedingly well supplied with good water, conveyed to it by subterranean conduits from Royat, a league distant. The principal edifice is the cathedral, a work of the 13th century, and the third, according to Hugo, which has been constructed in this city. Externally it has nothing to recommend it, being unfinished, and crowded amongst a number of mean buildings; but its interior is considered one of the finest existing specimens of Gothic architecture. It is built of Volvic lava, a material well in keeping with its style, and has a choir, chapels, &c. of great beauty, a number of handsome columns supporting a lofty nave and aisles, and much elegant carving and stained glass. Of the five towers it possessed before the Revolution, only one remains. Of the other churches, that of Notre Dame du Port, built in 863, is the most ancient, and is elaborately ornamented externally with mosaic work, bas-reliefs, &c. The corn and linen halls, the ancient college, town-hall, cavalry barracks, *Hôtel-Dieu*, and another hospital, the Prefecture, a public library with 16,000 vols., founded by Massillon, and the theatre, are other principal public buildings. It has also a botanic garden, museums of natural history and antiquities, and a cabinet of mineralogy, particularly rich in specimens of the volcanic products of the neighbourhood. It is the seat of a bishopric which has to boast of Massillon for one of its incumbents, and of tribunals of original jurisdiction and commerce; and has a royal college of the third class with about 350 pupils, a primary school, an academy of sciences and belles lettres, &c. Trade considerable; it being the *entrepôt* for the produce of the surrounding depts., consisting of hemp, flax, corn, wines, cheese, leather, and linen fabrics, and for a part of the merchandise of Provence and Languedoc intended for Paris, besides being on the great line of communication between Bordeaux and Lyons. Four large fairs are held annually. Manufactures not very important; the chief are those of silk stockings, druggists, tinted paper, coarse woollens, linen, cutlery, porcelain, cotton yarn, twine, sweetmeats, preserved fruits, and chemical products. There is also a saltpetre refinery. In and round Clermont there are numerous warm chalybeate springs, holding in solution carbonates of lime, magnesia, &c., and which, on cooling, deposit very extensive sediments. The most remarkable of these is in the suburb of St. Ailly, where a streamlet having raised its bed to a considerable height by means of successive deposits, and subsequently formed a cascade over another streamlet into which it had previously run, has effected the formation of a natural bridge over the latter, 21 ft. in length, by 16 ft. high. The little town of Mont-ferrand, formerly containing the stronghold of the counts of Auvergne, is now one of the suburbs of Clermont, with which it is connected by a fine avenue of willow and walnut trees.

Anterior to the Roman conquest, this city was named *Nemours*, and was the cap. of the Arverri: Augustus embellished it, and gave it his name. In the 3d century it was erected into a bishopric. It was several times demolished in the succeeding ages, and especially by Pepin-le-Bref. The counts of Clermont and Auvergne afterwards possessed it. It was here that the celebrated council, which bears its name, was held in 1095, when the first crusade was resolved on. Philip Augustus united this city to his dominions in 1212. Clermont has been the birth-place of many illustrious men, among whom may be specified, Gregory of Tours; Pascal, born

here on the 19th June, 1623; Thomas, Chamfort, De-lille the poet, and General Desaix, in honour of whom an obelisk has been erected in one of the squares. (*Hugo, art. Puy de Dôme*; *French Official Tables*; *Dict. Géographique*, &c.)

CLEVELAND, a town of the U. States, Ohio, on the S. shore of Lake Erie, at the mouth of the Cuyahoga river, and at the point where the Grand Canal, connecting the Ohio river (and consequently the Mississippi) with Lake Erie, unites with the latter. The opening of the canal has made Cleveland, which was previously quite unknown, a place of great commercial importance, and it is now rapidly rising in wealth and population. The registered shipping belonging to the place on the 30th Sept. 1838, amounted to 9,496 tons, of which about a half were steamers.

Subjoined is a statement of the quantities of most kinds of property that arrived at Cleveland, by the canal, in 1837 and 1838:—

	1837.	1838.
Wheat	548,697 bushels.	1,228,521 bushels.
Flax seed	7,947 —	5,928 —
Corn	220,574 —	106,529 —
Oats	88,499 —	21,554 —
Mineral coal	184,646 —	17,330 —
Flour	207,695 bbls.	292,851 bbls.
Pork	45,015 —	—
Whisky	12,414 —	10,429 —
Butter	775,642 lbs.	585,188 lbs.
Cheese	40,598 —	—
Lard	1,555,536 —	1,131,183 —
Hacon	2,812,761 —	1,241,780 —
Pig iron	1,017,847 —	1,006,764 —
Tobacco	115 bbls.	327 bbls.
Lumber	751,814 feet.	66,536 feet.
Stone	3,456 perches.	442 perches.

CLEVES, an ancient town of the Prussian states, Rhine prov. formerly the cap. duchy of Cleves, and now of a circ. It stands on the declivity (whence its name) of some hills, nearly at the N.W. extremity of the prov., about 2½ m. from the Rhine, with which it is united by a canal. Pop. 7,700. It is neatly built in the Dutch style, and surrounded by walls, but is not a place of any strength. It has a gymnasium or college, a handsome town-house, with iron-foundries, and manufactures of flannel, cotton, &c.

CLITHEROE, a town and parli. bor. of England, co. Lancaster, hund. Blackburn, on the Ribble, 188 m. N.W. by N. London, and 30 m. S.E. by E. Lancaster. The parli. bor. embraces the following chapels and townships, which, at the undermentioned periods, had a pop. of—

	1801.	1811.	1821.	1831.
Clitheroe bor.	1,368	1,767	3,815	5,215
Downham	470	527	620	552
Whalley	876	1,004	1,058	1,151
Wewey	349	458	594	784
Pendleton	914	930	1,519	1,205
Little Milton with Hewthorn and Culcoats	76	76	99	70
Parli. bor.	4,053	4,802	6,992	8,915

The town stands at the foot of Pendil-hill, which rises 1,800 ft. above the level of the sea. The houses are of stone; the streets paved, well kept, but not lighted, and plentifully supplied with water from springs. The church, rebuilt in 1828 at an expense of 8,500£, is a plain building; the other places of worship belong to the Methodists, Independents, and R. Catholics. In the churchyard is the free grammar-school endowed by Queen Mary in 1554. The salary of the head master is 200£ a year, and that of the second master 100£. The grammar-school is also used as a Sunday-school, when from 800 to 1,000 children are instructed on the Madras system. Clitheroe is a bor. by prescription, and has returned 2 mem. to the H. of Com. since 1 Elizabeth. Under an order of the H. of Com. in 1694, the right of election was vested in the burgesses and freemen, who held in right of freehold in houses or land within the bor.: out-burgesses, holding free burgage tenures in the bor., had also the right of voting. Previously to the Reform Act, the number of burgage tenures was 192, of which not more than a half were occupied by burgesses, and in fact it was a mere nomination bor. The Reform Act deprived it of one of its members; and the electoral limits were at the same time extended so as to comprise the various chapels and townships mentioned above. Registered electors in 1832, 306; in 1834, 374. Under the new municipal corporation act, the bor. consists of one ward, and is governed by 4 aldermen and 12 councillors. All the municipal affairs are transacted in the Moot-hall, to which is attached a prison kept by the town sergeant. Several branches of the cotton manufacture are extensively carried on: they consist principally of the weaving of calicoes by hand and power looms, cotton spinning, and calico printing. There are above 12 steam-engines in the bor.

In the neighbourhood are extensive beds of limestone, of which large quantities are burnt for manure and building. A mineral spa near the town is much resorted to. In 1669, the town and neighbourhood suffered severely from an extraordinary outbreak of water from the higher part of Pendill hill. Markets are held on Tuesday; cattle shows on alternate Tuesdays; fairs on 24th and 26th March; 1st and 2d Aug.; Thursday and Friday before the fourth Saturday after 29th Sept.; and 7th and 8th Dec. A communication by water has been opened with the principal canals and navigable rivers. Races take place on Salthill moor on 21st and 22d June. (*Darney's Lancashire.*)

CLOGHNAKILTY, a marit. town of Ireland, co. Cork, prov. Munster, at the bottom of the bay of the same name; 19 m. S.W. Cork. Pop. in 1831, 3,067; pop. of parish in 1834, 6,377; of whom 1,098 were of the estab. church, 2 Prot. dis., and 5,277 Rom. Catholics. The town is formed of 4 streets, that meet in the centre, and of a square. It has a par. church, a R. Catholic chapel, a Methodist meeting-house, an endowed grammar-school, a dispensary, public library, 3 reading-rooms, a court-house, bridewell, linen-hall, and market-house. The corporation, under the charter of James I. in 1613, consists of a sovereign, 24 burgesses, and a commonality. It returned 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. A manor court, held every third Wednesday, has cognisance of pleas to the amount of 2l. Markets, Fridays: fairs on 5th April, 1st June, 1st Aug., 10th Oct., and 12th Nov. A party of the constabulary is stationed here. The trade is much limited by the badness of the harbour, which is nearly impracticable for vessels of any size, in consequence of its shallow and shifting bar. Sea-sand is raised here in large quantities, and carried to the adjoining country for manure. Coal is exported to Cork and coal received in return. Post-office revenue, in 1830, 240l.; in 1836, 351l.; a coach, carrying at an average nine passengers each trip, plies six days in the week between Cork and Cloghnakilty. (*Stat. Surv.; Railway Rep., &c.*)

CLONES, an inl. town of Ireland, co. Monaghan, prov. Ulster; 66 m. N.W. by N. Dublin. Pop. in 1831, 2,381; pop. of par. in 1834, 21,870; of whom 7,027 were of the estab. church, 1,054 Prot. dis., and 13,789 R. Cath. The town consists of a triangular market-place, in which is an ancient stone cross, and a few streets with mean thatched houses. It has a par. church, a R. Cath. chapel, two Presbyterian, and two Methodist meeting-houses, and two dispensaries; and is a constabulary station. A manorial court is held monthly, and petty sessions on alternate Fridays. There is a brewery in the town, and near it a manufactory of agricultural implements. A yarn-market is held on Thursdays, in which about 5,000 pieces of linen cloth are annually sold. Fairs are held on the last Thursday of every month. It has a considerable inland traffic, as it appears that on an average of the three years ending with 1835, 5,000 tons of grain, 130 tons of fax, 140 tons of butter and eggs, and 54,100 sheep, lambs, and pigs, of the estimated weight of 1,705 tons, were annually sent thence chiefly to Belfast, Newry, and Dundalk. The Ulster canal passes near the town. A branch of the Agricultural Bank was opened here in 1836. The Post-office revenue in 1830 was 379l., and in 1836, 581l. The mail-coach from Belfast to Enniskillen passes through the town, and a coach to Dublin, which goes three times in the week, carries at an average eight passengers each trip. (*Stat. Surv.; Railway Rep.*)

CLONMEL, an inl. co. and parl. bor. of Ireland, prov. Munster, partly in Tipperary and partly in Waterford on the S.W. 39 m. S.W. by N. Dublin, and 26 m. N.W. by W. Waterford. Pop. in 1821, 18,012; in 1831, 17,638; in 1834, the number of inhab. was 17,835, of whom 6,737 were of the estab. church, 250 Prot. dissenters, and 15,948 Rom. Cath. The town chiefly lies on the N. side of the river in Tipperary; the communication with the other portion in Waterford being maintained by three stone bridges. The streets, which consist of a main thoroughfare upwards of a mile in length, intersected by several smaller, are well paved and lighted with gas. "The town has the appearance of much comfort and prosperity, and is generally considered to be in a thriving state; but the outskirts contain a mass of very poor inhabitants." (*Boundary Reports.*) The co. club-house is at the E. end of the town, and near it are extensive barracks for cavalry, infantry, and artillery. Two newspapers are published here, each twice a week. It has a parish church, a modern building, with some good monuments, two Rom. Catholic par. chapels, a Franciscan and a Presentation chapel, and meeting-houses for Presbyterian Calvinists, Unitarians, Baptists, Primitive and Wesleyan Methodists, and Quakers. An endowed school has been lately rebuilt at an expense of 5,000l.; besides which there are parochial schools for boys and girls, and others are maintained by voluntary contributions. There are in all about 600 pu-

pils in the public schools, and 700 in private seminaries. The co. infirmary and dispensary, the fever hospital and the house of industry for the reception of well-conducted paupers and the confinement of vagrants, are in the town, as are two orphan establishments, a mendicity association, and a savings' bank. Here also is the district lunatic asylum for the co., built to accommodate 60 patients; but at the close of 1837 there were 78 in it, 46 males and 32 females, supported at a total expense of 3,071l., or of 28l. 15s. each. There are 11 male and 15 female idiots in the house of industry.

The bor. was incorporated at a very early period, but its ruling charter was granted by James I. in 1608. The governing body consists of a mayor, two bailiffs, 20 other burgesses, and an unlimited number of freemen: the right of freedom is enjoyed by the eldest son, by apprenticeship or by marriage with a freeman's daughter. Previously to the Union, the bor. sent 2 mem. to the Irish H. of C., and it now sends 1 m. to the imperial H. of C. The elective franchise is vested in the burgesses and freemen resident within 7 m., and in the 10l. householders. No. of registered electors in 1838, 528.

The electoral boundary comprises 361 acres, but the municipal jurisdiction for other purposes extends over 4,800 acres, of which 1,000 are on the Tipperary side, and the remainder on the Waterford side of the river. The mayor and bailiffs hold a Wednesday court of record at the Tholsel for pleas to any amount; they also hold an annual court leet. The mayor's court, for the recovery of debts under 10s., sits also on Wednesdays. Petty sessions are held every alternate Friday. The assizes and general sessions of the peace for the co. are held in the court-house, a handsome building. The old co. gaol is now appropriated to untried cases, the new to prisoners of every description. At the close of 1837 there were in both 573 prisoners. In each the inmates are divided into six classes, but the accommodations are insufficient for the number committed.

The woollen manufactory was introduced into the town in 1667, when a number of German manufacturers were induced to remove thither: it declined at the Revolution, and has never revived. The cotton manufactory has been introduced, and there are extensive flour-mills in the town and its vicinity. The town is well situated for inland trade, being on the main lines of road from Dublin to Cork, and from Waterford to Limerick, and having the advantage of river navigation for barges of 50 tons burden to Waterford, a distance of 23 m. There is an extensive salmon fishery on the Suir, and the influence of the tide is perceptible beyond Clonmel. The principal trade is in grain, provisions, cattle, and butter, with all which it supplies the Liverpool, London, and Bristol markets. There are two breweries and a distillery. A considerable portion of the produce goes to Waterford, and numerous carriers conduct the inland trade with all the surrounding country. An establishment of light cars for the conveyance of travellers, of which Clonmel is the centre, has considerably promoted its improvement. The butter market is a spacious building, with suitable offices for inspecting and marking the article before it is exposed for sale. Markets on Tuesdays and Saturdays; fairs are held on 5th May and 5th Nov. and on the first Wednesday of every other month; they are chiefly for cattle. The Bank of Ireland, and the Provincial, Agricultural, and National banks have branches here. The excise duties for the distr., in 1835, amounted to 75,521l.

The town is beautifully situated in the vale of the Shannon, but its internal appearance is not very attractive. The houses appear to have been built more for comfort than show. Many families of the Society of Friends reside here, the simplicity of whose domestic arrangements has in some degree pervaded those of the rest of the town. The manners, fashions, dress, and food of the working classes, many of whom are agricultural labourers, differ little from those of the same description in the neighbouring districts.

CLOSTER-SEVEN, a small village of Hanover, duchy of Bremen, on the Aue, 26 m. N.E. Bremen. It deserves notice only from its being the place where the famous convention, which bears its name, was agreed to on Sept. 10. 1757, by which an army of 39,000 Hanoverians, Hessians, &c., commanded by William Duke of Cumberland, was dispersed and sent into cantonments. This convention was alike unpopular in England and in France: in the first it was looked upon as the result of imbecility and misconduct; and in the latter it was believed, and probably on good grounds, that had Marshal Richelieu not assented to the convention, the Duke of Cumberland must have surrendered at discretion. (The convention is given in *Smollett's Hist. of Eng.*, iii. 413.)

CLOYNE, an inl. town, or rather city, of Ireland, co. Cork, prov. Munster, in a fertile valley, 3 m. E. Cork harb. Pop. in 1831, 1,327; pop. of par. in 1834, 6,496, of whom 516 were of the estab. church, and 6,148 R. Cath. The town, which is small, irregularly built, and far from prosperous, has a large old cruciform cathedral, in which are some good monuments; among others one to Dr. Wood-

ward, bishop of Cloyne, who died in 1794, and was one of the earliest advocates for the introduction of poor laws into Ireland. A little distance from the cathedral is one of those extraordinary round towers, the origin and object of which have given rise to so much learned and fanciful conjecture. It is 102 ft. in height. The old Episcopal palace at the E. end of the town is now a private residence; the bishopric of Cloyne having, on the death of Dr. Brinkley, the last bishop, in 1835, been merged in that of Cork. The famous Dr. Berkeley, one of the subtlest of metaphysicians, and most amiable of men, was bishop of Cloyne from 1733 to 1753. The R. Cath. cathedral is a plain building, without any pretensions to architectural beauty. Crowes charity-school, founded in 1719, gives instruction to 35 pupils in reading, writing, arithmetic, &c. There is here a constabulary station. Market-day, Thursday. A court leet is held annually; a manor court every week; and petty sessions on alternate Wednesdays. The Post-office revenue in 1830 was 254*l.*, and in 1836, 295*l.* At Carrigermar, near the town, is a quarry of dove-marble, of which from 2,000 to 6,000 tons are raised annually. (*Stat. Surv.; Windeslet's Guide to Cork, &c.*)

CLYDE, a river of Scotland, and the only important one on the W. coast of that part of the U. Kingdom. It has its source near the S. extremity of Laparkshire, on the borders of Dumfriesshire and Peeblesshire, in the highest part of the S. mountainland of Scotland, contiguous to the sources of the Tweed and Annan. Its course is at first W., with a little inclination to the E., till near Biggar it turns N.W.; it then makes a sweep round by the S.E., till, being joined at Harperfield by the Douglas-water, it re-assumes its N.W. course, and, passing by Lanark, Hamilton, and Glasgow, unites with the Frith of Clyde, a little below Dumbarton. The distance in a direct line, from its source to Dumbarton, is only about 52 m., but including its windings, the course of the river is near 75 m. Soon after its junction with the Douglas, it is precipitated over a series of falls celebrated for their picturesque beauty: of these the principal are the falls of Bonington, Corehouse, Dundaff, and Stonebyres. The distance from the highest to the lowest fall is about 6 m.; during the whole of which the river dashes along with great impetuosity. Corehouse Fall is about 70 ft. in height. The Clyde has been rendered navigable at high water as far as Glasgow for vessels of 350 and 400 tons. (*See Glasgow.*)

COAST CASTLE (CAPE), or CABO CORSO, the cap. of the British settlements on the Gold Coast of Africa, empire of Ashantee; lat. 5° 6' N., long. 1° 51' W. The first colonial establishment formed here was by the Portuguese in 1610, but the Dutch dislodged them after a short period. Finally the British obtained possession of the settlement, in whose hands it has remained since 1661. (*Rosditch's Discoveries of the Africanus.*)

The castle is built upon a rock about 50 ft. high, projecting into the sea; its walls being washed by the surf that rolls impetuously along the coast. It is of a quadrangular shape, with bastions at each angle; has barracks, with accommodations for 16 officers and 200 men; but is of little strength, the walls being out of repair, and commanded in every direction by the adjacent heights (but on some of these forts have been erected). The water for the garrison is obtained from tanks, in which the rain from the buildings is collected. (*Captain Tulloch's Report on W. Africa.*)

The town is situated behind the castle, and presents a dirty and irregular appearance. The native houses have a few small rooms scantily furnished with mats and stools; the fires are made in a corner, with no other escape for smoke than a hole in the roof. There are, however, some superior residences belonging to Europeans, and the merchants have built themselves a neat clubhouse. The scenery of the neighbourhood has been described by a late distinguished female poet. "The land view, with its coccas and palm trees, is very striking—it is like a scene in the Arabian Nights. The native huts I first took for racks of hay, but those of the better sort are pretty white houses with green blinds. The English gentlemen resident here have very large houses, quite mansions with galleries running round. Generally speaking, the vegetation is so thick that the growth of the shrubs rather resembles a wall. The hills are covered to the top with what we should call calf-weed, but here it is called bush."

The climate of this settlement is characterised by excessive humidity. The heat is, however, not so great as might be supposed. In the hottest weather, owing to the tempering influence of the sea breeze, the thermometer seldom rises above 80° Fahr., and rarely, in the coldest, falls below 70°. It has generally been described as exceedingly unhealthy, and the official statements show that such is the fact. During the four years ending with 1826, two thirds of the white troops in garrison died an-

* Mrs. Maclean, better known as L. E. L., whose melancholy death at Gile place, in 1837, has given an interest to it which it did not previously possess.

usually; and in 1824 the mortality was in the enormous ratio of 982-2 in 1,000! It is true that these were singularly unhealthy seasons, and that the vice and intemperance prevalent among the troops added considerably to their sickness and mortality. But still, to use Captain Tulloch's words, "there is unquestionable evidence that in every year, and to all classes of Europeans, the climate proves extremely fatal."

The imports consist of cottons, hardware, gunpowder, &c. from Great Britain; sugar, rum, and tobacco from the colonies; and of foreign produce, beads, silks, tobacco, &c. The exports are gold dust, ivory, palm-oil, pepper, cam or dye-wood, tortoise-shell, malze, &c. But the value of the trade is inconsiderable; and is but a miserable compensation for the waste of life occasioned by the keeping up of this and the other settlements on this coast. (*Tulloch, ubi supra; Alexander's Colonies of W. Africa*, i. 146-175.)

COBLENTZ (the *Confluentes* of the Rhine), a town of the Prussian states, prov. Rhine, cap. reg. and circ., in a beautiful situation on the point of land at the confluence of the Rhine and Moselle. It has a freestone bridge across the latter, and one of boats across the Rhine. Pop. (ex. garr.) 13,700. The streets are mostly regular, and many of the public buildings are handsome; but, being a fortress, Coblenz has derived but little advantage from its fine situation for commerce: many of its thoroughfares are mean and filthy, and the pop. are poor and depressed. (*Chambers's Holland, &c.*, p. 55.) The original public building is the magnificent castle erected in 1779 for the elector of Treves. It was converted into barracks by the French; but has since been repaired, and is now used for the holding of the civil and criminal courts. Coblenz has a court of appeal for the regency, a theatre, a gymnasium or college for Catholics, and some other literary establishments. Commerce pretty extensive. Prince Metternich, prime minister of Austria, is a native of Coblenz.

Within these few years Coblenz has been rendered one of the strongest places in the Prussian monarchy, and is deemed one of the principal bulwarks of Germany on the side of France. The fortifications by which it is surrounded were constructed partly on the system of Vauban, and partly on that of Montalembert. They enclose a large extent of ground, and are capable of accommodating 100,000 men. Ehrenbreitstein, on the opposite side of the river, the fortifications of which had been blown up by the French, has been rendered stronger than ever, and is one of the principal outworks of Coblenz.

COBURG, or more properly SAXE-COBURG-GOTHA, a duchy of Central Germany, and the most S. of the indep. Saxon principalities, consisting of several small detached portions of territory, between lat. 50° 7' 30" and 51° 22' N., and long. 10° 15' and 12° 40' E., surrounded mostly by the territories of Bavaria, Hesse, Saxony, Meiningen, Ellrichhausen, Weimar, &c. The area and pop. of its two great divisions are:

	Area in sq. m.	Pop. 1837.	Chief Towns.
Saxe-Coburg	201	41,000	Coburg.
Gotha	596	96,000	Gotha; Waltershausen.
Total	797	137,600	

Coburg Proper is on the S. side of the Thüringer Wald (Thuringian Forest), and is included within the basin of the Rhine, having a general slope to the S.; Gotha, Altenburg, &c. are situated wholly on the N. side of the Thüringer Wald, and belong to the basins of the Elbe and Weser. The most mountainous parts of the country are the N. of Coburg and the S. of Gotha; through these the Thuringian forest-range passes, the highest summits of which,—the Beerburg, 3,265 ft., and the Schneekopf (snow-cap), 3,243 ft. in elevation,—are in the latter principality. Both divisions are, however, interspersed with fine valleys and fertile plains: Gotha is watered by the Unstrut, Gera, Hölzel, Saale, &c., and Coburg by the Itz, a tributary of the Mayn, and other rivers. Climate healthy and mild, especially S. of the mountains. The principal occupations of the people are tillage and cattle breeding; but the mountains, which are covered with pine forests, contain little cultivable land, and the forest economy there forms the chief branch of industry. In the valley of the Itz, the vine is cultivated, and hops, flax, and hemp, are also grown in the S.: the other agricultural products are corn, pulse, culinary vegetables, fruits, aniseed, coriander, cummin, safflower, and other medicinal plants: potatoes are a principal article of nourishment. Many hogs are fattened in the woods and sent down the Mayn to Frankfurt and elsewhere: considerable quantities of timber, pitch, tar, charcoal, and potash are obtained from the forests. Iron, coal, excellent millstones, marble, alabaster, gypsum, potters' clay, and salt are mined or quarried. Agriculture flourishes most in Coburg, manufacturing industry in Gotha. The principal manufactures are those of linen cloth, silk, linen thread,

woollen and cotton fabrics, leather, steel, iron, and copper wares, glass, earthenware, buttons, paper, &c. There are also numerous sawing-mills, linen-bleaching factories, breweries, and distilleries; and great numbers of toys are made at Neustadt in Coburg. A good deal of advantage accrues from the transit trade, the duchy being on the road between Leipzig and Frankfurt. Gotha is the principal trading town, and has several considerable mercantile establishments. The government is a constitutional monarchy; each of the principalities has its own elective assembly, and the two unite into one chamber, composed of 17 members, 6 of whom are deputies of the nobility, 5 sent by the 3 superior towns, and the remainder represent the inferior towns and country districts. No new tax can be imposed without their consent, and they interfere to regulate the judicial and civil administration of the duchy, to fix the number of the standing army, which, at present, consists of 1,366 men, &c. The qualification to vote for a deputy of the nobles is constituted by the possession of a seigniorial estate; for deputies of towns, every citizen who has not been a public offender, or a bankrupt, has a right to vote: in the country districts, the householders form the constituency. The deputies must be 30 years of age, and those for the towns and villages must have either an estate, free from incumbrance, worth 5,000 florins, or an annual income of 400 florins. The ministry is composed of one minister of state and three privy-councillors. In the year ending July 1837, the public revenue amounted to 215,778 doll., the expenditure to 206,311 doll., and the public debt to 850,000 doll.; the interest on which was 43,000 doll. Next to the superior court of appeal, the principal tribunals are a college of justice in each of the chief towns, and police, military, financial, &c. courts at Coburg and Gotha. There are 3 gymnasia and classical schools, 1 academical gymnasium, 2 seminaries for schoolmasters, 35 town schools, and 300 village schools in the duchy. The ducal house, and nearly all the pop., profess the Lutheran religion, there being only about 3,000 Roman Catholics and 1,000 Jews. Differences of religion, however, does not affect the equal enjoyment of political rights. The duke of Saxe-Coburg-Gotha holds the 12th place in the German diet; and the duchy is bound to furnish a contingent of 800 men for the service of the confederation. Coburg belonged successively to the counts of Henneberg, the house of Saxony, and that of Saxe-Altenburg. In 1816, its territories were enlarged by the cession of the principality of Lichtenberg, on the left bank of the Rhine; but the reigning duke has, within these few years, disposed of that possession to Prussia. In consequence of the extinction of the line of Gotha in 1826, the duke of Saxe-Coburg became possessed of the territories of Gotha and Altenburg; for which, by a family compact, Saxe-Altenburg was exchanged. The present duke, Ernest, born in 1784, succeeded his father in the sovereignty of Coburg-Saxe-Altenburg in 1806. He married the daughter of the duke of Gotha-Altenburg, who died in 1832; by whom he had two sons, Ernest, the present heir-apparent to the duchy; and Albert, consort of Victoria, queen of Great Britain. The house of Saxe-Coburg is indisputably the most fortunate of all the existing great families of Europe in respect to marriages: one brother of the reigning duke, Leopold, married, first the heiress to the British throne, next a daughter of the king of the French, and is now seated on the throne of Belgium, after having refused that of Greece! Another brother, Ferdinand, married one of the richest heiresses of the Austrian empire; and his son is now king consort of Portugal. One sister married the grand duke Constantine, heir presumptive to all the Russias; another sister is the duchess of Kent; and, as already seen, the duke's second son, Albert, has become the husband of the sovereign of these realms! (*A Almanac de Gotha; Berghaus; Cennabich; Ritter; Hauke's Germany.*)

Coburg, a town of central Germany, capital of the above duchy, on the left bank of the Itz, 106 m. E. by N. Frankfurt-on-the-Main, and 120 m. S.W. Dresden; lat. 50° 15' N., long. 10° 58' E. Pop. (1834) 9,076. Its streets are mostly narrow and uneven; but it is surrounded by some agreeable public walks, which separate it from its suburbs, and has several handsome public buildings. The Ehrenberg palace, built in 1549, contains a collection of pictures, a library of 26,000 vols., and some apartments adorned with figures in *alto-relievo*; the finest of which is a state banquetting-room, called the *Salle-de-Glens*, from some colossal *caryatides* which surround it. On an eminence commanding the town stands an ancient castle of the dukes of Coburg, now in part converted into a prison and house of correction; but containing also a collection of armour, and some rooms once occupied by Luther, with the bedstead on which he slept, his pulpit, &c. This castle was unsuccessfully besieged during the 30 years' war by Wallenstein, who had for some time his head quarters here. Coburg contains five churches, a government house, a gymnasium, with an observatory, and two libraries, a

superior ladies' school, a teachers' seminary, a large workhouse, and other charitable institutions, and a riding-school. The principal places of amusement are the theatre, casino, redoute, and musical club. It is the seat of gov., and of the high board of taxation for the duchy, and of the superior judicial courts and church consistory for the princip. of Coburg. It has manufactures of woollen, linen, and cotton fabrics, porcelain, earthenware, and gold and silver articles; with bleaching and dye-works, breweries, &c. "The court, and the whole of the duke's establishment, are maintained very handsomely," and the duke himself has been long noted for his hospitality towards the English. His fine seat, Rosenau, is in the immediate neighbourhood. (*Murray's Handbook; Berghaus; Cennabich, &c.*)

COCHIN, a small rajahship of Hindostan, near its S. extremity, extending along the Malabar coast, chiefly between lat. 9° 20' and 10° 30' N., and long. 76° and 77° E.; having N. and E. the territory of the Madras presidency, S. Travancore, and W. the ocean: average length and breadth about 45 m. each; area, 1,988 sq. m. Its E. boundary is formed by the W. Ghats, which are here covered with forests of teak and *mit* (a black wood), of large dimensions, which obliges both to be cut into short logs, in order to reach the coast; with poon, jack, and iron woods, &c. Towards Cacadu the hills are covered with grass instead of trees; but though their soil appears good, they are but little cultivated: in the N. there are narrow and well-watered valleys, in which rice is raised, and sometimes two crops a year are reaped. The houses of the cultivators are often embosomed in groves of palms, mangoes, jacks, and plantains. A considerable portion of the rajah's revenue is derived from the teak forests; the timber of Cochin being in great demand in Bengal, and since 1814, having been sent to the dockyards of Bombay, from which, previously to that period, it was excluded. There are many villages inhabited by Christians and Jews; the latter are settled mostly in the interior, but have a synagogue at Cochin town. This country was for a long period badly governed, and its inhabitants much oppressed. The rajah was tributary to Tippu Sahib, and since his fall has been tributary to the British; the subsidy now paid amounts to 77,900, per an. (*Hamilton's E. I. Gaz.*, i. 422-24; *Reports on E. I. Affairs*, &c.; *Journal of Asiatic Soc.*, ii. 383.)

COCHIN (*Cachin, a morass*), a marit. town of Hindostan, prov. Malabar, on a small island near the S. extremity of India; formerly cap. of the above rajahship, but since 1796 it has belonged to the British. Next to Bombay, it is the most eligible port on the Malabar coast; it is 150 m. N.W. Cape Comorin, 80 m. S.S.E. Calicut; lat. 51° N., long. 76° 17' E.; and is built on the N. extremity of the island, along the entrance from the sea to the "Backwater," an inland harbour or lagoon, which extends nearly 120 m., and is separated from the sea by a narrow peninsulated tract. Under the Portuguese and Dutch, by whom it was successively possessed, Cochin was a flourishing town; but since it has belonged to the English, who in 1806 demolished the fortifications and many of the buildings, it has progressively declined, and the inhab. are now very much impoverished; it still, however, trades with the rest of the Malabar coast, China, the E. Archipelago, and the Arabian and Persian gulphs. Large supplies of teak floated by the rivers from the forests into the Backwater, are shipped for the ports of the two last-named countries; the other exports are sandal wood, pepper, cardamoms, coconuts, copra, coriander, cassia, and fish-maws. It is the only place on the coast S. of Bombay where ships of any size can be built; but here some ships of 1,000 tons, many of from 500 to 800 tons for the E. I. C. service, and 3 frigates for the British navy, have been built. Under the walls of the old fort there is always from 25 to 30 ft. water, and ships obtain supplies of fresh water without difficulty. Provisions are extremely cheap, and as a port, as well as a place of trade, it is said to be much superior to Calicut. Jews of both the black and white sects are numerous, and have a synagogue in Cochin, almost the only one in India. Cochin is also the see of a Roman Catholic bishop, whose diocese includes Ceylon, and comprises more than 100 churches. Here in 1503 Albuquerque erected the first fortress possessed by the Portuguese in Asia. (*Hamilton's E. I. Gaz.*, i. 424, 425; *Journ. of the Asiatic Soc.*, ii. pp. 124, &c.)

COCHIN-CHINA, a prov. of the empire of Anam, which see.

COCKERMOUTH, a market-town and parl. bor. of England, co. Cumberland, at the confluence of the Cocker and Derwent, 24 m. S.W. Carlisle, and 19 m. N.E. Whitehaven. The town had, in 1831, 4,536 inhab.; but four entire townships and part of another have been added to the parl. bor., which had, in 1831, a pop. of 6,269. "Cockermouth has but few houses of a better sort, and little seems to have been done towards its improvement. The streets are narrow in many places, with a want of foot-pavement every where; and though the lower orders of people seem to be better off than in many other towns which we have

visited, yet there appears, generally, to be very little about the place tending to improvement." (*Bournebury Report*.) There are bridges over both rivers; that over the Derwent being 270 ft. long. Though unpaved, the streets are clean, and well supplied with water. A castle on a hill over the town, built shortly after the Conquest, was taken and razed by the par. forces in the war of 1641. The church of All Saints, erected in the time of Edward III., was rebuilt in 1711, and enlarged in 1825. The Independents, Methodists, and Society of Friends, have places of worship. It has a free grammar-school, and some almshouses. The moot-hall, where the municipal business is transacted, was lately rebuilt in the market-place; there is also a small house of correction. The borough returned 2 mem. to the H. of C. in 23 Edward I., after which the privilege was not exercised till 16 Charles I., since which it has been uninterruptedly enjoyed. Previously to the Reform Act, the franchise was exclusively vested in the holders of burgage tenures in the town of Cockermouth. The boundaries of the par. bor. were then extended as noticed above. Registered electors in 1837-38, 297. It is also a polling-place at elections for mem. for the W. div. of the co. In 1839, it had 5 flax and 3 woollen mills, employing together 222 hands; with tanneries, and some trade in hat-making, cotton weaving, &c. There are several corn-mills in the neighbourhood, and collieries at Greysouthern and Broughton, about 3 m. distant. Markets are held on Monday; and for butcher's meat and vegetables on Saturday.

CODOGNO, a town of Austrian Italy, deleg. Lodi, cap. distr., in a fertile territory, between the Po and Adda, 15 m. S. E. Lodi. Pop. 8,000. It has broad streets and good private buildings, some handsome churches, several colleges and schools, with an hospital, theatre, barracks, &c. It is a place of considerable trade, especially in Parmesan cheese, and has some silk manufactures. Near this town the Austrian troops were defeated, in 1746, by the Spaniards, and in 1796 by the French. (*Kampfskizze; Oester. Nat. Encyc.*)

COGESHILL, a town and par. of England, co. Essex, hund. Lexden, the town being on a hill on the N.E. bank of the Blackwater, 10 m. W. Colchester. Area of par., 2,770 acres. Pop. of do. (1831), 3,227. The town is ill-built; and the clothing trade, particularly the manufacture of balze, formerly carried on, has almost wholly disappeared; but some branches of the silk manufacture have been introduced; and a few of the inhab. are engaged in the making of toys. The church, a spacious structure, in the perpendicular style, has a large square tower. The river is here crossed by an ancient bridge of three arches. It has an endowed school, three unwidowed almshouses; and an annuity of 150*l.* a year, payable by Pembroke Hall, Cambridge, goes to the support and education of the poor. The Cistercian monks had an abbey here, a portion of the nuns of which still remains.

COGNAC, a town and river port of France, dép. Charente, cap. arrond., on the navigable river Charente, 22 m. W. by N. Angoulême. Pop. 8,830. It is ill-built, and contains no edifice worthy of notice, except an ancient castle, now converted into warehouses. The brandy, for the shipment of which this town is so celebrated, which is everywhere known by its name, is made from a very secondary white wine, *dénué d'agrément, mais très-spiritueux*. (*Julihen*, 165.) The brandy made from red wine is very inferior. In good years wine yields about 1-5th part of its volume of *can-de-vie*, whereas in bad years it does not yield more than from 1-9th to 1-11th part. All the brandy of Charente is sold under the name of Cognac; but the best qualities are produced in the canton of that name, and in those of Blazacq, Jarnac, Rouillac, Aigre, and Ruffec. The park belonging to the castle is a fine public promenade, and in it is a bronze statue of Francis I., erected on the spot where he was born, in 1494. Three councils have been held in Cognac.

COIMBATOUR, a British prov. of S. Hindostan, presid. Madras, between lat. 10° 8' and 12° 48' N., and long. 76° 50' and 78° 10' E., having N. the Mysore dom., E. the provs. Salem and Carnatic, S. the latter, and W. Cochin and Malabar: area, 8,202 sq. m. Pop. (1836-37) 807,964. Generally it is a flat open country, with a medium height of 900 ft. above the sea; its surface gradually ascending from the Covery on the E. to the Ghauts and Nelliagerry hills on its W. borders. The W. Ghauts rise from 1,500 to 2,000 ft. above the Coimbatour plain, and have in one place a remarkable opening about 21 m. in length called the Palighautcherry Pass, presenting a clear level way from the Malabar to the Coromandel coast. Next to the Covery, the principal rivers are the Bowany, Noyel, and Amberawatty, all which run more or less E., and join the Covery before it leaves the distr. Climates on the whole healthy and pleasant; and except that part facing the Palighautcherry Pass, this prov. is protected by the Ghauts from the violence of the S.W. monsoon. There are some marshes in the S. and in the vicinity of the hills; but the soil in general is dry, and well adapted for the dry grain culture, to which nearly

ten times as much land is appropriated as is occupied by well, and twenty times as much as is occupied by *vet.* cultivation. In 1836-37, there were 3,349,327 acres of land fit for cultivation, about two-thirds of which were under the plough. In the N. rice is the chief crop; cotton of several kinds is grown in considerable quantities both above and below the Ghauts, and almost all the tobacco that supplies Malabar comes from this distr. There are altogether about 579,700 acres of pasture land; cattle and sheep numerous. The land rev., collected under the ryot-war system, amounted in 1836-37 to 3,084,913 rupees. Chief mineral products salt and nitre, which are occasionally obtained from certain earths impregnated with muriates and nitrates abundantly scattered throughout the distr. In 1818, an aqua-marine mine was opened and worked. Weaving is the only art that has attained any perfection. Some of the towns are large and well built; but, excepting in these, mud cottages with red tiled or thatched roofs are almost the only houses. The peasantry, however, are contented, and enjoy comparative comfort. Pagodas or temples are not numerous; and excepting that of Peowra, a little W. of the cap., which contains some well-carved granite figures, they have little notoriety. The areas in front of most of them are ornamented with gigantic groups in pottery covered with chunam of caparisoned horses, elephants, and grotesque figures. Near the Ghauts the ox is adored, and every village possesses one or two bulls, to which weekly or monthly worship is paid. (*Hamilton*.) This prov. became subject to the Mysore Raja nearly 200 years ago, and to the British in 1799. It was greatly depopulated by an epidemic fever, which prevailed from 1809 to 1811. (*Hamilton's E. I. Gaz.*, i. 431, 432; *Madras Almanack*, 1838; *Parl. Reports*, &c.)

COIMBATOUR, an incl. town of S. Hindostan, cap. of the above distr. and seat of a collector of revenue under the Madras presid., in an elevated situation on the N. bank of one of the affluents of the Covery, 90 m. S.S.E. Mysore, and 270 m. S.W. Madras; lat. 10° 52' N., long. 77° 5' E. It is tolerably well built, and has a mosque erected by Tipoo, who sometimes resided here. The water is brackish, and 2 m. off both salt and nitre are procured by lixiviating the soil. Five m. to the N. iron is smelted from black sand. Peowra, not far distant, has a temple dedicated to Siva, highly ornamented with Hindoo figures, but destitute of elegance, which was spared by Tipoo when he demolished most other idolatrous buildings. In 1783 and 1790 Coimbatour was taken by the British, to whom it has permanently belonged since 1798. (*Hamilton's E. I. Gaz.*, i. 433.)

COIMBRA, a city of Portugal, prov. Beira, cap. distr., and see of a bishop, partly on a steep rocky precipice, and partly on a plain contiguous to the Mondego, 115 m. N.N.E. Lisbon; lat. 40° 12' 30" N., long. 8° 29' W. Pop. in 1820, according to Balbi, 15,210; but now supposed to be about 20,000. It was fortified at a very early period, and has undergone many sieges. The ancient walls and towers still remain, and form its only defence. It has an imposing appearance when seen at a distance, the summits of the adjoining heights being crowned with convents and public buildings; but the interior of the town by no means corresponds with the exterior view, the streets being narrow, steep, crooked, and dirty. The principal public building is the university, the only one in Portugal, transferred thither from Lisbon in 1206. It consists of 18 colleges, and is divided into 6 faculties; viz. those of theology, the canon law, civil law, medicine, natural philosophy, and mathematics. It has also attached to it grammar-schools, with schools of philosophy and rhetoric, ecclesiastical and civil colleges or seminaries, and a royal college of arts, at which those who intend entering at the university complete their preliminary studies. Different degrees are taken in the respective faculties, the student applying himself principally to the particular branch most connected with his intended profession, which, as Lord Caernarvon surmises, is probably an improvement upon the English system of college education, where the same degree is taken by all, without reference to the nature of their future occupations. (*Portugal and Galicia*, i. 42.) The collection of subjects of natural history is tolerably good, the observatory complete, and the instruments in perfect order, the greater part having been made in London and Paris. (*Ibid.*) The present system of education was introduced by the Marquis Pombal, in 1773; it is, however, indebted, for various improvements in the course of study, to Englishmen, who have been instructors; but, with all this, it is still very far behind; and many important branches of knowledge are either not taught at all, or are taught in the worst possible manner. The university is extremely well endowed; and the inferior class of nobles are sometimes competitors for the vacant chairs. The annual expenses of the students do not exceed 50*l.* each, any extra being defrayed from the revenues of the instit. un. The library consists of three large saloons, containing about 30,000 vols., but they are nearly all of ancient date. The

College of Arts, which formerly belonged to the Jesuits, is a remarkably handsome building. The monastery of Santa Cruz, an immense Gothic building in the worst taste, belongs to the order of Augustines, who, in addition to numerous important privileges, enjoy the right of appointing their prior to the office of chancellor of the university. The monks are, for the most part, of noble descent and polished manners, and are often seen mounted on fine horses splendidly caparisoned, being forbidden by the regulations of the monastery to appear on foot beyond its walls. (*Lord Carmarvon*, l. 43.) On a hill opposite to the town is the superb convent and church of the nuns of St. Clara. Besides these public buildings, there are the cathedral, and eight churches, five of which are collegiate, with several other convents, hospitals, &c. There is a fine stone bridge over the Mondego, whose bed, which is progressively rising, is nearly dry in the summer, while in the winter it becomes an impetuous torrent, and overflows the surrounding country. The town is well supplied with water, conveyed to it by an aqueduct. Near Coimbra, on the S. bank of the river, is the *Quinta das Legrimas*, or Villa of Tears, the residence of the beautiful Infes de Castro, whose murder forms the subject of the fine episode in the third book of the *Lusiad*. Earthenware of good quality is produced here, with woollen and linen cloths, combs, &c.

Coimbra is said to occupy the site of *Conimbrica*, founded by the Romans 300 years B. C. It suffered severely by the earthquake of 1755, and was a scene of great distress in 1810, when the Duke of Wellington retreated on the lines of Torres Vedras. (*Milano*; *Lord Carmarvon's Portugal and Galicia*; *Baldi*, *Essai Statistique sur le Portugal*, li. 37, 201.)

COLABBA, an island on the Malabar or W. coast of Hindostan immediately S. the Island of Bombay, with which it is connected by a causeway, and on which a fine lighthouse and cantonments for the British troops have been erected. (See *Bombay*.)

COLAPOOR, a small rajahship of Hindostan, prov. Bejapoor, partly above and partly below the W. Ghauts, including the towns of Colapoor, Parnellah, Mulcapoor, and Culgung. The rajah is descended from the eldest branch of the family of Sevajee, the founder of the Marhatta empire. He formerly possessed Malwan, and some other parts on the Malabar coast; but his subjects being notorious for piracy, the British compelled him to cede these places in 1812; and in 1829 assumed the government of the country.

COLAPOOR, an inf. town of Hindostan, cap. of the preceding distr., in a valley surrounded on three sides by hills; 125 m. S. E. of Poona; lat. 16° 19' N., long. 74° 22' E. It has a citadel, but its chief protection is in two hill forts in the vicinity: the town is neatly built, and contains some lofty trees, gardens, and good tanks. (*Hamilton's E. I. Gaz.*, i. 424-36.)

COLBERG, a fortified sea-port town of the Prussian dominions, reg. Coalin in Pomerania, on the Persante, near where it falls into the Baltic, lat. 54° 7' N., long. 16° 37' 15" E. Pop. 7,320. Principal public buildings, cathedral, town-house, and the aqueduct for supplying the town with water. There is in the ancient ducal castle a foundation for the daughters of nobles and burghers. It has a gymnasium, a house of correction, &c., and some manufactures; but its salmon and lamprey fisheries, and its shipping, are the principal sources of its wealth. There are salt springs in the vicinity; but, owing to the want of coal and timber, they are of comparatively little use.

COLCHESTER, a parl. bor. and river port of England, co. Essex, div. Colchester, hund. Leyden, on the declivity of a hill rising from the Colne, which cuts off a small suburb; 60 m. N. E. by E. of London. Pop. of town and Liberties, 1821, 14,011; in 1831, 16,167. It is well built, has several good streets, is paved, lighted with gas, and adequately supplied with water. Great improvements in the interior of the town have recently been effected, and are still going on; but the only important extension that has taken place within the last twenty years, is along the London-road, where many valuable detached residences have been built, and are now being erected. There are 3 bridges over the river. A part of the remains of the ancient castle, said to have been founded by Edward the Elder, is occasionally used as a prison. There are 8 parish churches: St. Peter's, built previously to the Conquest, has been modernised and enlarged; St. James's dates previously to Edward II., and is a handsome structure; St. Leonard's is also large and convenient; besides these, there are a French and a Dutch Protestant church, and 7 dissenting chapels. The remains of the church of St. Botolph's priory, founded in the early part of the 12th century, are said to afford some of the finest specimens of Norman architecture in the kingdom.

Colchester has a free grammar school, founded in the 26th of Elizabeth, with one scholarship in St. John's college, Cambridge, annexed to it; 2 others, in the same college, revert to this school on failure of applicants of the

surname of Gilbert (that of founder) or Torbington; and 4 founded in Pembroke college, Cambridge, on failure of any boys being sent from the Ipswich grammar school; the present revenue is 1177. a year; it educates from 30 to 40 scholars; 3 charity schools, founded in 1708, have been joined to the national school, in which about 400 boys are educated, of whom 148 are clothed by the charity; a Lancastrian school, and an endowed school founded in 1816, for children of Quakers, with a library attached to it. The principal charitable institutions are, an hospital, founded by James I.; several almshouses; and the Essex and Colchester Hospital, built in 1820. A commodious theatre was erected in 1812; and there are literary and philosophical, medical, botanical, and musical societies, all in a flourishing state. Market-days, Wednesdays and Saturdays; the latter a large corn market; but general provisions are on sale daily in the large and commodious market-place. There are large annual cattle fairs on the 5th and 6th of July, 23d and 24th of the same month, and 20th Oct. and 8 following days.

Colchester is a bonding port, but the foreign imports are comparatively insignificant; they consist chiefly of wine, oil-cake from Holland, and timber from the Baltic. The trade coastwise is more extensive, the imports being chiefly colonial produce, and home manufactures, from London; with coals, &c. from the northern counties: the exports, corn and malt. The river is navigable for vessels of 180 tons to "The Hythe," a little below the town, where there is a custom-house and commodious quay, large warehouses, and bonding, coal, and timber yards; larger vessels (chiefly colliers) discharge at Wivenhoe, still lower down, into lighters. There are between 60 and 60 vessels, of various sizes, belonging to the port; but besides these, a considerable number sail from the port that belong to the various smaller places lower down the Colne, which makes the shipping of Colchester appear greater than it really is. The oyster fishery of the river has been long celebrated, and was granted to the burgesses by Richard I.; it employs a considerable number of families, and numerous small craft between the port and London. There is a large distillery at Hythe, ranking the fourth in the kingdom; a silk manufactory in the town, established a few years since, employs between 300 and 400 hands, chiefly females. The weaving of baize (introduced by the Flemings in the reign of Elizabeth) used formerly to be carried on to some extent, but has wholly ceased. At present, the prosperity of the town mainly depends on its retail trade, by which an extensive agricultural district is supplied. During the last war a large military establishment was stationed here, the withdrawal of which caused some deterioration, but at present it is thriving. Under the Municipal Act its boundaries are contracted to an area of about 2,000 acres immediately round the town; and it is divided into 2 wards, and governed by a mayor, 6 aldermen, and 18 councillors.

Colchester has (with some interruptions) returned 2 mem. to the H. of C. from the 23d of Edward I. Previously to the Reform Act the right of election was vested in the free burgesses not receiving alms. The parl. bor. (co-extensive with the ancient liberties) extends over a space of 11,770 acres, divided by the Colne into two nearly equal parts. Number of houses worth 10l. and upwards, in 1831, 1,300; registered electors, 1837-38, 1,176. The different parishes form a poor union, the average expenditure of which is 10,155l.; ann. val. of real prop. in 1815, 42,137l.

Colchester has claims to high antiquity, and is supposed by some to have been the *Camulodunum* of the Roman period, though this has been disputed; there is, however, no place in the kingdom where more numerous Roman remains have been discovered. It had many monastic institutions previously to the Reformation; of these, St. John's Abbey, of which the noble gateway is the sole relic, was the chief.

Colchester was made the seat of a suffragan bishop in the 26th Henry VIII. There were 2 consecrations only, the first in 1536, the other in 1592; on the death of the last diocesan, in 1607, no successor was nominated. In 1648 the town was held by insurrectionary royalists, and endured a siege, by Fairfax, of 11 weeks, when it was starved into surrender, and the leaders hung; half the fine subsequently levied appears to have been paid by Dutch refugees, who had escaped from the Duke of Alva's persecution. It gives the title of baron to the Abbot family. (*Hist. and Descrip. of Colchester*, 2 vols. 8vo. Colchester; *Wright's Hist. Essex*, i. 1; *A True Relation of Siege of Colchester*, 8vo. 1799; *Rep. of Municipal and Boundary Commissioners*.)

COLDSTREAM, one of the border towns of Scotland, co. Berwick, on the Tweed, 14 m. S.W. Berwick-upon-Tweed. Pop. 2,020. Formerly the communication between England and Scotland was here effected by a ford, by which Edward I. entered the island with a powerful army in 1296; and it continued to be the chief passage for the Scottish and English armies till the union of the crown in 1603. It was by this ford, also, that the Covenanters

entered England in 1640. A bridge of five arches now spans the river, forming one of the greatest thoroughfares between the two kingdoms. It is irregularly built, and quite Scotch in its appearance, and in every other respect, though in the immediate vicinity of England. There are no fewer than 33 inns in the town! It has a weekly corn-market, and a monthly sheep and cattle market, both of considerable importance. A considerable number of the inhab. are supposed to depend principally on the smuggling of Scotch whisky into England; the difference of duty in favour of Scotland being 2s. 8d. per gallon. Poaching, both of game and salmon in the river, is very common. The Tweed fishery at Coldstream lets for 100*l.* a year. There is a par. church and 2 Presbyterian dissenting chapels, 3 subscription libraries, and four friendly societies. The means of education are good. General Monck resided at Coldstream in 1659-60, previously to his going to England and effecting the Restoration. During his stay here, he raised a horse regiment, to which he gave the name of the "Coldstream Guards," which name the regiment still retains. This town enjoys a share of that matrimonial trade for which Great Britain is famous.

COLERAINE, a marit. town and par. bor. of Ireland, prov. Ulster, co. Londonderry, on the Lower Bann, 4 m. from its mouth, and 47 m. N.N.W. Belfast. Pop., 1821, 4,681; in 1831, 5,752. Pop. of par. in 1834, 6,143, of whom 1,441 were of the estab. church, 3,825 Prot. diss., and 877 Rom. Cath. It was built and fortified by the Irish Society of London, to whom the district was granted by James I., in 1613. The town consists of a square, called the Diamond, a main street, and several others, in which are many well-built houses. A wooden bridge, constructed in 1716, and renovated in 1743, connects it with the suburb of Killymore or Waterside, on the W. bank of the Bann. The par. church is a large plain building. The Rom. Cath. chapel, an elegant structure, is in Killymore. The other places of worship are, two for Presbyterians, and one each for Methodists, Independents, and Seceders. "The town is improving and increasing; house rent is not high, but very steady. Vessels of 200 tons may come up close to the bridge, and discharge their cargoes at the quay. Trade is considerably improved, owing, it is said, to the improvement of the harbour at Port Rush. (*See below.*) The manufactures in the town and immediate neighbourhood are trifling; a few paper-mills and some small tanneries. The tenures of houses are leases of lives, renewable for ever, paying a septennial fine of one year's rent, but nothing at the fall of a life, and leases of 61 years. Originally there were walls surrounding the town, but these are obliterated." (*Boundary Report.*)

It has an endowed school built by the Irish Society; a town-hall, in which the municipal business is transacted; and apartments are provided for a library, a news-room, and savings' bank, with a dispensary, loan fund, and a mendicity association. The corporation, under a charter of James I., in 1613, consists of a mayor, 12 aldermen, 24 burgesses, and an unlimited number of freemen. Its jurisdiction extends over the town and the liberties of which were fixed by the charter at 3 m. in every direction from the centre of the town. The corporation returned 2 mems. to the Irish H. of C. until the Union, since which it has sent 1 mem. to the Imperial H. of C.

The Boundary Act has prescribed a new limit for the par. bor., including the town land called Coleraine, and suburbs on the E. side of the river, and about an equal space on the W. side. Registered electors (1838-39,) 219. The corporation holds a court of record for pleas to any amount. General sessions for the co. are held in April and Oct.; petty sessions on alternate Thursdays.

Duty was paid, in 1836, on 5,312 bushels of malt, and 26,167 gallons of whisky. There are numerous bleaching-grounds in the neighbourhood. The salmon and eel fisheries on the Bann, in the vicinity of the town, are very valuable. The former is let at 750*l.* a year, and its produce, which amounted, in 1836, to 75 tons, is sent, packed in ice, to Liverpool. The eel-fishery lets for about 1,200*l.* a year. The principal trade is in the export of corn and meal, provisions, including pork, linsens of a fine kind, called "Coleraines," &c. The total value of the exports, in 1836, was estimated at 104,685*l.* The gross customs' revenue, in 1837, amounted to 5,785*l.* The post-office revenue, in 1830, was 1,263*l.*, and in 1836, 1,451*l.* Branches of the Provincial, Belfast, Northern, and Agricultural Banks, were opened in 1827, 1834, and 1836. The trade of the town was much impeded by the bar at the mouth of the river, which had but 9 ft. water over it at springs, and 5 at neaps; but this defect has been, in a great degree, obviated by the formation of a harbour, already alluded to, at Port Rush, 4 m. N.E. from the mouth of the Bann, in which vessels drawing 17 ft. water may anchor, being sheltered by a projecting rock from the swell of the ocean. The outlay on this harbour has amounted, in all, to about 12,000*l.*; and it now affords great facilities to the trade of Coleraine, and of the district. (*See Boundary Report, Railway Report, &c.*)

COLESHILL, a town and par. of England, co. War-

wick, Birmingham div., hund. Hemmingham. Area of par., 6,200 acres. Pop. (1831) 1,863. The town derives its name from its being situated on a hill, near the Cole, 7 m. E. Birmingham. It has a handsome Gothic church with a lofty spire, several good houses, and a school supported out of lands purchased by the inhab. after the dissolution of the monasteries.

COLLUMPTON, a town and par. of England, co. Devon, hund. Hayridge, 12 m. N.E. Exeter. Area of par., 730 acres. Pop., 1831, 3,410; 1831, 2,813. The town is situated in an extensive vale beside the Culm, a tributary of the Exe, and consists of one large street, along the road from Exeter to Bath, and of several smaller streets diverging from it on either side; many of the houses are ancient, and some of them favourable specimens of their day. The church, originally collegiate, is a spacious structure, in the later pointed style, with a lofty and highly ornamented tower, and a beautiful chapel attached. There are 7 dissenting chapels; a national school, in which about 200 boys and girls are educated; with other schools, and several extensive charities. Market, Saturdays; fairs, first Wednesdays in May and Nov. for cattle and cloth. There is a woollen mill; and the manufacture of narrow woven cloths and serges employs a considerable portion of the pop., though the business be much declined. There is also, in the immediate vicinity, a paper-mill, 2 large flour-mills, and 4 tan-yards. A monthly session for the district is held in the town.

COLMAR (an. *Columbaria*, or *Colmaria*), a city of France, dép. Haute Rhin, of which it is the cap., in a fertile plain, on the banks of two tributaries of the Ill, 36 m. N.N.E. Strasbourg, and 234 m. E.S.E. Paris; lat. 48° 41' 44" N., long. 7° 22' 20" E. Pop. (ex. com.) 13,867. It was fortified previously to 1673, when Louis XIV. destroyed its defences, and united it to the dominions of the French crown; it is now surrounded only by *boulevards*, planted with trees and serving for public walks. It is tolerably well built, but contains few public edifices deserving of notice. The principal are the cathedral, built in 1363, the theatre, and prison. The other public buildings and establishments are, the hall of justice, city-hall, prefecture, college, with a public library containing (Hugo) 60,000 vols. and several paintings by Albert Durer and others; the deaf and dumb asylum, civil and military hospitals, church of the Dominican convent, now a court-hall, Protestant church, and museum, containing, amongst other curiosities, a remarkable aéroplane, which descended near Ensisheim in 1492, and originally weighed 260 French pounds.

Colmar is environed by pleasant walks, gardens, and country houses; and possesses an orangery and departmental nursery grounds. It is the seat of a royal court, and of tribunals of primary jurisdiction and commerce. It has numerous manufactures of cotton stuffs and printed goods, a large cotton and silk ribbon factory, besides others of cutlery, paper, brushes, combs, leather, &c.; and an extensive trade in iron, spices, drugs, and wine, with its manufactures good. It exports largely to Switzerland. The *Columbaria* of the Romans is believed to have replaced the more ancient *Argentaria*. This town was several times destroyed by the barbarians, and in after times suffered greatly during the wars between the houses of Hapsburg and Nassau. The Swedes took it in 1632. (Hugo, *Haute-Rhin*, &c.; *Dict. du Commerce.*)

COLMENAR DE OREJA, a town of Spain, prov. Toledo, 18 m. E.N.E. Aranjuez. Pop. 6,400. It contains a fine church, two convents and two hospitals; and is finely situated in a plain productive of wine, oil, and fruit. It has manufactures of woollens, pottery, and Spanish rush; and mill-stones, and fine white stone for building, are found in the vicinity.

COLNE, a market town and chapelry of England, co. Lancaster, hund. Blackburn, par. Whalley, on the Colne, an affluent of the Calder, 26 m. N. Manchester, 15 m. N.E. Blackburn, and 9 m. E. Clitheroe. Area of chapelry, 8,050 acres. Pop. (1821) 7,274; (1831) 8,090. This is a place of great antiquity; but antiquaries are undecided whether it be the *Colonia* of the Romans, or the *Colne* of the Saxons. Many Roman coins have been found here; and Cassin, Cliffe, about 1 m. distant, retains evident traces of a military station, having a regular quadrangular rampart, surrounded by a fosse. The town is situated on an eminence, on a tongue of land formed by the river and the Leeds and Liverpool canal, which passes through a tunnel about 1 m. from the place, and is surrounded by the fine grazing distr. of Craven. It is a brisk second-rate town, and has of late years been greatly improved. It is well supplied with water by pipes from Flass spring, 3 m. E. The parochial chapel of St. Bartholomew, supposed to be coeval with the reign of Hen. I., but repaired in that of Hen. VIII., and more recently the spire, is equivocally said to be a "spacious and decent building." The Methodists, Baptists, Independents, and Inghamites, have places of worship. A gallery in the first named

of these gave way in 1777, from the pressure of the crowd assembled to hear John Wesley, the founder of the society, preach on its opening; but though many were injured by the accident, no lives were lost. A free grammar-school, rebuilt in 1812 by subscription, on the site of one more ancient, educates 6 boys: Archbishop Tillotson was a pupil in it. The co. magistrates hold sessions here, and a constable for the gov. of the place is chosen annually by the rate-payers. The lord of the manor holds a court baron, and courts leet or halmote are held in May and Oct. This is one of the most ancient seats of the woollen manufacture: a fulling-mill existed in 1311, and about the same period a coal-mine was worked in the vicinity. In addition to the woollen fabrics, shalloons, calamancoes, and tammies were made in considerable quantities; and a piece-hall, on the principle of those at Bradford and Halifax, was erected in 1775. It is a substantial stone building, containing 2 rooms, each 162 ft. by 42 ft. The upper room has been used for nearly 40 years for the sale of woollens during the fairs, and, owing to the decline of the worsted trade, the whole building is now thrown open for the sale of general merchandise on the same occasions. The cotton trade having been introduced towards the close of last century, has nearly superseded the woollen trade, and the pop. is now principally employed in manufacturing cotton goods for the Manchester market. The spinning power is chiefly water supplied in abundance from the streams, steam-engines being used to obviate their occasional failure. The first power-loom was introduced into the distr. in 1832. In 1835 there were 11 steam-engines in the distr., 7 for spinning cotton, 1 for power-loom, and 3 for collieries. The canal already noticed affords a ready mode of conveyance for the coal, slate, lime, and stone raised here. Markets on Wednesday: fairs, March 7, May 13, and 15, Oct. 11, Dec. 21; also a fair on the last Wednesday of the month for cattle and cloth. (*Dance's Lancashire, &c.*)

COLOGNE, or **COLN**, an ancient and celebrated city of Prussia, formerly the cap. of the electorate of the same name, and now of the Rhine prov., and of a reg. and circ. of the same, on the left bank of the Rhine; lat. 50° 55' 21" N., long. 6° 55' 15" E. Pop. (1837) 66,179, having increased about a third in the course of the present century. It is connected by a bridge of boats with the town of Deutz, on the opposite side of the river; is built in the form of a crescent, close to the water; and is strongly fortified. The walls have a number of towers à la *Montaubert*, and form a circuit of nearly 7 m.; but a part of the included space is laid out in promenades, gardens, &c. But though finely situated on the banks of a noble river on a slightly elevated ground, Cologne has many wood houses, and is proverbially ill-built and filthy. The best of its streets are inferior to Tooley Street, in London, or to the Cowgate, of Edinburgh. Great antiquity, no improvement, and confinement within walls, have made it what it is. "Stagnating pools, sufficient to produce a direful pestilence, lie unheeded in every thoroughfare beneath the strong glare of the summer sun. The quay, instead of being disposed for wharfs and warehouses, is a strip of road outside the lofty walls, and destitute of any accommodation for traffic; the whole physical condition of the place is, in short, disgraceful." (*Chambers's Holland, &c.* p. 49.) We are surprised that the Prussian government does not interfere to introduce a better state of things; a little vigorous exertion on its part would serve to clean this Augean stable. But notwithstanding its filth, Cologne has in it much to interest the traveller. The cathedral or minster of St. Peter, a vast and imposing but incomplete Gothic edifice, was begun about the year 1248. It is about 460 ft. in length, and the choir rises to the height of 180 ft.; it is now being repaired and renovated at the expense of the king of Prussia. The church of St. Mary is remarkable for its antiquity, and that of St. Peter for the famous altarpiece painted by Rubens. Several of the other churches are also interesting, particularly that of St. Geron. The town-house is a fine old building. The hall for the courts of justice was erected in 1824. In the arsenal are preserved many curious specimens of ancient armour. Cologne is the seat of an archbishopric, of the provincial authorities, and of the courts of appeal for the province. Its university, established in 1388, was suppressed during the occupation of the country by the French. But at present the city has two gymnasia, or colleges—one for Catholics, to which is attached a very valuable library, and one for Protestants; there is besides an archiepiscopal seminary for the education of clergymen, a normal school, a commercial school, &c.; a public library, with numerous literary institutions, a theatre, &c. Manufactures important; they consist principally of cotton yarn and stuffs, woollen stockings, bonnets, &c.; silks, velvets, tobacco, soap, hats, lace, threads, clocks, &c. There are tan-works and several distilleries, the most esteemed product of the latter being the well known *eau de Cologne*. This city has a

very good port on the Rhine, and is the principal entrepôt of the extensive and increasing commerce between the Netherlands and the countries included within the German customs' union. Rubens was born in Cologne in 1577, and several of its churches are ornamented with some of his *chef-d'œuvres*.

Cologne was anciently called *Oppidum Ubiorum*, from its being the chief town of the Ubi, a German tribe. A Roman colony was planted in it by Agrippina, the daughter of Germanicus, who was born in it; hence it obtained the name of *Agrippina Colonia*, and latterly of *Colonia* and *Cologne*. (*Tacit. Annal. lib. xii. § 27; Cellarii Notit. Orbis Antiqui, l. p. 337.*) In the middle ages, Cologne was much more populous and wealthy than at present. It was for a lengthened period one of the most important cities belonging to the Hanseatic league. It suffered much at different periods from the intolerance of its magistrates, by whom all Protestants were expelled from the city in 1618.

COLOMBIA, a vast country of S. America, of which it occupies the N. part, between lat. 12° 25' N. and 6° S., and long. 60° and 83° W.; having N. the Caribbean Sea, E. British Guiana and Brazil, S. Brazil and Peru, and W. the Pacific Ocean and the repub. of central America; length, E. to W., 1,320 m.; breadth, N. to S., 1,040 m.; area 1,155,000 sq. m. Pop. (1834) 3,187,000. Since 1831, Colombia has been divided into the three independent republics of Ecuador or Æquator, New Granada, and Venezuela; the first occupying the S., the second the central and N.W., and the last the E. parts of the country. We are possessed of little authentic information respecting their statistics; but, according to the best information, they are at present (1839) divided as follows:—

	Sq. m.	Pop. (1827.)	Chief Towns.	Pop.
NEW GRANADA.	580,000			
1. Isthmus of Panama }	-	80,000	Panama	12,000
2. Musaca or Bogota }	-	337,000	Carthagena	14,000
3. Urandinamarca }	-	530,000	Bogota	40,000
4. Cauca }	-	170,000	Pompa	25,000
5. Boyaca }	-	440,000	Tunja	-
		1,357,000		
But, according to the official statement, the pop. in 1831 was -		1,687,100		
VENEZUELA.	450,000			
1. Venezuela }	-	370,000	Caracas	25,000
2. Cumana or Maracaibo }	-	125,000	Cumana	12,000
3. Orinoco }	-	180,000	Varinas	5,000
4. Zulia }	-	154,000	Maracaibo	20,000
		829,000		
But estimated in 1831 at -		900,000		
ECUADOR.	325,000			
1. Quito }	-	609,000	Quito	70,000
2. Guayaquil }	-	-	Guayaquil	20,000
3. Asuay }	-	-	Cuenca	20,000
Total pop. in 1827 -		2,786,000		
" " in 1834 -		3,187,000		

Bogota is the capital of New Granada, Caracas of Venezuela, and Quito of Ecuador. (*Encyc. Americana; American Almanac, 1839; Weimar Almanac.*)

Colombia is naturally divided into 3 distinct zones, or tracts of country. The first comprises the country between the Pacific Ocean and the Caribbean Sea and the Andes; the second, the mountainous region; the third, the immense savannahs which stretch S. and E. from the Andes to the neighbourhood of the river Amazon, and the mountains which border on the Orinoco. Colombia has as much as 2,000 m. of coast on the Caribbean Sea and the Atlantic, and 1,200 m. on the Pacific. The former is a great deal more indented with bays and inlets than the latter; the principal are the gulphs of Paria, Maracaybo, and Darien, on the Caribbean Sea; with Panama, Choco, and the Gulph of Guayaquil, on the Pacific. Several islands belonging to Colombia surround its coast; as those of Margarita, Tortuga, &c. (Venezuela); 1. Rey, Quito, &c. (N. Granada); and Puna (Ecuador). (*Hall's Colombia, &c.* pp. 26—38; *Mod. Trav. xxvii. 7. &c.*)

MOUNTAINS.—The great Cordillera of the Andes enters the prov. of Loxa from the S., between lat. 4° and 6° S.; in 2° 28' S., where it is nearly 15,000 ft. in height, it divides into two parallel ridges, in the elevated valley between which, 9,000 ft. above the level of the sea, Quito and other towns are situated. E. of this valley rise the summits of Copaurco, 16,380, Tunguragua, 16,740, Cotopaxi, 17,950, and Gumbaybo, 18,180 ft.; and on its W. side, those of Chimborazo, 20,100, Henlas, 16,302, and Pichincha, 15,380 ft. high; all covered with perpetual snows, from amidst which torrents of flame and lava have frequently burst, and desolated the surrounding

country. These two ranges afterwards unite; but near 10° N., again separate, enclosing the lofty valley of Pasto, bounded by the still active volcanoes of Aususal, Gumbel, &c., and the extinct one of Chiles. Beyond Pasto, the Cordillera consist of three ranges, the most W., the elevation of which is generally less than 5,000 ft., follows the coast of the Pacific, and terminates in the Isthmus of Panama; the central range is interposed between the valleys of the Cauca and Magdalena rivers, and terminates near Mompos, between lat. 9° and 10° N.; and the third, being the most E. and highest range, extends to the extremity of the Parían promontory, in long. 60° E. This last-named range divides the waters which flow into the Orinoco on its E., from the Magdalena, Zulia, Tocuyo, &c., and their affluents, on its W. side. Many of its summits reach above the limit of perpetual snow; and it has numerous lower summits, called *paramos*, which rise to 10,000 or 12,000 ft. above the level of the sea, and are constantly enveloped in damp and thick fogs. The city of Bogotá, 8,100 ft. above the sea, is built on a table-land formed by this mountain range, as are the towns of Nirgua, San Felipe el Fuerte, Barquemeto, and Tocuyo; but these are at a much lower elevation than Bogotá, the mountains decreasing in height very considerably N. of Merida. The mean elevation of the Andes in Colombia is about 11,100 ft.; their altitude is greatest near the equator. In Venezuela, between the parallels of 8° and 10° S. lat., there is another mountain system, unconnected with the Andean from which it is separated by the Orinoco, and the plains of Caraccas, Varinas, and those in the E. parts of New Granada. This system has been called the Cordillera, or Sierra of Paríma. It is less a chain than a collection of granitic mountains, separated by small plains, and not uniformly disposed in lines; its mean height is not above 3,500 ft., although some summits rise to upwards of 8,000 ft. above the level of the sea. (*Humboldt's Personal Narr. and Researches; Hall's Colombia*, pp. 2-6; *Mod. Trav.* vol. xxvii.)

Plains.—Colombia includes the most northerly of the three great basins of the S. American continent, the *Llanos* of Varinas and Caraccas; which, like the *Pampas* of Buenos Ayres, consists of savannahs or steppes devoid of large trees. These, in the rainy season, appear from the high lands as a boundless extent of verdure, but in time of drought they are a complete desert. Humboldt remarks, that "there is something awful, but sad and gloomy, in the uniform aspect of these steppes." "I know not," he says, "whether the first sight of the *Llanos* excites less astonishment than that of the Andes. The plains of the W. and N. of Europe present but a feeble image of these. All around us the plains seemed to ascend towards the sky; and that vast and profound solitude appeared like an ocean covered with sea-weeds." The chief characteristic of these steppes, like those of N. Asia, is the absolute want of hills and inequalities. An uninterrupted flat of 180 leagues extends from the mouths of the Orinoco to Arauc and Ospino; and from San Carlos to the savannahs of the Caguetá for 200 leagues. This resemblance to the surface of the sea strikes the imagination most powerfully where the plains are altogether destitute of palm-trees, and where the mountains of the shore and of the Orinoco are so distant that they cannot be seen. Occasionally, however, fractured strata of sandstone, or compact limestone, stand 4 or 5 ft. higher than the plain, and extend for 3 or 4 leagues along it; and convex eminences, of a very trifling height, separate the streams which flow to the coast from those that join the Orinoco. The phenomena of the *mirage*, and the apparitions of large lakes, with an undulating surface, may frequently be observed. These savannahs are watered by the numerous streams which form the Meta, the Apure, and finally the Orinoco; and the periodical overflows of which convert the whole country, during four months of the year, into an inland sea. The equally well-watered plains of Ecuador are intersected by numerous large streams of the Amazon, and form the basis of the great central basin of the continent. (*Humboldt's Pers. Narr.*, &c.; *Hall*, p. 8; *Mod. Trav.*, pp. 19-21, 22-23.)

Rivers.—The chief are the Amazon, which, in the earlier part of its course, runs almost entirely through Ecuador, near its S. border; and the Orinoco, which, together with all its branches, is wholly included within the territories of Venezuela and New Granada. Besides these, there are the Magdalena, Cauca, Atrato, Zulia, Tocuyo, and Guarapiche, whose waters go to the Caribbean Sea; the Patía, Mira, Esmeralda, and Guayaquil rivers falling into the Pacific; the Yapurá, Putumayo, Napo, Pigüema, Pastaga, Marañon, Santiago, Huallaga, &c., affluents of the Amazon; the Guaviare, Meta, Arauca, Apure, with its numerous branches, Venturi, Caura, Carony, &c., which discharge themselves into the Orinoco; and the Cayul, which passes into the territory of British Guiana.

Lakes.—The most considerable is that of Maracaybo, which is rather a kind of inland fresh water sea, and communicates with the gulph of the same name by a

channel about 2 leagues broad and 8 long. (*See MARACAYBO*.) The Lake of Valencia, which is the next in importance, is larger than that of Neuchâtel in Switzerland; there are others, both in the plains and in the mountainous regions; the most celebrated of them is that of Guatavita, not far from Bogotá, into which it is affirmed, large sums were thrown by the natives during the period of the Spanish conquest. Some extensive salt marshes are to be met with in different parts of the N.W. coast. (*Mod. Trav.*, vol. xxvii.; *Account of Colombia*, pp. 19-25.)

Minerals.—The Cordillera teem with metallic wealth; and though imperfectly explored, have already produced large quantities of gold, silver, platinum, mercury, copper, lead, and iron: the gold is mostly obtained by washing the auriferous soil, and comes chiefly from the prov. of Chocó, Antioquia, and Popayan; silver is found in the prov. of Pamplona, and the valley of the Cauca; platinum, on the coast of the Pacific; mercury and cinabar, in several parts, as well as lead; and iron and pit-coal in abundance near Bogotá: copper, in great plenty, is found, especially at Aroa, in New Granada. There are mines of rock salt in the mountains N.E. of Bogotá, and caves producing nitre near the lake Guavita. Hot sulphureous springs abound in several parts; those of Las Trincheras, about 10 m. from Valencia, are believed to be the hottest hitherto discovered, excepting those of Ujilino in Japan. Colombia abounds in stupendous natural wonders; amongst the rest are the natural bridges of Icononzo, not far from Bogotá; the fall of Tequidama, the loftiest cataract, and the *Silla de Caraccas*, the loftiest cliff yet discovered; the cavern of Caripé or Guacharo, &c. (*Humboldt's Pers. Narr. and Researches; Delabache's Geol. Manual*, pp. 410, 411; *Present State of Colombia*, pp. 297-314.)

The climate of the country between the Cordillera and the Caribbean Sea is extremely hot, and generally unhealthy. In the valley of the Orinoco the heat is also intense; but this tract is not so insubtrous as the sea coast, and is often refreshed by strong breezes. The mildest region possesses every gradation of temperature, according to elevation: when at the level of the sea, the thermometer has been found to stand at 115° Fah.; at the height of 4,800 ft., it has descended to 77°; at 8,000 ft. to 50°; at 9,000 ft. high, it becomes extremely cold; and at 15,700 ft., all vegetation ceases. At Caraccas, most rain falls in April, May, and June: Dec., Jan., Feb., are the months of greatest drought. Violent storms, accompanied with thunder and lightning, are frequent at Maracaybo. Earthquakes are very common; many took place at the end of the last century, and one in 1812 overthrew most of the principal towns on the N. coast, with great destruction of human life. Intermitent, putrid, and bilious fevers and dysenteries, are the most prevalent diseases on the coast; goltre is nearly universal in the mountainous regions. (*Hall's Colombia*, pp. 6-10; *Account of Colombia*, pp. 12-18; *Mod. Trav.* vol. xxvii.)

Vegetable Products.—The vast forests that line the shores of the rivers, and cover the mountains, abound with fine timber, which would yield a large revenue, if the means of transit to the coast were better. Mahogany, cedars, and an infinite number of woods of great beauty and durability, a very hard species of oak (*Quercus cerus*, Linn.), iron-wood, ebony of various kinds; Nicaragua, Brazil, and numerous other dye-woods; the cocoa and other palms; bananas, plantains, gigantic mimosa, &c., are found in profusion. Humboldt observes, "It might be said that the earth, overloaded with plants, does not allow them space enough to unfold themselves. The trunks of the trees are every where concealed under a thick carpet of verdure; and if we carefully transplanted the *Orchidea*, the *pipera*, and the *pothos*, which a single courbaril or American fig-tree nourishes, we should cover a vast extent of ground." Venezuela is, generally speaking, more fertile and richly wooded than New Granada. Mangroves and *Cacti* grow thick upon the banks of the famous Orinoco, date, and various other tropical fruits, are nearly every where plentiful and the *Picus giganteus* sometimes reaches the height of 100 feet. The coccol-nut, indigo, cotton, tobacco, yam and potato, are indigenous to Colombia, as are vanilla, castia-aleuia, cochineal, &c.: the prov. of Loza and Mariquetú are famous for their chechina bark; cusparia, sarzaparilla, sassafras, squilla, storax, and a multitude of other medicinal plants, gums, resins, and balsams, are natives of this country. Arborecent ferns of an enormous size are met with; and the earth in some parts is covered with graminaceous plants occasionally 30 ft. high. (*Humboldt's Pers. Narr. and Researches; Mod. Trav.* vol. xxvii.)

Animals.—Nature has been equally prodigal of animal as of vegetable life. Jaguars, tapirs, wild horses, hogs, deer in immense numbers, wild dogs, and monkeys of different kinds, are amongst the most common quadrupeds; as vultures, parrots, and paroquets, in flocks, macaws, scarlet cardinals, flamingoes, peli-ans, and an abundance of water-fowl, are plentiful among birds. Immense alligators inhabit the larger rivers, and

lanos, where, together with large serpents of various kinds, they lie buried in the mud during the dry season, and revive at the first appearance of the rains. The rivers and lakes are well stocked with fish; and the stagnant pools in the lanos abound with the gymnotus, or electrical eel. (For a description of this remarkable animal, see *Humboldt's Pers. Narr.* 348-377.; or *Mod. Trav.* xxvii. 233-237.) Scorpions, millipedes, scolopendras, termites, mosquitoes, and myriads of other insects abound: the pearl oyster inhabits several parts of the coast. (*Humboldt's Mod. Trav.* &c.)

The Races of People are said to have been distributed as follows in 1834:—

	N. Granada (Census).	Venezuela (official Statement).	Ecuador (Estimate).	Total.
Whites	1,058,000	200,000	157,000	1,415,000
Indians	376,000	307,000	395,000	976,000
Free coloured	168,700	435,000	42,000	645,700
Slaves	84,350	60,000	5,000	154,350
Total	1,687,100	900,000	600,000	3,187,100

The Carribs are the ruling Indian tribe; they are tall, of a reddish copper colour, with dark intelligent eyes, and a grave expression of features. They raise the flesh of their legs and thighs in long stripes, and shave most of the hair from their heads; but do not flatten the forehead, as is customary with the other tribes along the Orinoco. Since the revolution, all the Indian tribes have been declared free, and the rest of the population became free in 1840. (*American Almanac*, 1839; *Encyc. Americana*.)

Agriculture.—Cocoa, coffee, cotton, indigo, sugar, tobacco, hides, cattle, and Brazil-wood, are the principal articles of culture and commerce: the grain, and the nutritious roots known in the West Indies by the name of ground provisions, are produced only in sufficient quantities for home consumption. Maize is grown every where, and, when ripe, is pounded in wooden mortars into a coarse meal; there being no more perfect machinery for grinding it. Wheat is grown in the higher lands, especially in New Granada, where it succeeds as well as in England, and often yields 40 bushels an acre: two crops may be produced in a year. A substitute for bread is found in *cassava*, which is procured, by a process similar to that for making starch, from the yuca root: the plantain is to the mass of the natives what the potato has become to the poor of Ireland; the rice of Colombia is indifferent. Cocoa (properly the *cacao* nut) is principally grown in Venezuela, on the low rich soil of the coast, in *Varinas*, and near Guayaquil. It does not come into full bearing till after eight or nine years' growth; but after that, continues in produce from 20 to 30 years, bearing two crops a year, with little trouble or expense. Previously to the revolution, Venezuela yielded nearly 200,000 fanegas*, of 110 lbs each, the value of which was nearly 5,000,000 dollars: this quantity at that time was two thirds of all the cacao then made use of. The cultivation of cacao has however diminished; that of coffee having been in part substituted for it. Coffee has been introduced into almost all the temperate valleys of Venezuela, and the prov. of Santa Martha and Mariquita in New Granada; but its culture is conducted with less care than in the W. Indian islands. Its produce and the trade in it have, however, increased rapidly since the revolutionary war, and it now forms by far the greatest article of export. Cotton is grown in all parts of the country; but principally in the valleys of Aragua, and the provs. Cartagena and Maracaybo. The produce is said to be inferior in quality to that from the uplands of N. America; which is in great measure owing to the defective mode generally followed of cleaning and depriving it of the seed. In the prov. of Cartagena, the plant is grown upon newly cleared land, between successive crops of maize. Before the revolution, the quantity exported from Caracas amounted to between 2,000,000 or 3,000,000 lbs.; and the export from the coast of New Granada was still greater; at present, its growth for export is insignificant. Indigo is cultivated principally in the valleys of Aragua and the prov. *Varinas*, and formerly was exported in large quantities; but the competition in this article, which British skill and capital has produced in Hindostan, materially affects this branch of agriculture. The tobacco of Caracas is greatly superior to that of Virginia, yielding only to that of Cuba and the Rio Negro; in some places, as at Cumana, it is even superior to the latter. Under the Spanish regime, the culture and sale of tobacco were monopolised by the government. All individuals authorised to raise it were registered, and the entire produce was brought to the government depôts (*estancos*), and sold to its agents at a certain fixed price, who again sold it to the consumer at a large advance. The Colombian congress originally abolished this among other monopolies; but finding that they could not spare the revenue,

* A fanega of land is about $\frac{1}{2}$ acres English.

of which it was productive, it was again revived. The cultivation of the plant had, however, from some cause or other, so much declined, that the revenue derived from the monopoly ceased to be of any material importance; and a law passed the congress for its abolition, on the 1st of June, 1834. The works (*trapiches*) erected in different parts of the country for the fabrication of sugar were mostly destroyed during the revolutionary war, and very few of them have since been repaired. No sugar is now exported, and the half inspissated juice of the cane is only used for confectionery, or is eaten by the natives with their chocolate.

From what has been said, it will be evident that Colombia is a country of great natural riches, suffered to lie for the most part waste. Were its inhabitants of an active and industrious disposition, and its resources developed even in a moderate degree, it would be one of the richest and most important countries in the world. Previously to the arrival of Columbus, the horse and ox were unknown in the New World; but the llamas are now covered with herds of both. M. Depons, in the early part of the present century, estimated that there were, from the mouths of the Orinoco to the lake Maracaybo, 1,200,000 oxen, 180,000 horses, and 90,000 mules; an estimate which Humboldt thought too low. Sheep and goats are plentiful in the table-lands of Bogota, &c.; animal food is cheap and much consumed; and hides, wool, and cheese, form a principal portion of rural produce. Agriculture generally is in a very low state, and the government have been lately desirous to promote its improvement by encouraging foreign settlers, and disposing of the waste lands to them at a low rate, and exempting them for a period from taxes. Few people possess estates of 5,000*l.* a year; 5,000 dollars are reckoned a good income. Near Pamplona the grounds are surrounded with stone wall hedges, which give an air of proprietorship not often seen; and in the valley of Serinze (New Granada), a similar plan is adopted, and cultivation is in a tolerably advanced stage. Commonly, however, the natural indolence of the natives precludes this, and the Colombian who can eat beef and plantain, and smoke cigars as he swings in his hammock, is possessed of almost every thing his habits qualify him to enjoy, or which his ambition prompts him to attain—the poor have little less, the rich scarcely covet more. In the llanos the indolence of the inhabitants is such that, after having suffered for half the year from inundations, they patiently expose themselves during the other half to the most distressing want of water, though they know that almost every where they may obtain a good supply at 10 feet below the surface of the earth. The fertility of the soil and the warmth of the climate have, in fact, indisposed and unfitted the people for any vigorous exertion. (*Humboldt's Mod. Trav.*; *Hall's* &c.)

Pearl Fisheries.—Along the coast many of the inhabitants subsist as fishermen; bartering the fish they catch for maize and other inland produce. There are three pearl fisheries; two on the shores of the Atlantic, and one on those of the Pacific. The first are situated on the coast of the islands Margarita, Cubagua, and Coche, and at the mouth of the Rio Macha; in the 16th century they were much celebrated, and yielded pearls to the value of half a million dollars annually. The pearls of this coast are remarkable for their beautiful play of light, in which they are much superior to those of the East. The other fishery is at Panama: all of them are now much neglected, and do not yield more than 180,000 dollars a year. The Indians of Carico have a singular method of catching wild-fowl, which may here be noticed: they leave calabashes continually floating on the water, that the birds may be accustomed to the sight of them. "When they wish to catch any of these wild fowl, they go into the water with their heads covered each with a calabash, in which they make two holes for seeing through. When thus situated, and toward the birds, throwing a handful of maize on the water from time to time, the grains of which scatter on the surface. The birds approach to feed on the maize, and at that moment the swimmer seizes them by the feet, pulls them under water, and wrings their necks before they can make the least movement, or by their noise, spread an alarm among the flock. . . . Many have no other trade in the neighbourhood of large towns, and daily take multitudes of these birds, which they sell at a low rate." (*Humboldt's Pers. Narr.* H. 2*l.* 375; *Federal State of Colombia*, pp. 322, 323.; *Hall's Colombia*, pp. 28, 29.; *Mod. Trav.*, xxvii. 30, 54, 55, &c.)

Manufactures.—Such of these as are not merely domestic, are chiefly leather, hammocks, bales, blankets, coarse cloths of various kinds, hats, and salt; but none of them is of any importance. The principal salt works are at Araya and Santa Martha. The whole process is left to nature, and consists simply in the washing of the muriaticiferous soil by the rains, into shallow basins, where the salt is found incrustated, after evaporation, in a state of great purity. The common pottery is rude, and made by Indian women only. At Caripe, oil is manu-

factured by the Indians, from the fat of young guachero birds, and on the Magdalena, the negroes stuff their pillows with the wool obtained from the fruit of the mahagua (*bombax*). Such expedients often supply the place of better manufactures, all of which must be procured from abroad, and are comparatively scarce and dear. (*Mod. Trav.*, *Humboldt's Hall's Colombia*, &c.)

Trade.—The ports of La Guayra, Rio del Hacha, Santa Martha, Cartagena, Chagres, Puerto-Cabello, Panama, and Guayaquil, are those most frequented by foreign traders. The imports and exports of Venezuela, in which most of the foreign trade of Colombia is concentrated, were in 1833-34 as follows:—

Imports.		Exports.	
	Value.		Value.
	Dollars.		Do.
Cotton goods	1,063,527	Coffee	1,139,655
Linen ditto	616,270	Cacao	6,384,916
Woolen ditto	75,437	Indigo	431,602
Silk	96,918	Woods	17,677,858
Flour	140,770	Tobacco, cinchona bark,	
Pork	123,447	hides, &c.	816,837
Other imports	1,181,048		
Total	3,896,411	Total	3,894,483

Imports.		Exports.	
Countries.	Value.		Value.
	Dollars.		Dollars.
Great Britain	897,742-76		590,548-08
United States	785,051-33		1,115,490-38
France	61,969-21		205,750-21

Various	68,416-30		15,156-67
Total	3,896,411-31	Total	3,894,483-41

More than half this trade is centred in the port of La Guayra. The imports and exports of Puerto Bello (N. Granada) in the same year amounted to 1,445,734 dollars. The following official return of the exports of coffee and cacao from Venezuela during the four years ending with 1837-38, shows a progressive increase in the exports of those staples.

	Coffee.	Cocoa.
	Quintals.	Quintals.
Year ending 30th June, 1835	69,527	42,533
" " 1836	115,911	52,442
" " 1837	165,348	67,798
" " 1838	174,912	58,102

The port of Guayaquil, in Ecuador, has also an extensive trade in cacao, tobacco, salt, timber, &c. In 1837, the exports of cacao from this port amounted to 8,250,125 lbs.; and in 1838, to 7,196,075 lbs.

Roads, &c.—The want of internal communication is a considerable disadvantage; throughout the whole country there is not a road passable for wheel carriages; and every species of commodity is conveyed on mules. The ways generally are mere tracks, formed by the tread of successive travellers, and even in what were formerly termed royal roads, all that has been done is to cut down the trees. Bridges are few, and except those of Valencia and Capatzeno, consist of only a few rough planks, with branches, &c. laid across; or of ropes, upon which a suspended basket is made to run from one end to the other. In the more precipitous and dangerous passes, where mules can scarcely be used, it is customary for travellers to be carried in chairs fastened to the backs of men, who obtain a miserable livelihood by continually exposing themselves to risks, such as those which beset the chamois-hunter. (*See Andes*.)

Public Revenue and Expenditure.—The following has been given as an official account of the income of Venezuela for the five years ending the 30th June, 1839.

	1834-5.	1835-6.	1836-7.	1837-8.	1838-9.
	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.

* Raised to defray expense of suppressing instruction in 1835.

From this statement it is seen that, taking the average of the income for the four years from 1835 to 1838 inclusive, there has been an increase in the year 1839 over the average of the four preceding years of 89 per cent., and over the largest of these years of 16 per cent.

It will be observed that there is a nearly uniform annual increase in the produce of the export duties, arising necessarily from the increase in the products of the country.

The revenue and expenditure of New Granada in 1835 were:—revenue, 2,337,836 dollars; expenditure, 2,211,544 dollars; surplus, 126,292 dollars. The revenue and expenditure of Ecuador are supposed to be about 800,000 dollars a year each. The Colombian debt to England amounts to 6,550,000, for the payment of which the congress of New Granada has appropriated one eighth of the custom duties, as well as the surplus revenue, and national profits from tobacco and national lands.

Government is vested in each of the different republics, in a senate, and a house of representatives, both consisting of members elected by the cantonal deputies of the provinces, in a provisional assembly, held once in four years. In Colombia, previous to its partition, the right of suffrage in the election of deputies required the parochial voter to be a Colombian, above the age of 21, the owner of property worth 100 dollars, or exercising some trade or profession, and able to read and write (this last qualification to be peremptory after 1840). To be a cantonal elector, it was requisite to be a native of the canton, possessed of property worth 500, or an income of 300 dollars: to be a senator, it was necessary to have an income of 500 dollars, or to be of a learned profession. The executive power was vested in a president and vice-president, the former of whom could not continue in office longer than eight years successively; and neither he, nor any of the ministers, could be members of the congress. With some variations, this government has been adopted by the existing republics. The political government of each department is, by law, vested in the hands of an *intendente*, appointed by the president, with the sanction of the congress, with authority over the administration of justice, police, finance, and defence; but without the command of an armed military force. The provinces are under the administration of governors, with powers similar to those of the intendente; the cantons and parishes have each their own officers. (*Present State of Colombia*, pp. 116-125. &c.)

Justice.—The civil and criminal codes are an ill-digested collection of the laws of Castile and of the Indies, royal ordinances and other Spanish decrees, and colonial regulations; and their administration is very unfavourably spoken of. The judges were elected by the congress, from lists given by the president. Trial by jury, and the liberty of the press, were amongst the first enactments of the Colombian congress. (*Hall's Colombia*, pp. 23, 24.)

Religion the Roman Catholic, the ceremonies and festivals of which are celebrated with great splendour. The inquisition was abolished in 1821; but the clergy still possess considerable power, and though general toleration is afforded to persons of other creeds, they are not at liberty to perform their rites in public. The clergy are paid by the state: convents are still numerous, but diminishing; and dissent from Catholicism is spreading. Many Indians have embraced Christianity. (*Hall, &c. Accounts*.)

Armed Force.—The ranks of the different armies are filled with Indians and mixed races, in a tolerable state of discipline. In addition to these, there is a militia, consisting of the whole male population between 16 and 40 years of age. Considerable pains have been taken by the Colombians to raise a navy; but their maritime force is inconsiderable. A marine school was some years since established at Cartagena. (*Present State*, &c. 206-214.)

Public Education.—During the Spanish régime elementary education was sadly neglected, and all the more important branches of useful knowledge professed at the universities of the Caracas, Bogota, and Quito, were so taught as to be really worse than useless; and instead of expanding and enlightening the mind, served rather to imbue it with the grossest prejudices. South America has suffered much from this wretched system; the anarchy of which it has been so long the theatre being quite as much to be ascribed to the ignorance and prejudices of the people as to their want of acquaintance with the art of government. But some considerable progress has been made towards the establishment of a better order of things. Primary schools were ordered to be established in every parish, by the congress of 1821; Lancasterian schools exist in the principal towns, and the universities have been remodelled. The Colombian congress applied certain property formerly belonging to the clergy to the aid of public education; and the legislatures of the present republics have been anxious to carry into effect the system adopted by it. Several public journals are established in different parts of the country. (*Hall's Colombia*, pp. 52-56.)

Arts, Manners, Amusements, &c.—Architecture has made but little progress, and almost the only specimens worth notice are confined to Bogota. Painting is successfully cultivated in that city and Quito, and music in Caracas; but, generally speaking, the fine arts are in a very backward state. The besetting vice of the Colombians is indolence, which retards all their social progress: they are courteous, hospitable, and, when intimately known, friendly and cordial; temperate in their habits, and grave in their deportment; but suspicious, reserved, slow, and imbued with much national pride. The manners, dress, habits, and amusements of those of European descent resemble those of their Spanish ancestors. (*Humboldt, Hall, Murray, &c.*)

History.—Ecuador, and especially the valley of Quito, contains many monuments of the sway of the Incas; Venezuela was the first part of the new continent discovered by Columbus in 1498. The Spaniards found more difficulty in conquering this than any other part of their American territories; but before the middle of the 16th century, both Venezuela and New Granada had been erected into captaincies, governed by viceroys from Spain. In 1806, after the invasion of Spain by Napoleon, a spirit of insubordination broke out in these colonies; in 1811, their independence was declared; and in 1819, Venezuela and New Granada united into one republic, under the name of Colombia. In 1822, the royalists in Ecuador were defeated by Gen. Sucre; Bolívar headed the revolutionists elsewhere; and in 1823 the struggle ended with their complete independence. In 1829, Venezuela separated from the other states; rejoined them for a short period in 1830; but in Nov. 1831 separated anew: since which period Colombia has remained divided into the above three republics; though such is the state of insecurity in which all these governments exist, that, previously to the publication of this article, it may be again consolidated into one republic, or be divided into some half dozen. (*American Almanac*, 1839: *Mod. Trav.*, vol. xxvii. &c.)

COLUMB (ST. MAJOR), a town and par. of England, co. Cornwall, hund. Pyder. Area of par., 11,680 acres. Pop. of ditto (1831), 2,790. The town is situated on an eminence, at the foot of which is a small river, 4 m. from the sea, and 14 m. N.E. Truro. It had formerly a communication with the sea by means of a canal, now fallen into disuse. It has a large old church, and two Methodist chapels. The living is a rectory in private patronage, yielded, at an average of the three years ending with 1831, a free nett income of 1,267. Market-day, Thursday.

COLUMBIA, a distr. of the U. S. of America, lying between the states of Virginia and Maryland, on both sides the Potomac, about 120 m. from its mouth; length and breadth, 10 m. each; area, 100 sq. m. Pop. (1830) 29,834, of whom 6,119 were slaves. Surface gently undulating; soil naturally thin, sandy, and sterile. Climate healthy, mean temp. of the air about 55° Fahr. The Potomac traverses the distr. chiefly in a S.E. direction, receiving in its way through it a tributary from the E., by its junction with which a peninsula is formed, on which the city of Washington is built. At the confluence of the two rivers there is an excellent harbour and a navy-yard, to which ships of the largest tonnage may ascend. The yard covers a space of 27 acres, and in it are made all the anchors, cables, and blocks required for the service of the U. S. navy.

Washington is the cap. of the U. States, the seat of the general government, and the residence of the president and other principal officers of state. (*See WASHINGTON.*) The other chief towns are Georgetown and Alexandria; the former is separated from Washington by Rock Creek, another affluent of the Potomac. Alexandria is on the right bank of the river, 7 m. below Washington.

Considerable quantities of flour and other domestic produce are brought down the Potomac, but neither the commerce nor shipping of the distr. has increased so rapidly as might have been expected. In 1837-38 the total value of the domestic produce exported to foreign parts amounted to only 366,760 dollars, and the imports were not half as much. Alexandria and Georgetown have together about 19,000 tons shipping. There are three colleges in the distr., all in active operation:—the Columbia Institute at Washington; the R. Cath. university at Georgetown; and the theological seminary at Alexandria; connected with which is a medical department, and a preparatory school. This distr. is under the immediate government of congress. It was ceded to the U. States by Maryland and Virginia in 1790; and in 1801 it was enacted that the laws of these states should continue in force in the portions ceded by each. Congress first met here in 1800. (*Encyc. Americana*, p. 246: *Darby's View*, p. 494, 495, &c.)

COLUMBIA, a town of the U. S. of America, cap. S. Carolina, and seat of the state government, in an elevated plain near the centre of the state, near the Congaree river, 100 m. N.W. Charleston, and 68 m. N.E. Augusta. Pop. (1830) 3,810. The streets, which are

100 ft. wide, intersect each other mostly at right angles, and it has many good houses. It has a state-house, court-house, jail, and several places of worship. The S. Carolina college, founded in this town in 1804, has two large brick edifices, and possesses a philosophical apparatus, cabinet of minerals, and library of 10,000 vols. Students in 1839, 150. Here is also a theological seminary, founded in 1829. Columbia was founded in 1787. A steam-boat plies regularly between it and Charleston. (*American Almanac*, 1838-39; *American Encyclet.*)

COLUMBIA RIVER, a considerable river of N. America, and the principal in the Oregon territory, belonging to the U. States. Its total length is probably about 1,000 m. (*Darby*, &c.) It rises in the Rocky Mountains, about lat. 54° N. and long. 118° W. After flowing S. for upwards of 400 m., it unites with Clark's River from the E. It continues its course first W. and then S., mostly through a plain country, to its union with Lewis's River (its main affluent), about lat. 46°, at which point it becomes 960 yards wide. It now forms a noted bend, and breaks through a chain of mountains, after which its course is generally S.W. or W. to its mouth. About long. 120° are its great falls, where it descends to the rapid for 57 m. Its bed is composed of lava, and passes through another mountain chain; during which its width is contracted to 150 yds. About 180 m. from the sea, it meets the tide; beyond which it has a broad estuary to the Pacific. (*Flint's Geog.* p. 468.) Sixty m. below the great falls, it receives its last great tributary, the Multnomah, from the S.E.; and is afterwards called the Oregon River. It disembogues on the N.W. coast of America, in lat. 46° 24', between Capes Adams and Disappointment. Its entrance is infested with breakers, and as the sea breaks over its bar with great violence, entrance and egress are always difficult. The tide at its mouth rises 84 ft.; vessels of 300 tons may reach the Multnomah, and aloops go up nearly to the rapids. It abounds in the finest salmon, and in seals, the skins of which constitute a chief article of the trade with China from this river. (*Flint; Darby; American Encyclopedia.*)

COLUMBO, a sea-port town of Ceylon, the modern cap. of the island, and seat of government, on the W. coast, towards its S. extremity; lat. 6° 55' N., long. 79° 45' E. Pop. (1831) 31,549. Its walls, solidly built, are flanked with several bastions, is built upon peninsular projecting into the sea, having on the land side a fresh water lake of some size. It contains the residences of the governor and most of the British inhab. The *pettah*, or inner town, a few hundred yards E. from the fort, has a mixed pop. (4,900) of Dutch, Portuguese, and their descendants. The native Ceylonese reside chiefly in the suburbs. The town within the walls is regularly laid out, and built very much in the European style; houses, chiefly of stone, clay, and lime, and seldom more than a story in height, but each has a fine large verandah. The English have substituted Venetian blinds in their houses for the glass windows used by the Dutch. The fort contains the government house, a handsome building of 2 stories, the English church, court-house, library, museum, several hotels, and a lighthouse 97 ft. high. There are also in Columbo a Dutch and a Portuguese church, several Protestant dissenting chapels, missionary and other schools, &c. To the N. of the fort is a small semicircular bay, on which a wooden quay has been built, but the depth of water is not sufficient to admit of vessels above 100 tons burden coming alongside. The bay is sheltered and defended by a projecting rock, on which two batteries are erected; but from this rock a bar of shifting sand stretches across the mouth of the bay, within which the larger class of ships can venture only during the fine weather of the safe season. Besides its small bay, Columbo has an open roadstead, which, however, is safe only during the N.E. monsoon: were the town more favoured in this respect, it would be the most eligible port in the island, since it is placed in the centre of the cinnamon country, is the depot for nearly all the foreign trade of the island, and has a somewhat extensive traffic by means of internal navigation. Columbo is ill supplied with water. Its climate is healthy, though damp and destructive of books, clothing, &c. The Portuguese erected a fort here in the early part of the 16th century, of which the Dutch dispossessed them in 1696; and the town was taken from the latter by the English in 1796, which change of masters was afterwards ratified by the peace of Amlena. (*Harrison's E. I. Gaz.*; *Ceylon Almanac*.)

COMBOOGONUM, an ind. town of Hindostan, prov. Carnatic, dist. Tanjore, 20 m. N.E. that city. Pop. 40,000. It was anciently the cap. of the Cholas, one of the most ancient Hindoo dynasties in the S. of India of which any traces have been discovered, and who gave their name to the whole coast of Chola-madrali or Coromandel. Its ancient splendour is evinced by its pagodas, tanks, &c. It is chiefly inhab. by Brahmans. (*Malcom's Travels*, vol. II.; *Harrison's E. I. Gaz.*)

COMILLAH, an ind. town of Hindostan, prov. Bengal,

distr. Tipperah, of which it is the cap., on the S. bank of an affluent of the Brahmaputra river, 60 m. S.E. Dacca. The roads round it have been much improved by the labour of convicts. Six m. W. of Comillah are the remains of many brick buildings, and of a fort 200 ft. square, the residence of the former rajahs of Tipperah.

COMO (CITY OF) (an. *Comum*), a city of Austrian Italy, cap. dep. of same name, at the S.W. extremity of the Lake of Como, 23 m. N.N.W. Milan, lat. $45^{\circ}48'20''$ N., long. $9^{\circ}5'12''$ E. Pop. 15,600. It is encircled by an amphitheatre of hills, one of which to the S. is surmounted by the old fort of Baradello. The town is defended by double walls, flanked with massive towers, and has four gates. Its interior is crowded with dark, narrow, and filthy streets, numerous old and tawdry churches, dreary palaces of the Comasque nobility, and dismantled dwellings of the *citydanti*. The suburbs, however, in which more than half the pop. resides, contain many good streets and buildings; Borgo de Vico, the chief, stretches along the shore of the lake for a considerable distance, and is adorned with the Odescalchi and Iovian palaces, besides numerous other handsome edifices. Como has 12 churches, the principal of which, the cathedral, commenced in 1382 and finished in 1519, is imposing and, upon the whole, even a fine building, notwithstanding its incongruous character. "It is of white marble, the front is of light and not inelegant Gothic, the nave is supported by Gothic arches, the choir and transepts are adorned with composite pillars, and a dome rises over the centre." (*Eastace*). But though it be well situated with respect to the lake, Lady Morgan says "It is surrounded with a small square of low mouldering arcades, and paltry little shops; and every where the elegant Gothic is mingled with the grotesque forms of rude orders; and bas-reliefs of monsters and non-descripts disfigure a facade, where light Gothic pilasters are ornamented with golden crosses; while the fine pointed arch and clustered columns, contrast with staring saints and grinning griffins." In front of the cathedral is a statue of Pliny the younger, a native of Como, with a bas-relief alluding to his writings; and an inscription to his honour on each side the grand entrance. In one of the squares a monument is erected in honour of Volta, also a native of this city. Como possesses a lyceum erected by the French, with some fine philosophical apparatus, and a library of 15,000 vols., an ecclesiastical college, 3 gymnasia, 2 female seminaries, an hospital, workhouse, orphan asylum, and many other charitable institutions, a cabinet of nat. history, and botanic garden, a new theatre, and an amphitheatre. A handsome Casino or club-house has been built within these few years. Como is a bishopric, and the seat of the provincial council (*Provincial Congregation*), and of civil, criminal, and commercial tribunals. At one period it was the principal seat of the inquisition. It has manufactures of woollen cloths, silks, cotton-yarn, and soap, for which latter article it is celebrated. Its trade, which is facilitated by a port on the lake, is chiefly with the canton of Ticino, and with Germany, to which it sends rice, and raw and manufactured silks. The artisans of Como have, in all ages, been noted for their disposition to emigrate as hawkers of goods, or in search of employment, and they may be met with all over Europe, as vendors of telescopes, spectacles, barometers, &c. The fine climate and situation of Como attract many visitors. Como is said to have been founded by the Orobili, the earliest inhab. of this district. It was taken by the Romans 196 a.c.; and owed its principal importance under them to a colony of Greeks planted in it by Julius Caesar, when it took the name of *Novumcomum*. Near it is the Villa d'Este, once the property and residence of Queen Caroline of England. In the middle ages it belonged to the Ghibelline party, and was the rival of Milan. Under the French it was the cap. of the dép. of the Lario. (*Oesterr. Nat. Encycl.*; *Eastace*; *Cellarius*, *Not. Orbis Antiqui*, i. 680, &c.)

COMO (LAKE OF), (It. *Lago di Como*, an. *Larius Lacus*), a famous lake of N. Italy, which, in modern times, has derived its name from the above city. This fine sheet of water is very irregularly shaped, being divided by the triangular district which has Bellagio at its apex into three great arms, one of which stretches from Bellagio S.W. to Como, another N. to Riva and Novate, near the mouth of the Maria river, and a third S.E. to Lecco, and the outlet of the Adda. These divisions of the lake are sometimes called from the chief towns on their banks, the lakes of Como, Bellano, and Lecco. It greatest length, following its windings, may be about 45 m.; but it is no where above 4 m. in width. The depth is said to vary from 40 to 600 ft. It receives the waters of the Upper Adda, and several other rivers, but its only outlet is by the Lower Adda. Owing to the great height of the surrounding mountains, which expose it to sudden squalls, and the influence of currents, its navigation is rather dangerous to sailing vessels; but steamers traverse it in all directions with ease and expedition. The climate round the lake is mild and delightful; and, except in its more N. part, near the

mouth of the Upper Adda, its banks are remarkably healthy. Throughout its whole extent its banks are formed of precipitous mountains from 2,000 to 3,000 ft. high; in some places overhanging the water, and in others partially clothed with wood, and studded with hamlets, cottages, villas, chapels, and convents. "The most beautiful point of view in the whole extent, is undoubtedly at Bellagio. "The upper waters are there seen winding up to the very foot of the higher chain of the Alps, and terminating within a short distance of the terrific pass of the Splügen; the loftier hills that border the lake of Lecco rise on one side, and on the other the beautiful expanse of the lower lake rises behind the beautiful foreground, rocks, and hanging woods that form the point of Bellagio; with numbers of trading boats gliding under the broad reflection of the gigantic mountains, their white sails occasionally gleaming in the sunshine, and several little villages scattered along the shores." (*Sketches of Italy*, iv. 212.)

The younger Pliny had several seats on the border of this lake. The principal of these stood, one upon a height commanding a view of the lake, and the other so close to its edge as to admit of fishing lines being thrown into the water from the bed-room of the villa (ix. 7.). Many attempts, but very unsuccessful ones, have been made to identify the site of these villas. The *Villa Pliniana*, 5 m. N.E. from Como, is, from its having near it an intermittent fountain, usually supposed to occupy the site of one of these villas. But Pliny does not say that the intermittent fountain which he describes was on his estate, or near his seat (iv. s. 30.); and there is, in fact, no real ground for supposing that the *Villa Pliniana*, which was built near the middle of the 16th century, has anything in common with either of the villas described by Pliny. (See *Eastace*; *Matthew's Diary of an Invalid*, &c.)

COMORIN (CAPE), a promontory forming the S. extremity of Hindostan, in Travancore, 188 m. N.W. Colombo, in Ceylon; lat. $8^{\circ}4'N.$, long. $77^{\circ}44'30''E.$ Its approaches are beset with rocks. Notwithstanding its remarkable position, it never attracted the least attention from the Hindoo geographers; and what is more singular, modern authorities differ considerably as to its lat. The above is that given by Heywood.

COMORN (Hungar. *Komarom*), a royal free town of Hungary, in the N.W. part of that king., cap. co. of the same name, on a point of land formed by the confluence of the Waag with the Danube, 46 m. W.N.W. Buda, lat. $47^{\circ}45'34''N.$, long. $18^{\circ}7'50''E.$ Pop. about 17,500, exclusive of the garrison. The citadel, built by Mathias Corvinus, in the 15th century, has never been taken; and its works have been so much strengthened during the present century, that it is now one of the strongest fortresses in Europe. The town is irregularly built, and the streets are said to be narrow and dark. It contains 4 Catholic, and 2 Protestant churches, a Greek church, and a synagogue, a county hall, a mail house, many large public buildings, and barracks, a hospital, Cath. and Prot. high schools and an assurance-office for vessels navigating the Danube, which river is here crossed by both a flying bridge and a bridge of boats. Mr. Gleig says of Comorn, that it appeared to be in a far more flourishing condition than Pesth. "Its shops are good, the streets full of bustle, and the river, where it washes the walls, is by no means bare of shipping. We found, also, upon inquiry, that it contained 2 theatres, a casino, or club-house, and an excellent market-place." It has manufactures of woollen cloths, tanneries, &c. &c., and considerable trade in corn, wine, honey, fish, and timber, by the Danube. There are numerous vineyards in its neighbourhood. (*Oesterr. Nat. Encycl.*; *Gleig's Bohemia*, &c. iii. 234.)

COMPIEGNE, a town of France, dep. Oise, cap. arrond., on the Oise, which is here crossed by a handsome bridge of three arches, 33 m. E. by S. Beauvais. Pop. 8,895. The town is ill laid out and ill built, but it contains many public and private edifices worthy of notice: amongst the former may be specified the town-hall, a curious Gothic building, and several churches. But the glory of Compiègne is its royal palace, one of the most remarkable in France for extent and magnificence. A palace was originally built here by the Merovingian kings; but the present edifice was commenced under Louis XV., finished by his successor, and renovated by Napoleon. It has a noble front towards the Forest of Compiègne, 633 ft. in length; all the apartments are on a single floor, communicating with each other. The peristyles, *salle des gardes*, ball-room, theatre, and a superb gallery, are especially deserving of admiration. The gardens surrounding this palace are much more extensive than those of the Tuilleries, which they rival in beauty. Compiègne contains a public library with 28,000 vols., and a theatre. It was formerly fortified by walls flanked with towers, and entered by seven gates. Charles the Bald established an abbey here, and gave the town the name of *Carlopolis*, after which it rose considerably in importance, and became the seat of many national

councils and assemblies, as well as the burial-place of several of the French kings. But in proportion as the consequence of St. Denis increased under the kings of the third race, that of Compiègne declined. It was at the siege of this place, in 1430, that the famous heroine Joan of Arc fell, through the mean jealousy of the governor, into the power of the English. (*Hugo, art. Diez; Guide des Voyages, &c.*)

COMPOSTELLA, a town of Mexico, state of Guadalupe, 36 m. from the Pacific Ocean, and 100 m. W. by S. Guadalupe. In its vicinity there are some silver mines; and to the N.W. of it, tobacco of a superior quality was formerly grown.

CONCAN, a marit. subdiv. of Hindostan, provs. Aurangabad and Bejapoor, comprising a portion of the ancient Hindoo subdiv. of *Kankana*, whence its name, and at present forming two dists. under the presid. of Bombay: it extends both N. and S. of that city, along the Malabar coast, between lat. $13^{\circ} 50'$ and $20^{\circ} 15'$ N., and long. $75^{\circ} 40'$ and $78^{\circ} 54'$ E., having N. the collectorate of Surat, and a detached portion of the Gulcoar's dom.; E. the distr. Ahmednuggur and Poonah and the Sattarah dom., from which it is separated by the W. Ghauts; S. a portion of the Sattarah territory, and W. the ocean. Length N. to S. 310 m.; breadth varying to nearly 60 m. Area, pop., divisions, &c., as follows:—

Districts.	Area in sq. mi.	Pop.	Land revenue (1829-30)
S. Concan	6,770	656,860	£. 105,550
N. Concan	5,500	387,650	106,690
Total	12,270	1,044,510	212,240

The general aspect, though there are many fertile tracts producing rice, &c., is that of a congeries of steep and rocky mountains, intermixed with a multitude of ravines and chasms, and interspersed with jungle: it formerly abounded in fortified heights, difficult of access, most of which have been dismantled by the British since their conquest of the country in 1813. The coast, though it has a very straight general outline, is broken by a great number of shallow harbours, which, previously to the British rule, were the resort of numerous pirates. The W. Ghauts, which bound the Concan to the E., rise to the elevation of from 2,000 to 4,000 ft., with an abrupt face towards the W. The passes over them are impracticable for wheeled carriages. They are mostly composed of primitive trap-rocks; but their summits are covered with a thick crust of laterite or ferruginous claystone, of which material much of the surface of the Concan is composed. In the S. shelly sandstone is met with. There are many mountain streams, but none deserving the name of a river. Concan produces all the grains of Malabar, but is chiefly celebrated for its hemp and coconuts. Oil grains, the sugar-cane, turmeric, ginger, &c., are grown in the S. The land in S. Concan is assessed on the ryotwar, and in the N. on the village system. In some instances ill-cultivated tracts of land are allotted for a term of years at a low rent to a speculator for the purpose of improvement. A large proportion of the inhab. are Hindoos, and *Sattars* (burnings of widows) are said to have been more frequent here than in any other part of India, Bengal excepted. Many Dheels, Coolies, &c. inhabit the Ghauts and N. Concan. A large portion of the Bombay native army is now recruited from these districts. In 1829 there were reported to be 419 native schools, attended by 9,399 scholars, or 1 in 144 of the pop. The Aurgia family once possessed nearly the whole of Concan: it subsequently belonged to the Peshwa, on whose fall it came into the possession of the British. (*Hamilton's E. I. Ges.; Madras Journal of Literature and Science*, No. 16, *Siphington's E. I. Port. Reports.*)

CONCENTAYNA, a town of Spain, prov. Valencia, 30 m. N. Alicante. Pop. 7,100. It has 2 churches, 2 convents, an hospital, and a house of charity for poor travellers. Neither the streets nor the houses correspond with the number and wealth of the inhabitants, who, Mifano says, are more intent upon increasing their substance by agricultural and manufacturing industry, than on beautifying the town. They manufacture cloths, taffeties, handkerchiefs, and other articles. Their fields, which are well irrigated, produce wheat, maize, pulse, wine, oil, silk, &c.

CONCEPCION, a city of Chili, in the S. part of the Republic, cap. prov. of same name, on the right bank of the Bioblo, 8 m. E. from its mouth, and about 270 m. S. S.W. Santiago; lat. $36^{\circ} 43'$ $25'$ S., long. $73^{\circ} 5'$ $33'$ W. Pop. 8,000. (*Amer. Almanac*, 1839.) It stands upon a low neck of land between the Bioblo and the S.E. angle of the Bay of Concepcion, and occupies a surface of about 4 sq. miles. Streets intersect each other at right angles; houses mostly only one story in height in consequence of the great frequency of earthquakes, and many are built entirely of unbaked bricks. Concepcion was formerly a flourishing town, containing several good buildings, and as many as 20,000 inhab.: previously to 1822 it possessed a massive cathedral, but this and the

greater part of the city were in that year totally destroyed by an earthquake. It is the residence of a bishop and the military governor of the prov. Manufactures and trade are said to be at present of little importance.

The Bay of Concepcion is "a large square inlet, open on the N., while the S. and W. sides are formed by a high promontory jutting out from the main land, and bending into the shape of an elbow, each side being 3 or 4 leagues long." (*Hall, Extr. from Journal*, ii. 273.) The diameter of the space thus enclosed is about 5 m. The mouth is divided by the island Quiriquina, which lies across it, into 2 channels; the N. entrance has 30 fathoms water, diminishing gradually to 12 fathoms in the middle of the bay; the S. entrance has 30 fathoms at its commencement, and 11 fathoms at its entrance into the Talcahuano anchorage. There are 3 harbours; that of Talcahuano, close to the small fortified town of the same name, under the promontory in the S.W. angle, is the most secure from winds, and that in which ships generally lie. Full 12 fathoms water are found in all parts of the bay within $\frac{1}{2}$ m. of the beach; the holding ground is excellent, and the bottom free from rocks. (*Miers.*)

Concepcion was founded in 1768, after the destruction of the old city of Penco by inundation, during an earthquake. (*American Encyclopedia; Hall; Miers; Geographical Journal*, &c.)

CONCORD, a town of the U. S. of America, cap. New Hampshire, and seat of the state government, co. Rockingham, on the Merrimack, 68 m. N. W. Boston. Pop. (1830) 3,750. It consists chiefly of two streets, extending for nearly 2 m. along the W. side of the river, which is here crossed by two bridges. It contains the state-house, a handsome stone building, and the state prison. The courts were removed to Concord from Portsmouth in 1823. It is a town of considerable trade, and has a water communication with Boston by means of the Merrimack and Middlesex canal. (*American Encyclopedia*, &c.)

CONDÉ, a town of France, dép. du Nord, cap. cant. at the confluence of the Hague with the Escaut (Scheldt), 25 m. S.E. Lille. Pop. 5,297. It is strongly fortified by works constructed by Vauban; it is well built, and contains a handsome town-hall and a fine arsenal. A canal, 15 m. in length, connects Condé with Mons, in the Netherlands. It was taken by Louis XI. in 1478.

CONDÉ SUR NOIREAU, a town of France, dép. Calvados, cap. cant., on the road between Caen and Domfront, 23 m. S. S.W. the former. Pop. 6,480. Its buildings are generally heavy and *bride*; it contains, however, two old churches worthy of notice. It formerly possessed a castle with a large tower, but little now remains of that edifice. It has some commercial activity, and fabrics of woollen, cotton, and linen articles, cutlery, &c. (*Hugo, art. Calvados.*)

CONDOM, a town of France, dép. Gers, cap. arrond., on a height the foot of which is washed by the Balse, which is here crossed by two bridges, 33 m. N.W. by N. Auch. Pop. (*ex. com.*) 3,953. It is ill built, *laide et briste*, but improving; it is surrounded by *locusts* planted with trees, and has numerous villas in its environs. In its centre is a large open space, in which is the parish church, formerly the cathedral, which, despite the mutilations it has undergone, is still a magnificent Gothic edifice. Pens, corks, earthenware, brandy, woollen yarn, and leather are produced here; and there is a brisk trade in corn, flour, wines, &c. It has a tribunal of original jurisdiction and a communal college. It owes its origin to a monastery, which existed in the 9th century, but was of a much earlier date. It was formerly the seat of a bishopric, once filled by Bossuet. (*Hugo; Dict. Géog.* &c.)

CONDRIEU, a town of France, dép. Rhone, at the S. extremity of which it is situated, cap. cant. on the Rhone, 21 m. S. Lyons. Pop. 3,591. It has acquired some celebrity for excellent white wines, the original plants producing which were, it is said, brought thither from Dalmatia by order of the emperor Probus.

CONGLETON, a market town and bor. of England, co. Chester, hund. Northwich, in a remarkably healthy situation, on the Dane, in a deep valley bordering on Staffordsh.; 23 m. S. Manchester. Pop., 1831, 6,405; 1831, 9,352. But this refers only to the old bor., which extended over a space of 2,500 acres; a suburb, forming part of Buglawton township, has been added to the new municipal bor., which had, in 1831, a pop. of about 10,800. The principal street is upwards of a mile in length, paved, and lighted with gas: it contains many ancient houses of timber framing and plaster; at the W. end are many detached mansions, surrounded by gardens and shrubberies, and chiefly occupied by the more opulent manufacturers. "The town is increasing rapidly in every direction. The impulse given to its trade by the repeal of the duties on French (raw) silk caused an increase of 50 per cent. in the pop. between 1821 and 1831; and although in 1835 the trade received a shock from which it took some time to recover, it is

now in a flourishing state; new factories are building, and at present there is a demand for labour that cannot be supplied in the town." (*Municipal Boundary Report*.) It has an Episcopal chapel, in the patronage of the corporation; a Catholic and several large dissenting chapels; a grammar-school, nominally free for the sons of burghesses (there are about 70 boys receiving classic education, about 1-3d of whom are sons of freemen, but all pay for tuition); an infant school, established in 1835; several large Sunday-schools; and many charitable institutions and bequests, the latter chiefly held in trust by the corporation; a town-hall; new gaol, built in 1804; and public assembly-rooms, built in 1832, contiguous to which is a modern market-place. Market, Sat. Silk is the staple manufacture of the town; the silk-mills being mostly erected along the banks of the river. At present (1839) the trade consists chiefly in the throwing of raw silk, the spinning of waste ditto, the manufacture of thrown silk into plain ribands by power looms, of which there are about 254 in the town, and the weaving of a few ribands and broad cloths by hand-ooms. There are also a cotton spinning factories, and a few tanneries and leather-manufactories: it was formerly noted for tagged leather thongs, called "Congleton points." Certain lands reserved under an enclosure act are held in trust for the benefit of the poor. The bor. is now divided into 3 wards, and governed by 4 aldermen and 18 councillors. (*Ormerod's Cheshire*; *Lyons's Mag. Brit.*; *Parl. Reports and Papers*.)

CONGO. **OR** **LOWER** **OR** **S. GUINEA**, a country in S.W. Africa, to which various boundaries have been assigned by the old and more recent travellers. The Portuguese, who discovered it in 1487, included in Congo all the coast of W. Africa from Cape Lopez Gonsalvo (Loango), in lat. $0^{\circ} 37' S.$, long. $8^{\circ} 35' E.$, to Cape Negro, in lat. $15^{\circ} 50' S.$, long. $11^{\circ} 55' E.$; for they found the whole of that tract inhabited by negro tribes, resembling each other in every respect, and subject to one paramount chief, called Mani-Congo (Sovereign of Congo); but in process of time this empire became dismembered; inferior chiefs threw off their allegiance and erected separate kingdoms, which are at present known as Angola (a name now more frequently applied to the district over which all these kingdoms extend), Loango, Benguela, and lastly Congo Proper, the subject of this article.

The boundaries of Congo Proper are at present marked N. by the river Congo or Zaïre, which at about lat. $6^{\circ} 5'$ separates it from Loango; S. by the river Dando, in lat. $8^{\circ} 20' S.$, dividing it from Angola; W. the Congosse coast is washed by the S. Atlantic ocean, while to the E. it has the unknown countries of Fugeno and Matamba, the Mountains of the Sun, &c. According to the investigations of Ritter, Congo consists of two distinct regions: that next to the sea, or the *littoral*, is low and flat, is traversed by many streams, and abounds in sandy deserts, but is elsewhere very fertile. The climate in this region is exceedingly unfavourable; and pestilential emanations, and swarms of noxious animals, expose the lives of the inhab. to perpetual danger. The other region consists of the terraces, or acclivities, ascending from the plain to the high table-land in the interior. This is by far the finest part of the country, and the richest, and most populous. The river Zaïre, which descends from the interior to the coast, has its great cataracts in passing through this region.

This river is a most conspicuous object in the topography of Congo: it is a magnificent stream, particularly towards its embouchure: it overflows during the rainy season, and fertilises the surrounding country; but these risings take place also in the dry season, elevating the current 7 ft. increased to 19 ft. by the rains. It is exceedingly deep; Massey's sounding-machine having indicated 113 fathoms, and yet the lead had not touched the bottom. In the upper parts, the current varies in strength from $\frac{3}{4}$ to 5 m. an hour, but is sufficiently strong in the channel to prevent a transport entering the river without the aid of a powerful sea-breeze. At about 140 m. from its mouth, the Zaïre narrows to from 300 to 800 yds. for about 40 m.; its banks bristling with precipitous masses of slate, which sometimes intercept the stream, and form rapids and cataracts, called by the natives *effluvia*. Beyond these craggy regions, the Zaïre expands in breadth to 3, 2, and even to 4 m.; and near the place where Captain Tuckey was compelled to abandon his journey, the width and majestic appearance of the river, the verdure of the land, which was here well peopled, combined to render the scene agreeable in the highest degree. (*Tuckey's Expedition*, pp. 337-348. *Journ. Royal Geog. Soc.*, iii. 220.)

The banks of the Zaïre, from its mouth to Embomama (about 60 m.) are clothed with a most exuberant vegetation, presenting to the eye a continued forest of tall and majestic trees, clothed with foliage of never-fading verdure.

The supposed identity of the Congo with the Niger was long a question agitated among geographers; and

its decision was one of the objects of Tuckey's expedition. This question has been, as every one knows, set at rest by the Messrs. Landor. But it is sufficiently clear from the information collected by Tuckey, that the Zaïre, at no great distance from the point to which he had ascended, divides into two great arms, the most N. of which has its source in a lake or marsh.

The natural productions of Congo have been admirably arranged by Professor Smith, a member of Tuckey's expedition (who unhappily lost his life in the course of it), and Mr. Brown. Large trees are only found in the valleys, or thinly sprinkled over the sides and summits of the hills, and consist for the most part of the *Adonsonia*, *Bombax pentandrum*, *Anthoecista*, *Masanga* (native term, but allied to *Cecropia*), *Eleis guineensis*, *Raphia vinifera*, and *Pandanus candelabrum*. Intermixed with these, on the alluvial banks of the Quorra, large patches of the Egyptian papyrus form a grand feature in the vegetation. The edible productions are maize, cassava, sweet and bitter, two kinds of pulse, the *Cytisus cajan*, a species of *Phaseolus*, and ground nuts (*Arachis hypogaea*). The common yam, besides another species of *Dioscorea*, so bitter as to require four days' boiling before it be eatable, with the sugar-cane, capsicum, and tobacco, are alimentary plants of secondary importance. The most valuable fruits are plantains, papaws, limes, oranges, pine-apples, pumpkins, tamarinds, and a fruit about the size of a small plum, called *sali*. The plant, however, of most importance to the natives is the oil palm (*Elaïs guineensis*), from which is extracted the best palm wine; this and two other species of palm (*Raphia vinifera* and a *Hyphea*), are to the Congosse what the coco-tree is to many of the Asiatic islanders. The indigenous fruits are the *Anona senegalensis*, *Sarcocaulis*, a species of cream-fruit, *Chrysobalanus*, *Icaco*, a species of *Ximenia*, and another of *Antidesma*. (*Professor Smith's Journal* in Tuckey's work, with remarks thereon by Mr. Brown, *passim*; *Quarterly Review*, xviii. 350, 351.)

The animals appear to be those chiefly which are found in every part of this great continent; lions, leopards, elephants, buffaloes, antelopes, wild hogs, porcupines, hares, monkeys, &c. The river abounds with good fish, and also with those huge monsters the hippopotamus and crocodile. Domestic animals are few and scarce; those mostly met with are hogs, goats, fowls, Muscovy ducks, and pigeons, and a few sheep, generally spotted with hair instead of wool. The natives eat these animals in a manner quite characteristic of their rural laziness. They remove either skin or feathers, nor hair; and scarcely warming them by the fire, tear the meat in pieces with their teeth. (*Dr. Leach and Mr. Crouch*, in Appendix to Tuckey's work; *Quarterly Review*, xviii. 351.)

Government, Population, &c.—If we may depend on the traditions of the people, who have neither annals nor history, Congo was formerly a powerful empire under a single sovereign, or rather absolute despot. But it is evident, from the accounts of the early travellers, little as they are, in many respects, to be depended on, that, when first visited by Europeans, the government of Congo did not differ materially in its form from what we find it at the present day; and that it consisted of a sort of confederacy of small states under a principal sovereign. (*Prevost, Histoire Générale des Voyages*, v. 1-7.) It would appear, however, to be pretty certain that the power of the superior monarch has materially declined during the last 300 years. At all events, Congo is now split into an infinite number of petty states or *chiefdoms*, each governed by a *chenos* or chief. These chiefdomships would, in Europe, be said to be fiefs, held under a principal sovereignty, called *kingdom* or *chiefdom*. It is said that Banza Congo (St. Salvador?) But it would seem that most of these chiefs affect a nearly total independence; and being all despots in their own limited spheres, and frequently at war with each other, and with the principal sovereign, the country is uniformly almost in a state of the most frightful anarchy. At the death of a *chenos*, it is not his son, but his brother or maternal uncle that succeeds him.

The inhab. are said by Tuckey to be a mixed race; but the Portuguese never visited the country in such numbers as to produce any impression on the physical character of the people; and the Congosse are certainly one of the least favoured negro varieties. Speaking generally, they seem to be sunk in the lowest state of degradation. They are incorrigibly indolent; have little or no clothing; and though they raise Indian corn, agriculture is in the lowest state, and they frequently suffer the extremity of famine. Their religion is the grossest species of fetishism. (*Ibid* p. 23.) The Portuguese having established missions in different parts of the country, the natives sometimes exhibit in their religion an odious mixture of Christianity and idolatry. They are prone to all sorts of excesses and debauchery. The women are degraded to the condition of beasts of burden, and prostitution to strangers is considered as a necessary

part of hospitality. Still, however, they are not wholly destitute of good qualities; and are said to be sincere, hospitable, and compassionate. Having been long a principal seat of the slave trade, a considerable part of the disorders that prevail in the country are with much probability ascribed to the enormities growing out of that detestable traffic. This is said to isolate one petty state from another, and to occasion perpetual wars; the slaves being mostly prisoners taken in battle, or kidnapped on the public roads. But, admitting the influence of these causes, still we apprehend that the intellectual inferiority of the negro race is at bottom the real cause of the degraded condition of Congo, and of all the other negro states. The Congos are said frequently to decapitate their prisoners, and burn their bodies; and if such barbarity be practised when the prisoners may be sold, the presumption would seem to be that it would become much more prevalent were the traffic put an end to. (See *Tuckey, passim*; and *Ritter's Geography of Africa*, French translation, l. 379—387.)

The country has been represented as very populous, and as studded with towns and villages swarming with inhab. Carl, one of the early missionaries, gravely reports that a king of Congo marched against the Portuguese at the head of an army of 900,000 men! (*Prevost, ubi suprà.*) But it is evident that a country in the state we have described cannot be thickly peopled; and, in point of fact, Tuckey states that the most considerable *banza*, or cap., of a petty state that he visited did not contain more than 100 huts and 600 persons. In Embomma he found 60 huts, with 500 inhab.; and at Inga 70 houses, in which not more than 300 persons resided. It is true that his observations in the interior were not very extended; and he admits that the upper banks of the Zaïre (where his operations unhappily ended) were considerably more populous than those towards the coast; but still it is abundantly certain that the accounts of the extraordinary pop. of the country have no better foundation than the imagination of the writers. According to the statements of the missionaries, the cap. of the country, which they divided into six provinces, was built on a mountain about 150 m. from the sea, and was called by them St. Salvador. They speak in the most extravagant terms of the beauty and salubrity of the situation. According to Carl, of whose statements we have already given a specimen, it contained 40,000 inhab.; and it had several Christian churches, and a school under the direction of the Jesuits. But Merolla reports that in 1668 St. Salvador had suffered so much from the ravages of war, that the sovereign had transferred his residence to Lemba, and that the former had become a den of robbers. (*Histoire Générale des Voyages*, iv. 631.) There are no subsequent accounts of St. Salvador on which it would be safe to place any reliance.

CONGOON, a sea-port town of Persia, prov. Fars, on the Persian Gulph, 130 m. S. by E. Schiraz. Pop. from 6,000 to 7,000. It has an excellent roadstead, where a frigate may ride in safety in the most tempestuous weather; and good water and firewood may be procured in abundance. (*Kinney's Persian Empire*, p. 81.)

CONI, or CUNEO, a town of N. Italy, king. Sardinia, cap. and prov., on a hill at the confluence of the Stura and Cesso, 45 m. S. by W. Turin. Pop. 10,000. This was formerly a strong fortress, and sustained without capture various sieges, till being delivered up to the French they dismantled it in 1801. It is still, however, surrounded by a wall, with 2 gates; it has a cathedral, 3 other churches, a royal college, hospital, workhouse, and some public baths. Its principal street is wide and handsome, and is lined throughout with porticoes: the other streets are, in fact, mere lanes. Coni is the seat of a court of primary jurisdiction, and a bishopric, and the residence of the intendant and military commandant of the div. It has some silk fabrics, and carries on a considerable trade, being a sort of entrepôt to Turin and Nice. (*Rampoldi; Mod. Trav.*, &c.)

CONJEVERAM (*Chanchipura*, the golden city), a considerable town of Hindoestan, prov. Carnatic, distr. Chingleput, in which it is the chief military station under the Madras presidency. It stands in a valley 26 m. W. S. W. Madras, and 35 m. E. Arcot; lat. 15° 49' N., long. 79° 41' E. It is tolerably populous, and covers a large space of ground, which is in great part occupied by extensive gardens and cocoa plantations. It has two remarkable pagodas; one, dedicated to Silva, contains many pillars handsomely sculptured, and some well-carved figures of elephants, &c.; the other, which is smaller, has a great deal of curious workmanship and sculpture, which, for truth of proportion and delicacy of execution, is scarcely surpassed by any other Hindoo edifice. There are numerous weavers amongst the pop., who manufacture red handkerchiefs, turbans, and cloths for native dressers. Small pagodas, and *chowtries*, or travellers' houses, abound both in the town and its vicinity: the valley of Conjeveram is fertile, contains many substantial tanks, and appears in a prosperous state. (*Hamilton's E. I. Gaz.*, i. 443, 444.)

CONNAUGHT, one of the four provs. into which Ireland is divided, on its W. coast, containing the coe. of Galway, Leitrim, Mayo, Roscommon, and Sligo. (See *last* page.)

CONNECTICUT, one of the smallest of the U. States, in the N. part of the Union, between lat. 40° 58' and 42° 2' N., and long. 71° 53' and 73° 50' W., having N. Massachusetts, E. Rhode Island, W. New York, and S. Long Island Sound: length, E. to W., 60 m.; average breadth, about 18 m.; area, about 4,700 sq. m.; pop. (1830) 237,665, of whom 25 only were slaves. It ranks third in the Union as to density of pop., having 63 individuals to the sq. m. Surface generally undulating. A chain of mountains of inconsiderable height runs N. and S. through the W. part of the state. The principal river is the Connecticut; it rises in New Hampshire, and having passed through Massachusetts, intersects this state nearly in its centre; and then bending to the E., falls into Long Island Sound, a little below New-Haven, after a course of 410 m., 250 of which have been made navigable by means of locks and canals. Along the coast are several excellent harbours; the best are those of New London and New-Haven. Climate very variable: an extreme degree of heat and cold are experienced at different seasons; but the sky is usually serene, and the country healthy. There are some sterile districts; but the soil is for the most part fertile, and (for America) well cultivated. European grains, Indian corn, flax, hemp, and culinary vegetables, are raised in abundance; orchards are numerous, and apples so plentiful that cider is a considerable product. The pasture-lands are good; large herds of cattle are reared, and butter and cheese are made in large quantities. In 1836 there were 255,000 sheep, which produced 829,200 lbs. of wool, value 418,796 doll. Farms vary in size from 50 to 200 acres. There are mines of iron ore, lead, and copper; but excepting the first, none of them are wrought. Marble, black-lead, porcelain clay, and freestone, are found in many parts. The chalybeate waters of Stafford are celebrated. Manufactures occupy more attention than rural industry, and are more considerable, in proportion to the population, than in any other state of the Union. Rhode Island excepted. The principal are those of cotton and woollen stuffs, iron and tin ware, leather, fire-arms, carriages, powder, clocks, gin, snuff, &c. In 1837 it had 31 banks, with a united cap. of 8,665,607 doll. A considerable coasting trade and traffic with the W. Indies are maintained. The principal articles of export are cattle, horses, mules, grain, fish, candles, soap, butter, cheese, &c. The state is divided into 8 counties. Hartford is the chief city, and is, in conjunction with New-Haven, the seat of government; the other principal towns are Middletown, New London, and Norwich. These contain several colleges, learned societies, and public schools. The state school-fund, founded in 1821, is the most considerable of any in the Union; the capital, in 1832, was reported to have amounted to 1,902,967 doll., the number of persons deriving benefit from it 86,282, and the amount of interest distributed in the same year 81,590 doll. Yale College, founded at Saybrook in 1700, and removed in 1716 to New-Haven, contains the finest cabinet of minerals in the Union, and an extensive library. In 1836 it had 411 students, being a greater number than any other college in the U. States. The legislature consists of a senate of 12 mem., and a H. of Representatives; 80 towns sending 2, and the other towns 1 rep. each, their total number, in 1837, being 208. The senators, representatives, governor, and lieutenant-governor are all elected annually by the white male inhab. of the age of 21 years complete. Senators receive 2, and representatives 1½ doll. each during session, besides an allowance for travelling expenses. The judges of the supreme courts are appointed by the assembly, and hold their offices during good behaviour, or until they are 70 years of age, when they must retire. Connecticut sends 6 mem. to the National H. of Representatives, and 2 senators to the National Senate. The government was fixed on its present footing in 1818. This portion of the Union was first colonized in 1636 and 1639, by 2 colonies united in 1666. Its subsequent progress has been one of almost uninterrupted prosperity. (*Darwin's View of the U. States*, pp. 491—493.)

CONSTANCE (an. *Constantia*, Germ. *Constantz* or *Costanza*), a city of the grand duchy of Baden, cap. circ. same name, or See (reis (*Lake Circle*), finely situated on the Rhine, at the point where it emerges from the Lake of Constance, 100 m. S. S. E. Carlsruhe, 26 m. E. Schaffhausen; lat. 47° 36' 10" N., long. 9° 8' E. Pop. (1838) 6,220 (*Bergkows*), mostly Catholics. Constance is a highly interesting city, from its historical associations. In the 15th century it is said to have contained from 30,000 to 40,000 inhab.; and its streets and many of its buildings remain unaltered since that period, though several of them are wholly, or almost wholly, deserted. It is fortified by a wall flanked with towers, and surrounded by a ditch; has three suburbs, one of which, Petershausen, is on the opposite bank of the Rhine, but com-

municates with the city by a long covered wooden bridge built upon stone piers. The cathedral or *minster*, begun in 1084, is a handsome Gothic structure with a lofty steeple, commanding an extensive view of the lake and country, as far as the mountains of Voralberg and the Grisons. The doors of the main portal are curiously carved; and the choir is supported by 16 pillars, each of a single block. A fine high altar, and several interesting tombs and relics, attest the ancient wealth and grandeur of the see, which was formerly the most considerable in Germany, and had large possessions in, and jurisdiction over, Switzerland. A plate of metal let into the floor of this cathedral, near the altar, marks the spot where John Huss stood when he was condemned in 1415. The Franciscan convent, the first prison of Huss, is now a ruin; and the Dominican convent, to which he was afterwards removed, has been converted into a cotton factory. The *kanfhaus* (market-hall), erected in 1388, is interesting, as being the place of meeting of the famous council of Constance, held from 1414 to 1418. The concourse of ecclesiastics and others, from all parts of Christendom, at this council was such that not only the houses in the town were crowded, but booths were erected in the streets, while numbers of pilgrims were camped in the adjacent fields. Religious processions, dramatic representations, and entertainments of every description, hourly succeeded each other; and thousands of individuals were employed solely in transporting thither the choicest delicacies of Europe. The great object of this council was to vindicate the authority of general councils, to which the Roman pontiff was declared to be amenable. And having done this, the council proceeded to depose three popes or antipopes, John XXIII., Gregory XII., and Benedict XIII.; they next elected Martin V., and thus put an end to a schism which had lasted 40 years. But, notwithstanding its merit in these respects, the council of Constance is justly infamous, for the treacherous seizure and execution of John Huss and Jerome of Prague, notwithstanding the safe-conduct granted to the former by the emperor Sigismund, the president of the assembly, who wanted power or inclination effectually to vindicate his pledge. Huss suffered at the stake, on the 6th of July, 1415; and Jerome, who had attended him to the council, was burnt on the 30th of May, 1416. The opinions of Wycliffe were also condemned; and an order was issued to commit his work and bones to the flames. Various relics of this period, and a collection of Roman and German antiquities found in the neighbourhood, are preserved in the *kanfhaus*.

Constance contains an ancient palace, a lyceum, an hospital, a conventual school for females, several collections of art and science, and a theatre. The suburb of Peterhausen contains a grand ducal residence, formerly a Benedictine abbey; that of Kreuzlingen is fortified, and possesses a convent, in the church of which there is some elaborate carving. The suburb of Brühl is the scene of the martyrdom of Hiri and Jerome. On the bridge across the Rhine there are mills for various purposes.

Constance is the seat of the circle and district government. It was a place of considerable commercial importance till the period of the Reformation, since which it has, until very recently, progressively declined. The chief resources of its inhab. are derived from the culture of fruit and vegetables, some trade, the navigation of the lake, and a few manufactures, chiefly of cotton cloth and yarn, and silk fabrics, which have lately been a good deal extended. This is one of the richest towns in Germany. It was founded or enlarged by the Romans in the 4th century. It was a free Imperial city till 1548, when Charles V. placed it under the ban of the empire; next year it was attached to the Austrian dominions, and in 1805 to those of Baden. (*Berghaus, Allg. Lander und Völkerkunde; Schreiber, Guide du Rhin; Mosheim's Church History*, iii. 416.)

CONSTANCE (LAKE OF) (an. *Lacus Brigantinus* or *Suevicius*, Germ. *Bodensee*), a lake of Central Europe, the largest belonging to Germany, between lat. 47° 39' and 49° N. and long. 9° 30' and 9° 45' E., surrounded by the territories of Baden, Württemberg, Bavaria, Austria (Voralberg), and Switzerland. Length, N.W. to S.E., about 34 m., greatest breadth about 8½ m.; area, about 300 sq. m.; elevation above the level of the sea, 1,365 ft.; greatest depth, 964 ft. Its most N. portion consists of a narrow prolongation, called the Neberling Lake. The Rhine enters the Lake of Constance on the S.E., and issues from its N.W. extremity at the city of Constance, connecting it with the lake called the Unter or Zeller-see, which contains the fertile isl. of Reichenau, and is sometimes considered part of the Lake of Constance. The banks of the latter are mostly flat or gently undulating, and distinguished for their fertility. They abound with corn-fields and orchards, and some tolerable wine is grown on them. The S. shore especially is studded with a picturesque line of ruined castles and other remains of the middle ages; and both sides are crowded with numerous towns and villages, the principal of which are Landau, in Bavaria; Friederichshausen, a summer

resort of the king of Württemberg, Miersburg, and Neberling, in Baden; Arbon, in Switzerland; and Bregenz, in the Austrian dominions. The waters of this lake are green, clear, and subject to sudden risings, the cause of which has not been satisfactorily explained. Numerous aquatic birds and *Crustacea* inhabit this lake; and it is abundantly stocked with fish. Its navigation is somewhat dangerous, owing to sudden squalls: considerable traffic, however, takes place upon it, and two or three steam-boats run several times a week from Constance to the different ports situated around it. (*Canonica; Schreiber, Guide du Rhin; Schüss; Allg. Erdkunde*, &c.)

CONSTANTINA (vulg. *Kostantinah*), an inland city of N. Africa, Algeria, cap. of its E. prov., beyond the Lesser Atlas, on a peninsulated height, surrounded on three sides by the Rummel, or Wad-el-Kebr (*Amp-saga* of the ancients), which runs in part through a deep ravine, crossed by an ancient bridge, 114 yards above the water, and 113 yards in length; 190 m. E.S.E. Algiers; lat. 36° 24' N., long. 6° 30' E. The hill, on which the city stands, appears to have been separated from the opposite heights of Scath-el-Manaurah by an earthquake, or some other natural convulsion. On the S.W. side gradually declines down to the plain, and on that side only the city is accessible. The present city is about 1½ m. in circ. Pop. probably about 25,000, of whom, exclusive of the garrison, a half may be Kabyles, a fourth Moors, and the rest Turks and Jews. The ancient city was much larger, extending on the other side of the ravine, and down into the plain.

Constantina is strong, as well by art as by nature: the walls on the land side are 5 ft. thick, and have, in many parts, casemates behind them. There are 4 gates, all of Arabic construction, built however, in great part, of the materials of Roman edifices: the superb gates, with columns of red marble, mentioned by former travellers, no longer exist. On its N. side, on the most elevated part of the plateau, is the Kasba, or citadel, occupying the site where was formerly the Numidian citadel, and more recently the Roman capital, parts of both which edifices still exist. The palace, built within these few years, is a large edifice, handsomely fitted up. There are said to be 13 mosques, exclusive of chapels, &c., but none of them deserve any especial notice. Streets narrow and dirty; houses generally two stories high, covered with tiled roofs, *a des d'inc*; they are constructed of brick, raised on a foundation of stones, the remains of the ancient buildings. Many of them are large and well furnished, and there are no indications of extreme poverty in any class of the inhabitants. There are many remains of antiquity; but these have suffered much of late years, having been taken down, and employed as materials for the fortifications. The bridge over the ravine, already alluded to, was originally constructed by the Romans. There are also several Roman clusters, a church, probably of the era of Constantine, with arches, &c. The inhabitants are industrious: the principal manufactures are those of saddles, bridles, boots, slippers, and garters, a few coarse blankets are also made; and the late bey employed 25 men in the manufacture of gunpowder. A considerable trade is carried on with the S., the inhab. receiving gold-dust, ostrich feathers, slaves, and the finer sort of haiks, both silk and wool, in return for corn, saddlery, and articles of European manufacture. From 1,200 to 1,500 mule-loads of corn used to be annually sent to Tunis. The land round the town is fertile, and mostly belongs to the community. The actual cultivators pay four fifths of the produce as rent.

A French force of 8,000 were killed in an attempt to take this city in 1836, and suffered much on their retreat. In the following year another French army, proceeding from Bona, sat down before it on the 6th of October, and took it by storm, after a desperate resistance, on the 13th of the same month. (*Tableau de la Situation*, &c. p. 60; Shaw, p. 60–62; *Journ. of Geog. Society*, viii. 48, 49, &c.)

CONSTANTINOPIE, so called from its founder, or rather restorer, Constantine the Great (Turk. *Stamboul*), a famous city of Turkey in Europe, cap. of the Turkish dominions, and the first city of the Mohammedan world, a distinction which it has held since 1453, when it ceased to be the cap. of the Eastern empire. Its situation, whether considered in a commercial or political point of view, is the finest imaginable; and it seems naturally fitted to be the metropolis of an extensive empire. It occupies a triangular promontory near the E. extremity of the prov. of Roumelia (an. *Thrace*), at the junction of the sea of Marnara, with the Thracian Bosphorus, or Channel of Constanti-

nople, being separated from its suburbs of Galata, Pera, and Cassim-Pasha by the noble harbour called the Golden Horn, lat. $41^{\circ} 0' 12''$ N.; long. $28^{\circ} 59' 2''$ E. Pop. uncertain, but supposed to amount, exclusive of its suburbs, to about 400,000, and, together with them (Scutari being excepted), to perhaps 500,000 or 550,000.

It is shaped somewhat like a harp; the longest side of the triangle being towards the sea of Marmara, and the shortest towards the "Golden Horn." Its length E. to W. is about $2\frac{1}{2}$ m.; breadth varies from 1 to 4 m. Its circ. has been variously estimated at from 10 to 23 m.; but measured upon the maps of Kauffer and Le Chevalier, it appears to be about $12\frac{1}{2}$ m. in circuit, and contains, according to Dallaway and Gibbon, an area of about 2,000 acres. Like Rome, Constantinople has been built on seven hills, six of which may be observed, distinctly enough, from the port, to rise progressively above each other from the level of the sea to 200 feet above it; the seventh hill, to the S.W. of the others, occupies more than one-third of the whole area of the city. Each of these hills affords a site to some conspicuous edifice. The first is occupied by the Seraglio; the second crowned with the Burnt Pillar, erected by Constantine, and the mosque of Othman; the mosques of the sultans Solymann, Mohammed, and Selim, stand on the summits of the third, fourth, and fifth; the W. walls of the city run along the top of the sixth; and the Pillar of Arcadius was erected upon the seventh.

This amphitheatre of peopled hills, with its innumerable cupolas and minarets interspersed with tall dark cypresses, and its almost unrivalled port, crowded with the vessels of all nations, has, externally, a most imposing aspect, to which its interior forms a lamentable contrast. The expectations of the stranger are, perhaps, no where more deceived. The streets are narrow, crooked, steep, dark, ill-paved, or not paved at all, and dirty; though, by reason of the slope of the ground on either side towards the sea and harbour, and the great number of public fountains, much of the filth is conveniently cleared away. Adrianople Street, running from the gate of the same name to the Seraglio, is the only one deserving the name of street; the rest are mere lanes. The houses are mostly small and low, being built of wood, earth, or, at the best, of rough or unwhewn stone. It is the palaces, mosques, bagnios, bazaars, khans, &c. that make so splendid a show at a distance. Dallaway (*Constantinople*, p. 70.) and Sir J. Hobhouse believe that its streets were anciently not more regular than at present; and that from the frequent and sudden devastations by fire, mentioned by the Byzantine historians, its houses were formerly, as now, built mostly of wood or other fragile materials. About a century after its restoration, Constantinople is reported (*Gibbon*, ch. xvii.) to have contained "a capitol, or school of learning, a circus, 2 theatres, 8 public and 153 private baths, 52 porticos, 5 granaries, 8 aqueducts, or reservoirs of water, 4 spacious halls for the meetings of the senate or courts of justice, 14 churches, 14 squares, 344 streets, and 4,388 houses, which, for their size or beauty, deserved to be distinguished from the multitude of plebeian habitations." It contains, at present, 14 royal and 332 other mosques, or houses of Mohammedan worship, 40 colleges of Mohammedan priests, 183 hospitals, 36 Christian churches, several synagogues, 130 public baths, nearly 200 khans, and numerous coffee-houses, caravanserais, and public fountains; besides some extensive subterranean cisterns, the aqueduct of Valens, several remarkable pillars and obelisks erected by the Greek emperors, and other monuments which, together with the walls, the castle of "Seven Towers," &c. are interesting remains of antiquity, and for the most part in a tolerable state of preservation. (*Andréossy*, p. 194.; *Cours Méthodique de Géographie*, p. 625.; *Hobhouse*.)

Constantine surrounded the city with walls, chiefly of freestone, flanked at variable distances by towers. These have been in many parts demolished at different periods, by the violence of the sea, and by frequent earthquakes, and on the side facing the port are especially in a very ruinous state. The city was increased towards the W. by Theodosius II. who built the walls on the land side which still bear his name. These consist of a triple range, rising one above another, about 18 ft. apart, and defended on the outside by a ditch 25 to 30 ft. broad, and 12 to 16 ft. deep. The outer wall is now very much dilapidated, and in many places is only a little above the level of the edge of the ditch; it seems never to have had any towers. The second wall is about 12 ft. in height, and furnished with towers, of various shapes, from 50 to 100 yards apart. The third wall is above 20 ft. high, and its towers, which answer to those of the second, are well proportioned. These walls are constructed of alternating courses of brick and stone; and the inner ones, notwithstanding the ravages of time, earthquakes, and numerous sieges, are still tolerably perfect. On both

the other sides of the city the walls are only double, and, generally speaking, not so lofty. They are frequently adorned with crosses and other ornaments, which have not been removed by the Turks; and in many parts there are bas-reliefs, and inscriptions by the Greek emperors who have built or repaired the several portions. When Dr. Clarke visited the place, he says there were in all 478 mural towers, and probably about the same number still exist.

Constantinople originally possessed 45 gates, 19 of which opened on the land side, 12 towards the Golden Horn, and 13 towards the Propontis. Only 7 gates now exist, or are at present used, on the land side, the centre one of which, the *Top-Kapoussi*, or Cannon Gate, is the *Porta Sancti Romani*, through which Mohammed II. made his triumphal entry into the city. Near the S.W. angle of the city is the *Hepiaggrion*, or castle of "Seven Towers" (though it has now but 4 towers), an irregular fortress, supposed to have been built about the year 1000. It was enlarged in succeeding ages, and in great part rebuilt by Mohammed II., who made it a state prison, it being useless as a fortress. The Golden Gate, erected by Theodosius to commemorate his victory over Maximus, was originally profusely ornamented with beaten gold, and surmounted by a gilded bronze statue of Victory. Mohammed II. walled it up. When Wheeler saw it, it was still adorned with bas-reliefs, in white marble, representing several scenes of classic mythology; but these must have disappeared, since more recent travellers speak of it as only an ordinary arch between two large marble pillars, and ornamented with Corinthian pilasters, "d'un style assez médiocre."

The ancient wall of Byzantium, founded by Byzas the Megarean, B.C. 656, and ultimately destroyed by Severus, not long before the building of Constantinople, occupied the first hill or apex of the triangle, at present the site of the seraglio. Its walls, according to Herodotus, were Cyclopean, and so skillfully adjusted that they seemed like one entire mass. Most authors say that there are no vestiges of Byzantium; but Dr. Walsh affirms that "part of the walls of this very ancient city are actually standing, and cut off the gardens from the adjoining streets." The seraglio, which is believed to be about the same extent as the ancient Byzantium, is nearly triangular, about 3 m. in circuit, and entirely surrounded by walls; those of the city forming its boundary towards the port and sea of Marmara, while on the W. it is shut in by a lofty wall with gates and towers, built by Mohammed II., soon after the capture of Constantinople. Its whole surface is "irregularly covered with detached suites of apartments, baths, mosques, kiosks, gardens, and groves of cypress." The apartments are chiefly on the top of the hill, and the gardens below, stretching to the sea. Though externally picturesque, from the contrast of its light and elegant minarets, with its dark, solemn, and stately trees, the seraglio is unmarked by any thing to characterise it as the habitation of royalty. The greater part of its interior is not open to the public; but those acquainted with it say that it contains little worthy of admiration, and that that little has been imported from Europe. The palace consists of various parts built at different times, and according to the taste of successive sultans, without any regard to uniformity or architectural rule; and it is, therefore, a heap of houses clustered together without any kind of order. Outside are two courts, the first of which is free to all persons, and is entered by the Bab-a-boomajin or *Sublime Porte*, the principal of the gates on the city side, — a ponderous, unsightly structure, covered with Arabic inscriptions, guarded by 50 porters, and having a niche on either side in front, in which the heads of state offenders are publicly exposed. The irregular but spacious area into which this gate leads, formerly the *Forum Augusti*, contains the mint, the great vizier's divan, and other state offices, the infirmary for the sick belonging to the seraglio, and the church of St. Irene, believed to have been built by Constantine, and in which the second general council was held by Theodosius. (*Andréossy*, 46.) This church resembles St. Sophia on a small scale, and contains much marble and mosaic-work: the Turks have converted it into an arsenal. The second quadrangle is smaller, being about 300 paces only in diameter, but is more regular and handsome than the former. It is laid out in turf, intersected by paved walks, and supplied with fountains. On the left hand are the treasury, the divan, or hall of justice, and the smaller stables (the larger stables containing, according to Tournefort, 1,000 horses, are in another place, facing the sea of Marmara). On the right are the offices of the attendants, 9 kitchens, and the entrance to the private apartments. All round the court runs a low gallery, covered with lead, and supported by columns of marble. At its farther end is the tall Corinthian column, erected by Theodosius the Great to commemorate his victory over the Goths; and near it are the Bab-e-Saadi, "Gates of health and happiness," which lead to the throne-hall, the royal library, the apartments of the sultan, the harem, and other suites of

rooms, embellished with a costly, but tasteless, magnificence. The throne-hall is isolated, lofty, built in great part of marble, and adorned with handsome marble columns and stained glass windows. The throne itself is a canopy of velvet fringed with jewels, supported by four columns covered with gold, pearls, and precious stones; but its effect is destroyed by horse-tails, and other palfrey ornaments, suspended from the roof. The state apartments closely resemble each other; their chief furniture consists of sofas, carpets, and mirrors. The walls are wainscotted with jasper, mother-of-pearl, and veneered ivory inlaid with mosaic flowers, landscapes, and sentences in Arabic. The pavilions of the harem are built upon arches, and roofed by domes covered with lead or spires with gilded crescents. They have many balconies, galleries, *casquets*, &c. Baths of marble and porcelain, rich pavilions overlooking the sea, marble basins, and spouting fountains, are sprinkled over the rest of the surface within the seraglio. The number of inmates, and others connected with the seraglio, have been estimated at upwards of 10,000; but this is, probably, much beyond the mark. All are provided for by the sultan. And Tournetfort (*Lett. v. vol. ii. p. 164.*) states that, when he visited the place, besides 40,000 oxen, and the purveyors furnished for the use of the seraglio daily, 100,000 lambs or goats, 10 calves, 200 hens, 200 pairs of pullets, 100 pairs of pigeons, and 50 green geese. But notwithstanding this general accuracy of Tournetfort, we have no doubt that in this instance he was misled, and that Mr. Elliott (*l. 308.*) has done right in rejecting this statement.

On the third hill is the *Eski Serai*, or Old Palace, said to have been the residence of the later Greek emperors; a building surrounded by a lofty octangular wall about 1 m. in circuit, and to which, when a sultan dies, his harem is removed. It presents nothing remarkable.

The mosques of Constantinople have all an open space around them, generally planted with trees, and refreshed by fountains. The principal mosque, the celebrated St. Sophia, stands on the W. declivity of the first hill, near the *Sublime Porte* of the Seraglio. It was begun and finished under the emperor Justinian, between the years 531 and 537. It is in the form of a Greek cross, 269 feet in length, by 243 feet wide, or about 8-6ths the length of St. Paul's London, by nearly the same width, and surmounted in its centre by a dome, the middle of which is 160 feet above the floor. The dome is of an elliptical form, and much too flat to be externally beautiful, its height not exceeding 1-6th part of the diameter; which is 115 feet, or 15 feet more than that of the dome of St. Paul's, and 18 feet less than that of St. Peter's at Rome. It is lighted by 24 windows ranged round its circumference, and rests upon four strong arches, the weight of which is firmly supported by four massive piers, strengthened on the N. and S. sides by four columns of Egyptian granite. The present dome is not coeval with the building; the original one, which was less lofty, and more circular, having been thrown down by an earthquake 21 years after its erection. There are, besides, 2 large and 6 smaller semi-domes, the whole of which blending internally with the principal one, form altogether a magnificent expanse of roof. Four minarets, but each of a different shape, have been added to this mosque by the Mohammedans. The building has been outwardly so much patched and propped up in different ages, that it has lost whatever beauty it may have originally possessed, and is now a heavy, unwieldy, and confused-looking mass. It is entered on the W. side by a double vestibule about 38 ft. in breadth, which communicates with the interior by nine bronze doors, ornamented with bas-reliefs in marble. The interior is spacious and imposing, not being broken by aisles or choirs; but the variegated marble floor is covered with mats and carpets; the mosaics of the dome, &c., have been whitewashed over by the Turks; the colossal seraphim and other sculptures have been in great part destroyed, and the general *coup d'œil* is spoiled by "a thousand like cords, depending from the summit to within 4 ft. of the pavement, and having at the end of them lamps of coloured glass, large ostrich-eggs, artificial horse-tails, vases and pickers of crystal, and other mean ornaments." (*Hobhouse.*) The building is said to contain 170 columns of marble, granite, porphyry, *verd antique*, &c., many of which were brought from the temple of the Sun, built by Aurelian, the temple of Diana at Ephesus, and other ancient structures. The cost of the building, owing to the ambiguity of the Byzantine historians, cannot be accurately determined; but Gibbon observes (*Decline and Fall*, ch. xl.) that "the sum of one million sterling is the result of the lowest computation." Yet with all this, Justinian seems to have failed in making St. Sophia a really fine edifice. Sir J. Hobhouse says of it,—"My impression was, that the skill of the one

hundred architects, and the labour of the ten thousand workmen, the wealth of an empire, and the ingenuity of presiding angels, had raised a stupendous monument of the heavy mediocrity which distinguished the productions of the sixth century from the perfect specimens of a happier age."

Most travellers agree in preferring the mosques of Solymen the Magnificent, and Achmet, to St. Sophia. The former of these, called the Solymania, was built in 1556, of the ruins of the church of St. Euphemia at Chalcedon. It is 216 ft. in length by 210 ft. broad, and has a handsome dome, supported on four columns of Thebaic granite 60 ft. high, pavements, galleries, &c. of marble, several minor cupolas, 4 fine minarets at the angles, a spacious court-yard leading to it, with galleries of green marble on either side, and 28 leaded cupolas, and a very handsome gate of entrance ascended to by a flight of at least 20 marble steps. The whole of this mosque is in very good taste. Behind it, in an enclosed court shaded with trees, is the mausoleum of Solymen, an octagonal building, and the handsomest of all the royal sepulchral monuments, which are very numerous in the city. The mosque of Achmet II., between St. Sophia and the Propontia, was constructed in 1610, and has a very beautiful marble pavement. It is the only mosque which possesses six minarets. There are of extraordinary height and beauty, and each has three Saracenic galleries surrounding it. The Osmanli, or mosque of Ochman, completed in 1756, has a light and elegant dome, and is tastefully ornamented. The other principal mosques are those of Mohammed II., Bajazet, Selim II., Mustapha III., the Validee, &c. The last named, founded by the mother of Mohammed IV., contains a double row of fine marble pillars, chiefly brought from the ruins of Troy. Another mosque has become an object of curiosity, from its containing a sarcophagus, supposed to have been that of Constantine the Great. Many of the mosques have, like St. Sophia, been formerly Greek churches; the remainder have been erected mostly by the Turkish sovereigns, the viziers, or wealthy individuals. The royal foundations comprise a college, with a public library, an hospital, and an almshouse; and the mosques in general have attached to them some charitable institutions. They derive their revenues from villages and lands belonging to them, and held by a tenure not dissimilar to that of our church-lands. The incomes of some of the mosques are very large; that of St. Sophia has been said to amount to 800,000 livres annually (*Hobhouse*): Dallahway says 3,000,000. (p. 58.)

The largest space in Constantinople is the *At-Meidan*, or Horse-course, the ancient Hippodrome. It is at present 300 yards long, by 150 wide. (*Elliott.*) In it formerly stood the celebrated group of 4 horses, originally transported thither from Rome, and afterwards removed to the cathedral of St. Mark, at Venice. It still contains the granite obelisk from Thebes, set up by Theodosius the Great; the broken pyramid of Constantine the Great; the column of its bronze plates; and, between the two, the hollow spiral brass column, which originally supported the golden tripod in the temple of Delphi. The last consists of 3 serpents, twisted together. Mr. Elliott describes it as being at present about 12 ft. high; mutilated at the top, and much injured in the centre. Close to the Hippodrome formerly stood the imperial palace, the senate-house, and the forum. No remains of these exist. The Hippodrome continues to be used by the Turks for feats of activity; both on horse-back and on foot.

In the Adrianople Street is the "Burnt Pillar," so called from its having been blackened by repeated conflagrations. It was erected by Constantine the Great, and was originally 120 ft. in height, and composed of 10 blocks of porphyry, each upwards of 9 ft. high, and 35 ft. in circumference, resting on a marble pedestal 30 ft. in height. The joints of the column were concealed by embossed brass or iron hoops, and the whole supported a colossal bronze statue of Apollo, said to have been the work of Phidias. (*Gibbon*, ch. xvii.) The statue of the black stone were thrown down by lightning in 1150, and the whole height is now only 90 ft. In the centre of the city the pillar of Marcian may be seen, enclosed in a private garden. It is of granite, with a Corinthian capital of white marble, surmounted by an urn of the same material. The finest of all, the Arcadian or Historical column, erected early in the 5th century, and covered with a series of bas-reliefs, representing the victories of Theodosius the Great, was taken down at the end of the 17th century, and only 14 ft. of it are now above ground. (*Dallahway*, p. 114.) Dallahway readily traced the vestiges of the *Beaumont* palace, built by Theodosius II. opposite the Sea of Marmara.

The means for the supply of Constantinople with water are worthy of remark. The aqueduct of Valens, which communicates with another and more extensive, though similarly constructed aqueduct, beyond the walls, continues, as anciently, to convey water into the city.

* The total expense of building St. Paul's Cathedral was 700,000*l.* in 1694. (*London Encyclopedia.*)

It was originally built by the emperor Hadrian; and rebuilt first by Valens, and again by Solymán the Magnificent. It rises from the summit of the third to that of the fourth hill, consisting of a double tier of 40 Gothic arches in alternate layers of stone and brick. It is in some parts considerably dilapidated, and its E. extremity especially is much injured. Andréassy estimates that it was originally nearly 1,380 yards in length; it is now, he says, 669 yards long, and about 74 ft. in height. (*Andréassy*, p. 433.) There are several other aqueducts on both sides of the port, which, as well as the *Acqueducs*, or reservoirs, without the walls, were chiefly the work of the Greek emperors, though they have been augmented and kept in repair by the Turkish sultans. All the water that supplies Constantinople comes from Belgrade, a village a little to the N.E. of the city. An American traveller (*Sketches in Turkey* in 1831-32) has estimated the quantity brought into the city at 18,000,000 gal. every 24 hours, and states that the various water-courses about Constantinople must exceed 50 m. in length. The whole of these important works are under the superintendence of an officer with great powers, and are annually inspected by the sultan.

The Greek emperors constructed many large cisterns within the walls, both open and subterranean: the former have been gradually filled with earth, and converted into gardens; but several of the subterranean ones still remain entire. The principal are contiguous to the Hippodrome. The largest, or *Cisterna Basilika*, is a vault of brick-work, covered with terrace composition, 336 ft. in length, by 189 ft. broad, and supported by 336 marble pillars, each 40 ft. 9 in. in height. (*Clarke*, pp. 170, 171.) It still affords water to the inhabitants, being supplied by the city aqueduct, and many wells are sunk into it. Another vault, the *Cisterna Mastina*, called by the Turks "the thousand and one columns," is, according to Mr. Elliott, 240 ft. long by 300 wide, 5 fathoms deep, and sustained by 14 rows of 16 double columns of white marble, the capital of one pillar forming the base for another. This cistern is now dry, and half filled with earth: it is at present used as a rope-walk, or place for spinning silk. Not far from it is another cistern, also dry, but capable of holding 1,500,000 gallons water. (*Elliott*.)

The fountains are amongst the chief ornaments of the city. There are almost as many as there are streets; one is to be found in every piazza, market-place, and mosque. They are uniformly square, with a spout at each side and a leaden roof; and are generally gilded, painted, inscribed with sentences from the koran, or otherwise decorated. The public baths are built mostly of marble, on a uniform plan, and covered with little flat domes: their interior is generally handsome and spacious; and the price of a bath, the first of oriental luxuries, is so low that a poor man can enjoy a hot bath for a penny. In the better sort, coffee, sherbet, and pipes are furnished to the bathers. Few houses of consequence are unprovided with a commodious bath.

The greater number of the *hans* (bazaars), and *bazaarines* (or changes), are built of stone or brick. The *hans*, or *sevins*, or inns, are for the most part royal or charitable endowments, each capable of accommodating from 100 to 1,000 persons. They consist of open squares, surrounded by rooms, in several stories, and possess recommendations far outweighing their want of architectural elegance. Most of them are intended for travelling merchants. Excepting a small present to the servant at departing, strangers are gratuitously lodged in them, and during their residence in the city, are masters of their rooms, of which they keep the keys. "They are for all men, of whatever quality, condition, country, or religion soever, and the construction of them has contributed to attract the merchandise of the furthest boundaries of Africa and Asia to the capital of Turkey. During fires or insurrections, their iron gates are closed, and they afford complete security to the persons as well as goods of the merchants." (*Hobbes*.)

The covered *bazaars* have more the appearance of a row of booths in a fair, than a street of shops. Each is appropriated to a separate article of merchandise. The shops are all open in front, and under cover of a common roof; the sills of the windows, as in ancient Pompeii, forming the counters. (*Elliott*.)
